2nd-4th C AD (Inhumation style known throughout Eurasia graves)	Inhumation	N.	1. Deep pit; body lay in wall niche closed by slab 2. As above, pit sealed with rubble 3. Stone sarcophagus 4. Pit with stairway leading down 5. Lidded pit graves	Turkic/Proto-Bulgar Half had cranial elongation	Tadzhikistan Lower Volga (similar to Volga Bulgar since 1,000 BC) Amu-Darya Bactria Bulgaria Zlivka
7th-8th C AD	Inhumation	N.	1. 70% Catacomb? 2. 30% niched pits	Proto-Bulgar, occasional mongol features occasional artificial cranial deformation Identified with Bulgarians, Khazarians and Sabir tribesmen)	Dagestan (Derbend) Similar to Alanic catacombs of the Don and Donetsk areas

Conclusions:

The grave styles noted here had their origins in Central Asia, and were associated with Turkic tribes, Proto-Bulgars and Alans who practiced artificial skull elongation, perhaps through wearing head rings, turbans or other forms of headress. The specific types of interments described here began as early as 200 BC, in Bactria, in regions traditionally inhabited by Scythians, Saka, and other Indo-Iranians. *Forms of inhumation first appeared in Russia in the 200 years preceding the 4th Century AD.* This development indicates migrations of Indo-Iranians into the area. These tribesmen were the very ones responsible for breaking Greek power in Central Asia, thus paving the way for the establishment of the Parthian Empire, and they are likely to have been an admixture of unorthodox Magians, Buddhists and animists. Much later, catacomb and niched pit graves experienced a revival as proto-Bulgars (who were formerly associated with Dagestan), began inhabiting the Lower Volga, contemporaneously with the Muslim jihads against the Magians. From there they encroached upon the Don and Donetsk regions especially. These funerary methods can be identified as belonging to the race who built Zoroastrian-style fire temples in Bulgaria, Volga, Bulgaria, the Kuban region and the Crimea. In short, their bodies were not cremated or buried in the soil, but interred in stone lined cysts, whether the pit was sealed by stone debris, or by more temporary lids. The latter means of closure accommodated the possibility of re-usable graves, at least graves that could be accessed as required. The method conforms to a known Magian funerary practice entailing depositing the corpse in a sarcophagus or stone cyst. This had the effect of preserving the soil from the defilement of juices exuded by rotting corpses. The only problem is, their heads were aligned in a direction that was forbidden for Magians, the direction of the demons. This proto-Bulgar grave alignment varies from the E-W alignments found in a few other Bulgar centres near the Caucasus and Kuban; most notably *Yasenovopolyski* ("Ash-tree fields") and Pashkovski.

A combined American and Russian team descended on a series of 11 kurgans situated on the Aksai river.¹⁸⁸⁶ The remains discovered were predominantly Sarmatian, but also included those of a Sauromatians. These are of course convenient tribal nomenclatures that only serve to disguise the presence of Indo-Iranian sub-groups such as the Yaziks, Alans, Roxolani, Sirax and Aorsi.¹⁸⁸⁶ There was also evidence of "pit, catacomb and Timber-Frame" grave constructions in connection with the mounds. The earliest was 3000 BC and the most recent dated to the beginning of the 4th century AD.¹⁸⁸⁶

Some graves carry goods imported into the area via the Northern Caucasus, as well as metal objects decorated by griffin heads.¹⁸⁸⁷ Others show more eastern affiliations, for from time to time they found swords manufactured along the lines of Chinese hand weapons of the Han dynasty.¹⁸⁸⁷ Evidently some of these folk were Hunnish, and were buried here after a hasty departure from Eurasia. Their very presence here attests to disturbing events throughout the far eastern Hunnish stomping grounds, something noted from the sidelines by Roman and Chinese sources. Tribes were scattering like billiard balls dispersed by a power break.

Middle period Sarmatian graves around the 1st Century AD contained earthenware typical of the Kuban region, but also included interesting examples of Medean green-glazed vessels.¹⁸⁸⁸ The glazing technique and pottery style can only be found in Iraq, Medea, Dura-Europos, and southern Ukraine (on the Volga, Don and Kuban rivers).¹⁸⁸⁸ One cannot automatically ascribe these wears to migrants, as is still possible, largely because they may have arrived as booty or as a traded commodity.

As for funeral methods they included inhumations with grave orientations tending towards the south, whereas it changes to the north by the close of the Sarmatian period in the 3rd Century AD.

A Franco-Russian archaeological team probed a series of kurgans and fortified complexes near the Iset river, not far from Shadrinsk in the Transurals region.¹⁸⁸⁹ The grave culture here contained finds of a sort associated with Saka tribesmen and Khorezmians.¹⁸⁸⁹ Metal plaques depicting various images are usually skirted by a simulated cord boundary. Defensive structures are indicative of frequent occupation from the 7th century BC right through to the Middle Ages.¹⁸⁸⁹ Insufficient human remains have been identified there, which is somewhat surprising considering the size of this 'administrative centre'. An alternative disposal method was probably in use besides kurgans, traces of which have yet to be discovered. What remains have been located are very often disturbed assemblages, which they attribute to tomb robbing, yet I believe exposure is another possibility. Only a very close look at the stratigraphy will confirm the cause in each case. Dwellings were supported by pillared columns.

The trail of evidence reaches out into distant Eurasia. Field surveys in the Tien Shan region led to the discovery of numerous kurgan burial mounds, many of which have yet to see a spade (so typical of the state of affairs in that part of the world).¹⁸⁹⁰ Europoidal remains, with a small percentage of Mongolod traits were typical discoveries in those that were properly examined.¹⁸⁹⁰ In the period 1000-800 AD stone markers throughout the area are inscribed with deer petroglyphs (and thus associated with Eurasian Saka tribesmen).¹⁸⁹⁰

In 4.7% of remains discovered, Tuva provides us with evidence of "cutmarks on the remains of a number of individuals, It is probable that the cut marks were produced during the defleshing and disarticulation of the cadavers, which appears to have been undertaken during secondary burial practices."¹⁸⁹¹ By comparing the pathological signiatures of cannibalism, exposition and disarticulation Murphy concluded that defleshing was the primary cause of trauma and lesions amongst the 1,000 skeletons found there. The bodies were those of Scythians and Hunno-Sarmatians (and thus Indo-Iranian, and therefore cognisant of excarnation customs typical of the Iranian nations).¹⁸⁹¹ Once again, if the defleshed remains were those of Magi or Buddhist shamans, a 5% is figure probably indicative of their level of presence in the total population.

The practice appeared confined to adult remains in a 60:40 male/female ratio.¹⁸⁹² Defleshing was not apparent in infant and juvenile skeletons, leaving one to conclude that the practice was confined to adult remains in a 60:40 male/female ratio. There was also evidence individuals went to the trouble of interring a fully defleshed body, along the way attempting to manually re-assemble the skeleton.¹⁸⁹² No less astonishing are sets of bones drilled and sewn together with vegetable matter, so as to re-assemble the skeleton in its entirety.¹⁸⁹² This left them looking like your typical medical skeleton (such as those found in doctor's surgeries and medical schools), but with the individuals facial features reconstructed by means of red or white-coloured clay mask formed by pasting clay over the deceased prior to flesh removal.¹⁸⁹²

Evidence for these practices was replicated in excavation results at Aymyrylg (on the Ulug-Khemski river in Asiatic Russia, on the Mongolian periphery), with Scythian excarnated remains re-assembled in the ground, or put there in advanced stages of corruption on account of prior, deliberate exposure.¹⁸⁹³ Some remains were delivered to the plot encased in a sack or leather bag, perhaps in a putrescent state,¹⁸⁹³ and this seems suggestive of the tree-hanging exposition method known elsewhere.

DEFLESHING A WELL
KNOWN PRACTICE IN THIS
PART OF THE WORLD

Although seasonal burials were observed by Turks (by Chinese testimony), remains were treated in this fashion even during Summer, thus putting to rest the 'winter burial difficulties' theory to rest. Murphy suggests it was part of a ritual concerning the soul of the deceased, that lived on in the bones, which had to be reverently treated through defleshing. In my opinion Buddhist or Zoroastrian excarnation rites are the most likely point of origin for the Scythian funerary observances, rites that, I believe, had a shared origin in the first place.¹⁸⁹⁴ That these bodies were Europoid and often found in *kurgany*, or contained in log cabin death houses, re-assembled as though sleeping, suggests a Scythian tribal adherence to Magian excarnation rites.

METHODS RESEMBLE THE
MORTUARY RITUALS OF
THE BUDDHISTS AND
MAGI

The presence of mummified remains, complete with cranial and abdominal packing (and even embalming fluid!), indicates yet another exotic funerary tradition known to the Scythians in those parts, yet which differs from the natural mummification encountered at Urumchi.¹⁸⁹⁵ Mummies had a silk cowling placed over the face, on top of which lay a plaster death mask. Finally there is evidence for the fabrication of cremation dolls, where a clothed effigy is created from straw to serve as a receptacle for cremated remains.

POST-MORTEM RITUALISM
VARIED IN PRE-
SASSANIAN TIMES

A 10th Century incursion of the nomadic Pecheneg nations into Russia brought with it Orthodox Zoroastrians, folk given to excarnation funerary rites rather than burials and cremations, the latter being impermissible under Magian law. Yet even before the arrival of these Orthodox Zoroastrians, the Volkhyv and Bulgar priests, being Magi, must have been de-fleshed in accordance with ancient Medean law. *No other method was sanctioned for the disposal of Magian corpses.* As you are about to see, there seems to be archeological and linguistic evidence for Magian funerary rites in Russia, rites of exposure banned by Vladimir' upon his conversion to Christianity.

Pre-Sassanian Magian and Persian funeral customs were fairly relaxed when compared with Zoroastrian Orthodox standards. Cremation was not yet punishable by death, and perhaps even the norm in a number of regions.¹⁸⁹⁶ If the bulk of the Rus' Magian presence was formed by Zurvanite exiles of the 3rd-Century Zoroastrian reformation, then it is likely burials and cremations were practiced by the bulk of the people, while only zealots and Magi strictly adhered to the de-fleshing procedures contained in the Magian canon. Since the Scythians were animists and Magians, and yet freely buried their dead (embalmed in wax), we might think that burial was permissible where it came from a Scythian Magian source.

As you have already seen, excarnation rites are found a little further afield, in the wilds of southern Siberia and Central Asia. They required the dead to be placed on funerary biers mounted in trees, and the dangling of corpses from branches for up to a year, often encapsulated in a bag of ox-hide,¹⁸⁹⁷ perhaps to limit the spillage of death-riddled body fluids, which could pollute the soil terribly. Out in the Taiga of northern Siberia and Russia tales of bodies being exposed to both the elements and beasts by placing them in trees (hanging or laid flat on stands wedged into the boughs) have persisted until only a couple of hundred years ago.¹⁸⁹⁸ In this part of the world excarnation is normally associated with the beliefs of the presumably Buddhist shamans,¹⁸⁹⁸ but as previously discussed shamanism had itself formed a symbiotic relationship with Magianism in some areas, especially in the Siberian and Ural regions.

Russian archaeologists found incontrovertible evidence of excarnation in Central Eurasia, Southern Siberia, attributable to Scythians, but they represented roughly 30 finds out of 600. The ratio of males to females subjected to defleshing was 3:2, with a total absence of excarnated juvenile remains. My personal belief is the bodies represented select elements of their social matrix, namely Magi and shamans. The practice of seasonal interments (another Magian tradition) was strongly signposted by the burial of bodies that experienced prolonged exposure prior to burial during the winter-spring period, as also the construction of family mausolea, whether of log cabin style, or stone "niched" sepulchres. If these various points were associated with priestly individuals, then on a purely statistical basis shamans and Magi probably constituted 5% of the overall Scythian population in those parts.

TREPANATION

Trepanning was also noted, not only for medical purposes, but for the creation of magical talismans using

cranial fragments from individuals one can only guess were deemed holy. At other points elaborate mummification techniques were practiced which included abdominal packing, brain removal.

Excarnation is an especially intriguing funerary method. In the absence of large scale excavations at Ecbatana it is difficult to ascertain a period of origin for the custom in those parts. It may have been local, but then again it may have been introduced from Eurasia, by Scythians after their seizure of Medea.

Russes, Prussians and Balts are known to have placed bodies under a roof, to lay in state for an extended period. After having been exposed for as long as two years, whatever was left of the remains were cremated.¹⁸⁹⁹ Cremators were fined large sums of money relative to the size of whatever charred bones were not fully consumed by the fire, and reduced to ash. So they were required to be diligent in their incineration of skeletal remains, and as a result this method of ultimate disposal leaves no archeological trace of exposition whatsoever, and barely any of cremation. Nevertheless archeological evidence for intentional defleshing has been found in the Baltic, dating as far back as the Bronze Age, as are accounts of excarnated bones being burned after the corpse was exposed for a prolonged period.¹⁸⁹⁹ In fact some Baltic burial sites crudely resemble the circular, many-ringed *dakmas* of Central Asia.

Death is the great leveller. All mankind, whether great or small, must face it. Death grounds were a relentless source of defilement. So in large cities it was deemed more hygienic and safe for the living, to build communal death repositories away from settlements, so limiting their unholy contamination.

To what extent death houses (*astodans* or *dakmas*) were ever commonplace in pagan Rus' remains unknown, but the Ukrainian word *dakh* ('a roof'), is probably a relic of these structures. The same with the Old-High-German *dah* ('a roof').¹⁹⁰⁰

Very often ancient Russian cemeteries consisted of mounds; mounds that may well be the remnants of disused *dakmas* and *astodans*. The mounds themselves are regarded as belonging to the Eurasian kurgan culture.¹⁹⁰¹ They are found spread from Germany to Scandinavia, throughout Russia and the Caucasus and right through to Central Asia. The practice is of considerable antiquity, going back as far as the Bronze Age.¹⁹⁰¹ Different variants of the kurgan are known, each of which has inherited its own archeological classification. The prevailing type consists of a wooden shelter built above an open square plot, dug deep into the earth. The excavated pit beneath these rooves was often lined with stone flagging.¹⁹⁰¹

Kurgans were most likely of Magian provenance. One can infer this not only because they match the physical description of temporary Magian death houses, but because of a Russian linguistic survival; *mogila*. *Mogila* (which means 'a hill' or 'a grave', and in particular 'a burial mound') is connected with *mogila* (Bulgarian, Polish), *mogyla* (Old Russian, Serbian), and *mohyla* (Czech), which carry the same meanings.¹⁹⁰² *Magura* (Rumanian for 'a hill') is linked with this linguistic strain.¹⁹⁰² The linguist M. Vasmer remained non-committal about its etymology, but claimed that *mogila* is not derived from *magu-ula* (Middle Iranian meaning 'a magus hill' or 'a magus barrow').¹⁹⁰² Considering the amount of Magian indicators in Rus', I have serious doubts about his purely linguistic assessment. The only interpretation that Vasmer does not outright reject is 'a place of rule',¹⁹⁰² but I do not find that this interpretation need invalidate a *magu-ula* genesis for the word, and may even add extra impetus for such a connection bearing in mind that the Magi were about as elite as you could get in pagan society, the equivalent of princes and kings. The faithful converged on their burial site annually, praying for their souls and the souls of others. The *fravashis* of especially powerful kings and wizards were, with recourse to comparative religion, consulted the old believers, living and ruling from beyond the grave, from within the grave.

Another Russian word for 'a burial mound' is *kurgan* (the word from which the archeological classification was derived). It appears to have been used from at least 1224 AD onwards, and is traceable back to various Turkic Central Asian words denoting strength.¹⁹⁰² Another possibility is that it came from the Persian word *gurgane* (*gur*: grave - *gane*: home),¹⁹⁰³ though Vasmer disputes this connection. Theoretically the last option is perfectly in accordance with the archeological evidence, mound-covered buildings that typified the Magian conception of a home inside the grave, where the dead slept, waiting patiently in excitement and joy for the time when they would re-emerge to do battle with the devil and his army, then, after the universal destruction, re-populate the face of the earth.

Fig 106.3. The skeleton of this Swede is obviously incomplete. It is ever so tempting to assume that the missing bones had simply rotted away. Perhaps some of them were already gone before the grave was ever filled in?

Even today the remains of countless prehistoric burial mounds litter Persia, a good many of them woefully under-examined by archaeologists. Some of them are classified as Maikop mounds,¹⁹⁰⁴ a form of funerary structure found throughout Russia and the Caucasus too, thereby proving a primordial connection between the two regions in terms of shared funerary customs and religious observances.

As previously mentioned less well-to-do country Magians deposited their dead in *zad-marg* death cabins. The Celts and Russians also had death-cabins, which could be interpreted as *zad-marg*. In Russia, such buildings were called *domovishche*,¹⁹⁰⁵ which denoted 'a grave', or even 'a log-construction house built over the grave site'. But as a general rule the term *domovishche* more properly meant 'a house that was stood or propped up'. Based on these meanings a *domovishche* might resemble a *zad-marg* in form and purpose, or a temporary roofed structure erected to protect an open grave plot from the elements. Certainly the *Chernaya Mogila* royal death-house near Chernigov could be deemed a *zad-marg*. *Dom* (the Old Russian for 'a home') was the root from which *domovishche* was formed. It is traceable partly to the Old Indian *damas*, but more specifically to the Avestan *dam* all of which mean 'a house'.¹⁹⁰⁶ The Latin *domus* and the Greek *domos* no doubt originated from the Old Indian rather than the Avestan (which gave rise to the Russian). Perhaps Russian *domovishche* had an Iranian provenance after all.

Perhaps in emulation of the Magian death houses and temporarily roofed plots, many Russians planted a roofed cross at the grave-sites of their beloved in the post-conversion era. Originally the roof was affixed to a vertical post or board, but during the Christian era a variant of this style arose, with a crosspiece being added to the roofed posts, thus creating a roofed cross (fig 688). The small surface area of these rooves was incapable of sheltering a grave, so it is more likely that they were symbolic of the old ways, of the superstitious Magian admonition to place a roof over a grave. Their bets were covered both ways.

In a rite similar to those practiced by the Magi, the pagan Russians lit fires (holy fires) on top of the grave mounds and pits, a social norm which served as a means of protection.¹⁹⁰⁷ It succored the soul of the deceased and watched over the site as a vigilant sentinel.¹⁹⁰⁷ Such observances remind me of a Russian war cemetery I once visited, where the people gathering about the *vechnaya plamy* (Russian: the eternal flame; literally means 'centuries-old flame') with bunches of beautiful red flowers, especially roses. The custom may have existed since pagan times.

Whether the wood used to kindle these fires was the remains of temporary roofing built over the grave pit to briefly house the body of the deceased, or piles of well-stacked timber, or a combination of both, I cannot say. Certainly in Ibn Fadhlan's account of the Rus' open-air cremation ceremony, the roofed pavilion was located separately from the pyre.¹⁹⁰⁸

As with the affluent Magi of Central Asia, rich heathen Russes might have had a sturdy metal defleshing platform constructed, consisting of a metal basket mounted on a long pole. The mortal remains were placed in the basket, then the pole was impaled into the ground. The weight of the platform was supported by a stylised foot. Such a device was fairly rare, but a Soghdian sales voucher has been located, revealing the sale of such a contraption. They would, in all likelihood, resemble the excarnation platforms portrayed in Breughel's 1562AD painting, *the Triumph of Death*. Until this point in time no such contraption has been found in Russia. *Breughel's* painting does however point to the existence of highly specialised Central Asian defleshing platforms in greater Europe even as late as the 16th Century AD. This is suggestive of Magian or Buddhist excarnation rites in a European context. The raven and the dog were two beasts mightily connected with the excarnation rites of the Magi; they who stripped meat from the bones of the dead, thereby purifying the deceased from the grip of death. In Russia the word for 'a dog' (more specifically 'a bitch') *sobaka*, seems to be derived from the Medean word for 'a dog' *spaka*. By inference the mere usage of a Magian term for a dog might, when read in conjunction with a variety of other data, suggest that Russian dogs had some hand in excarnation. In Norse tradition ravens played the same role they did in nature and

in Magian tradition (carrion eater), but the dog's pride of place was ceded to the wolf. Wolves were 'Odin's dogs', scampering about the scene of a battle, devouring the slain amid flocks of jumpy feeding ravens.¹⁹⁰⁹

ODIN'S DOGS

One Norse epithet for any warrior (not just an enemy) was 'the man who reddens the wolf's teeth' and 'dispels his hunger'.¹⁹⁰⁹ In the same way fallen combatants were 'the reddener of Huginn's (one of Odin's raven's) claws' or 'his bill'.¹⁹⁰⁹ Battle was therefore a kind of feast, to which ravens and wolves were invited by the lure of war's aftermath. War was 'Huginn's feast', and the blood of the dead, 'raven's drink'.¹⁹⁰⁹ In the New Testament's *Book of Revelation* such scenery is portrayed, wherein it is described as the 'feast of the Great God'.

RAVENS

From the Norse kennings we might guess that the vikings did not immediately bury or cremate the bodies of men killed in action. Instead they left them where they fell so that the ravens could have their fill. So were these kennings just a way to poetically describe a warrior, or were they prompted in the first instance by a religious or cultural practice, namely the exposure of the slain to scavengers (as the kennings suggest)? Evidence points to the latter.

Leaving their bodies in the open air could not have meant that Norse battle casualties were callously abandoned to the elements, bereft of a proper funeral rite. After all, by their deaths in battle their bodies had been dedicated to Odin.¹⁹¹⁰ By offering up their lives as a sacrifice, and succumbing to their wounds, they had entered the hall of glory, they had lived and died by the sword, they had entered the illustrious company of Odin, where feasting and everlasting combat was the order of the day. Allowing their remains to be stripped clean by ravens could not have been disrespectful for heroes such as these; it must have meant giving them a good send off. The stalwart pagan Hakon is gloriously remembered by Thorleif for feeding the corpses of enemy princes to the ravens.¹⁹¹¹ Whether he was treating his vanquished royal foes pitilessly, or farewelling them with the dignity due all good warrior-princes destined for Valhalla, is only provable where we know how the other victims of the same battle were treated.

BODIES LEFT IN THE OPEN FOR THE BEASTS OF THE FIELDS

IT WAS PROBABLY A GOOD SEND OFF FOR WARRIORS GOING TO VALHALLA

In their analysis of the Earldom of Orkney archaeologists investigated 47 sets of Norse human remains and the burial traditions associated with their departure from this world. Customs can be classified as either disturbed remains (reminiscent of exarnation) and those interred in various poses throughout the Late Iron Age, the Viking Age and the Medieval Christian Age. The results are as follows:¹⁹¹²

	Right	Left	Back	Disturbed	Flexed
23 Late Iron Age	2	3	12	3	Nil
15 Viking Age	0	1	4	3	6
9 Medieval Christian	0	0	9	0	0

	W-E	S-N	N-S	E-W
23 Late Iron Age	8 (100%)	4 (100%)	3 (100%)	0
15 Viking Age	6 (100%)	2 (100%)	2 (100%)	3 (100%)
9 Medieval Christian	9 (100%)	0 (0%)	0 (0%)	0 (0%)

EVIDENCE OF EXCARNATION HAS BEEN FOUND IN THE NORSE ORKNEY COLONIES

"in some cases the body of the deceased had been ritually cut up into parts before the various body parts were buried raw".¹⁹¹³ Some believe the presence of cooking pits near the grave, in conjunction with skeletal material bearing signs of cannibalistic butchering (as opposed to an exarnation signature) are suggestive of endocannibalism. At such events mourners consumed at least some part of the corpse. The practice was known in Hindustan and in the desert wilds of Baluchistan, practiced variously by Scythians and Hindus. Since you are (made of) what you eat this custom permitted the physical remains of ancestors to live on in the bodies of current and future generations. Magian lore tells us of such ghoulish meals, but strictly associates them with devil-worshipping sectarians.

SOME BODY PARTS MAY HAVE BEEN EATEN, OR SO IT HAS BEEN THEORISED

Fleshy areas were stripped away from bones bound for cremation too. Mourners did so using iron knives and scrapers, many of which were found in the vicinity of buried remains or urned cremains.¹⁹¹⁴ Some guess the implements were significantly tainted by impurity, and therefore consigned to the grave.

In the Oseburg burial, archaeologists chanced upon a tapestry, crafted by pagan hands. It depicted diverse scenes, including a series of bodies dangling from trees. Alas there are no captions to describe exactly what these hangings signified, but there seems little doubt that scenes such as these were known to people of their day. Even more importantly, the tapestry lends credence to the reports of Christians and Muslims alike concerning hangings in the North, whether it be in Scandinavia or Russia. The dangling bodies on the Oseburg tapestry might represent;

FLESH CUT FROM THE BODY WITH KNIVES

A PAGAN TAPESTRY

1. Penal executions *Agni Purana* prescribed the execution of criminals by means of a black religious rite; hanging I believe. In a Magian context, hanging a criminal and leaving their body to rot in the open air would not have defiled the soil at the base of the wolf-tree. Exuding corpse juices and the shattered remains of 'black' corpses (ie; the bodies of condemned and executed criminals) are unable to cause defilement since the demon of corruption, their indwelling unspirituality, had already taken flight from the world with their death.

THE IMAGERY MIGHT DESCRIBE SEVERAL DIFFERENT THINGS

2. Religious sacrifices At Uppsala pagans made hanging sacrifices, of animals and men. The tapestry might therefore portray a sacrificial scene.

3. Exarnation As related earlier, one style of exarnation associated with the Caucasus entailed hanging the corpse from a tree, to be exposed to birds.

Of further significance is a fairly ancient Norse kenning (poetic saying) which speaks of the war dead as being food for the vultures. Why? Vultures don't live in Scandinavia! In fact the closest vultures to Scandinavia are in India, Central Asia and Siberia, often charged with consuming bodies during Buddhist and Magian exarnation rituals.

SAXON CREMATIONS

In England, the Saxons are known to have buried or cremated their kinsfolk.¹⁹¹⁵ The heathen Anglo-Saxons set aside specific areas for this purpose. With very few exceptions, Anglo-Saxon graves were aligned in two different ways. As with pagan Slavic, Bulgar and Finnish graves and mausoleums, the earliest and most numerous grave-form has the corpse laid out along an east-west axis, its eyes pointing directly to the east, into the rising sun.¹⁹¹⁵ It was a custom scrupulously observed by the Magi, and in modern Yezidism they use the term *kubleh* or *qiblah* when referring to this solar focal point on the horizon (two *qiblah* actually exist for the eastern heliacal rising, namely the points of the summer and winter rising). Under Islam however believers were required to abandon the traditional E-W solar *qiblahs* and redirect their gaze towards Mecca, even in death.

GRAVES AND MAUSOLEUMS

"The foolish will ask: What has made them turn from their qiblah? Say: The East and the West are God's (qiblah) ... we will make you turn towards a qiblah that will please you. Turn your face towards the Holy Mosque".¹⁹¹⁶

MUSLIMS NO LONGER TURNED TO THE SOLAR QIBLAH IN THE EAST

The other form of grave is aligned North to South, with the eyes glaring northward.¹⁹¹⁵ These north-south graves, are, as a rule, female graves, or youngsters.¹⁹¹⁵ The closest parallel to this can be found among the Magi. The white Magi considered an east-west alignment of the skull to be holy, whereas a north-south alignment was seen as taboo, in short diabolical, for their eyes looked toward the north and beheld there the fiends. A sizeable proportion of the skeletons unearthed there were decapitated, which, owing to the sheer prevalence of the practice, has been interpreted as a sign of ritual homicide, or legal executions. While these interpretations are most likely correct, some of them could have been penitential decapitations (as practiced by the Magi), which granted unatoned mortal sinners the right to cross over the Kinvat Bridge.

SKULLS WERE ORIENTED TOWARD THE EAST

Most are simple inhumations.¹⁹¹⁷ The fact that they are rarely accompanied by grave goods indicates the body may have been placed in the grave naked, though it is impossible to say whether perishable items were interred with them. If these burial rites were in any way related to the practices of the Magi, then the average person, being poor and unable to finance the building of a death house, would simply be lowered into the grave onto a carpet, laid out under the heavens, clothed only in the light of the sun. Archeological reports have concluded that temporary structures were often erected over pagan Anglo-Saxon grave sites (fig 449), and that some graves were lidded by a trapdoor which could be opened and closed as required.¹⁹¹⁷ This data clearly supports the use of re-usable graves and grave shelters among the Anglo-Saxons, and the religious theory behind their adoption of the practice is identical to yet another form of funerary method practiced by the Magi. An excellent parallel for these graves might be the Bulgar stepped or lidded grave pits and sepulchres.¹⁹¹⁸

RE-USABLE GRAVES

Some excavated Anglo-Saxon graves dating to pagan times were devoid of skeletal material, and perhaps the buried remains unearthed by archaeologists were only the last generation of people to had been put inside the re-usable grave plots of their families. In support of this theory, some graves contained no remains whatsoever, which is what one would expect to see if the family grave was vacant at the time the Church ordered them to desist from

'heathenism'. At the time of the conversion, these graves would have been permanently filled in, and all the racking torn down by the Church authorities. These so-called 'Final-phase' burials are difficult to distinguish between Christian and pagan graves, for they occurred at a time when paganism and Christianity overlapped.¹⁹¹⁷ Archeological data on the Anglo-Saxon graves shows there was not a great deal of difference between pagan graves and Christian ones of the era, and this continued to be the case for some time after the supposed conversion of these pagans.¹⁹¹⁷ The only visible difference is that other small cemeteries appear to have been founded, separate from the larger cemeteries of the pagan period.¹⁹¹⁷ These diminutive cemeteries might be attributable to Christians who had peeled away from the majority of the population, who still practiced a close blend of pagan and Christian practice. Arnold's book does not contain dates for the phasing out of above ground grave structures. Establishing a date after which they fell into disuse is exceedingly vital, because it would coincide with the Magi's loss of control, which then passed over to apostolic Anglo-Saxon Christian clergy. Bearing in mind the prevalence of simony among the English clerics, it may well be that the grave shelters were still being sanctioned well into the Christian era.

The mere fact that these graves were readily accessible¹⁹¹⁷ means that excarnation practices are a distinct possibility at these Anglo-Saxon cemeteries, but Arnold provides no information about whether the remains found there were complete assemblages, or undisturbed. So confirming exhumation practices would be premature on my part without this information. So the question remains, were they simply re-usable burial plots, which often had temporary roofs erected over them, or were they excarnation pits with precisely the same configuration? Determining whether these graves were being re-used from generation to generation might be ascertained by examining the number of grave plots relative to the expected population density. If the ratio of grave-pits to presumed population size is small, then it enhances the possibility that the graves were being repeatedly used, as the archeological data suggests. My own personal opinion is that the defleshed skeletal remains were then removed from the plot and placed on the racking above, leaving the plot vacant until the next family member died. The bones might have been taken and stored elsewhere also.

More importantly, if the Anglo-Saxon grave-pits were Magian, then the northerly-facing and easterly-facing graves indicate we are dealing with Zurvanites rather than Orthodox Zoroastrians, for they show that white and black families lived side by side, freely intermingling. This of course was an anathema to Orthodox Zoroastrians, who refused to entertain the presence of evil-doers in their community. Therefore the Anglo-Saxons, like the pagan Slavs would have been the inheritors of traditions first imported into Europe with the descendants of the Zurvanite Magi banished from Central Asia between 200 and 400 AD. Such communities allowed for the mixed performance of 'white' and 'black' ceremonials.

A number of square wooden structures were erected inside some of the heathen Anglo-Saxon cemeteries,¹⁹¹⁹ which followed the design of Magian shrines (ie; four corner posts walled with lattices of interwoven wood). This archeological data might support historical accounts of the countless 'heathen' Saxon shrines. Since many of them contained a deep circular hole in the middle we might conclude that they were post holes, but alternatively they might have been used to contain disarticulated skeletal remains, or had an idol rooted in them. Therefore many of these structures could have been idol shrines.

The most common view among archaeologists is they were death houses that permitted the ongoing performance of ancestor veneration or worship. If connected with the customs of the Magi, then these more elaborate structures indeed represented places where one came to pay respect to one's kinfolk on the anniversary of their deaths, when the souls of the deceased came back to visit the world each year. Underground boxes were also found in these cemeteries, similar to those seen in pagan Russia and continental Europe. In England it appears they could be opened and closed. Where the Anglo-Saxons raised burial mounds, they were generally constructed on high ground, more than 100 meters above sea level, a practice preferred by the Magi also.¹⁹²⁰

Excarnation looks to have been prohibited by Christian Saxon law under Charlemagne. In a surviving historical document specifically relating to witches the *Capitulatio de partibus Saxoniae* prescribed beheading for those who 'give his or her (a male or female witch's) flesh to be eaten'.¹⁹²¹ Here, I believe, the excarnation of Magian priests and priestesses is the intended meaning, though this legal provision mentions the same penalty for those who consume

the flesh of witches, or witches who eat human flesh. This other aspect of the law may have served to eliminate demonism and the Dionysian rites of *omophagia*, frequently present throughout regions of ancient Scythia and Parthia, and transported into Europe with immigrants.

EXCARNATION POSSIBLY DEPICTED ON THE SUTTON HOO ROYAL PURSE

Lastly, compare the artistic reconstruction of a Magian excarnation in progress (fig 107.1), with one of the cloisonne enamel representations (fig 107.2) that was affixed to a purse found in the royal Anglo-Saxon Sutton Hoo ship grave. On face value the purse of Raedwald, a 7th Century East Anglian monarch, seems to depict two dogs eating the corpse of a man, perhaps a royal. That the bodiless death ship also contained a wand, cauldrons, drinking horns, lavish jewellery and so on,¹⁹²² probably means that Raedwald had an impressive sacral role to play in society, perhaps that of high priest. Equally intriguing is the Medo-Scythian style (an Aryan art form that originated in the Scythian and Medean regions) used by the pagan goldsmith or jeweller who crafted the East Anglian ornaments (figs 107.2 and 107.3). An example of Medo-Scythian art is shown in fig 107.4. It depicts a hare, and was probably made by a Magian Iranian craftsman during the 6th Century BC. In another interesting twist, spoons engraved with the names of St Peter and St Paul were found at this same site;¹⁹²³ such an unlikely mix of heathen and Christian ritual equipment. A likely explanation is found in a variety of early medieval Church writings, particularly in the *Malleus Maleficarum*, the law book used to try and sentence witches. The latter text explained that some (but not all) witches and wizards were Christian 'heretics'. Sutton Hoo appears to point us in this direction.

CAULDRONS AND OTHER RITUAL PARAPHERNALIA

SPOONS DEDICATED TO ST PETER AND PAUL

Excarnation was probably known in Gaul and Britain from Celtic times, and, indeed, long before that. Throughout Europe and the Baltic zone, stretching back as far as 8,000 BC the de-fleshing or exposure of corpses

Fig 107. 1

Fig 107. 2

Fig 107. 3

Fig 107. 4

EXCARNATION WAS KNOWN IN THE BALKANS AS EARLY AS 8,000 BC

was commonly practiced.¹⁹²⁴ At first their families placed the disarticulated and often incomplete remains of the deceased under their living quarters, in company with horns and antlers belonging to oxen or deer, and also dog heads (bear in mind the sacred nature of these creatures to the Medean Magi).¹⁹²⁴ According to Gimbutas it is exceedingly rare that *megalithic* inhumations of excarnated corpses contained a complete number of bones.¹⁹²⁴ The remains are frequently missing their heads, or show signs they had been decapitated, either before or after death. Often skulls are found separately, embellished with inlays of various materials such as amber. Here we find another possibly Magian parallel, for decapitation was the highest and sweetest form of penance that a person could undergo, since it was believed to remove the threat of damnation to the person concerned. It allowed them avoid the three-day punishment in the underworld and thus cross the Kinvat star bridge into heaven unimpeded.¹⁹²⁴ But alas, we don't know the motives of the megalithic people, for lopping the heads off their dead.

ARCHAEOLOGISTS RARELY FIND INTACT SKELETONS

DECAPITATIONS

Moreover the remains of carrion birds (deemed especially holy to the Magi) are found buried at many of these ancient places, birds such as ravens, the noble predator birds and, more especially, the magpie (whose warbling was regarded by the Magi as a potent weapon against demons). Interestingly the skeletons of large fish were found there also. This could be related to Magian thought, for the great tree that imparted life was protected against Ahriman and the demons by ten large fish. Why didn't they bury rams, cattle, sheep, seagulls, or pigs at these sites, we should ask? Is it a coincidence that the species of animals found buried in association with megalithic excarnation sites (with the exception of the fish) were those mentioned by the Magi as performing the defleshing of corpses?

BURIED RAVENS, MAGPIES, EAGLES, DOGS AND FISH

The careful burial of these birds and animals in conjunction with the dislocated remains does not conform to Aryan Hindu notions concerning dogs and black birds,¹⁹²⁵ especially likely since these sites were pre-Indo-European. As we know the Vedic Aryans cremated their dead, and from the next two vedic passages, were none too keen to have their remains devoured by dogs or black birds.

'Prepare not our bodies for the dog, or the jackal; for the aliklavas, the vultures, and the black birds! Thy greedy insects, O Lord of the Cattle, and thy birds shall not get us to devour!' ¹⁹²⁶

'Far from us shall go the jackals, evil omens, dogs; far shall go the mourning women who bewail misfortune with dishevelled hair!' ¹⁹²⁷

VEDIC ARYANS DID NOT
WANT THEIR BODIES
EATEN BY DOGS AND
BIRDS

According to the late Professor Gimbutas the corpses of the megalithic era were informally presented in locations where vultures came down to feed on the cadaver. There are also the famed megalithic tombs of Britain; homes for jumbled defleshed skeletal material. Features of such sites include being roofed with a single rock slab, with a towering funnel rising above the chamber, and an eastwards facing corridor or wall opening. These bone repositories therefore resemble Magian 'Towers of Silence' or 'astodans' in important respects. An open wall section, especially on the eastern wall, was a structural modification common to many of the places excavated in Ireland. In a Magian context such a hole was seen as a crucial exit-point, a pathway to the Sun, for souls departing the death ground every dawn. So what we have here is a comparable description of a Magian death ground, a considerable distance from Iran.

MEGALITHIC OSSUARIES
POSSESS SIMILAR
STRUCTURAL FEATURES
TO MAGIAN DEATH
HOUSES

When the Bronze Age Celts first arrived in the British Isles, Europe's closest land to the setting sun, they brought an elaborate dualistic ritual calendar, and a range of other customs. As the colonists worked their way inland they may have been shocked to find Stonehenge and the seemingly eternal megalithic monuments that studded the British landscape. But we don't know this for sure. Nor do we know if they marvelled over their similarity to Persia's Magian excarnation grounds. What we do know is these gargantuan constructions were erected millennia previously by unknown hands. If they were death grounds, they used different construction techniques to those preferred in Iran. Ireland has a hardy geology, well endowed with basalt, with which the ancients constructed the archaic pre-Celtic cult sites. Whereas in Iran more permanent death grounds were made from mud bricks, or cut sandstone, and so are less likely to survive thousands of years of exposure to the elements and various invaders.

Communal burial zones for featuring disarticulated remains are found in northern England dating to the Later Neolithic. An archaeologist named Roger Mercer found evidence of excarnation at Hambledon Hill in England, which was particularly noticeable in the case of a young lad whose remains were dragged a certain distance from a bone-filled enclosure by an animal about 3400 BC.¹⁹²⁸

More than 250 barrow mounds have been found in the vicinity of Stonehenge.¹⁹²⁹ Frequently cranial remains differ from those archaeologists are accustomed to finding in the area, giving rise to a belief they belonged to an intrusive culture, or even the biproduct of interbreeding over a long period.¹⁹²⁹

Possible insitu examples of excarnation, dating c. 2200 BC can be found in Northhamptonshire.¹⁹²⁹ In spite of its insular nature, Britain was by no means alienated from social contact with continental Europe. Whatever inhumations continued in Wessex around that time, appear connected with rites performed in the Alps, Germany and France. By the time we reach the Iron Age, funerary practices carry stylistic features common to many parts of Europe.¹⁹²⁹ Somewhere around 1900 BC cremation became more fashionable, with the ashen wake deposited in burial urns, and over time even thrown directly into a pit.¹⁹²⁹

Excarnation re-appears in Early Iron Age Dorset featuring incomplete and disturbed assemblages interred within pits at the heights of 'hill forts' (possibly burial grounds dug into purposefully built mounds of some height).¹⁹²⁹

About the time of the Roman invasion local Celtic tribesmen seem to have reverted to cremation, and there is some reason to believe that they exposed corpses to the elements for a good while prior to the obsequies of incineration.¹⁹²⁹

MEGALITHS FOUND IN RUSSIA, MOSTLY DOLMENS, DATING BACK TO 3,000 BC

Some mounds raised in Essex between 100-300 AD have, due to optimum soil conditions, provided proof that incense and floral objects during burial. Around this time there is a proliferation of remains that were beheaded either before or after death. I personally believe it signifies an atonement ritual long practiced in the Orient. Celtic folklore points to it being an integral feature of their native culture, rather than a criminal punishment.

Where ancient British remains went uncremated, they are, as a rule, oriented W-E or N-S.¹⁹²⁹

If the Irish megalithic constructions prove to be the handiwork of Magian engineers, they are evidence of the oldest existing *dakmas* in the world. One Neolithic tomb site from Co. Kerry, Ireland, had corridors a mere 0.5 to 1.3 meters high, in other words accessible only when stooping low, or even barred from human passage.¹⁹³⁰ But dogs and birds would have had no such troubles getting in and out. It possessed three concentric passages arranged around a central pit area possessing accumulated charcoal and pieces of burned bone, potential evidence for a fire in which skeletal material was reduced to ash.¹⁹³⁰ It seems to have been open on the eastern wall.¹⁹³⁰ Was this a Neolithic *astodan* in Ireland? The Celtic site at Navan Fort in Ireland (1st Century BC) must have taken a lot of effort to build, and yet it was covered over with limestone debris and turf, barely a few years after it was made. The structure was originally composed of concentric circles of upright wooden posts, with a large central pit and a sloped ramp leading down to it. No charcoal remains were located at the pit, so it was not used for fire.¹⁹³¹ Perhaps Navan Fort was not a temple, strictly speaking, but a '*dakma*' death house, which was filled in by its builders once it had served its usefulness.

The writings of Aenghus infer that Glendalough (in Ireland) once served not only as an important cemetery, but the most important one in the Western world.¹⁹³² Considering the Magian-style customs found in Celtic Gaul and various regions of Europe, his comments may reveal that Glendalough was a major funerary centre. For instance, Navan Fort in Co. Armagh, Ireland is described as a royal cemetery,¹⁹³² wherein resided the remains of royal personages and druids (ie; Magi).

A strange 6th Century AD tale from the *Gothic Wars* may have some bearing on this. Procopius mentions that Britons had a duty to row their boats to the continent nightly to pick up the souls of the dead and ferry them back to Britain.¹⁹³³ Despite inconsistencies which Procopius recorded regarding Britain, there may be an element of truth behind this particular account. Perhaps seamen carted the bodies of deceased Celts from druidic Gaul back to Magian *astodans* located in Britain proper, or in Ireland. Whether the tale can be considered factual is best left up to the reader.

Their many similarities to Magian funerary centres are either related or purely coincidental. If they are unrelated then no more need be said. But if a number of megalithic and Celtic sites (like Gavrinis, Newgrange, Navan Fort, Carrowkeel, Creevykeel, the Orkneys and Knowth) were *astodans*, then this would prove that Magian-style excarnation practices existed in Europe long before the accepted date for Zarathustra's period of religious influence. Under these circumstances the megalithic ossuaries may have been an ancient progenitor for the Magian excarnation culture, perhaps belonging to extremely primitive Magian communities living much farther west than we could ever have been expected, many millennia before Magianism is thought to have begun.

The arrival of the Aryan hordes into Europe, amongst whom were the so-called Kurgan people, has long been a topic of discussion. Since late last century they were viewed as a predominant cultural influence on early paganism in the West. Be that as it may, we have just traversed evidence for the existence of Magian (not shamanic) defleshing customs in Europe somewhat earlier than the Bronze Age. This indicates one of two things. Either there was a movement of Iranians and Magi onto the continent in the Late Paleolithic, and out into Asia, or the megalithic excarnations of Old Europe predated Zoroastrianism, perhaps influencing the ascendancy of excarnation customs into Iran.

The Russian Academy of Sciences is belatedly cataloguing some 3,000 dolmens along the Black Sea coast in the Krasnodar region, and Caucasian foothills. Based on their current estimates they date to between 1,000 and 3,000 BC.¹⁹³⁴ Archaeologists there hope to document features common to these younger Caucasian megaliths, and the much older Western European constructions. Nevertheless the heart of Magian civilisation predominantly centred

around the Caspian and Iran (according to Persian religious texts), so I tend to believe that it had always been located there. That Magianism originated in the West and later abandoned western Europe in favour of a shift to Iran, bringing excarnation culture with them, appears to be an unsound theory. In spite of this it may be significant that the earliest Magian calendar suited the needs of a people who lived at far more northerly latitudes. Such a detail could be introduced into the argument.

Long after the Neolithic period had come to a close, in the mid 6th Century BC, people of the Danube region began organising special excarnation sites or death grounds, where the remains of their kinfolk were laid out for the birds. This change in their excarnation practice was a very late development, and occurred at a time when Indo-European culture was part of their daily lives. In assessing this information we find clues that the waves of invaders who came into Europe were Magian, or Indo-Europeans who had a certain Magian component, or Vedic Indo-Europeans who had adopted an unspecified number of Magian customs. In places like Ireland, Poland and Germany the archeological remains of bones or ashes were often accompanied by razors and (bone) scrapers,¹⁹³⁵ objects conceivably linked to the Central Asian practice of cutting meat from the corpse so that it can be hand-fed to dogs, vultures and carrion birds, slice by slice. Present day Eurasian Buddhists still farewell their dead in precisely this way. Following the stripping of the corpse the bones are buried or cremated.

Baptism, holy water and purification rites

Magi believed more than a thousand things could make you unclean. To remedy this defilement of body and soul, various ceremonies were enacted to purify the body, the most important of which were ablutions. These purificatory washing ceremonies were the only things enabling a Magian to maintain their sanctity. Without recourse to them, a Magian remained physically and spiritually defiled. A major requirement of spiritual ablutions was, naturally, water. Magi used holy water for this purpose, normally drawn from a natural spring, especially one with reputed healing capabilities then consecrated by ritual incantations. For it was not so much the water that came from above, but that which welled from beneath the ground,¹⁹³⁶ that the Magi considered holiest, nourishing, invigorating, salvific, and cleansing - it was the blood of the earth, which brought life to all things on the planet.

The circumstances under which ablutions had to take place were cited in the heavily Magianised *Vendidad*, which was a catalogue of sinful deeds, penance, ablutions, punishments and lashes of the whip, all rightly apportioned, and fit for the crime. Purification was required from contact with plagues, demons and spirits, or from black magic, evil thoughts, evil dreams, evil words spoken, curses, touching dead animal matter, bloodshed, murder, oath-breaking, sexual depravity, having extinguished a fire, having been near a corpse, or a pregnant or menstrual woman, polluting the elements, or for the exorcism of demons. A penitent would simply wash themselves with a little water, or if they had been exceptionally sinful they might have to undergo a *Bareshnum* rite, which necessitated the use of *omez*. For instance, those who had been exposed to plague, or had perpetrated a death sin, would normally experience the onerous duty of a *omez* washing.

Padyab - Penitential abluion

The Magian *padyab* penitential rite demanded a ritual washing with spring water (known to the Magi in former times as *Zaotrha*). A second rite of purification demanded the use of *omez*, a mixture of water and bull or sheep urine, or urine from one's closest kinsmen.¹⁹³⁷ Defiled belts, and footwear had to be washed in it and clothing soaked in the mixture of cow's urine and water before being left out to dry for some time. Only then could unclean items be rendered pure once more. A similar though different purification rite is found in the Indian *Puranas*.

'One should bathe in the urine of a cow, maintain himself with milk and move with the cows eating after they had eaten. It is known as govrata. One would become free from the sins in a month. He would attain the world of cows and reach heaven'.¹⁹³⁸

One can infer that urine was used by certain European pagans while washing themselves, and that their usage of urine was more Magian in nature than Hindu. St. Sturma observed communal bathing in Slavia as he was en-route to Mainz from Thuringia.¹⁹³⁹ There he *'came upon a great number of (pagan) Slaos swimming in the river and washing*

rites of purification

defilement and sins
needed to be washed
away

omez - water mixed

slavs bathing

themselves. When the ass on which he was riding saw their naked bodies he began to quiver with fear, and even the man of God could not bear the stench of them'.¹⁵³⁹ The strange thing is their unclotted bodies stank even after they had washed themselves. I believe this account is actually describing a communal *Nan* river-bathing session on a pagan ceremonial feast day, followed by the liberal use of *gomez* after emerging from the water. The folk in question were Slavic, though some could plausibly have been of mixed Bulgarian, Saxon or Scandinavian ethnicity.

POSSIBLE SLAV USAGE OF
GOMEZ

So were German (Christian) claims that the Slavs stank like nothing you had ever smelt¹⁹⁴⁰ really only mud-slinging? Or had they come across pious pagan Slavs who reeked of animal or human urine? The answer seems evident in the Russian language. From the few words beginning with *moch-*, we find that they mainly relate to the urinary function, such as *mocha* ('urine'), and yet there are two words *mochyoniy* ('steep' or 'soak') and *mochit'* ('to wet' 'to soak' or 'to steep').¹⁹⁴¹ It seems a little incongruous to have words meaning 'urine' and 'steeping' emanating from the same root word. This suggests that urine served as a cleansing agent. Moreover the Slavic word 'to wash' *myti* or *miti* is related to the Lithuanian *maudyti* or the Latvian *maut*, which are connected with the Old Indian *mutram* or Avestan *mutram* both of which mean 'filth or dirt'.¹⁹⁴² These are apparently also connected with the Irish word *mum* ('urine').

The *Primary Chronicle* talked of Bulgars drinking down, or washing themselves with moistened excrement.¹⁹⁴³ If accurate such an inclusion might describe Bulgars washing in *gomez*, or if excrement is taken to mean faeces it may describe a defilement ceremony of the sort perpetrated by black wizards.

URINE ASCRIBED
AMAZING POWERS

Until comparatively recent times, in distant Scotland (especially at *Morvern* and Breadalbane) and even Russia, there is a belief in the curative effects of urine.¹⁹⁴⁴ In Scotland it was believed that urine bestowed protection upon those things washed by it; it was used as a benediction for plough cattle or, as in Russia, to heal the sick. Clearly urine was used to wash things in northern Britain, an area formerly controlled by Norse invaders and colonists. Moreover they also believed urine caused much offense to the fairies.¹⁹⁴⁵ The Norsemen in Iceland used to cleanse their garments in diluted cow's urine, which had been deliberately collected up from the cattle, and contained in specially stored buckets.¹⁹⁴⁶ Comparatively modern examples do exist. As recently as last century, the womenfolk of Yorkshire reportedly used the contents of chamber pots to wash their hair and faces.¹⁹⁴⁷

SOME PRUSSAINS
REFUSED TO WASH, IN
HONOUR OF THEIR GODS

In Eastern Europe one's pagan dualistic persuasion determined what sorts of behaviour were appropriate or inappropriate. Prussians preferred to wear the sort of cloth more favoured by their respective gods, some linen, others wool.¹⁹⁴⁸ For some Prussians it was improper to ride a white horse, whereas others considered it bad to mount a black one. Likewise 'Some Prussians, in honour of their gods, bathe daily; others never'.¹⁹⁴⁸ Here washing or staying filthy were determined by one's religious persuasion, and, in this particular instance, I believe suggestive of white cleanliness, black filthiness, or Magian waterless washing.

THE NAN BATHING RITE

Before the advent of later *nan* bathing, Magians would not directly wash in natural water sources. Instead the Magi (and Scythians) exfoliated with incensed mud packs, or were made clean in sauna-like bath houses that leached impurities from their skin pores. The dirt could then be wiped off, and did not provide a direct source of contamination for water bodies like rivers, ponds and so forth.

BATH HOUSES

Bath houses were important locations for the performance of bodily cleansing in Eastern Europe. In *the Kalevala* the Finns are portrayed as having them. In the *Primary Chronicle*, pagan Russians are described as dousing themselves with an unspecified liquid and ferociously whipping themselves with a bundle of birch switches inside their bath houses. The latter devotion resembles Magian and, more particularly, Mithraic penitential bathing.

It is noteworthy that medieval pagan Rus' bath houses vaguely resembled Herodotus' description of Scythian hemp tents, but were of more permanent construction. In both instances water was poured onto red hot stones to produce copious amounts of steam, which filled the bath-house's interior. Though pagan Russians grew hemp, we do not know if they continued the Scythian custom of throwing hemp seeds onto the hot stones, allowing them to get 'stoned' while they bathed. The Scythian custom of 'skull cups' was still extant in medieval Rus', why not bath house hemp sessions?

The Irish had sweat baths too, reminiscent of Turkish baths,¹⁹⁴⁹ which enabled villagers to cleanse themselves.

Nan - Ritual bathing

The *nan* was a ritual bath or full-immersion baptism during which a newly born child was cleansed of its impurities and dressed in its sacred white shirt. It was conceptually similar to the ablutions which Hindus take in the Ganges River, to purify themselves from sins and other bodily impurities.

At no point was the *nan* purification rite mentioned as having been practiced by Magians within the Magian texts, and so we must question its original acceptability in the Magian religion. Around the time of Christ, Strabo shed some light on their bathing practices, and it did not include bathing in bodies of water.

'For the Persians neither urinate, nor wash themselves, in a river; nor yet bathe therein or cast therein anything dead or any other thing that is considered unclean'.¹⁹⁵⁰

This is of course true of many early Magians, but in later times, under Hindu and Buddhist influences, the Parsee exiles residing in India began to take ritual baths. A date for this acquisition is unknown, nor do we know how widespread the custom became among the Magians living in Eastern Europe, China or deepest Eurasia. As far as Ibn Fadlan knew, the Slavs washed stark naked, both males and females together.¹⁹⁵¹ But there was to be no lascivious skinny-dipping. Any incidents of promiscuous intercourse were punishable by execution, the offenders being slit in half.¹⁹⁵¹ Whether Russian river bathing was related to the *nan* is unclear, though I would say their custom is closer to the way of the Hindu than the traditional Magian. Incidents where Slavs bathed in a river may have been rituals dedicated to Perun, the thunder god whose names and functions seem derived from the Hindu Daeva Indra. By bathing during the first thunder storm of the year, a Russian was said to be fortified against the affliction of diseases.¹⁹⁵²

Bareshnum - Cleansing ritual

One of the most gruelling purification rites was the *bareshnum*. This rite had two major variants, one a more lavish affair performed at a *bareshnum* ground, the other a vital and extremely powerful heathen baptism. The latter form was a pagan baptism of the forehead, which had to be performed following the birth of a child using consecrated water. This specially blessed pagan holy water was normally sprinkled over the brow, as stated in the following quotations.

'In revelation it says, if any one who has not performed the Bareshnum shall die, the demons make him as though he were a corpse kept one month in the hot season. And, when the soul arrives at the head of the Kirvat bridge, the archangels and angels complain of the stench of that soul, and are not able to make up its account and reckoning. It remains at the Kirvat bridge and is not able to pass; it experiences much repentance and has no advantage from it'.¹⁹⁵³

'If it be necessary for anyone to perform the Bareshnum of the head, and he be able to do it, but does not do it, if he performs the ceremonial ablution of the head a thousand times, it does not become pure from that pollution...it does not become pure through any other thing except through the liquid consecrated by the religious formula'.¹⁹⁵⁴

The *bareshnum*¹⁹⁵⁵ ceremony took place in an open field with relatively dry ground, and devoid of trees. Basically the site where it took place was made from a series of nine holes (2-4 fingers deep) dug in a straight line, in groups of three. Water and *gomez* were placed in various holes. Each group of holes was separated from the others by a gap of nine feet. The gap between each group was traversed by walking across a series of stones which were properly aligned and set in the ground. The groups of holes were surrounded by a total of twelve furrows which had been gouged from the earth using an iron blade, perhaps a sword or a plough. Over a period of nine nights the penitent underwent an arduous set of ablutions which entailed the washing of one's body and clothing with water (in the first set of three holes) and *gomez* (in the second and third set of three holes). From outside the furrows, the cleanser (see the *True History of Wizards and Witches*) reached into the holes with a spoon on the end of a lengthy stick, and sprinkled the person with water or *gomez*. The penitent progressed to each hole walking the series of stepping stones

already mentioned. Also connected with this was the *magh*, or stone ablution seat, upon which the defiled person sat or crouched while the cleanser went about his work, pouring water and *gomez* over the individual. On each of the nine penitential days the person, and the clothes they wore at the time of the offense, was repeatedly washed. In a more recent form of *bareshnum* ground, the holes were filled with standing stones instead of water and *gomez*. The repentant sinner sat crouched on these stones as the magus cleanser washed away his sins.¹⁹⁵⁶

Patet - Magian sacramental confession

The Magi professed that sinners should avail themselves of the *patet*, a penitential ceremony requiring the oral confession and renunciation of serious sins. Those guilty of a *death sin* (*Marg-argan*) had to utter the *patet* in the presence of a *dastur* (the Magian equivalent of a Christian bishop). He heard the confession of their wickedness, and gave absolution for whatever sins they had honestly admitted to. As you will soon see, the power to forgive sins, through a rite of confession, was the domain of bishops within the Christian world, or to parish priests, but only if they had been specially commissioned as confessors by their bishop.

At the completion of the *patet* rite the penitent solemnly vowed to avoid sinning again. *Patet* was strictly a form of spiritual cleansing. In no way did it obviate the need to undergo physical punishment for their sin in this world. It merely prepared the soul for its reunification with God in heaven. Full forgiveness was not complete until penitents had placed themselves at the disposal of the Magi, to perform a physical penance of a magus' choice. Without this, the person could expect to undergo lengthy excruciating purgation during their three days in the underworld. Some sins were inexpiable, meaning that although a soul might be destined to reach heaven, the punishment attached to the more heinous classes of sin could not be in any way negated in the next world. As heavy as these burdens may have seemed to the faithful, the Magi taught them:

*'It is not desirable for any one that he should become hopeless of the pity and forgiveness of Ahura Mazda, and fix his heart outwardly on this.'*¹⁹⁵⁷

For this reason the high priests, the *dasturs*, provided an avenue of forgiveness for sinners, acting on the creator's behalf. *The Vendidad* (especially *Fargard VIII: 29*) explains the *patet's* efficacy in extinguishing wrongdoing, and *Shayast La Shayast VIII* expounds its brilliance in the renunciation and atonement of *death sins* (especially crimes against 'good' life and the generative act).

While the great demon was the sole cause of mortal destruction, he might also destroy our souls if our bad works gave him power. Good works helped provide protection against punishment in the afterlife. Through them, ablutions and varied penances came *'the preservation of all good creations from every evil'*.

Sages, the wise men - while magian confessors

'the wise and the ancients say that when a man becomes fifteen years of age it is necessary that he takes one of the angels as his own protection (ie; a particular guardian angel), that he takes one of the wise as his own sage, and that he takes one of the high-priests and officiating priests as his own high-priest. So that, if, any time, a bereavement approaches, he may beg a favour from the archangels, in order that it may furnish an escape from that bereavement'. And, any time any affair comes forward, and he has to have opinion and advice, he holds a consultation with that sage, while the sage tells him his opinion. And, if any question as to proper and improper comes forward, he speaks with that high-priest, so that he may tell him in reply. When the instructions of these three persons are brought to pass, carrying out the commands of the sacred being is accomplished. Especially the instructions of the high-priests, because their satisfaction is connected with the satisfaction of the sacred being; and the high-

THE FORGIVENESS OF SINNERS

ACCEPTING A MAGUS AS ONE'S PERSONAL CONFIDANT IN MATTERS SECULAR AND RELIGIOUS

priests possess so much dignity in the presence of the sacred being, the good and propitious, that they are quite able to forgive any trivial one of the sins of mankind, and Hormazd (Ahura Mazda), the good and propitious, quickly forgives that sin for the high-priest. Therefore carrying out the commands of the high-priests becomes incumbent on every one; and the fulfilment of this maxim is better than that of a whole assemblage of maxims'.¹⁹⁵⁸

Besides the *patet*, other avenues of penitential sacrifice existed, allowing white Magian families to nullify temporal suffering for specific sins in the next world.

- | | | |
|----|--|--------------|
| 1. | The giving of charitable alms to the poor and needy. | ALMS |
| 2. | The performance of works and deeds in the service of others. | GOOD WORKS |
| 3. | The offering up of prayers to God was also very high on the list. | PRAYERS |
| 4. | The sacrifice of personal 'honourable wealth' with a value comparable to the magnitude of the sin committed by the penitent. | FLOGGINGS |
| 5. | Submitting oneself to a magus to be flogged with the whip / scourge. | |
| 6. | Turning oneself over to a magus to be beheaded and sometimes flayed. | SIN PAYMENTS |

As for penitential beheadings, archaeologically significant human remains were discovered in a 5000-year-old city, situated in Sistan-Baluchistan.¹⁹⁵⁹ Most were buried after having their heads lopped off, and a number of crania were arranged in such a way as to suggest ritual or penal killings.¹⁹⁵⁹ Renewed archaeological interest in Iran is sure to recover more of the same, and further proof that the archaeological evidence conforms with practices enshrined in their religious laws. Considering the age of the remains found in Sistan-Baluchistan the rite is very old.

Having just viewed a vast range of Magian funeral customs I am now compelled to traverse cosmological views peculiar to ancient Iran, Finland, Russia and the Baltic region. As you will see folklore indigenous to these areas preserves key elements of Aryan spirituality and religious teaching.

The Zoroastrian afterlife¹⁹⁶⁰

HEAVEN

In Persia c. 618 BC, the pagan prophet Zarathustra spoke of seeing God as a massive fire, from which every flame, plant, animal or thing in the world, and every human soul emanated. Called Ahura Mazda, the wise and just Lord, He transited the gulf between heaven and earth in his fiery chariot of solar brilliance. Propelled by massive eagle's wings, he was ever on the look out for the great warrior demon, the Daeva Indra. Indra, that mighty belligerent of evil (according to the Zoroastrian view) thwarted the passage of imperfect souls across the Kinvat bridge into the heaven of goodness, into the resplendent heavenly city.

With Ahura Mazda resided Gayomart, the first man in heaven, and progenitor of Mashya and Mashyoi, the first man and woman on earth, as well as Gosh, the soul of the divine bull from whose body all earthly things were made, and in whom dwelled the souls of sacrificed cattle.

On Judgement Day,¹⁹⁶¹ the Sayoshant was to return once again and raise the people from their graves. He would then weigh the sum of each soul's thoughts, words and deeds, then they were given their just reward, according to their *exact* weight. Sraosha and his assistants sorted them into two groups; the good and the evil. For three days wrongdoers were to be taken into the world below, watching the good enjoy three blissful days in heaven. There was to be much crying. The lands would be melted by his halo and both good and evil alike compelled to traverse a stream of molten metal, to be washed of their sins in preparation for their entrance into heaven, and reunification with the heavenly lord. In that boiling metal their sins were to burn away, yet their souls would not be killed.

Thereafter, the Sayoshant was to dispense *Hush* to the gathered assembly, the white *Haoma* meal that brought on immortality. God's archangels would then do battle with Ahriman, Azi-dahaka and the arch-demons, and cast them *and the damned who had committed mortal (death) sins*, without Patet, down into the fiery furnace, entombed and heinously punished. In Zarathustra's mind, the wicked were subjected to perpetual damnation and long-suffering.

THE WARRIOR-SAVIOUR
FORETOLD

EARTH

GENII INHABITED THIS
WORLD, ALONGSIDE MAN

But mankind was not alone. All over the earth could be found genii of both good and evil disposition, known as *Yazatas* and *Drugs*. These beings, of whom angels were the highest form, were essentially spiritual warriors of the heavenly war, normally in anthropomorphic form. They had considerable magical abilities and a propensity to come to the aid of, or indeed harm humanity in the case of *Drugs*.

At the end of all the ages, when the things that made us all different had disappeared (age, sex, caste etc), man would already have been visited by a number of past salvific prophets who came to point people in the right direction of moral reform. Zoroastrians awaited the last Sayoshant, he who was an incarnation of the first man (the first and the last), the word, the living embodiment of the Truth (*Astvatsereta*), the mighty speared one, who rode with horses, a world Messiah who would transfigure the world (as the sun stood still in the sky for thirty days), resurrect humanity and bring drastic changes to Zoroastrianism.

THE MOTHER OF THE
REDEEMER

He himself was to have been of the "seed" of Zoroaster, born through a Virgin. The virgin's name was to be *Gobak-abu*, a pure and sublime maiden who through the act of giving birth to "the imparter of righteousness" would become a powerful intercessor, the surpasser of every problem.¹⁹⁶²

THE KINVAT BRIDGE

*"The Judicial Peak is that of the middle of the world, the height of a hundred men, on which the Kirvat bridge stands; and they take account of the soul at that place. The Arezur ridge (of the Alburz mountain) is a summit at the gate of hell, where they always hold the concourse of the demons".*¹⁹⁶³

Fig 110. Painting of the saved and the damned; St Katherine's monastery, Mt Sinai

Kinvat, "The Bridge of the Separator" was a trap preventing the unjust from walking into the heaven of the righteous; for them it was as thin as thread. One got to Kinvat by ascending Mt Albruz, and from the summit of that mountain the soul walked onto the star bridge, as far as the star station befitting their level of good works.

But before one's soul could reach the bridge it first had to visit *Atas-gah*, a fiery place (the purgatorial fire). From there the soul progressed onto the star station, then to the moon, thence the sun, and then finally to Kinvat, the bridge leading across to heaven.¹⁹⁶⁴

The bridge of the Requitor, or the Separator, atop Mount Albruz was impassable to the unclean, for the greater the weight of a person's sins, the thinner it became, unto the thickness of a razor's edge,¹⁹⁶⁵ ultimately causing transgressors to topple to their purgation or long suffering in the underworld

below.¹⁹⁶⁶ Mithra, the watchful sentinel of truth and justice stood guard there, further helping to guarantee that nothing false or impure could enter and defile heaven. In the Vedic Aryan view, Indra (who according to the Magi was the chief deity of the "apostate idolators", and Zurvanites, accomplished this same task.¹⁹⁶⁷

Sudkar Nask mentioned the bridge punishments for sinners attempting to make their way over Kinvat. For example "a woman who gives herself in marriage to a righteous man, and comes away from him; such as when a hedgehog should be constantly going in and coming out by her sexual organ; and the cutting off of her way from the best existence".¹⁹⁶⁸

Zurvanites and Mithraic devotees didn't believe that the underworld was going to be as bad as what the Zoroastrians said, at worst just a little shadowy and topsyturvy. For although there would be punishment for the unrepentant, some of them believed that the Good Ahura Mazda would never surrender his creations to suffering for all eternity. Contrary to this later Zoroastrian/Zurvanite view, Zoroaster was adamant about the perpetual nature of their suffering; weeping, bad food, torture, and the gnashing of teeth.

St Katherine's monastery, located on the slopes of Mt Sinai, has a wall painting depicting the attempts of Christian souls trying to climb up a ladder and into

heaven.¹⁶⁹ As they continued their ascent, demons carrying noosed ropes (which call to mind the Zoroastrian “snake catcher” nooses) snared some of them by the neck or hands, and dragged them off the narrow pathway to their eternal damnation in the flames below, head first. Such notions resemble Zoroastrian/Zurvanite scriptural references describing what occurs just after death. For example, in *Bundahishm* and *Vendidad*,¹⁹⁷⁰ strangulation by a noose is depicted as the traditional Zoroastrian/Zurvanite penalty for the damned, particularly apostates and heretics. In the painting mentioned (fig 110) some demons are seen carrying bows, or tools and appliances which would soon be ingeniously applied to the bodies of the wicked, in a manner befitting of their crimes.

DEMONS ENSNARING
THE DAMNED WITH
NOOSED LASSOES

Such a place of irony, woe and lamentation was quite fresh in the mediaeval Christian’s mind. But where does this kind of imagery come from, since very little of it was mentioned in the Bible? The Zoroastrian view of the fate inherited by the damned is almost identical to that of the entire Church during the first 1,000 years of its history! As you will see, the two religions were in some way deeply intertwined. Other customs lived on too. Merely opening the Bible and comparing it with Zoroastrian scripture reveals amazing similarities, some parts seem like almost direct quotations! In Part II you will discover the extent of these similarities, and the role they played in the formation of Christian ‘heresy’.

The older an Eastern or Western monastery is, the more chance you have of finding ossuaries, where the bodies of the brothers, priests, nuns and the faithful were suspended in wall niches, or placed in lead caskets until their bodies had rotted. Finally their skeletal remains were gathered up and heaped onto a gigantic pile.

THE COUNTERWORLD - THE HOUSE OF EVIL

The underworld was accessed by a journey down a great fire blacked abyss lined with spikes and blades, and from whence issued the odorous smoke which belched from the House of Evil. At the moment of death, the screaming souls of the wicked were shackled by the *Vae*, the soul escorts of wrong-doers, and brought down to the lair of the Prince of demons, Ahriman, who was the incarnation of death and Father of Evil. Upon arrival the soul was seized upon by demons from every direction and subjected to excruciating punishments. For each unatoned mortal sin they had committed in the earthly world they were decapitated three times. These hapless inmates spent their time waiting upon their master the black god and suffering torments ‘til freed; for some it would feel like an eternity. Black Magi and witches who performed heroically detestable evils in the name Ahriman would transform into demonic and serpent forms upon arrival, and there be seated on thrones from which they would dispense punishments upon those whose works were evil, but who had not made an oath of allegiance to Ahriman.

HELL

EVIL-DOERS TAKE THEIR
RESIDENCE IN HELL, AS
LORDS IN THE INFERNAL
KINGDOM

*“Regarding the cold, dry, stony, and dark interior of mysterious hell it say, that the darkness is fit to grasp with the hand, and the stench is fit to cut with a knife, and if they inflict the punishment of thousand men within a single span, they think they are alone; and the loneliness is worse than its punishment ... and their food is brimstone and of succulents the lizard, and other evil and wretchedness”.*¹⁹⁷¹

“the darkness, the intensity and far-reaching bottomlessness of the blackness, and the absence of goodness in hell; and the proximity to stench, close concealment, sleet-pelted clambering, frozen, advancing, painful condition, distressed state, and awful fear of those in hell” And it is over this hellish pit that Kinvat spans, 9-spears wide for the good-doer, razor-thin for the wicked.

THE VAR

According to accounts in *The Book of Bundahishm*, mountains sprang forth from the earth during the conflict between the creator and the demons. These mountains were linked with the three cosmological zones, heaven at their peaks, demons beneath their bases, and in between mankind, who often lived on their slopes or dug dwellings into their sides. For example, *Dinkard*¹⁹⁷² speaks of “the construction of his seven dwellings in the midst of Albruz, one of gold, two of silver, two of steel, and two of crystal”. Echoes of this Magian scripture can be found in Russian mythology which also recalls tales of mountains of glass and iron.¹⁹⁷³

THE HALL BENEATH
THE GROUND

ITS CONSTRUCTION,
AND ROLE IN THE
SALVATION OF THE
MAGIANS

One construction connected with the mountains was the Great Var, which should not be confused with the house of evil.

“And Ahura Mazda spake unto Yima, saying: O fair Yima, son of Vioanghat! Upon the material world the fatal winters are going to fall, that shall bring the fierce, foul frost; upon the material world the fatal winters are going to fall, that shall make snow-flakes fall thick, even an aredvi deep on the highest tops of mountains. And all the three sorts of beasts shall perish, those that live in the wilderness, and those that live on the tops of the mountains, and those that live in the bosom of the dale, under the shelter of stables.

IT HAD FRESH WATER,
PLANTS, STOCK, AND ITS
OWN UNDERGROUND
LIGHTING

Before that winter, those fields would bear plenty of grass for cattle: now with floods that stream, with snows that melt, it will seem a happy land in the world, the land wherein footprints even of sheep may still be seen. Therefore make a Var, long as a riding-ground on every side of the square, and thither bring the seeds of sheep and oxen, of men, of dogs, of birds, and of red blazing fires...

There thou shalt make waters flow in a bed a hathra long; there thou shalt settle birds, by the ever-green banks, that bear never-failing food. There thou shalt establish dwelling places, consisting of a house with a balcony, a courtyard, and a gallery. Thither thou shalt bring the seeds of men and women, of the greatest, best, and finest kinds on this earth; thither thou shalt bring the seeds of every kind of cattle, of the greatest, best, and finest kinds on this earth. Thither thou shalt bring the seeds of every kind of tree, of the greatest, best and finest kinds on this earth; thither thou shalt bring the seeds of every kind of fruit, the fullest of food and sweetest of odour. All those seeds shalt thou bring two of every kind, to be kept inexhaustible there, so long as those men shall stay in the Var. In the largest part of the place thou shalt make nine streets, six in the middle part, three in the smallest. To the streets of the largest part thou shalt bring a thousand seeds of men and women; to the streets of the middle part, six hundred; to the streets of the smallest part, three hundred. That Var thou shalt seal up with the golden ring, and thou shalt make a door, and a window self-shining within.....

*O Maker of the material world, thou Holy One! What (kinds of) lights are there to give light in the Var which Yima made?
Ahura Mazda answered: There are uncreated lights and created lights....*

And the men in the Var which Yima made live the happiest life (of all)!”¹⁹⁷⁴

Deep in the bowels of our earth, it was said, lay this Var, an enormous underground hall of dimensions that stifle the imagination. In it were to be built houses, streets and pastures for every conceivable animal (both domestic and wild), plus a water source and extensive gardens to nourish all things within. According to the myths of the Magi, man first discovered how to work iron in the Var, and to make cloth and music. Only people of pure Aryan bloodlineage were allowed to live in there, people born without any blemish or handicap.

Throughout history, religion has inspired humanity to build its most incredible monuments. In ancient Egypt and Crete men built labyrinths for ritual purposes, and in Anatolia, there are around 100 underground, multi-level cities of admirable size, mostly built by the ancient Hittites.

Bundahishm talks of Airan-veg as being the location of the great Var,¹⁹⁷⁵ which was situated in the middle of Pars, in Sruva, beneath Mt Yimakan.¹⁹⁷⁶ According to the late Prof West this would make it near the town of Damaghan in the district of Khurasan. It has also been suggested in Gamagan in Pars. The word Sruva may also indicate that it was located between Shiraz and Fasa. It has yet to be found. Of interest is Magian scripture which reveals that the subterranean Var was once ruled by a man called Aurvata-d-nar,¹⁹⁷⁷ which might be a myth, but might also reveal it once had its own governor.

FOOD, EQUIPMENT AND
GOODS WERE KEPT THERE
IN READINESS FOR THE
GREAT BATTLE, DURING
THE END TIMES

The Var was to be built in readiness for the end of the world, when there would be the advent of a dire Winter, and fires were to fall from the sky and obliterate all life on the face of the planet (a point also intimated by the Druids). Everything needed to re-populate and restock the flora and fauna of the “new earth” was to be prepared in readiness for that day, and kept inside the Var to be resown in the post-apocalyptic era. The Magian race would be the only ones to survive this universal destruction visited upon the world, by emerging from these subterranean shelters. The Var had to have multiple storeys, self-shining windows and artificial lighting, roads, plumbing, and a portal sealed by a door and a gilded ring.¹⁹⁷⁸ The completeness of their preparations of course presupposes that they would know when this wintry and fiery death was to occur, or else they wouldn’t have been able to enter their underground shelter in time.

SELF-SHINING LIGHTS

Several years ago there were tabloid newspaper reports that a Siberian drilling team searching for oil near the Urals had drilled down so far that they broke through into a cavity at a considerable depth. According to the tale,

they took to their heels upon hearing screaming and cries of sorrow from down there. Obviously there could be a number of very earthly explanation for this story. But it might also be, that the tales of the underneath lands still live on among the superstitions of Russians living far out in the countryside.

The Finnish afterlife¹⁹⁷⁹

EARTH

According to the Finns, the earth was inhabited by a range of good and evil spirits which interfered in the lives of mankind, the souls of one's ancestors and game animals slain during hunting expeditions. Living spirits resided within game, trees, plants, mosses, water, air and were ruled over by their many spiritual lords and mistresses. These spirits which animated all things were known as *haltija*.

THE HEAVENS

According to the myths of the Finnish *Kalevala* (epic poetry describing the beginnings of all existence), the multi-layered heavens of the Finns was governed by Jumala and his wife Akka, the god and goddess of the sky. Each planet in the sky was worshiped as a god, as were all the stars. Finns believed them to be drops of egg white splashed across the heavens, spilled from the creation egg.

The *scaup* bird came to roost on the knee of the water mother, as it protruded above the water-line. And "there it builds its nest laid its golden eggs"¹⁹⁸⁰. The eggs hatched, and due to the excruciating heat generated by the event the water-mother "jerked her knee". The eggs broke, and from its various components the earth was made

*"The bits changed into good things the pieces into fair things: an egg's lower half became mother earth below an egg's upper half became heaven above; the upper half that was yolk became the sun for shining the upper half that was white became the moon for gleaming; what in an egg was mottled became the stars in the sky"*¹⁹⁸⁰

So the Finnish myth is rather similar to the Aryan conceptual creation of the world, where both heaven and earth were built by the remains of a broken egg laid by a giant duck. The yolk was fashioned into solid earth, hills, rocks, swamps and mountains by the hands of Luonntar (Mother nature). Ancient heroes still dwelt in the Heavens, sometimes venturing down into Tuonela and the earth. In the Heavens was Ilma, Lord of the Air and all of his servile air spirits and entities. Ahti, Lord of the Water dwelt in the heavens, together with all the spirits that lived in it (such as the Nakki, which were no doubt Aryan serpent Nagas that in Hindu tradition lived in the waters under the ground!). Gods (deified human beings) like the mother of Metsola, Pellervoinen, Tuulikki and Tapio were just some high ranking god-like spirits and personages that governed the forests, taiga, tundra and the spirits that dwelt within them. The greatest of these lords was Vainamoinen, a great hero from bygone ages, who discovered fire and brought it to man.

In the tales told by the white and black Finnish shamans, there was a bridge which led to the heavens, which for the unwary became as thin as the edge of a keen blade.¹⁹⁸¹ This is almost identical to the Magian view, which states that , the Bridge of the Separator diminished in size to the thickness of a hair or razor when the wicked tried to cross. Using the comparative method, let us now examine the above synopsis of the *Kalevala* in light of the Aryan *Laws of Manu*; because it allows us to perceive yet another series of parallels between the Finns and the Aryans.

*"This universe existed in the shape of Darkness, unperceived, destitute of distinctive marks, unattainable by reasoning, unknowable, wholly immersed, as it were, in deep sleep. Then the divine Self-existent indiscernible, (but) making (all) this, the great elements and the rest, discernible, appeared with irresistible (creative) power, dispelling the darkness. He who can be perceived by the internal organ (alone), who is subtle, indiscernible, and eternal, who contains all created beings and is inconceivable, shone forth of his own (will)."*¹⁹⁸²

He, desiring to produce beings of many kinds from his own body, first with a thought created the waters, and placed his seed in them. That (seed) became a golden egg, in brilliancy equal to the sun; in that (egg) he himself was born as Brahman, the progenitor of the whole world. The waters are called narah, (for) the waters, are indeed, the offspring of Nara; as they were his first residence, he thence is named Narayana.

From that (first) cause, which is indiscernible, eternal, and both real and unreal, was produced that male (Purusha), who is famed

THE FINNISH CREATION
MYTH

THE FINNISH MYTH
RESEMBLES THAT OF
THE BRAHMANS AND
MAGI

in this world (under the appellation of) Brahman. The divine one resided in that egg during a whole year, then he himself by his thought (alone) divided it into two halves; And out of those two halves he formed heaven and earth, between them the middle sphere, the eight points of the horizon, and the eternal abode of the waters.....”¹⁹⁸²

“He, the Lord, also created the class of the gods, who are endowed with life, and whose nature is action; and the subtle class of the Sadhyas, and the eternal sacrifice. But from fire, wind, and the sun he drew forth the threefold eternal Veda, called Rik, Yagyus, and Saman, for the due performance of the sacrifice.

Time and the divisions of time, the lunar mansions and the planets, the rivers, the oceans, the mountains, plains, and uneven ground, austerity, speech, pleasure, desire, and anger, this whole creation he likewise produced, as he desired to call these beings into existence. Moreover, in order to distinguish actions, he separated merit from demerit, and he caused the creatures to be affected by the pairs (of opposites), such as pain and pleasure. But with the minute perishable particles of the five (elements) which have been mentioned, this whole (world) is framed in due order.

But to whatever course of action the Lord at first appointed each (kind of beings), that alone it has spontaneously adopted in each succeeding creation. Whatever he assigned to each at the (first) creation, noxiousness or harmlessness, gentleness or ferocity, virtue or sin, truth or falsehood, that clung (afterwards spontaneously to it)

As at the change of the seasons each season of its own accord assumes its distinctive marks, even so corporeal beings (resume in new births) their (appointed) course of action.....”¹⁹⁸³

Some Finnish shamans have a custom of cross-dressing, which might have its origins in the following passage.

“Dividing his own body, the Lord (Brahma) became half male and half female; with that (female) he produced Virage. But know me, O most holy among the twice-born (Aryans), to be the creator of this whole (world), whom that male, Virag, himself produced, having performed austerities”¹⁹⁸⁴

Manu then explained the various manifestations of existence, with a discourse on the nature of plants and animals.

“(Those trees) which bear fruit without flowers are called vanaspate (Lords of the forest); but those which bear both flowers and fruit are called Vriksha”¹⁹⁸⁵

“These (plants) which are surrounded by multi-form Darkness, the result of their acts (in former existences), possess internal consciousness and experience pleasure and pain. The (various) conditions in this always terrible and constantly changing circle of births and deaths to which created beings are subject, are stated to begin with (that of) Brahman, and to end with (that of) these (just mentioned immovable creatures [ie; trees])”¹⁹⁸⁶

As mentioned in the previous passage, Brahma (the Creator) fashioned man and animals in the beginning, and required them to live through various existences. With each passing they were reborn continually into another form, whose highest state of existence was flora, especially trees.

Like the Aryans, the Finns also believed that the trees of the forest were reincarnations of their ancestors. When logging for various purposes the woodsmen gave a final chop to the trunk, which was regarded as a killing-blow to that ancestor. The Finnish creation myth portrayed in the *Kalevala* also greatly resembles one told by the Magi. This Magian variant contains important features equally displayed in Manu, evidently because they originated in the same part of the world during roughly the same era.

“The sky and earth and water, and whatever else is within them are egg-like, just as it were like the egg of a bird. The sky is arranged above the earth, like an egg ... and the semblance of the earth in the midst of the sky, is just like as it were the yolk amid the egg”¹⁹⁸⁷

TUONELA (THE UNDERWORLD)

Most Finns believed the lands beneath the ground were home to a civilisation of wizards, shamans and Lapps. Through these lands ran a brackish river, overgrown with weeds, dying trees and rotting vegetation. Manala could be found there, an isle of the dead ruled by Tuoni and Tuonetar, the god and goddess of the dead. The instrument of their great wrath was the dog Surma, a beast that brang people to an untimely or unpredicted end. Cold, frost,

death, all manner of sickness, decay and putrefaction originated from this realm. Spirits, demonic entities and giants lived out an arduous and wretched existence there.

The Latvian afterlife¹⁹⁸⁸

THE ELEMENTAL REALM

The elemental gods of Latvia were presided over by the thunder god, Perkuons. Prevalent in their council were the elemental mothers. These included the "Earth Mother" (Zemesmate), the elemental air goddess (Vejasmate), The elemental fire goddess (Ugunsimate), the elemental water goddess (Udensimate), the sea goddess (Jurasmate), the goddess of the woods (Mezasmate) and the goddess of the fields (Laukomate).

THE MOTHER
GODDESSES

THE UNDERWORLD

The ruler of this portion of the outer worlds was Velumate, the goddess of the dead. The "Forest Father", Mezateus, lived here as well, personifying the destructiveness of the forest. Herein resided the souls of the deceased, known as the *Velis*, as well as the favoured *majaskungs* who were guardians of the home, and the ancestral home hearths of their earthly kin. The *lietuvens* or souls of the "damned" were also held bound here, though on the odd occasion they briefly escaped the underworld and ventured forth upon the earth to carry out poltergeist-like activities and hauntings. Furthermore, three types of hags known as *ragana*, *spigena* and *lauma* preferred to inhabit the multitudinous swamps and bogs that characterised much of this place of foreboding.

THE MOTHERS AND
FATHERS OF NATURE

Most of the landscape was extremely desolate, for all plants were stripped of foliage, leaving a horizon of rotting, fire-blackened and hideously malformed forestry. Little sustenance existed in this netherworld, and its inhabitants hoped to survive by eating the slimy lichens and mosses that coated the rocky ground.

Most of their period of interment here consisted of trying to escape the clutches of the hags and two varieties of demons (called *velns* and *juods*) whose task it was to torment and devour the souls of the newly arrived. Since *juod* is believed cognate with *jeu*, one might guess that the heathen Latvians had somehow been exposed to Manichean or Magian doctrines, which portray the God of Israel as the face of Ahriman. Anti-jewish thought was present in *Rus'* also, mainly propagated through Church sources, with comments like, "*The devil holds Jews in his hands in the Abyss*".

¹⁹⁸⁹

Anyhow, those who brought food with them would find it invaluable in alleviating the pangs of hunger, and as a suitable form of bribe or barter amongst the residents of this place. The living could hasten the release of relatives from the underworld by offering up prayers and massive tithes of grain and meat to Velumate.

ZODIACAL REALMS

The pagan Latvians believed that the skies were home to the Sun, Moon and other known planets. As in Russia the celestial vault was divided up into the traditional signs of the zodiac, which were governed by Laime, the goddess of luck, and her two sisters, Dekla and Karta. These figures determined the fate of matter and every living thing, as created existence made its passage through space and time.

LUCK GODDESSES AND
THE ZODIAC

The Lithuanian afterlife¹⁹⁹⁰

THE HEAVENS

The Lithuanian heaven was governed by the supreme god *Deivas*, and *His General, Perkunas*. Perkunas became the god of thunder by gaining the favour of his maker and was now the one most often called upon to protect the Lithuanians from marauding *Rus'* and Germans. Zemeninkas and Zemyna, the master and mistress of the earth resided there, together with Medeine, the mistress of the forest. All the Lithuanian gods were originally the souls of men and women who became deified by *Deivas* after their deaths. Stationed high above the earth, in the heavens, they hoped to maintain order amongst the *siela* (the souls who successfully made the climb). *Siela* could visit the lands of the Lithuanians to defend their relatives against evil spirits, demons, sorcerers and nether-beings, for it was only on this earth that evil things frequented.

LITHUANIANS REACHED
HEAVEN BY CLIMBING A
MOUNTAIN

The heavenly realm sat atop a great mountain, where even the clouds could not succeed in enshrouding its summit. Around this peak floated the Sun, Moon and the other heavenly bodies. This view of the holy mountain being orbited by the planets was also held by the Magi. Consider *Bundahishm V:3* ;

“Of Mount Alburz it is declared, that around the world and Mount Terak, which is the middle of the world, the revolution of the sun is like a (circular) moat around the world; it turns back in a circuit owing to the enclosure of Mount Alburz around Terak. As it is said that it is the Terak from behind which my sun and moon and stars return again”.

In the Lithuanian scheme of things these planets were made by Deivas to maintain night and day, and to record the fate of all matter. The powers of these luminaries bathed both the heavenly mountain and the Earth.

According to the Lithuanians, there was no netherworld region but the earth itself. All about the land roamed *nelaikis* and *vaidualis* (both of which were types of malign ghosts), vampires, *vilkolakis* (werebeasts), *ragana* (hags), *velnias* (demons) and *milzinas* (giants), who made it their business to hunt down the people of the earth. Their governor was the demoness Giltine, the goddess of death.

When a person passed away, their soul began its climb up the treacherous inclines of the heavenly mountain. If the soul slipped and fell or was pushed off by vindictive entities, then the soul would slide down the mountain side and come to rest somewhere upon the earth. When the soul struck the Earth it was reborn again, newly reincarnated as a rock, flower, bush, lamb or tree. In this way existence was maintained, through the perpetual recycling of spirits who proved unable to make the climb. Even fire, air, water and earth spirits were soul-parts, according to their beliefs. This seems to have been a pagan Gnostic concept, though the similarity between the finer details of the Cathar heresy,¹⁹⁹¹ and the Lithuanian view of the afterlife are very amazing. The Neo-Manichaean Cathars held that the earth was Hell, and that unenlightened souls could ascend towards heaven only as far as the strength of their good deeds and level of enlightenment would allow. After a period of sojourn at these heights one was ensnared by the demons and dragged back to earth for reincarnation as something or other. On one hand the close-to-enlightened could expect to be reborn as a plant, while on the other hand the lascivious, drunken, meat-eaters of the world would inherit baser forms of animal life. But without having received the salvific Cathar spiritual baptism one was repeatedly doomed to fall back into our hellish world, a haven for the pestiferous demonic swarms of the material world.¹⁹⁹²

In Lithuanian tradition, our world is haunted by the souls of sorcerers, thieves, murderers, victim's of violent accidents, or suicides, and those guilty of serious wrong doings. When they died, the souls of the good kicked them off the mountain's precipices, preventing them from ever reaching the very summit of righteousness which would see them find eternal peace.

*The Rus' realms of existence*¹⁹⁹³

From the following myths drawn from Rus' pagan mythology, one can discern diverse, and perhaps even intertwined elements of the Magian and Neo-Pythagorean world views.

BOUYAN

Some pagan Rus' believed in Bouyan, a cluster of idyllic isles, otherwise known as “The Islands of the Blessed”. And it was to this place that the good souls of some Slavs migrated after death, in the form of a swan or other such bird. These islands (which lay far to the West) floated in the ocean, on the backs of whales which swam into the Sunset. This Slav belief has a parallel in Neo-Pythagorean teachings on the Isles of the Blessed,¹⁹⁹⁴ in addition to a group of islands near Britain, which were once regarded by Britons as extremely holy.¹⁹⁹⁵

MESYATS, THE MOON

Some Slavs believed that certain souls journeyed to the moon after death. The Manichaeans perceived the Sun and the Moon as having a similar of role, serving as a final repository for the liberated light particles of the recently deceased, but only if they had been released from the bondage of the material world by a member of the Elect. Manichees originally drew this doctrine from Zoroastrian beliefs, which peg out a similar route to the heavens.

THE STAR BRIDGE TO PARADISE

The pagan Russians thought that souls entered a heavenly paradise called *Rai* by crossing over a star bridge. This bridge (and for that matter the Norse *Bifrost* bridge) parallel the bridge of *Kirwat*,¹⁹⁹⁶ which in Magian lore sorted who could enter the heavenly city of Garodoman and who could not, for the bridge itself served as a trap for the wicked!

THE WORLD WAS
HAUNTED BY UNHOLY
SPIRITS

ISLES OF REPOSE FOR THE
HOLY

THE BRIDGE TO HEAVEN

Just as the white Magi longed to enter Ahura Mazda's dazzling demon-proof sky-fort, that housed the souls of the faithful and the fravashi saints, the Slavs likewise believed they would enter a celestial paradise that was guarded by a wall.¹⁹⁹⁷

It is probably no coincidence that Rai was not only the Russian word for paradise, but also the name of Zoroaster's birthplace, and a major Iranian city in Khvaniras, where the supreme patriarch of the Magian royal bloodline once had his throne before it was taken over by the Muslims.

Rod, Rozhanitsy and Kupala and the remainder of the celestial gods lived in the celestial realms beyond the star bridge. There they distributed food and meat to Moksha, who in turn portioned these out to the loyal and deserving servants of the creator gods. Tithes and sacrifices to these main gods were believed to bring greater sustenance and more bountiful harvests for one's own community.

THE TREE OF LIFE

Pagan Russians believed a World Ash held up the vault of the skies, spanning the distance between Rai (paradise) and the netherworld. All life, however small, was seen to draw sustenance from its sap in both this world and the next.

The Magi adored a similar tree, probably the Golden Ash, but also including the Manna Ash. The salvific *Haoma* grew from its branches, granting immortality to the drinker, and so bridging the gap between life and death.

There were other holy trees in pagan Rus', such as the birch, box, oak, lime, ash, willow, plum, cherry, apple and pear trees. Each individual species of holy tree was dedicated to a deity, and maintained within a grove. It is impossible to say whether or not the heathen Russians saw these other varieties as "The Tree of Life", but at the very least they were seen as holy.

Siberian shamans also believed in a tree of life, which held up the heavens. The souls of many shamans lived in its branches before they were born into the world.

THE GREAT MOUNTAIN

The pagan Slavs spoke of a great and holy mountain, whose slopes joined heaven, earth and the underworld. This mountain was traditionally identified as Mt Olympus, though in more ancient times it could have been one of the other main mountains of Iran, such as Albruz or Terak.

According to Slavic tradition the deceased ascended its lofty peak in order to step out into the supreme heaven of the good. At face value, this appears to have been an alternative means of reaching heaven, but in Magian belief one had to first reach the mountain summit in order to step onto the star bridge.

THE KINGDOMS UNDER THE WORLD

The Slav underworld was also known as the luxuriant lands of the thirty Kingdoms, and it was reached by entering a lofty mountain pass, then venturing down through a hole in the earth, down through labyrinthine passages and caverns. Thereafter the person had to traverse a lake of molten fire in order to reach the land of plenty. Within this legend one can perceive significant elements of Magian lore. By implication the Slavs also believed that they would go down to live in the Var once built by Yima to house the bodies of the faithful until the demise of the world by fire.

Then again the thirty kingdoms might have been a view of the hereafter held by black pagans, rather than the var. If so, this differed from how the white Magians saw the underworld. According to the white Magi, the black families (ie; evil doers, those who did not respect their family, those who were cowards, witches, traitors treasonous against their own tribe, those who stole from their friends and those who broke oaths) could all expect to end up in the deepest conceivable recesses of the underworld, unless they acquitted their wrongdoings by making prayers, penances and the prescribed sacrifices, designed to make total amends before the very gods themselves. Deprived of the light and warmth of the Sun's beautiful rays, the lowest pits of the netherworlds seethed in a soup of darkness, full of malingering demons and shadowy souls.

THE ZODIAC

THE RUSSIAN ZODIAC

The zodiac originated in Babylon and olden Egypt, then entered the civilisations of India, Greece and Rome. The pagan Rus' were great believers in astrology, and based much of their lives on prognostications discerned from the planetary rotations within the zodiac. For the Rus', the zodiac was the embodiment of all goodness, the realm of Khors and his children (the princesses who ruled the twelve star signs), plus sunrise and sunset, his messengers (comets), and the Great Judges¹⁹⁹⁸ (the planets).

KHORS ZODIAC-LORD

The mighty god Khors, a divine representation of the Sun as goodness and light, was also the maker of good fortune and the absolute ruler of the twelve realms of destiny (signs of the zodiac). Whilst his father Svarog (the heavenly smith who forged all that existed), held a firm grip on the elements, creation and growth, Khors himself determined what good things should be bestowed upon these living creations. Khors and his estranged wife Mesyats, the Moon, lived there with the other heavenly bodies, who were called the Great Judges, each of which presumably had primacy of jurisdiction over various parts of life. When travelling through any Sun-sign, these planets imparted their own judgements and verdicts upon those who dwelt upon the earth, beneath the umbrella of a specific lunar mansion, house or cosmic zone.

Svarog always had a fondness for humanity. He forged and arranged all matter into a coherent universe. The birth of each person was of much importance to him, for in commemoration of this event he laboured in the heavens, and made a star to celebrate their coming. When the planet Judges reached consensus that a person must perish, Khors reluctantly plucked out their star from the darkness and hurled it down upon the land. At the moment of impact, the person would die in the manner proposed by one of the Great Judges. The shock of the falling star's impact released the victim's soul, making it free to begin the last leg of its journey toward its final resting place, often in the Moon or Sun.

This belief is similar to that held by a group of holy men (perhaps druids) that inhabited islands near Britain. Plutarch recorded the visit of Demetrius to Britain while on an Imperial fact finding mission to these same islands.

"Shortly after his (Demetrius') arrival there occurred a great tumult in the air and many portents; violent winds suddenly swept down and lightning-flashes darted to earth. When these abated, the people of the island (the holy men) said that the passing of someone of the mightier souls had befallen. "For," said they, "as a lamp when it is being lighted has no terrors, but when it goes out is distressing to many, so the great souls have a kindling into life that is gentle and inoffensive, but their passing and dissolution often, as at the present moment, fosters tempests and storms and often infects the air with pestilential properties".²⁰⁰⁰

The pagan communion of the Rus' Magi, and its origins

The central act of worship in any white Magian community was attending a full *Haoma* ceremony, which transpired at the turn of the seasons. They did not however delineate their year into four parts as we do nowadays, though there were trends in this direction under Cambyses, who imported Egyptian calendrical peculiarities to the Persian one. Yet the Magi found it difficult to fully reconcile the two systems, and this led to the abandonment of these Egyptianisations. Around 441 BC the New Year was transferred to the vernal equinox, whereas according to the ancient Iranian calendar, the year started on the autumnal equinox. In those earliest times the year had ten months of winter and two of summer, which were still chilly, thus indicating that they formerly inhabited regions with latitudes as high as 60° North. Later, as they inhabited more southerly latitudes, their summer was found to have been of 7 months duration. The Avestan year, as with the Vedic year, was divided into two halves, with the turning points being mid-summer (*maidyošahem*) and mid-winter (*maidyařem*).

Summer (which began in what we call spring and was divided into three parts, delineated by harvest, mid-summer and high spring) and Winter (divided into two *yáiryas*).

In some cases the season names in Russian are related to the Avestan. *Osen'*, the Russian word for "Autumn" is similar to the Slovenian, Czech and Serbo-Croat *Jesen*, the Bulgar *Esenta* (all of which mean "Autumn") and *Jesenas* (Serbo-Croat and Slovenian).²⁰⁰¹ My feeling is that these terms are related to the Magian word *Yasna*, the *Haoma* ceremony, which might indicate that *Haoma* was made for the Slavs, in Autumn at least. In Old Icelandic we find the term *Haust-blót* ("the autumn sacrificial feast").²⁰⁰² Though one cannot prove a viable connection between the Norse and Slav autumn feasts, the pagan Norsemen and Russians held major ritual feasts during the same season. *Zima*, the Russo-Slavic term for "Winter" can be traced back to the Avestan *Zimo*, meaning "frost" or "Winter".²⁰⁰³ *Yara* was originally the Russian, Bulgarian, Czech, word for "Spring", and in a number of the Slavic languages it also related to spring bread or grain.²⁰⁰⁴ Its origin appears to be the Avestan Persian *yara* (year), which is found in the Gothic with practically the same meaning (*yer*: year). From them come the English word *year*.²⁰⁰⁴ And as if this similarity isn't enough, the English word "mid-year" strongly resembles the Avestan *maidyařem* ("mid-year"). Two other names for the seasons do not have Avestan roots. *Vesna*, another Slavic word for "Spring" comes from the Old Indian *Vasantas* ("Spring"), and *Leto* ("Summer")²⁰⁰⁵ is only linked to other languages with difficulty. At these particular solstice and equinoctial gatherings the Magi traditionally dispensed libations of *Haoma* to the believers using ceremonial rhytons (horns). On other feast days devotees ate only *dron* bread, biscuits or buns.

The *Haoma* libation, which we will soon examine in detail, was truly a wondrous mixture, a marvel beyond marvels. It brought healing, long life, immortality and good fortune. It protected the faithful from demons, thwarted maelific witchcraft, and brought fertility to one's land and the herds that grazed thereon. In short, it was a recipe for every success, and in those days, what more could a person want?

At the seasonal *Haoma* assemblies it is believed that priests, blood-rulers and warriors were the only ones to drink the milk-based libation, while the rest of the mustered citizenry received libations commensurate with their station in

Fig 111. 3

life. The lower classes - merchants, craftsmen, herders and soil-tillers drank mead and beer libations for the remainder of the festive year. The presence of Magian-style ceremonial drinking equipment in Russia and Scandinavia suggests that these linguistic similarities do indicate the performance of the Magian *Haoma* rite in certain areas of Central, Eastern, and Northern Europe.²⁰⁰⁶ Rhytons and glass conical cups *identical* to Magian and Assyrian ritual cups (Fig 111.3) have been widely excavated in Rus' and Scandinavia.²⁰⁰⁷ They were of local manufacture. Post-Sassanian drinking rhytons (obviously non-Islamic) have been found in Russia bearing a host of Turkic imagery (Fig 111.2). These no doubt belonged to Magians of the post-Islamic era, and must have been made by Magian exiles in Turkic lands, or by Turkish craftsmen. Nevertheless these were probably used by the faithful in Rus'.

How old is *Haoma*?

Motifs of ritual banquets attended by princely figures are common enough Mesopotamian, pre-Zoroastrian art and wall reliefs.²⁰⁰⁸ They ear-mark a royal presence at most Iranian libation ceremonies, including the *Haoma*-mixing rites, perhaps even as early as 2,000 BC.²⁰⁰⁸ Therefore *Haoma* was integrally linked with the kings, and already a focal religious performance in the Iranian, Medean and Babylonian region some time before Zoroaster's religion had even begun.²⁰⁰⁸ So in order to gauge the antiquity of *Haoma* we must look further back in history to find a possible precedent. Herodotus noted that the "ziggurat"-building Bronze Age Scythian magicians and soothsayers of the steppes were already performing similar libations, but which were made of Mountain rue, heather, hemp and mushrooms, all soaked in holy spring water.²⁰⁰⁹ This concoction was then pulverised in a mortar and then filtered to purify the juices, which were then further mixed with a given quantity of spring water and soured milk. The mixture sat in the sun for a while, allowing it to ferment. These processes completed, the sacred brew was ready for the congregation to consume.²⁰⁰⁹ Lozko mentions that these ingredients were mixed in the same proportions as the Iranian recipe. So it would seem that Scythian priests partook of a *Haoma* ceremony of sorts, as early as the 6th Century BC. But, if the traditional timelines for the Zoroastrian texts are credible, then the Scythian "*Haoma*" rite was in a form that pre-dated the Zoroastrian version of the libation,²⁰¹⁰ and probably not *Haoma* in the true sense.

One very curious piece of the Scythian libation puzzle lies on the wall of an excavated stone temple at Bug, on the Dniester River in Russia. On a section of masonry we find a relief showing a priest of some kind, kneeling before a sacred tree.²⁰¹¹ Some have ventured to guess that it depicts a Volkhv performing a ceremony. Beneath the tree was a sacred deer, and a bird (perhaps a rooster) was perched on its branches.²⁰¹¹ The closest parallel to this sort of religious iconography can be found on Babylonian seals, or a wall at Persepolis in Persia. Part of the wall depicts a Magian ritual libation procession in progress, with participants heading toward King Darius, carrying offerings, that included an antlered deer. The deer need not necessarily have been sacrificed, but might only have been brought to Darius to provide milk for the ceremony. Whatever the case we do not know whether this was a libation rite totally unrelated to *Haoma*, or a variant of the *Haoma* ceremony, possessing long-extant Mesopotamian features, which catered for the pre-Zoroastrian sensibilities of the rulers. If the Persian and Russian motifs were related, then based on this imagery it seems likely the rituals performed by this Russian pagan priest originated in ancient Babylon. Yet the accompanying written inscription places the building's construction as recently as the early 10th Century AD! It is quite unthinkable that millennia-old, Mesopotamian-style rites were taking place not too far North of Christian Byzantium during the early Middle Ages. Yet this seems to be the case. In figures 112.3, 112.4 and 112.12 you will note Mesopotamian images of two goats or ibexes grazing upon the foliage of a holy tree. This kind of artwork also appears on the head of a Scythian sacrificial axe dating to 6th Century BC (see fig 112.6), and noticeably Persian in style. The axe was unearthed in Russia, therefore indicating such religious motifs had some poignancy to the region's many soothsayers and prophets. The image, and the attendant religious connotations, had evidently traversed many long centuries to make it into Scythia. The Scythian example resembles an image on a Babylonian cylindrical seal dated to around 3,000 BC²⁰¹² (ie; contemporary with the age of Sumeria and Egypt of the Archaic period). The seal has a finely etched scene showing a priest performing a ceremony with two deer under a sacred tree (see fig 112.3), thus highlighting the supreme antiquity of the imagery. How these ancient Mesopotamian "deer and tree" images came to Russia is rather easily explainable. The concepts had either been in Russia since pre-Scythian times, or they were carried into Russia, and across Europe with

migrating Scythian royalty, who employed the stag as their sign of lordship.²⁰¹³ These were the very Scythians who were building ziggurat-like mega-structures on the Russian steppe even in the Bronze Age. And what is more, their ruling kings had long-standing contact with Assyria, Persia, Iran and the many Iranian tribes east of the Caspian.²⁰¹³ Elsewhere in Europe the stag appears as a royal emblem. Perhaps the Anglo-Saxon deer standard found in the Sutton Hoo ship burial (fig 112.13) possessed the same ancestry as the Russian examples. The stag emblem was connected with the Indo-Iranian Saka (stag) tribe.

Whatever the case there seems to have been a relationship between the Assyrian and pre-Zoroastrian Iranian Magi, and even the Egyptian priesthood. This connection is readily observable in the emblem of the solar disk. A number of Babylonian and Assyrian seals and monumental friezes have depictions of the winged solar disk that in time became a Magian representation of Ahura Mazda in his chariot of solar brilliance.²⁰¹⁴ Obviously these solar disks predate the formation of Zoroastrianism, so I suspect Assyrian priests were responsible for introducing the “deer and tree” insignia to the Persians, and the solar disc to both the Persians and Egyptians. Now if this was so, then it is just possible that a deer’s milk libation ceremony arrived in Russia with the Iranian Magi, Magi who had themselves in ages past been greatly influenced by the Babylonian priests. It is impossible to guess the age of the deer’s milk libation, but it appears to have been taking place in Iran and Mesopotamia prior to the arrival of the Aryans and their Vedic *Soma* rituals in Europe c. 1900 BC. And if the imagery found on a grave (or perhaps even altar) stone from Cherin Bosnia (fig 112.5) is anything to go by, the stag continued to be a powerful image in the Balkans, even into the Renaissance period, when these stecci stones are thought to have been made.

What plant was *haoma*?

The Russian Volkhvy Magi may not have used a conventional Iranian or Scythian cow’s milk base for their libation, but then again the Magi might not have done so either. *Yasna X:13* mentions that milk must be mixed with the *Haoma*, but it doesn’t specify what type. Perhaps any milk was suitable, be it that of a goat, a cow or horse.

In Sassanian times holy milk was called *gaus givya* (literally “cow’s milk”), *giv*, and the sacred butter *kum* or *gum*.²⁰¹⁵ We find no Avestan or Pahlavi equivalents for the Slavic *moloko* (“milk”). However I have noted an apparent connection between *givya* (meaning “fresh milk”, or “living”) and the pan-Slavic *zhivot* (“life”).²⁰¹⁶ From such an etymology comes the Russian word for “an animal” *zhivotnoe*. It is my guess that *zhivotnoe* originally described their herds of stock, especially the auroch. These were the beasts who gave them milk, which the Persians called *givya*.²⁰¹⁶

The massive, long-horned aurochs of the Russian steppe were without question descended from stock once raised and imported into the region by Magian pastoralists. The Russian word *tur* (“an auroch”) is related to the Avestan Persian *staora* (“huge, horned cattle”).²⁰¹⁷ From this we get the English word “steer”, which came via the Gothic *stiur*.²⁰¹⁷ The ancient Russians no doubt obtained fresh milk from these herds. As it happens the English word *cow* is closely related to the Avestan *gao* (“a cow”).

However unrelated it might be there was a pagan Rus’ word *kumys*²⁰¹⁸ which meant “a drink of fermented mares milk”, which was also related to Mongol, Kazakh, Uighur and Tatar words meaning “to stir”. We might therefore consider the frequent use of mare’s milk. More certain is the use of sheep’s milk, which was dispensed during holy banquets, and indeed mare’s milk, which was very popular.²⁰¹⁹ This milk provided spiritual protection;

*“Those who shall cause this renocation in the existences (the High-priests devoted to Sraosha), they are observant, little afflictive in tormenting, and fully mindful, so that, when milk reaches them, they thoroughly digest it ... they have no fear ... nor yet do they mention false and irreverent statements concerning those who are righteous”.*²⁰²⁰

We know that an extract from the *Haoma* plant provided *the one indispensable ingredient* of the *Haoma* the libation, for the *Haoma* plant itself was the fountain of the ritual’s efficacy.²⁰²¹

Nowadays Parsees regard pomegranates as *Haoma*, but ironically this plant does not even fit the descriptions of *Haoma*, provided in the Magian texts. Despite the fact that a decoction of its skin is alcoholic in nature, the Parsee libation is clearly not the original *Haoma*, but only an emulation of it. So it appears that the Magi lost contact with the original *Haoma* plant. The need to use a *Haoma* substitute may have eventuated from their exile from Iran to India, from snowy peaks to scorchingly hot southern climate. Perhaps *Haoma* couldn’t be grown in India for climactic reasons, perhaps their *Haoma* trees were decimated in Iran (chopped down by the Muslim invaders), or perhaps the exiled Magi were cut off from their traditional sources of *Haoma*, prevented from being able to obtain it

from distant sources by a combination of political factors (Muslim control of their homelands) and geographical isolation. You may recall that on p. 263, I equated the *Haoma* with Ash trees of Genus *Fraxinus*. I did so on the strength of a Magian ritual term which has survived in the Russian, and which related to the making of *Haoma*. Added weight is given to the theory by the resemblance of these trees to the Magian *Haoma*, not to mention a Magian presence in Russia, and European folklore attesting to its holiness. So we will begin to scrutinise the various points which support this hypothesis, by examining the Holy writings of the *Avesta* and the *Pahlavi* texts to see what else we can glean

What is not *haoma*!

In the search for *Haoma*'s secret identity it is helpful to know what might be *Haoma*, and what was definitely not *Haoma*. *Bundahishn*²⁰²² makes mention of various fruits. Grapes, pomegranates, apples, lemons, peaches, apricots, pears, mulberry, figs, quinces and plums can be excluded from our search for the *Haoma*, since they were referred to in as though they were simply plants, and certainly not the "mighty *Haoma*, who splits the skulls of the *Daevas*".

Opium poppies grew abundantly in the heartlands of Thessaly and Bulgaria, just as well as they did in India, Cambodia and Burma. But any suggestion that *Haoma* was the milk of the opium poppy can be discounted because it doesn't fit the description of a tree.

Academics currently believe that Ephedra was *Haoma*, mainly because Russian archaeologists discovered large stores of hemp and ephedra at the fortified Margiana temple site. However, by comparing Magian scriptural references of *Haoma* with taxonomic data on Ephedra, we quickly see that this theory is still left wanting.

True, many species of Ephedra can be found in Western Europe and right across Asia, as far away as China. But it is normally described as a shrub, usually under a metre in height, but in some cases it reaches two metres. Its fruit varies from red to yellow, and this detail provides our first clue that ephedra is not *Haoma* itself.

Distinctly significant Magian scriptural stanzas about *Haoma* include "Grow (then) because I pray to thee on all thy stems and branches, in all thy shoots (and tendrils)", and "the archangels framed together a stem of Hom the height of a man, excellent in colour, and juicy where fresh". Here a stem (which obviously forks out of a branch) can be as tall as a man. What then can we say about the length and girth of the branch that gave birth to it? ... what then can we say about the size of the tree from whence these branches grew? Then we read ... "We worship the yellow lofty one; we worship *Haoma* who causes progress, who makes the settlements advance; we worship *Haoma* who drives death afar; yea, we worship all the *Haoma* plants". Obviously a tall yellow tree is being described rather than a shrub, or, heaven forbid, a mushroom like fly agaric.

What we do know about *haoma*

The writings of the Magi gave praise to *Haoma*, the source of their immortality, vitality and health. They describe its mystical qualities, its general appearance, and the means by which it was processed during the ritual order. Pay particular attention to the underlined scriptural references, because they highlight significant clues as to the *Haoma*'s true form.

"Let the Demon-gods and Goddesses fly far away from hence, and let the good Sraosha make here his home! (And may the good Blessedness here likewise dwell), and may she here spread delight and peace within this house, Ahura's, which is sanctified by Haoma, bringing righteousness (to all).

At the first force of thy pressure, O intelligent! I praise thee with my voice, while I grasp at first thy shoots. At thy next pressure, O intelligent! I praise thee with my voice, when as with full force of a man I crush thee down.

I praise the cloud that waters thee, and the rains which make thee grow on the summits of the mountains; and I praise thy lofty mountains where the Haoma branches spread.

*This wide earth do I praise, expanded far (with paths), the productive, the full bearing, thy mother, Holy plant! Yea, I praise the lands where thou dost grow, sweet-scented, swiftly spreading, the good growth of the Lord. O *Haoma*, thou growest on the mountains, apart on many paths, and there still may'st thou flourish. The springs of Righteousness most verily thou art, (and the fountains of the ritual find their source in thee)!*

*Grow (then) because I pray to thee on all they stems and branches, in all thy shoots (and tendrils) increase thou through my word! *Haoma* grows while he is praised, and the man who praises him is therewith more victorious. The lightest pressure of thee, *Haoma*, thy feeblest praise, the slightest tasting of thy juice, avails to the thousand-smiting of the *Daevas*.*

MIXED WITH MILK

Who as a tender son caresses Haoma, forth to the bodies of such persons Haoma comes to heal... And taught (by implanted instinct) on every side, the bounteous birds have carried thee to the Peaks-above-the-eagles, to the mount's extremest summit, to the gorges and abysses, to the heights of many pathways, to the snow-peaks ever whitened.

There, Haoma, on the ranges dost thou grow of many kinds. Now thou growest of milky whiteness, and now thou growest golden; and forth thine healing liquors flow for the inspiring of the pious.²⁰²³

Here *Haoma* is described as several species of tree which provide an intoxicant of some kind; a holy inebriation that did not impart a heavy stupor, but a light and joyous giddiness.

WOMEN HARVESTED THE
HAOMA

So terrify away from me the (earth's) aim of the curser. So terrify and crush his thought who stands as my maligner.....With manifold retainers dost thou, O Haoma, endow the man who drinks thee mixed with milk; yea, more prosperous thou makest him and more endowed with mind..... I renounce with vehemence the murderous woman's emptiness, the Gaini's (Geh), hers, with intellect dethroned. She vainly thinks to foil us, and would beguile both Fire-priest and Haoma; but she herself, deceived therein, shall perish. And when she sits at home, and wrongly eats of Haoma's offering, priest's mother will that never make here, nor give her holy sons!.....Thereupon spake Zarathustra: Praise to Haoma Mazda-made. Good is Haoma, Mazda-made. All thy plants of Haoma praise I, on the heights of lofty mountains, in the gorges of the valleys, in the clefts (of sundered hill-sides) cut for the bundles bound by women. From the silver cup I pour thee to the golden chalice over. Let me not thy (sacred) liquor spill to earth, of precious cost!.....These and thou art mine, and forth let thine exhilarations flow; bright and sparkling let them hold on their (steadfast) way; for light are thine exhilarations, and flying lightly come they here. Victory-giving smiteth Haoma, victory-giving is it worshiped; with this Gathic word we praise it.....We worship the yellow lofty one; we worship Haoma who causes progress, who makes the settlements advance; we worship Haoma who drives death afar; yea, we worship all the Haoma plants. And we worship (their) blessedness, and the Fravashi of Zarathustra Spitama, the saint'.²⁰²³

The following is a precis of these, and many other aspects of the *Haoma*, both physical and spiritual

1. *Haoma* was cut, picked up by the shoots, forced down into a metal mortar, then crushed with very great effort.²⁰²⁴ The attached foliage had to be sufficiently rigid to allow for this kind of treatment. After being gathered together in a bundle and trussed up with a holy Kustik belt, *Haoma* must still have contained firm pith, because it still needed a good pounding in the mortar, to get the very last drops of "saving essence" from it.
2. A stem of *Haoma* could be over 1.5 metres long, for "the archangels framed together a stem of Hom the height of a man, excellent in colour, and juicy where fresh".²⁰²⁵
3. The statement "the Hom was provided with a mouth, where it was suitable, and sap constantly oozed from the Hom where it was moist"²⁰²⁶ is, I believe, a reference to "mouths", ie; splits appearing in the bark of the *Haoma* tree as it is heated, and from which issues sappy gum.
4. *Haoma* had a sweet scent, took root and grew quickly.²⁰²⁷
5. It had many roots, stems, branches and tendrils,²⁰²⁸ and prospered in the snow.²⁰²⁹
6. *Haoma* had different species;²⁰³⁰ "Now thou growest of milky whiteness, and now thou growest golden; and forth thine healing liquors flow for the inspiring of the pious".
7. *Haoma* branches were kept in people's homes, to bring prosperity to the householders.²⁰³¹
8. *Haoma* grew yellow and tall,²⁰³² covered in golden flowers.²⁰³³

Fig 113. In Magian tradition, the devil and his serpentine accomplices chewed the *haoma* tree (ie; the Ash) to death, by gnawing on its roots. This engraving from Sweden shows a dog eating the roots of the Ygdrassil ash, the world tree. There may be a connection between the two myths. The above image is normally interpreted as depicting a deer who grazed on the Ash.

|---|---|

Let's revisit what the Magian texts stipulated: In the Iranian homeland the revered plant grew best on lofty, snowy mountains. It was a hardy tree that thrived in cold climates and water-logged soils. *Haoma* was also a leafy plant, sometimes white in colour, and sometimes yellow. Either it periodically changed its coloration, through the autumnal jaundicing of its leaves, or the emergence of either white or yellow flowers. Generally it seemed to be yellow. Perhaps the yellowness signified the Ash's overall appearance; the glowing radiance of its golden foliage as the sun hits it. Thus it was yellow overall; yellow leaves and blossoms, with considerable tendril growth.

Remembering the linguistic association between the Magian *Yasna* rite and Ash trees, which is inherent in the Russian words *Yasen* and *Yasna*, all that remains is to identify which of two ash genii the *Haoma* belonged to, by a process of elimination. *Haoma* trees didn't look red as the *Soma* and European Mountain ash do. *Haoma* was yellow and devoid of fruit. Therefore *Haoma* could not have belonged to genus *Sorbus*. All that leaves is the other group of ashes, known as genus *Fraxinus*, which is indigenous to Europe and south-west Asia, Iran and Turkey especially. They do grow in India, but only in at heights of the Himalayas.

That *Haoma* came in three kinds is of exceptional interest, for the same is true of genus *Fraxinus*. These variants of the *Haoma* might be equated with the following species;

Fraxinus Ornus This species of Ash, strangely called the *Manna Ash*, could be worthy of the *Haoma* title, simply owing to its common folk name. *Fraxinus Ornus* has white blossoms which give off a lovely scent.²⁰⁴⁵

Fraxinus Excelsior Aurea The best candidate for the *Haoma* tree is the Golden Ash, which would certainly be a fitting title for any plant that is supposed to represent the radiant brilliance of Ahura Mazda. The Golden Ash grows to around 15 metres, turns yellow during the autumn, and has tendril-like branchlets, but in winter time they develop dark buds. At that time of year its bark turns a luxuriantly golden colour. It also has yellow flowers which give off a sweet fragrance, and has winged seeds.²⁰⁴⁵

ASH TREES

Fig 114. Manna Ash

Fraxinus Excelsior

The European Ash called *Fraxinus Excelsior* is spread throughout much of Europe and the Caucasus, and appears similar to the *Aurea*, but grows to much greater heights.²⁰⁴⁵

Like *Haoma*, the *Fraxinus* Ash family are hardy plants, which grow quickly due to their extensive root system. They grow to a fair height, and don't suffer much from damp or waterlogged soil. Most of the *Fraxinus* Ash trees therefore fit the description of *Haoma*. rather admirably.

Haoma was first and foremost a type of alcoholic libation produced using liquors ceremonially extracted from the *Haoma* tree. This is yet another vital clue. The bark of the *Fraxinus* genus contains a monosaccharide called *Glucoside Fraxin*, which exudes from the bark once scored, and by inference, if smashed in a mortar. And it is no ordinary exudate. The sappy gum of the Manna ash (*Fraxinus ornus*) is essentially alcoholic in nature, 80 per cent mannitol to be more precise.²⁰⁴⁶ Some Sicilians still make an alcoholic draught from it.²⁰⁴⁶ The same sap freely flows from *Fraxinus Excelsior* and *Fraxinus Excelsior Aurea* resin, forming as a white crystalline coating in hot conditions leaving a powdery substance.

That the Magian term *Yasna* is related to the Russian words for the Ash and indeed gum, nicely encapsulates the hypothetical significance of the alcoholic gummy ash resin in the *Haoma* rites. Additional evidence for an association between the Russian word *yasen'* with genus *Fraxinus* comes from what one would think an unlikely source. *Yasen'* appears in the Celtic linguistic subfamily as *Om-en*, or the proto-Celtic *osna*, which meant genus *Fraxinus*.²⁰⁴⁷ A more distant relative of *yasen'* is the Old Icelandic *askr* (the Ash).²⁰⁴⁷ The presumed proto-Slavic form of *yasen'* was *asen'*, which was in turn related to the Lithuanian and Latvian *uosis*, not to mention the Old Prussian *woasis*, the Latin *ornus*, as well as the Greek.²⁰⁴⁷ Such a correlation stretches back to the Indo-European intrusions.

Ashes of genus *Fraxinus* were renowned for their healing virtues in both Ireland and Scandinavia.²⁰⁴⁸ *Haoma* too shared out this life-sustaining gift. So revered were the *Fraxinus* ashes that the Norse world tree Yggdrasil is regarded as being of that genus.

Nowhere is *Haoma* described as a fruit. Past commentators have postulated that *Haoma* was a variety of mountain grass, but I believe the references to twigs and branches, puts *Haoma* firmly in the category of a foliage bearing tree. Therefore, on the balance of probabilities, the European Mountain Ash was used to make the Aryan *Soma*, whereas the Iranian Magi used portions of the Manna or Golden Ashes to make *Haoma*. Should this prove to be correct, this evidence is of immense spiritual significance to all modern Hindus and Parsees, the identities of their respective long lost plant-gods of eternal life revealed at last, after century upon century of total obscurity.

Golden mistletoe

One additional form of *Haoma*, perhaps even the best kind, was a parasitic species of flora brought to the *Haoma* tree by birds. Such a plant might be mistletoe (*Viscus Album*, a parasitic plant which grows all year round),²⁰⁴⁹ which in the Russian was called *omela*.²⁰⁴⁹ Variants of the word *omela* are found throughout Slavia and the Baltic, but do not appear to have been shared elsewhere in Europe.²⁰⁴⁹

The association between mistletoe and the Druids is so well known, as to require little or no comment. Suffice to say that it was called *druid's-plant* (ie; the Magi's plant), and like *Haoma* was held in deepest reverence, especially for its qualities as a universal cure-all. It was cut from the an oak tree with a ritual sickle, and caught below in a sheet, lest it strike the ground. As you will recall we have already examined numerous shreds of evidence which allude to a Magian presence in Celtic Gaul, Britain and Ireland. Identifying Mistletoe as a form of *Haoma* might be yet another link in this chain.

It would be wrong to place mistletoe's pagan spiritual roots in the Druidry alone. The supposed curative powers assigned to the mistletoe are recognised throughout much of Northern Europe and Asia, even as far away as Japan.²⁰⁵⁰ That the Celtic druidic priesthood developed a fondness for mistletoe via oriental connections, is signposted by an ancient druidic affinity with the East, in particular Galatia, Turkey. Unless the mistletoe has actual pharmacological properties, the widespread incidence of its veneration is suggestive of an archaic teaching about its efficacy in healing, a teaching spread throughout Europe and Asia.

THE GOLDEN OR MANNA ASH

MISTLETOE

DRUID'S PLANT

POWERS ACKNOWLEDGED IN EUROPE AND ASIA

The mistletoe and its many virtues might have been related to the sun, for it was frequently harvested at Midsummer.²⁰⁵¹ The Swedes deemed it imperative to cut mistletoe during the Summer solstice.²⁰⁵¹ And in England it was recorded that after cutting mistletoe from a trunk, one should thrice circumambulate the tree upon which it thrives, in the direction of the sun.²⁰⁵¹ This being done, the mistletoe became a weapon against black magic, and guarded the bearer against wounding.²⁰⁵¹

In Switzerland, folk obtained mistletoe “when the sun is in Sagittarius” by breaking it off with an arrow shot, and seizing ahold of it with the left hand before it hits the ground.²⁰⁵² In one part of that country they called it “thunder-besom”, that is a *besom* that was brought down from heaven by lightning.²⁰⁵³ As mentioned the word *besom* may be related to the Magian word *Barsom*, a broom-like bundle of wands used during the *Haoma* ceremony, which were able to procure magical effects when used in conjunction with one’s prayers.

Mistletoe certainly had a pan-European following; Italy, Sweden, Bohemia, Austria, England, France and Scotland are just a few of the places²⁰⁵⁴ where they deemed it sacred, or at the very least beaming with magical, healing, and spiritual power. Tradition has it that mistletoe preserved dwellings from intentional or accidental arson, and even extinguished fires.²⁰⁵⁵ This last detail might be related to mistletoe’s use in a holy libation (namely *Haoma*) that was used to douse the holy flame during the *Yasna* rite.

The Danes held in far greater esteem mistletoe that had sprouted on the uppermost crown of a rowan tree.²⁰⁵⁶ The mistletoe in this case was far more potent than it would otherwise have been, had it been found on another species of host.²⁰⁵⁶ The Swedes and Germans beheld mistletoe as immensely protective against the onslaught of witchcraft.²⁰⁵⁶ What garlic was to vampires, mistletoe was to baleful magicians.²⁰⁵⁶ Again, this is yet another property shared by both mistletoe and *Haoma*.

The following pagan riddles, which were collected in the Volga region last century, obviously concerned a highly sacred Russian pagan ritual.

“There stands a tree, and in the tree sits a dove, and under the tree is a tub - the dove plucks the flower (or growth) from the tree, pours it into the tub - the leaves from the tree grow no less in number, and it cannot fill the tub”.²⁰⁵⁷

“There stands a post (stolb) and on the post is a flower (or growth), and under the flowers (or the growths) is a cauldron, and above the flowers (or growths) is an eagle (the bird-tsar’), - it breaks off the flowers (or growths), and throws them into the cauldron, the flowers (or growths) never grow less, but they don’t fill the cauldron”.²⁰⁵⁷

In both riddles produce is removed from the tree to be placed in either a tub or cauldron, but the tree’s foliage does not diminish. What seems to be described here is the removal of a parasitic plant from an oak tree. Considering the legendary association between the oak and mistletoe,²⁰⁵⁸ the riddles might therefore have described the harvesting of mistletoe, or perhaps even flying-rowan from the host oak.

According to local tradition in Ryazan, the word *stolb* (“a post”) also refers to “a post that changes into an oak tree”;²⁰⁵⁹ so in all likelihood the post referred to here was really an oak tree. In Chapter VIII, I discuss the possibility that some carved idols and posts can regrow their own root systems under the right conditions, and revert to a tree, albeit one with carved religious insignia

A clue as to how mistletoe was supposed to be removed might be found in another of the Russian folk riddles connected with those above. “Cut it without a knife, kill it without an axe”.²⁰⁶⁰ Accordingly it was proper to remove the mistletoe by whatever means except a knife or axe. Hence the use of a sickle or arrow.

In such an oak tree sat a bird that was praised, and she would leave neither the Tsar’, nor the Lithuanian king.

A possible point of origin for these widely-travelled mistletoe customs might be found in Magian scripture. Zoroaster’s father harvested an eminently powerful form of golden *Haoma*, which grew in a bird’s nest at the top of the tree, but only after having thoroughly washed his clothing.²⁰⁶¹ He surrendered all the *Haoma* that he had cut from the tree to his wife, and she acted as a guardian for it, presumably keeping it in the family home.²⁰⁶¹ Such passages are reminiscent of the way druids collected mistletoe.

“(The angelic Fravashi hero) Vohumano seized one of those birds by both legs, and the other by one; he also brought them that Hom, and gave it up to them there, on that tree within their nest”.²⁰⁶²

MISTLETOE WAS
REVERED THROUGHOUT
EUROPE

A REMEDY AGAINST
UNHOLY WITCHCRAFT

BIRDS BROUGHT THE
HAOMA DOWN FROM
HEAVEN

"And that (particular) Hom was connected with that tree; and on the summit of that tree, there where the nest of the birds was, it grew constantly fresh and golden-coloured".²⁰⁶³

"And that Hom (Haoma) was also seen by him, when it had grown on that tree, on the inside of the nest. Then Porushasop thought thus: "It is for me, really to produce to proceed and, even as there is no reaching by me up to that Hom, that tree must be cut down, for apart from that, O Hom of Ahura Mazda! thou seemest fresh, so that the benefit of something from thee will be advantageous".²⁰⁶⁴

Then Porushasop walked on and washed their clothes acquiescently, and here a great wonder was manifest to Poirushaspo. About this it says that, all the while that Porushaspo washed their clothes, Vohumano then proceeded from the uppermost third of the tree unto the middle of it, whereon it was the desire of Porushaspo to be conveyed. Then Porushaspo having washed the clothes, walked up to it and thereupon gathering up the whole of that Hom. All of it was then also appropriated by him through assistance like that of that archangel".²⁰⁶⁴

The growth described in this Magian text sounds suspiciously like mistletoe. Its seeds are digested by birds, but proceed unharmed from their bodies via droppings. When the droppings fall on the branches of a susceptible tree, such as the oak, linden and apple trees, hawthorns and the like, or even a bird nest, the mistletoe takes hold of the host plant by burying its roots into the tree bark, often on the underside of the boughs. Mistletoe has golden leaves and berries that wrap around the boughs of the host.

As a side note, I've found Ash seedlings growing in my roof gutter They had been carried there by wind or birds, and were positively thriving. They do not appear to have rooted themselves on nearby trees though.

Haoma - the giver of life

Other exceptionally crucial features of Magian religion appear in the passages which immediately follow the above *Dinkard* extract. When rain fell on the trees and other plants the archangels (in the form of holy water which had rained from heaven) descended from heaven onto their branches, bringing with them the *nature* of Zoroaster.

"About Khurdad and Murdad bringing the cloud-water down in a compassionate manner ever anew, drop by drop, and completely warm, for the delight of sheep and men, and - with as much seed as the roving of two rampant bulls would thereby cast upon the plants which have grown, all of every species - they are casting it upon those other plants at that time, even upon the dry ones; and the nature of Zoroaster came from that water to those plants".²⁰⁶⁵

The sanctity of this water (ie; the holiness of Zoroaster) then passed on to white cattle, to the milk of prodigies.

"...Porushaspo drives six white cows, with yellow ears, up to those plants. And here is manifested a great wonder, such as revelation mentions thus: Two of those cows, unimpregnated, had become full of milk, and the nature of Zoroaster came from the plants to those cows, and is mingled with the cows' milk; it is owing thereto that Porushaspo drove those cows back. Then he said to his wife Dudaub, O Dukdaub! in two of those cows, which are unimpregnated and have not calved, milk has appeared; do thou milk those cows and of any embodied existence whatever". And Dukdaub arose and, taking that pail of hers which had a four-fold capacity, she also milked from them the milk which was in them, and a great part of what they gave up to her she had to throw away; and the nature of Zoroaster was in that milk".²⁰⁶⁶

The passages are self-explanatory. The *Haoma* libation bestowed the nature of Zoroaster upon the drinker (in this case Zoroaster's mother), via the milk, which had in turn absorbed his nature from the heavenly rain. It is presumably for this reason that *Haoma* divested the powers of prophecy. In this section of revelation, the wife of Porushaspo drank the libation of milk and *Haoma*, and the child Zoroaster formed in her womb as a result. That she went on to discard the extra portion of milk is perplexing, considering that demon-worshippers were known to have done so. Unless of course it was poured into the holy fire, which is not stipulated in the text. *Dinkard* further speaks of the means by which Zoroaster's spirit entered material existence in the earthly body that formed in his mother's uterus.²⁰⁶⁷

Within these scriptural references one can perceive what could fittingly be termed the "creation pathway"; the means by which a human being was conceived. Their scriptures do not elucidate whether or not this pathway

HAOMA GAVE LIFE TO
THE WORLD

THE NATURE OF
ZOROASTER ENTERED THE
MILK

THE CREATION PATHWAY

applied only to Zoroaster, or to the creation of prophets and spiritual heroes, or to all human beings. The Magi had a reasonable understanding of human gynaecology, and clearly believed that life came into being through the intermingling of the male and female seed within the womb.²⁰⁶⁸ But if we take it that Zoroaster's "creation pathway" was similar to that of the faithful we can make some vital inferences. In order to create a person three things had to be formed separately: the *glory* of the being, the *guardian spirit* of the being, and lastly, the *nature* of the being. These three sub-elements only became fused together the moment the mother-to-be drank *Haoma*. At that moment one of the faithful was conceived.

This soul, which had been formed by the heavenly lord Ahura Mazda in deepest antiquity, came down into the world along a specific route. Its *glory* entered the being's germ, then onto the endless light, then to the sun, and then the moon, and then to the stars, and then to the fire in the house of the mother who will bear the child.²⁰⁶⁹ Thus a being's *glory* came upon the mother-to-be through close contact with the home-fire. In the account of Zoroaster's conception, the mightiest of angels conversed, asking if the intended mother-to-be had been spotted, and was ready to conceive.²⁰⁷⁰ With the mother located, the *guardian spirit* was carried down through the light of God to the earth by the angels, and implanted into the *Haoma*.²⁰⁷¹ Water and vegetation consumed by the mother formed the being's physical body.²⁰⁷² The *nature* of the being entered water from heaven, which, in droplets, landed on the grass and other vegetation. Angels herded heifers to the area, and they ate of the plants. The *nature* of the being was thence transferred into the milk of their udders.²⁰⁷³ By mixing the cow's milk (containing the *nature* of the being) and *Haoma* (which contained the being's *guardian spirit*), the nature and spirit of the being combined with the being's *glory*, which already resided within the mother, having thus far been previously implanted in the mother by the home-hearth. For their part the demons and Ahriman's earthly servants could thwart the creation of beings by breaking the soul pathway. If they could extinguish fires they *destroyed the glory of a potential being* and the flow of descendants from that house fire. By stealing cow's milk, mutilating a cow's udders, bewitching fields, or causing drought, they *annihilated the nature of a potential being*. By vexing, withering or physically destroying ash trees they *eliminated the guardian spirit of a potential being*.

Not every human being was Mazda-made though; some were demon-made. Evidently only those formed in this manner belonged to him. Without these three elements being present at their conception, a newborn was incomplete.

If this creation-pathway applied only to spiritual heroes of great magnitude, then witches would have been trying to prevent the birth of heavenly warriors on earth, thereby bettering their master's position in the war between good and evil. Zoroaster's arrival was tragic to Ahriman's cause. A more than worthy opponent had entered the fray. The lord of devils thusly commanded his demon-children to gather in large numbers. They were to hide milk, and to spoil it. In so doing they hid or defaced the magnificence and mighty virtue of Zoroaster that was inherent in milk, and prevented the birth of Zoroaster's minions.

*"One marvel is this which is manifested in the struggle of the adversary for concealing and spoiling that milk, just as revelation mentions thus: Thereupon, at that time, the demons formed themselves into an assembly, and the demon of demons growled....."*²⁰⁷⁴

As you will read Ahriman's mission against milk was firmly embedded in pre-Christian superstition throughout many parts of Europe and Asia. In European witch trials and folklore we hear that European black witches were commanded by the devil to make off with milk, to pollute it, and to thwart the churning of butter (which in Magian tradition was sorely needed to feed the very holy fires that brought protection and strength to the world of created existence). These "superstitions" were widely known on the continent, but utterly divorced from Christian scripture. By attacking milk the devil-worshippers mounted a direct attack against the *Haoma* rite, the sun's weapon against death, disease and demon-spawn. As more of these criminal acts succeeded, they helped guarantee the relentless dissolution of the spiritual kingdom possessed by their master's enemy. It is difficult to guess where else these beliefs might have originated besides Magianism, the very Magianism that seems to have formed an underlying strata of paganism in various parts of Europe. That maelific individuals were being convicted for crimes against butter and milk as late as the 16th and 17th Centuries AD further attests to the longevity of the old ways among the descendants of wizards who thought Europe a suitable destination.

THE GLORY OF A BEING

THE NATURE OF A
BEING

AHRIMAN HOPED TO
DESTROY MILK

SPIRITUAL WARFARE
OVER MILK

Of the Devil's henchmen and henchwomen it was also said:

"That in the ninth and tenth centuries (of the Zoroastrian calendar), there come those who are the brood of the fiend and the wound-producer of the evil spirit; even one of them is more to be destroyed than ten demon-worshippers; they also produce extermination for these who are mine, for these of my religion, whom they call a provision for destruction...."
"They foster villainous outrage, and they say the best work for mankind is immoderate fighting whose joyfulness is due to actions that are villainous; those, too, that they exterminate are the existences due to the spirits, they exterminate their own souls, they exterminate the embodied existences of the world (through their vexation)".²⁰⁷⁵

What is known of Zurvanite ritualism?

Features of Zurvanite ritualism are to be found in *Yasna* XXXII and XLVIII, which briefly allude to the pre-Zoroastrian sacrificial practices of ancient Iran. The comments Zoroaster made in these texts must be viewed as belonging to a remote era, when Iranians happily worshiped both the Ahuras and Daevas. It is likely that a more venerable layer of Assyrian or Babylonian gods made its presence felt among them too. For this reason it is difficult to conclude the degree to which Aryan or Mesopotamian magical rites were integrated with the Magian ceremonial observances, in order to placate the Daeva gods.

By Zoroaster's testimony, the primary culprits were bands of "evil-doers" who persistently lavished offerings upon the Daevas, in adoration of Indra especially, whom he calls the arch-demon of wrath. Zoroaster tells us they quaffed down a filthy brew, full of intoxicating substances fit only for the "bloodthirsty servants of Fury and the wickedness", the Princes and their personal sacrificers. Therefore we can assume that these condemned libation rites were attended to by Indra-worshipping Princes and a class of sacrificial priest, who were further described as delinquent slaughterers with blades of dazzling iron. This allows us to deduce that *Soma* ritualism was an integral part of their ceremonial order. Clearly the beverage he spoke of was a war libation, perhaps the very one once concocted in ancient Iran, which we shall soon examine.

PERSIAN INDRA-WORSHIP

It was thus an Iranian warrior-cult firmly based on the worship of Indra. The Magi recorded that they raised their deadly hands against the helpless sacred Kine (the holy cow), slaughtering her without mercy, and uttering profanities against both it and the Sun, as the cow died.

We are still none the wiser as to the precise ritual observances of the Zurvanites, but I postulate the following libations, since their ritualism must somehow have catered for both the Ahuras and Daevas, but entertained an excessive fondness for Daevas.

A MIXTURE OF SOMA AND HAOMA

SIMAHOMA

Because Zurvanite religion was a synthesis of Aryan paganism and Magianism, the Zurvanite libation may have been a blend of *Soma* and *Haoma* in a single libation. Such a drink might have been the *Simahoma*²⁰⁷⁶ briefly mentioned, but not described, in the *Agni Purana*. Sadly the *Puranas* say nothing of its recipe, stating only that it stopped the onset of bad dreams. Perhaps *simahoma* was a hybrid form of *soma* and *haoma*, produced via a grafted or parasitic form of flying rowan or mistletoe growing on an Ash tree.

ALTERNATE USE OF SOMA AND HAOMA

SOMA OR HAOMA

Zurvanites adulated both Ahuras and Daevas, so it is equally possible they observed separate *Haoma* rites for the Ahuras, and *Soma* rites for the Daevas, by adherence to both ritual orders

Then again Zurvanites may have only used *Soma* for the heavenly portion of their offerings, and to pay homage to Indra. Whereas *Haoma* was perhaps used for infernal intercession from the Ahuras, depending of course on the degree to which given sacrificers favoured the Daevas.

DESECRATED HAOMA

In the *Moralia*, Plutarch revealed that some Magus wizards were given to performing the infernal wolf-sacrifice. Through a need to establish the context for such a rite, and due to Orthodox Zoroastrian references to two-legged wolves among the "Race of Wrath", we might guess that Zurvanite Magi were the sacrificers in question.

According to Plutarch, the Lord of the underworld was ritually offered (in Plutarch's transliteration) *Omomi*, which seems to be his transliteration the words *Hom* or *Haoma*, the fountain of all power. If this were so then

Zurvanites may have used *Haoma* in the infernal segment of their rites, by irreverently desecrating it. After pulverising *Haoma* in a mortar (Plutarch also mentions *Omomi* was hammered down in the mortar) the Magus then proceeded to defile the blessed *Haoma* by mixing it with blood rather than the mandatory milk, and by speaking words of blasphemy (as mentioned by Plutarch) and malediction (instead of the prescribed praise and benedictions) over it.

Then instead of raising the bloodied *Haoma* chalice to heaven (in the *Gathas*, *Haoma* had to be offered up to heaven), the Magus dug a hole and poured the abysmal mixture down into the bowels of the underworld, to bestow life, honour and power upon his master. To give you some idea of the totality of this desecration, the white Magi thought it unspeakable to spill even a single drop of the *Haoma* on the ground, the *Haoma* "of precious cost". The wolf sacrifice was therefore a corrupted mirror image, or absolute defilement, of the white Magian *Yasna* ritual. The concepts promoting such perverse mimicry are covered in Chapter VIII and Part II, Chapter VII. Therefore Plutarch might actually have been describing the concoction of the Az libation, the black chalice, the cup of harlotry and decadence. Perhaps these "Luciferian" Magian devotees used other types of blood in this ritual concoction, but wolf's blood was probably have been preferred.

Consequently it is more likely that the wolf-sacrifice was the "high-mass", so to speak, of Ahriman's disciples, and therefore not necessarily connected with Zurvanism.

AZ

Who could drink the haoma?

No one from outside the community could enter a temple or grove unless they had been invited in, and were proven to be a believer in the Daevas (or Ahuras in the case of traditional Zoroastrians, and white Magians). Pagan pilgrims, from within Rus' and from abroad, could enter the groves or temples, by suitable arrangement.

Christians, Christian heretics, Jews and Muslims were barred from ever crossing the grove boundary line, or approaching the sacred springs and fire shrines of the pagans. From what Adam of Bremen says of the Prussians it would seem that allowing non-believers access to the Holy site would 'contaminate' or desecrate the purity of the location. No member of these other faiths was to make contact with the gifts destined for the Gods, much less partake of the sacred drink. In fact it was heinous to share the same cup as them at any time, and for this reason many Magians probably took their own cups with them wherever they went.

NON-BELIEVERS
PREVENTED FROM
ENTERING THEIR HOLY
SITES

"it is requisite to abstain from the same cup as those of a different religion, and it is not desirable to drink the water of any goblet of theirs".²⁰⁷⁷

THE FAITHFUL COULD
NOT DRINK FROM THE
CUP OF A NON-BELIEVER

In heathen Rus' Lozko relates that it was customary to prohibit the presence of Christians, Muslims, Jews and other foreigners at their ceremonies. This formal naming of banned faiths also took place during the *Haoma* ritual, where the Zota decrees that they were incapable of performing good deeds, let alone befitting of the holy libation.

Likewise, criminals, liars, oath-breakers and those living in a state of banishment, could not drink the libation or frequent any of the sacred sites. Otherwise the holy would fast become the unholy or profane. As with so many pagan Russian customs, this banning of the faiths may have originated in the Zoroastrian texts. Other "unclean" communicants were not to join in the ceremony at certain times. Under Magian lore, no menstrual woman, or female who had recently given birth, was to speak during the ceremony, nor could they touch the twig stand, or drink the sacred drink. Sinners needy of ablutions were not to stand near pious elements of the gathering.

The last offices

If a worthy member of a white Magian family collapsed or was near death their kin sent for a Magus who would bring some health-giving *Haoma* for them to drink. Should the person die, they would soon be walking amongst the Holy Immortals.

Preparation of the *haoma*

The writings of the Zoroastrian texts are far more earthly than those of the Vedas, far less caught up in rhyme and riddle. Generally speaking they are straight forward in their descriptions of the ritual acts performed. For this reason, a reconstruction of the libation is much easier to conclude, but still difficult nonetheless.

The milk-based *haoma*

The *Haoma* libation consisted of cow, deer, horse or goat's milk and spring water, mixed with *Haoma* extracts (ie; gum and juices) drawn from squashed and strained *Haoma* plant (ie; Golden or Manna ash) or mistletoe. A second variant may have used mistletoe in lieu of ingredients drawn from the *Haoma* ashes. A third variant had a specific application in warfare.

The elixir of power - *Haumavarka* (The wolf drink)

In the Achaemenid era of early dynastic Persia, and perhaps earlier, a specific type of *Haoma* libation was drunk by Aryan warriors before they went into battle. Not only did it steel them for combat and give them focus and confidence, but it granted greater energy and speed. This extra burst of energy and motivation was no doubt due to the action of Ephedra, a plant which grows in Central Asia, and is imbued with the character of amphetamines or "speed". *The Iranians are confirmed to have used the Ephedra plant in their Haoma libations for a very long time.*²⁰⁷⁸

Once imbibed, the war *Haoma* unleashed bravery, ferocity and primordial bloodlust. According to Ginzburg,²⁰⁷⁹ the *Haoma* libation (or one variant of it) drove men into frenzy, *making them like wolves*. Clues as to its nature are found in the Iranian term *Saka Haumavarka*, a title applicable to the forebears of the Royal Iranian bloodline of the Achaemenids, in former days, and the title of western Eurasian Scythian tribal grouping.

A linguistic examination of the words *Saka Haumavarka* reveals that it wasn't just a royal title, but an intoxicating *Haoma* libation of some kind (Iranian: *Hauma*: "Haoma", *Varka*: Wolf - literally "Haoma wolf"). Accordingly the Persian monarchs, Scythians and *Haoma*-wolves may have been one and the same, at least in some of the rites they observed. The inclusion of the word *Saka* probably indicates these rites were connected with the Indo-Iranian Saka tribal entity, of whom the Messagetae were a key member before migrating into Europe. Even more specific is the correlation between *Haumavarka* and the name *Haumavarga* (an Iranian tribe formerly living in the region of Tashkent, Uzbekistan).²⁰⁸⁰

As incredulous as it may seem, there is an immense store of information suggesting *Haoma* wolves were not unknown throughout pagan districts, and even in Christian Europe; this later gave rise to folk tales of werewolves.

The Iranian *varka* ("a wolf") is cognate with *vuk* (Bulgarian and Serbo-croatian), *volk* (Russia), *warg* (Old English), and *varg* or *vargr* (an old Scandinavian or Germanic word), all of which mean "a wolf".²⁰⁸¹ Besides meaning "wolf", the Old Icelandic *vargr* meant "a thief", "a robber" or "a miscreant". A relationship between wolves and crime is evident in Russia too. *Volk* had an additional meaning in dialects of the Volga region, "a thief caught red-handed".

These words suggest that wolves were synonymous with criminals and thievish raiders in the Old Norse and Russian. Though linguistically alien to *vargr*, the Old Icelandic terms *skelmi-ligr* "devilish" and *skelmir* "a rogue" or "a devil"²⁰⁸² nicely preserve the relationship between knavish behaviour and revelry. *Vargr* ("a wolf" or "evil-doer") is related to a host of Baltic and Slavic words that do not regard such individuals kindly. As with the Iranian *varka*, *vargr* provided a basis for the Slav word *vrag* ("enemy").²⁰⁸³ In the Bulgarian, Slovenian and Serbo-croatian *vrag* meant "a demon" or "a devil". In Czech *vrah* meant "a murderer", the Polish *wrog* "an enemy".²⁰⁸³ These concepts are related to the Lithuanian *vargas* ("poverty") and *vargti* ("to be penniless" or "to be in a state of distress"), and the Old Prussian *wargs* "evil". And then there is the Gothic *wrikan* ("to pursue or chase after something") and *wraks* ("one who drives things away", or "one who chases things").²⁰⁸³ Then there is the Old Icelandic *farga* ("to destroy" or "to make away with"),²⁰⁸⁴ which is inevitably related to *vargr*.

Considering that the wolfmen are often presented as a brotherhood in European folklore, we are presented with an image of a crime fraternity well known for its greedy looting, its demoniacal nature, its miscreant form, its murderous ways. To this I would add their magic, in Russia at least. According to Vasmer *vorog* was related to the Russian *vorozhba* (which means "to cast a spell", or "to work harm by magic"),²⁰⁸⁵ where *vorog* transformed into a non-concrete noun via a mutation of the final consonant g into zh.

THE WOLF-MEN

ASSOCIATED WITH THE
CONCEPT OF EVIL

THE POWER TO HARM
OTHERS WITH MAGIC

Other Slavic words possessing the same ancestry as *vorozhba* further indicate that this style of sorcery could harm individuals, it could give rise to prophesies, it could lead to the fulfilment of one's desires, and allowed one to hex things. Succinctly their breed of witchery allowed for both white and black magic.

Many other corresponding etymologies for "a wolf" are to be found throughout Eastern Europe, Russia, the Balkans and Central Europe: *v'lk'* (Old Russian), *v'lk* (Bulgarian), *vlk* (Czech), *vilka* (Polish), *wulfs* (Gothic), *volk* (Slovenian), *ulk* (Albanian), *vilks* (Latvian), and *vilkas* (Lithuanian).²⁰⁸⁵ These are related to the Old Indian *vrkas* and the Avestan *varka*. Clearly wolves were described in Europe using an inherited Indo-Iranian term, with variants in the Old English, German and Old Norse closely resembling the Avestan Persian.

We gain significant insights into these words by interpolating them with Norse mythology. Bearing in mind that wolf-priests once existed among the Slavs and Balts, we ought to consider the possibility that the Norse *beserkirs* and *ulfhethnar*, who ran into battle in a state of almost uncontrollable rage wearing bear or wolf pelts, were priest-warriors with a bad attitude. At no stage have the Norse sagas ever intimated that the *beserkir* and *ulfhethnar* were pagan priests, a point which I am sure would have been raised had it been true. It would have been a perfect opportunity for Christians writers to diabolise the old priesthood, yet they did not.

Nonetheless Norse shape-changers do appear in a quasi-religious context. Odin's confederate wolfmen were known as the *Ulfhethnar*, that is "wolf-skinned".²⁰⁸⁶ The term relates to a Norse practice of donning a wolf pelt, which allowed for their transformation into vulpine form.²⁰⁸⁶ That they did such things is evidenced by an effigy found on a 6th Century AD Scandinavian bronze artefact.²⁰⁸⁶ Such were the origins of the werewolves, who appear in annals as late as the 16th Century AD, not only in Scandinavia, but in the Baltic. At the midwinter these Norse wolfmen would race through the forests like a wild pack, hunting down game, raiding beer supplies, and incite all manner of havoc. Folk legends from the Vologda region maintain that in antiquity, mighty Russian sorcerers adopted the guise of wolves and bears.²⁰⁸⁷ This suggests the existence of similar heathen practices in Russia.

According to Norse Sagas such as *Hrafnismal*, *Hrolf's Saga Kraka* and *Volsunga Saga* this fraternity of Norse warriors (which included outlaws) were said to have been able to mentally mutate into wolves preceding battle, and this transformation was completed by wearing a wolf pelt as an over garment.²⁰⁸⁸

*"Wolf-coats they call them that in battle bellow into bloody shields.
They wear wolves' hides when they come into the fight, and clash their weapons together".²⁰⁸⁹*

They became wolves through a form of battle fury which was granted to them by Odin, the god of War and magic, the "long-haired friend of the altar-fire".²⁰⁹⁰ Whatever caused this state of psychological abandonment to the forces of rage, it also granted freedom from battle-anxiety and the pain of wounds, thus indicating that it may have contained a very strong narcotic substance. It is my view that this additive was resin extracted from the hemp crops which pagans are known to have cultivated in heathen Rus' and Scandinavia. A more modern parallel is afforded by the Mujahadeen combatants who steeled themselves for battle against Soviet troops during the Afghanistan war by smoking large quantities of Hashish - it gave them extra courage, helping to take away their fear.

One further clue linking their battle-frenzy with the use of narcotics can be found in written accounts of the Norse wolf-men. In *Ynglinga Saga* these "werewolves" were described as "frantic as dogs or wolves" who "bit their shields and were as strong as bears or boars" while in their state of battle-fury. Immense restlessness and teeth-grinding are classic symptom of chronic amphetamine (Ephedra) usage. If this analogy is correct then Norse wolf-warriors might also have included Ephedra in their battle libations, just as the ancient Iranians had once done back in Central Asia and Iran, in their battle-Haoma, their wolf-Haoma. Consequently the *Ulfhethnar* may have been *Haoma*-wolves.

Members of Odin's wolf-brotherhood conversed in their own "wolf-language", which was mutually intelligible to all members of the group.²⁰⁹¹ The language might only have been a series of wolf sounds signalling various battlefield commands to their comrades during combat, or may even have been a separate language, either contrived, or a non-Scandinavian tongue belonging to a different race, or even a religious language. Norse 'wolf-men' also included Royal personalities such as Hrolf, a Danish monarch; yet another point of similarity with the Slavic Magus-princes, and the royal Achaemenid *Haoma*-wolves.

In pagan Russia and the Baltic too, priests, heroes and princes became transformed into wolves rather easily, and if we are to believe Slavonic folkloric tradition, underwent out of body experiences, flying sensations, clairvoyance

and clairaudience. These were all classic elements of witch flight, as recorded in trial documentation in a number of countries, up to the 17th Century AD. Moreover the rites of the witches were inexorably linked with the cauldron, the mortar and pestle, and the besom (a type of broom). These same items of ritual equipment were also pivotal instruments for the correct performance of the *Haoma* ceremony.

Nevertheless by comparing Scandinavian and Eastern European connections between princes, wolves and frenzy with the Iranian *Saka Haumavarka* terminology brought to light by Ginzburg, one might conclude that a select group of Slavs and Norsemen were recipients of the fury-bringing Iranian battle-*Haoma*, and even more than that, that their monarchs were in some way related to the ancient Achaemenid dynasty of Persia, a point to which I will later return.

I hypothesise that wolf-*Haoma* was a variant of the *Haoma* libation (cow, deer, horse or goat's milk and spring water, mixed with *Haoma* extracts) intermingled with prodigious quantities of hemp resin and Ephedra.

Still, no precise recipe exists for the Wolf-*Haoma*, the drink of warriors, priests and the high born, so we should consider the plausibility of the following two recipes.

1 As mentioned, Plutarch related in *De Iside et Osiride* that some Magi practiced "the wolf sacrifice", a rite which necessitated the burying of *Omomi* (perhaps a corruption of *Haoma*) in the vulpine victim's skin.²⁰⁹² Plausibly there was a connection between *Haomavarka* (*Haoma* wolf), wolf pelts, wolf sacrifice and the wolf drink. Therefore the *Haomavarka* libation may have consisted of a blood (human, cattle or wolf's blood) mixed with *Haoma* ingredients, amongst which was *Ephedra*.

SACRIFICING WOLVES
AND WAR PRISONERS

Two authors tell us that human blood was ritually extracted in Germany and Scythia; to form the basis of a libation. Herodotus saw the Scythian warriors drinking from a "blood-bowl" which was filled with the blood of the first man they had killed in battle. And Strabo's report that the Cimbri slit the throat of war prisoners and emptied their life-blood into a large bowl may indicate that the Germanic warrior libation consisted of human blood taken from sacrificed combatants.²⁰⁹³

The Scythians (who had a well developed war culture) drank a libation of mountain rue, heather, hemp and mushrooms which had been soaked in holy spring water. These plantstuffs were collectively pulverised in a mortar, their juices extracted, and siphoned off into a given quantity of spring water and soured milk. The mixture was then allowed to ferment. If the wolf drink could be in any way linked with the recipe mentioned in Herodotus' account then its primary ingredients were most likely mountain rue, heather, hemp, mushrooms, spring water,²⁰⁹⁴ and perhaps even ephedra. The mushrooms would have been hallucinogenic in nature and probably accounted for the craziness that the drinker experienced.

SCYTHIAN LIBATION

Based on what we hear of the Prussians of Samland, from Adam of Bremen, we might guess that it was a libation of blood and cow's milk, a mildly intoxicating milk-based libation.

"They take the meat of their draft animals for food and use their milk and blood as drink so freely that they are said to become intoxicated. These men are blue of colour (through tattooing?), ruddy of face, and long-haired. Living, moreover, in inaccessible swamps, they will not endure a master among them."

ADAM PRAISES THE
PRUSSAINS

He further stated "...Prussians, a most humane people, who go out to help those who are in peril at sea or who are attacked by pirates".²⁰⁹⁵ They thought little of ostentatious material goods, caring only that their holy sites were not defiled.

What a mightily fearful drink it must have been (whatever its exact form), for the behaviour it instigated would have been greatly influenced by the drinker's social surroundings. During banquets, parties, carnivals, festivals, athletic and manly contests and ritual games, the warriors would have slid into the general mood, quickly becoming the life of the party - night long rabble-rousing, joking, playing pranks, carousing with the young ladies and drink after drink after drink etc.

But, in a quarrel, violent confrontation, or battle, their mood was quickly enveloped in a war-like psychosis (depending of course on the dosages of the ingredients). In susceptible persons even more frightening behaviour erupted, as they started fidgeting. Next their heart began pounding and adrenaline absolutely roared about their body. By then they had started pacing up and down, teeth agrinding, and their demented eyes reflecting a state of insane rage dwelling within. Next the whole world probably started to fade from view, people and words became

DRUG -INDUCED WAR
PSYCHOSIS

distant, and before long, all contact with them was lost.

The individual then maniacally waded into the thick of the fracas, focused on only one thing, the persons he believed had to die by his sword. In some respects a warrior would no longer have been responsible for their own actions. The rasping of drawn swords, and the wispy hum of blades cutting thin air ensued.

Performing the *Haoma* rite

The following is a hypothetical reconstruction of a European Magian *Haoma* ceremony based upon Magian scripture.

1. The pagan choir, and congregation assembled in around the temple areas as the resounding songs of piety continued with great feeling. Drawing upon the spiritual stanzas of *Gathas* (a collection of ancient Magian hymns), the faithful began singing hymns to the Ahuras (and or Daevas where Zurvanites are concerned).

THE GATHAS

In the Old Icelandic *geta* ("a speech", "a sentence", or "faith" {in a religious sense}) we might have evidence for a sort of recital, possibly religious in nature. In Vasmer's dictionary, the Old Icelandic (*geta*) and other Slav variants of it, are probably connected, and it is my guess that the Magian Gathas were the basis for the link.²⁰⁹⁶

2. A party of seven Magi converged on the inner sanctum to make ready for the ceremony. The tithe bearers prepared pitchers or bowls of sacred spring water,²⁰⁹⁷ holy milk and butter and the sacred bull, in readiness for the procession to the altar, once they were called to their assigned position by the Zota Magus (head priest). At this point he got dressed in his robes, and was cleansed by the Asnatar.

EIGHT MAGI GATHER FOR THE CEREMONY

3. The tithes were led or carried into the sanctuary, and placed at the feet of the god's idol by the Aberad.

4. The community then fell silent.

5. The Zota ascended the altar, summoning the faithful to be present for the ceremony and warning unclean people and faiths to depart from their company forthwith. Next he summoned each of his team of Magi to ascend the altar, and assume their proper position.

6. The Frabardar presented his ritual equipment to the Asnatar for cleansing. Having themselves been purified by a sacred washing, each Magus priest robed up in turn, by placing a veiled bonnet on their head, and fastening their face mask (called a *Padam* or *Paitidana* or *Penom* in the Avestan) or veil over their mouth. Other items of ritual equipment were cleansed by the Asnatar at this point in the ceremony. Once prepared and duly summoned by the Zota, each member of the sacrificial team ascended the altar to their correct positions.

THE EQUIPMENT IS CLEANSSED

7. The Zota garbed in his the lengthy veiled-headress and robe, and with mask tied on and fire-making rods in hand, walked to the fire where he began the ceremony with all due precision, since it was only due to the proper and diligent execution of the ceremony that it became effective.

THE ZOTA LEADS THE CEREMONY

8. Fire was brought over to the sacrificial altar by the Sroshavar'z, from the main village or settlement fire which burned in the upper storey of the temple, and was used to set alight the kindling which the Atarevakhsh stacked upon the altar. The fire took alight, illuminating the priests with the glow and the glory of the Sun (Ahura

THE WOOD WAS
INSPECTED FOR
IMPERFECTIONS

Mazda). Now it had only to be fed more billets and butter using tongs, ladles and in some cases, other specialised equipment.

Since it was considered a sinful act to use flawed kindling in the holy fire, any wood destined for the sacred flame had to be scrupulously inspected, and perfumed before it was lovingly fed into its consuming blaze. Even kindling for the campfire or home hearth had to be checked for imperfections. The Magus split open the bark with a knife, and peeled it away to scrutinise the surface of the wood. Wood that was rotting, green, or being eaten by worms and other parasites was never suitable to place on any fire, let alone the holy fire. Normally timber was collected a year before hand and left to stand, allowing it to dry off and mature enough to be used ceremonially.

The pagan Russians burned oak or birchwood on their holy fires, perhaps because the Magi believed a spark of divine flame lived within these woods. This holy spark was released during kindling's combustion. Birch (Biryzoa) is thought to have been favoured because it burned quickly and cleanly, but in the Iranian texts we learn that *Berezi-savangha* (note the similarity in the two names) was one of the highest forms of wood that could be used in the holy fire, the son of the Radiant Ahura Mazda, which burned in the presence of Mazda and all the Yazatas. Moreover the Russian word *berezhno* ("with due care", "with gentleness", "with accurate attention to a detail") may indicate the sensitivity with which these woods were treated, when used for ritual purposes.

A VARIETY OF OFFERINGS
WERE MADE

Whenever buns, pancakes, twigs or plantstuffs²⁰⁹⁸ were to be burned by the Magi as sacrificial offerings, the Rathwiskar helped the Atarevakhsh douse them with a little spring-water in order purify them. The Rathwiskar probably left them to dry for a short while on the altar, close to the fire. "With a drop of water on a twig they should hold (it) four finger-breadths in front of the fire".²⁰⁹⁹ Once dry, the Atarevakhsh fed offerings into the fire in a precise manner.

THE CAULDRON ON THE
FIRE

9. The Frabardar then mounted the cauldron over the fire on a tripod, and spread the mats upon which the offerings and mortar were placed. Next the Havanan began grinding *Haoma* in the mortar. Offerings of *hadhanaepata* (sweet smelling wood, which was traditionally taken from the pomegranate) were made simultaneously.

HYMNS AND PRAYERS

10. As the hymns and prayers continued, the Zota presented each of the ingredients aloft towards (the Sun in) the heavens.

11. The sacrificial cow was brought before the altar, consecrated with benedictions and cleansed by the Asnatar.

THE BULL IS SACRIFICED
FOR THE FEAST

12. At this point the cow or bull was sacrificed. It may have been hung with a noose at the place where the ceremony was enacted (ie; either from the bough of the holy tree if the ceremony was performed in a grove, or strung up from a temple roof beam), or perhaps it was tethered to a sacred post and slaughtered inside the temple using a club, or by a Magus's sword or an axe.

Under Magianism the flesh of the sacrificed bull killed as part of the *Yasna* rite was termed *myazda*. Herein we find a connection between the Slavs and the Iranian cattle slaughtering ritual. In Russia (where cattle were sacrificed by Volkhvy Magi in pagan times) the word for meat is pronounced *myasa*, which favourably compares with the Magian word *myazda*. This being the case, the killing of a bull and the blessing of its *myazda* (holy meat) on the altar, as practiced by the pagan Slavs, Zurvanites, the cult of Mithra, some of the pagan Gnostic cults, and as detailed in later Sassanian Zoroastrian scripture, can only have come from a source other than Hinduism!

Considering this word survival, the pagan Rus' priests must have been Magians rather than Hindu-style brahmin (who were were strenuously opposed to cattle-killing, which they saw as virtually unforgivable). Even so cattle sacrifices are mentioned in the *Rig Veda*, intimating that the Indo-Europeans and Indo-Aryans (the ancient progenitor of the Hindu religion) were cattle-killers.

Cattle sacrifices were expressly forbidden by the Magian prophet Zoroaster, even in the Gathas.²¹⁰⁰

"Unto you O Ahura and Asha the soul of the Kine (sacred Bull) cried aloud: For whom did ye create me, and by whom did ye fashion me? On me comes the assault of wrath, and of violent power, the blow of desolation, audacious insolence, and thievish might".²¹⁰¹

Paradoxically Zoroaster's reign was perhaps the only period in which cattle sacrifice was challenged by Iranian religious authorities. It was a major part of Magian ritual before Zoroaster, and would continue to be ever afterward. This further proves something that has been noted in books like *Vendidad*. That the supposed Orthodox reformation of the Zoroastrian faith undertaken by Karter managed to enshrine many of the customs of the pre-Zoroastrian Magi as formal components of later Orthodox Zoroastrianism. These vestiges of the Zurvanite rites, originally abhorred by Zoroaster, were not only kept, but were even more earnestly sanctioned by the Orthodox Zoroastrian religious authorities. *And since later Zoroastrian scriptures are bursting at the seams with Zurvanite holy lore, it provides us with clues that the Pahlavi texts are an invaluable source for reconstructing Zurvanite rites.*

The "blow of desolation" found in the above passage may describe a Medean sacrificial killing method recorded by Strabo. According to him a killing-blow was landed on the beast's head with a great cudgel.

Magianism of the post-Karterian period was better known for its slaying of a bull rather than the traditional brahminic horse offering, which (among the Rus') had been greatly diminished in significance, though in more ancient times both were widely slain for ritual purposes.

Some *Pahlavi* texts speak of more than a thousand head of cattle offered in sacrifice at a time. Eastern Slavs slaughtered cattle on white and black altars on the isle of Khortitsa, and at Rugen, the heathen Western Slavs were recorded as having brought massive numbers of cattle to the great temple for sacrifice, which were later eaten by the crowds of worshippers.

THE COOKED MEAT
WAS SHARED WITH
ATTENDEES

Fig 116.1. Scythian cauldron

Fig 116.2. Gundestrup cauldron, Jutland, Denmark

13. The Zota (who might have been the one who performed the killing) promptly bled and butchered it, while the Shroshavar'z continued to oversee the activities taking place at the altar. Incidentally, the Lithuanian word for altar was *aukumas*²¹⁰², indicating that their sacrifices were dedicated to worshipping the Ahuras, the Gods of the White Magi.

The Zota would then have carved a large flank of flesh from the sacrificed cow, re-ascended the altar and presented it before the sacred fire. This meat would then have been fed into the cauldron to boil as the *Haoma* mixing ceremony continued.

14. Amongst sobs and laments the head priest led those present in song and prayer to the Sun (Dazhbog in the case of the Russians) or whatever other Yazata deities (ie; genii/personified nature spirits) were being invoked during the ceremony, while the assistant continually stoked the hemmed fire in the correct fashion. The remainder of the ceremony proceeded in the proper manner, with the Havanan and other assistant priests mixing the *Haoma*.

And then it is recited; "To Ahura Mazda would we present our offered Haomas and that which is lifted up ... which furthers the settlements; and that which is offered to the good and holy king, and that which is offered to the holy ruler which rules according to, or in the ritual ... and we present our Haomas each to our own soul ... Yea, we present these Haomas and Haoma implements, and these spread mats, and these Myzdas (holy meat), these stones, the first in the creation, the stone mortar brought here with the yellow Haoma in it, and the iron mortar brought here with the yellow Haoma in it, this Haoma-water,²¹⁰³ and this Baresman (barsom) spread with sanctity, these bodies, and forces, these striving Zaothras [holy water] (that seek to

find thy grace), this holy Haoma, and the flesh, and the holy man, and the saints innate thoughts, even the Saoshyants' innate thoughts.

And we present this fresh milk as an offering now lifted up with sanctity, and this Hadhanaepata plant, lifted up with sanctity. And we offer, and present these Zaothras with our celebration, having the Haoma with them, and the milk, and the Hadhanaepata, to the good waters and offered up with piety. And we present the Haoma-water in our celebrations to the good waters, and both the stone and the iron mortar, and this branch for the Baresman, and the prayer for blessings uttered at the fitting moment which has approached (for our help in its order with the prayers), and the recollection and practice of the good Mazdayasnian law, and the heard recital of the Gathas, the well-timed prayer for blessings as it comes uttered by the saint (and for our help), and ruling (while it is spoken) as a ritual lord, and these wood-billets, and the perfume even Thine, the Fire's, O Ahura Mazda's son! and all good objects (which are ours), and Mazda-made, and which have the seed of sanctity (or are that seed). ... we announce in this our celebration to Ahura Mazda (as our gift), and to Sraosha (Obedience) the blessed, and to Ashi (who is recompense), and to Rashnu the most just, and to Mithra of the wide pastures, and to the bountiful immortals, and the Fravashis of the saints, and to their souls, and to the Fire of Ahura Mazda ... for the sacrifice, homage, propitiation, and adoration of the entire creation of the holy (and the clean)".²¹⁰⁴

He then says "for it is sacrifice, homage, propitiation, and praise ... together with all the holy Fravashis of the saints, of those now dead, and of those of the living, and of those of men unborn, of the prophets that shall serve us, bringing on the renovation of the completed world".²¹⁰⁴

THE STRAINING

15. Like *Soma*, the *Haoma* ingredients were pulverised in a metal mortar, squeezed and strained into a silver chalice, which was then poured into a second larger golden chalice, in which it mingled with the spring water and was stirred in well. This was then tipped into a large cauldron or bowl of milk, or a ritually consecrated vessel of some kind. The next crucial part of the ceremony may differ between *Haoma* and the Vedic *Soma*.

16. The head priest drank an initial amount of the mixed *Haoma*, and tipped a portion of the libation onto the fire.²¹⁰⁵ At this, a burst of vapourised *Haoma* rose up into heaven, the sight and aroma of which they regarded as being pleasing to the Creator - this was the clash of divine fire, *Haoma* and water. In this way the Svarogich (or *Agni*) took as much sustenance up to his father and the other gods as they required, in the form of a fire bird. Most likely this would have left a thin film of cooked milk over the Svarozhich's ashes.

"For the offered Haomas which have been offered in libation to that lofty Lord Ahura Mazda and to the holy Zarathustra Spitama (produce) abundance in cattle and in men; and this abundance is as the good Sraosha, who accompanies us with the great splendour of sanctity, and may he be here with energetic effort (and to aid us in our worship)".²¹⁰⁶

The reasoning behind every single Magian ritual was not fully explained in the Avesta and Pahlavi texts. One possible explanation for the practice of pouring the libation into the fire might be found in *The Laws of Manu*,²¹⁰⁷

"An oblation duly thrown into the fire, reaches the sun; from the sun comes rain, from rain food, therefrom the living creatures (derive their subsistence)".²¹⁰⁷

The team of Volkhvy Magi then drank the priest or poet's share of the libation. *Haoma* was further mixed and distributed in cups or two rhytons.

17. At this point, female Volkhvy (if in a "clean" state) made their way up to the altar and spoke prophesies, predicting the season's weather and performing many "miracles".

18. On occasions when *Haoma* was dispensed to the faithful, only those members of the gathering who were holy and spiritually clean could sip its juices. At other times the Zota would call the righteous to eat meat from the cauldron using *Yasna VIII*.

Once the drink had taken effect, all present forgot the problems of their lives and entered heaven, where the worries and wrongs of their daily deeds were rubbed out, by the liberating nature of the beverage.

19. The remains of the slaughtered cow were taken from the temple to a nearby building where other attendants began to cook it. With everyone enlivened by the libation there was now much rejoicing. Ritual games

continued to the sounds of holy music and dancing. Other food brought by the congregation, was blessed by the Magi, and prepared by the Volkhva and other women folk who were present at the ceremony.

FEASTING, A TIME FOR
JOY

20. A communal feast was shared out, with plenty of high spirited action continuing on into the wee hours of the night. Some days were so highly solemnised that work may have stopped for several days, thus allowing pilgrims to make their way to distant *khrami*, temples, groves, idols and springs of repute.

A typical Persian ritual feast resembled a Scandinavian or Russian feast-come-banquet in many respects. The Persians;

*“..Indulge in lavish feasts which feature the heaviest possible drinking, for ... they carry on their most important deliberations when drinking wine; and they regard decisions then made as more lasting than those made when they are sober”. They dine in an extravagant manner, serving whole animals in great numbers and of various kinds; and their couches, as also their drinking-cups and everything else, are so brilliantly ornamented that they gleam with gold and silver”*²¹⁰⁸

Many a Norsemen undertook to resolve important business matters and personal affairs during the course of a drinking session. This could have its drawbacks. Sometimes inopportune comments were made while inebriated. This might lead to conflicts the following day, where parties had been humiliated, or realised the rashness of any deals they had made, in the cold light of day.

Other libations

The following libations were drunk throughout much of Europe by the upper and lower classes in both pagan and Christian times, though prior to the conversion, these brews had a religious character, laden with magic. Brewers relied heavily upon the process of fermentation to achieve their intoxicating “holy” properties. Fermentation is itself caused by the addition of yeast, (a lichen-like fungi that converts sugars into alcohol) or flowers with yeast-like qualities. In areas where yeast was unknown, the emptying of communal spittle into the batch may have simulated the yeast fermentation process.

Beriozovitsa

Another Russian libation was *Beriozovitsa*.²¹⁰⁹ To make it the Slavs milked birch sap, and this somehow underwent a fermentation process as it stood in storage vats. Little else is known about the precise means of brewing birch-brew, but the method was probably of some antiquity.

BIRCH SAP ALCOHOL

Mead

Russian Church texts forever condemned the revelry of the mead parties which so characterised Mediaeval Russian social life. The Old Russian word for ‘mead’ was *medovukha*,²¹⁰⁹ a honey-beer apparently brewed using yeast and hops. Based on the Scythian *Haumavarka* word form *medovukha* could mean “mead-wolf”.

MEAD

As it stands, the Old Russian and Slavic word *med* and variants of it (meaning “mead” or “honey”) are traceable to the Old Indian (*madhu* meaning “mead”), and the Avestan (*madu*, meaning “honey” or “wine”).²¹¹⁰ Obviously European mead, the drink of ages, had an Aryan genesis, and most likely possessed the same religious virtues that it had under the Indo-Europeans. As you will recall mead was profoundly connected with the worship of Indra. Finns drank *Sima* in the form of ritual mead during their *Sima* ceremonies, instead of a milk-based *Soma* libation. If Indra was the basis of the Aryan-pagan and Dualistic religions in Europe, then the warriors probably drank their libations from ceremonial buckets, just like Indra (Perun) did.

Mead is also present in the Old Prussian as *meddo*, the Lithuanian and Latvian *medus*, the Gaelic *mid* (mead brewed with hops). Imported spices from India and beyond, such as cinnamon or nutmeg were probably mixed with honey, sacred spring water and boiled. Next it was allowed to cool off and mixed with yeast or some other fermentation catalyst. Later that day it was barrelled and stored for half a year. Mead was kept, not only in barrels, but also in underground storage pits where it could be withdrawn by the bucket-load, during prolonged festivities.

Allusions to mead are especially found in Finnish folklore. Lemminkainen’s mother resurrected him after dredging his corrupted body parts from the river of the dead with a rake.²¹¹¹ She sewed anew his sinews and bones, and he became whole once more. All that remained was to re-invigorate him with ointment; “a drop of mead brought

to anoint the weary one, to tend the ill-befallen”.²¹¹

To brew the mead, she sent a bee out into the forests.²¹² There it visited the gaily coloured forest flowers and came home laden with mead. It went off again to a “holy stream’s whirlpool” and got water for her there. The mother then cooked these ingredients;

MEAD BREWING IN THE
KALEVALA

“in tiny cauldrons, in beautiful pans”.²¹² The bee (“the little man”) then ascended up into the heavens to where the gods live, for “there is mead aplenty there ... with which once the Creator sang charms and ... anointed his brood *injured by an evil power*”.²¹² “In pots of silver ... pans of gold, honey boiled in the middles, at the brims melted butter, mead at the south tip”.²¹³ “Forestland’s vat of honey, is fizzing as it ferments”.²¹⁴

Mead could also have medicinal properties. The Finns concocted honeyed ointments from the mead that dropped from the limbs of the oak tree. Together with oak bark, grass and hay the honey was boiled; a healing ointment made.²¹⁵

Beer

RITUAL BEER

Ritual beer first began its life in ancient Egypt and Mesopotamia, but later spread throughout much of Europe and Asia. Whether it had been independently discovered in these many different locations, or whether the brewing arts were taught to them is uncertain. Nevertheless it was but one style of ritual drink that formed the backbone of their pagan religious life, especially amongst those who could not drink *Haoma* or *Soma* for most of the year. As with mead, beer was normally drunk to excess by the warrior breeds, who treated most sacred intoxicating drinks with some slight irreverence, just like Indra (Perun) their idol, with his gut full of *Haoma* and beer dregs which he sculled by the bucketfull.

As part of the beer-making process, barley was soaked in lake or creek water and allowed to ferment in barrels stored in the warm environs of a temple sanctuary, kept temperate by the combustion of an eternal fire.

Once converted into malt it was dried out, pulverised, mixed with hot spring water, mashed, and these remnants were then mixed with boiled and filtered hops water. The application of yeast to the batch now caused the enhanced fermentation of the brew, which was then further strained to remove sedimentation and stored ready for use in barrels. Non-ritual beer was made by suitably skilled person’s using secret recipes too precious to tell. In these special brews *Volkhvy* and learned brewers probably added a few extra goodies such as wormwood, or the juice of mushrooms to the vats, for a bit of extra kick. During Summer the barrels were probably stacked beneath the “life-giving Sun”.

HOPS

Hops, a principle constituent of beer appears in the Russian as *khmel’*, Bulgarian *khmel*, Serbo-Croat *khmel*, Polish *chmiel*, Slovenian *hmelj*, Czech *chmel*.²¹⁶ These supposedly come from a Middle Greek word. Hops also appears in the Old Icelandic as *humli*, Anglo-Saxon *hymele*, Middle Latin *humulus*, and Middle Low German *homele*.²¹⁶

The *Kalevala* tells us a little about Finnish beer making, and the attendant mythical and religious aspect to it.²¹⁷ Firstly they sacrificed a great bull by a downward swing of the club, preceding the beer-brewing.²¹⁸ Hops were cultivated by trailing them up the sides of trees, and “Lord Luck sowed barley”.²¹⁸ Though the *Kalevala* adds that hops were not grown in the lands of the Finns,²¹⁸ and so were evidently imported from hitherto unidentified locations.

When it was time for the brewing “hop called out from the tree, barley spoke from the field-top, water from Kaleva’s well” asking to share each other’s company, for they had become bored.²¹⁷ A female “beer-smith” set to work.²¹⁷ On a promontory, “on a fleeting Summer’s day” (ie; at a certain time after the Summer solstice) she brewed the beer in a “birch tub”, with well stoked fires beneath ... “six grains of barley, seven hop catkins, of water eight ladlefuls; she put the pot on the fire and brought the stew to the boil”.²¹⁷ Evidently the ratios used were six of barley, eight of water, and seven of hops.

THE BEER-SMITH TRYs
MANY ADDITIVES, TO SEE
IF THE BEER WILL
FERMENT

In this tale the beer-smith wonders how she can ferment the mushy beverage. In vain she tries various agents; pine needles and cones from the spruce tree; chips of wood from the floor; bear spittle. None of them started the fermentation. Lastly she tried “mead-sweet grass” and “golden flower petals ... the golden grass”. The latter agent seems to have been the dandelion, which the ancient Greeks also used for the same purpose. “Now the beer chose to ferment, the young drink grew up in the grooved cask of new wood”. “The fair brew was maturing lying underground” in pits where the casks were kept at the required temperature, by surrounding the barrels with stones specially heated in “beer-

fires". These fires consumed immense quantities of timber.

There was another variant of beer in Finland, a war libation. Intent on warmongering rather than staying at his farm, with his home-brew, the Finn Lemminkainen said "I have a good mind to go drink the beer of war, to taste the honey of war".²¹⁹ Despite whatever money he had, even the bonanza of a chest full of newly-discovered coins, Lemminkainen still wanted to go raiding for silver and gold.²¹⁹ Gold because he needed it, silver because he lusted after it.²¹⁹

"THE BEER OF WAR"

Pagan gnostic libations

Kvas

The Mithraic warrior brotherhood had two ritual libations integral with their Persian mysteries, one a libation made from a mixture of water and bread, and the other of wine. What is even more interesting, there may be evidence for the use of these specialist libations in pagan Rus', in the form of *Kvas* or *Mulse*.

A LIBATION MADE
FROM BREAD AND
WATER

The age old Russian beverage *kvas* is a dark-looking drink made from water and fermented bread. Even today, it is still available on the streets of Russia, Belorussia and the Ukraine. Phonetically it seems related to *Kvasir*, which from Norse mythology we can infer was a sacred Norse drink, especially since the Danes also drank *kvas*, albeit of a variant that used fruit.

Considering what seems to be a Roman Mithraic presence in Russia, *Kvas*, might originally have been the Mithraic bread and water communion, but in a more innocent disguise. If this was so, there is reason to believe that some pagan Ruslanders were continuing to accept this form of pagan communion for many, many hundreds of years after the conversion, right underneath the nose of the Orthodox Church. So prevalent was *Kvas* drinking that it became a national beverage. Though whether any given cup of *Kvas* was just a simple refreshing drink, or the product of a more elaborate ritual, naturally depends on *who* the *Kvas*-maker was, and the religious beliefs of the drinker.

Kvas apparently had several variants, depending upon what sort of grains were employed by the brewer; though normally rye was the fundamental ingredient.²²⁰ The term *kvas* is found throughout all the Slav nations in one form or other, and in the Albanian *kos*, which is a soured sheep's milk drink. In Rus' another word *tyurya*, denoted a particular type of *kvas*. This term is thought to come from the Greek, as well as the Old Indian *turas* and the Avestan *tuir*.²²¹

Wine

Sacred wine was once used during the Dionysian, Orphic and Mithraic libations. Since the word for wine throughout most of Slavia is *vino*, and this word has a Greek and Latin etymology, one can infer that their wine-making had Greek and Roman roots. Perhaps the similarity arose from words used to describe the Christian Eucharistic wine, but *vino* might also have pre-dated Christian sacramental wine, in which case its origins would be pagan.

From a description of a healing libation used in Britain²²² Mithraic wine might perhaps have been wine fortified with egg yolks, honey, spring water, oil, and perhaps fennel plus other spices. This wine libation was formerly known in Roman times as *mulse*.

Necromantic and Divinatory connections

BISINA

Discussed later in the book

ERGOT

Whether the purple ergot fungus (*Claviceps purpurea*, from which comes LSD) was ever ritually used by the pagan Russes as an aid to performing necromancy is uncertain, but by the later Middle Ages it proved to be a very big problem, with large outbreaks of accidental ergot poisoning occurring. The toxicity of ergot is such that in the advanced stages of poisoning it causes appendages to fall off, so much so that individuals often appear to have been

BISINA - NAPELLUS
MOYSIS

ERGOT POISONING

afflicted by leprosy. Ergot produced very “spaced-out” or diabolical visions, resistance to pain, psychosis and numbness. Anyone who has ever seen the psychedelic paintings of the Mediaeval artist Hieronymus Bosch will be struck by their vivid surrealism. In many instances people depicted in the paintings appear to have been suffering from leprosy, or very likely ergot poisoning, and what is more, some have theorised that Bosch was himself under the influence of ergot as he painted.

Divine foods

PAGANS BASED THEIR
LIVES AROUND RAISING
OR GROWING ENOUGH
FOOD TO FEED
THEMSELVES

Because Northern Russia is agriculturally marginal country, farmers were much consumed with the tricky matter of crop cultivation. For those who tended and raised crops to stay alive, the agricultural year began in March. Their hearts filled with expectation, the fieldworkers headed out into the newly-ploughed land, laden with farming implements, to prepare mother earth to receive the seed. From then until the completion of the harvest during June and August, peasants lived on the most meagre of fare. Come the harvest they gained respite from malnourishment. Even so it was not unusual for Rus’ families, the Simurg-worshipping ancestors of the Magians, to be running low on grain by the end of autumn, say the last week of October, barely several months later.

After Autumn the inhabitants of Slavia mentally prepared themselves to endure a relentless cycle of pressing hunger and suffering which would last throughout the callous winter months, until the next harvest. In the intervening period they had to watch in terror the coming of storms, blights, hail, beggars, grain-stealers, ravenous insects, frosts, rodents, and briars which decimated their fledgling crops and food reserves little by little. All the while they lamented the grip of hunger which twisted in their gut. It worsened day by day.

MANY CALAMITIES
DESTROYED THEIR FOOD
SOURCES

Oppressed by fear and starvation householders nervously stood vigil over their silos ready to fend off the lawless, and those desperate in their hunger. Still others took matters into their own hands. Gathering weapons and other instruments of war they readied themselves to raid other estates more well endowed with surplus food. Such events characterised the strategic war between the good sun who gave life to the world, and the black god and his demons who took it. This conflict intensified around mid-winter, when the seasons turned their course in favour of the radiant creator above. Throughout those long nights the white shape-changers (often dressed as wolves) did battle with the witches and other minions of the evil one, forcing back the deathly winter (see Part II, Chapter VII).²¹²³ Steadily the sun waxed stronger, compelling the devil’s snow to cease smothering that which lays buried beneath it. The conflict further progressed around Spring, for it was then that the initial shoots of cereal peered through and got their first glimpse of the glorious sun. Demons writhed and squirmed in suffering, pained by the emergence of flowers, crops and other new plant life, in particular the cereals which were the life of the nations. The white Magi once said:

THE FORCES OF EVIL
ATTACKED THE FARMSTHE SUN CAME TO THEIR
RESCUETHE GROWTH OF CEREAL
TORTURED THE DEMONS

“When barley is coming forth, the Daevas start up; when the corn is growing rank, then faint the Daevas hearts; when the corn is being ground the Daevas groan; when wheat is coming forth, the Daevas are destroyed. In that house they can no longer stay, from that house they are beaten away, wherein wheat is thus coming forth. It is as though red hot iron were turned about in their throats, when there is plenty of corn.”²¹²⁴

Considering the Magian presence in Rus’, we can infer that pagan Russians thought no differently when it came to such a fundamental Iranian religious concept. In this passage we find that the production of cereal crops and food is the religious basis for the fertility rites of the European and Russian white witches. These required the lighting of bonfires, cauldron rites, and broom-like bundles of wands.

FOOD WAS HOLY

THE HARVEST WAS A
CAUSE FOR REJOICING

Food was inherently sacred, and its very growth brought life to the world. *Those who tilled the soil helped accomplish the work of the creator* by working the fields, and bringing harvest time to fruition. A family’s prosperity and its ability to feed itself therefore hinged as much on farmers, as it did on the outcome of the fertility magic and counter-magic supplied by the white magicians (in response to the crop and stock destroying black magic of the witches and their father the devil, that winged-goat/serpent of old). If harvest time was a cause for rejoicing, as the demon-punishing grains of abundance were reaped and taken to the granaries, how much more amazing would its transition into edible food be. Once threshed, grain was ritually offered to the mighty Sun, or one of the celestial gods or *fravashi* saints, by the Magi. The god had eaten ... the fertility god became strong ... the land became fruitful once more. Later, baskets of grain and the sacrificial meat (boiled in the cauldron) were taken and prepared for

distribution in different forms ... as cakes, buns and biscuits. These culinary delights were holy enough to cleanse a person's insides as it passed through, invigorating their bodies, and assuaging their hunger.

It was therefore improper to eat wholesome food in an unworthy manner, nor was it acceptable to fast, or gluttonously consume more than one deserved.

*"Then let the (white Magus) priest teach people this holy saying: "No one who does not eat, has strength to do works of holiness, strength to do works of husbandry, strength to beget children. By eating every material creature lives, by not eating it dies away".*²¹²⁵

For this reason the Russian Orthodox church probably instituted its rigorous regime of fasting, not only to teach the faithful self control, but to dissuade pagans from attending their many calendrical feasts. If fasting did not deter Magians from feasting, it at least allowed Christian priests to guess who was still observing the old ways.

Any true Mazda worshipper was also expected to share their food with guests and those who had little;

*"He who tilling the earth, O Spitama Zarathustra! would not kindly and piously give to one of the faithful, he shall fall down into the darkness of Spenta Armaiti, down into the world of woe, the dismal realm, down into the house of hell".*²¹²⁶

Based on the sort of comments supplied by Adam of Bremen this level of munificence matches the generosity of many a pagan Prussian.

In Russia, the plough repeatedly appears in popular folk tradition as something holy. *Plug*, the Russian word for "a plough" is related to a host of other astonishingly similar words in the Balkans, Central, Western and Eastern Slavia, Germany and Scandinavia. They all had a yet to be identified common source. Inevitably there has been some bickering over whether it had a Nordo-Germanic or Slavic genesis, because it has obvious implications for determining the source of certain agricultural expertise throughout these regions. By some coincidence the plough, and indeed ploughmen were considered holy in Scandinavia and Germany. The commonality of this concept may be universal, the plough a phallic instrument if you like, which performed coitus with mother earth as it ploughed the furrows, in readiness for the seed that would impregnate her.

There is anecdotal evidence from Scandinavia that princes performed the sowing of grain personally. Again we find a correlation between royalty and the fecundity of the land. While we might think that those of the royal blood were too busy to burden themselves with the weary business of sowing fields, we know that in Christian Russia at least, they used to make house calls on their people, and were therefore very close to the people. House calls are unlikely to have been a new innovation. Perhaps they did so to lend assistance with agricultural tasks, but even so many princes would have made these visits to curry favour with the folk, thereby ensuring a certain amount of allegiance at *veche* (democratic council) meetings.

Holg biscuits

Round cakes were made by the pagans for festive consumption. Perhaps charged with a little hemp, to impart an even greater feeling of freedom and light-headedness.

The Russian word for "a cake" (*tort*) comes from the Old Russian *t'rtove*, which originated in the Italian *torta* and the Latin *tortus*.²¹²⁷ This term was more than likely Christian, and evidence for Roman Catholic influence in the period before the 1054 AD schism with Constantinople.

Russian words for bread include *bykhanka*, *bokhanka* and *bukhanets*.²¹²⁸ These are related to the Polish *bochen* or *bochenek*, the Czech *bochnik*, the Middle-High-German *vochenze* or *fochenz*, which are in their turn related to the Latin word *focacia*.²¹²⁸ There was therefore an obvious Latin influence on Slavic and Germanic bread-making. Perhaps this was again a Christian influence, but it might also have been pre-Christian, in which case the influence was more than likely Mithraic. During their ceremonies the Mithraic brotherhood consumed ritual loaves like those in fig 117.1.

Bogat'e was used when referring to fresh bread baked from newly harvested grain.²¹²⁹ Its root is connected with other Slavic words denoting wealth, so presumably the consumed bread made one rich. *Bogat'e* is related to the Russian words *bagat*, or *bagat'e* meaning "a fire", or "smouldering beneath ash".²¹³⁰ These are in turn related to *bahhan*, the Old High German word for "a stove".²¹³⁰

FRESHLY HARVESTED
GRAIN

Two other commonly used words were *zhitnik* ("barley-bread") and *zhito* ("barley-bread" in the North of Russia, and rye-bread in the South).²¹³¹ These terms are cognate with words found in the Serbo-croat, Bulgarian and Slovenian. Since *zhito* and *zhitnik* were related to *zhizn*, *zhiti* and *zhivy* we can infer that they were connected with the notion of "life", and, moreover, traceable back to Avestan and Old Indian words denoting the same concepts.²¹³² In this instance the influence is undeniably pre-Christian, and evidently related to Iranian and Indian ideas regarding the importance of bread as the stuff of life. These notions were probably quasi-religious.

THE BREAD OF LIFE

Holy meat

We have already witnessed the similarity between the Russian word for meat, and the Magian ritual term for meat offered at the altar. After being presented during an offertory procession, the beast was taken within the grove or temple and slaughtered by a Volkhv, then left to hang from the tree or a temple beam, where it was gutted, skinned and left to set. The remainder of the beast was pulled down, dressed, and baked in an oven or slowly cooked over a fire pit, basted in dollops of butter and honey. Based on Magian tradition we know that roasting meat by direct contact with the flame would have been done by "sinister families", causing not a little consternation amongst the more sanctimonious guests.

Pork was probably another of their holy meats, since it was widely eaten at Magian feasts, and forbidden to Jews and Muslims.

The Russian words for "a sow", *svinoi* or *svina*, is related to the Gothic *svain*, the Anglo-Saxon *su*, the Latin *sus*, the Greek *us*, Middle Latin *suinus*, the Avestan Persian *hu*, the Old Prussian *svintian*, and the Old Indian *sukaris*. Similarly related is the Latvian *sivens* or *suvens* ("a suckling pig").²¹³³

Kaban, the Russian word for "a boar", comes via the Turkic.²¹³⁴

These etymologies are unlikely to have arisen from the Indo-European since observers of vedic lore did not eat swine meat, deeming it unclean. Therefore European terms for pork are likely to have come from the next most likely source, Avestan. Consider one Finnish term for "a pig", *porkus*. It evidently came from the Avestan word for "a pig".²¹³⁵ The English word *pork* has a similar point of origin.

Drons

SACRED LOAVES

The large round and flat *Dron* was an unleavened ceremonial loaf similar to a pancake, which was poured onto a griddle by a female Magus, then incised with nine crosses, formed by fingernail cuts.²¹³⁶ The female priests of the pagan Rus' Slavs also made "pancakes", which were termed *bliny*. These would have been similar to, if not identical to the *dron* loaves made by the Magi. For example, the mediaeval chronicler Helmold tells us that Polish pagan pancakes had nine mounds on the back, and I guess these mounds may have resulted from being scored by nail or knife cuts. They were perhaps the same as the Western Slav sacrificial cakes in Poland, or the Celtic Bannock buns used by the druids in Ireland and Britain, which according to Frazer had an unspecified number of raised mounds on one side.²¹³⁷

LOAVES CONSECRATED
TO THE YAZATAS

Whenever a person sought the spiritual aid of a Yazata genii, sacrificial drons were offered at the sacred fire to achieve intercession. The sacrificial immolation of *bliny* was also noted amongst the heathen Russes.

Drons were cooked on griddles, and equally likely in ovens of the sort shown in fig 117.2. Fifty such outdoor ovens were excavated at Novgorod. They resemble ovens found in Syria and the Middle East which are normally used for baking flat unleavened loaves not dissimilar to drons. Considering that each of them was surrounded by a fence, I believe they had a ceremonial application of feast days, hence the large number of them found outdoors. I shall touch upon this subject elsewhere in this book.

PORRIDGE WAS HOLY

Holy gruel

The female Magi made sacred porridge from husked barley, wheat and rye grain brought there by the people. It was then consecrated and mixed with milk and honey. The holy gruel was believed to give strength and life, and so it also was sacrificed on the sacred flames. The sacrifice of porridge to fire was noted among the pagan Russians.

Similarly people, especially witches, were recorded as pouring porridge into holes in the ground. No doubt this porridge could be abused during ritual desecrations to feed the demons, or simply bring life to fallow soil.

In a *Primary Chronicle* anecdote, the Rus' city of Belgorod in the Ukraine was encircled by Pechenegs (Zoroastrians) c.997 AD, and was suffering under the weight of the siege.²¹³⁸ One wise-man recommended digging two lined pits, one which was filled with mead and the other with porridge. The Pechenegs were summoned to send a delegation to the city, whereupon the locals showed the hospitality of their suffering inhabitants by breaking open the pits and bringing up mead by the bucket-full, and porridge (which the Zoroastrians would have presumed to have been ritually consecrated).²¹³⁸ This was most pleasing to their eyes, and thereafter they withdrew their attacking forces and left that place alone.²¹³⁸ This is a very revealing tale which could mean several things. Either the Pechenegs were impressed with the amount of provisions still in storage within the beleaguered city, or no longer felt morally justified in troubling such a kind and hospitable bunch of mead-drinkers, or their military activities possessed a religious dimension, directed towards eradicating Christian and most likely idolatrous "black" Magian settlements. Whatever the case, the mere act of showing them the mead and porridge was enough to have the Pechenegs leave in peace.

The gahs

DAILY PRAYER SESSIONS

Gahs were daily prayer sessions held by the Magi, and which were attended by Magi priests who prayed before the holy fire and fed it with the sacred woods, on an around the clock basis. As soon as one shift of Magi had finished, the next group of Magi would take over from them, and so on.

The Magian prophetic calendar

The following timeline, which gives some structure to the scattered and disjointed Zoroastrian prophesies, was reconstructed by the late Professor West,²¹³⁹ who used Magian references to Alexander the Ruman as an historical reference point. Establishing the identity of this personage is crucially important to our attempts to marry prophesied and actual events. That West identified Alexander the Ruman as Alexander the Great is most likely correct considering that his reign and death chronologically preceded the ascension of the Arascids and Sassanians. However Rumans were specifically referred to as "Greeks by strict reckoning". This is evidently a reference to Greek Romans, or in other words Greeks who called themselves Romans. The only race to fit this description were the Byzantines. Therefore the title "Alexander the Ruman" is more befitting of a Byzantine emperor named Alexander rather than Severus Alexander (a Roman Emperor), or Alexander the Great (a Macedonian who was never referred to as a Roman).

There was only ever one Roman Byzantine Emperor named Alexander, who ruled between 912-913 AD. His demi-pagan reign, though dissolute, did not see any outlandish Byzantine military exploits in Anatolia or the Far East. Thus unless there was some other major Roman or Byzantine leader by that name, that went unrecorded (which is unlikely), then Alexander the Ruman was none other than Alexander the Great. I include here hypothetical Magian timelines based on these three Alexanders.

Alexander the Byzantine	Severus Alexander	Alexander the Great	Event
8387 BC	9077 BC	9630 BC	The first millennium of existence
5387 BC	6077 BC	6630 BC	The Fravashi of Zoroaster was formed
2387 BC	3077 BC	3630 BC	Ahriman sprung himself from imprisonment in the Abyss, and came into the world.
2317 BC	3007 BC	3560 BC	Masha and Mashoi (first man and woman) are born
1387 BC	2077 BC	2630 BC	The coming of Azi-Dahaka into the world

1584 AD	894 AD	341 AD	Hushedar is born
2013-2113 AD	1323-1423 AD	770-870 AD	The Terrible Winter of the great wizard Mahrkus
2614 AD	1924 AD	1371AD	The start of the final, twelfth millennium
3524 AD	2834 AD	2341 AD	The birth of Sraosha, the pagan Messiah
3641 AD	2951 AD	2398 AD	The end of the year 12,000 and the beginning of the cosmos' renovation.

12,000 YEARS AND THEN A NEW BEGINNING

The beginning of time was relative to the first years of creation, as described in the Magian Avesta and Pahlavi texts. Following this, there was to have been a 12,000 year period, composed of four 3,000 year epochs. Unlike the open-ended Christian and Muslim calendars, the Magian prophetic-calendar was destined to cease some 12,000 years after its beginning. For it was at that time that Sraosha would renew the face of the universe, renovating it back to its intended state, fresh, clean, beautiful and devoid of demons now vanquished. Further information concerning the coming of the Sayoshant in the millennium of Ashedar-mah, and his transfiguration of the world, are to be found in *Dinkard*.²¹⁴⁰ According to the Sassanian Zoroastrian copyists, the date of the Sayoshant's arrival can be determined by referring to the scheme of events held in the book *Bundahishm*. It was thus portended to occur around the year 2,341 AD, at a time when mankind lived to a very ripe old age, thanks to the medical marvels of the times. Contrary to their position, the late Professor West found problems with their dates. He illustrated that the Pahlavi texts contained chronological fudges in places, made *after 630 AD* so that prophecies could be conveniently aligned with similar events. Even so, some of the Magian prophecies are quite remarkable.

SRAOSHA WOULD RENEW THE FACE OF THE EARTH

DIFFICULTIES ESTABLISHING A CREDIBLE BIRTH DATE FOR ZOROASTER

The writings of Plutarch,²¹⁴¹ Pliny the Elder and ancient Greek writers such as Eudoxus only add to the enigma, clashing with later Zoroastrian datings by an enormous 5,600+ years. They place the birth of Zoroaster in the year 6,347 BC, some six thousand years before Plato's death; Hermippus mentions the year 6,184 BC. Later Zoroastrian authors explain the 6,000 BC+ date given by the Greeks as signifying the birth of Zoroaster's pre-existing soul, or *fravashi*. Others claim that Zoroaster's birth date had been confused with that of another Zarathustra who acted as a priest serving with the troops of Darius I during his invasion of Greece and Scythia. If by some stretch of the imagination the Greek dates were deemed acceptable, it would mean that the year 12,000 elapsed in the year 3,347 BC or 3,184 BC, more than 1,500 years prior to the commonly accepted date for Zoroaster's birth.

CONFLICTING TIME CYCLES

We might guess that there were also conflicting prophetic time cycles within Magian communities, which would have further added to the religious disorientation experienced during those final years of Zoroastrian civilisation. It is conceivable that the officially sanctioned Zoroastrian time cycle had lapsed long before the expected dates noted in the Orthodox texts. I say this because in some Magian passages there are doubts about the timing of Sraosha's arrival, or possible references to persons mocking the Mazda-worshippers over the non-arrival of Sraosha. In none of the following examples does the text go on to offer examples of prophetic revelations, or dates, to reassure the faithful of the exact timing for Sraosha's arrival, which is what one should expect if there was a definitive and widely respected date available for the future event.

DOUBT ABOUT THE TIME OF SRAOSHA'S ARRIVAL

"Even he who is an ox of many cattle has openly and publicly wailed this complaint on account of the righteous one: "How long is the time till he arises, until the wicked one who is a smiter and privileged corrupter is he who is unprivileged?". Because for the sake of producing resolution, he complains that, until the developer shall arise, even he who is irresolute is ruler, that is, until he who is the developer shall become privileged".²¹⁴²

SOME SAID HE WOULD NEVER COME

The text does not go on to say how long it will be, which is the response one could reasonably expect in reply to the Ox's question if the time for his coming was well known. But it might also be that there was such a timetable (which we know to be the case from the Magian texts), but that there were such significant doubts about the veracity or acceptability of the timeline, that a response to the question could not be offered to resolve the ox's doubts. *This, too, that they praise, recount, and practice the religion of Mazda-worship at the time of the renovation of the*

universe, that of which the demons through deceitfulness, and then also wicked mankind deceived by those who are demons, have said that it does not occur".²¹⁴³

THE MAGI SAID HE
WOULD COME IN GLORY

This piece of scripture mentions detractors lambasting the Zoroastrians over a renovation that will never occur.

"...about the renovation of the universe in the words of Ahura Mazda to Zarathustra, thus: "I have produced the effecter of the renovation, the causer of righteousness, Soshans, of whom mankind say that he does not come; and yet he will come, for the righteous, with that glory which becomes all-brilliance"".²¹⁴⁴

Is this a reference to mockers refusing to believe in the coming heathen Messiah, or were there persons casting jibes at the Zoroastrians for Sraosha's non-arrival, which had been expected and then lapsed? It's difficult to say.

If the prophetic time cycle, supposedly written for an audience around 500 BC, was already *fixed*, then anxieties about Sraosha's expected arrival in 2341 AD would simply not exist. After all he was to be coming in a specific year, roughly 3,000 years away! Nor do the texts say things such as, "why does his coming have to be so far away from the people of our day", which would have been another logical inclusion in the scripture if the prevailing Zoroastrian orthodox time cycle was irrefutable. Why would they have doubted and lamented the coming of a messiah whose arrival was fixed almost 3,000 years hence, and could not readily be expected in their own time? This cannot be taken to mean that they didn't believe in him; let's face it, dedications to Sraosha were central to the ritual life of the Zoroastrians. What it might mean is that they were unsure of the date of his coming. Many of today's Jews doubt whether the Jewish Messiah will ever arrive, precisely because the Messiah's arrival was not fixed for a specific time or age. The same could be said of Christians in relation to the second coming. Again, if the date was portended for a time that was firmly fixed and in no way open to dispute, some few thousand years hence, then why would Zoroastrians have been lamenting the non-arrival of their saviour? I seriously contend that the Zoroastrian timelines were not known with total certainty in their day, and that there were conflicting variants.

VARIOUS TIMELINES
EXISTED

What are the implications of this? Firstly we cannot tell how ancient the orthodox Zoroastrian prophetic chronology is, nor the extent to which the texts were edited. Greek claims that Zoroaster was born around 6,000 BC ought not be totally ruled out, mainly because there are a certain number of European megalithic sites that resemble Magian death houses called astodans. *Dadistan i Dinik XVII: 4* states that the ideal astodan should be made of stones and roofed by a large, rock slab, with a perforation on the eastern wall, which allows light from the rising sun to enter the tomb. Bearing in mind the many similarities between Magian funerary rites and Megalithic tomb remains, I would say that *Dadistan i Dinik* provides a fair description of a Megalithic tomb in Britain. So we are left with two options. Either the resemblance shared by astodans and megalithic tombs is purely fortuitous, or it was not. And if it was not, they either predated the religion of Zoroaster, and were taken up by him, or, if they were invented by him, then Zoroaster is far older than we suspect. If the unthinkable were true, and the megalithic burial complexes of Ireland and Europe (perforated on one wall, in the direction of the rising Sun) can be shown to be Astodans, it could be argued that the Greek dates are feasible. Secondly, as portended events came to fruition (such as the invasion of Alexander the Great), the Magi might have altered the original wording of a given prophecy to reflect the transpiration of the event, and accommodate the names and events of the time. However since the white Magi jealously protected the truth, it is difficult to imagine them willfully corrupting long extant prophecies to any great degree. Such an act would have been contrary to their most cherished morals, unless of course an alteration was merely a point of clarification. Whatever changes were made must have been done purely in good faith. Thirdly, some prophesied events deviate from the accompanying factual events by several hundred years.²¹⁴⁵ Since the book of *Bundahishm* is both a book of prophecies and at the same time an historical record, some would argue that such inaccuracies render the entire text suspect, even in its finer details. Such a knee-jerk reaction would be better offset by an even closer analysis of the material, not to mention a realistic level of archaeological exploration in Iran commensurate with the area's importance.

CONFUSION EXISTED
ABOUT THE PROPHECIES

Therefore it is conceivable that Zoroastrianism owed much of its demise to the inherent confusion encapsulated within *Bundahishm's* prophetic cycle of events. As the lands of Zoroaster were progressively torn apart by Nestorian and Byzantine Christians, Turks, and Arabs (especially during the 6th and 7th Centuries AD), the non-appearance of the second last saviour Husheddar, who was supposed to have helped the down-trodden Zoroastrians regain power and ascendancy in Iran, must have scarred them deeply. As one of the most persecuted religions to have ever

existed, many of the Magian faithful inevitably felt lonely and dejected by their god, and seriously questioned not only the validity of the prophecies, but their religion. As for modern views on their eschatological calendar, it becomes important to establish when Zoroaster lived, some say 1,500 years BC, others between 1,000-1,200 BC.

	1,500 BC	1,000-1,200 BC
1,500 years following Zoroaster comes Aushedar	0 AD	500-700 AD
1,000 years after Aushedar comes Aushedar-mah	1000 AD	1500-1700 AD
1,000 years after Aushedar-mah comes the Sayoshant	2000 AD	2500-2700 AD

Accordingly the arrival of the world messiah foretold by the Magi is either imminent (the year 2,000), or can be expected some 500 to 700 years hence.

Pagan chronology in the Balkans

THE HEATHEN
MONASTARY IN ALBANIA,
ALLEGEDLY FOUNDED BY
KHAGAN VLADIMIR'

Pagan calendars were normally related to the annual cycles of both the Sun and Moon. That much can also be said of the pagan Slavs. Yet one cannot overstate the unfathomable importance of another calendrical system once used by them.

IT RESEMBLED THE
MAGIAN CALENDAR

It was associated with a fraternity of dualistic, light-worshipping pagan priests from a 10th Century AD Albanian pagan monastery near Elbasan.²¹⁴⁶ This monastery was supposedly founded by the Rus' Khagan Vladimir after his alleged relapse into paganism.²¹⁴⁶ As you will recall, Vladimir was the very one who introduced a pantheon of Magian and Iranian gods to Kiev (amongst whom was Khors, otherwise known as Khres {ie; Jesus see p. 155}), and abandoned them in favour of Byzantine Christianity a short time later. It was formerly known as the Ion-Vladimir (St John-Vladimir) monastery, and it formed the basis for an oath-bound secret society known as the Rotu, who were not Bogomil heretics but often confused with them.

IT WAS ROUGHLY
SYNCHRONISED WITH THE
CHRISTIAN CALENDAR

Around 1,000 AD, these adepts gauged time using a seemingly Magian prophetic chronology. In the Rotu document *Life of Vladimir the Ardent Sun*, the date is expressly stated as "*in the year 12,000 and 1,000 more, after the very beginning, and in the 7th year after the going down of the Enlightening Sun*".²¹⁴⁷ Since the document concerns the life of Khagan Vladimir, the phrase *Enlightening Sun* is really a reference to Vladimir's spiritual name, "*the Ardent Sun*". Because Vladimir died in 1015 AD, we might presume that the document was written in 1022 AD, but I am unaware if there is definite dating on the manuscript to confirm or deny this. In other words the pagan calendar's chronology was so similar to the Christian calendar as to be almost identical. The Christian and the pagan Slav calendars might have differed by less than 10 years! By my reckoning we can infer from the text that Albanian and Slavic Magians had surpassed the 12,000 year cycle²¹⁴⁸ and embarked on a new era. This can logically be equated to the end of the 12,000-year Zoroastrian cycle and the start of the years of the Sayoshant. Thus we are dealing with pagan Priests who c. 1,000 AD believed their Sayoshant was born 1,000 years prior, and were already 1,000 years into the portended renovation of the Deliverer.

DISSIDENT MAGIAN-
CHRISTIANS MAY HAVE
BEEN RESPONSIBLE

This fairly clearly illustrates not only the presence of Jesus-worshipping Magian-Christian wizards in the Balkans, but that their calendar was not in synchronisation with the 12,000 year Orthodox Zoroastrian prophetic time line. In fact it was shy of the Orthodox Zoroastrian dates by 2,300 years.

Knowing the Magi's scrupulous attention to detail in all matters religious, such a large discrepancy could only have come about if there was considerable dissension about the exactitude of the traditional Zoroastrian religious timeline, around 1 AD. These doubts would have been compounded by the following factors;

1 A break away faction of Magi (perhaps originating among the Three Wise Kings see Part II), who saw sufficient evidence in the Gospel that Christ was the Sraosha mentioned in the Magian texts, deliberately established a new time cycle (skipping some 2,300 years of portended events), in order to accommodate their belief that Christ was Sraosha. To onlookers this might not have been such a drastic measure, particularly when one takes into account the many chronological discrepancies in *Bundahishm*.

2 Owing to Alexander the Great's predations on the complete tally of Zoroastrian holy texts, such a large corpus of material was lost that the *Avesta* and the nasks had to be pieced back together, line by line, from the recollections of the Magi. Even after this there was still a great cloud hanging over the precision of certain reconstructed texts. Where an overly great burden of doubt remained about the authenticity of a given nask, it was

generally omitted from the official canon. From this emerged an official view of the prophetic chronologies, though it could well be that other Magians secretly harboured a liking for alternative datings previously discounted by the Sassanians. Thus there may have been a series of endorsed and unsanctioned chronologies known to the Magians, many of which could not be accepted with any certainty.

3 As the late Professor West theorised, traditional Zoroastrians might have begun fudging dates during the age of the Muslim conquests, in order to bring about a revival of Zoroastrianism. If this did occur, it is impossible for us to prove what the unadulterated timeline would have looked like originally because we do not have extant Magian manuscripts datable to before the 7th Century AD to compare them with.

4 As mentioned in *Dinkard V*;²¹⁴⁹ there were a number of forgeries of the Zoroastrian texts made in ancient times by persons unknown, either because certain groups of Magi had different mnemonic recollections of the prophetic cycles and amended their copies of the holy texts accordingly, or a group of mischief makers (perhaps black Magi) had deliberately formulated heretical variants of the chronologies.

So it is conceivable that there were a number of time-cycles in existence. Nevertheless the timeline compiled from the texts by Professor West was the one most likely sanctioned by the Sassanians. Whether this makes it correct in every respect is debatable, though one would think the Magian hierarchy had the best possible access to all available variants of the texts, and were capable of confirming their authenticity. That is unless overpowering political and religious factors were at work, which saw certain powerful factions of Magi gain acceptance for their own timeline at the expense of others.

In summation, this Balkan pagan time cycle is not synchronised with traditional Zoroastrian dating (which is itself doubtful in some respects), and may well be the handiwork of a formerly Magian priesthood who regarded Jesus Christ “the Good Sun” as Sraosha (Sayoshant), but who maintained customs of a mostly Zoroastrian or Zurvanite nature. Such a cult can be identified with the Magian-Christians mentioned in Part II.

Whether the pagan Rus’ sects used additional calendrical systems is largely unknown. There is certainly no record of Greek or Roman calendars there. Post-Alexandrian Greeks use the Olympian dating system, and Roman calendars are relative to the year of the Rome’s foundation, ie 756 and 753 years BC respectively.²¹⁵⁰ The Rus’ deification of Sirius (Le’ , feast day 19th March), may have entered their calendrical system under Magian influence, for the Magi held that the New Year began, strictly speaking, with the heliacal rising of Sirius. Pagan name lists were known to the Church in pagan Rus’. These might have served as a dynastic dating system such as those formerly used by the Babylonians, Egyptians and pagan Gnostic astronomers.

Calendars

The old Iranian calendar

The Magian calendar was not divided into four seasons, as we have, but two; summer and winter. Summer included spring, summer and autumn, and stretched from 8-12 March to 19 October. and Winter was broken into two halves.²¹⁵¹

THE STRUCTURE OF THE
MAGIAN CALENDAR

Summer	Vernal equinox	▶ High-Spring	▶ Mid-Summer	▶ Harvest	▶ End of Summer
Winter	Beginning of Winter	▶ Mid-year	▶ End of Winter		

New year 8 March

Vernal equinox c. 21 March (souls visit this world)

Maidyozarem (“High-spring”) c. 24 April marked the feast of **the greening of the plant kingdom**

Maidyozarem + 60 days marked **the summer solstice**

Maidyoshahem - 14 weeks marked **the first day of summer**

Maidyoshahem was the summer solstice ie; **mid-summer**) ie; 28 June

Maidyoshahem +75 days marked *Paitishahaem*, **the harvest festival**

Maidyoshahem +105 days marked *Ayathrem*, **the end of summer**

Maidyarem - 10 weeks marked **the start of winter**

Maidyoshahem + 180 days marked *Maidyarem* (**mid-year**, but not necessarily mid-winter)

Maidyarem + 10 weeks marked the **end of winter**.

THE MAIN FESTIVALS

A FESTIVAL WHEN SOULS
VISITED THE VILLAGES

The 10-day festival of the manes (*hamaspathmaidyem*) transpired at the end of winter, and it was characterised by fravashi-worship and the “flying of the souls all around their villages”. As you will recall from last chapter, this festival coincided with the time of the field battles in pagan Europe. As with the word “year”, the etymology of the English term “mid-year” seems traceable to the Avestan *Maidyarem* (“mid-year”).

The Old Iranian calendar utilised twelve one month periods, each with 30 days. Since they had calculated that a fixed year lasted 365 d. 6 h. 12 m. 57.5 s. it became necessary to intercalcate every 116 or 120 years, by adding an extra month, the last such intercalcation taking place during the rule of Yazdegird I, around the turn of the 5th Century AD.²¹⁵¹

Where one’s calendar is synchronised with agricultural and stock breeding cycles, the latitude at which one lives becomes a crucial factor in determining when a feast day will fall, and what time interval will separate various feast days, depending on the variation in the amount of available sunlight. For this reason the harvest festival is held at different times in northern and southern Russia. It seems to me that the Magi would have given some consideration to the matter of latitude during the Iranian migratory diffusion, for moving too far north or south of Iran’s latitude would have required a very annoying recalibration of their entire ritual calendar. Such a modification took place in the earliest phase of Magianism, when the new year swapped from the autumnal to the vernal equinox, following their migratory movement into Iran from an extremely northern latitude, presumably Siberia.

The Rus’ pagan calendar

The *Rus’ pagan year (Noviy Rik)* began at the same time as the Zoroastrian year (*Nawruz*).²¹⁵¹ on the Vernal equinox, and differed from the Norse pagan year which began in October (ie; around the time of the old Magian New Year festival). Originally the Persians observed New Year on the Summer Solstice, but later moved it forward, bringing it into line with the Babylonian New Year, known as *Zagmug*. According to a paper written by S. H. Taqizadeh,²¹⁵¹ the Magian New Year festival was more or less held in conjunction with the observed heliacal rising of Sirius, a custom inherited from the Egyptians. Considering this, it is immensely significant that the pagan Russes were also worshipping Sirius (ie; *Lel’*) some two days prior to their equinox.

SLAVIC NAMES FOR THE
MONTHS

March	Berezen’	The month of the birch
April	Kviten’	The month of flowers and blossoms
May	Traven’	The month of grass (equal to <i>Maidyoshahem</i> , the grass mowing time)
June	Cherven’	The month of bee-breeding
July	Lipen’	The month of the lime tree
August	Serpen’	The month of the sickle; reaping time (equal to <i>paitishahem</i> , harvest time)
September	Veresen’	Spindle month?
October	Zhovten’	Grazing month? Yellow month?
November	Listopad	The month the leaves fall (ie; autumn)
December	Gruden’	The month of stocking up? coal month?
January	Sichen’	Fodder month? Turning month? (equivalent to <i>ayathrem</i> ?)
February	Lyutiy	The month of severe frosts

*The Rus’ Christian calendar*THE CHRISTIAN
CALENDAR

The Christian calendar was calculated according to the Sun’s yearly passage across the heavens and were expressed as a given number of years following the world’s creation. The year 900 AD (Anno Domini) equals 6408 years after the world’s creation. In other words, to arrive at a Christian date during the Mediaeval era just add 5,508 years to the number of years AD. The Russian names for the months are; January (Yanvar’), February (Fevral’), March (Mart), April (Aprel’), May (Mai), June (Iun’), July (Iul’), August (Avgust’), September (Sentyabr’), October (Oktyabr’), November (Noyabr’), and December (Dekabr’).

The Jewish calendar

Within a solar year, the Jews had 12 lunar months, each with its own name, and each related to a sign of the zodiac. The monthly calendar was synchronised only when the Moon was formally sighted by someone on the ground, rather than when it actually became a New Moon. Often cloud cover delayed the pronouncement of a new month. The first Jews to catch sight of it stoked massive bonfires on high ground, thereby signalling to distant Jews that the month had begun.

Jews lit bonfires on high ground to let others know that a new month had begun

The muslim calendar

The Christian year 622 AD was equated with the first (hegira) year of the Muslim calendar, which began with Mohammed's retreat to, and mustering of forces at Medina. In other words 900 AD equals 278 Hegira years. Again, a solar calendrical system, with lunar months, each of which possessed its own Arabic title.

The Muslim calendar relates to Mohammed's flight to Medina

Pagan feast days in Rus'

The Magi taught that every day of the month had an angelic custodian that had to be worshiped and given offerings on its own particular day. These were called feast days. The pagan Russes had a most elaborate schedule of dualistic feast days,²¹⁵² some of which they inherited from the Magi. In the following lists (C) denotes a feast day for one of the celestial deities, (E) signifies a feast day for one of the earthly deities, and (D) indicates a feast day for one of the infernal deities. Since modern Russian folklorists divide the pagan year into four, I have presented the reconstructed calendar in this fashion. However, I believe that a sufficient number of Russian feasts are similar enough to the magian divisions of the year, that, after allowing for the variation in latitude, the year was divided in a roughly similar manner to the Old Iranian calendar.

The Magi had their own feast days

The Russes had a dualistic pagan calendar

Vesna (Spring)

In pagan eyes, the Sun provided enough visible evidence of its life-giving properties. When it was powerful, life sprang from an earth made pregnant by the nourishment of Moksha and the Spring rains of Perun. The desire to have a full belly from week to week ensured zealous devotion to the "Great Orb", whose warmth stimulated the entire world of creation. Ceremonies centred upon guaranteeing fertility and enough abundant food stocks to last one's family throughout the coming year.

The Sun brought happiness and fertility to the lands

Importantly, the birth of children, particularly males who would one day bear arms, was also dependant upon the whims of the gods. Every rite performed a vital function in the overall scheme of earthly prosperity.

Spring was a celebration of new life

One school of thought postulates that Magian ritual drinking and pourings placated the wicked spirits and demons inflicting harm on the land, thereby averting calamitous events.²¹⁵³ So in Russia, where the land was barren, spring sacrifices probably transpired with astonishing frequency. These crisis sacrifices, which did not always entail the shedding of blood, were probably infrequent in the Malo and Belorus lands, but the Great Russes were no doubt accustomed to them because their soil was poorer.

- 1 Mar The advent of a new year. Libational sacrifices were offered up to gain portends of the coming rains and harvests.
- 1 Mar Rod (E) Festivities were dedicated to Rod and masculinity.
- 1 Mar Rozhanitsy (E) Festivals of Rozhanitsy, female fertility and femininity.
- 1 Mar Kikimora (D)
- 9 Mar **Festival of the earth mother**
- 12 Mar **The New Year festival** Circular Khorovod dancing and singing "carols".
- 13 Mar to 20 Mar Yarillo (C)
- 14 Mar Radunitsa (E)
- 17 Mar **Bee-keeping festival**
- 18 Mar Dazhbog (C) / Khors (C) The baking of the slaughtered sacred cow. Prayers were made to the Good Sun seeking intercession on behalf of the living.
- 19 Mar LeI' (E)
- 21 March **Vernal Equinox**
- 22 Mar Lado (E) / Vodyanik (D) / Slava (E)
- 22 Mar to 25 Mar Dazhbog (C)
- 24 Mar Pryadko (E) Departed souls came back to earth to visit the living. It was a day that

The New Year Festival

Vernal Equinox

		required numerous purificatory ablutions. No one spoke of the dead and people probably took their dogs with them everywhere they went. Probably equivalent to the Magian Suri festival, when the fravashis came to visit the earth.
THE SPRING GODDESS FESTIVAL	25 Mar	The Spring goddess festival The earth was awakened from its prison beneath the Winter snows. Bonfires, fire-leaping and the tossing of bread sacrifices into the rivers a feature of this feast day. These were usually images of deities and representations of ailing body parts baked in the form of a simulacra bun. Similar to the Magian No Ruz.
	were	
PERUN'S DAY	26 Mar	Perun's day (C) - Perun's day was a festival of Spring lightning, thunder, and coincided with the preparation of grain for sowing.
	28 Mar to 22 Oct	Korkush (D)
	1 Apr	Domovik (D)
	3 Apr	Radunitsa (E) Prayers were made on behalf of the departed souls, and requests for them to intercede on behalf of the living were made. Communal mourning and remembrance feasts were held, especially at the death grounds.
	7 Apr to 6 May	Yarilo (C)
	15 Apr	Yarovit (C)
THE VOLOS FESTIVAL	20 Apr	Rakhmanov's festival was held in honour of the Volkhvy. Everyone went out and had a meal or picnic in the fields amid songs and merriment.
	23 Apr until Summer	Volos festival Stock procreation rites were performed. This festival was highly esteemed by artists, traders and the wealthy.
	6 May	Veles (E) / Volos(E), Yarillo(E), Or (E) Without any women present, a Volkhv poured a beer sacrifice onto the holy fire.
	6 May	Usin' (E) Usin's festival sought to increase the prosperity of bees, horses, the vault of the sky and all greenery. People washed themselves with dew before dawn and sacrifice bread (ie; drons) on the fire.
ZIL'NIK FESTIVAL	10 May	Zil'nik festival Features of the Zil'nik (Green) festival were ritual meals and libations in the fields and forests. Green week began, with people eating ritual meals of herbs, eggs, lamb, fish, rye, salads, eggs and pies. I believe that this feast is most likely derived from the Avestan "High Spring" calendrical observance of <i>Mainhyo-zaremaya</i> , ²¹⁵⁴ called Green Month.
	22 May to 16 Jun	Bereginya (E)
	22 May to 16 Jun	Polyanitsa (D)
	22 May to 16 Jun	Mavka (D)
	23 May	Skrabnik (D) / Troyan (C)
	22 Mar to 25 Mar	Dazhbog (C)
	25 May to 16 Jun	Rusalki (D) Everyone hung linen strips from the boughs of trees at the water's side, and tossed bread sacrifices into the water.
	25 May to 16 Jun	Poterchata (D) / Khors (C)
	25 May to 25 Jun	Klechal'nitsya (E)
	15 Jun	Svyatovit (C) On this day prayers were offered up to Svyatovit and Dazhbog, as were harvest songs, the sacrifice of floral garlands, pies and wine.
RUSALKI WEEK	Just before Summer	Rusalki week During Rusalki week gifts were offered to the water and tree spirits.

Sgeto (Summer)

With the arrival of Summer, Dazhbog (now invigorated and youthful), bestowed life upon the earth as thanks for all of the sacrifices he received throughout the Winter.

The true essence of the rising or ascending Sun was embodied in the fire wheel, which symbolised not only the Sun's glowing perimeter, but the chariot wheels of his cosmic vehicle. Sun-horses kept at all major temples and were brought out by the priests to take part in these organised festivities. During Summer, a white horse with

golden mane was paraded on major occasions, and during the winter period a black horse was used. As in Aryan times these might also have been sacrificed. Certainly horse sacrifices had existed in Rus' for millennia, and during the 10th Century AD were still being conducted among the Rus', the Balts, and Finns of the north.

Mid May - Early Jun	Semik festival Semik was a feast of water, sex and the dead. A birch tree was dressed in ribbons and other finery and treated as a villager's guest for three days whereupon it was led out of the village and flung into the closest main water source to consummate the fertility of the land. A similar ritual can still be found nowadays in India, with the crafting of wooden idols which are treated to nice flowers and the high-life. Following a grand procession, they are thrown into the Ganges river.	SEMIK FESTIVAL
21 Jun	Porovit (E)	
July-Aug	The Harvest festival - Northern Rus'	HARVEST FESTIVALS
June-July	The Harvest festival - Southern Rus'	SUMMER SOLSTICE
about 21 June	Summer Solstice On this day, the longest of the year, the festival of the Sun as King was celebrated with massive bonfires all across Rus'. These bonfires were <i>built</i> from flames brought together from all local hearth, shrine and temple fires, and it amounted to a victory parade of the holy fires.	KUPALA'S EVE
24 Jun	Kupala's eve Kupala's eve was a night of unrestrained lovemaking, during which villagers, young and old alike, gathered in forests, and near water sources, to begin a night of ecstatic union. Males nimbly jumped the holy bonfires to be cleaned of spirits and be filled with the potency and sanctity of their flames. Kupala's eve culminated in the burning of straw effigies signifying the consumption of Iarillo and Kupala in an orgy of wanton lust. A wheel was rolled from a hill top, signifying the Sun's approach toward the descendant, its downhill run. ²¹⁵⁵	
25 Jun	Kupalo (C)	
25 Jun to 25 Jul	Diy (E)	
26 Jun to 7 Jul	Lyesovik (D) Sacrifices of bread were left to Lyesovik on this day, beseeching him to protect the coming harvest from unclean forces.	
27 Jun	This festival entailed the burial of Iarilo's phallic effigy.	
1 Jul	This feast was dedicated to smiths, marriages and the zodiac.	
12 July to 14 Oct	Svyatovit (C)	
25 Jun to 7 Jul	Vyed'ma (D)	
25 Jun to 25 Jul	Oderzhima (E)	
1 Aug to 6 Aug	Pryadko (E)	
1 Aug to 9 Aug	Vikhor (D)/ Grets' (D)	SAVIOUR-GOD FESTIVAL
1 Aug to 9 Aug and	Perun (C) Hymns and prayers were recited before Perun's oak, and sacred cattle oxen were slaughtered to provide a ritual banquet for all brotherhoods. Perun's warrior fraternities held lengthy feasts at this time, wallowing in greatest revelry.	
9 Aug	Pozvid (E)	
13 Aug to 29 Aug	Stribog (C)	
28 Aug to 14 Dec	Priya (E)	
1 Aug to 6 Aug	Saviour-god festival This feast entailed the slaughter of cattle, and the sacrifice of poppies, mead, apples and pears, plus the remembrance of past ancestors. To facilitate the cattle sacrifice, cows were taken to the summits of the highest hills/mountains and ritually slain.	

Osen' (Autumn)

Agriculturally speaking Osen' was a winding down period, for Mother Earth had given birth to all she could. With the advent of this season, the merriment, incessant bouts of all-night drinking, orgies and the other physical excesses of Summer began to wane. Food was preserved and stowed away to see the villagers through the ravages

AUTUMNAL EQUINOX

of the up and coming Winter. Sacrifices were rarely needed during this time of year.

	23 Sept	Autumnal Equinox	Also a festival of Stribog, and the day of portends for Autumnal weather conditions.
	1 Sept		A Festival of thanks and wedding candles. The home hearth and oven were deeply venerated on this feast day. Children ran about the fields all day, tasked with squashing every bug they could find. This was evidently a continuation of the Magian practice of killing the devil's creations, the creatures that infested and destroyed the holy crops.
	1 Sep to 2 Sep	Rozhanitsa (E)	This feast day was characterised by female gatherings and prayers for the ongoing health, strength and continuation of their ancestral lineage.
	8 Sep to 9 Sep	Pryadko (D)	
	14 Sep	Simargel (C) / Tyr (E)	
PASIKA	21 Sep	Pasika	The Bee, bee-keepers and hives festival.
	22 Sep	Pereplut (D)	
	25-26 Sep	Svyatovit (C)	A night-long prayer vigil took place at the idol. The ritual sacrifice of a sacred cow was performed at this assembly.
	1 Oct	Earth Mother	This feast day was a time for performing pagan weddings. Young girls prayed for marriage to someone suitable. Seasonal preparations were made in readiness for Winter.
	5 Oct	Mesyats (C)	A Volkhva prophetess imparted knowledge of the dawning Winter, to allow the people to make suitable preparations in terms of victuals.
	14 Oct	Kama (E) / Zhelya (E)	
	22 Oct to 22 Dec	Blud (D)	
SMITHS' AND PLOUGHMENS' DAY	22 Oct	Pryadko (D)	Pryadko, the soul-escorter's feast day entailed ceremonies dedicated to the remembrance of all one's forefathers.
	26 Oct	Smiths & ploughmens day.	Roosters were sacrificed, and forges blooded.

Sima (Winter)

WINTER ...

THE DEATH OF THE SUN?

Winter (perceived as the death of the Good Sun for a time), was naturally no time for celebration. Instead, in accordance with dualistic ritual practice, they perhaps offered sacrifices appeasing to the demons, in order to *help the Sun return to vitality by appeasing Chernobog, and the forces he used to assail the crippled Dazhbog.*

The imperilled Sun of good fortune, the eternal combatant against Chernobog (whose kingdom was Winter itself), had to be nourished if gloom, frost and misfortune were to pass away into Spring. The intensity of sacrificial activities (libations, meals and animal or even human sacrifice) might have been directly related to the amount of food held in storage for the coming year. Low reserves would making famines a very bloodthirsty affairs.

...OR ITS REBIRTH?

The life-giving *Haoma* was probably the other secret weapon which they used, allowing Dazhbog respite to renew his potency, as he grew weary and old in his passage across Svarog's sky, worn down by the rigours of battle. In Rus' it was widely believed that Winter was the time of the Good Sun's rebirth, which in itself is very Mithraic!

WINTER SOLSTICE

Chernobog was greatly active during Winter, chilling people to the bone, killing stock and burying the spirits of the land under cumbersome and suffocating blankets of snow. The need to sate, and salute the victorious Chernobog was greater than ever at this time, for he had pushed back the Sun. Unless they could make him ease off a bit, he might go too far, and destroy the Sun as they knew it.

The ongoing need for crisis sacrifices was probably just one other *causa bellum* amongst the Rus' at this calamitous time of year. During very harsh Winters we might think that greater levels of raiding occurred between neighbouring tribes or villages in order to get enough (animal or human) victims for the Winter crisis sacrifices and offerings.

About 21 Dec	Winter Solstice	The shortest day of the year. A black faced old man led a horse through the village, followed by a goat tended to by 2 young girls dressed as men. The
--------------	------------------------	--

animals were actually people dressed up in hides or straw. This group was followed by revellers, musicians and drunkards. Portends of weather for the coming year were made by Volkhva prophetesses now that the old year had just died, and a new one was about to be born again/ reinvigorated.

KALITA FESTIVAL

- 1 Nov Mokosh' (C) This was a festival dedicated to sewing and women's chores.
- 1 Nov Tyr (E) The hunting season began once sacrifices were made to Tyr.
- 8 Nov to 19 Dec Dev (C)
- 23 Nov **Kalita festival** Prophecies of the coming Winter weather were made by a Volkhva.
- 25 Nov to 19 Dec Nemet' (E)
- 25 Nov to 25 Dec Morok (D) / Moroka (D)
- 6 Dec to 12 Dec Dolya (C) During Dolya's feast day women and young lasses gathered to pray for luck, good fortune and safe childbirth.
- 6 Dec to 19 Jan Diva (E)
- 6 Dec to 18 Feb Marnik (D)
- 16 Dec to 18 Feb Mara (D)
- 25 Dec to 14 Jan Kolyada (C) People danced the *Koliada*, the circular dance of death, and sang carols. This symbolised the cyclic nature of birth, life, aging, death, birth etc. A goat was sacrificially offered to the Sun. *Oboroten'* (shape-changer) field battles went on during the night, as the werewolves armed themselves for battle against the black witches and demons who would muster to steal the grain and livestock which would sustain their families in the coming year.
- 25 Dec Pryadko (C)
- 26 Dec On this day the people began the brewing of the mead and beer, and enjoyed a sumptuous banquet of sacrificial cow, perhaps baked in honey and butter.
- 26 Dec Rod (E) This festival was dedicated to the propagation of the family bloodline.
- 19 Jan to 15 Feb Dana (C) Dana's day was a festival of ablutions. The people met at the sacred springs and cleansed and fortified themselves with spring-water, seeking blessings from above.
- 19 Jan to 22 Jan Mavka (D)
- 27 Jan to 3 Feb **Volos Festival** The festival Volos was dedicated to Zmiya-Volos, the "Good Shepherd", the tender of the flocks and the wild beasts of the forests. Magical rites were performed at this time. "Mummer" actors went from place to place wearing masks and sheepskin jackets. Cattle sacrifices, drinking and banqueting characterised this feast.
- 7 Feb to 13 Feb **Butter week**¹⁷ Butter week occurred in the few weeks prior to the vernal equinox and provoked great carnivals, with actors, jesters, skomorokhi (bards), and circus acts all competing for the attention of the locals. Binge-drinking, fist-fights and other strength contests proved popular. A lot of matchmaking between young couples continued in earnest. No sewing was allowed at this time, most likely to negate the ill-effects of jealous weavers who used their powers to disrupt young lovers.
- 15 Feb Vili (E)
- 22 of Feb Aveya, Avvar, Gladeya, Glukheya, Gnidusha, Karkusha, Khranusha, Nimeya, Otpeya, Pukhleya, Reusha, Tryaseya, Zhovteya (D)
- 22 Feb to 20 Mar Marena (E)
- 25 Feb Stribog (C) Prayers were offered to the wind god to bring good weather throughout the Spring and Summer period.

KOLYADA

VOLOS FESTIVAL

BUTTER WEEK

ATHLETIC CONTESTS

Unassigned feast days

The following deities have not been allotted feast days on the preceding pagan Holy Calendar. Perhaps their day went unrecorded in the past, but they might also have been worshiped all year round.

Celestial gods	Porovit, Rugievit, Svarog, Svarozhich, Triglav, Yarovit.
Earthly Gods	Obida, Planidi, Predok, Rozhanitsy, Zorya Utrenyya and Vechernaya.
Demon gods	Chernobog, Chugaister, Diva, Leshiy, Norka, Perelyesnik, Poludnitsa, Vila.

Games and contests

Both Lozko and Krishchuk mention that the Russes conducted their own ritual games following their holy festivals.²¹⁵⁶ The degree to which these may have resembled the athletic games of the ancient Greeks is by no means clear, nor is there any indication of their formality, if any. In ancient Greece, contestants competed stark naked, with their lithe bodies smeared in oil - they ran races, wrestled and threw weights and javelins. From Krishchuk's account of the god Slava, it is likely that victors were given a coronet of ivy. This in itself might be a trace of Greek or Roman victory customs.

The Western pagans also held games of ritual significance.²¹⁵⁷ Boxing, wrestling, horse-racing would have been part of the scheduled events if we are to draw upon the ancient Greek experience.

Jousting and polo were highly favoured in Persia and Tibet at such times. There is however no evidence for polo in Mediaeval Germany and Slavia, indicating that jousting might have been the only sport practiced by European Magians.

Hollywood's portrayal of jousting as a standard feature of Mediaeval Europe is almost certainly incorrect, considering that the practice drew the penalty of excommunication from the Church. My guess is that there was originally a pagan genesis for jousting, with religious connotations. But the heaviness of the penalty could just as easily have been to limit the number of accidental deaths the sport was causing. Church documentation for the introduction of the ban will need to be examined more closely to resolve this question.

Board games

The world's first board games were invented in Babylon. From that time man has discovered the many benefits of games as a means of relaxation, or an opportunity to defeat boredom with an opportunity to challenge and defeat your friends and adversaries without shedding blood. In mediaeval and indeed pagan Rus', Britain and Scandinavia, chess was played, as was mill.

Although India has long been mooted as the homeland of chess (about the 7th Century AD), where it was called *chatrang*, archaeology has proven this to be incorrect. Russia's love affair with chess goes back even further than has been supposed, with (what seem to be) chessmen unearthed in Russia dating back to 200 AD,²¹⁵⁸ a discovery that predates its use among the Indians, or anywhere for that matter. What is more certain is that it had been in Rus' at least since the 9th Century AD, and it had come from the orient rather than Europe (where pieces came to reflect the make up of Christian society). For instance the Rus' chessmen were turned from wood or bone, and of a type known in Persia and India, with pieces including the Queen and Shah, the boat, the elephant and the pawn.²¹⁵⁹

On linguistic grounds it is possible to say that they inherited this pastime from Persia. The Russian word for chess *shakhmat* comes from the Persian *Shahmat*, which means "checkmate", or literally "The Shah is dead".

In heathen times it could never have been just a game. The Magian Persians called chess the game of *Asha* (truth). Not only was it a good primer for military strategists (who in antiquity appear to have been the most addicted of players), but the contest between opponents symbolised the religious war between the forces of light and darkness, utilising white and black chessmen combatants to neutralise the opposing army, and ultimately their King.

The Norse variant of 'chess' was called *Hnefatafl*, and according to one source, a variant of it required a black fleet (viking pirates?) to break through a blockade of white warships, which represented the king's forces.

Chess continued to be highly popular throughout the Russian and Scandinavian region. Centuries later the likes of King James I of England, that renowned witch-hunter, made journeys to Latvia to play chess with the locals.

Chapter VVVV

Black rites and holy sites

It is perhaps only natural that prehistoric and ancient man sought to personify as gods those aspects of nature that gave him sustenance; spirits of the hunt, trees bearing edible foods, clouds bringing rain and so on. How much more so would he put a face on those silent killers that brought disease, drought, malnourishment and bloodshed; these too had a very real influence on day to day existence. These demons had to be stopped at all cost, but how do you efface the malignance of cantankerous, egotistical and chaotic beings such as them. In many regions of the world folk from every walk of life formulated their own responses to the harm-causing demons. In some cases the methods employed to make peace with them assumed the guise of a formal religion. Such creeds are the focus of this chapter.

A surprisingly large list of demons has survived in the folklore of the Russian people down to the present day.²¹⁶⁰ These demons were gifted with patronages of great suffering. That is, they were empowered to inflict particular species of harm, grief and lamentation upon humanity and the world of creation ... upon the streams, birds, cattle, crops and trees. In this chapter I hope to determine the past origins of pagan Slav devil worship, and reconstruct the nature of the devotions performed on behalf of the demons by a specialised class of heathen warlocks and witches known as the *Garabancias*, as well as the *Kolduny* and *Volkhvy*. I shall also explain the origin and nature of the black rites, the unspiritual arsenal which armed Ahriman's combatants. I will further detail the entrance of this faith into greater Europe, where it was practiced by the black witches of the Mediaeval and Renaissance periods. In reality it had been there at least since the Bronze Age, and especially so in Roman times, when Cilician pirates were re-settled around the empire from their Mesopotamian homeland.

As mentioned in Chapter II, some Russian devils were demons of place, such as the Leshiye, Polisyuny, Ocheretyaniki, Bolotyanski, Nochnitsy and Morozhka). Others were major demonic figures, which in several cases can be equated with demons listed in the writings of the ancient Greek Dionysians, the Magi and the Aryans - *Bida*, *Chernobog*, *Chuma*, *Grets'*, *Kikimora*, *Korkush*, *Mara*, *Marnik*, *Morok*, *Moroka*, *Niy*, *Norka*, *Pan*, *Poludnitsa*, *Zhiva*, *Volos*, *Vikhor*, *Viy*, and *Vodyanik*. At least two of Russia's more notorious demons (*Viy* and *Niy*) have names cognate with those of Magian arch-demons. Considering how specialised their names are, it is all the more certain that they entered Russian peasant culture with people trained in Magian scripture and lore. There are further indications that the demons *Vyed'ma* and *Blud* were in reality the unholy and malignant spiritual remains of a deceased person or witch, who came to be worshiped as a demon after their death. And yet other demons were potent spiritual evils which harrassed the world of the living, such as the class of trembling demons known as the *Tryasovitsi*, who were named *Otpeya*, *Gladeya*, *Avvar*, *Reusha*, *Khranusha*, *Pukhleya*, *Zhoroteya*, *Aveya*, *Nimeya*, *Glukheya*, *Karkusha*, *Gnidusha*, plus the *Zlidniye* (harm-bringing) demons known as *Gore*, *Likho*, *Neshchastiya*, *Bida*, *Khvoroba*, *Nedolya*, *Nuzhda*, *Zavoina*, and *Primkha*.

Many of the aforementioned Russian devils had their own specific feast days, which in itself reveals that these evil forces of many and varied kinds had an organised religious following in Eastern Europe during pagan and even Mediaeval times.

As we prepare ourselves to meander through the dimmest recesses of the human psyche, I want to compare the writing styles of Christian writers, which have camouflaged the reality of European devil-worship for such a long

time. *The Primary Chronicle* reported the following things concerning the sacrificial practices of the pagan Slavs.

*"..The people sacrificed to them (the idols), calling them gods, and brought their sons and their daughters to sacrifice them to these devils..."*²¹⁶¹

Here the idols of the Slavs are referred to as gods, but the Christian chronicler resolves to place his own gloss ("devils") at the end of the sentence. So what are they gods or devils? Evidently they are what the pagans called gods, and what the chronicler called devils.

Now compare this with what Procopius has to say, for he makes a clear distinction between gods and demons in a pagan context, divulging that the Heruli of Scandinavia were party to devil-worship.

OTHER REFERENCES ARE
UNMISTAKABLE

*"... they (the Heruli) reverence in great numbers gods and demons both of the heavens and of the air, of the earth and of the sea, and sundry other demons which are said to be in the waters of springs and rivers"*²¹⁶²

We will now attempt to trace Slav and perhaps even Erulian devil worship to their historical roots. This and preceding chapters, serves as a lengthy introduction to Chapter VII in Part II, which concerns European infernal witchcraft from the Middle Ages onwards. As you will see demonology had been present in many parts of Europe since ancient times, and in a variety of forms.

THE MAGI SPOKE OF
AHRIMAN'S DEVOTEES

According to the teachings of the white Magi, the ways of Ahriman were assiduously followed by his mortal adepts, the wicked priests who took care of their master's interests in this world. The white Magi listed slaying the innocent, oath-breaking, committing unnatural intercourse, divorce, fire extinguishing, beaver-killing, idol-worshipping, embezzlement, crop-blasting, cattle-maiming, greed, aiding and abetting wickedness, laziness, inclining towards heresy, performing sundry witchcraft, cannibalism, revelling in filth, becoming an apostate, worshipping the demons, stealing, and consorting with thieves as some of the worst sins a person can commit.²¹⁶³

CRIMES PLEASING TO
AHRIMAN, WERE
PLEASING TO HIS
FOLLOWERS ALSO

Therefore, on a purely theoretical basis the black Magi (the exact opposite of the white Magi) would have considered these acts extremely meritorious and excellent to perform. And the Magian texts go on to insist that they perpetrated these very same deeds, which were spiritually and/or temporally criminal in nature. Through the misdeeds of the devil's disciples, various modes of witchcraft infested Magian society, to the detriment of plants, man and beast, not to mention the majesty of the creator-sun.

To uproot their detested presence the white Zoroastrian high-priests held their own witch trials. For the *Nikadum nask* (a legal guide) talks of;

THE WHITE MAGI
CONVENED THEIR OWN
WITCH TRIALS, AND
EXECUTED THOSE FOUND
GUILTY

"evidence as to witchcraft and destroying the righteous man, that is, in what proportion it is certain or doubtful." and *"About causing the execution of one worthy of death for entertaining fondness for witchcraft and laughing at witchcraft and whatever is on the same subject"*²¹⁶⁴

This Magian "witch-hammer" *nask* therefore pre-dates the *Malleus Maleficarum*, the legal guide-book which spearheaded the Catholic Church's assault on European devil-worshippers. Clearly the white Magi did not presume the guilt of a witchcraft suspect, but instead sought the truth of matters, by subjecting the evidence to an elaborate system of proofs. Older still is *"the Burning"*, a series of Babylonian legal tablets containing witch trial procedures.²¹⁶⁵

IN INDIA, WITCHES WERE
SIMPLY FINED

Indian anti-witchcraft laws were far more lenient than those of the white Magi;

*"For all incantations intended to destroy life, for magic rites with roots (practiced by persons) not related (to him against whom they are directed), and for various kinds of sorcery, a fine of two hundred (Panas) shall be inflicted"*²¹⁶⁶

*"He who has sacrificed for Vratyas, or has performed the obsequies (ie; funeral rites) of strangers, or a magic sacrifice (intended to destroy life) or an Ahina sacrifice, removes his guilt by three Krikdwa (penances)"*²¹⁶⁷

THE WITCHING TIME

As in Europe's earliest wave of witch trials, the white Magi are unlikely to have recorded the testimonies of witnesses or the statements of the accused, which had been tendered before the court, nor kept archives of the same. Why should they? All that was needed was a verbal pronouncement of guilt or innocence, and of course a sentence where necessary. As you will see there is some evidence for the continuation of Orthodox white Magian witch-hunting customs during the Christian era, especially the practice of lynching suspects. In Europe the twelve days after Christmas (ie; the Winter Solstice) were regarded as a "witching time", for the witches were greatly active during that period.²¹⁶⁸ German Christian residents protected themselves against their 'unholy' designs with a

catalogue of rituals aimed at driving away witches and demons.²¹⁶⁸ In Germany, Walpurgis night (the eve before May Day) was also called “Burning out the Witches”.²¹⁶⁹ Throughout that night the menfolk of a given village would light purificatory fires around their settlement and dwellings.²¹⁶⁹ Next began the processions which all were involved in;

*“Men and boys make a racket with whips, bells ... women carry censers; the dogs are unchained and run barking and yelping about. As soon as the church bells begin to ring, the bundles of twigs, fastened on poles, are set on fire, and the incense is ignited. Then all the house-bells and dinner-bells are rung”*²¹⁶⁹

The din of these activities had the effect of exorcising a village of witches, especially in Bavaria and Bohemia.²¹⁶⁹ The usage of bells, whips, incense, dogs and ignited bound faggots as a means of achieving the expulsions is, I believe, connected with similar Magian exorcisms.²¹⁶⁹ That Church bells also participated in the event is extremely telling. The bell-ringers were either joining in the spirit of a local custom which they had no understanding of, or they were party to cultural ancestry that gave rise to the same custom. A similar superstitious observance was known in Southern France on the 12th day after Christmas. There they screamed, rang bells and lit torches made from bound bundles of twigs.²¹⁷⁰

When it came to maelific witches, the Zoroastrian fire-priests were in no mood to play games; *“Wizards or witches ... the authorities shall inflict punishment upon them”*.²¹⁷¹ In their mind the dutiful extermination of black witches was simultaneously a form of pest control, and at the same time a holy war against the Lord of devils in that ever-unfolding cosmic battle.²¹⁷¹

As with the *Malleus Maleficarum* of the Catholic Church, *Nikadum nask* included regulations requiring suspects to undergo torturous ordeals of divine justice (like the Magian ordeal of hot iron, or of water) over matters of witchcraft. The court case considered as evidence *“many kinds of speaking with wizard’s spells, and those with threats of danger; and about the usage in witchcraft as to the moderate and justifiable production of mutual afflictiveness thereby”*.²¹⁷² A typical Yatukih wizard’s spell-curse might be *“I will destroy thee through witchcraft”*.²¹⁷³

Roughly speaking Russian curses followed a like formula. The maledictions *Izvod tebya voz’mi* or *Izvod s toboi* are but two of those used in Northern Russia.²¹⁷⁴ They were an open invocation of the water demon *Izvod* to take the person against whom the imprecation was directed.²¹⁷⁴ This might have greatly worried the many mariners of Archangelsk region, where it was perhaps heavily used. A similar recitation was used in relation to Chernobog (the pagan name of the pre-Christian Lord of Devils) ... *“May Chernobog exterminate you!”*,²¹⁷⁵ or *“One hundred devils on you”*.²¹⁷⁶

From the white Magi we hear also of *“the duty imposed of chastising a wizard for ... assisting a demon”*,²¹⁷⁷ or the effects of *“gravity, harm, and vexation owing to various degrees of promise-breaking”*.²¹⁸⁸ These two excerpts relate to the the harm arising from demonic-discipleship in the first instance, and the brazen lies of the warlock.

The business of witchcraft and witch-hunting was a game that two could play. In this chapter, we seek to understand what it was like to be part of Ahriman’s religion, and discern what antics flowed from the Devil’s own. But before we immerse ourselves in the controversial and not-so-politically correct subject of devil worship we must go back to where, we are told, it all began, with the seduction of Masha and Mashoi, the first man and woman born into the world. The following is the story, as recollected by the Zoroastrian white Magi.

“On the nature of men it says in revelation, that Gayomard, in passing away, gave forth seed; that seed was thoroughly purified by the motion of the light of the sun, and Neryosand (angel) kept charge of two portions, and Spendarmad (a Mazdean Archangel) received one portion. And in forty years, with the shape of a one-stemmed Ricas-plant (a plant like Rhubarb) and the fifteen years of its leaves, Matro and Matroyao (Masha and Mashoi) grew up from the earth in such a manner that their arms rested behind on their shoulders, and one and both alike. And the waists of both of them were brought close and so connected together that it was not clear which is the male and which the female, and which is the one whose living soul of Ahura Mazda is not away. As it is said thus: “Which is created before, the soul or the body? And Ahura Mazda said that the soul is created before, and the body after, for him who was created; it is given into the body that it may produce activity, and the body is created only for activity; hence the conclusion is this, that the soul is created before and the body after. And both of them changed from the shape of a plant into the shape of man, and the breath went spiritually into them, which is the soul and now, moreover, in that similitude a tree had grown up whose fruit was the ten varieties of man (which according to their traditions included among them several races of freaks)”.²¹⁷⁹

AND CRAFTY PLANS
PREPARED THE
DESTRUCTION OF THE
WORLD

Next came the moment of man’s fall. Unlike the Judaeo-Christian Adam and Eve (who were evicted from Eden for eating the fruit of Yaweh’s Tree of Knowledge), *Masha and Mashoi fell from grace for worshipping demons (who were the children of another god, who was the exact opposite of Masha and Mashoi’s creator)*. That fateful moment signalled mankind’s venture into disobedience and intransigence against his creator, and is described as follows;

Ahura Mazda spoke to Masha and Mashoi thus: “You are man, you are the ancestry of the world, and you are created perfect in devotion by me; perform devoutly the duty of the law, think good thoughts, speak good words, do good deeds and worship no demons”. Both of them first thought this, that one of them should please the other, as he is a man for him; and the first deed done by them was this, when they went out they washed themselves thoroughly; and the first words spoken by them were these, that Ahura Mazda created the water and earth, plants and animals, the stars, moon, and sun, and all prosperity whose origin and effect are from the manifestation of righteousness. And afterwards, antagonism rushed into their minds, and their minds were thoroughly corrupted, and they exclaimed that the evil spirit (later personified as Lord Ahriman) created the water and earth, plants and animals, and the other things as aforesaid. That false speech was spoken through the will of the demons, and the evil spirit possessed himself of this first enjoyment from them; through that false speech they both became wicked, and their souls are in hell until the future existence. And they had gone thirty days without food, covered with clothing of herbage (note the similarity of Adam and Eve); and after came to a white-haired goat, and milked the milk from the udder with their mouths. When they had devoured the milk Masha said to Mashoi thus: “My delight was owing to it when I had not devoured the milk, and my delight is more delightful now when it is devoured by my vile body”. That second false speech enhanced the power of the demons, and the taste of the food was taken away by them, so that out of a hundred parts one part remained”.²¹⁸⁰

In other words, the milk was stolen away for the sustenance of the demons through the agency of the first humans, who drank it in an unbecoming manner, in a defiled state.

“Afterwards, in another thirty days and nights they came to a sheep, fat and white-jawed, and they slaughtered it; and fire was extracted by them out of the wood of the lote-plum and box-tree, through the guidance of the heavenly angels, since both woods were most productive of fire for them; and the fire was stimulated by their mouths; and the first fuel kindled by them was dry grass, kendar, lotos, date palm leaves, and myrtle; and they made a roast of the sheep, and they dropped three handfuls of meat into the fire, and said: “This is the share of the fire”. One piece of meat they tossed to the sky, and said: “This is the share of the angels”. A bird, the vulture advanced and carried some of it away from before them, as a dog ate the first meat. And, first, a clothing of skins covered them; afterwards, it is said, woven garments were prepared from a cloth woven in the wilderness. And they dug out a pit in the earth, and iron was obtained by them and beaten out with a stone, and without a forge they beat out a cutting edge from it; and they cut wood with it, and prepared a wooden shelter from the sun.

Owing to the gracelessness which they practiced, the demons became more oppressive, and they themselves carried on unnatural malice between themselves; they advanced one against the other, and smote and tore their hair and cheeks.

Then the demons shouted out of the darkness thus: “You are man; worship the demon! so that your demon of malice may repose. Masha went forth and milked a cow’s milk, and poured it out towards the northern quarter; through that the demons became more powerful, and owing to them they both became so dry-backed that in fifty winters they had no desire for intercourse, and though they had had intercourse they would have had no children. And on the completion of fifty years the source of desire arose, first in Masha and then in Mashoi, for Masha said to Mashoi thus: “When I see thy shame my desires arise”. Then Mashoi spoke thus: “Brother Mashya! when I see thy great desire I am also agitated”. Afterwards, it became their mutual wish that the satisfaction of their desires should be accomplished, as they reflected thus: “Our duty even for those fifty years was this”.

From them was born in nine months a pair, male and female; and owing to tenderness for offspring the mother devoured one, and the father one (ie; they cannibalised their offspring). And, afterwards, Ahura Mazda took tenderness for offspring away from them, so that one may nourish a child, and the child may remain. And from them arose seven pairs, male and female, and each was a brother and sister-wife; and from every one of them, in fifty years, children were born, and they themselves died in hundred years”.²¹⁸⁰

As the centuries passed Ahriman’s devious and mighty afflictions mangled the earth of creation, and got ever worse. Likewise his seduction of mankind became progressively more sly, and he won so many over to his cause that his religion grew out of all proportions. On the eve of Zoroaster’s birth, the Iranians were freely worshipping not only angels and ahura’s, but daevas and drugs (demons)

Zoroaster warned them of their coming annihilation at the hand of god not only for their daeva-worship and slaughtering, but the cruelty which they inflicted on the helpless ox.

“The Turanians proceeded about the smiting and destruction of that ox, and, through their sorcery and witchcraft the mind of Kai-Ul was disturbed about that ox, and he went to a warrior, whose name was Srito, and ordered him to kill that ox; so that man came to smite the ox. And here is manifested a wonder of importance by that ox, such as revelation mentions thus: “To him spoke the ox, in grave words, thus: “Thou shouldst not murder me, O Sritro! thou seventh of those of this race; you will atone for this malice when Zarathustra, the most desirous of righteousness among the existences, arrives and proclaims thy bad action in revelation”.”²¹⁸¹

Thus Zoroaster spoke;

“For ye are confusing our thoughts, whereby men, giving forth the worst deeds, will speak, as of the Demon-gods beloved, forsaken by the Good Mind, (far) astray from the understanding of the Great Creator, the Living Lord, and (far astray) from his Righteousness! Therefore ye would beguile mankind of happy life (upon earth) and of Immortality (beyond it), since the Evil Spirit (has ruled) you with his evil mind. Yea, he has ruled you, (ye) who are of the Demon-gods, and with an evil word unto action, as his ruler (governs) the wicked!

Full of crime (your leader) has desired to destroy us, wherefore he is famed, (and his doctrine is declared); but if this be so of these, then in the same manner, O Ahura Mazda! Thou possessest (because thou knowest) the true (teachings) in thy memory,....

Among these wretched beings (this their leader) knows not that those things which are declared as victorious (by his allies) are bound together for the smiting; yea, those things by which he was famed (as victorious) by his (blade of) glittering iron. But the utter destruction of those things Thou, O Ahura Mazda! knowest, most surely! Of these wretched beings Yimna Vixanghusha was famed to be; he who, desiring to content our men, was eating kine’s flesh (the slain ox) in its pieces,....An evil teacher (as that leader is) he will destroy (our) doctrines, and by his teachings he will pervert the (true) understanding of life, seizing away (from me), my riches, the choice and real wealth of (Thy Good Mind)....

Aye, this man will destroy my (Zoroaster’s) doctrines (indeed, for he blasphemes the highest of creatures that live or are made). He declares that the (sacred) Kine and the Sun are the worst of things which eye can see; and he will offer the gifts of the wicked (as priests to their Demon-gods). And at the last he will parch our meadows with drought, and will hurl his mace at Thy Saint (who may fall before his arms).

Yea these will destroy my life, for they consult with the great of the wicked (enlightening themselves by their words). And they are seizing away the gifts of inherited treasures from both the household-lord and from house-wife; (wretched men that they are), and those who will fiercely wound (my folk, repelled and in no way kindly moved) by the better mind of the holy,....”²¹⁸²

These passages present a picture of a religion entailing blasphemy against creation and crime, that possessed its own doctrinal framework. Devil-worship, hatred of the sun and cattle, seem to have been integral features of this Mazdaean apostasy. Accordingly they are unlikely to have kept cattle, or grown things and most likely got their sacrificial oxen by rustling and a life of outlawry. To guard against them the Magians may have kept their cattle penned in enclosures or barns. If the sun was “the worst thing that eye could see”, perhaps they didn’t want too look upon it. Maybe they only walked about after sundown, or shaded their eyes from the sun using a wide brimmed hat, or a cowled robe to block out solar rays. Led by a notorious criminal ringleader and his iron sword, they acted as house raiders, carrying off whatever they found of value on a premises, including cattle, and wounding the inhabitants into the bargain. This man (of the demon gods), ruler of the wrongdoer, was to steal the religion of Ahura Mazda, and twist and pervert it, until at last it would become a breed of Zoroastrian apostasy.

Despite Zoroaster’s strained attempts to oust both Daevas and the Drugs (demons) from public worship, the Iranians quickly lapsed back into the old ways upon his death, and so cattle slaughter remained a central part of the Magian ritual order ever after. Zoroaster’s murder came at the hands of those sword-bearing wizards (known as Karaps and Kavis) who were beholden to the demons; the jilted ones who served the Iranian monarchs prior to their adoption of the white faith of Zoroaster. The term Karap probably comes from the Old Indian word *krpanas*, which meant “a sword”, and *krpani*, “a dagger”.²¹⁸³ The older Karap priesthood may therefore have originated within Vedic Aryanism, a religion of sword-priests. In the Lithuanian we find *kerpu* or *kirpti*, meaning “to cut” or “to cut off”,²¹⁸³ which could conceivably be a Baltic recollection of the sword-wielding Karap wizards.

TURKIC HORDES INVADED
IRAN

Several centuries later, the religion of devil-worship gained even greater pre-eminence with the appearance of the Turkic invaders from the East, who marched into Iran under manifold banners, and whose terrifying reign brought it to ruination, in every way.

THEY KILLED THE LIVING
AND PERFORMED
WITCHCRAFT

"Ahura Mazda spoke thus: "Righteous Zarathustra! I will make it clear: the token that it is the end of thy millennium (somewhere near the year 10,000 of the Zoroastrian calendar), and the most evil period is coming is that a hundred kinds, a thousand kinds, a myriad of kinds of demons with dishevelled hair, of the race of Wrath, rush into the country of Iran from the direction of the east, which has an inferior race and race of Wrath. They have uplifted banners, they slay those living in the world, they have their hair dishevelled on the back, and they are mostly a small and inferior race, forward in destroying the strong doer....the race of Wrath is miscreated and its origin is not manifest. Through witchcraft they rush into these countries of Iran, which I, Ahura Mazda, created, since they burn and damage many things; and the house of the house-owner, the land of the land-digger, prosperity, nobility, sovereignty, religion, truth, agreement, security, enjoyment, and every characteristic which I, Ahura Mazda, created, this pure religion of the Mazdayasnians, and the fire of Vahram (ie; the holy fires), which is set in the appointed place, encounter annihilation, and the direst destruction and trouble will come into notice. And that which is a great district will become a town; and that which is a great town, a village; and that which is a great village, a family; and that which is a great family, a single threshold." 2183

THEY EXTINGUISHED THE
HOLY FIRES, AND
BROUGHT ANNIHILATION
UPON THE GOOD
RELIGION OF AHURA
MAZDA

According to *Dinkard*, the general happenings of that time were;

DESOLATION

"the oppressiveness of infidelity and idol-worship, the scarcity of freedom, the extreme predominance of avarice in the individuals of mankind, the plenitude of different opinions about witchcraft, and the inclination of many for paralysing the religion of the sacred beings. The annihilation of the sovereignty of mankind one over the other, the desolation of localities and settlements by severe actual distress, and the evil foreign potentates who are, one after the other, scattering the valiant; the destruction among cattle and the defilement of the spirit of enjoyment, owing to the lodgement of lamentation and weeping in the countries of Iran, the clamour of the demon-worshippers in the country, and the unobtainable stature, non-existent strength, blighted destiny, and short life of mankind. Also the abundance of ordinances of various descriptions, the approval of the apostate among tyrants (it was an anathema for the white Magi to countenance the reign of an unjust ruler, especially one who was an apostate despot) and the non-approval of the Zoti (Magian High Priests) who is well-disposed and wise, the coming of the Zoti (high priests) to want, and all the other adversity, disruption, and running astray which are overpowering even in districts and localities of the countries of Iran. The maintenance of no ritual of the religion of the sacred beings; the weakness, suffering, and evil habits of those of the good religion; the lamentation and recantation of the upholders of the religion; and the wickedness and extermination of good works in most of the countries of Iran. Also much other misery in these two centuries is recounted in the Avesta, which passed away with them (the Avesta slid into oblivion with the very people who observed its teachings) and is also now so visible therein, and manifestly occurs in them" 2184

LAMENTATION

THE PRIESTHOOD
DEJECTED

THE MISERY

THE DISBANDMENT AND
DISPERSION OF THE
MAGIAN RELIGIOUS
HIERARCHY

The religious hierarchy of the Magi disintegrated, causing the white Magus priests of Zoroaster to wander aimlessly and forlorn in that unforgiving time, and come swiftly to destitution. Shunned by the masses, who abjured their faith in the face of such unfailling adversity, the white Magi faded from sight. Yet other Magi became corrupted by the lifestyles of the invaders and crossed over into their ways.

THEY PRAYED THAT
HARM MAY COME UPON
THE WORLD ALL THE
SOONER

This, too, is a statement as to them, which revelation mentions thus: "That is the age mingled with iron (that is, from every side they perceive it is of iron) in which they bring forth into life him who is a sturdy praying apostate. This is their sturdiness, that their approval is unobsercant of both doctrines; and this is their praying, that whenever it is possible for them they shall cause misery to others; also when an old man publicly advances into a crowd of youths, owing to the evil times in which that man who is learned is born they are unfriendly to him that is, they are no friends of the high-priests of the priestly assembly. They are freely speaking (that is, they utter phrases smoothly), they are wicked and are fully maliciously talking, so that they shall make the statements of priests and high-priests useless; they also tear asunder the spiritual lordship and priestly authority, and shall bring the ruler and priestly authority in to evil behaviour as vicious, but they bring together those who are singular.

THEIR UNHOLY VERSES
AND OATHS

VILLAINOUS WOLVES

PERVERTED WISDOM

Anything they say is always mischief, and that district which had a judge they cast into the smiting precinct, into hell; it is misery without intermission they shall inflict therein, till they attain unto damnation through the recitation they persevere in (an unholy oath?), both he who is the evil progeny disseminated by the apostate and he who is the villainous wolf full of disaster and full of

depravity... Then, when character and wisdom recede from the countries of Iran (that is, they depart), so that destitution and also winter, produced by demons who are worshipping the demon, rush together from the vicinity of disaster on to the countries of Iran, where even rain becomes scanty and pestilence is secretly advancing and deceiving, so that deaths become numerous; thus even he of perverted wisdom, who is wicked, and the apostate also, who is unrighteous, rush together in companionship. As what one says they all exclaim thus: "Consume and destroy, O ruler! for it is to be consumed and destroyed by thee; destroy even the fire, consume even as food those who are the protection of the association enforcing religious obedience, and those leading on the poor man of the righteous dispensation by their guidance". So that they shall make him thoroughly detached and smite him; ... And about the ninth and tenth centuries this also it says, that, as that age proceeds, this is what occurs, O Zarathust of the Spitamas! when many apostates utter the righteousness of priestly instruction and authority, which is wickedness towards me, they cause begging for water, they wither vegetation, and they put down all excellence which is due to the manifestation of righteousness". ... This, too, he says, namely: "Of those, O Zarathust of the Spitamas! who come in the 9th and 10th Centuries, I tell thee that they are of the fiend of Greed (Azi); it is in her womb that they are to be fashioned, they who assist those who would be vicious, through pre-eminence in leadership, or through excellence in subserviency".

And this, too, it say about them: "Those men are much to be destroyed:" so it is said by Ahura Mazda that "these who are righteous, who carry away a corpse in this world, distress their fire, according to every high-priest, and even long-flowing water; their bodies, which are really cesspools of a terrible character, become very assisting for the tormentors whose corpses are grievously wicked. Concerning them I tell thee, O Zarathustra of the Spitamas! that, in the 9th and 10th Centuries (of the Zoroastrian calendar), there come those who are the brood of the fiend and the wound-producer of the evil spirit; even one of them is more to be destroyed than ten demon-worshippers; they also produce extermination for these who are mine, for these of my religion, whom they call a provision for destruction (that is, when it is possible to live in our way, and ours are wicked, they diminish in superiority). Even the iniquity that they shall commit in leadership and subserviency, the sin which is smiting thee, they call a trifle, O pure one of the Spitamas! and the smiter, they say, is he whom these of thy religion of Mazda-worshippers smite" ... They foster villainous outrage, and they say the best work for mankind is immoderate fighting whose joyfulness is due to actions that are villainous; those too, that they exterminate their own souls, they exterminate the embodied existences of the world; and they produce lamentation for the soul, and even the religion, as regards what is the mode of controlling orthodox people together with the iniquitous of the same period" This, too, it says, that Zarathustra enquired thus: "Is he, O Ahura Mazda! who is a Kai or a Karap (Prof West: two forms of wizards), or he who is a most evil ruler in authority, mingled again with the good?" And Ahura Mazda spoke thus "Even he" Zarathustra also enquired thus: "Is he, too, O Ahura Mazda! who is one of those of the good sovereignty, mingled again with the good; or these such as the Kaisar and Khagan (Prof West: the ruler of the devil-worshipping Turkic invaders)? And Ahura Mazda spoke thus "Even that former, O Zarathustra!"²¹⁸⁵

RELIGION

MAGIAN CIVILISATION
DESTROYED BY TURKS,
ARABS AND BYZANTINES

A perilous epoch is warned in the final line of this quotation, one that would see the religion of Zoroaster mingled with that of the Kaisar and Khagans. Here is prophesied (or even retrospectively recorded) the hybridisation of the good religion with that of the leather belted fiends, the apostate destroyers and immoderate fighters.

"...those three manifest branches, that worship the fiend with simultaneous worship, are really these who march for eminent service on horses, even the Turkish demons with dishvelled hair, the Arab, and also Shedaspo the ecclesiastical Aruman (Prof West: the Roman (Byzantine) Emperor ie; Caesar).²¹⁸⁵

THE SORCERERS AND
COVENANT BREAKERS

While most of the destructive behaviour in these preceding extracts can be attributed to the Aryan war culture of the Daeva-worshippers, there were other forces at work, whose doctrines were fundamentally contrary to those of the Aryans, yet whose actions resembled those of the Aryan war bands in oh so many ways. The *Avesta* is quite clear in delineating between condemnation of the Daeva-worshippers and the Zoroastrian mission to destroy the devil-worshippers, who amongst other things loathed the sun. According to the *Rig Veda* (the Sun Veda), the sun was greatly venerated, so it is not proper to portray the Aryans as sun-haters. That honour belongs to a totally different religion, that of Ahriman, which Zoroastrians called the religion of the *Zandiks*.

TYRANTS

ZAND WAS AN
INVERTED BELIEF
SYSTEM

"and for the encounter with, and the dislodgment of the Kayadhvas, and of the individual Kayadhians, male and female, and of the thieves and robbers, of the Zandas (possibly meaning the Zandiks, the worshippers of the Drug), and the sorcerers, of the covenant breakers, and of those who tamper with the covenants (warlocks). Yea, we sent it forth for the encounter with, and for the overthrow of the murderers of thy saints, and of those who hate and torment us for our Faith, and of those who persecute the ritual, and the tyrant full of death".²¹⁸⁶

THEY LOVED AHRIMAN
MORE THAN WE WILL
EVER KNOW

The *Zand* which the white Magi spoke of was a formalised creed which they greatly detested, whose power emanated from either prevented belief, or what is even better, a non-belief in the very existence of a creator god. One might even call it the religion of non-belief and wrong-belief. In accordance with their creed, habitual lying and oath-breaking were required, as also ritual desecrations and sorcery.

*“Zand is the apostle of the wizards, and through Zand it is possible to perform witchcraft”.*²¹⁸⁷

This strange religion required their wizards to worship the evil principle and the demons who served him...

*“that is he (a Zandik) thinks well of Ahriman and the demons” ... “the atheist’s religion, the wicked way that there is no creator, there is no heaven, there is no hell, there is no resurrection, and so on; such is the meaning”.*²¹⁸⁷

These sacrificer-priests had a number of idol temples the most important of which was situated on the banks of a lake then known as Kekast (Lake Urumiyah).²¹⁸⁸

So, as you have read, Zoroaster’s victory over the daeva (devil) worshippers was by no means conclusive, or long lived. By the reckoning of the Zoroastrian Magi, the dominion of the delinquent black Magian two-legged Wolves, was almost complete. Led by their Kaisars, Khagans and wizards, they had come to such ascendancy in the centuries before the time of the Shapurs, that they were able to boldly invade Iran and reinfect anew the Good religion of Zoroaster with a heinous and zealous inclination to worship devils. And, contrary to the laws of Zoroastrianism, the disciples of destruction, and their despotic rulers, came to mix with those who held to the Good Religion, so that its whiteness became sullied and grey through an infusion of darkness. And, said the Zoroastrian priests, those *“Two-legged wolves were more to be destroyed than those with four (legs)”*.²¹⁸⁹

The coming of the wolves

Bahman Yast is a Magian religious text written in the form of a prophetic dialogue between Ahura Mazda and the prophet Zoroaster, and details the advent of major events which would impact upon the Zoroastrian faith. The oldest copies possessed by scholars were written in the 8th-10th Centuries AD by Mobeds (Zoroastrian Orthodox White Magus priests) who were trying to mobilise their faith into a holy war against the Muslims. This culminated in the disastrous 930 AD uprising which saw some of the last militants of their faith crushed into oblivion.²¹⁹⁰ So presumably if the events contained within it were supposed to reflect historical realities, they would already have occurred long before the penning of these manuscripts. Its value as a historical document therefore hangs under a cloud, mainly because of this military agenda. As to whether chronologies were fudged (as mentioned by the late Prof West)²¹⁹¹ to facilitate this uprising, or whether the texts had been propagated in pristine form is far from certain. Even the name Karter (the supreme high priest responsible for founding Orthodox Zoroastrianism) does not appear in relation to the piece of text in question, which is very surprising. Already in one of the oldest books *Bahman Yast* we see words like “Arab”²¹⁹² creeping into the text; these were most definitely additions made to the original writings, some time after the 7th Century AD.

Magian scripture, like that of the Aryans, spoke of human history in terms of ages; the Golden Age, the Age of Silver, the Age of Copper, the Age of Steel, and finally the Age of Iron. The Magi related that the Age of Iron would bring terrible visitations of suffering upon the people of Zoroaster. *Bahman Yast III* talked of the coming of the “Race of Wrath” at that time, among whom were the two-legged wolves, those who taught the people of Iran to worship devils. According to these writings the invaders were not Arabs, but people of Turkic stock.

As it happens wolves were the foremost of the Turkic totemic images,²¹⁹³ so equating them with wolves, even two-legged ones is probably historically sound. The Magi’s description of the two-legged Turkic wolves nicely matches those supplied by the Armenians. During a Turkic assault on 7th Century Derbend they were described as *“a vile ugly horde of attackers ... their flowing hair like that of women”*. They were *“like savage wolves”*. They were so to speak miscreated wolves with dishevelled hair.²¹⁹³

These anecdotes also complement what the Gothic Bishop Jordannes had to say on the interbreeding of Gothic and Scythian witches with inner-Eurasian demons.²¹⁹⁴ This had the abysmal effect of giving rise to the Huns, who in turn stocked the Hunnic nations with Turkic belligerents.²¹⁹⁴ Now of course such an interbreeding would be all

together impossible, in a physical sense, where the demons were unspiritual vitae. However if it happened that the demons referred to were man-demons of the sort described in Chapter VIII, then the account is a little more credible than it might otherwise be.

If we are to accept the chronologies in the *Bahman Yast*, the demon-worshipping witches poured into Iran from the region of Turkestan in the mid-7th Century AD, a time which conveniently coincided with the Muslim Jihads against the Zoroastrians in Central Asia. If this chronology was correct (which is doubtful) then the Turkic race we may be looking at were the Bulgars, who historical sources have placed in this exact area during the 7th Century AD and before.²¹⁹⁵ But the big crunch comes in the prophetic text *Bahman Yast*,²¹⁹⁶ when we learn that these “demoniacs” were to be expelled by the rise of a new prince named Shapur (either Emperor Shapur I or Shapur II) who was to gather a large Iranian army to throw down their idol houses, and thus rid Iran of their devil and daeva worship. Shapur’s “white” attitude towards the devil worshippers and their infernal gods is best shown in *Bahman Yast*;

“let the demon be destroyed, and the witch be destroyed! And let the gloomy progeny of the demons be destroyed”.²¹⁹⁷

According to prophecy, Shapur was to walk in the footsteps of a legendary Iranian monarch who had stood against this endless sea of desolators during the time of Zoroaster.²¹⁹⁸ This ancient leader was once known as the righteous King Kai-Vistasp, whose best deeds included;

“opposing many wizards, demon-worshippers, demon-consulters, and those seduced by deceivers who are awful disputants”.²¹⁹⁸

But if the new Shapur is to be identified with Shapur I (241-272 AD) or Shapur II (309-379 AD) then the prophetic chronologies must be out by some hundreds of years, and the expulsion of the devil worshippers would have occurred in the 3rd and 4th Centuries AD. If the events of *Bahman Yast III* were a historical account (which there is no reason why they couldn’t be), we must scan the region for historical evidence of such a “race of wrath”, otherwise write them off as a mere story.

During the 3rd Century AD, Karter focused his attention on expelling the remaining Daeva and drug worshippers from the Zoroastrian religion. Though Karter worsted the Daeva worshippers, many of their customs, such as cattle sacrifice, were still contained in the Zoroastrian corpus of holy writings that he endorsed. By scrutinising Magian scripture such as *Bahman Yast III* we discover that this other intrusive demoniacal faith bore the following traits;

- They were ruled by princely sorcerers (Kaisers and Khagans) and had priestly sacrificers who were wizards.
- They had a love of dazzling iron weapons (particularly swords), and were fond of war.
- Their race contained men known as the two-legged wolves.
- They were servants of fury, banditry and destructive warfare.
- They coveted other peoples goods as their own, and revelled in banditry and crime.
- They dressed in black robes and wore dishevelled hair.
- They had a numberless sea of idol houses, and underground hiding places.
- They used *Haoma* and sacrificed cattle.
- They worshiped Daevas and the Demons (Drugs). Their principal deities included the Aryan war God Indra, as well as Azi-Dahaka, the serpentine patron-demoness of Greed.
- Their race came into Iran from Turkestan and took over the religion of Ahura Mazda.

From around the 4th Century AD they were relentlessly forced out of Iran as religious reforms to Mazdaism were enforced by the Sassanian kings. But, as you will see, they didn’t just disappear from the face of the earth; they simply went somewhere else.

By reading *Bahman Yast* in conjunction with these *Yasnas*, we discover that this “Race of Wrath” had characteristics also found in pagan Rus’ religion. As it stands, links between the Zurvanites and the pagan Slavs are well accepted by many modern scholars in the fields not only of Slavic paganism, but in the study of heresy also.²¹⁹⁹ The connection between these pagans and the medieval heretics is covered in Part II.

SUPPOSEDLY ANCIENT
PROPHECIES SPOKE OF

FEATURES OF THE
DEVIL’S RELIGION,
ACCORDING TO THE
WHITE MAGI

DEMON-WORSHIPPERS
OUSTED FROM IRAN IN
THE 4TH CENTURY AD

THE WERE LED BY
WOLVES

1. Pagan Rus' was a land ruled by Volkhyv (wolf) Magi, Khagans and princes. This suggests that the Russes had received an infusion of Irano-Turkic religious customs and leadership.

THEY WORSHIPPED INDRA

2. The Russes worshiped the war god Perun (most likely the Slav name for the Daeva Indra), plus Ahuras and other sundry Daevas.

THEY SLEW CATTLE

3. Since Indra was worshiped by both the pagan Russes and the Race of Wrath, you would expect both groups to have been *Soma* drinkers. Among the Finns and Slavs *Soma* was drunk and worshiped under the name *Sima*.

4. Cattle were sacrificed by the pagan Slavs. But instead of bludgeoning them to death the Volkhyv strangled them with a noose just as the Scythians and Persians once did.

Eastern Europe - a new home

From this information, as in the remainder of this chapter, there are ample clues which hint that certain pagan Slavs, Bulgars and even Scandinavians may well have been the descendants of this Race of Wrath. When you consider the comparatively short distance separating Rus' and Iran, they are far more likely candidates for this Race of Wrath than say the Hindus, who also worshiped Aryan gods *but did not slaughter cattle*.

TURKIC INVADERS ENTER
RUSSIA AND EASTERN
EUROPE

Many of the people who settled in Rus' and the Balkans were originally Turkic, or had migrated there from Iran, Asia Minor and Central Asia.²²⁰ What is even more compelling is that in those days the pagan Rus', Serbs, Magyars, Croats and the Balts (or at least one segment of their population) fit all of the criteria mentioned for the Race of Wrath, as mentioned in the *Avesta* and *Pahlavi* texts. In each case they were ruled by princes and magus wizards, and had "Black" priests.

GARABANCIAS

Among the Slavs these black priests performed magical ceremonies and were the enemies of the White priests who went by the name of the *Bieloknyazi* (literally; the White Princes).²²¹ These witch-priests were termed *Volkhvy* (Magus Wolves) or *Garabancias*. Further West in Frisia a *Garabancias* was probably known as a *Barabancons*, and in the Scandinavian sphere they would have been termed *Gramer* (Wrothmen). Let us now examine the terms Volkhv, Garabancias, Barabancons, and Gramer to see what other things they reveal.

Volkhv

VOLKHYV

According to the eyewitness accounts of Arabs who travelled through Russia, the Slavs had sacrificer-priests known as Volkhyv, who were astronomers also. As explained previously the word *volkhv* is integrally linked with the Russian word *volk*, which means "a wolf". So what was the significance of the wolf in that part of the world? The Scandinavians and Slavs saw criminals as wolves, and hung them from trees. In Old Icelandic "a hanging tree" is called a *vargtre*, or "Wolf-tree". In this instance the Old Icelandic word *varg-* comes directly from the Iranian word *varga* or *varka* ("wolf"). Earlier we scrutinised information suggesting *volkhvy* were no strangers to good and evil religious practices and spellcraft. Some, perhaps even a good many, worshipped both ways.

GARABANCIAS

Garabancias

In Balkan folklore the *Garabancias* assumed the role of black magician. By my reckoning they were connected with the black Magi, the Turanian crime-priests, the sword wielding Karpan wizards, mentioned in the *Avesta* and *Pahlavi* texts as responsible for the demolition of sun-worshipping white Magian society in Iran. I say this for a couple of reasons. Firstly the *Garabancias* tended to congregate in Hungary, Serbia and Croatia, societies *whose ancestors formerly dwelt in Iran*, but who had migrated westward. The *Garabancias* could also be found in Hungary, the lands of the Finno-Ugric Magyar (pron. Major).

THE HUNGARIANS KNEW
OF THE GARABONCIAS AS
SHAPE-CHANGERS

According to one Hungarian tradition a *Garabancias* (ie; *Garabancias*) was a sorcerer who could assume the shape of an animal, perhaps a white bull who went into combat against a black bull.²²² This suggests that as shape-changers the *Garabancias* fought on the side of goodness, whereas the standard belief is that they were evil priests dissimilar to the good pagan priests. Unfortunately this particular supposedly authentic account of the *Garabancias* was only first noted in writing barely 30 years ago, so it is hard to confirm its veracity. From extant Hungarian folklore we do not know whether they could assume other guises, such as goats or wolves. Some scholars have attempted to link this shape-shifting incident to shamanic traditions, while others contend that there is little evidence that the *Garabancias* followed a form of shamanism similar to that practiced by the Magyar *Taltos*.²²³

In the absence of detailed accounts of the *Garabancias* shape-changer magicians we must look to linguistics for some possible clarification. To do this we turn to Eastern Europe. The title *Garabancias* probably comes from, or is well preserved in the Gypsy tongue. In Gypsy the word *garambashimos* means “banditry”, “plundering” or “robbery”.²²⁰⁴ Interestingly if you join together the Gypsy words *gara* (animal) and *bashimos* (“barking” or “yelping”)²²⁰⁴ you get *Garabashimos*. Might this admixture of Gypsy words signify that a *garambashimos* was like a barking or baying animal, such as a dog or wolf? Then in Turkish we find *karabasan* (“a nightmare”), *karaborsca* (“the black market”), and *karaborsaci* (“a black market trader”).²²⁰⁴ Whether the *karab-* root of these Turkic words is in some way derived from the term *Karap*, the name of the demon-worshipping “wizards of crime” mentioned in the *Avesta* and *Pahlavi* texts is difficult to say. By joining the Turkic words *haram* (“something unlawful, or contrary to religion”) and *bashibosh* (“unleash”) we get *Harambashibos*, which is close to the Gypsy word *Garambashimos*. Could *Garambashimos* originally have been related to a constructed word like *harambashibos*, and if so, did *Garambashimos* mean the unleashing of things with a criminal or apostate nature? Again another possible correlation with the crime-priests recorded in the Magian texts. The nature of the Slavic *Garabancias* is most likely preserved in the following words, and, as with the Gypsy parallels, it appears that they too were involved in theft and kidnapping, and perhaps even grave robbing. *Grabiti* (Old Slavonic), *grabya* (Bulgarian), *grabscioti* (Middle Lithuanian), *grebti* (Lithuanian), *grabiti* (Serbo-Croat), *grabiti* (Slovenian), *hrabiti* (Czech), *grabich* (Polish), *grbbnati* (Old Indian), *garawnaiti* (Avestan), all of which mean “to snatch” or “to steal off with someone or something”.²²⁰⁵ Other seemingly connected words are *grabazda* (Polish): “a looter”, and *grab* (English), plus *grabar* (Russian and Ukrainian), and *grabarz* (Polish): “a gravedigger”.²²⁰⁵

While there are some minor phonetic deviations in the words cited, overall it is intriguing how there are so many concurrences in word form and meaning over such a large area. If these Slavic, Turkic and Gypsy examples represent separately preserved Eastern word survivals then one might think that a *Garabancias* was a shape-changing criminal or apostate who, like a howling dog or wolf, had been unleashed on the world, leaving a trail of black-marketeering, suffering and lawlessness wherever they lived. In this context one could infer that the pagan *Garabancias* priests, of Hungary and the Balkans, were sacrificial intercessors who served the devils and helped to promote destruction, banditry, mayhem, black-marketeering and crime.

But that is not the only place they were found. Such a religious figure is described in the *Treaty of Christburg* as performing funeral rites for the pagan Prussians (in the mid 1200’s AD), at which he greatly congratulated the efforts of the deceased in preying on people by committing crimes, thefts and any act of defilement which could be perceived as disgusting or putrid.²²⁰⁶ The *Garabancias* were supposedly similar to the *Planetniki* astronomer priests of the Western pagan Slavs (who were not shamans), thus indicating that the *Garabancias* were probably astronomers also.²²⁰⁷ This likening of pagan Polish astronomers to *Garabancias* robber-priests might also give us an indication that the Slav Magi adhered to the original Iranian view that the planets were the agents of Ahriman, who stole off with the good fortune of the righteous, and gave these plundered benefits to the unholy. As far as the white Magi were concerned the planets were themselves the greatest of all brigands. It might therefore be proper to view the *Garabancias* as an astronomer-Magus, instead of a traditional shaman, though Eliade mentions there are some academics who believe the *Garabancias* was in part shamanic. Others doubt whether or not the *Garabancias* underwent the sort of mystical shamanistic abilities experienced by the shamanistic Hungarian *Taltos*.²²⁰⁷

In short, we don’t know whether the *Garabancias* was purely Magian, or devoted to a dualistic animistic creed that synthesised Magian and shamanistic principles. Amazingly the Tibetan term for a black Lamaistic shaman, that is a shaman who interacts with the demons of the underworld, is *Narobonchun*.²²⁰⁸ Could it be that the Frisian *Brabancon* and the Slavic *Garabancias* were the descendants of demon-worshipping black wizard-shamans originally of Siberian/Turkic provenance, who (we might deduce from *Avestan* and *Pahlavi* literature) once took over Iran? Were they the ones who convinced the Iranians to engage in devil-worship, and acquired Magian traditions as they occupied Iran?

Brabaneons

Further West in Frisia a vast fraternity of warrior-brigands existed known as the *Brabancons*,²²⁰⁹ a name which I believe is tantalysingly similar to the Slavic *Garabancias*. During the Middle Ages these folk made a living not by tending crops or herds, but by raiding and looting the surrounding agrarian communities on a large scale. This

indulgence in the theft of honestly earned goods and food by force is interesting considering that in Frisia the devil's name was *Barabon*. Accordingly their looting sprees may be connected with the infernal one and his cunning enterprises. One can almost envisage a band of *Garabancias* or *Brabancons* being something like a Mediaeval organised crime syndicate, or Hell's Angels chapter, for want of a better analogy.

Gramer

MANY NORSEMEN
WORKED HARD FOR A
LIVING

Over the years, Mediaeval romanticism has built a stereotyped picture of the Norsemen as a heroic raider and trailblazing explorer. This stereotype only serves to camouflage the fact that most Norsemen were highly accomplished artisans in various mediums, reputable traders, and settled farmers who tilled the soil to grow the rye and millet which their wives ground and baked into bread, or who helped raise the cattle and swine which graced their dinner plates. The Vikings (a term the Norse used when referring to "pirates") were only one segment of their society, and in very many instances they were outlaws, who were unwelcome back home because of the manner in which they had broken the all important law, that brought peace and stability to the provinces of Scandinavia. As a pastime, or means of getting rich quick, it was really only tolerable when carried out away from home, in places like England, France, Ireland, Scotland, the Baltic, coastal Germany and Poland.

SOME NORSE VIKING
RAIDERS, AND THEIR
LANDLESS KINGS, WERE
TERMED GRAMER AND
GRAM

So some heathen Scandinavian royals lived in a manner totally unlike that of their sedentary relatives, who reigned over landed kingdoms. Instead of governing peaceful provinces where agriculture, animal husbandry, trade and craft workshops were the backbone of their income (via taxes and so forth), these kings, the sea kings, took to the oceans in longships with bands of warriors who aided them in conducting raids and looting sprees abroad. Their kingdom was not so much warfare, but raiding; roving the high seas in search of maritime and coastal prey. They descended upon whatever choice targets took their whim, or offered them the hope of easily won treasure. Such kings were known by the Old Icelandic term *gramr*, and their personal retinues were called *gramer*.²²¹⁰

*"In those times the chief who ravaged a country was called Gram, and the men-at-arms under him Gramer".*²²¹¹

GRAM AND GRAMER
RELATED TO THE PERSIAN
WORD FOR "RAGE"

As for the etymology of the terms, we find the Old Icelandic *gramr* ("a king" or "a warrior"), *gramendr* ("the angry gods"), *gramir* ("fiends" or "demons"), *gramr* ("wroth", or "angry").^{2211a} The Norse words *Gramr* and *Gramer* also seem related to the Old Saxon word *grom*, which in turn is related to the Slavic word *grom*. As previously mentioned the Slavic *grom*- root formed some of the following words; *grom* ("thunder"), *gromit'* ("to annihilate", "to smash asunder", "to ransack", "to rout or defeat an enemy", "to flay"), *gromko* ("loud"), *gromada* ("something massive or enormous"), *gromnykhat'* ("to rumble"), *gromila* ("a robber", "a house-breaker", or "a stand-over man"), and *gromozdit'* ("to tower (above)").²²¹² Ultimately these Scandinavian and Slavic words can all be traced back to the Iranian Avestan word *granta* ("to become furious or savage"), and more especially the Persian word *garam* ("rage"). This series of Irano-Slavic linguistic parallels may provide us with a view of the Norse raids that I would have guessed impossible. In effect, the Old Norse preserves a religious linkage between pirates and "gods of rage", and the relatedness of *gramir* and *gramer* leads one to speculate that the sea-brigands, and their kings were somehow seen as demons. Some will be tempted to interpret this as simply Old Norse Christian invective, however the linguistic preservation of Iranian religious concepts related to rage and diabolism, are present in Scandinavia, and once again, it is unlikely to be "just a coincidence".

A "BATTLE-WOLF" WHO
HOWLED LIKE A WOLF

What has never really been apparent is the motives of at least some Norsemen when going raiding. If the linguistic reconstruction is correct it is conceivable that certain groups of gutsy young and wizened Norse brigands feasted and got rolling drunk as they recounted tales of places they had seen. Before long, amid back slapping, outrageous dares, wrestling and even more drinking they set about planning a series of raids on just those same places; plundering operations which would make them very rich. But deep down, for some of them anyway, booty might only have been a secondary consideration - for them the promise and joy of kicking in peoples doors, dragging cowering victims out of bed and putting them to the sword, burning down farms, inciting fear, and kidnapping voluptuous young lasses was just as important as getting their hands on the money.

GUNNULF WAS ONE OF
THE HIGH BORN

Harkening back to the Gypsy linguistic parallels for the *Garabancias*, where we discover that they may have been connected with baying or howling animals, there may be yet another Norse connection. One existing rune stone in Denmark makes mention of two kinds of pagan Norse priest, who married the same woman.²²¹³ The first man was *Gunnulv* (Old Icelandic: "battle-wolf"), who the stone notes was as "*baying man*"²²¹³, and the second type

of priest served in the pagan Norse temples. Gunnulv's memorial runestone was erected to his memory by *his beloved wife Ragnhild*, who was the sister of one *Ulv* ("wolf"). Ragnhild states on the rune-stone *that hardly anyone had as high a pedigree as Gunnulv*.²²³ This reference to his high birth may be an exaggeration of the truth inspired by her love for the man, however it is certainly not implausible. Gunnulv may well have belonged to a genealogical tree equivalent to that of Kings and Princes of the *Saka Haumavarka*, the warlike Iranian *Haoma*-wolves, the same ones who brought their Iranian vocabulary into Europe. Based on the contents of Norse epic, historical references and paleo-linguistics I believe Gunnulv was an indigenous Norseman, yet descended from the two-legged wolf priests mentioned by the white Magi as having caused so much distress back in Iran, the epitome of the royal Magian *Haoma*-Wolf. He would therefore have been just one of the many wolf-men in the Germano-Slavic region. The stone does not mention that Ragnhild bore his children, but did so in the case of Alle Solve, her second husband.

The homilies of Grigoriy the Philosopher represent some of the earliest authentic Russian Orthodox sermons.²²⁴ While you would expect him to be scathing of the drunken revelry and mead parties that so characterised the period, his harshest denunciations are against the murders, thieves and tomb robbers. Due to the tone and repeated manner in which he wrote the sermon we might think there were a very great number of brigands and murderers in Mediaeval Rus' ²²⁴ - *the Primary Chronicle* admits as much.

TWO-LEGGED WOLVES

Black witchcraft

The Devil's mysteries

The white Magi taught that the legendary source of witchcraft was the other god (the horned deity Ahriman who was the enemy of the Sun), and his consort, the Whore. This we will now explore.

In the millennia which followed the demise of Babylon, the Medean priesthood inherited the demonological skills of their predecessors. The Medean Magi regarded these rites as their greatest gift from Zurvan and the Black God (whom the pagan Slavs called Chernobog). These rituals they termed the Mysteries of the Black God and the Wizards.²²⁵ Through the unholy mystery of their allegiance to the Lord of the Underworld, and the Great Harlot²²⁶ (the Black Mother) they gained power over the seven planet-gods, and were thus endowed with their might.

With the intelligences of the celestial orbs under their suzerainty, and for their own personal glory and wealth, they would have free reign over fate and the cosmos; just like Ahriman (Chernobog). In line with brahminic thought, these mysteries were probably not taught to just anyone, but learned from generation to generation by a blood priesthood, though from the Chaldean perspective it is possible that prospective black magicians were inducted into the rites if they were auspiciously gifted on their natal horoscope. These priests and priestesses were to be Ahriman's instruments of power, servants who fed Ahriman from the *Az* chalice, an appalling libation which brought calamity upon the world. If *Haoma* brought life to the lands, then it was *Az* that conjured death, drought, disease, and every mentionable turpitude.

With great frequency and diligence they mixed the *Az*, offering that unholy and blemished gift down to Ahriman in honour and thanksgiving for all the evils of humanity, the cup of spiritual suffering which the Evil One made all creation drink from, invoking hardship, pain and lamentation across the face of the planet.

In Zurvanite theology, the black Magi's need to make *Az* was just as real as the white Magi's need to make *Haoma*. *Az* was born from the infamous dare that Ahriman once arrogantly threw in the face of Zurvan, his Father in Heaven, the cosmocrator.²²⁷ For it was his Father's judgement that if at the end of the final 9,000 year period he had not convinced mankind to love him more greatly than the White son, *then Ahriman would be consumed by all the evil that that cup had held*. This was to be a form of capital punishment; the death of the God of Evil for all eternity. With the stakes being so high, the "Lord of the Underworld" needed some very trusty and loyal servants in the world who would blend the *Az* that would make their Lord's designs manifest, and who would carry his mission to humanity far into the future, over millennia. These were the black Magian Apostles and his congregations of black witches and warlocks. For the lord of the underworld these devotees were his every joy, for they kept him alive and prosperous, and proved to be the tools by which he might conceivably win his wager. Ahriman's black Magian helpers could methodically strengthen his reign in the world by propagating the missionary-like spread of *Zand*, which meant deliberately contrived heresies, black witchcraft, perversion, atheism, blasphemy, defilement,

WIZARDS AND
APOSTATES

insurrection, lawlessness and crime, especially armed robbery. Defilement was an integral part of their ceremonies, practically a daily commandment of their faith if you like. Let us see what else the white Magi had to say about the black Magian devil-worshippers.

THEY PERVERTED THE CEREMONIES OF THE WHITE MAGI

*“And afterwards, the grumbling of the evil spirit (Ahriman) maliciously, at that vexation, (said) thus: “I have produced for the annoyance of any upholder of that religion of thine (Ahura Mazda), 99,999 wizards, 99,999 wolf-worshippers, and 99,999 apostates”.*²²¹⁸

CONSECRATIONS WERE PERFORMED WITH THE WORST DEEDS OF MANKIND

*“He shall first do this, so that he may restrain the thoughts of men from virtuous things, and their further words and perverted further deeds from the ceremonial of us who are archangels; they further lose their wisdom, and further consider even as perfect righteousness that which is loved by the demons; they utter the false words and consecrate with the worse deeds of mankind; and with the holy-water which one consecrates most to you, more falsely and more arrogantly than falsity and arrogance, do they enhance the greatest ceremonial, so that they shall make more of the most. Owing to discord, through that love of you who are demons, they smite with destruction him who shall not be a satisfaction to you in the presidency; and the leader they take becomes a destroyer, so in the sequel, too, there is some one that smites him; even though they consider him as your follower, they shall occasion his destruction. You are evil demons for a congregation when they speak of avoiding you, and worse for the ceremonial, or obeisance, when it occurs; that which becomes all clearness to the utterer of righteousness, in this existence, you utterly destroy; and the lodgement of complete mindfulness in the body is for admonition to human beings about abstaining from the demons. This, too, is stated, namely: “Evil are you who are wicked and worship the demons with good holy-water and with words; through them the holy-water obtains evil recompense, even the hell that is horrible”.*²²¹⁹

DEMONS WERE WORSHIPPED USING HOLY WATER

THEY HAD UNNATURAL SEX

The unhallowed nature of their “Black Sabbaths” can also be seen *Dinkard VIII;*

THEY DEFILED MANY THINGS

*“About the vicious desire of the performer and permitter of unnatural intercourse; also their violent lustfulness, heinous practice, and corrupt, polluted bodies, blighted in destiny; great through their destruction of life in the things which they see, and every greatness inevitably provides them a merited death; as great in sinfulness as Azi Dahaka in oppression, as the serpent Srobar in witchcraft, as Tur-i Bradro-resh, the Karap, in destroying the righteous, and as a deceiving apostate in falsehood. About the grievous sinfulness of a woman, just delivered and giving milk, whose progeny is the offspring from intercourse with divers males, and whatever is on the same subject. About the increasing vigour of the female from the mounting of the male, and the diminished vigour of the male from mounting on to the female”.*²²²⁰

PRACTICING OPPRESSION, WITCHCRAFT, AND FALSEHOOD

THE DEMONIC NATURE OF SODOMY

*“...that (person) which is destroying the seed is the flowing of stench into the prescribed vessels for it, the delivering it to males by a demoniacal process (ie; sodomy), and carrying on a practice which effaces and conceals the race of the living. One was Tur-i Bradar-vakash, the Karap and heterodox wizard, by whom the best of men was put to death”.*²²²¹

*“About the harm owing to the demons this, too, he spoke, namely: “The destructiveness of the evil spirit (Angra Mainyu, ie; the Black God) is his evil teaching by statements to my creatures; and my riches plundered by him are the proportion of the production and possession of wealth for which a desire exists through Good Thought; that is, when they possess it with propriety it is desirable”.*²²²²

As you will see, many things contained within these fragments of Iranian scripture were performed during an undetermined number of infernal witches sabbaths during the Middle Ages and Renaissance.

THE WHITE MAGI PROFESSED THAT WOMEN WERE HIGHLY SKILLED IN WITCHCRAFT

Whilst women were unable to perform the *Haoma* sacrifice according to Zoroastrian tradition, they were allegedly well and truly able to partake of the “Black God’s mysteries”, since it is said that their “brooding and scheming” was born from him, and that they were greatly in league with Geh, the black mother, the Great Courtesan of Harlotry and Sorcery. Through the agency of these subterranean mentors they were supposed to have become prophetesses. In pagan Rus’ the Volkhva’s ability to utter staggeringly accurate prophecies, after having imbibed the heavenly milk, was of some repute.

The following is a brief extract from a magical demon-bowl, crafted in Seleucia (Sassanian Persia) some time during the 6th and 7th Centuries AD, ie; in the period immediately preceding the advent of Islam in the Magian East. In effect it shows that the processes of maleficia were simply a part of everyday life in the pre-Islamic East. Demon-bowl 19504’s inscription was calculated to stymie the hexes of female witches;

“... I have heard and the voice of the weak ... of raging women who curse and afflict and cause pain they have descended against them [Azdai], Yazdun and Yaqrun, Prael the great and Ruphael and Sahtiel and seized them and by the tufts of hair and the tresses of their heads and broke the horns which were high and tied them by the tufts of hair of their heads and said to them “remove that which you have cursed” and they said to him “from the pain of our heart we cursed and from the bitterness of our palate we resolved to curse”

I have made you swear and adjure you ... (to) release ... Negray daughter of Denday ... from the curse of the prostitute (probably Ahriman’s consort Geh, the Great Whore of witchcraft) ... and from the curses of all people who curse in the name of idol demons and their surrenderings ... heal and annul the curses of those who curse Negray daughter of Denday. ... and I sent back the curses of those who cursed Negray daughter of Denday to their masters until they release and bless ...”.²²³

AN ACCOUNT OF THE INTEROGATION OF WITCHES, FOUND ON A SASSANIAN BOWL

With bowls like this dug from the earth it’s hard to guess how modern scholars are so dismissive of witchcraft’s factuality as an infernal religion. It was the embodiment of a very ancient dualistic teaching, which had flooded into Europe practically unrecorded, from Persia and other locations throughout the east.

At this point we must be very careful indeed to distinguish between black and white Magian prophetesses. The white and black priests and prophetesses were like two sides of a coin, they were diametrically opposite antithesis mirror images of each other. On one side of the coin were the white Magi priestesses (and to a very much lesser extent priests). The prophetic powers which the white Magi possessed are mentioned in the Magian texts as stemming from *Spenta Mainyu*, the Holy Spirit of Ahura Mazda, the radiant, Good and Omnipotent. These prophesies were regarded as Truth-gifts or *Asha-gifts*,²²⁴ pure, righteous and miraculous spiritual powers that were bestowed upon them by the spirit of the Creator, for the assistance of the good. But on the other side of the coin were the black Magian priestesses, who derived their powers of magic and prophecy from the dark side, via *Angra Mainyu*, the angry and Unholy Spirit of the Adversary, Ahriman, plus Geh and Azi-Dahaka. Due to the numerous references (in the Zoroastrian texts) to the witches, their magic and their promiscuity, one might suppose that (if the accounts are true) they followed in the footsteps of the ancient Babylonian temple prostitutes.

THE WHITE PRIESTESSES WERE NOTHING LIKE THE BLACK ONES

THE PROPHETESSES OF THE SUN WERE PURE AND HOLY

THE DEVIL’S SYBILS WERE WHORES

TEMPLE PROSTITUTES IN BABYLON

We know that the Babylonians had temple prostitutes because of accounts related by Herodotus, which, in the main, have been corroborated by stone tablets from Babylon, unearthed by archaeologists. Their whoredom was part of a devotion to the seductive Ishtar, who was embodied in the planet Venus, and who went by the names *Qadishtu* or *Harimtu*, both of which are translatable as “The Whore”.²²⁵ Every woman was required to earn an amount of money (however small) by having sex with a paying customer. Once she had done so she was free of her obligation to serve as a temple “hooker”.²²⁵ Babylonian tablets whimsically recall that some women were so ugly that they were stuck in the temple for several years without having been chosen to give their favours.²²⁵ For this reason I suggest that the Great Whore mentioned by the Magi was actually Ishtar. Archaeologists have also unearthed an engraved amulet depicting a man having sex with a woman who is laying down on an altar. In short, religious prostitution was an authentic part of Babylonian religion. Accordingly we might guess that Babylonian-Chaldeanism, of the sort practiced by the Al-Kaldani of Mediaeval Hamadan, was somehow related to the religion of the black Magi. There we find strong Islamic censures against inter-marriage between Muslim males and the Chaldean witch-wives, as well as Venus worship.

THE GREAT WHORE WAS REALLY ISHTAR, AND THEREFORE THE SEDUCTIVE VENUS

MUSLIM MEN PROHIBITED FROM MARRYING WITCHES

THE RAUCOUS DEMONS FOUGHT AMONGST THEMSELVES

SLAVS HAD FORMALISED DEVIL-WORSHIP

On Devil worship

“Owing to the gracelessness which they practiced, the demons became more oppressive, and they themselves carried on unnatural malice between themselves; they advanced one against the other, and smote and tore their hair and cheeks. Then the demons shouted out of the darkness thus: “You are man; worship the demon! so that your demon of malice may repose”.²²⁶

According to the 19th Century anthropologist Frazer,²²⁷ most pagan Slavs considered the celestial gods too nice, or kind to require sacrifices on any large scale. Instead they preferred to worship Chernobog, the horned god, and his army of destructive demons. By their reckoning these angry and dangerous infernal gods, were the ones they really ought to be wary of. Sir James Frazer’s comments do not seem to accord with the reconstructed Slavic ritual calendar of white and black days (see p. 511). Clearly there is evidence heathen Slavs performed white Magian rituals sacrifices as well, however this was only one half of their ritual life, just as the regulated homage of devils

constituted the other half of their religious *duties*, all very unacceptable under Orthodox Zoroastrianism.

Throughout this book repeated mention has been made of devil worship, so a *bias-free* summation of its nature is warranted here to understand it, because it originates from several quarters, all of which need to be scrutinised.

The cult of appeasement

The overriding rationale for worship of the Evil Principle and his army of destroyers, was that they held the whole world in the palm of their hands, afflicting humanity with starvation, disease, war, quarrels and unfortunate accidents. Only offerings could alleviate this, and win their favours.

In the Russian folk tale *The Smith and the Devil*²²⁸ the hapless son of a devil-loving blacksmith, almost forfeits his life due to a certain devil's witchcraft-inspired civil disturbance. According to the story, this near tragedy occurred because following the death of the smith, his son turned his back on the demon his father had come to revere. Even worse, the son would harm the demonic image painted on the smithy's front door, by smacking it with an iron-working hammer. The son was saved from his untimely fate only by agreeing to stop bad-mouthing the devil in question. The motto of the story is; Stop slandering devils, or you'll pay dearly! Equally important is the story's portrayal of the devil's ability to give or take away life, for according to the *Primary Chronicle*, the Black God, the Anti-christ of the dark Magi was believed to be both Creator and Destroyer.²²⁹

The division of the people into two flocks

According to Magian eschatology, at the end of the world, at the Assembly of Sadvastaran, Sraosha, the incarnate word of god and Saviour of humanity, would weigh all souls, and divide the people into two flocks (based on the weight of their sins and good works).²³⁰ Zoroaster tells us he would then banish the black flock down to their master in the underworld forever, but in the Zurvanite and Zoroastrian Orthodox view he was to send the evil-doers down to the underworld for a horrifying three days of punishment, after which they would be purified from all their sins. Thus cleaned they were to be reunited with their creator.

The primary aim of the white and black Magi appears to have been to shepherd the people into two flocks, which the people would automatically fall into by the weight of their thoughts, words and deeds. Each person in some way played a part in helping either Ahriman or Ahura Mazda be victorious over his brother.

Based on recorded accounts of European witch oaths, it appears that the true and honest initiation into either group only came via a vow of loyalty to either the Creator or the Destroyer.²³¹ This oath could only be taken once a person had reached "the age of reason", and actually understood the difference between "good" and "evil"; only in this manner could "true good" or "true evil" come into being, *making the person so much closer to, and more greatly loved by their respective deity.*

But others would be part of one of these groups without knowing or ever admitting it; they were ignorant of the gods they worshiped by their thoughts, words and deeds; little more than unbelievers bound for suffering beyond knowing. Whether they liked it or not, they would come under the stewardship of one god or the other in the next life.

The deeds loved by the black god were the destruction of nature (ie; of new or unborn children, plants, animals, and the earth), greed, calumny, bad language, crime, rebellion, boastfulness, anger, ill-will, gluttony, treachery towards friends, family and spouses, hate, laziness and cowardice.

The deeds loved by the white god were love, kindness, submission, honesty, humility, hope, loyalty to friends, kin, spouses, your King and country, child-birth, plus the care of the earth and its fruits (animal, vegetable and mineral).

Thus the people worshiped one god or the other by the way they acted during their life. Most would serve both in unequal measure: but where would they go after they had died and their soul had slipped from the world? The Magi preached that everything a person ever thought or did was in some way dedicated to their god; the fruits of their labours. So is it really too far fetched to believe that at one time a certain group of people went a step further, advocating that looting, cheating, raping, infanticide, swindling, and stealing were not only permissible, but pleasing to their god? Let's face it, even today a considerable number of people live by this same value system (intentionally or unintentionally), but unlike the black Magi do not regard it as a religious matter.

DEVILS COULD BE FRIENDLY AND HELPFUL, BUT ONLY IF GIVEN OFFERINGS

DEMONS IN RUSSIAN FOLK TALES

SOME FOLK BELONGED TO THE SUN GOD, OTHERS TO THE DEVIL

DOING EVIL WAS A FORM OF OFFERING TO THEIR INFERNAL FATHER

THE MORE EVIL ONE WAS, THE CLOSER ONE WAS TO HIM

A love of the daevas

In the *Rig Veda*, a Brahmin lamented that one of his opponents was wrongly accusing him of being a magician owing to the ritual consecrations he performed in adoration of the Daevas. With the gods perceived as belonging to two separate camps (the Asuras and Daevas), it came to be that people saw those beholden to the rival faction of gods as being lovers of evil. As with the Christian Church, the prevailing Zoroastrian (not Zurvanite) view is that the Daevas (which are worshiped by modern day Hindus, and formerly by the Zurvanites, Balts, Romans and Greeks) were not celestial beings, but the subterranean reptilian enemies of the Ahuras. In their eyes to worship them was akin to loving devils, but, most assuredly the Hindus or the Aryans did not look upon the Daevas in that way; they were worshipping the true gods, and the Asuras were the serpents!

The Indians believed that “one should know that the hells are governed by dreadful looking serpents”.²²² And these serpents had varied faces, whether of humans, cats, vultures or owls, and inflicted insufferable torments on the sinners, piercing them, or cooking them in pans. Execrated for their misdeeds they were further forced to gorge themselves on the most pathetic of fare, bad wine, bad food, faeces, dirt, mucous. Mechanical devices also saw duty in the yawning hells of forbode. And it was from this sinkhole of damnation that the sinner was reborn into some baser form. Punished in full, they could only look forward to suffering. Yet there were good demons too, who could be worshiped also.

TRADITIONALLY WHITE
MAGIANS SAW THE
DAEVAS AS DEVILS

HINDU DEMONS
FREQUENTLY APPEARED
AS ASURAS

Zurvanites believed demons were gods

According to Zurvanite theology, everyone has missed the point entirely. The throngs of Ahuras and Daevas were equally divine, but with differing natures, and as such both groups need sacrifices. Succinctly, a god is a god. Members of the cult of Mithra produced many gem cameo's depicting engraved ritual scenes, which clearly portray zurvanitic themes. But such imagery does not appear to have died out with the demise of Ancient Roman civilisation. One carved 15th Century AD grave stone found at Konjik (in Bosnia) shows a battle between a serpent and a mounted rider carrying a large spear or jousting lance.²²³ The most interesting thing is that a robed man is standing in the middle feeding both the serpent and the rider.²²³ This scene is almost identical to motifs found on the incised mithraic gems, and I believe represents a sacrificial priest in the act of feeding the forces of good and evil their required sustenance. I am uncertain by what means this particular stecci was dated. Unless it is out by between 300-500 years, it may mean that Mithraic/Zurvanite sacrificial reliefs were being carved in the Balkans in the Renaissance.

ZURVANITES HELD
THAT BOTH CAMPS OF
GODS OUGHT TO BE
WORSHIPPED

Liberation from evil creation

From Dionysianism and Manichaeism came a view that material creation was evil, and once life had come into being, suffering and hardships in this world were all that one could look forward to. Creation was therefore an act of entombment for the otherwise pure human soul, and in opposition to the true spiritual existence, which was immortal and free of agony. Thus life was too much for people to bear in their wait for death, the long awaited final moment of liberation from the pains of this life. Destruction was not an evil force but an agency of victorious liberation for animals, plants and humanity, and death their moment of fullest glory. According to this ethos, the devil God, who is the embodiment of destruction, is in reality the messianic saviour of all existence.

SOME SAW THE DEVIL
AS A SAVIOUR

Zurvanite teachings on Devil-worship

It would seem that demon-worship was a standard part of Iranian religion before the birth of the reformist moralistic prophet Zoroaster. Magian scripture tells us that Zandiks and Drug-worshippers had an enduring love of Ahriman and his demon children, a love displayed by the bestowal of offerings to the harm-causers of the counterworld, to embolden them in their rebellion against the deities and saints then reigning in heaven. This was a central theme of the myths of *Bundahishm*, the regrouping of the myriads of infernal powers, who at an appointed time would return to the celestial sphere from their place of banishment on earth, and seek to seize their rightful place in heaven by force. The fact that Ahriman was the equal (and in every way a polar opposite of) Ahura Mazda meant that mankind could not be complacent in their dealings with him. Like a plundering burglar, Ahriman could be forced to desist from his horrible fits of anger, and withdraw his assault on humanity by appeasing him with

offerings, which were like extorted booty to him. Many Iranians saw merit in assuaging the infernal legions (and their goat-father, the great standover man), if not out of love, then to disarm his arsenal of chaos and devastation. This brought them into conflict with the Zoroastrian white Magi, who fulminated against their enormities.

During a crisis such as famine or plague the obvious questions on the lips of villagers would have been ... which demon was responsible for causing the damage? Who was to blame for offending the demon? How many were to blame? How could they fix it? What did the demons want in order to get off their backs? The allegiance or compliance of these blackened beings would not come easily or cheaply. Consistent with the Zurvanite view that the Evil One was deserved of sacrifice, offerings were made to the unholy lord and his children (the denizens of the underworld) by the black or Zurvanite (grey) Magi, which either sought to break the demonic strangle-hold on the afflicted, or sought to invoke the strengthening of their malignant darkness in the world. In return for these offerings, the Magus wizards usually gained favours of some kind, especially the ability to control the planets, tell the future, invoke maleficia and commune with the dead.

But what do you give a god like that? The answer is everything his enemy holds dear. To take that which the Radiant Ahura Mazda loves and crush it, or putrefy it, is to cause delight and rejoicing in the underworld. Black sacrifices often consisted of slaughtering humans or cattle, but in an even worse form of desecration, a black Magus usually inverted or perverted a *Haoma* ceremony by burying holy porridge, *Haoma* milk or *drons* (round flattened rolls which were dedicated to the angels) in a cesspit or bog to feed the infernal deities. Yes, mangling the jewels of the white Magi, the ritual order of holy worship to Ahura Mazda, was best of all.

When talking of Roman (Iranian) Mithraism, Plutarch exposed that the Mithra who gave his name to the religion was merely one component of the faith. As it turns out, the central teaching of Mithraism was that the supreme god had two sons (one the Sun, the other the demon god *Deus Arimanius* {Ahriman}) which were at war with each other, forever and a day.²²⁴ Both of these deities had their own loyal priesthood.

The black Magi who served *Deus Arimanius* allegedly performed the most evil of sacrifices - the burial of pulverised *Omoni* (a plant) mingled with wolf's blood.²²⁴ Inherent in Plutarch's words is an admission that an organised religion dedicated to evil, and the father of evil actually existed in his day. It is an independent confirmation (from classical Rome) of what the scriptures of the Iranian white Magi had told us all along; that evil did indeed have a religion all of its own. And what is more Plutarch's informants slip him one of the greatest lies of all time, namely that Zoroaster recommended that Ahriman be given sacrifices as a panacea against misfortune of every kind!

We must take a moment to pause over just exactly who brought this corrupted, and even banned brand of Magian wizardry from Iran to Rome. The answer is *Mesopotamian pirates* from Cilicia (where even today, many multi-storey underground complexes can still be found), and damn successful ones at that.²²⁵ When they set off to plunder the Mediterranean and Aegean, their sea-brigands did so not in ones, twos and threes, but supposedly in fleets of up to a thousand vessels.²²⁵ As you will see at various points in this book, the connection between piracy (the seizure of other people's goods by force), and the religion of the black lord of the underworld were inseparable, in fact a trademark way of life, if you like.

In practice, the black Magian sacrifices were probably offered to goad their lord into action, to stimulate earthly destruction. Through the intercession of his unholy power (*Angra Mainyu*), a black Magus could procure the means to achieve his own ends, such as killing off someone by death magic, by offering a living sacrifice (a life for a life), or return favours to his/her master by withering the fertility of stock and the land by similar means.

Under Zurvanite Magianism (called Mithraism in Rome), mankind was an "innocent bystander" in the middle of a cosmic war zone between the forces of creation and the forces of destruction. Not infrequently they ended up getting caught in no-man's land. If the creator gods became displeased and withdrew their aid, or were drained of their strength, *human beings had to intervene* with sacrifices (of one kind or another) to undo the source of any grievance, or to bolster a waning god's vitality. For it was at times of crisis when the demon gods gained the upper hand, or were given free reign by crippled and weakened creator gods that "Hell" in full measure scourged the Earth. It was from this fundamentally Iranian Zurvanite school of thinking that devil-worship gained ascendancy, and become a fundamental religious precept among the pagan Slavs. It later entered (re-entered!) Mediaeval Eastern and the Western Europe via the teachings of diffuse Slavic Magi (Rus', Bulgars and Balts).

Blood sacrifices On human sacrifice

Some modern Neo-pagan authors have asserted that (despite a large number of testimonies to the contrary) human sacrifice never occurred under "paganism", and attribute these accounts to lies spread by the Church's anti-witch and anti-paganism crusade. However these statements ride rough-shod over plenty of eye-witness accounts from many varied sources, plus skeletal remains and bog victims unearthed and forensically examined by archaeologists. It is a touchy subject for many people, but if we are to gain some understanding of authentic beliefs during the pagan era we must prepare ourselves to explore the concept of human sacrifice yet further, and even more importantly try and grasp the reasoning for it. In this book I attempt to place it in its original context. It was a religious rite, therefore it must have had some religious basis; but what was this basis?

According to the pagan writer *Diodorus*,^{225a} about 300 babies were burned on a subterranean altar by Mithraic priests to lift the siege that befell Agathocles in North Africa. *This very temple has been discovered at the site of olden Carthage, and once excavated was found to contain traces of charred juvenile and infant remains.*²²⁶ Based on what was recorded of the infernal rites attached to the cult of Mithra, the fullest scale of human sacrifice (especially infants and children) will never be known because it was customary to incinerate the "offering".

Fig 118. The Carthaginian vault in which child sacrifices were performed.

During the Inquisitions cases of baby-killings predominated at the hand of witches who claimed to be part of a religion which was spread over many countries.²²⁶ This in itself may lead us to believe that the infernal rites of the "black" families were somehow religious customs left behind by the dark, Ahrimanic side of the cult of Mithra, whose underground sacrificial vaults can be found spread right across Europe, from Britain to the Balkans. If Iranian temples were situated in England and Germany during Roman times, does it not then follow that infant sacrifices were in all probability there also? If Mithraism was operating in pagan Rus' (and there is evidence to suggest that it was) it is hardly surprising that similar tales should emerge there. *The Primary Chronicle* recalls the Rus' pagans killing their children to the idols (Perun in particular), and destroying their Yatvingian war prisoners, all of which suggests Mithraic complicity in the form of Ahrimanic sacrifices, but it could also be a hangover from Scythian times when they freely offered prisoners of war to their immensely powerful war god. The execution of war prisoners was not always ritually inspired either. Mass graves in modern Bosnia and Kosovo reveal sinister ways of making enemies disappear, together with their future sons and daughters. This is the true meaning of "wiping a man's seed from the face of the earth".

Contrary to popular imagery, principally derived from ancient Roman historians, and heavy-handed Christian monks, the sacrificial shedding of blood during the "pagan" era was, by and large, limited to paying the Thunder or War god his "wage" of blood. Outside of these war sacrifices, the remaining vestiges of even more grotesque sacrificial cannibalistic slayings, once practiced by some groups on the Indian sub-continent, began disappearing from pagan culture, making them increasingly rare. But certain "black" families and Dionysian devotees still indulged in exceedingly bizarre sacrifices born out of crisis, a different school of religious thought, or a simple loyalty

to demonic power brokers.

Normally, human sacrifice was ventured into only in the gravest conceivable situations, like eclipses and calamities that threatened the obliteration of their people. Usually sacrifices required shedding the blood of poultry, livestock, and cattle in particular, all of which were seen as ultra-fertile and nourishing to the earth and the gods.

Curiously, it was these sorts of practices that started popping up around Europe during the later Middle Ages, when devil-worship came into vogue. Some witches executed by the authorities were credited with extensive killings, normally of infants. It was this sort of “psychopathic” behaviour, particularly the killing of travellers and strangers, that was said to have been practiced by the Arsa, the northernmost tribe of the Rus’. Certainly Finns are not known to have bumped off unwanted guests, so one wonders whether the Arsa, like the Bulgars and other steppe tribes, were also richly endowed with black Magus priests.

In Rus’, a time of great crisis would have been truly frightening to endure, for it was then that the practice of demonic placation took over, the cult of offerings to the infernal deities, the only things which would make them crawl off to their blackened holes and swamps, fully sated and “leave decent pagan folk alone”. Consequently pagan Russians normally avoided swamps wherever possible for fear of resident demons. In their mind, the price that had to be paid, was the price that could and would be paid to save the common good. To them the willing offering of one’s children, or self-sacrifice, was deemed an act of greatest piety in the eyes of the entire community.

Slavic Volkhyv were known to sacrifice themselves, perhaps because they thought it would do some good for the people in their darkest hours. Further westward, Celts sacrificed people to fend off *the gods who caused calamitously poor harvests*, or even ventured to kill themselves (with their own blade) as an offering to the gods to achieve things on behalf of their kin.²²³⁷ These historical accounts are verified by the discovery of Lindow man’s body in an English bog. A medical examination of the well-preserved corpse suggests he died in an utterly submissive state, and what is more, that his death was preordained by having eaten a portion of ritual bun, which served as an omen for his selection as the sacrifice. Sort of like drawing a short straw. That his hands were well-manicured, and showed little sign of work, led some to speculate that he was of noble birth, and, based upon the premature creases that lined his forehead, most likely a man who spent much of his time studying oral law.

A potential, though still unsatisfactory reason for human sacrifice may be found in the Aryan *Laws of Manu*.

*“A Brahman must never eat (the flesh of) animals unhallowed by Mantras; but, obedient to the primeval law, he may eat it, consecrated with Vedic texts.. If he has a strong desire (for meat) he may make an animal of clarified butter or one of flour (and eat that); but let him never seek to destroy an animal without a (lawful) reason. As many hairs as the slain beast has, so often indeed will he who killed it without a (lawful) reason suffer a violent death in future births”.*²²³⁸

It is obvious that Brahmans did not take kindly to the wanton slaughter of animals, let alone human beings. But murder and ritual slaughter can be two different things.

*Scayambhu (the Self-existent Brahma) himself created animals for the sake of sacrifices; sacrifices (have been instituted) for the good of this whole (world); hence the slaughtering (of beasts) for sacrifices is not slaughtering (in the ordinary sense of the word). Herbs, trees, cattle, birds, and (other) animals that have been destroyed for sacrifices, receive (being reborn) higher existences. On offering the honey-mixture (to a guest), at a sacrifice and at the rites in honour of the manes, but on these occasions only, may an animal be slain; that the (rule) Manu proclaimed. A twice-born (Aryan) man who, knowing the true meaning of the Veda, slays an animal for these purposes, causes both himself and the animal to enter a most blessed state”.*²²³⁸

The sacrifice of human beings (*purusamedha*) is not specifically mentioned here, but the reasoning for it is manifest in the preceding passage. Whomsoever was sacrificed, became blessed, the most blessed of all, as did his/her/its killer. The Indian text Agni Purana does specifically require human victims during certain rites

One rite designed to procure greater dominions for the king speaks of oblations using bovine or goat fat, or “*the body of a man*”.²²³⁹ This is then succeeded by oblations using a variety of grains mixed with clarified butter. Then, at midnight, the wise man dons a variegated cloak, takes up bow and sword, pays homage to the goddess *Sigra*, then moves southwards to the place of sacrifice, “*at the entrances or a single tree or in a cremation ground*”.²²³⁹

Ritual suicide falls into this same category, and in this next account we find confirmation that in many cases human sacrifice was a form of pagan martyrdom, freely submitted to. At Athens, an Aryan brahmin was recorded

as having; "leaped upon the pyre with a laugh, his naked body anointed, wearing only a loin cloth".²²⁴⁰ A memorial inscription erected at the site of his death read; "Here lies Zarmanochegas, an Indian from Bargosa, who immortalised himself in accordance with the ancestral customs of Indians".²²⁴⁰ By his death, by ritually offering himself, the Indian was beatified, and conducted into heaven.

The white Magi believed that killing criminals was a holy act, especially if they were caught red handed (they could be killed on the spot). Like the Magi, the Celts also believed that God delighted in the sacrifice of criminals caught red handed.²²⁴¹ During pagan times the lot of human tribute to the demons most often fell on the heads of incarcerated criminals, who were left languishing in pits in expectation of some later communal crises. Some of the Danish bog bodies were sacrificed by strangling and still had a noose around their neck. Without criminals, a person might offer their child, or get somebody by means fair or foul.

If what one Arab mentioned concerning the Arsa tribe is reliable, there is every indication that, in the North of Russia, they snatched strangers for sacrifice, probably drifters, pilgrims, and the homeless. The sacrifice of Christians or other reactionary faiths in preference to locals might also have been seen as a way of ridding themselves of religious activists opposed to the Volkhy.²²⁴²

Adam of Bremen provided us with a wealth of accounts on the Eastern pagans. According to him the Balts were supposed to have killed specially purchased slaves to their bird-gods and snake-gods.²²⁴³ As mentioned previously, sacrificial victims (cattle, pigs, rams, sheep) in the ancient pagan world were normally required to be in a perfect state, free of any handicap or shortcoming. The men ritually slain by the Balts were to have been without blemish, since imperfections in the sacrifice rendered them an unbecoming offering to the snakes.²²⁴³ So who were these serpentine and winged lords so loved by them? Considering the vestiges of Aryan cultures then extant along the Baltic, the most convincing answer is nagas and sarpas, creatures mentioned in the Aryan sanskrit *Law Book of Manu*, which proceeds to describe the various classes of divinities which existed within the Vedic scheme of things.

"Yakshas (the servants of Kubera, the demons called) Rakshasas and Pisakas, Gandharvas (or musicians of the gods), Asuras, (the snake-deities called) Nagas and Sarpas (the bird-deities called) Suparnas and the several classes of the manes (which were Vedic saints, sages, warrior heroes, and the souls of one's ancestors)".²²⁴⁴

In *Agni Purana* we are assured that health, wealth and prosperity could be obtained if:

"The serpents Vasuki, Taksaka, Kaliya, Manibhadra, Airavata ... should be worshiped in the bright fortnight".²²⁴⁵

However Baltic serpent-worship could just as easily have been Aryan, Assyrian or Gnostic in origin, if the creatures in Figs 119 were ever lavished with slaughtered offerings in Eastern Europe.

Since the Balts also kept serpents as house pets during the Mediaeval pagan era, we might regard these as pet *Naga* gods, who brought holiness and sanctity to whichever house harboured them. My guess is that they were Nagas (Finnish: *Naaki*), but from the Magian perspective they might just as easily have been Azi, the evil *Daeva* serpents of the underworld. Despite the fact that modern commentators normally regard Baltic and Slavic rites as essentially shamanistic in nature, it actually displays classic features of Aryan religion. But on the other hand, it may have been, as I believe, shamanism, yet a form of shamanism displaying an open blend of Vedic lore and ritual. And it is perhaps from this area that they acquired their reverence for snakes as house protectors. We might think raids on other villages, to capture victims for sacrifice, would have been popular among the Balts too. Balts frequently plundered their neighbours, whether fellow-Balts, or alien Slavs and Norsemen, with the expressed purpose of reducing them to slavery and sacking their properties.²²⁴⁶ Such plundering expeditions were highly orchestrated, involving large numbers of troops, and were a symbol of a chieftain's greatness among his peers.²²⁴⁶ Having stormed a settlement the raiding-parties put to death able-bodied males, then purloined valuables, women-folk and the young.²²⁴⁶ The acquisition of the land and buildings did not appear to have been a primary aim, simply to sack. Now if the Balts offered bought premium-quality slaves to their fussy snake-gods,²²⁴⁶ then they may have offered locally captured slaves to them as well - that is unless there were religious prohibitions against sacrificing locals (this I doubt), which therefore required them to procure victims from slave traders. Better still, they could raid their neighbours or seize upon a passing traveller (if they were suitable) who would be free of cost.

Fig 119.2. Cernunnos - N. Britain.

Fig 119. 3. Typhon, a Greek subterranean divinity, and bog denizen. Ancient Greece.

We have very few references to human sacrifice in Scandinavia, apart from at Uppsala where they slew “blue-men”. Blue men in this case means either a victim tattooed in blue, or, considering that blue was really the Old Norse word for “black”, they were killing African negroes or Indians. These would have been specially imported by slave traders, or taken in raids on the Spanish and North African coastline in the mid-ninth century AD. In the Irish Annals the Moors captured by the Dublin vikings (tentatively identified as the *Al-Madjus* vikings) were termed “blue-men”. Considering the postulated existence of white Magianism among the Scandinavians the motive for such a sacrifice would have been to cleanse the world, for in Magian scripture negroids (and Indians no doubt) are portrayed as arising from the sexual union of a demon and a witch.²²⁴⁷ On the other hand the blackness of these sacrificial victims might equally apply to their perceived state of piety, or much rather impiety. The blue-men in this case might have been sacrificed criminals and pirates.

The manner of sacrifice

The performance of human sacrifice was something which clearly distinguished the Volkhvy and Druidic “Magi” from their Zoroastrian counterparts in the East. While the Persian Zoroastrians had no qualms about killing wrongdoers and witches, these slayings did not manifest themselves as a formal ceremony cloaked in ritual, but simply an execution or slaying. From both Arab and Christian accounts of the Rus’ or Ros, we know they frequently engaged in human sacrifice.

In *The Life of St George of Amastris* the Taurian Ros are portrayed as ritually slaying people of every gender, whether old or of tender years, mostly in the wake of their battle victories. This included hammering nails into the heads of captives.²²⁴⁸ It is perhaps a coincidence that the white Magi regarded this as one of the main activities of demons in the underworld.

The Arab Ibn Rusta recounted that Volkhvy had such influence over the common people that whatever they demanded be sacrificed to the gods *was surrendered to them without question*. Thereafter *their sacrificial priests used a noose to girotte the victim*, or otherwise hanged their animal and human offerings by the neck, usually from the bough of a grove tree.²²⁴⁹

Among the druidic Celts sacrificial victims were killed by stabbing, or as in the case of the “Druid prince”, by simultaneous bludgeoning, girrotting and bleeding.

In one of the few references to pagan sacrifices within the *Primary Chronicle*, “Nestor” records that the Rus’ brought their children to offer to the Gods, and their blood was evidently sprinkled about the sacred mound atop which the idols stood.²²⁵⁰ We don’t know their religious motive for doing so. The sprinkling of a child’s blood (either that of a bastard, or a child who has a father, depending on the circumstances) was performed by the Druids.²²⁵¹

When additional human sacrifices were required these were chosen on a random basis by means of sortilege,²²⁵² most likely by a toss of the dice.

In *The Death of a Druid Prince* archaeologists (using forensic methods) have managed to piece together the grisly end of what was believed to had been a Druid prince, *a man who willingly underwent death at the hands of his colleagues*. He sat down, perhaps on a chair or stool and was then bludgeoned over the head, then girotted by a strip of deliberately knotted leather thonging which was placed around the neck and then swiftly twisted by means of a stick which had been inserted through the thonging. And as he sat their semi-conscious and choking to death, one of his colleagues slit his jugular vein *with great care*, allowing his lifeblood to pour out, perhaps into a bowl, perhaps onto the ground. The Druids (if they were in part Magi) practiced sacrificial methods very similar to those of their Eastern brothers, the Slav Volkhvy Magi, Persians and the Scythians who also girotted their sacrifices.²²⁵³

From the Upper Volga region we have an Arab’s eyewitness account of a Russian concubine being simultaneously garrotted and stabbed to death to accompany a chieftain into the next world.²²⁵⁴ Though there is a superficial resemblance between this account and the death of Lindow man, it differs on two points. Firstly the girl volunteered to die for her chief, and secondly she was not struck over the head prior to the sacrifice, but instead drugged to make the final moment as least traumatic as possible.

On the nature of strangulation as a means of sacrificially dispatching a victim, one wonders whether the Volkhvy and Norsemen attached the same ritual significance to it as the Zoroastrians. If they did, then the many sacrificial hangings they performed, by means of a noosed rope tossed over a beam, or the bough of a holy tree, were ear-marked for demonic realms. That Icelandic hanging trees were termed *Varg-tre* (ie; wolf trees) is certainly

THE RUSSES SACRIFICED CHILDREN TO THEIR IDOLS IN KIEV

DICE OR LOTS WERE SOMETIMES USED TO SELECT THE SACRIFICE

A RUS’ CONCUBINE VOLUNTEERS TO BE SACRIFICED TO ACCOMPANY A CHIEF INTO THE AFTERLIFE

suggestive of Magian influence there, for criminals were hung them.

As elsewhere, Orthodox Zoroastrians living on the steppes (such as the Pechenegs) carried a lasso ready at the saddle during the Middle Ages. This vital piece of equipment was only partly to do with roping steers and lambs. According to the Magian texts these lassoes were named “snake catchers”, nooses which were used to strangle anything damned. Its official name was a snake catcher, because the heretics and apostates which they sought to strangle were labelled snakes in the Magian texts.²²⁵⁵ No doubt many of the pious Zoroastrian Pechenegs who were migrating into the Steppes of 10th Century Rus’ would have enjoyed strangling the Volkhvy two-legged wolves where possible. In their eyes, this would have been an act of great devotion, a holy duty.

Lassoes also had an application in warfare. Bulgars and Mongols are known to have used noosed ropes in close quarters combat. As skillful as they may have been with the lasso it is difficult to imagine this being a preferred weapon against opponents armed with swords, and clad in mail. Nooses might have been effective against horsemen, though I suspect there was a customary or religious significance behind fighting infantrymen with nooses. Perhaps they were only used on affluent-looking combatants, by warriors who wanted to capture and ransom them. Yet such accounts might also be describing Magian Bulgars strangling their enemies, enemies they perceived as “snakes”.

More is said about the notion that strangled victims went to the underworld later in this book, because there is pictorial evidence at a Monastery at Mt Sinai, which suggests that Christians of the early Church, like the Zoroastrians, also believed that anything strangled or hung became the property of demons (as could also be reckoned from the New Testament).

STRANGLING WITH
NOOSES

Features of human sacrifice

Pagans sacrificed human beings for differing reasons, using various means of selecting the sacrifice.

Selected by lot to die

A form of death lottery was recorded in the Russian *Primary Chronicle*. In this account the son of a Varangian Christian was selected for sacrifice using the lottery method, but his father would not surrender him, and they both subsequently perished at the hand of an angry mob. The pagan Slav Magi and priests utilised numerous means of understanding the will of the gods, but interpreting tossed dice was most likely the preferred method. Lot casting to foretell the victim was by no means confined to Rus’ however.

For instance lots were cast to prognosticate the victim during the sacrifice of human beings in the Lowlands (Netherlands).²²⁵⁷ Divining the will of gods via the agency of dice was observed among the Western Slavs.²²⁵⁸ We hear that twin sets of dice were used by European pagans, one white and the other black. Such dice have been recovered from archaeological excavations in a number of places around Europe.²²⁵⁹ It ought be stated however that archaeologists only ever associate dice with games of chance; never as a means of religious augury. In many cases they resemble Roman dice, but I suspect these dice were originally Mithraic in nature.

The Celts had a method of selecting their human sacrifices, in which they shared out a ritual bun, one piece of which carried a blackened mark caused by deliberate scorching.²²⁶⁰ Whomsoever received this portion once it was distributed to the faithful was destined to be sacrificed. Take the following two quotations from the British Isles; one the words of Thomas of Erildoune, the other the plea of a young warrior (who had fairy blood).²²⁶¹

“Tomorrow, of hell the foule fiend
Among these folks shall choose his fee.
thou art a fair man and a hend (comely),
I trow full well he would choose thee”.²²⁶¹

“Then would I never tire, Janet, in Elvish land to dwell;
but aye at every seven years They pay the teind to hell
And I am sae fat and fu’ o’ flesh I fear ‘twill be myself’”.²²⁶¹

Admittedly they are folk poems belonging to a much later period, but they still seem to encapsulate a belief that a victim was randomly selected to be sacrificed to the devil.

FRISIANS AND SLAVS
CAST LOTS, TO DIVINE A
SACRIFICE

BANNOCK BUN

In Scandinavia regicide was committed as a crisis offering during times of ecological calamity, not by lots, but by the will of the people. In the next extract we learn that King Domald was sacrificed, or at the very least slain because of some defilement he had experienced or caused. As a result of this hitherto unspecified wrongdoing, his death was pre-ordained by the chieftains and their citizens;

DOMALD WAS
SACRIFICED AT UPPSALA
BECAUSE THE SEASONS
HAD TURNED BAD

"Domald took the heritage after his father Visbur, and ruled over the land. As in his time there was great famine and distress, the Swedes made great offerings of sacrifice at Upsal. The first autumn they sacrificed oxen, but the succeeding season was not improved thereby. The following autumn they sacrificed men, but the succeeding year was rather worse. The third autumn, when the offer of sacrifices should begin, a great multitude of Swedes came to Uppsala; and now the chiefs held consultations with each other, and all agreed that the times of scarcity were on account of their king Domald, and they resolved to offer him for good seasons, and to assault and kill him, and sprinkle the stale of the gods with his blood. And they did so".²²⁶²

The individual had irredeemably defiled himself.

In pagan times a person could become unholy and worthy of death by defiling things;²²⁶³ and this is perfectly understandable, for in Magianism defilement was an infernal act. Defiling a pagan holy site often drew the death penalty.²²⁶⁴ The Prussians believed that the simple entry of Christians (though we might include foreigners also) into their groves caused the Holy place to be defiled.²²⁶⁵ Christians were martyred for chopping down pagan holy trees, or merely transgressing the bounds of the pagan sanctuaries.²²⁶⁵ Eighth Century pagans inhabiting an island situated between Denmark and Frisia worshiped at sacred temples dedicated to Fosite.²²⁶⁶ Everything there was to be guarded from defilement, especially the holy spring and cattle. The penalty for violating these precincts was death.²²⁶⁶ When St Willibrord did so, by conducting Christian ceremonies there, he, and all the Christians who travelled with him, were taken captive by a Frisian king, who cast lots so as to divine which of the captives should die as punishment for this sin.²²⁶⁶

DEFILING A HOLY PLACE
COULD SEE ONE
SACRIFICED

Some acts were deemed inexpiable, especially the breaking of solemn oaths, or serious crimes. Whomsoever was guilty of such a thing had to be banished or put to death. In the Zoroastrian texts it is mentioned that the execution of a criminal was the highest form of gift one could grant to Ahura Mazda. Putting bastards (children unclaimed by their father) to death was similarly efficacious according to the druids. The Celts believed that a king or leader who had become defiled (owing to wrongdoing) would bring about calamity for the entire community. His purification could only be brought about by sacrificing a child of parents untainted by defilement.

The black Magi performed ritual desecrations that awoke the powers which lay behind harmful witchcraft. The writings of the white Magi tell us that they were to be slain for these iniquities once apprehended and judged. Again, the Magian texts divulge that the great demon's grand rites of defilement caused injury to the Gods of creation, while at the same time fed the demons, giving them increased vigour and potency. Therefore if any Magian committed a serious act of defilement against fire, water or some holy site, or called upon the powers of infernal witchcraft, it was highly desirable the individual be sacrificed or executed, if they would not, or could not make atonement.

Like the white and black sacrifices of the Zurvanite Magi (as recorded by diverse historical sources), the sacrifices performed by the Mediaeval/Renaissance witches included bulls, cocks, dogs, children and criminals also, but there was an interesting twist. Unlike the Kings and Princes who represented the Sun, the criminal was regarded as the living embodiment of the devil, Satan,²²⁶⁸ a Divine Criminal if you like. Criminal slayings had been around for a long time. In ancient times law-breakers (with nooses still hanging around their necks) were hearded into the Roman colluseum to be rent apart by beasts,²²⁶⁹ and the Celts also slew them to invoke prosperity.²²⁶⁹ Nooses were found around the necks of bog victims in Denmark, potentially indicating that they were executed criminals. In India the only possible atonement for a cattle-killer, brahmin-slayer or regicide, or one who had contracted a permanently debilitating or incurable ailment, was death by fire, or drowning.²²⁷⁰

The person was born to suffer a sacrificial end.

In Aryan times a person was supposed to die by the manner in which they lived, and sought glory for their name and their family by doing so. Some were kings destined to reign for only a fixed period.

REGICIDE

In one story of the pagan Slavs, two men called Gunn and Jarmerik (either Germans or Scandinavians) are recorded as having slaughtered a Slavic King and his Queen.²²⁷¹ Sensing that they would be put to the sword if they hung around any length of time, they sped from the area hoping to elude death at the hands of a very great Slavic throng gathering to pursue them.²²⁷¹ As their hunters closed in, the pair of murderers began to hear exactly what their pursuers were yelling out to them. To their amazement, the Slavs were telling them to come back, because in committing regicide, the two men had just become the new rulers of their tribe!²²⁷¹ Unwilling to grasp at such a dubious offer, the two wisely chose to flee the area entirely. Assuming that such a tale reflects a factual occurrence, there is something almost Darwinian about this method of Royal succession; survival of the fittest. One might think that the typical king would have been subjected to many such assassination attempts during the course of his reign. Of further interest is the fact that the Germanic Gunn and Jarmerik had no knowledge of the custom, nor were they precluded from the kingship on the basis of lacking royal bloodlineage. Thus it would appear that at that time, the rule of the Magus princes had not yet come about in Slavia, at least in that locale. It is most unfortunate that Fraser's account does not allude which tribe it was, nor the date of the alleged occurrence. I am inclined to believe that these were Western Slavs, perhaps one of the Polish tribes, but then again they might have been Balts or Prussians.

This particular method of royal succession has Indo-European parallels. One only had to be born into the warrior-caste to be eligible for the kingship. Only Aryan warriors who had shown themselves superior to all others were able to undergo the Aryan rite of coronation. The means by which Gunn and Jamerick became eligible for kingship among an unspecified group of Slavs had an amazing counterpart in India.²²⁷² There we find a form of royal succession deplored by the Brahman caste as a degrading break with Aryan tradition, since it entertained the permissibility of kings born in the lowest castes. The Samorin monarch of the Malabar coast held power for 12 years after which time he cut his own throat in a public ceremony, and was thence cremated.²²⁷² But until that time anyone could attempt to assassinate him, and if they did so, they became king.²²⁷² Slaying the monarch was no easy feat considering the thousands of guards that protected him.²²⁷² The Samorin form of kingship was banned under British rule, in the year 1743 AD.²²⁷² Likewise in Quilicare India we learn of men who were made king for 12 years, and during that time charged with sacrificing to a particular idol at a great temple situated there.²²⁷³ As the fixed period of rule came to a close he hacked off parts of his body, and slit his own throat, so that he might bleed to death.²²⁷³ With his passing a new successor king was installed

REGICIDE IN INDIA

LIVING AND DYING BY THE SWORD

An Aryan warrior was to die by the sword, in battle.²²⁷⁴ To die a natural or peaceful death was regarded as disgusting, to get a wound on your back was unforgivable (a mother would rather chop off her breasts, and regret the day she fed the child upon seeing a son with a back wound). The typical Aryan warrior was therefore exceedingly glad, filled with great rejoicing at the prospect of living and dying by the sword. In a similar way, the Brahmans who performed sacrifices for their society were to end their life by being ritually sacrificed. Pliny the Elder²²⁷⁵ noted that Brahmans immolated themselves on the holy fire of Agni, but in that source, no mention is made of them doing this at a certain age, or under what circumstances. Since Zurvanite Magi cleaved towards customs of the Brahmin caste, we might expect this kind of custom should manifest itself among the Rus' Volkhy, and in fact it does. In *Legends about the founding of Yaroslavl* we learn that a Volkhy was sacrificed immediately after he had ritually executed a victim. It appears that he willingly suffered this death. If so, the belief that one had to die by the manner in which one lived may be the very reason why the Volkhy allowed himself to be put to death ritually. Alternatively he may have given himself to demons, or another deity. Again, Celts were known to have self-sacrificed in order to achieve success for their people.²²⁷⁶

PAGAN PRIESTS BEING SACRIFICED

KHAZAR RULERS RULED FOR FORTY YEARS, THEN WERE KILLED

Accounts of regicide and royal suicide were amply recorded concerning the heathen Prussians, Scandinavians, Druids and Khazars. To this I would add Goths. In many cases they were burned alive, and even jumped onto the pyre themselves (as was the case with a Prussian King).²²⁷⁷ Margaret Murray traced the killing of Kings and other royal personages from the late Mediaeval era through to the 15th-16th Century, which by her reckoning were performed every seventh year.²²⁷⁸

According to Frazer and Vernadskiy, the Khazar rulers (who prior to their conversion to Judaism were Eastern Dualist pagans) were destined to follow the fate experienced by the sun, enjoying prosperity and suffering alternately, in synchronisation with the passage of the seasons.²²⁷⁹ At the end of their 40th year they were sacrificed and a new ruler selected, who would in turn undergo the same kind of life, that of a man born to die.²²⁷⁹ If the seasons were not prosperous it may have been due to some regal misdemeanour, a factor which could lead to an early death.

While there were a number of Russian princes slain during the epic Kievan Rus' period, only prince Igor' (who was labelled "a thieving wolf" by the Drevlyanian ruler), was recorded as having died under ritual circumstances.²²⁸⁰

Ritual regicide or kingly sacral suicide can be found in the Aryan *Law Books of Manu*, which tell us that Kings were like the Sun (amongst other things), and destined to die by weapons, preferably in war.

AN ARYAN KING WAS EXPECTED TO DIE IN WAR

"But (a king who feels his end drawing nigh) shall bestow all his wealth, accumulated from fines, on the Brahmanas, make over his kingdom to his son, and then seek death in battle".²²⁸¹

"Let the king emulate the energetic action of Indra, of the Sun, of the Wind, of Yama, of Varuna, of the Moon, of the Fire, and of the earth. As Indra sends copious rain during the four months of the rainy season, even so let the king, taking upon himself the office of Indra, shower benefits on his kingdom.

As the Sun during eight months (imperceptibly) draws up the water with his rays, even so let him gradually draw his taxes from his kingdom; for that is the office in which he resembles the Sun".²²⁸²

SUN PRINCES

St Vladimir and several other Rus' princes were described as Suns (in Igor's tale), but as to whether these Slavic "Sun-princes" underwent a ritual sun-death like that of the Khazarian Khagans and Aryan kings went unrecorded.

pagan and Christian monarchs might not have been the only ones going under the hammer either. Al-Masudi made repeated references to the number of Caliphs, Arabic royals and dignitaries that were deliberately murdered.²²⁸³ Whether the killing of a given Muslim royal was politically or ritually motivated, or the result of some vendetta is not always clear. The death of Caliph Al-Ma'mun took place in a manner conveniently predicted by his astrologers,²²⁸⁴ succumbing to some strange condition at a waterhole.²²⁸⁴ Even though Mediaeval Muslim physicians were some of the best around, the Caliph's entourage of personal doctors were totally at a loss to issue a satisfactory prognosis.²²⁸⁴ While it is tempting to suspect poison or malaria as the likely cause of his death, it is unlikely they misread the symptoms, thus leaving us with an impression he died of something fairly exotic and totally unexpected. Unexpected that is except for the virtually 100% accurate prediction of his imminent death by the astrologers. Either these astrologers were actually capable of predicting such things (as so many Muslims and Christians of the era had claimed), or they separately, or in unison with other parties such as the Chaldeans, were responsible for killing off the Caliph.

PREDICTED DEATHS

Might the accurately prophesied death of Oleg "the Sage" have been well predicted or was he assassinated by his astrologers?

These condemned royals and other sundry victims underwent a life of plenty and regal splendour, after which they were ritually slain, even rushing to meet their fate, by Frazer's accounts.²²⁸⁵ By the 15th-16th Century the witches were apparently starting to shy away from human sacrifice, because around this time it appears that they substituted a goat for the person who would once normally have been killed.

The victim was nearing the end of their life, or due to a calamity

THE ERULIANS SUICIDED IF THEY FELL SERIOUSLY ILL

Babylonian priests had a long history of sacrificing babies, and elderly citizens who had outlived their usefulness to society.²²⁸⁶ Tales of this nature are by no means isolated, or indeed confined to Mesopotamia. Procopius explained that Erulian Goths did not normally die of sickness or old age.²²⁸⁷ That was because as soon as the end looked imminent, they made a pyre and laid on it.²²⁸⁷ Then a member of the tribe (who was not a blood relation) approached the bier, and quickly despatched them with thrusts of a knife.²²⁸⁷ Next the pyre was set alight from the edges first, and a great spectacle had.²²⁸⁷ Having been consumed by the inferno, the ashes were taken up and interred.²²⁸⁷ It was thought meritorious that the man's wife should die alongside him, by strangulation with a rope (the word hanging appears in the translation).²²⁸⁷ If she avoided this path, she became a virtual outcast.²²⁸⁷

Prussian monarchs were not just secular rulers, but holy kings.²²⁸⁸ They communicated the will of the gods to their subjects, and acted as an intercessor for their subjects, before the divine beings.²²⁸⁸ In the inimitable style of the Aryans, a Prussian ruler prepared to self-immolate upon discovering he was succumbing to a debilitating illness that sapped his strength.²²⁸⁸ Ascending the pyre, which he himself had prepared, he preached to the masses the need to continue worshipping the gods, while for his part he was about to travel to the heavens and there act as an heavenly ambassador for the tribe.²²⁸⁸ Grabbing some of the eternal flame which burned reverently in the grove, he ignited the timber stack.²²⁸⁸ Such was the moment the Prussians lost sight of their king, engulfed by flame, smoke and wafting incendiaries. Now his soul flew skyward into paradise, travelling, as it were, on a vehicle of rising flame and spiralling smoke plumes. Having reached this state of blessedness, beatified by the holy fire, the masses called upon their pagan king high above for help, and intercession. His name lived on.

THE PRUSSIAN KING
WHO ASCENDED TO
HEAVEN

The ultimate Gothic regal epithet was *Thiudans*, a king who had passed on to the next life.²²⁸⁹ A *Thiudan* differed from the *Reiks* (the earthly kings) in that his rule and dominion lay in the spiritual realm, encompassing heaven and earth.²²⁸⁹ There is an obvious similarity between this Gothic tradition and that of the Old Prussians. This may explain the readiness of Gothic *Reiks* to self-sacrifice during a moment of calamity. *Reiks* seems to have originated in an old Aryan epithet for a king (*Rig*, “the sun”). Following the ruination of his men in battle, the Gothic king Ermanaric self-sacrificed,²²⁹⁰ being in effect a sacred crisis offering.

SOME GOTHIC KINGS
RULED IN HEAVEN

If regicide did take place on the scale that has been suggested, and for such divergent reasons, then the modern interpretation of royals as exploitative imperialist forces within society (as portrayed in the Communist historical model) is totally wrong.

Strabo provides a similar report concerning a Hindu Brahmin, derived from the writings of Calanus, who served Alexander the Great during his eastern campaigns.²²⁹¹ They witnessed the 73 year old Brahmin priest suicide on a pyre after falling seriously ill for the first time in his life.²²⁹¹ Some said a house was built over the pyre and subsequently consumed by the funeral blaze, others that he simply reclined on a golden couch perched on the summit of the bier.²²⁹¹

A SICK ELDERLY
BRAHMIN BURNED
HIMSELF TO DEATH

The Eruli, a tribe of reputed Magicians that lived in Denmark, and who were renowned for their speed in battle and runic inscriptions, ritually slew not only war prisoners, but the chronically ill and the elderly folk of their tribe.²²⁹² It is not mentioned who they offered them to, but I suspect it may have been to underworld divinities that constituted a certain portion of their “pantheon” of deities. Alternatively these deaths were looked upon as mercy killings akin to the euthanasia we frequently hear of nowadays, but we will never know. The Old Prussians were recorded as suiciding whensoever their lives had entered an irreversibly distressful phase.²²⁹³

DEFORMITIES AND
HANDICAPS

The Russian words *ubogii* (“a cripple” or “a wretch”) and *ubozhestvo* (“deformity” or “wretchedness”), are derived from the Russian pre-fix “U-” (away from) and the root word “bog” (god). Subsequently we are left with a distinct impression that in former times the deformed, the handicapped or the crippled, were regarded as corrupted wretches who had been disowned and abandoned by the Creator.

The Magi related that the world would be long under the pollution and defilement of Ahriman. For this reason deformities (like death itself) were seen as a product of demonic possession, with the corruption that would stem from it, being a sure sign that a demon had twisted and mutilated what would normally have been a perfect creation. The ancient Aryans held in contempt incurables and the permanently disfigured or incapacitated, but nowadays Hindus consider it extremely virtuous to support such unfortunate souls with alms.

MUTANT BIRTHS
PRESAGED CALAMITY

In Mediaeval Europe it was commonly believed that the birth of unusual or bizarrely deformed offspring was an unhealthy message from the gods, an absolute sign of impending calamity. In Russia, mutant births were perhaps fearfully taken to the Volkhy to discover what omens or discrete message might be linked to it. Creatures or people born stunted, or covered in hair, or with holes in their body, or with hair lips, or with no genitalia, or genitalia of both kinds, or with extra legs, eyes or arms were all held in detestation. Albinos and siamese twins must have been particularly shocking to the pagan mind. *The Primary Chronicle* saw fit to mention the birth of a number of freaks that arose during a time of calamity, many of which were thrown into the river. Based on linguistic evidence one might guess that it was because they were disowned by god, and heralded the shocking calamities then afflicting Rus’. It is also worth mentioning that one of the bog bodies unearthed in England was found to have an extra finger on one hand. Was this deformity the reason for his ritual sacrifice?

Some readers will remember seeing Buddhist monks self-immolating on television during the Vietnam war. As shocking as the television footage may have been to Westerners, these holy men were making the highest possible spiritual sacrifice, cremating themselves in a state of serenity. Perhaps they could be of more assistance to their people if they entered the hereafter. Conceptually speaking, Christian Martyrs belong very much to this category. They were sainted standing by their lord until the bitter end, beatified by their death in the name of Christ. Many of their past sins paled into insignificance at the point they surrendered their life in honour of their saviour, who, in times past, freely gave himself to be put to death by his people.

The person was killed as a penance for their sins

DECAPITATION AS A
MEANS OF ATONEMENT

The Balts had a typically Zoroastrian/Zurvanite sacrificial method for sending war captives to the gods; beheading.²²⁹⁴ Thereafter the headless corpse was immolated. For the prisoner who was soon to die, this beheading might have been regarded as an act of greatest kindness, because, according to Magian law, decapitation was believed to wipe the slate clean with regard to any sins as yet not atoned for. Otherwise the damned were to be thrice decapitated by the demons in the underworld for each unatoned for mortal sin they committed while alive, and in this way the grievousness of their sin would be eventually expiated in the underworld, thus readying them for their ultimate reunification with god. During Roman times, the execution of State citizens was only to be carried out by beheading. Whether such a tradition came about due to the substantial Iranian Mithraic influences then current in Rome is anyone's guess. The practice of decapitation is widely found among the Celts, and is a frequently occurring theme in their folk epics, which see the hero of the story voluntarily submitting himself for decapitation, only to have the severed head rejoin itself back onto the body afterward. Onlookers who saw the execution of Danes for criminal activities reported that the condemned man seemed gladdened by the prospect of being beheaded.

DANES WOULD RATHER
BE DECAPITATED THAN
FLOGGED, IF THEY HAD
BETRAYED THEIR KING

"...men who have been caught betraying his royal majesty or in some other crime would rather be beheaded than flogged. ... and, when it so happens that this is inflicted, one may see the person who is about to die go rejoicing to his execution (by beheading) as if to a banquet".²²⁹⁵

MANY SAXONS WERE
DECAPITATED

And then we have Saxon graves unearthed by archaeologists in England, which frequently include skeletons which had their heads lopped off,²²⁹⁶ but whether this took place before or after death is unclear.

The person was sacrificed to accompany someone into the next world

A young slave girl was put to death during the Rus' Chieftain's funeral which Ibn Fadhlān witnessed on the Upper Volga.²²⁹⁷ The girl had volunteered, from among the many women present, to be killed so that she could accompany her chieftain into the afterlife.²²⁹⁷ We are lucky a Muslim traveller was in the audience to provide such a detailed and objective view of the proceedings, because I am sure Ibn Fadhlān would have recorded that the woman went reluctantly to her fiery grave if it had been the case. Instead we are greeted with a vastly different spectacle. Before she was taken on board the ship to be put to death, she took part in a series of rites, including decapitating a chicken, and peering over a specially erected free-standing door frame (perhaps of the type mentioned in *the Puranas*).²²⁹⁷ Maintaining her composure she looked over the gateway, and into the next world, witnessing the souls of her ancestors ready to greet her, and recounted what she was seeing to all present.²²⁹⁷ One thing is for certain, the many gathered onlookers had a very real conviction that a heavenly paradise awaited her, so too the girl herself.

A FEMALE SACRIFICER

To prepare herself for the Angel of Death (ie; the old crone who was to be her executioner), the girl drank two unspecified draughts, perhaps natural sedatives or even poisons.²²⁹⁷ Thereafter she had sex with several of the deceased chieftain's kinsmen.²²⁹⁷ Feeling sheepish about going under the knife the young woman hung back ever so slightly during the performance of the rituals and songs which followed. Unable to stomach the young woman's dallying any longer, the haggish "Angel of Death" as she was called (ie; an incarnate angel), quickly grabbed her and carted her onto the vessel.²²⁹⁷ Perhaps the incarnate death angel was impatient, perhaps she was worried that the sedatives would wear off. Once on the gold brocaded death ship the hag wasted no time garotting the slave

girl, but then delegated this duty to a couple of men.²²⁹⁷ As the two males choked and restrained the struggling concubine, the old woman stabbed her to death through the chest as she gasped for air. All the while the gathered throng of funeral attendees banged their shields, and made noise to mask the sound of her muffled cries.²²⁹⁷ Now it should be stated that it would have been impossible for Ibn Fadhlān to witness the manner of the girl's execution from his vantage point, so perhaps he relied on what other attendees had told him.

Because the elderly woman who sacrificed the slave girl was officially referred to by attendees as an "Angel of Death", the pagans may have seen her as a black fravashi, a "black angel" who caused slaughter. From this account we might suspect that pagans quite readily (and calmly) submitted themselves to ritualised slaughter, because the act of their slaying did not kill their soul, but gained the highest possible spiritual rewards. It would seem that their brand of paganism was a whole lot more evolved than the stereotyped bonfire parties and nude romps we are left with as a result of modern witch cults like the new Church of Wicca, and so forth. For the Aryans said:

"The woman (widow) who enters the (funeral) fire along with the (dead) husband would accompany the man to heaven, having gained immediate access by this sacrifice".²²⁹⁸

If the Rus' concubine's death was in any way analogous to this Aryan funeral rite, she was not offering herself for slaughter, but undertaking a voyage into the afterlife, having won eternal bliss for herself, and guaranteed salvation.

Feeding the war god

A warrior's death found its fullest expression in Aryan tradition. Just as the Sun kings and Brahmins reached the state of utmost blessedness through sacrificing themselves on a pyre, so too did the soldier find this same eternal bliss and immortality by being struck down in battle. It was his every hope. For his station in life was not merely to fight bravely and skillfully, or to chase the enemy beyond the limits of his endurance, beating them back from the extremities of his homelands, and scattering the dwelling places of his king's enemies, but to offer himself as a living sacrifice for his people, and so die in the arena of battle. But if good fortune was not on his side, and he was captured in combat, then he could always hope to be sacrificed; at least then he could die by arms, his life consummated at last. He would not have to suffer the indignity of slavery, ploughing the fields of his captors, never again to experience the sacred feel of a sword in his hand, to limber up and equip himself to set out for war yet again.

Agni Purana prescribed that warriors should offer sacrifices to Indra both before and after a military campaign. In essence the devotee promises to give him far greater offerings if he allows him to return victorious. If Perun was in reality Indra (the war/thunder god), then, like the Indo-Europeans, the pagan Russes would have offered war sacrifices to him on the eve of battle and following victory. These sacrifices consisted of prisoners, and the spoils of war, which were ceremoniously dented and destroyed. Although it does not properly belong among the black rites, I have placed the rites of sacrifice to the war god in this chapter, only because it sometimes entailed human sacrifice. The intent was not however evil, in the sense of invoking demons, but simply ceremonies of appeasement celebrated in connection with the god of warfare and worldly conquest.

The Primary Chronicle hints that roughly a thousand Yatvagian (Prussian) war captives met a grisly end before Perun's idol in Kiev during the year 983 AD. During the ceremony all the Kievans turned out to celebrate their victory over the Yatvagi, and give thanks to Perun for the Baltic lands they seized during that conflict. In Germany, the picture was much the same when it came to Wotan. Blooding their weapons on prisoners and law-breakers, and the wrecking of war booty were key features of his worship.²²⁹⁹ As with the blood of animal sacrifices, the blood of prisoners flowed freely into a sacrificial bowl, pumped by hearts strong and brave. On the basis of phonetic equivalents, and a similarity in nature, it has been said that both Odin and Wotan were one and the same.²³⁰⁰ By Adam of Bremen's reckoning, Odin meant "Fury".²³⁰¹ In Scandinavia, broken armour was hung from the boughs of the holy oaks of Thor (the Thunder God perhaps equivalent to Indra), as were the corpses of men.²³⁰²

From time to time archaeologists have unearthed Celtic sacrificial deposits. These included valuable items of war booty, stocks of weapons and the like, much of which was in a broken state.

Aryans saw it as perfectly acceptable to pay homage to the war god in this way. On the other hand the white Magi viewed war sacrifices as delinquent acts of worship to one of the most notorious demons ever. The principles espoused by Aryan society dictated that it was fitting and proper to die in the manner by which one's caste lived.²³⁰³

THE MAGI THOUGHT IT
DEMONIC TO SACRIFICE
TO THE WAR GOD
INDRA

To die in combat, or to be offered up to the war god was almost a beatified death, but to die a peaceful death was ugly and very shameful.²³³ For example,

*“Those kings who, seeking to slay each other in battle, fight with the utmost exertion and do not turn back, go to heaven.”*²³⁴

If we draw upon Herodotus’ accounts of the Scythians, then the blood of captured cattle, enemy prisoners and the wounded was made into a libation. In some cases it may even have been used to quench the holy fire. Thereafter the corpses of sacrificed warriors were probably cremated on a pile of flaming charcoal and timber, sending a pall of smoke which carried the happily liberated souls up into heaven.

Contrary to this, the white Magi felt such pyres were a defilement of God’s precious son by human and animal remains, a blaze from which the pungent odour of singed hair and roasting flesh wafted up into heaven; a sight most heinous before the eyes of their radiant Ahura Mazda.

Though the Magi had no qualms with the concept of warfare and military service, Zoroaster’s doctrines forever condemned these attitudes and aspects of the Aryan warrior lifestyle, for through it “immoderate fighting” flourished, war for the sake of war, great times of desolation. Peace was more desirable than war, for then affray and ruination gave way to growth, expansion, creation and plenty. Still Magians thought that war must be pursued for a different reason, and only under specific circumstances. For them it was holy to bear arms and hunt down the forces of evil, wherever they might hide in this world. Whether against “black” witches, brigands, pirates or despots, the forces of the good must rally to exterminate their oppressiveness, and the attendant baseness with which they contaminate the world, and the lives of the faithful. In light of this, slaying their enemies was so to speak an act of cleansing.

During times of war, the Zurvanite Volkhvy (like the Druids) probably accompanied warriors to the scene of a battle to cast their opposing sets of white and black dice, right up until the last moment, seeking last minute “advice from the gods”, where to pitch their camps, what hour to assail the enemy village, and so on. However, the sacrifice of war prisoners presented to them by the warriors (or their enemies’ severed heads) would have been their main reason for being there.

Crisis offerings

If the young slave girl and the pagan funeral gathering seemed unperturbed by the prospect of her impending sacrifice, what then can we say of the following account from the Russian *Primary Chronicle*.

During a severe northern famine in 1071 AD (82 years after the conversion of Rus’), a pair of pagan Volkhvy Magus Priests (who came from Yaroslavl’) demanded that the people of Beloozero bring them all the female folk of the area, the majority of whom they accused of causing food shortages. Thus all their female kin were brought to the sorcerers. Pagan priests then stabbed them to death, through the back. At this particular point in the Chronicle entry it seems the killings were either black crisis sacrifices performed by black Magi, or the actions of white Magians executing dark female witches guilty of hexing crops throughout the region. The situation becomes clearer a little later.

The deaths of so many of their spouses, daughters and mothers did not provoke the peasants to anger against the magicians; on the contrary, the sorcerers now gathered a band of followers several hundred strong as a consequence of this. Soon one of the prince’s tax agents and a Christian priest arrived in their district, and upon discovering the mass killings, implored the peasants to hand over the wizards. The followers of the magicians felt in no way inclined to do so, and instead hid them in a safe place where they would likely elude discovery. The tax collector attempted to rally the people against the sorcerers and only succeeded in winning twelve men over to his side. The upsized band then pursued and fought elements of the pagan gathering. After slaughtering the Christian clergyman the pagans disengaged from the fighting and took off into the woods. After a round of diplomacy, the tax-collector convinced the other inhabitants of Beloozero to flush out the magicians and hand them over for chastisement (but only after threatening to continue collecting duties and taxes in their area for a full year). His order was then fully complied with.

AROUND 1071 AD, TO
LIFT A FAMINE

THE PRINCE’S TAX AGENT
PURSUED AND HUNG
THEM

Once the heathen sorcerers were captured they were interrogated about the nature of their principle deity. The magicians supposedly told them they were devotees of demonic hosts residing in the Abyss, and servants of their master, a demon-god they formally addressed as “*the Antichrist*”. Following these admissions the Magi demanded to see Khagan Svyatoslav personally, a request that was turned down by the tax officer who then summarily hanged them.

Presuming that the account was factual and undoctored by the Chronicler, the priests in question were not white priests killing witches for their transgressions against nature, but Zurvanite magicians who slew a fair number of women as a crisis sacrifice to the demons, thereby hoping to lift the dreadful famine then afflicting Beloozero region. Accordingly these priests were probably not sun-worshippers, but devotees of Chernobog (ie; Ahriman).

So in heathen Russia during times of woe (plagues, hail, failed crops, famine, drownings, dying livestock, drought, inundation with rodents and other pests), the gods and demons were appeased by ritual sacrifices, performed by certain pagan priests. In all likelihood they consulted the will of the gods by rolling oracular dice (probably of polished black jet), to discover a means of remedying the impasse.

The calendar of pagan Russian religious festivals can be found in Chapter VI. There you will have an opportunity to see on which days specific demons received homage and crisis sacrifices, especially as tragic circumstances dictated.

Zurvanites evidently felt that demons responsible for an orgy of destruction had to be placated, since they only misbehaved when neglected. In a typical zurvanite settlement, villagers were probably all summoned together (by the clanging of metal or bells) before the village prashchur’s effigy, or an idol of the offended deity (who officiated over matters relating to the area of crisis) at the insistence of the area’s presiding *Volkvo*, and the Veche council chairmen. These idols would normally have been situated in a sacred grove or underground pit. There they could petition the celestial gods for help, and beg devils to stay well clear of their lives. With the fertility gods on side, all that remained was to sooth the demon’s anger. If there was no *kunir* (an idol of secondary status) depicting the offending demon in the settlement, then a group of elders, guards and pilgrims were probably assigned to gather tithes and take the offerings to a nearby settlement possessing such an idol, with all haste. Village militia or temple guards may have gone from house to house looking for shirkers, or readied themselves to escort the crisis offering. And if we are to believe the preceding *Primary Chronicle* account in which men were commanded to bring their own womenfolk to the sorcerers to be slain, it seems no coercion whatsoever was required to make villagers attend a crisis meeting; everyone would have turned up to one of these potentially lethal gatherings quite willingly.

Fertility gains could often only be achieved by coercing the demon-god to withdraw its fist of destruction from stock and crops, an end which these devoted gatherings hoped to procure. If that means some demons outwardly appear to have been fertility gods, then so be it. But there is a major difference between the gifts imparted by generous fertility deities of the celestial realms, and the ritual extortions of conniving demon-gods.

So in conclusion many dualist pagans thought it best to pay homage to gods of fertility and the demons of destruction whensoever life went terribly wrong for the whole community. Now, with some of the universe’s biggest givers and takers feeling satisfied, mankind could breathe a sigh of relief.

Certainly Celtic death rites were linked with the appeasement of deities who caused all manner of destruction, often possessing their own patronages, and a degree of specialisation such as we see in the Russian demonic pantheon.²³⁰⁵

Pagan holy sites

What we know of the former heathen holy sites of Europe, provides us with clues that they were of varied pagan faiths, which included eastern dualist paganism (Magianism), animism, pagan gnosticism (Mithraism, Chaldeanism, Neo-Pythagoreanism) and Aryan paganism. The Aryan origin of their words for fire, their holy flags, the Hindu-style form of their idols, their grove cults, and the Indo-Iranian names of their gods, suggests a need to indulge in a comparative religious study, that expands upon similarities between Vedic and Magian religion, and European paganism. In doing so one is able to make informed guesses about the nature of European pagan religious sites, to paint in details otherwise erased or omitted by Christian or Muslim sources.

BY APPEASING A
DEMON, IT WOULD
LEAVE YOU ALONE

SLAVIC PAGAN HOLY
SITES SHOW THAT THEY
WERE OF VARIED
HEATHEN FAITHS

This approach does have one shortcoming. Due to a relative scarcity of Pan-European historical source material for each given sub-topic, dating to between 500 and 1,000 AD, it is by no means easy to confirm that these additional conjectured details were actually present across all of Europe (ie; every single country). Sometimes folklore is all we have to go on. In most cases we cannot definitively authenticate the Pan-European nature of a given analogous custom, where comparable details are no longer to be found in other European countries. Considering that many features of Magian religion should be readily noticeable in the archeological record, only a greater commitment to archeological exploration will bring us a better understanding of what actually took place. Even then, we will never be able to recover the full picture. As in Asia, European pagan holy sites fell into five main categories; temples (fixed or mobile), groves, holy springs, holy fires and idols. With the coming of Christianity, public modes of heathen religious expression were no longer permitted. The new order, whether Christian or Muslim, set about dismantling whatever sites still remained operative, or where possible commandeered them for Christian or Islamic usage respectively.

More importantly, this section proceeds to divulge evidence that these heathen faiths were remarkably well organised, so much so that pagan adherents from other "christianised" countries made their way to Rus' and the Baltic on religious pilgrimages during the 10th Century AD and before.

Khrami - pagan temples

In bygone ages, the pagans could see their fenced off grove and trees within them. On days when an oblation was to be made to the gods a high priest would cross over the boundary fence, and enshroud the tree in the holy tent.²³⁰⁶ There he was alone with the heavenly gods. As temple-making became more common, people incorporated the concept of this private inner sanctum into their building design. Under Aryanism, a sacred post or pillar was raised inside the groves to tether the steed prior to its sacrifice. In Zoroastrian/Magian texts, four wooden pylons were said to delimit the boundary-line of the inner-most sanctum, and were encased by a mesh of interwoven thin wood slats, or even woven basketry which prevented entry into the pagan "holy of holies". This allowed worshippers to see the holy fire within, and witness the ceremonies taking place. Sanctuaries were also found in any Christian church or chapel, although in Russia it was appended to one end of the nave, rather than centrally located, and skirted by a *trapeznya* porch.²³⁰⁷

Large sums of money were invested in their construction. At Gutzkow, Poland, 300 marks of silver was the sum recorded as having been raised and set aside for building a temple there.²³⁰⁸ Upon completion it proved so breathtaking in appearance, that the Gutzkowians refused to demolish it when their people were eventually converted.²³⁰⁸ Other sources of temple-building revenue consisted of donations from abroad, tribal taxes, votary contributions collected from those seeking intercessions, and or course war booty. The high fane of Rugen was financed in just this manner, or so it was noted.²³⁰⁸

Khram construction

According to a linguist by the name of Makhek, the Old Slavic word for "a temple" (singular *Khram*", plural: *Khrami* is supposed to have been derived from the Hittite word *Karimmi*, which also means "a temple".²³⁰⁹ One cannot overstate the implications of this, for here we find that the pagan Slavic word for "a temple" came from the language of the Hittites, an Aryan people, and there are *no surviving Persian or Old Indian parallels*.

The reconstructed hypothetical Old Eastern-Slavic word *khorm", though linguistically dissimilar to *khram* by a minor degree, apparently gave rise to other related words throughout Slavia, many of them quite specialised, others more general.²³¹⁰ These include the Russian dialectal words *khromina* or *khroma* ("a roof"), *khromshchik* ("a carpenter"), as well as the Ukrainian word *khoram* ("a corridor"), *khoromi* ("a porch").²³¹⁰ Then in the Serbo-Croat we have *khram* and *khrama* which meant "a house" or "a temple".²³¹⁰ In the Slovenian *hram* signified "a construction, "a dwelling", "a home", "a temple", and much later in history "an apartment", and Czechs used the words *chram* or *chramina* ("a temple" or "a church").²³¹⁰ *Chromina* was the Polish word for "a hut" or "a cabin". Related to these last few words is the Latvian *karms* ("a construction") and the Old Indian *harmyam* ("a fortification").²³¹⁰

FROM A HITTITE TERM

THE PRESENCE OF SUCH A
WORD IS LINGUISTIC
EVIDENCE FOR PAGAN
TEMPLES

From this we can infer several things. Firstly that *khram* originally denoted a pagan temple in eastern and southern Slavia. Secondly that many folk in western and central Slavia had lost the pagan meaning of a *khram* and began using it to describe any kind of building whatsoever. Alternatively these same people still worshiped in heathen *khrami*, but due to their isolation from more major Eastern Slavic cult centres, they had to content themselves with conducting pagan religious gatherings in private homes. The situation was much the same in Scandinavia, for *St Olav's Saga* tells us a major cult site for Thor was situated on a farm, in a barn. And lastly, in Russia and Poland the word entirely lost its pagan affiliations after the conversion, thereafter meaning "a Christian church". This probably means that local bishops chose to commandeer and renovate pre-existing heathen buildings, during the conversions, recycling them for Christian usage. The very same thing happened in England.

So how is it that Mediaeval Slavic pagans had preserved a word for "temple" once used by the Indo-European Hittites some 2,000 years prior to their day? Let's face it, *the word had survived the passage of 2,000 years in the Slavic, in the same context (ie; not only the survival of the word, but its use to describe temples which Slavs in fact built)*. If the word *Khrami* had not been in Slavia for 2,000 or so years, a relic of the ancient Indo-European migrations into Europe, then it was surely imported there by people who had kept Hittite temple-building alive for that same period. Pagan Slav temples evidently had a Mesopotamian or Aryan origin.

Since the Bulgars are the only other non-Slavic race to equate *khram* with a heathen temple, it's possible that that the Bulgars taught the ultimately Hittite word to the Slavs, together with the know-how to make them. Since *khram* was not used by the Volga Finns or Bashkirs, and cannot be found in other Turkic languages, this leads me to believe the word was indigenous to Slavia, and had been there from remotest antiquity.

So what were Aryan temples like? From the *Agni Puranas* we know Aryans believed they could redeem up to 21 generations of their ancestors by building or financing the construction of temples and pavilion shrines.²³¹¹ Temples were ideally of exquisite craftsmanship, for they were intended to shelter the holy *Daeva* idols.²³¹¹ Their general appearance and structural integrity was to be well maintained by regular upkeep, if the good fortune promised by the *Puranas* was to materialise.²³¹¹ It then followed that the destruction of a temple robbed its former builders and sponsors of the spiritual graces received through their act of devotion.²³¹¹

Indian pagan temples varied in both shape and size.²³¹² They could be square, circular, elliptical, octagonal or oblong.²³¹² Doorways were an integral structural component, and were traditionally embellished with the effigies of angels and divine guardians, carved into the lintels and posts either side of the entrance.²³¹² Further ornamentation consisted of intertwined branches and foliage.²³¹² The temple's architectural form was seen as a representation of the divine being to whom the temple was dedicated, with specific structural features embodying certain part of the god's body.²³¹³ For instance the fairly standard towering vault and cupola represented the divinity's head and neck.²³¹³ Such notions seem apparent in the Old Russian *p'rst'*, the Bulgarian *pr'st*, the Serbo-Croat, Czech and Slovenian *prst*, the Polish *parst*, all of which meant "a finger".²³¹⁴ These are related to the Latvian *pirsts*, the Lithuanian *pirstas*, and Old Prussian.²³¹⁴ These Slavic words are cognate with the Old High German word *first* ("the ridge of a roof"), or the Latin *postis* ("a post"), the Old Indian *prstham* "a backbone", "the spine of a mountain", or "a summit".²³¹⁴ *Stolb* (variously meaning "a post", "stairs" or "a ladder" in diverse Slavic tongues) is equated with the Latvian *stilbs* "the lower part of the hand or foot".²³¹⁵ That further correlations between names for architectural features and body parts are not easily discernible, indicates that such similarities are purely coincidental, or had mostly dissipated with the passage of time.

Anyhow, the Brahmins wrapped a special thread around various parts of an Aryan temple, including the exterior. Once built, all that remained was to sanctify the building by a prescribed set of hallowing rituals, and chisel sacred images into it. Such an unusual detail as a string encircling a temple seems replicated in Adam of Bremen's mention of the Swedish temple at Uppsala, which was girded by a golden chain.

To consecrate an Aryan temple doorway "*(a piece of) gold should be placed beneath the door (frame)*".²³¹⁶ It is impossible to guess whether or not such a custom gave rise to a later Norse pagan tradition. At various Scandinavian sites, archaeologists have located carnelian shards and golden embossed foils (termed *goldengubber*) buried under post holes. Owing to their widespread distribution archaeologists guess the foils served some magical purpose, perhaps

sealing a marriage, or guaranteeing fertility at the site. They variously depict heterosexual couples, same sex couples (perhaps men hugging each other, or perhaps homosexuals) or a person and an animal. Some of these golden foils carry the image of a bear embracing a woman. This last motif may be related to Gothic mythology, which traces their ancestry to progeny once generated by the union of a young lass and a bear.²³¹⁷ Considering that golden magical foils are frequently found in the foundations of houses, these bear and woman foils may have been Gothic amulets designed to bring fertility and heirs to the married couples dwelling in a given Gothic household.²³¹⁷

GOLDEN SUN DISCS WERE
INSTALLED IN THE
TEMPLES

The Aryans usually placed a large golden metallic disk inside their newly completed temples, but only after the due consecrations had been made.²³¹⁸ These temple disks represented the sun, and were thus objects of cult veneration.²³¹⁸ This calls to mind an account concerning the Wends, who slung a so-called "golden shield", on a wall inside Yarovit's temple.²³¹⁹ Perhaps it was really a solar disk of the type described in the *Agni Puranas*. Judging by Herbord's spartan description of the sanctuary's interior, little else was found there. Maybe Wolgast was more austere than other Wendish sites, but judging by the number of villagers thronging around the temple as the Christian troops first entered to violate the sanctuary, the pagans might have been expecting their arrival. If so pagan priests could have spirited away most of the temple's valuables just in time. Nevertheless the locals were visibly awe-struck as the sacred device passed by, victoriously held aloft by the Christian free-booters. Though in opposition to this conjecture, Yarovit was held to be a war god that Herbord equated with Mars.²³¹⁹ Evidently his name was derived from the Slavic *yariy* ("violent", "fierce", "furious").

HOLY FIRES WERE LIT

AN IDOL WAS ERECTED

ARYAN TEMPLE FLAGS
WERE RAISED

To further inaugurate an Aryan temple the Brahmins placed a stone altar there, and lit the holy fire of *Agni* upon it. Next the temple's principal idol was put in place, seated on its own stone pedestal. Following this a flagstaff was blessed and erected next to the idol of the divine being, in order to negate the effects of the evil spirits.²³²⁰ Once hoisted, the flag "surrounds the neck of the temple (the vault's interior) and it wafts the wind around the globe (the cupola's interior), altar and image".²³²⁰ An Aryan temple banner required purification too, and could only be used after it was bathed and consecrated. The silken flag was either of "a single or variegated colours", and traditionally bore an heraldic depiction of military arms.²³²⁰ The *Agni Purana* adds; "It should be adorned with cowries and small bells".²³²⁰ Once all this was complete, a flag-raising ceremony took place, accompanied by great pomp and reverence, the faithful solemnly reciting hymns as the unfolding banner made its heroic ascension to the top of the mast. If worshiped with piety the temple flag could remove the stain of one's sinfulness, and bestow boons upon the assembled devotees. Kings were the primary providers of temple flags. It was a pressing duty that they avoided to their own personal detriment.

Fig 120. Tibetan prayer flags

*"By the offer of a banner one goes to heaven and becomes a strong monarch on the earth".*²³²¹

THE FLAG WAS
WORSHIPPED

Aryans attached some importance to their temple flags as evidenced by *The Laws of Manu IX: 285* "He who destroys a bridge, the flag (of a temple or royal palace), a pole, or (common) images (made of clay and so forth), shall repair the whole (damage) and pay five hundred (Panas)". Regarding the pagan Western Slav temple flags we may have further evidence of Aryan religious parallels.

In the Aryan tradition idols could housed inside a temple, or outdoors safely sheltered by a pavilion shrine, or in the halls of those who wished to earn the spiritual merits attached to sponsoring the erection of an effigy.²³²²

The faithful also needed to dig holy tanks, reservoirs or wells near the new temple, to pool the sacred waters.²³²³ A post was driven deep into the well's bottom, and a consecrated effigy, plus gold, were committed its bottom.²³²³ The spiritual graces flowing from well construction were profound. As sacred cattle lapped its waters, the sins of the one who commissioned the digging and lining of the well were taken away - "He never goes to hell", so said their scriptures.²³²³

IDOLS LIVED INSIDE THE
TEMPLE

HOLY WELLS WERE DUG

The style and decoration of pagan Russian *khrami* varied depending on the precise form of worship normally conducted there. Just as there was immense variation in the construction and decoration of the later Christian churches, pagan temples most likely acquired their own "feel". The more lavish and impressive *khrami* no doubt attracted greater volumes of heathen pilgrims on sacred festivals (and more prestige for local tribespeople).

Since most available descriptions of the pagan Wendish temple interiors come from some of the very people

who sacked them, we should ask how reliable their recollections were? If Mediaeval Christian writers were in any way keen on diabolising the pagans, they could have had an absolute field day describing the insides of the heathen temples. There was simply no better moment to revel in classic demonic clichés. Instead, we find very little of this, and predominantly lucid descriptions of what was seen inside. For example at Rethra ... "a great temple had been erected to the demons, the chief of whom is Redigast. His image is ornamented with gold, his bed bedecked with purple".²³²⁴ Thietmar added that the effigy was actually gilded wood, embellished by engravings, perhaps writing, though it is highly unlikely that Redigast was seen as demonic by pagan Wends. This was Thietmar's own embellishment. Purple cloth was draped over the walls,²³²⁵ and flags placed inside,²³²³ though it is difficult to guess how closely this practice resembled that of the Aryans. Carved images (set with animal horns) were erected outside, near the exterior of the Rethra temple.²³²³ In all we are presented with a picture of pagan Slav holy sites every bit similar to those described in the Hindu *Puranas*.

Lotus shaped mounds?

In Hindu (and presumably Aryan) religious art, the *Daeva* idols were very frequently found seated (in the lotus position) or standing on a lotus flower pillar. According to *Agni Purana* the faithful worshiped weaponry and sundry deities atop flower-shaped mounds, in the centre of which was an idol of Indra. In 1951 Russian archaeologists excavated a flower-shaped mound at Novgorod, which is believed to have acted as a pedestal for Perun's idol, originally brought there by Vladimir's uncle Dobrynya. Holy fires once blazed there also, burning in the centre of the flower, and at the tip of each petal.²³²⁶ All things being equal, this Novgorod religious site was probably a Zurvanite or Aryan pagan *daeva* temple dedicated to Perun, or in other words Indra.

As you will have seen Celtic pagan idols were sometimes found seated with their legs arranged in the so-called lotus position, a religious posture adopted during meditation in India.²³²⁷

Towered temples

As you will recall, Aryan temples frequently possessed a lofty vault.²³²⁸ The situation was much the same in Slavia. By far the most impressive of the Slavic *khrami* were immense (square, octagonal or circular) wooden towers, roofed by a pyramid-like cupola made from aesthetically pleasing rows of oak shingles called *lemekh*.²³²⁹ *Lemekh* is a word common to all the Slavs, despite minor phonetic variations, and appears traceable to the Lithuanian word *lemesis*.²³²⁹ These shingled temples²³³⁰ probably resembled the fire temples of the Magi, and coincidentally were not unlike Western Church bell-towers to look at.

SHINGLED ROOFS

In other instances, heathen Slav towers had octagonal spires, or *shater* “tent rooves” (pronounced *shatyor*) as they called them. These cupola-towers apparently existed before the 989 AD conversion to Christianity, and their design was faithfully incorporated into early Russian churches.²³³¹ High towers were therefore elements of pagan Slavic architecture.

SPIRES

TEMPLE CUPOLAS

Linguistics lets us infer that *shater* tent rooves (or at the very least Magian tents) were employed over a large area; Slavia, Serbo-Croatia, Bulgaria, the Uighur Empire, Azerbaijan, and the vast Turkic lands of Central Asia, as far away as the Altai region of Siberia, in the Asiatic Far-East. The true origin of *shatyor* is the Persian word *chatr* (“a barrier” or “tent”), and the Old Indian *chattram* (“a barrier”).²³³² *Shatyor*’s impressive distribution might be evidence that Magian or Magian-Brahminic temple building skills had decentralised from the Iranian region, and had diffused northwards, eastwards and westwards over an exceptionally vast region. The Achaemenid holy city of Pasargadae (which translates as “the encampment of the Persians”), was tent-shaped in its overall layout.²³³³ Such a design was simply a translation of their tented holy sites into more lasting materials, which were suitably decorated with the exploits of kings by teams of carvers.²³³³ If for arguments sake Achaemenid Magians had come to settle in Russia, either immediately, or after a lengthy period of habitation in Northern and Central Asia, we might expect they engaged themselves in similar activities. Accordingly one should find groves, anthropomorphic household utensils, griffons, highly decorated temples, seals. And we do. Though one point of difference between Achaemenid Persia and Slavia was the Russian use of wood rather than stone, perhaps on account of its plentifulness. The relatively treeless realms of the Achaemenids and Magi never provided the Persians with a suitable quantity of timber for use in temple construction. For this reason, building in wood may have been cheaper to make in time and money (no stone to import and dress), and what is more, the wood was very holy. Expatriate Persian craftsmen in Slavia probably delighted in a pleasant change from stone. Achaemenid architecture originally showed Egyptian and Mesopotamian decorative influences (ie; humans with animal heads and other animalian body parts, lions, griffons),²³³³ far in excess of the expected Greek influence, which was nonetheless present.²³³³ Be that as it may, the vast majority of the Magian religious sites appear to have been in the form of outdoor gardens (transected by flowing creeks of crystalline purity), free-standing pavilion-shrines, as well as raised platforms set atop hills.²³³³ This notwithstanding, steppe immigrants emerging out of the Caucasus constructed ashlar buildings and towers (fire temples and possibly observatories) in southern Ukraine.

Our most enduring problem is the desolation of the old Slav temples, on account of which we are unlikely to discover the fullest range of artistic themes that once adorned them. This is a pity, for they were described as exquisite even by the Christians who came to destroy them. Nor can we compare anything other than chance discoveries of well-preserved fragments of carved panels. Nevertheless, Russian holy groves and temples can be admirably equated with Iranian holy sites. All the more so because a number of Scandinavian and Slavic artifacts (whether excavated or mentioned in mediaeval historical sources) resemble those of the Persians. Accordingly we see a translation of Persian motifs like lions and griffons cascading out of Iran and into Northern and Eastern Europe. Such motifs are found in their wood carvings. In a Slavic context, the tent-roofed cupola design is thought to have been an outgrowth of a feature common to Slavic fortifications.²³³⁴ A firm relationship between religious towers and fortified sites is validated by archeological excavations and historical accounts pertaining to Rugen, which depict the main temple there as securely guarded not only by men-at-arms, but defensive works.

Another Old Russian word for “a tower” commonly used in pre-Christian times was *vezha*, which is similar to the Slovenian *veza*, the Polish *wieza*, and the Czech *vez* or *veze*, which in almost all cases mean “a tower”. *Vezha* perhaps originated from the Avestan Persian verb *vaza*.²³³⁴ What is more certain is that these correlations emerged from the proto-slavic *vezha meaning “a mobile home”, or “a portable tower”. Historically speaking, Slav towers were more often than not portable, and for this reason only infrequently covered in external cladding. They could be readily dismantled, transported about on a wagon and re-assembled at a new location.

We know from Poland that the Western Slavs preferred to build their temple towers on the top of hills or mountains, but due to the lack of high ground in Russia, it is less likely that they followed this custom. These temples contained idols, treasure and holy fires which were so valuable that in one case we know of (the Western

Slav cult centre of Rugen) they were guarded by 300 armed riders. Archaeologists and surviving historical accounts allow us to guess that the Rus' pagan temples resembled those of the Western Slavs in many respects.²³³⁵ In his 10th Century text *Fields of Gold*, Al-Masudi informs us that many Slavs were demi-pagans, part Christian and part sun-worshippers. They were, so to speak, heretics. He provided descriptions of their Slavic temples (or possibly even heretical churches), but did not state if he saw them personally:

“And another temple was built by one of their kings on Chornaya Gora (Black mountain) - miraculous waters encircle it, multi-coloured and varied, with well known uses. In it they had a great idol in the form of a person, like an old man with a stick in his hands, with which he moves the bones of the dead from the grave (ie; he re-animates or resurrects the dead). A picture of various ants is situated at his right foot, and at his left foot are pictures of black, winged ravens, and other black winged images ...”²³³⁶

A TEMPLE BUILT BY A
SLAVIC KING

“And they have another temple on a hill surrounded by the sea Inside it was lined out with red coral and green chrysolite. In the midst of it was a great tower, and under it was the idol, which had parts crafted from four kinds of precious stones: carnelian, crystal, sapphires, and green chrysolite, and its head from many carats of gold. Young girls stare at another idol which stood opposite it, bringing it sacrifices and incense. The building has been attributed to a sort of sage that was there in olden times”²³³⁶

A TEMPLE SURROUNDED
BY SEA

Archaeology, historical sources and Slavic folk traditions tell us that their idol houses were lavishly adorned with graven images of the divine beings.²³³⁷ The pagan idols venerated by Khagan Vladimir and the Kievans were located on the hill not far from the towered palace (in the *Primary Chronicle* text recorded using the word *terem*).²³³⁸ *Terem* was the Old Russian word for “a tower”, “a cupola” or “a palace”. It was related to the Serb *term* (“turret”), the Bulgarian *trem* (“a porch”), the Serbo-Croat *trejema* (“a hall”), and the Slovenian *trem* (“a roof”). Vasmer does not list an Old Indian or Avestan correlation for these terms, but records that they might have come from Greek and Roman words which meaning “a beam” or “a girder”.²³³⁹ Considering the supposed Greek or Roman origin of *terem*, the means of making such a construction may have been copied from Roman and Greek frontier defensive posts long observed by the Slavs, or taught to them by captured Roman war prisoners, of which there were once many.

DIFFERENT NAMES FOR
TOWERS

There were two other Old Russian words for “a tower”, namely *syn* and *sun* (which meant the same as “son”, and was therefore in all probability somehow related to “the sun”). *Syn* originated in the Dunai-Bulgar tongue, and is also traceable to the Old Turkic, where it meant “a statue” or “a grave marker”.²³⁴⁰ Here we have possible evidence that Russian towers housed idols consecrated to the gods, and effigies representing ancestors who had passed on. What is more, the data suggests Slavs learned how to make these idol-towers from the Magian Bulgars and Turks.

Lastly there are the words *chertog* and the later *cherdak*. The Old Russian *chertog* (“a building’s interior”)²³⁴¹ originated in the Persian *chartak*. *char* (“four”) *tak* (“high”, “a balcony” or “a porch”).²³⁴¹ Perhaps it originally meant “a high or four-storey tower”. In Sassania, a *Chahar Taq* was, more specifically, a domed pavilion that sheltered a Zoroastrian fire altar.²³⁴² Clearly a certain proportion of the Bulgar and Slavic Magians were Orthodox Zoroastrians beholden to post-Karterian ideologies, iconoclasm and dogmatism. The following table is a synopsis of words relating to towers and temples in Slavia. They are in no way to be found throughout the Germanic tongues.

Term	Meaning	Origin	Distribution of cognate words	EVIDENCE OF PERSIAN ARCHITECTURAL TERMINOLOGY IN RUSSIA
<i>khram</i>	‘a temple’	Hittite	Eastern and Western Slavia, the Balkans	
<i>shater</i>	‘a pyramidal cupola’	Persian/Old Indian	Eastern Europe and Eurasia	
<i>vezha</i>	‘a tower’	Proto-Slavonic	Russia, Poland, Czechoslovakia, Slovenia	
<i>terem</i>	‘a tower’	Greek/Roman	Russia, Bulgaria, Serbo-Croatia, Slovenia	
<i>syn</i>	‘a tower’	Bulgar/Turkic	Russia, Bulgaria	
<i>cherdak</i>	‘a balcony’	Persian via the Turkic	Russia	
<i>chertog</i>	‘a building’s interior’	Persian via the Old Bulgarian	Russia, Serbia, Bulgaria, Central Asia	

To match their cosmological view, the pagan Russians and Balts made towers of some considerable height. These main towers were divided into three levels; the upper “observation deck”, holy fire and pagan belfry, the ground based inner sanctum where ceremonies were performed, and the subterranean level.

Many Slavic and Baltic tower temples were round, but others were square shaped, constructed around four central pylons.²³⁴³ According to Darmesteter, this was the principal form of Achaemenid Mazdean temple design, so this may be further evidence that Slavic temples were based on Persian designs of some antiquity. Dome-topped fire temples supported by columns were however atypical of the Sassanian period,²³⁴⁴ rather than towers, no doubt the result of Roman craftsmanship reluctantly provided by war captives from missing legions taken in warfare against Rome. A building of similar design is still to be found in Russia.

If the Slavs had Magi, and they had towered temples (with architectural features derived from the Iranian), then it is likely their towers were styled in a manner similar to a typical Magian fire temple. You see Magians once kept their fires atop towers to keep the flame out of harm’s way. This being the case, Slavic *khrami* towers probably possessed a sand box, stone hearth or pedestal somewhere on the upper storey, on which burned the holy fire, the eternal fire of ages (ie; Svarozhich, or son of God). In fact the modern Russian term for an eternal flame is *Vechnaya Plamya*, literally “the centuries-old flame”. Judging by the account of the Slav temple at Rugen, one could also find the war banner and primary idol of the settlement inside the temple.²³⁴⁵ The idol was sited on the ground floor level of the temple, in front of which was a sacrificial fire pit. The placement of idols inside fire temples was never acceptable under Orthodox Zoroastrianism; only the more ancient varieties of *Daeva* and *drug*-worshipping Zurvanite Magi observed this practice. Therefore the Slavic towered fire temples were, in all likelihood Magian Zurvanite temples, run by Zurvanite dualist Magus-wizards, or Aryan pagan holy sites administrated by Brahmins.

The Slavic war banners might have had a three-fold role. Firstly as a means of heraldic identification for specific military units, thus facilitating greater control of one’s fighters on a crowded battlefield. Secondly to show archers the prevailing wind direction and approximate velocity. And thirdly to discover whether or not the *fravashis* (the Magian saints) were accompanying them into combat, and hence signal the likelihood of victory during battle. The following scripture would of course only apply to non-Zurvanite Magi, for it refers to battle against the *Daevas*. Whether the Zurvanites had a similar teaching is unknown, nor do we know who the *fravashis* would have been directed against in Zurvanite doctrine; against the *Ahuras* or the *Daevas*?

*“We worship the good, strong, beneficent fravashis of the faithful; with helms of brass, with weapons of brass, with armour of brass, who struggle in the fights for victory in garments of light, arraying the battles and bringing them forwards, to kill thousands of Daevas. When the wind blows from behind them and brings their breath unto men, then men know where blows the breath of victory; and they pay homage unto the strong, beneficent fravashis of the faithful, with their hearts prepared and their arms uplifted.”*²³⁴⁶

While there are only scant references to the Slav war banners, there are a number of recorded instances in the sagas where Norse battle standards bore a raven motif,²³⁴⁷ and the way in which they moved about divulged the outcome of a conflict before it had even started.²³⁴⁷ For example the raven banner carried for Ragnar Lothbrok was woven by his daughters, and it portended victory if it flew strongly, whereas a limp pennant augured defeat.²³⁴⁸ As you will recall the sons of Ragnar (from Dublin) are guessed to have been willing participants in the *Al-Madjus* attacks on Cordoba and North Africa, so accordingly they may have believed in the same banner-lore as the Magi. Magyar standards carried the same sorts of motifs too; ravens with meat in their beaks. Considering that Hungarians had heathen fire priests known as *Magoch Magus*, and call themselves Magyars (pronounced majar), their raven image should be seen in a Magian context, signifying swift death to their enemies.

Roman soldiers invested a certain spiritual significance in their battle standards, the Roman eagle foremost of all. In so far as the conquest of Jerusalem is concerned legionaries were observed entering the still-burning temple of Solomon, ritually sacrificing to their battle standards, or in a spiritual sense, the angels and genii that

MAGIAN WAR BANNERS

NORSE AND MAGYAR WAR BANNERS

accompanied them into battle, and layed waste the Jewish sanctuary.²³⁴⁹ In this respect they possessed spiritual powers conceptually equivalent to Magian war flags.

As with the Mazdean temples, the *Volkvry* chose the upper storey of these towers as the preferred location for the flame, for not only was it the highest point overlooking the surrounding landscape, but it afforded some protection to the holy fire, which in times of war could be susceptible to attack. Vernadsky mentions that Slav temple's could only be directly accessed via the roof (using ropes), and when there, the pagan priests had to hold their breath.²³⁵⁰ This was most likely a reference to the Zoroastrian/Zurvanite belief that human breath could contaminate the holy fire, and when tending it Mobeds had to wear a mask over the face. We know that the *Volkvry* also wore masks, plausibly for this reason.

One Mediaeval Western writer spoke of a "lighthouse" situated in one of the Baltic countries, a lofty tower with a fire burning brightly at the top. Perhaps this was a lighthouse, but it might also have been an eyewitness account of a holy fire burning on the upper storey of a Magian tower.²³⁵¹ Consider this. It was situated south of the town, and in a small cemetery. The archaeologist (Flipowiak 1986) called it a beacon to guide shipping. But how could it be when it was not situated on the coast, but further inland on a river. It is unlikely that river craft would need a lighthouse for guidance, when they simply follow the river's course. That is unless it served to warn approaching helmsmen of navigational hazards. Unfortunately I know of no further details in relation to the structure of this tower. From the writings of the Magi, we know that the holy fire was the most important and vulnerable possession of a given settlement, the focal point of the people's public ceremonial life, since only it was capable of transporting their sacrificial gifts back to the Creator and heavenly gods. If the holy flame was in danger of capture, the ash-filled fire urn could be removed and transported to the safety of some secluded location, however this option would only be considered in the gravest of dire emergencies, when there was literally no other option.²³⁵²

Magian Belfries

Slavic *Volkvry* used bells to ward off evil in the surrounding lands, and were known to have worn them on their person, or mounted them in bell towers, where the bells hung from the ceiling by means of chains.²³⁵³ The bells might also have been in separate bell towers.²³⁵⁴ This practice is in accord with Magian fire temple constructions, which had four bells slung from the ceiling by chains, and which were rung during prayer sessions, when the holy fire was being fed.²³⁵⁵ By Moulton's reckoning the Parsees had adopted the practice from the Hindus,²³⁵⁶ and not all fire temples had them. Magian bell towers were most likely modelled on early Hindu towers, or, less likely a later post-exilic tradition, acquired in India. Considering that Iranian mosques were often refurbished fire temples, it necessarily follows that many eastern minarets are vestiges of the ancient wizard towers, or otherwise modelled on them.²³⁵⁷

The more archaic Old Russian word for "a bell tower" was *zvonitsa*, which was derived from the Old Russian word for bell *zvon* (Old Slavonic, Serbo-Croat, Slovenian and Czech), *zvonets* (Bulgarian), and *dzvon* (Polish). Then there is the Latvian *zvanis* and the Lithuanian *zvanas*. These stemmed from the Old Indian *svanas* ("a sound"), which also gave rise to the Latin *sonus* ("sound"). Thus we might think that Slavic and Baltic bell towers originated in the pre-Christian era, and had some kind of an Aryan genesis.²³⁵⁸ Three pagan Russian first names banned under Christianity (*Dzvoinka*, *Dzvenimira*, and *Dzvenislava*)²³⁵⁹ seem related to bells, and do not appear to have had a masculine form. This might indicate that women, perhaps female Magi, were tasked with ringing the temple bells. *Dzvoinka* and *Dzvenimira* might have meant "bell-ringer", while *Dzvenislava* could have meant "Glory of the ringing bells". On the other hand, Russian folklore preserves information on the *kolokol'niy man* or *kolokol'niy myzhik*.²³⁶⁰ These were deceased male bell-ringers that wore pointy white or red hats, and sounded the bells in the dead of night.²³⁶⁰ *Kolokol'niye kyzhiki* were normally the souls of ancestors with supernatural powers and abilities.²³⁶⁰ They served inside the churches at night or on major feast days.²³⁶⁰ Upon the third striking of their bells, demons were struck down, or so they said in Novgorod.²³⁶⁰ Perhaps *kolokol'niye myzhiki* were the ghosts of Russian Christian monks returning from beyond the grave to dutifully sound the bells as they did in life. The inclusion of pointy white and red hats veers us from a monastic spectre though, instead suggesting they were the helpful apparitions of heathen bell-men. Another word *balabolka* meant "a bell" or "bell-ringer", and it was etymologically related to *balabolit'*, which meant "to

chatter”, or more likely the reflexive form *boltat'sya* meaning “to dangle” or “to hang around”.²³⁶¹ The less archaic Russian word for bell (*kolokol*) evidently comes from the Old Indian *kalakalas* (“disorderly clamouring or cries”, or “noise”). Doubtless to say *kolokol* reflected the chaotic peeling of different-sized bells rung in unison, bells of Indian provenance.²³⁶²

ORNATELY DECORATED
WITH WOOD ENGRAVINGS

Slavic temple sanctuaries were inlaid with lime, oak, boxwood and other fine-grained ornamental woods, and carved with celestial and mythological imagery of the highest standard,²³⁶³ sumptuously decorated griffons, centaurs and serpents.²³⁶⁴ Such ornamental work is potential evidence for the continuation of ancient Greek or Mesopotamian religious practices inside Slavia. Slavic temple towers were used by their heathen astronomers as a platform to scan the heavens in search of the planets and other celestial phenomena.

In Russia, bell-towers were free standing, normally built at a distance from the main building,²³⁶⁶ and this continued to be the case during Christian times. Some English bell towers crudely resemble the architectural model of a tower which was dug up by archaeologists during the Novgorod excavations.

Slavic temples came alive with the scent of floral garlands, perfumes, incenses and visually tantalising reliefs, pagan “scriptural” writing, and paintwork. Notable was the inlaying of gems, coral and other precious objects into the woodwork, as was mentioned of a Balt temple.²³⁶⁶

INCENSE, PERFUMES AND
FLOWERS

Some of the tower constructions found in Old Russia, the Baltic and the Ukraine might not have been temples at all, but much rather astodans, towers of the dead, known to the Magi as “Towers of Silence”. The following is Moulton’s account of a Parsee (Zoroastrian) *astodan*:

DEFLESHING GROUNDS
SOMETIMES TOOK THE
FORM OF TOWERS

“A Tower (of silence) is a round structure of brick or stone situated on rising ground, a hill-top if possible. Inside its circular wall was a floor built in three sections - the highest, next the wall, for males, the next for females, the lowest for children. They slope down to a central well, with a circumference about half that of the outside wall. In the shallow receptacles provided, the corpse was laid, and the cotton clothes well slit up and down with scissors, care being taken that the head does not lie to the north, a quarter haunted by fiends”.

*As soon as the corpse-bearers had left the Tower, the vultures swoop down from their post of observation round the wall (on an outer ledge), and in half an hour there was nothing left but the skeleton. Quickly the bones dry, and the corpse-bearers enter again after some days, and cast the bones into the central well, where they crumble away”.*²³⁶⁵

The underground places

The pagan Germans, Celts, Iranians, Buddhists and Slavs all dug out underground places. In various parts of Europe, archaeologists normally interpret them as food storage facilities. Some saw both religious and secular use. As you will have read certain pagans living in the frosty North reportedly spent much of their time living below ground to escape looking at the sun they loathed. Down in the burrowed hollows they revelled, playing drums and music until nightfall.

More sophisticated underground temples were constructed by the Slavs too. In pagan Rus’ the base of a circular stone temple at Bug was excavated and found to possess a subterranean passage leading down into a circular room. This is the room in which Mirobog appears in a wall mural on bended knees before a sacred tree. In a Magian environment, such rooms most likely acted as ‘caves’ for performing necromancy and planetary invocations. That is because a white Magus would not even think about performing a *Haoma* libation beneath the surface of the earth. This would be an act of defilement; devil-worship.

MITHRAEA

So where did they inherit the practice of building subterranean temples from? If we are to assume that the cult of Mithra was not under-represented in certain parts of pagan Rus’, we may have good reason to suspect that there were a lot of *Mithraea*, or underground vaults in Rus’, in which the pivotal bull-sacrificing ceremony was performed, where a priest impersonating Mithra slaughtered the Bull of Creation. Roman Mithraeas were unearthed as a result of WW2 bombing in England, relics from Roman Briton. They have also been found right across Europe,²³⁶⁷ and some huge structures in Central Asia tend to resemble *Mithraea*, although they are generally

assumed to have been absent there. Whether the below-ground portions of the Rus' temples served as *Mithraea* is anyone's guess, but generally *Mithraea* were built to a standard design, and were supposed to be rectangular rather than circular in nature, as was the case with the Rus' design. Greek Pythagorean gnostics used underground chambers as well (perhaps circular) in which they performed necromancy. The only clue that below ground temples ever existed in Rus' came when several were unearthed in Russia some time ago. It is amazing that any survived at all, because like the above ground temples, they too were earmarked for demolition by Russian Church authorities. Vladimir ordered his troops not only to tear down the temples, but to "dig them up".²³⁶⁸

Zoroastrian scriptures linked the heretical devil-worshippers and their numberless idol houses with the use of hiding pits, or burrows. But is there such a link with the Slavs? Considering the many perceptible manifestations of quasi-vedic, quasi-Magian society, Slavic pagan Zurvanites used some underground diggings for ritual purposes, or as *astodan* bone pits, and not just for storage, or sanctuary in the event of an attack.

Amphitheatres

According to one source, the pagan Russes possessed amphitheatres. They consisted of an earthen-mound (central stage), on which sat idols and an altar, all of which were surrounded by a semi-circle of benches or "pews" that faced the sanctuary, providing seating for in excess of 300 persons.²³⁶⁹ Such sites may have been places of secular assembly, such as the *veche* council area excavated at Novgorod, which fits the general description of an amphitheatre. Having said that, Rus' pagan priests are recorded having used comedy masks, horns, harps and other mysterious rites during festivals at which they performed for the packed audiences of the post-conversion era.²³⁷⁰

Traditionally amphitheatres were of Greek or Roman origin. Smaller venues in rural localities throughout Slavia may have emulated the great amphitheatre at Pergamum or Epidaurus, where the pagan philosophers once preached and convened lectures before outlawed by Christian authorities, or modelled on theatres fashionably built in various parts of Central Asia during the Hellenic period. If the Russes built their amphitheatres to Roman specifications they may have been erected by Mithraic devotees, and if Greek they were probably built by descendants of Neo-pythagorean philosopher scientists banished from Athens in the 6th Century AD. By some coincidence the early mediaeval Northumbrian royal court in Yeavinger (Britain) also had an amphitheatre.

Svyatilishche

Svyatilishche (from the Slavic meaning a house for saints and holy things) were shrines located in Slavia's villages, lesser settlements, and even out in the wilderness. True they had smaller dimensions than great temples, but were generally no less stunning in appearance. The not-so-rich placed tithes and sacrifices at these sites for protection against demons, just as hunters and woodsmen hoped for a similar insurance policy against unexpected blizzards, or sudden attacks by marauders, bandits, wolves or bears. Small shrines might only be a sacred tree, stump, tree hollow or bough, bearing recognisable mythological and religious engravings. Gifts were left in the most obvious location, to be collected and immolated by a resident or wandering Magus at a later date. In Old Russian another name for a small pagan temple or chapel was *bozhnitsa*²³⁷¹ (derived from the word *Bog* {god} and thus traceable back to the Iranian *Bag*). The word *bozhnitsa* implies devotional images and idols representing Iranian and shamanic gods, *yazatas*, holy saints, Magi, royals and nobles were housed within timber shrines. Back in Magian Iran regional sacrificial pavilions of similar function were assigned their own Magus, referred to as a *Bagnapat* (meaning Master of a *Bagin* {*bag* shrine}). For this reason linguists have linked *bozhnitsa* with the term *gudhus* (Gothic: "a synagogue") or *godahus* (Old Icelandic: "a pagan temple").²³⁷²

Perhaps the best example of a Magian shrine is Cyrus' tomb.²³⁷³ Royally funded priests continued to serve Cyrus after his death at the hands of the Massagetae, living near the mausoleum, and performing sacrifices of sheep and horses in his honour.²³⁷³ Whether this was typical behaviour for all royal priestly servitors throughout the Achaemenid and Sassian periods has yet to be determined, but if it was, one might think heathen districts possessed countless royal shrines, each manned by several Magi.

It was revealed in writings derived from the council of Braga (in Portugal) that pagans in that part of the world were in the habit of building illuminated shrines near the groves and springs, which shone brightly (probably owing

to the holy fire burning within, or due to large numbers of burning candles). Interestingly, these shrines were described as having walls of lattice construction, just as were the Magian temples and shrines, whose inner sanctum was a four-posted chamber surrounded by wooden lattice wall grilles, and for this reason the interior light sources were probably visible to onlookers.²³⁷⁴

Heathen pilgrimages

The sort of temples mentioned in this chapter were major destinations for pilgrims, not only by Russians, but die-hard pagans from Western Europe, pining for their mead. They were also centres of great learning and medical treatment. Physical evidence of trade contacts suggests many of these visitors were English and Frankish, though Adam of Bremen specifically highlights Hispanic and Hellenic folk converging on the Baltic in large numbers to consult necromancers, soothsayers and other occultists.²³⁷⁵

Slav (and perhaps even foreign) initiates gathered at these institutions for tutelage in the finer arts of the *Volkhr*'s craft. These hierarchical colleges contained the intelligentsia of pre-Christian Rus', and progression through their highly regimented fields of study took many years to achieve, and brought great prestige. These were effectively Magian seminaries, where they learned Magian scripture and ritual (called *herbestans*), or *dibirestans* (where writing, astrology, natural science, medicine etc was acquired).²³⁷⁶ With the coming of Christianity, their written treasures were committed to the flames, ushering out an old era, heralding a new.

There are no existing records hinting at just how many temples flourished in pagan Rus'. Perhaps these massive temple edifices were found in almost every major *grad*, *khrami* dedicated to the tribe's patron god, and worshipped at a prince or chieftains's seat of power.

If we draw upon the case of Rugen, pagan troops were probably attached to Rus' temples or sanctuaries of note during major festivals, perhaps even at all times. They were probably tasked with crowd control, guarding the temple and other sundry duties like escorting of tithes and dignitaries from distant towns. Other temple buildings perhaps included accommodation for the Ehrpats (Magian students), study rooms, storehouses for food, furs, tools and other valuable commodities, inns, workshops, stables, apothecaries, smithies, studies, and libraries. People of every social class descended upon the temples and sanctuaries bearing gifts for their gods; bribes to stave off harm or perhaps even to receive a showering of luck if they had been especially generous. At these religious centres, pagan priests were consulted by those seeking treatment not only for kin, but diseased crops and livestock. Remedies, wards and phylacterys of every description were dispensed from their pharmacological drying rooms.

Fasting and donations of cattle and gold were features of Aryan pilgrimage ... “*who possesses learning, austerity and penance, reaps the fruits of pilgrimage*”.²³⁷⁷

ARYAN PILGRIMAGES

Everywhere heathens could be seen in festive moods, prostrating themselves before carved or gilded statues of their favorite gods, normally on woven mats or prayer rugs to avoid kneeling on dead or defiled matter. At certain times of their festive year, gargantuan ceremonial bonfires were burned at major colleges on ritual hearths of set stone (ie; cairns of stones), consuming voracious quantities of sanctified timbers like birchwood and allowing the ready summoning up and worship of powerful angelic spirits and genii. These colleges were almost always sited in windy places, and wherever possible were situated on a promontory hill or at the base of a mountain near a large body of water, or preferably a river junction. Here the secret rites of the “Doctors” and *Volkhvry* brought to fruition man’s highest possible level of interaction with the elements, a befriending of the sky, the trees, the grass, the water, the animals and all that existed. A pre-eminent council of *Volkhvry*, which presided in Tmutorokan, coordinated the Slav networks of fire, air, earth and water temples, as well as the colleges associated with the more prestigious temples.

PAGAN COLLEGES

At around the time of Charlemagne, according to Einhard (the Emperor’s biographer), pilgrims making their way through Western Europe were routinely subjected to Church roadblocks, spot checks, body-searches and in-depth questioning by local priests and bishops accompanied by armed troops.²³⁷⁸ Such details reveal a strong desire to control, and/or monitor the movements of pilgrims and “undesirable riff-raff”. It had occurred to me that this was a strange way to treat pilgrims; pretty heavy handed. Perhaps the Church was dabbling in mediaeval police duties, but it may simply have been trying to verify whether people were actually on their way to Jerusalem and the Holy lands, and not some pagan cult centre in Prussia, Rus’ or Bulgaria. *Official reports were said to have been collated during these checks*, so this may have been an intelligence gathering effort, aimed at pinpointing and curtailing Franks sympathetic to paganism.

THE MOVEMENTS OF
PILGRIMS WERE CLOSELY
MONITORED

The mere existence of these pagan pilgrims further reinforces one major conclusion fast emerging from this work; that the pagans of northern, western and eastern Europe were far from informal gatherings of nature worshippers, instead being an organised religion controlled for the most part by the Magi, and which had roots in many countries. Why for instance did the pagan western Slav temple at Rugen (Poland) receive overseas financial donations, which were no doubt kept inside with the mass of gold bullion therein?²³⁷⁹ Were these sin payments, a pious gift, or covert funding to help them sustain military operations against the Holy Roman Empire?

Pagan holy sites

From Mediaeval Christian sources we learn that Eastern European paganism could only thrive if the groves and springs remained uncontaminated by “unclean” races. Due to the remoteness of their nations from the great centres of Christianity and Islam, the Balts, the Finns and the Rus’ were able to maintain the purity of these kinds of sites for centuries without them ever being chanced upon by dangerously nosy non-believers. For this reason, pagan villagers detailed a grove-keeper to guard a sanctuary’s boundaries, as a sentinel against uninvited guests to their Holy of Holies. From accounts of the Finns we know that their grove-keepers were usually elders who lived in a cabin located next to the grove. During the times of the conversions, pagans had a right and duty to protect their springs from the sort of contamination that resulted from intrusive non-believers. Former “brothers” and “sisters” who had started attending mass were *banished* (ie; *excommunicated*) from the *pagan fellowship*, and alienated.

THE PURITY AND
SANCTITY OF HOLY
SITES WAS OF UTMOST
IMPORTANCE TO THE
SLAVIC PAGANS

In Vedic and Avestan tradition, banished individuals were prohibited from entering the holy places unless readmitted to the pagan community, after being absolved of the spiritual defilement caused by their spiritual or civil transgressions. Banishment was the most horrendous punishment to be inflicted by the Magi, for it meant a ceremonial disowning not only of a person’s body, but of their very soul. Magian banishment came into effect with the recital of the *yazad* curse (the ‘Curse of the Wise’). From that moment, the banished criminal or wrong-doer was cut off from their society and religion. They had forfeited their right to enter holy places and springs, and indeed heaven. The wayward defaulters were now unclean, abandoned by the celestial gods and their own kin. Only demons remained.

NON-BELIEVERS AND

Groves

GROVES WERE VERY
HOLY PLACES

As with their Aryan ancestors, the awe-inspired reverence of the Slavs and Balts for the *daevas* led them to make fenced in enclosures, within which the sacred trees flourished, perhaps living many hundreds of years. Although their rites are no longer practiced, we can look to the ancient Indian texts for clarification as to their supposed religious function. *Agni Purana* describes the Asian groves, which were established for more than just aesthetic purposes.²³⁸⁰ The Aryan scriptures promised that “*The consecration of trees and a garden destroys one’s sins and gets the highest merit*”²³⁸¹ and “*Whoever causes to set up a pleasure grove stays eternally in the garden of Indra*”²³⁸² Their lushly foliated boughs were gloriously draped in cloth and floral wreaths, their trunks washed with water. Serene tunes resounded throughout the grove from the instruments of players, as cows (offered to the god or goddess of the grove) contentedly grazed inside.

BRAHMINS CONSECRATED
GROVES

Brahmins ritually consecrated a given tree, especially those devoted in honour of Indra, using butter, herbs and floral garlands.²³⁸³ The tree was then bedecked in cloth, a custom that appears to have been practiced in various parts of Europe, until comparatively recent times.²³⁸³ Following the dressing of the tree, oblations were offered to it, with a musical accompaniment,²³⁸³ and a cow released there. Generally there was a shed or cabin of some kind erected nearby, which served to house a sacred flame.²³⁸³

GROVES USED BY
EUROPEAN PAGANS

Similar grove customs were found *as late as the Middle Ages* throughout much of heathen Europe, and as with horses, and the Indo-European language, it appears that the Indo-Europeans were responsible for introducing them.

Prussians, like the Slavs, maintained inviolate groves and pastures, that were not to be despoiled by human hands,²³⁸⁴

DESCRIPTION OF AN OLD
PRUSSIAN GROVE

*“Among very old trees we saw there the sacred oaks which had been consecrated to the god of that land, Prove (Perun/Indra). There was a courtyard about them and a fence very carefully constructed of wood and having two gates. For, besides the household gods and the idols with which each village abounded, that place was the sanctuary of the whole land for which a flamen (fire priest) and feast days and a variety of sacrificial rites had been appointed. On the second week day the people of the land were wont to assemble there for holding court with the ruler and with the flamen. Entrance to this courtyard was forbidden to all, except only to the priest and to those wishing to make sacrifices, or to those in danger of death, because they were never to be denied asylum. For the Slavs show such reverence for their holy things that they do not allow the neighbourhood of a fane to be defiled by blood even in time of war. They admit oaths with the greatest reluctance, because of the avenging wrath of the gods”*²³⁸⁵

SHARPENED FENCE
PAILINGS

THE IDOLS OF BYGONE
HEROES AND MAGI WERE
FOUND THEREIN, AND
COULD BE CALLED UPON
BY THE FAITHFUL

In Slavia groves were a place of assembly and counsel, where commoners brought issues before royalty and regional fire priests. By inference, Helmold’s description of a Slavic-Baltic grove indicates that some if not many were enclosed by a gate and wooden fencing.²³⁸⁶ Fences were made of sharpened pailings, perhaps to deter trespassers. Eternal flames were sometimes found in them. For instance the pagan Lithuanian grove at Romove had an oak-fuelled eternal flame, that burned before a sacred oak.²³⁸⁷ Note also that the oak was hallowed, with a ritual of some sort implied by the term “consecrated”.

The idols of their beloved gods and “pagan saints” stood prominently beneath their leafy boughs, peppered with acorns, and shaded by luscious foliage. As you will shortly see, these were effigies of pagan warrior heroes and *Volkhv*, deified in death as they were in life. Here pagans came to commune with each other, and the *daevns* once widely worshiped in continental Europe before the advent of Christianity.

In pagan eyes, a grove was first and foremost the sanctuary of the World Tree (the European Mountain ash [Rowan tree] or the Golden or Manna Ash depending on one’s devotions), and lesser trees, a microcosm of everlasting bounty and eternal life. Its fenceline marked the extent of an inviolate consecrated precinct. Neither hunting or trapping, nor the felling of trees, nor the picking of flowers, herbs and shrubs was allowed there. Devotees and pilgrims entered the sanctuaries escorted by a *Volkhv* or *Volkva*, through whose agency they tendered their tithes to the gods. Only those permitted entrance by the village elders could proceed into the groves, and even then they had to observe proper decorum.²³⁸⁸

The Magi professed that a spark of god’s divine fire dwelt in the wood of every tree and plant (birch and box trees in particular). The Magi called this internal “plant fire” *urvazist*, and it awesomely emerged during the combustion of wood in a holy fire. Since the presence of *urvazist* was not as pronounced in animal matter as it was in plants, forests must have provided Magians with a vista of awe, stark imagery revealing the Creator alive within one’s surroundings.

Throughout Rus’ and the Baltic the oak (Perun’s sacred tree) was amongst the holiest of plants, but lime and birch trees were also highly revered. Box, oak, ash, willow, plum, cherry, apple and pear trees could also be found in Rus’ groves, each individual tree being dedicated to a deity, whose presence lived inside that tree. A linguistic analysis of names for these trees indicates common terminologies for them throughout much of Slavia, Germany and Scandinavia. What is more, Oriental or Greek affiliations for these words, are only barely perceptible.

During ceremonial ascents into the heavens (which mirror the tree ladders of the Finno-ugric shamans to the North), *Volkhv* of sufficient standing sometimes climbed these trees to the realm of a particular God,²³⁸⁹ a type of “Jacob’s ladder” if you like, an astral voyage only for the initiated. This shows that in some cases Russian priests were shamans, most likely dualistic animists.

During communal grove meetings on major feast days, a *Volkhv* or elder entered the presence of the sacred flame, took the curtain which symbolised the inner sanctum of the Creator’s presence, and surrounded the tree and himself with the partitioning tent cloth. Propitiatory oblations then took place in this inner sanctum, with bursts of *Haoma* or *Soma* steam (or even vapours from seared blood) wafting up through the leaves of the world tree into the very home of the gods.

European pagan groves were fenced in, partly to show the boundaries of their holy perimeters, but also to contain and shield the holy animals ruminating there. This is another point of similarity with Aryan groves, that were well stocked with cattle in ancient times. For instance Dano-Frisian holy grove sanctuaries penned the sacred cows who drank water from a spring that exuded miraculous virtues.²³⁹⁰ The Church saw it as their duty to desecrate such sites, perhaps drawing upon Islamic conversion methods, which, back in Iran, made much use of site defilement, tree chopping and the like.

The situation was probably much the same among the Finns. In the Kalevala, Ilmari’s lady friend petitions the high god “I send my cows to the grove, the milk-givers to the glade” ... Look after them, O fair God, keep them, steadfast Creator, and keep them out of harm’s way”.²³⁹¹ There the alder, rowan and willows kept a watchful eye over the milkers. A well of gold was found there too, providing watery “mead” to quench the cattle’s thirst and increase their milk flow.²³⁹¹ From the Finnish smith Ilmarinen’s forge also came a “golden-horned” sun cow, with a solar disk mounted on its head.²³⁹² Such a creature was known to both the Egyptians and Indians, and was evidently most holy to the Finns.

Sacred black and white dairy cattle and the deer of the settlement, were probably left to graze freely there on the “pastures of the gods”. Here animals could chew the grass upon which dew had dripped from the leaves of the holy trees. The milk from their blessed udders was therefore laden with heavenly dew from above. Sacred cows were milked daily by a female Brahmin or Magus, and their holy milk poured into pitchers and amphoras for use in the ceremonial concoction of the drink of immortality and new life. For instance in the Iranian we have the female name

PERIMETER OF THE
HOLY SANCTUARY, AND
FENCED IN THE SACRED
LIVESTOCK

MILKING THE SACRED
CATTLE

Dogdo (“One who milks cows”). Frequent milking was vital to prevent the unholy loss of milk, as the fattened udders of dozing heifers pressed into the ground. In doing so they enhanced a settlement’s production of sacred cream and butter, so sorely needed as food for the holy fires. From the Magian perspective, cow’s milk was a vital substance employed in *Haoma* making. Groves were lovingly tended by priests and priestesses who catered for the special needs of more vulnerable plants like fruit trees, some of which must have needed to be covered against frosts. Flowers and medicinal herbs grown in the sanctuary were touched by gods and angels, and so considered more efficacious than herbs grown in the wilds. Such plants were readily used by a settlement’s herbalists to treat various ailments, whether for ailing man or beast.

FOR ARYANS,
ESTABLISHING A GROVE
WAS AN ACT OF PIETY

Aryan custom dictated that groves be established by pious patrons, possibly using school children, who spent part of their day planting trees. For this reason settlements probably had more than one grove. Whether European pagan warriors, merchants and peasants maintained separate groves, to serve the needs of their respective feudal social classes is unclear, but in Britain, Ireland and Scandinavia there were a number of fenced enclosures at a given location. Personal enclosures may have belonged to particular families, for ancestral devotions.

GROVES IN
NORTHUMBRIA

At Yeavering, the Saxon Northumbrians had a temple encircled by a boundary fence. Cattle skulls were displayed about it upon erected posts.²³⁹³ The bones may have been the remains of their frequent cattle-sacrifices, or the skeletons of cows that died naturally inside the enclosure.

Certain trees continued to have pride of place in European folk tradition. In various parts of Sweden farmers kept a sacred *Bardtrad* (an ash, lime or elm tree that served as a guardian for the settlement) somewhere on their property, even until last century.²³⁹⁴ They thought that impending misfortune would result from harming one of these trees in any way.²³⁹⁴ As matters stood the *Bardtrad* helped pregnant wives have trouble-free labour, but to obtain this assistance the woman had to hug the trunk.²³⁹⁴

Sacred springs

Pagan Russes regarded springs as very holy. Such a belief was held in common with most of Europe’s pre-Christian pagans, and by the Magi and Aryans in particular, who perceived them as dwelling places for mighty spiritual forces, the goddess Anakhita especially. In some of the oldest Magian texts we read;

*“The spring named Arvi Sura (Anakhita), O Spitaman Zarathustra! that spring of mine, purifies the seed in man, the fruit in a woman’s womb, the milk in a woman’s breast”.*²³⁹⁵

*“I will praise the water Ardoi Sura Anahita, the wide-flowing and healing in its influence, efficacious against the Daevas, devoted to Ahura’s lore, and to be worshiped with sacrifice within the corporeal world, furthering all living springs and holy-helping on the increase and improvement of our herds and settlements, holy, and increasing our wealth, holy and helping on the progress of the Province, Holy as she is”.*²³⁹⁶

PRAISE TO THE HOLY
WATERS

THE PAGAN SAINTS
ATTEND

*“Let the saints’ fravashis now draw near, those of the saints who live, or have lived, or those born, or yet to be born: yea, let them come near which have borne these waters up stream from the nearest ones that lie below as the outlet pours away. Let not our waters be for the man of ill intent, of evil speech, or deeds, or conscience; let them not be for the offender of a friend, not for an insulter of a Magian, nor for one who harms the workmen, nor for one who hates his kindred. And let not our good waters which are not only good, but the best, and Mazda-made, help on the man who strives to mar our settlements which are not to be corrupted, nor him who would mar our bodies, our uncorrupted selves, nor the thief, or bludgeon-bearing ruffian who would slaughter the disciples, nor a sorcerer, nor a burier of dead bodies, nor the jealous, nor the niggard, nor the godless heretic who slays disciples, nor the evil tyrant among men. Against these may our waters come as torments. As destructive may these come, may they come to him who had done those first foul evils, as to him who does the last. O waters! rest still within your places while the invoking priest shall offer”.*²³⁹⁷

WRONGDOERS WERE NOT
TO TOUCH THE WATER

THE WATER QUENCHED
THE THIRST OF THE
CATTLE

By inference these Magian passages might have applied to the Russian water goddess Moksha, whose name was derived from Finnish terms meaning “a river”. I say this because Anahita’s other name was *Oksho*. This similarity may be purely fortuitous, and Vasmer certainly does not include it in his list of etymologies for Moksha.

Usually a natural spring was found somewhere inside a grove, with the water of the gods nourishing the roots of the holy trees and quenching the thirst of the sacred milk-givers who lounged beneath them. Wherever spring water welled up from beneath the earth, the ground was considered especially sacred to pagans. Holy water was not to be treated lightly, particularly after its blessing with religious formulas, since its ritual mis-handling constituted an act of devil-worship according to the Magi. Trespassers were to be carefully guarded against, and in Russia it was forbidden to speak while drawing water there.

Throughout much of Iran and the Orient, it was commonly believed that spring water possessed remarkable healing properties (perhaps owing to mineral content), and was therefore used to form the drink of immortality, sacred beer and mead. In Europe, as in Asia, some springs were better endowed with the ability to heal and expel spirits and demons than others. One could tell not only by the luxuriant verdancy of the oaks and other plants, but by past ‘miraculous healings’, for here was the beneficence of the Gods for all to see. Consequently pagan devotees probably travelled considerable distances to drink, wash and commune at places of renown, for it was deemed pious to visit these wondrous shrines. Even nowadays pilgrims trek up the side of Iran’s Mt Shand to retrieve holy water for healing their ailments. During the Christian era, overseas pilgrims came to Slavia and the Baltic from as far afield as England and Germany to walk with the gods once again. People hung wax simulacra, or cloth worn by the sick or infirm from the boughs of nearby trees, to obtain healing. Body part simulacra buns had already been in use by pagan Franks as early as the 6th Century AD.²³⁸ In some places these Aryan customs lasted far into the future. Until this century the Loughharrow pilgrims of Britain tethered their cattle to a nearby tree, and tossed large chunks of butter into the lake water, much to the chagrin of the local bishop.²³⁹ This custom evidently originated in Indo-European religiosity.

Since springs, creeks and rivers are natural topographical features, holy sites of this calibre would be notoriously difficult to see in the archeological record. Larger cult sites would be identifiable as holy springs surrounded by the remains of scattered temporary campsites (attributable to pilgrims intermittently visiting a site on certain feast days) and huts. Wheel ruts and log roads might also be discernible in their vicinity. The remains of wooden simulacra and stone effigies could be present there also, where soil preservation permits.

Holy fires

The most glorious of white Magian religious duties was the feeding of holy fires, the so-called *vahram* fires that existed throughout all major settlements. It was an act of unparalleled devotion to the creator;

*“We would approach You two, O ye primeval ones in the house of this Thy Holy Fire, O Ahura Mazda, Thou most bounteous Spirit! Who brings pollutions to this Thy flame him wilt Thou cover with pollutions in his turn. But as the most friendly do Thou give us zeal, O Fire of the Lord”.*²⁴⁰

“I offer my sacrifice and homage to thee, the Fire, as a good offering, and an offering with our hail of salvation, even as an offering of praise with benedictions, to thee, the Fire, O Ahura Mazda’s son! Meet for sacrifice are thou, and worthy of our homage, may’st thou be in the houses of men who worship Mazda. Salvation be to this man who worships thee in verity and truth, with wood in hand, and Baresman (wand bundle) ready, with flesh in hand, and holding too the mortar. And may’st thou be ever fed with wood as the prescription orders.

Yea, may’st thou have thy perfume justly, and thy sacred butter (gum) without fail, and thine andirons (unleavened bread) regularly placed. Be of full-age as to thy nourishment, of the canon’s age as to the measure of thy food, O Fire, Ahura Mazda’s son! Be now aflame within this house; be ever without fail in flame; be all ashine within this house; be on thy growth

within this house; for a long time be thou thus to the furtherance of the heroic renovation, to the completion of all progress, yea, even till the good heroic millennial time when the renovation shall have become complete. Give me, O Fire, Ahura Mazda's son! a speedy glory, speedy nourishment, and speedy booty, and abundant glory, abundant nourishment, abundant booty, an expanded mind, and nimbleness of tongue for soul and understanding, even an understanding continually growing in its largeness, and never wanders, and long enduring virile power, an offspring sure of foot, that never sleeps on watch, and rises quick from bed, and likewise a wakeful offspring, helpful to nurture, or reclaim, legitimate, keeping order in men's meetings, yea, drawing men to assemblies through their influence and word, grown to power, skillful, redeeming others from oppression, served by many followers, which may advance my line in prosperity and fame".²⁴⁰¹

In an historical sense, the gist of these scriptural passages is corroborated by Strabo who stated "*And to whatever god they offer sacrifice, to him they first offer prayer with fire*".²⁴⁰² Consecrated fire was one of their most important religious symbols; each a holy site in its own right, each, like the jewelled firmament, a beacon of god's light. Strabo tells us that the Magi normally maintained their holy fires in the precincts of grove enclosures.²⁴⁰² In practice the dwelling of a *valhram* fire varied from place to place, depending on the lifestyle of the Magian families.

Normally the holy fires burned inside a large metal urn, which, in mobile pastoralist communities (or among refugees fleeing the Muslim conquests), could be transported about in the back of a tent-covered wagon, sitting comfortably on an insulative sand-box. In larger fixed temple complexes, the containment urn stood proudly atop large stone dais' and altars, tended by priests, fire wardens, guardians and wood collectors. Different classes of Magi tended the holy fires, and through their loving reverence for the Son of God, brought protection and prosperity to the land and its people;

"it is necessary to properly maintain the sacred fire which they have established in a town or village. And at night it is necessary to make it blaze up once, and by day twice. For it is declared in revelation, that, if there had been no sacred fire, no one would have been able to go from town to town; because it is owing to the glory of the sacred fire that no one on the roads is able to commit an excess upon any one else".²⁴⁰³

In modern Bombay, there is a Parsee fire that has burned continuously for over a thousand years, from the time the Magi arrived in India. But in a more ancient epoch such life-spans would have been fairly typical of Magian fires in Iran and Central Asia. Until the coming of the Muslim Arabs and Turks in the 7th Century AD, and the subsequent exile of the Zoroastrians from Iran, the Magi had other supremely eminent sacred eternal fires, the heart and soul of their white religion. The most famous of these was *Farbag* (the priests' fire, Fars in Persia, or even Kabul Afghanistan), then *Gushnasp* (soldiers and the Magi, at Shiraz in Persia) and lastly there was *Burzen-Milhr* (for farmers and husbandmen, and it was situated at Mt Ganavad or Mt Revand in Persia).

As a result of Byzantine anti-Magian crusades and the advent of Islam, the fire urns of the Caucasian, Iranian and Central Asian Zoroastrians were progressively thrown down and snuffed out, their holy ashes kicked and scattered about the ground by Muslims and Christians alike. Thus died the fires, the sons of god unable to be re-lit in the history of the world, since the dasturs, the only ones able to re-ignite them, had been killed, or had fled.

Other lesser fires burned everywhere throughout the lands of Zoroaster's people, in every town and village, and hamlet, and house, but these subordinate flames did not even faintly approach the grandeur of the main fires, which attracted large numbers of prayerful pilgrims annually. The white Magian fire-priests were duty bound to shield the holy flames from any harm, especially that of evil-doers, who sought to defile the fires. The first act of any new Magus was to wander the countryside in search of a protector, a warrior lord who would accept him as his personal Magian sacrificer. In return, the Magus' defender would guard and watch over him, the holy springs, idols and most importantly the fires. And on account of meandering journeys, the Romans came to see the Magi in their midst as itinerant beggar-priests.

The white Magi believed that where *valran* fires burned, so too was the presence of God, who was himself the most wondrous and beautiful of all fires. The pagan Slavs also believed that fire (which they called *Svarozhich* or *Svarogich*) was the son of god, a custom no doubt inherited from the Magi.

For the Magi keeping the holy fires burning in homes and temples was almost the greatest act of love one could ever have for the Creator. Pagan Slavic customs and beliefs associated with fire were thus extremely close to that of the Zoroastrians and Zurvanites. But to the untrained eye something as meaningful as holy fires were simply "heathen" and "devilish" bonfires! When establishing new Magian villages, a foundation fire was installed in a newly built fire shrine.²⁴⁰⁴ Such fires were often named after a prominent king or high born aristocrat, in particular those who had, in all piety, financed their construction.²⁴⁰⁴

The 10th Century Arab annalist, Ibn-Dasta described the Slavs as "fire-worshippers", who bow down low before the flame.²⁴⁰⁵ In the 11th Century Russian text *Slovi Khristolyubtsya*, the Slavic practice of offering prayers to the hearth fire, the Son of Svarog, (the Shining God) is described.²⁴⁰⁶ Since Arab sources describe the pagan Russians as both "*Simurgs*" and avid fire-worshippers, we can deduce that the Russes had similar if not identical fire-rites to the Zoroastrians. Throughout the remainder of this section you will discover amazing similarities between these two fire-cults.

Samovars - were they really Magian fire urns?

Now it was the custom of the Magi that the eternal flame and ashes be contained within a large metal urn, roughly two feet tall, which they called *afirinagan*. They were not dissimilar to tea urns in form, and were traditionally mounted on sand boxes or stone pedestals cut in such a way that there was a stone foot at each corner of the pedestal's upper surface. These feet helped hold the urn in place.²⁴⁰⁷ One archaeologist, the late Dr Spooner, apparently excavated a large number of these fire urns in Central Asia.²⁴⁰⁷

Strangely, some classical Roman, Jewish and Greek altars resemble these fire urn pedestals. Certainly a fire is unlikely to have been lit atop the stone; fire and embers would have fallen out all over the place without being contained in something. For instance, one Roman altar dedicated to the guardian genius of the first Varduli cohort (complete with inscribed swastikas and the Germanic rune *Dæg* {*Dæg* meaning "fire" in both the Germanic and Iranian}) possessed a circular indentation in the top of it, which presumably held an urn or bowl of some kind.²⁴⁰⁸ Fire urns continue to be used by the Parsee fire-priests.

Russians have long used metal samovars for boiling water, vessels that resemble old-fashioned tea or coffee urns. We might ask the question, was there ever a connection between *samovars* (Russian tea urns), and the fire urns the Magi employed to contain their holy fires? Archeologically speaking it is difficult to say. I have not read of samovars being excavated by Russian archaeologists in any of my source materials, though they might well have been. For a solution we must look towards comparative linguistics.

It has long been accepted that *samovar* is an obvious syncretisation of *samo* (self) and *varit'* (which nowadays means "to cook" or "to boil") which would then make a *samovar* "a self-boiler". An obvious connection can be found in the Turkic *samavar* and *sanabar*, or the Tatar *samaur*, or *samuvar*, which also denote cooking urns. I believe that the Slavic and Turkic words had a similar genesis to the Russian *samovar*, and what is more, that *samovar* really came from *samo* + *var* rather than *samo* + *variti*, the traditionally accepted etymology.²⁴⁰⁹ *Sam'* (from which comes *samo*) originated from the Old Indian *samas* ("the same"), and/or the Avestan *hama* ("the same").²⁴¹⁰ The modern Russian word *varit'* is a verb which was formed from the noun *var* (which meant "resin", "heat", "hot embers", or "boiling water"). But in the *Old Russian, Serbo-Croat and Old Slavonic*, the noun *var* specifically meant "hot embers", whereas the verb *variti* (which had variants among the Slavs and Balts) meant "to boil".²⁴¹¹ Thus when determining the origin of the word *samovar*, in an ancient context, it is important that we distinguish between *var* and *variti*, because the two words are slightly different, even though they come from the same root word *var*. In the case of *samovar* the suffix -*var* need not necessarily carry a connotation of cooking, and, as mentioned, the noun did not possess such a meaning in ancient times, *only the verb*. Thus we arrive at a literal translation of "the very same hot embers" (instead of "self-boiler"), which could signify that the word *samovar* embodied the Magian ideal of a perpetual fire, whose embers

THE PRESENCE OF GOD

IT WAS IMPORTANT TO
KEEP THE FIRE BURNING

SLAVS AND RUSSIANS
WORSHIPPED FIRE

Fig 124. The Roman Varduli military altar.

possessed the age and unbroken pedigree of the glorious Aryan holy fires.

The inclusion of “resin” as an additional meaning for *var* is interesting. Unless this meaning preserves a custom of extracting plant resin by boiling, I suggest it relates to the Magian practice of burning incense and the the sweet *Haoma* (Golden Ash) resin to feed the fire. I incline towards the latter view because if the former were correct, one would also expect to see *var* meaning lamb, beef, porridge and any other foodstuff normally cooked by boiling, instead of a seemingly unlikely “resin”. Moreover the Magian name for a holy fire was *valtram*. The Slavic *var* might come from this word. I am convinced that during pagan times the Slavs used *samovars* not just to boil water, but to contain the holy fires into which they periodically fed sandalwood and *Haoma* resin, the “sweet honey” of Magian lore.

Not only that, but in the Lithuanian we find it as *versme* (“a spring” or “a source”), which is reminiscent of *barsema* (a Magus wand which lay on a stand in front of the fire, and which were implements that acted as a source for the outpouring of their magical power).

Russian words denoting the ashen remnants of a fire, like *pepel*, *zola* and *prakh* do not seem to have an Avestan or Mesopotamian origin. Old Indian could be a source, but the phonetic connections are weak.²⁴¹² The Old Russian word *palit'* meaning “to scorch or singe” rather than “to burn” seems related to *palka* (meaning “a wand”) and *palets* (“finger”). This being the case one might say pagan Slavs formerly singed their wands next to the holy fire in accordance with the same Magian form of that ritual (ie; wetting the wands with holy spring water and leaving them to be scorched by the fire), which was performed by the Magian Rathwiskar. The ceremonial scorching of moistened golden ash branches caused the bark to rupture, allowing the ash sap to exude. Resin could then be put into the fire. Barsema wands were however made from tamarisk back in the old countries.

Palochka (“a small wand”, “a baton” or “a rod”) and *palka* (“a rod” or “a stick”) are probably traceable back to the Old Indian *phalati* (“it is breaking/snapping”, or “it is crackling/chapping”), and do not appear to have Avestan roots.²⁴¹³ If the Rus' were Magians then it stands to reason that holy fires were a significant feature of community and home life. It is quite true to say that in traditional Russian homes, the fire has always been of both practical and religious significance. Not only did they allow for cooking and home heating, but they acted as a gateway through which souls entered and left this world. There, in the fire, existed one's progenitor ancestors and future descendants.

The Slavic custom of opening the stove door the moment a family member passed away, and making it blaze up²⁴¹⁴ is undoubtedly linked to a passage of Magian scripture, which states;

“it is revealed that when they sever the consciousness of men (after the soul of the deceased has lingered for three days and been released through the performance of the “three-day ceremonial”) it goes out to the nearest fire, then out to the stars, then out to the moon, and then out to the sun; and it is needful that the nearest fire, which is that to which it has come out, should become stronger”.²⁴¹⁵

Every pagan Rus' settlement was organised around a *Mir*,²⁴¹⁶ which symbolised their unity. The Russian *mir* specifically meant “the people”, “the world”, “peace”, “agreement” or “accord”. In a practical sense the Irish word *Mir* had a similar meaning (“a portion”, “a part of a country”, “a section”) in that it was a label for separate areas, though Vasmer does not include it in his list of etymologies. According to Professor Vernadsky *Mir* comes from the Persian *Mithras* (meaning “an accord” of some kind), the guardian of sacred oaths. Even so the Persian *Mihir* could also denote a holy fire. For example, *Darimihir* was a popular Iranian colloquialism for a Magian fire temple (“*Dar-i-mihir* {Gate of Mithra}”).²⁴¹⁷ So if the Russes were Magians, the Russian *mir* might also have meant “a holy fire”, but this additional meaning did not survive the Christianisation process.

A number of pagan Russian first names²⁴¹⁸ which the Church saw as unfit for the naming of Christian folk, and subsequently replaced with Christian names, may be evidence for this. Most pagan Russian first names are in some way translatable. Once translated they described a person's nature or role in life. For instance *Gulyaiveter* meant “walking wind”. A good many others end in *-slav* (meaning either “glory”, or “Slav”), *-misl* (“a thought”), *-mil*

RUSSIAN PAGAN NAMES

(meaning “beloved”) or *-mir*. In the case of *-slav*, *-misl* and *-mil* the ending confers a meaning on the root word such as were indicated above. *Bogoslav* meant “the Glory of God”, *Granislav* “the glorious verses” and *Mechislav* “the sword of glory”. *Bogumil* meant “Beloved of God”, and *Bratonil* “Beloved brother”. Then there was *Dobromisl* “Good Thought”, or “one who thinks well of things”. Coincidentally “Good Thought” was an important white Magian angel, perhaps the guardian spirit of one so named. Many Slavic first names ended in *-mir*, so we might presume that the *-mir* ending had a specific meaning. But what was it? Since *Mir* had a meaning of “peace”, “accord”, “the world” and “the people” in the Slavic, we find it difficult to get satisfactory translations from the pagan first names using either interpretation. This suggests that that *-mir* had another elusive meaning.

As in Russia the Iranian Pahlavi word *mīhr* connoted an abstract notion of “friendship, “an agreement” or “a contract”, which is evidently reflected in the Slavic form and meaning of the word *mir*.²⁴¹⁹ In Albanian *mīre* meant “good” and in the Bulgarian it also meant “light” (in addition to the standard Slavic meanings). The Old Indian word *mitras* meant “a friend”. The Slavic word *svet* (which is conceptually and linguistically connected with *mir*) also meant “peace” or “light”, but in some linguistic sub-groups of the Slavic we find that *mir* also meant “light”, “day” or “people”. *Svet* came from the Old Indian *svetas* (“bright”, “light” or “white”) or the Avestan *spaeta* (“to shine”).²⁴²⁰ For this reason, there is every reason to believe that the pagan Russians used the term *mir* when referring to the holy fires that burned in their *ognishche* fire-houses and pavilions.

In Iran *Mīhr* also meant “sun”, but carried the connotation of “fire” or “light”. For example the Magi called one of their greatest holy fires *Burzem-Mīhr*. Such a fire would naturally embody all these qualities; it shone like the sun, and embodied peace and friendship. This is in perfect accordance with the various meanings attributed to the Slavic word *mir*. Now in the following list of Russian names if we translate the Persian word *Mīhr* (pron. *Mir*) as “fire”, lucid translations automatically become possible. Among many of these prohibited pagan names we can discern Slavic translations of Magian names, and concepts related to differing grades of holy fire, and various classes of people who had some ritual connection with these fires. For example the name *svetozar* probably meant “holy fire”. *Medomir* (“honey-fire”, or “fire-honey”) was perhaps a reference to the “honey” placed on the *vahram* fires by the Magi (ie; ash-tree resin). Alternatively *Medomir* might have meant “mead of peace”, or even a “mead-fire”, that is a fire used during the mead-brewing process. The last option would conform to the Magian notion of brewing fires, which were a separate class of fire. Thus we might interpret *Gradimir* as “a city fire”, *Budimir* as “a cabin fire”, *Dalenir* might have originated from the Persian term *Dar-i-mīhr*. In pagan times Slavic fire-cabins might have resembled those found in the Scandinavian *Lund*, or the Finnish *Lud*, which had a sacral function, and were located at groves or near the family home. Each Finnish *Lud* cabin contained a holy fire and idols of the family ancestors.

Judging by the Kalevala the Finns felt it necessary to keep the fires burning all the time, for it contains the imprecation “Great woe to the flameless”.²⁴²¹

In Russia we find the term *lesnaya budka*, which meant “a forest warden’s hut”. The Russian pagan first name *Budko*, was perhaps used by someone holding the position of grove keeper, and who manned the *lesnaya budka*, keeping watch for unholy trespassers. *Borimir* might have meant “a pine-grove fire”, *Lyubomir* “the Fire of love”, *Mezhamir* a “forest-fire”(ie; a grove fire). *Ostromir* could have been “an island fire” or “an ostrog fire”. In the Ukrainian an *ostrog* was “a roofed building walled with wicker basketry”.²⁴²² Such a building is an excellent description of a Magian inner-sanctum, which shielded the fire, and in which rites of adoration took place. But in Belorussian and Polish an *ostrog* was a settlement surrounded by a palisade made of pointed logs. In effect an *ostrog* fire was “a village fire”, or a fire maintained within the inner sanctum of a fire temple (ie; a fire house). *Ratomir* might have meant “a warrior or military fire”. As it happens the ancient custom of burning eternal fires of remembrance still continues. At a number of war monuments and cemeteries that I have visited over the years, eternal flames still burn, and coincidentally are guarded. In pagan Rus’ a *stomir* might have been a guardian-fire kept by 100-man heathen Russian military units called *Sotnia*. This kind of fire would have been marginally less grand than the Varduli cohort’s holy fire. *Orimir* is more difficult to translate. Perhaps an *Orimir* meant Or’s fire (ie; the fire of the god Or) or even a “horse-fire” of the sort used to boil cauldrons during the *asvamedha*. *Zhiromir* was a composite of *zhir* (“food” or “fat”)²⁴²³ and *-mir*, perhaps meaning “fire-fat”. A Lithuanian word related to *zhir*, *gyras*, meant *kvās*

SOME ARE RELATED TO
FIRE

DIFFERENT CLASSES OF
FIRE

SPECIAL GROVE-
WARDENS’ HUTS

SCENTED WOOD WAS OFFERED TO THE FLAMES

(which in pagan times was a form of libation once poured into the holy fire or drunk). Serbo-Croat *zhira* ("acorns"), Slovenian *zhir* ("acorns" or "food"). These are connected conceptually with *zhit'*, which means "to live". The Ukrainian or Bulgar word *zhir* meant "fat", "an acorn" or "pig's lard". Therefore *Zhiromir* might have meant "fire-fat", or "fire food", and in a pagan sense perhaps indicated a person who placed fat, acorns, butter or meat on the holy fire.

Wooden billets of precious wood (sandal especially) were however the preferred foods consumed by the *Vahram* fires. These were traditionally broken down into small sacrificial chips, which could be placed in the fire in a variety of ways. The Magi believed that *berezi-savanga* was the wood most powerfully invested with the spiritual fire, and its mere growth promoted long life and prosperity in the world. And it just so happens that *bereza* is the Slavic word for the white "birch tree", which the Slavs had for so long burned as votive offerings to their gods.²⁴²⁴

Similarly, in the Old Norse we have what was presumably a pagan ritual term *Blotspann*, which translates as "a sacrificial chip (of wood)".²⁴²⁵

ASH, THE CLOTHING OF THE FIRE

Inevitably ash was the result of so much daily combustion. Magians referred to the residual ash of their *vahram* fires as *var* or "the clothing of the fire".²⁴²⁶ At their daily fire ceremonies, the fire-priests anointed the faces of prayerful devotees with this ash. In Rus' Magian society it is simply no coincidence that the Slavic word *var* meant "resin", "heat", "hot embers". The inclusion of "boiling water"²⁴²⁷ to the Slavic *var* quite likely related to the boiling cauldrons which sat on the holy fire.

GIVING AMBER AND RESIN TO THE FIRE

In pagan times resins such as amber were placed in the glowing fires. Again the Slavic word *var* had a meaning of "ash" and "resin", and to the Magi it meant "ash" or "the clothing of the fire". Another Slavic word for "resin" was *smola*.²⁴²⁸ A number of Baltic words (like *smela* and *smilkti*) also show the relationship between "resin" and "smouldering", which is exactly what happens to resins and incenses ignited in fire. In fact, the English word "smoulder" seems to be related to it. *Smola* might also be related to *smolost'* meaning "a cow's udder", and if so might the Lithuanian *smilkti* ("to smolder") be connected with the English word "milk"?

TYPES OF FIRES

Every Magian fire, whether it be in a home, village, or city were all joined to God, and thus theoretically constituted a minute portion of a single holy blaze, despite whatever physical distance might have separated them.²⁴²⁹ As with the 'feudal' society that maintained them, these fires too possessed varied pedigrees. The higher the social ranking of a fire's patron, and the older the flame was, the more prestige it could claim, the more devotees it could attract.

RUSSIAN NAMES FOR THE DIFFERENT FIRE CLASSIFICATIONS

GRADE ²⁴³⁰ OF FIRE	MAINTAINED BY ²⁴³⁰ FIRE-PRIESTS	RE-LIT ANNUALLY ²⁴³⁰	LOCATION ²⁴³⁰
<i>Vahram</i>	Yes	Permanently lit	Cathedral-like temple
<i>Adaran</i>	Yes	Yes	Communal fire house
<i>Dadgah</i>	No	Yes	Home hearths

The following is a hypothetical reconstruction of the hierarchy of pagan Rus' holy fires, based on Magian analogies, including possible Russian word equivalents for that class of fire, based on the heathen names proscribed in Christian times.

PRIESTLY FIRE

The Magi's main Iranian holy fire was known as *Farbag*. In Russia it might have been called *Radimir*

WARRIOR FIRE

The principal warrior fire in pre-islamic Persia was *Gushmasp*. In Rus' such a fire might have been called a *Ratimir* or *Stoimir*.

TRIBAL FIRE

The equivalent of a *Varharan* fire probably burned in a belfried temple in each tribal grad where a *Knyaz'* reigned. In Russia a tribal fire might have been called a *Gradimir*.

VILLAGE FIRE

Each Magian village had its own *Aduran* fire - a temple or grove fire, or communal bonfire. In Rus' a village fire might have been called an *Ostromir*.

SETTLEMENT

In Magian lore, a settlement fire was made from 16 home hearth fires. Such a flame might have been termed a *Stanimir* or *Mezhamir* by the Slavs, and would probably have burnt on a sacrificial stone altar within a "peasant" grove-enclosure.

HOME HEARTH

Magians kept a holy fire permanently alive in their home ovens, a symbol of the presence of the almighty and great protector of their people. Home fires belonged to the lowest grade of holy fire, termed *dadgah*. Whenever a family shifted to another fixed abode they took the ash and embers of this home fire with them, to found the new hearth. This Magian custom is very ancient and continuously observed by later generations of Parsees.²⁴³¹ Based on Russian folk tradition, it seems heathen Russes observed these same strict rules governing home-fires.

The ancient Greeks had a similar observance, meaning that in remotest times the translation of the home fire to a new abode was originally an Aryan custom practiced by the Vedic Indo-Europeans, thereafter being inherited by the Magi after them. The Russian word for a home fire might have been *Budimir*.

The common Slavic and Baltic words for "flame" (*plamya* or *plamen*) are not derived from Avestan and Old Indian sources, and it is my guess that they came from the Latin *flamma*.²⁴³² It might also be related to the Latin word *Flamen*, that is, the fire-priests who formed colleges dedicated to particular gods, as was the ancient Roman custom. It is of further interest that the priests of pagan Britain (just prior to the conversion) were referred to by Church historians as *Flamen* and *Arch-flamen*. If the connection between *plamya*, *plamen* and *flamen* is valid then we might suspect that some Slavic fire tenders followed Roman/Mithraic customs, and may have done so since the time of Ptolemy, who depicted Caesar's altar on one of his maps of Scythia. It was situated in the Southern Ukraine.

Another pan-Slavic word for "fire" was *ogon'* (or variants of it), which is derived from the Vedic *Agnis* (the divine holy fire). The Vedic *Agnis* also gave rise to the Latin *ignis* and the Hittite *agnis*, the Lithuanian *ugnis* and the Latvian *uguns*.²⁴³³ Judging by the prevalence of *ogon'* (and variants of it) Baltic and Slavic "fire-worship" had substantial Vedic roots. That is not to say that the word was not being used by the demi-Vedic Zurvanite Magians. The Vedic word for fire does not seem to have taken root among the Germans and Scandinavians.

The Russian word *zhar* (meaning "heat" or "live coals") also appears in the Bulgarian, Serbo-Croat, Czech, and Slovenian.²⁴³⁴ It is thought derived from the Old Indian *haras* (meaning "live coals" or "a flame"), which in turn fed into the Old Prussian as *gorme* ("live coals"), the Latvian *garme* ("warm"), the Armenian *jerm* ("warm") and the Frisian *germo* ("warm"), from which we get the English word "warm".²⁴³⁴ The Old Russian word for "smoke" *dym* is found in the Slavic, Greek, Latin and Old High German, all of which originated in the Old Indian *dhumas* ("smoke").²⁴³⁵

The Norsemen and Prussians are recorded as having kept perpetual fires, burning on altars.²⁴³⁶ In the Baltic the holy fire dwelling in the family stove was cared for by the woman of the house at night before going to bed, and revived each morning with devotion.²⁴³⁷ Similar traditions are to be found throughout Slavia.

In Magian eschatology, *Ahriman* and the Whore sought to vex and destroy the purity of all created nature, especially fire, but in particular the *Vahram* fires. One further duty incumbent upon any white Magian was the protection of the holy fire. It had to be guarded against the black Magians, apostates and other assailants wanting to extinguish it. To this end the Slavs built heavily fortified towers wherein the *Vahrams* burned brilliantly, resolutely and with all confidence, bringing vitality and health to the land and the people.

In *Bahman Yast II*, we are told of a future time when the *Vahram* fires would suffer grievous annihilation from the

enemies of god's light, signifying the onset of disaster for their religion, the obliteration of the Magian Aryan nations, and devastation for the world of created good existence. Whereas in ancient times there were more than enough Magus-priests to attend the fires, in that dark winter of *Ahriman's* malcontent, barely one-thousandth of their number would remain to perform the sacred duty to the *valram* fires. Earth lay in the Demon's penumbra.

Temple towers also sheltered the fire against direct sunlight, since the Magi proclaimed it was not proper to allow sunlight to fall on the holy fire, because it melted away the potency of the flame, dissolving it and rendering it invisible. In Ireland and England there are recorded examples of folk beliefs over the last eight hundred years which related to the radiance of the sun being able to extinguish fire, and hence they protected fires from direct sunlight.

Fire birds

Fire birds had their origin in Persia, but are also interconnected with the legend of the Phoenix, which can be traced back to ancient Egypt, in the form of the Bennu bird. They were popularly portrayed as eagles composed of raging flame, and were bringers of fertility. By obtaining the blessing of a fire bird, all the crops in one's district would grow at an unbelievable rate, and cattle or sheep would be fruitful. In pagan Russia fire birds were termed *zhar-ptitsy*. These varied myths probably have a common basis, which resides in ritual. When a holy libation was poured onto a holy fire, a gush of fire would appear to fly up towards the sky. At that precise moment the flame, as a fiery bird, took flight, carrying the life-bringing sacrifice to the celestial gods, along with the prayers of the faithful. It literally rose from the ashes. Here is one Russian legend about the fire bird.²⁴³⁸

There was once a *tsar* (in reality a *Knyaz'* or *Khagan*), whose apple orchard was losing its fruit. Owing to the names of both his sons and himself, one can guess they were Christian, but the year of this Tsar's reign is not stated. As matters stood, his fruit harvest diminished daily because the fire bird was taking them away from him for reasons unknown. Perhaps it was because he did not have a fire bird. I say this because the king guessed that it would only be by obtaining the fire bird that his orchard's losses would cease. And so Vyslav Andronovitch sent his three sons on a mission to find the elusive *zhar ptitsa*, which had skillfully evaded capture thus far. The prince who could find it was to inherit their father's entire kingdom, and so the competition between them was fierce.²⁴³⁸

During this journey Prince Ivan (ie; John) lost his way, and his mount was killed in a wolf attack. A while later Ivan chanced upon the grey wolf who had slain his steed. The wolf told him where the fire bird could be found, at the court of Tsar Dalmat, in a relatively distant land.²⁴³⁸ To get there the wolf allowed the prince to ride on his back.²⁴³⁸ Having arrived secretly outside Dalmat's wall-encompassed garden, the wolf proceeded to warn Ivan to take only the fire bird, but not the cage which housed it in the garden. But the foolhardy prince took no heed, and tried to make off with both bird and cage. Unbeknownst to him the cage was attached to bells, and these alerted the guards, who promptly pounced on the knavish young man and arrested him.²⁴³⁸ Dalmat castigated the rash prince after having ascertained Ivan's identity. He was told that his attempt to steal the fire bird was despicable, and that he would have been given it freely if only he had done the proper thing, and courteously asked for it.²⁴³⁸ To atone for this misdeed Dalmat sent him on a quest. Only on completion of this assigned task would Dalmat hand over the bird. Ivan was captured in the stables of another king (Afron) doing what Dalmat had asked of him, and sent on yet another quest to retrieve a queen. With the assistance of the wolf's magical deceptions Ivan swindled both Afron and Dalmat, making off with both bird and cage, not to mention a golden-maned charger, and a queen who he seized by capture.²⁴³⁸

In effect this seems to be a legend about a Russian Christian monarch relapsing into paganism, and fulfilling his desire to do so by re-establishing a perpetual holy flame, from the court of a foreign royal. Now the name Dalmat sounds suspiciously like Dalmatia, in Croatia. So Dalmat might have been a Croatian royal. Ivan botches the entire mission by trying to steal the holy fire and the receptacle which held it. A series of bells were tied to the fire urn, and so they peeled once he tried lifting the receptacle. Ivan was made to undertake a quest as a penance for his crime. But with the help of a shape-changing *Volkhv* Magus, the prince merely appears to have atoned for his ruses, and returns home to Russia victorious. He lives happily ever after, with his own kingdom, a fire bird and a new wife.

In Finland the fire bird was born in the forge of a hero. In the midst of the incandescent coals the smith made "a

fiery eagle, a wivern of flame ... the feet he shaped of iron, for wings the side of a boat".²⁴³⁹ This fire bird flew to locations determined by Ilmarinen, and performed wondrous deeds for him there. "Well, the iron-foot eagle at that flared up into flight - up into the sky" to the heavens.²⁴³⁹

Founding a temple fire

Founding a temple fire was a very elaborate ritual demanding multiple ignitions and purifications and could only be performed by a *dastur* or greater. It required the gathering of flame from numerous other sources, particularly hearths and occurred during the final week of the year.

In Magian law, a temple flame was created by the pooling of fires from a prescribed number of sources, such as a fire made by friction against wood; a fire caused by a lightning strike; a brewing fire (a fire used in the brewing process); a corpse-fire and especially a fire from another fire temple. Accordingly every temple fire had a pedigree and unbroken genealogy traceable back to the earliest *Vahrams* of Mazdaism, as intricately preserved as the bloodlines of any given Magus or king.

It was not lost on the black Magi, Muslims and Christians alike that to destroy temple fires was the surest way to destroy the Good Religion of *Ahura Mazda*. Conversely the way to rebuild the religion was to found more and more temples and holy fires. Accordingly the ignition or re-ignition of a holy fire was an awe-filled occasion.

Another facet of the Magian holy fires is that lower grade fires were extinguished at a certain time of year, on the five intercalary days which concluded the year, and re-lit by the Magi. As with the Magi, the so-called Russian "fire-cult" made distinctions between various types of fire and annually re-lit their hearths around mid-winter. In Russian folklore, the term *nebesniy ogon'* ("heavenly fire"), applied to fires started by a lightning strike from one of Perun's thunder bolts.²⁴⁴⁰ These fires were often kept separate from the standard hearth, and fed eggs for sustenance.²⁴⁴⁰ The Magi also fed eggs to their fires, eggs which symbolically hatched into fire birds. If there was a further lightning strike on the property, and a blaze erupted out of control, villagers were only to extinguish that blaze with milk.²⁴⁴⁰ If there wasn't enough milk, they used kvas.²⁴⁴⁰ They were not to employ water under any circumstances, for it was believed to cause flare ups in earth-bound heavenly fire.²⁴⁴⁰ Another species of flame was termed *zhivoy*, literally the "living fire". From olden times village inhabitants in many parts of Russia (Novgoroders especially), annually doused their hearths as a community, to extinguish their home-fires in readiness to receive newly consecrated fire.²⁴⁴¹ The ceremonial generation of this much anticipated new fire, the *zhivoi ogon'*, was attended by elders, eminent families, as well as village representatives.²⁴⁴² It could not begin until every hearth in a settlement had been quenched.²⁴⁴² On this same day each year, unspecified menfolk briskly rotated a spoked wheel, or a wooden shaft, on a piece of wood using a length of rope.²⁴⁴² In some parts of Europe a hangman's rope was recommended for this purpose.²⁴⁴³ The proceedings were conducted in absolute silence, the rite performed cleanly, and in the *exact* fashion.²⁴⁴⁴ As the ritual participants diligently went about their task, silent and solemn onlookers witnessed the emergence of flame from the wood.²⁴⁴⁵ In such a manner was born the *zhivoi ogon'* (literally "living fire"), which arose from the friction generated.²⁴⁴⁵ They then set alight a dry wooden staff using the fresh fire, and ferried it to every home so they could re-ignite their hearths.²⁴⁴⁵ The inhabitants were admonished to ensure that this flame stayed alive until the same festival one year hence.²⁴⁴⁵ According to Russian folklore, once

Fig 126.1. Brazier, Scandinavia
Fig 126.2. Zoroastrian fire urn, India

the *zhivoi ogon'* was placed in the hearth, allowing it to die out would bring certain misfortune on the entire household.²⁴⁴⁵ The fire had to be guarded against defilement from impurities and rubbish.²⁴⁴⁶ To feed it they placed leftover sour cream in the oven. Milk and water were also associated with the homefires, perhaps, like sour cream, as a bowl full of sustenance placed on a shelf inside the oven.²⁴⁴⁶ Russian peasants always recited prayers during the morning fire feeding, which took place at dawn.²⁴⁴⁷ So it was too for the Magian people. The Novgoroders, whose great city stood by the river *Volkhw* (ie; Magus River), greatly prized this flame; no doubt for its spiritual value, its pagan spiritual value. Without dallying villagers then lit bonfire in the street, one in the midst of the village, and yet others near the cow sheds and cow-trail.²⁴⁴⁷ Locals later ran their cattle between them to provide protection against disease.²⁴⁴⁷

ON ST NICHOLAS' DAY
BELIEVERS GATHERED IN
NOVGOROD, ALONG
MAGUS RIVER, TO
CELEBRATE THE ANNUAL
FIRE DOUSING CEREMONY

Such were the happenings that took place on the 6th of December, the festival of *Nikol'shchina* (St Nicholas' feast day), *Nikola Ugodnik*, a time of great rejoicing for the people.²⁴⁴⁷ Families gathered together and celebrated this moment with three to four days of mead-drinking revelry.²⁴⁴⁷ While it may have been performed under the auspices of a Christian saint, this was essentially a Magian pagan ceremonial observance. You might expect a solemnity of this kind to be confined to Russia. It is instead found right across the continent: Germany, Scotland, England, France, but nowhere more so than in Slavia and the Balkans.²⁴⁴⁸ Mediaeval Europe witnessed a dramatic rise in the popularity of these need fires, that is despite a resounding condemnation of the practice by the Catholic Church, who decried it as a *heathen rite*.²⁴⁴⁹ The custom proved so resilient that villagers persisted with it even until last century.²⁴⁴⁹ One cannot overstate the significance of the Church's enthusiastic attacks on the practice, when viewed against the pan-European nature of the uses to which the need-fire was put, or the days upon which it was made, and the manner of the fire's birth. In short, such evidence suggests the existence of an ancient pagan religion deeply rooted in the European psyche, which found itself unsuccessfully challenged by the prevailing Church authorities.

THE CHURCH ATTACKED
THIS PAN-EUROPEAN
CEREMONY AS HEATHEN
TO THE CORE

The use of a fire-wheel as a source of friction is a feature peculiar to Russia, Scotland, and indeed the Beltaine fires of the thought-to-be-extinct pagan Celtic druids. The Celtic bonfire ceremonies of Beltaine were lit in response to the increased activity of the black witches, who were at that time especially powerful, and much given to milk-stealing and vexing cattle.²⁴⁵⁰ Since the druids are the oldest recorded group of Europeans known to have observed the wheel friction custom, one is tempted to associate the diffusion of need-fires with a druidic diaspora of some kind, that leapt onto the mainland, and migrated as far away as the Urals.²⁴⁵⁰ Perhaps this took place after the Roman slaughter on Mona, with large segments of the druidic class escaping Britain, only to seek sanctuary in far away places. But on the contrary, it is far more likely to have been a ritual transported into pre-Roman Britain with druidic Magi, as they left their eastern roots and Galatian holy oak far behind. It therefore comes as little surprise that Russian and Celtic Magian observances (in Gaul and Briton), followed a similar, if not the same, format.

THE FIRE WHEEL ROTATES

FIRE IS BORN INTO THE
WORLD

*"The Scots term of Beltin the first Day of May, having its first rise from the custome practiced by the druids in the Isles, of extinguishing all the fires in the parish untile the tythes were paid; and upon payment of them, the fires were kindled in each family and never till then".*²⁴⁵¹

Daily prayers at the fire temple

By drawing on the many points of similarity between Magianism and the rites of the *Volkroy* Magi, we can deduce the following. After the ringing of bells, Svarog's fire was fed five times per day by the *Volkroy* with sacred woods and other timber cut from the forests, amidst universal rejoicing, hymns and prayers of the *Gathas*. People stood about as the procession of woods was taken into the inner sanctuary by specially invested individuals. Prayer times (which the Magi called the Gah's) began at cockcrow, when the more pious pagans attended, and continued at prescribed times throughout the day until sunset. At nightfall began *Ahriman's* domain, when the dead and deadly roamed about until dawn.

The prayer times were as follows.

<i>Gah Havan</i>	6am-10am	<i>Gah Rapithwin</i>	10am-3pm
<i>Gah Uziren</i>	3pm-6pm	<i>Gah Atwistruthrima</i>	6pm-12pm
<i>Gah Ushahin</i>	12pm-6am		

Evidence for Magian *gah* fire-vigils in heathen Russia is found in the Old Russian word *grano* ("verses"), which is linked to the Avestan *gar* ("praise" or "a hymn of praise"), and the Alanic *gaer* ("a cry" or "a sound").²⁴⁵² *Grano* is also related to the Old Indian *gruṭe* ("he is singing"), which no doubt pertains to the recital of hymns.²⁴⁵² In addition to this the Old Russian *zhertva* ("sacrifice") is related to the Old Indian *gir* "praise, "reward" and the Avestan *gar*.²⁴⁵² This simply illustrates the common Indian and Iranian origins for the concept of hymns as a religious offering, and a continuous understanding of the notion that the word described a tradition of religious song, present even into pagan times. The Lithuanian *girti* and *giriu* ("to praise") is much closer to the Old Indian, which may or may not indicate they cleaved more greatly to vedic psalmody, in what was arguably the most staunchly pagan of all the European countries. If Vasmer's etymological reconstructions are complete, then such a series of correlations appears to be absent in the German, Scandinavian, English, or any of the Romance languages.

A different class of religious song is perceptible in the Russian *pet'* ("to sing") and *pesnya* ("a song").²⁴⁵³ These may have been connected with Greek pagan gnostic hymns (eg; to Apollo), or alternatively Byzantine Christian hymns.

LINGUISTIC EVIDENCE
FOR MAGIAN PRAYER
SESSIONS IN RUS'

Pagan idols

In the ancient world, mankind carved holy images of spirits, divine beings and their ancestors. The practice first began during the stone-age when hunters whittled (from bone, wood and antler) magical effigies of deer, bears, pregnant women and the like, which are thought to have been able to cause a change in the fortunes of those who gave reverence to the image. The powers attributable to these first generations of idols lay in sympathetic magic.

Later idol crafting became a highly evolved science, surrounded by intricate ritualism. As mentioned the pagan priesthoods of antiquity held common views on pagan religiosity and ceremonial in quite a number of respects. The priests of the Egyptians, Chaldeans, Greeks, Romans and Medean Magi all used mutually similar, sacred and well guarded magical processes to craft idols. These were known as the telestic arts. By Greek reckoning the method appears to have originated in Babylonia-Chaldea.²⁴⁵⁴ As you will soon read Christians and Jews had only a very rudimentary knowledge of the principles behind idol-worship. Based on their crude observations, the idolatry which they so vehemently rejected and condemned, entailed giving homage to stones, timber and demons. This is only partly correct. A Babylonian *Kudurru*-stone dating to the 13th Millennium BC clearly depicts Mesopotamian idols in the form of columns, or wooden posts with bulbous serpentine or anthropomorphic faces carved at the top. These were either engraved with the image of a god, or left unembellished but for inscribed spells.²⁴⁵⁵ Images frequently included those of the divine sages, often dressed as animals. Carved posts were not always idols though. The erection of engraved pillars or stellae, was also practiced by Egyptians and Mesopotamians, to delimit territorial boundaries, and record resounding military victories for posterity.²⁴⁵⁶

RITES

BABYLONIAN IDOLS
TOOK THE FORM OF
CARVED POSTS

The telestic arts

In Alexandrian Egypt, the pagan priests taught that idols were linked with the soul of the god through the telestic arts, occult processes used during an idol's carving and consecration. From *Asclepius III:37* we know the telestic arts entailed the use of certain plants, gemstones, incenses and sacred utterances. To the classical mind, the soul of a god could not enter "the lower bodies"; things like gems, pieces of dead wood, or living things such as trees or people. This was because the celestial divinities were too lofty and etheric to defile themselves by residing in such a base condition. To this end, the telestic arts (devised by Egyptians or Chaldeans) prescribed that a *daemone* (a lower angel) or hero *obedient to the deity* was conjured into the idol, and from that day forth this being would act as the god's agent and earthly representative. The telestic arts served to bind this *daemone* or hero to the receptacle be it a stone or wooden image, and ensured its obedience to the god it was to serve. As Celsus Africanus explained; "Let anyone

THE RITES WERE
KNOWN AS THE
TELESTIC ARTS

A DAEMONE WAS
INFUSED INTO THE IDOL,
SERVING AS A
MESSENGER FOR A
CELESTIAL GOD

*inquire of the Egyptians, and he will find that everything, even to the most insignificant, is committed to the care of a certain demon”.*²⁴⁵⁷

Tenth Century AD Muslim writers said much the same thing about them;

“Now these things are called sacred, which are made holy by the gods themselves, or their demons, being (as I may say) dedicated to us by the gods themselves. By this account we call demons holy, because in them God dwells, whose name they are often said to hear.” ... and ...

PERFUMES, HOLY WATER,
KNEELING, BELL-RINGING,
CANDLES AND PRECIOUS
METALS AND STONES
WERE REQUIRED TO
PERFORM THE RITUALS

*“there are also sacred rites and holy observations, which are made for the reverencing of the gods, and religion, viz. devout gestures, genuflexions, uncoverings of the head, washings, sprinklings of holy water, perfumes, exterior expiations, humble processions, and exterior ornaments for divine praises, as musical harmony, burning of wax candles and lights, ringing of bells, the adorning of temples, altars and images, in all which there is required a supreme and special reverence and comeliness; wherefore they are used for these things, the most excellent, most beautiful and precious things, as gold, silver, precious stones, and such like: which reverences and exterior rites are as it were lessons and invitations to spiritual sacred things, for the obtaining the bounty of the gods”.*²⁴⁵⁸

THE DAEMONE FORMED A
BRIDGE BETWEEN THIS
WORLD AND THE LANDS
OF THE GODS

An idol was therefore only a representation of the deity, mystically linked to the god, a sort of front door step permitting divine worship and the divinity's direct presence, but through the mediation of a *daemone*, the lowest form of spiritual essence, which alone was capable of entering into inanimate lower bodies. At no stage did they see an idol was the god itself, something the *Old Testament* misrepresents. As a part of the telestic rite each idol (ie; resident *daemone* or hero) received its own name, by which the God recognised it, and to which the *daemone* or hero responded upon hearing its mere utterance, *but only if the devotee was holy*. Thus, the same god could be known by many names, depending on how many idols were consecrated to it. Idols were said to have little trouble bestowing favours on behalf of the god who they represented, but only when prayed to, given offerings or serenaded by music and incense.

IDOLS ENABLED PAGANS
TO MAKE CONTACT WITH
THEIR GODS

IDOLS HAD THEIR OWN
NAMES

The task of unravelling the connections between similar and dissimilar names for gods in pagan Eastern Europe becomes even more convoluted once you realise that (according to traditional Chaldean teachings about idols) any given god might have a number of effigies on earth dedicated to it, with each idol of the God known by its own separate name. Divine worship was therefore offered to a specific god via the adoration of variously-named idols. Can we be so sure, that differing names for pagan gods which have survived down to the present day do not represent different gods (which many no doubt are), but simply regional names for an idol venerated in a specific locality. For example among the Slavs and Balts the God of Thunder was known by various names such as Perkunas, Perkuons, Pargnus, Perun and Proven. Were these merely dialectal variations, or are we looking at evidence that there were five main idols dedicated to one and the same god, with each idol possessing its own personal *daemone*, with its own personal name?

The following range of idols (found mostly in Britain, Gaul, Germany the Balkans) conform to a Pan-European format, with the planets Mars, Jupiter and Mercury augmented by a second name, peculiar to a certain locality. They were therefore gods of place, governing a locality assigned to them by the supreme god. In Chaldean theology the life force of each planet took on human flesh each and every generation in the guise of certain privileged Chaldean headmen and women (witches and wizards). When they died an idol was fashioned and consecrated in their honour, receiving their genius or soul after they passed away, in the same way that daemones might be fixed to an idol through the telestic art or idol craftsmanship. One also notes the existence of female matron goddesses and Hercules (witches and heroes respectively).

In antiquity, the Egyptians, Greeks, Romans, Indians, Medeans, Assyrians, Chaldeans and Babylonians had highly developed idolatry, and were eminently skilled in the fashioning of idols. Although the Rus' were said to have been consummate artisans when using a wood medium, it is unfortunate that the only major surviving examples of their idols are often very crude. The crafting of fairly simple images was also evident among the Celts, whose idols resemble those of the Russes in many respects. Nonetheless the more elaborate Slav idols were most likely torn down and destroyed during the conversion, leaving only petty idols remaining. Since the Slavs had inherited Chaldean magical rites,²⁴⁶¹ there might have been a factual link between the *teletic arts* of the classic civilisations and the origins of the idol-craft employed by *Volkhvy*.

In Rus', idols were normally crafted from the trunks of grove trees by *Volkhvy* suitably skilled in idol-craft.²⁴⁶² In areas where slash and burn agriculture was practiced, Slavic idols were normally hewn from stone to prevent the "scandalous" destruction of their deity's image during burn-offs. More often than not Balto-Slavic idols were representations of divine beings, Magi or heroes, something which leads one to believe that they knew the *teletic arts*. We have even greater cause to think this because according to the Arabs, their idols were inlaid with finely cut gems, especially in the eye cavities, since their gleaming facets were believed to be a window into the world, emitting glimmers from the lands of the gods. From depressions left in the pupils of some Celtic idols, and things like the Gundestrup cauldron (which turned out to be Scythian and not Celtic), it is fairly clear that the Celts and Scythians also employed glass or gem-eyes for some images.²⁴⁶³ Even so, Slavic stone *kumiry* (a specific type of idol) were of mixed quality, and in no way reached the pinnacle of Egyptian, Babylonian or Indian craftsmanship, whose artisans gave their idols such life-like appearances.

Indian idols

One can infer from Mediaeval Church sources and archeological specimens, that Celtic and Slavic idols resembled those of the Hindus (see p. 54). *Agni Purana*²⁴⁶⁴ provides fairly precise descriptions of how to make, handle and consecrate idols. Indian idol-fabrication rituals were fundamentally different from the *teletic arts*, for they resulted in the direct presence of the god, rather than a *daemone*-underling who merely acted as a god's representative (as was the case in Chaldeanism and pagan gnosticism). Since we don't have eyewitness accounts of European pagan priests in the act of making idols, we cannot confirm that the following rites were used in the manufacture of Slavic poly-cephalic and many-armed *Daeva* gods.

HINDU TEXTS INFORM
US HOW ARYAN IDOLS
WERE MADE

THE CRAFTSMAN STARTS
CHISELLING

With silk fastened around his arm, a craftsman set to work making an idol, in a shed specially constructed for the purpose.²⁴⁶⁴ Other sculptors might aid him in this task, as the idol's future guardians watched on, playing music all the while. A string of mustard seeds was tied to the idol's arm as a special incantation was recited. With a blessed chisel in hand the artist delicately, and with all reverence, carved the idol's features to the best of his ability.²⁴⁶⁴

GIFTS GIVEN TO THE IDOL

Once this work was completed the artisan and the assembled group of worshippers payed their utmost respects to the image, housing it in a special pavilion, bathing it, and dressing it.²⁴⁶⁴ Bowing low in obeisance, they bestowed upon their new lord the gift of a cow.²⁴⁶⁴

CHECKED FOR DEFECTS

Next they prayed there were no defects in the effigy's construction and prepared to bring it to life.²⁴⁶⁴ Sequentially the priest opened the idol's eyes with a sacred utterance and an anointing, as butter, flowers and mustard were surrendered at its feet.²⁴⁶⁴ The idol was crowned with grass.

THE IDOL IS CROWNED

The priest liberally bathed the image in butter, to the tune of hymns, then sealed the image by caking flour onto its surface. A short while thereafter the gluey paste was scrubbed away with the aid of hot water.²⁴⁶⁴ It underwent purificatory ablutions, washed in a river, a holy precinct, in a water source wherein gems had been placed, and with streams of water from consecrated pitchers. Steaming hot water completed the ablutions.²⁴⁶⁴ The surface of the damp image was then dried with a powder comprised of five different species of soil. Once dusted off, the washings continued.²⁴⁶⁴ Firstly herbs were boiled up, and the watery tincture poured on the idol, followed by an anointing with various dairy products, and water laced with fruit juices.²⁴⁶⁴ Even more incantations were uttered, and precious perfumes smeared on the steadily more divine image.²⁴⁶⁴ Garlands were draped around its neck, as were herbs and a holy string.²⁴⁶⁴ With the utterance of the requisite mantras, its head was bathed in incense.²⁴⁶⁴

ANNOINTED WITH
BUTTER

GARLANDS

THE BRAHMIN CALLED
THE GOD'S
CONSCIOUSNESS INTO THE
IDOL

Next the Brahmin entered into a meditative state, drawing the god's consciousness down from the ether. Using the power of his will, the Brahmin imprinted parts of the celestial being's form and mind onto the idol.²⁴⁶⁴

THE IDOL HAD TO BE
CARED FOR

Sequentially he brought to life the god's arms, mind, heart, olfactory senses, legs and genitalia by writing the required hymns on the god's body parts, both physically and mentally.²⁴⁶⁴

IDOLS WERE FED, AND
WENT TO BED AS NORMAL
PEOPLE DO

All this having been done, the idol became a physical embodiment of the god, the divinity itself at one with the effigy.²⁴⁶⁴ Appropriate household goods were then supplied to the god, for its earthly needs.²⁴⁶⁴ These goods were of necessity used by its custodians, who performed every menial task for the idol, and gave homage at all times.²⁴⁶⁴

WHEN AN IDOL GREW
TOO OLD IT WAS THROWN
INTO A BODY OF WATER

Indian idols had their own daily routine; eating, drinking and sleeping. When an idol's guardians wished to put it to bed, they sang the *ato deva* hymn.²⁴⁶⁴ *Agni Purana* also relates that images were taken to the river for a ritual bath, mounted upon a vehicle, and there worshiped atop a river-side wooden platform or pier against a background of music and hymns. At the end of the day's proceedings, the idol returned home once again, to its place of rest in the temple, to its bed.

NERTHUS WAS DRIVEN
ABOUT IN A CHARIOT

When an idol began to look jaded, worn out with the lapsing of ages those of wood were incinerated. Old stone idols were treated somewhat differently. Their cloth-draped form was driven to a coastal area on a wheeled vehicle, and plunged into the depths of a water body, preferably the sea, to the sound of music. On that day the old effigy was laid to rest, and a new one consecrated and raised.²⁴⁶⁴

These features call to mind Tacitus' references to the Germanic Goddess Nerthus; "*They believe that she (the Earth Mother Nerthus) takes part in human affairs, riding in a chariot among her people. On an island of the sea stands an inviolate grove, in which, veiled with a cloth, is a chariot that none but the priest may touch*".²⁴⁶⁵ She (perhaps meaning the idol of Nerthus) is paraded about the countryside on the chariot to share in the festivities that took place throughout many parts of heathen Germany. Upon cessation of the gaiety "*the chariot, the vestments, and (believe it if you will) the goddess herself, are cleansed in a secluded lake*". Following this the goddess and the chariot are returned to the grove in which her presence (and most likely idol) dwelled.

MEAT OFFERINGS SLUNG
AROUND THE NECK OF
IDOLS IN THANKSGIVING

As you will recall from the beginning of this chapter, Slavic idols were also put to bed in elaborately constructed and decorated towers and purple-bedecked temples, they were dressed, and indeed covered with inscriptions (perhaps written mantras or power words).

Herbertus' account of a Prussian grove mentions the presence of an idol coated with a thick layer of bitumen (a

substance derived from crude oil).²⁴⁶⁶ The closest parallel to this can be found in Ancient Egypt, where the idols of demons were habitually dressed in tar.²⁴⁶⁷ Bearing in mind that an unknown number of pagan Prussians also worshiped the Graeco-Egyptian pagan gnostic god of healing Asclepius²⁴⁶⁸ (under the name Asceutus), the link need not be that tenuous.

The Eastern Finns kept a chest containing carved effigies of their ancestors in their holy *Lud* or *Kuala* cabins. This might have an Egyptian parallel, though whether there is a connection is uncertain, or even unlikely. You see it was the custom in Egypt that each generation an idol should be made, and kept by the priests. In this way they knew how many generations had lived there.²⁴⁶⁹

The idol sanctuary which the Russes of the Upper Volga worshiped at consisted of a mound upon which was raised a post with the face of a god chiselled into it. This god was surrounded by a series of smaller idols who were allegedly the issue of that same god. Whether or not these were really ancestor idols is difficult to say. Another translation makes the smaller idols the daughters and wives of the main idol.²⁴⁷⁰

To reward these idols for their gifts and support, a Russlander gave them the meat of slaughtered cattle and sheep, which he deliberately hung around the necks of the idols. The worshippers watched on as dogs entered into the sanctuary, and converged on the meat offerings which they eagerly devoured. So it would seem that a hopeful querist or thankful worshipper was assured that a god was well pleased if dogs ate their gifts to the idols. We know this because the visibly happy Rus merchant went on to exclaim "he (the god) has consumed my gifts". Therefore it would be proper to say that the god of these Rus' merchants was either personified as a dog, or that dogs merely acted as agents or familiars of the god, and their mouths were as the mouth of the god itself, who truly ate the sacrifices offered to it.²⁴⁷¹

For what its worth, Norse carved wooden posts provide exceptional parallels with idols made in ancient Babylon or Medea in the Achaemenid period. On the balance of probability these idols were fashioned by Magians using the telestic arts. One Russian word for an idol was *stod* (masculine) or *stoda* (feminine), which had the additional meaning of "a god" or "a goddess".²⁴⁷² Linguists believe it came from the Old Scandinavian *stod* ("a post", or "a column"),²⁴⁷² though there the *stod* has lost its original religious meaning. By implication Scandinavian pagan idolatry was found in Russia too, and what is more, their idols were in the form of carved posts. Archeological and historical sources confirm that this was frequently the case.

Consider the Norse carved posts (figs 128.1 and 128.4) which were found at the Oseburg grave site. Commentators normally interpret them as prow ornamentation for longships, perhaps even cult objects, since a number of them were interred at the aforementioned site. However I believe they were idols, and in particular Magian effigies depicting lions. Firstly they bear a stark resemblance to Babylonian (fig 128.5), Persian (fig 128.6) and Scythian lions (fig 128.2, 128.3).

Stylistically speaking Medean renditions of the lion were tamed somewhat around the 4th Century BC.²⁴⁷³ With their ferocious, menacing aspect stripped away they looked more like a common house cat, though they still retained their leonine features.²⁴⁷³ Medean craftsmen often portrayed canine and avian predators resting on the backs of ibex and feline beasts which featured on their socketed metal standards.²⁴⁷⁴ These varied images were often intertwined with great skill, creating an aesthetic hybrid anthropomorphic image.²⁴⁷⁴ One of the Oseburg "lion-posts" (see fig 128.4) also had a bird on its back, pleasingly integrated with the interlaced reliefs adorning the neck and head region.

Norse idols might normally be kept in a barn temple. In *St Olav's Saga* pagans related the following details about their idol of Thor, which they kept on a certain farm, and which received hundreds of willing visitors.

*"we have a god who can be seen every day, although he (Thor's idol) is not out today, because the weather is wet, and he will appear to thee terrible and very grand, and I expect that fear will mix with your very blood when he comes into the Thing". "he bore the likeness of Thor; had a hammer in his hand; was of great size, but hollow within; and had a high stand, upon which he stood when he was out. Neither gold nor silver are wanting about him, and every day he receives four cakes of bread, besides meat".*²⁴⁷⁵

IRANIAN GODS
WORSHIPPED AT KIEV

In the eastern world idols were often carried about on wagon-like vehicles. According to Al-Nadim's sources Indian sun-worshippers gave worship to an idol of the sun (in human form) that drove along in a horse-drawn vehicle. It had its own personal servants, money, land holdings, and was constantly serenaded by music, and cared for as one might a living being of high status.²⁴⁷⁶

Indian moon-worshippers had their blacksmiths fabricate idol-vehicles too, albeit duck-drawn.²⁴⁷⁶ This is almost an exact description of a metal contraption found in the Balkans, dating to the Bronze Age, long before Alexander's invasion of India.

In 11th Century Norway the pagans had a similar observance, for Thor's idol was mounted on wheels. Dragging his carriage along signified a pious act of service towards Thor.

The Russian Idols

Our best information on the Rus' idols comes from the *Primary Chronicle*, a strange little episode that on face value leaves one with the distinct impression that the Rus' idols were the brainchild of Khagan Vladimir. While it is fairly strange that no other mention of indigenous idols was made for the pre-980AD period, what information the *Primary Chronicle* does tell us is very revealing; a solitary entry which unveils the true identities of the heathen gods worshiped by the Kievan Rus' State c.980 AD. We took a look at the "multi-national" pantheon of *Kapishche* idols raised by Vladimir (the Rus' Slav Khagan with the *Bulgar* name) in the year 980 AD on p. 152. They were predominantly Iranian gods plus a *Daeva*. Some had simply been assigned another name, and retained their other attributes and patronages, whilst others kept their original Iranian titles. Demon idols are entirely absent from the royal line-up. That is not to say they were unknown, simply deprived of state worship. The names of certain Iranian archdemons found in Magian scripture have been amply preserved in Russian folklore.

If the names of these Slavic gods are traceable linguistically to Iran and Central Asia, it would not be improper to suggest that Iranian religious thought was important during the formative stages of pagan Slav religion, and considering a plethora of anecdotal evidence, that many Slav pagans were practicing Magians. To illustrate this point, if Russian idols had names of Zulu provenance you could deduce with some conviction that there were Zulu influences, particularly if there were also apparent continuities of Zulu culture in Slavia, which accompanied the linguistic survivals. Obviously such an eventuality is improbable. But just one look at a map shows how close Russia is to Persia and the Caucasus. The pagan Slavs and Russes are, predictably, known to have travelled to these parts during the Middle Ages, for business, war, and other matters. *These Kievan idols without question belonged to people who were Magian.* Unless they were already being worshiped by Magi in Rus' for some time prior to Vladimir, they most likely belonged to newly-arriving pagan Silver Bulgar Magi migrating to the Balkans, a people who we definitively know were Magian on account of Arab testimonies and through the analysis of elements of their surviving religious architecture.

Moreover, since Orthodox Zoroastrians did not fashion idols, these particular Rus' Magians evidently belonged to an earlier wave of Zurvanites, since Vladimir's pantheon incorporated the veneration of *Ahuras* and the *Daeva* Indra.

I have focussed upon the Bulgar origin of these effigies mainly because certain Bulgars were deemed to be Magian, they did migrate from the Caucasus and Islamicised Silver Bulgaria moving west and south-west, and their temple designs were so to speak Sassanian in nature.

The *Old Testament* provides numerous Jewish accounts of the way Babylonians behaved towards their idols. The descriptions are for the most part only crude and fairly straight forward observations of idol crafting and idolatry, that do not seek to explain the philosophical basis that lay behind them. For instance *Isaiah 46: 1-2* mentions that the Chaldean idols of *Bel* and *Nebo* (in Russian the word *Nebo* means "the sky"), among others, were loaded onto donkeys to be taken away following the fall of Babylon. What this shows is all perfectly understandable, the actions of the Babylonians in attempting to save their idols from harm and destruction.

In the 10th Century AD Al-Nadim described the Chaldeans of his day (the same sort of priests that served the

idols of ancient Babylon) moving their idols about on barges when they needed to transport them.²⁴⁷⁷

Al-Masudi described the arrival of a four-armed golden Aryan *Daeva* idol at Baghdad, brought all the way from India. As a result of the Muslim holy wars in India this idol called *Shugl* (together with a number of other smaller effigies) was taken back to the heart of the Caliphate as booty, and immediately diverted to a police station upon arrival, and one might suspect, impounded.²⁴⁷⁸ What this shows is that idol-worshippers are likely to have taken their idols with them when forced to leave their homeland, whether by ship or by wheeled vehicle.

While the Bulgar scenario is, to my mind, the most likely reason for the late raising of the idols in Kiev, we should ask the question; if they were imported from elsewhere, where else could they had come from? Here are some options;

1. The idols were withdrawn back to Kiev from Black Bulgaria as it became more and more Christianised.
2. The idols were brought into Rus' by fugitive Western Slavs (Poles), whose country had only recently converted to Christianity (966 AD).
3. The idols were brought to Rus' by Vladimir sometime following his overseas stay in Scandinavia while trying to muster a Norse army to deploy in the civil war against his brothers. Under this option some or all of these idols would have originated in Scandinavia, or even Ireland. But if this were the case where was Odin? Freyr? Thor? While it is possible that some of these gods could conceivably be discretely tucked away within the Russian Pantheon, disguised by Slavicised titles, it should be noted that they traditionally kept their own names when worshiped by Scandinavian colonists in Western Europe and the British Isles. In these locations there are many place names which have names traceable to Norse gods. Even so there is a mounting case that an undetermined number of Norsemen were Magians, especially among those living in Dublin.
4. The Rus' idols belonged to Paulician heretics who had fled into Rus' from Asia Minor, or to some of the 200,000 Paulicians who might have migrated north into Russia and the Ukraine after their forced resettlement in the Balkans under John Zimesces. In his *Fields of Gold* Al-Masudi recorded that the faith of the Paulicians was an open blend of Christianity and Magianism, something which corroborates the account supplied by John IV, a former leader of the Armenian Church. The nature of the pagan Rus' "pantheon" fits neatly into this category.
5. The idols were brought there by Zoroastrians fleeing the failed 930 AD uprising in the Middle East.

Earlier in the book I posed the question as to where the primary idols (*kapishche*) may have been situated prior to Vladimir bringing them to Kiev and Novgorod. It is also plausible that Vladimir's pantheon was artificially created as a goodwill gesture toward the various tribes now offering him their allegiance. Did he, for example, recommend a pooling of the tribal *Kapishche* (patron gods) at Kiev, as a sign of the federated nature of the early Rus' state? Such a manoeuvre would conform to Aryan practice, for the *Agni Purana* recommends that victorious kings incorporate rather than suppress local gods in captured areas. At the very least, Vladimir's choice of divinities was a political statement. Under his rule, the Kievans were to pay homage to Iranian gods, the gods of state.

Unfortunately we have no historical accounts of wheeled-idols in Russia, so once again linguistics must come to the rescue. Earlier you read of Rouen's olden name (*Rotomagus* ie; "a wheeled-Magus"), and the body of a Celtic prince laying in state on a wheeled couch, wearing a white pointed hat. From this we might guess that idols of the Magi, or even their inert bodies, were transported about on wheeled vehicles, if only for ceremonial purposes. Hence the concept of "a wheeled-Magus". In the Old Russian the words *kolimog* and *kolimag* meant "a tent". Other related words such as the Belorussian *kalamazhka*, the Old Czech *kolimah* or the Old Polish *kolimaga* all meant "a horse-drawn wagon". In the Ukrainian we discover that *kolimaga* meant "a freight wagon" whereas *kolimag* meant "a tent".²⁴⁷⁹ Since there is a sound connection between tents and wagons, the tents described were probably of the mobile variety, normally mounted on the back of the vehicle.

Perhaps a wheeled-Magus was simply a wandering Magus (or group of them) deputised to visit remote settlements in their wheeled wagons. Since *kolimags* were apparently affiliated with the word *khram* "a temple",²⁴⁷⁹ it is exceedingly likely that the wagons in question were sometimes mobile holy fires, or idol houses that the widely-

VLADIMIR'S CHOICE OF IDOLS WAS A POLITICAL AND RELIGIOUS STATEMENT

dispersed country folk visited, whenever Magus wizards visited their area for certain festivals. They also served as transport for fire during resettlement.

One linguist has even suggested that these words are collectively related to the Old Turkic *kulungu* (“a small boat”).²⁴⁷⁹ If it is then it might describe a wheeled boat, sometimes used for the amphibious transportation of religious objects and dignitaries. Earlier in this book you witnessed Russian wind cars. In the early 1100’s, the *Gesta Abbatum Trudonensium* reported the manufacture of a wheeled-ship near Aachen (Belgium). It was subsequently moved to Maesdricht to be fitted with sail and mast, hauled overland by weavers. Beyond there the procession visited a number of settlements along the way to Trond, where the Chronicle’s author got his first glimpse of them.²⁴⁸⁰ The abbot there must have sensed there was something untoward about the whole affair, and his reception for them was most unflattering. Other citizens of Trond thought differently, especially the ladies that rushed to the two-week-long night-time ceremonies conducted around it.²⁴⁸⁰ On account of the partial nudity, rejoicing and revelry taking place there, a great many (supporters of the abbot) wanted the land-ship burned, but other activists turned out to protest against such designs. Escaping the controversy, the vessel set forth yet again, but was refused entry to Louvain.²⁴⁸⁰ After that the Chronicler made no further mention of its ultimate fate.

In another isolated incident a 12th Century German Catholic priest saw a crowd of pagans (in festive spirits) near Cologne, clustering around a wheel-mounted, boat-like vehicle which he believed was carrying a devil (idol).²⁴⁸¹ Nobody knows where the landship finally ended up. Nor do we know who built it.

These two separate testimonies suggest that pagans in 12th Century Germany and Belgium knew how to make wheeled-boats; and what is more, the Church was none too happy about them. Perhaps the rejoicing associated with these craft might have been a celebration of the 907 AD victory over Constantinople. This is only speculation, but for argument’s sake the Romans once encountered Celts celebrating an important military victory that transpired several hundred years earlier. Perhaps it was a religious occasion, the attendees drawn to cult idols or well-placed pagan dignitaries on board the craft. When all the evidence is tallied though, there is obviously more substance to the *Primary Chronicle’s* wheeled-ship account than first meets the eye.

The Magyars supposedly lent their name to the term *mazhara*, which was used by the Crimean Tatars when referring to their mobile homes, which were covered, four-wheeled wagons.²⁴⁸² I am unaware if this is the original meaning of Magyar in the Hungarian.

Based on the aforementioned meanings I believe *kolimag* originated from an agglutination of the words *kolo* (“wheel”)- *mag* (“a sorcerer” or “a Magus”). As with Rotomagus, *kolimag* probably originally meant “a Magus on wheels”. It should be noted linguists do not believe that *kolo-* formed the root of *kolimag*.

We are extremely unlucky that no copies of Masudi’s *Historical Annals* have survived because it contained so much information on the pagan Slavs that Masudi mentions in *The Meadows of Gold* that he need not say another word about them. Perhaps Masudi made further reference to the land ships, but we will never know for sure unless we find a copy somewhere or other. Despite the fact that *the Primary Chronicle* is the only surviving source in which a full account of the wheeled-ship assault is recorded, other forms of available evidence tend to add weight to a story which might otherwise seem like a fairy story. Therefore, the non-existence of a corroborative written account should in no way be viewed as proof that a given event did not occur. And let’s face it, if there was ever an era in which information went missing, the Middle Ages was it. In this book I discuss the factors which led to the emergence of so many books dedicated to the ancient sciences and the occult, and the subsequent destruction of these “forbidden books” in blazing pyres at the hand of Church authorities. And in the Byzantine east, in one of the Anatolian provinces, Al-Nadim relates that a colleague of his was personally shown through a repository for ancient manuscripts which had been housed in a subterranean vault, built in antiquity from marble, and whose massive iron doors were kept sealed by the very same Byzantine authorities who kept its precise location a closely guarded secret. These books did exist, but now they don’t, or are they still awaiting discovery?

The *Primary Chronicle* mentions nothing of pagan idols in Rus’ prior to those raised by Vladimir. But the pagan Kievans certainly had them, and there are several good reasons for this. Firstly, Bulgar and western Slavic temples have been excavated, built in the pre-980AD period, which were modelled on Iranian temples, with a large central tower to house the sacred fire and largish idols.

IDOLS IN WHEELED SHIPS

HERETICS SUPPOSEDLY
GATHERED AT COLOGNE

Secondly philology supports the existence of Magian cult sites in Slavia, including those for the adoration of royals, such as were formerly known in in the pre-Sassanian era. Most of them were converted into fire shrines during the Orthodox Zoroastrian reformation, by Karter's command. As the Orthodox Zoroastrian Sassanians expanded their boundaries into regions formerly part of the Parthian and Achaemenid Empires, they frequently encountered idol and fire shrines that had been continuously maintained throughout that period by adherents of Parthian and Achaemenid religious observances.²⁴⁸³

Jewish writings clarify certain aspects of the royal cults associated with paganism throughout the eastern parts. The Talmudic TRACT ABUDA ZARA chapter IV. MISHNA VI stipulates heathens maintained altars for living kings, but erected an idol dedicated to the monarch only after the king died. The royal effigy was traditionally placed on these altars, formerly used in connection with the king's ritual ceremonies.²⁴⁸⁴

Thirdly, the pagan Slavs really loved their idols, and thought nothing of offering animal and human victims to them in worshipful homage. The Russes are unlikely to have fostered these measures if the effigies were alien to their belief system, or thrust upon them against their will. Obviously these idols were of considerable religious significance to the multitudes. Thirdly, from *The Primary Chronicle, The Life of Avraamij of Smolensk*, and the *Lesson on the Life of Boris and Gleb*, we know the Slavs were far from eager to relinquish their idols, or see them torn down. The Arkona idol (toppled by Christian Danes), for example, was guarded by 300 horsemen, a sign of the value attached to its protection. Moreover the Kievans wept bitterly as they chased after the idols which Vladimir had cast down into the river. Not the kind of devotion you would expect a mere nine years later if their prince had forced his alien idols upon them. Without question, Khagan Vladimir's idols were not the first Magian idols the Kievans had ever seen. Moreover it is highly unlikely they sacrificed their children to them if they were held in little regard! We are thus left with the Chroniclers view that the Slavs were a people drunk and deluded with a love of idols. So my guess is the Kievans were not unfamiliar with Vladimir's smorgasbord of Iranian and Aryan gods.

The hierarchy of idols

There were three basic classes of idols in Slavia.²⁴⁸⁵

- 1 *Kapishche* A *Kapishche* or *Kap'* was the primary idol of a god.
- 2 *Kumir* *Kumiry* were second or subsequent idols, of reasonable importance. Sometimes these include effigies of *Volkhov* and heroic cultural figures of antiquity.
- 3 *Bolvan* *Bolvan* or *Bovvan* were interchangeable terms for a *Kumir*, but I use it to designate small effigies or statuettes.

Linguistics provides supplementary information about these idols;

Bolvan

Bolvan, or variants of it can be found in Old Russian, Ukrainian, Belorussian, Middle Bulgarian, Serbo-Croat, Slovenian, Czech, Polish, Latvian and Lithuanian. These were *blvan* (Old Russian: Idol), *balvan* (Serbo-Croat: "an idol" or "beam"), *balvan* or *bolvan* (Slovenian: "an idol", or "a sizeable chunk or block", or "a log"), *balvan* (Czech: "a large chunk or block" or "lump").²⁴⁸⁶ In Belorussian *balvan* (a word cognate with other Slavic words meaning "an idol") means "a wooden post near the corner of the stove".²⁴⁸⁶ The *pechnoy stolb* (literally "an oven post")²⁴⁸⁷ is arguably a similar physical Russian construct. By some strange coincidence in England there was a practice whereby peasants kept "witch-posts" at one corner of the hearth specifically to protect the flame and cooking pots from the vexation of maelific black witches.²⁴⁸⁸ One such "witch-post" (from Yorkshire, a former viking enclave) is depicted in fig 131.2. A closer examination of the

Fig 131.1. A witch post, Yorkshire, England.

Fig 131.2. Slavic idol found at Strya Ladoga, Northern Russia, 10th Century (almost 30 cm high).

post reveals that the top of it bears the image of a crudely carved face; an unmistakable clue these peasants had a wooden idol standing watch over the hearth to stop witches destroying the home hearth fire, which as explained was a task eagerly pursued by warlocks and their ilk. Therefore English and Belorussians probably had similar customs when it came to the positioning of idols in the home.

THE PAGAN RUSSES
LOVED THEIR IDOLS
DEARLY

As unbelievable as it may seem, a carved post, if correctly re-planted, might, under special circumstances, regenerate a new root system and revert back into living trees. Pagans carved pictures or words into timber idol-posts and in some cases their holy trees. There are several instances from heathen France and Germany where living oaks and pines were chiselled with pagan images, as for instance the one found in the Bresle Valley by St Valery.²⁴⁸⁹ It is more than plausible such trees began as decorated posts or idols that reverted to trees, still bearing the images once engraved into them.

NORSE AND SAXON
CARVED POSTS

Norsemen and Saxons carved massive wooden posts, even something as mythologically significant as *Irmunsil*. Into the Christian era there are occasions where Englishmen carved pictures into May-poles, which were probably a pagan survival of the old hewn wooden columns. Carved posts are unlikely to have been made for mere aesthetics. I believe their etched scenes were instructive when viewed in the light of indigenous oral tradition concerning their pagan faith and ancestry. As mnemonic aids “trigger-images” greatly enhance our ability to recall stored information, classes might have been held in front of carved trees and posts, allowing the illiterate, and pagan priests under instruction, to absorb the full meaning of the day’s tuition. For instance mediaeval alchemical tomes were frequently devoid of writing, either written in obtruse sigils, or in colourfully illuminated pictures. These images told their own story, in much the same way as the tarot’s major arcana was a philosophical teaching represented pictorially. Without any knowledge of the accompanying oral lore the pictures are meaningless, and serve to guard their knowledge from non-believers. Where trees were carved they might have had a lengthy lifespan, depending of course on how viciously the bark was chiselled.²⁴⁹⁰

CERTAIN TREES WERE
CARVED WITH RELIGIOUS
IMAGES

SOME IDOLS WERE MADE
FROM STRAW

Equally close in form and meaning is the Irish word *balban* which denoted “a straw effigy”.²⁴⁸⁶ The Irish word is connected with the fashioning of straw idols, which as we know were relatively common in pagan Rus’, Scandinavia and many parts of Europe where paganism still existed. These many terms seem connected with the Polish word *balwan*, which means “a large stone”, “a huge block” or “a piece of rock”, the Lithuanian *bulvonas* (“an idol”) and the Latvian *bulvans* (“a bird effigy”).²⁴⁸⁶ The meaning *bulvans* acquired might relate back to the bird gods they supposedly worshiped with acts of human sacrifice in certain parts of the Baltic, purchased slaves mostly.²⁴⁹¹

RENOWNED WAR HEROES
CARVED INTO IDOL FORM

It has been suggested that these many words are related to the English *bole* and the Old Icelandic *bulr* or *bolr*, which meant “a tree trunk”.²⁴⁹² Moreover the Norse kenning (ancient saying) for “a warrior” or “hero” was a “tree of battle”. This kenning may dimly recollect a time when fallen heroes were immortalised by having their image carved onto a tree trunk or post. A specific link between gods and wooden beams is found in the Old Icelandic *ass*, which meant a heathen Norse god, but also denoted “a pole” or “a beam of large diameter”.²⁴⁹²

THE TERM *BOLVAN* IS
DERIVED FROM THE
PERSIAN WORD
PAHLIVAN, MEANING A
HERO OR WARRIOR

When all is said and done though these many words are probably derived from the Persian word *pahlivan* which meant “a hero” or “a warrior”.²⁴⁸⁶ This being the case it is plausible that these linguistic ties reveal that a *bolvan*, and many variants of the word denoted idols dedicated to *fravashis*, the departed souls of white Magian heroes who could give aid to the living if invoked and given due worship. A Persian genesis for the word *bolvan* is given added credence by the presence of the word *bulvan* in the Old Turkic (meaning “a memorial” or “a memorial gravestone”), and the Kazakh word *palvan* (which also occurs in the Eastern Turkic, Tatar and Uzbek tongues) as well as *balvan*, all of which mean “a warrior” or “a hero”.²⁴⁸⁶

Numerous stone memorial grave markers²⁴⁹³ can still be found across the Russian Steppes dating to the time of the arrival of the Pechenegs, Kipchaqs and earlier horsemen (and their “walking cities” of wagons) from Central Asia. Whether they were worshiped by the nomads is unclear, but based on the more archaic variants, which would appear further westward in Europe, such individuals were no doubt once worshiped.

Here we find evidence of uniform religious terminology spread from Western Siberia and Central Asia right through as far as Ireland, something which helps reinforce the assumption that the Magian diaspora from Central Asia had fanned out in every conceivable direction from the old homelands, even into forested realms not far from

the Roman Empire's more distant borders. Based on this linguistic evidence, we can surmise that idols were normally made from large slabs or chunks of rock, straw effigies, tree trunks, carved posts, logs or beams. In Russia, the words *balaban* or *boloban* (which meant "a fool")²⁴⁹⁴ were probably forms of Christian invective directed against idol-worshippers in the post-conversion era. These words are also connected with *balaban* (meaning "to chatter or waffle on"), no doubt a cheap shot at the many prayers the pagans recited.

Kumirg

Other secondary, grove or village idols were crafted near the main *kapishche* idol that they were supposed to represent, so as to achieve a rendition as close as possible to the original; providing uniform portrayals of the god in question. *Kumir* meant "an idol" or "small god". The origins of the word are rather vague. Some believe it came from the Semitic word *kumra*, which meant "a sacrificer". In the Alanic Ossetian tongue we find that a *kumir* was "a giant", and in the Finnish *kumartaa* meant "to bow down in adoration".²⁴⁹⁵

KUMIRY

Whenever a *Volkhw* Magus, sage, hero, or warrior legend died, the Slavs made a statue of them and erected it in the groves.²⁴⁹⁶ The faithful prayed to it and anticipated the magical intervention of that Magian *fravashi*-saint from beyond the grave, just as Christians expected the miraculous intercession of the Christian saints. Accomplished ancestors and clan heroes of renown were also carved into wood and planted in a grove for veneration by the faithful, but usually only as a *bolovan*.

IDOLS ERECTED IN
MEMORY OF THE
FAITHFUL DEPARTED

But even before they had died the great Magus-wizards and pagan gnostic priests were already gods, living gods, as was debated between Asclepius and Hermes Trismegistus in *Asclepius* :35;

*"those who have soul and breadth, that they are idols - these who bring about these great events. You are saying about these who give prophecies that they are idols - these who give (men sickness and) healing that (...) them".*²⁴⁹⁷

The Norsemen had a word *kumba*, which meant "a sepulchral monument",²⁴⁹⁸ ie; a carved object dedicated to a deceased person. Considering other points discernible in the linguistic etymologies these could be construed as having a religious function, a testimony to the honour and memory of a hero or Magus-sacrificer.

Kapishche or kap'

PRIMARY IDOLS

Linguistic evidence indicates that *kaps* and *kapishche* were religious images. They might be carved statues, or even holy pictures. The Russo-Slavic word *kyp'* which meant "an image" is thought related to these words.

Every significant god possessed a single main idol of great aesthetic value, size, and esteem. So venerated was its image that countless smaller idols would themselves be modelled on it.²⁴⁹⁹ It was through this image that the god's greatest presence could be felt on earth. Known as a *kapishche*, these elaborate effigies were located in the seat of state power, but were preferably erected on the highest possible vantage point above the surrounding terrain, ideally atop mountain peaks; the higher the better. Infernal gods were frequently sited in fens or buried underground to live beneath a mound or barrow, and were worshiped from atop the mound, thus accentuating the subterranean nature of the deity from the counter-world. In the Old Russian *kapishche* meant "a pagan temple", no doubt indicating that idols of this magnitude were housed in temples.²⁵⁰⁰ From historical accounts of the Western Slavs, we know this to be the case. I note a similar correspondence in the Bulgarian *kapishtse* ("a temple"). Once again the Russians and Bulgars appear to share terminologies relating to places of worship. The Russian term *kaplitsa* ("a chapel" or "a shrine") could be related to both the above terms. *Kaplitsa* is in turn related to the Russian *chasovn'ya* which suggests that they took the form of sentry towers, and may have been places where time was kept.

IDOL CHAPELS

In the Finnish Mari tongue a *kap* was "a body" or "a human figure", very likely an idol depicting a human being.²⁵⁰⁰ The Old Norse term *kappi* is almost certainly related to these words; it meant "a hero" or "champion".²⁵⁰¹

TWO-DIMENSIONAL
IDOLS

But in the Magyar language a *kep* was "a picture"²⁵⁰⁰ of some kind, perhaps meaning that some of their most important idols were portrayed in two-dimensions only.

Certainly the Asiatic Mongols had such idols, which were felt tapestries, and it was forbidden for ordinary people to touch them, under pain of death. These idols were transported in tented wagons.²⁵⁰² Idols of this nature were perhaps manifestations of dualistic animism, or forms of Magianism that preceded or superseded the Zurvanite phase of Magianism, during which three-dimensional religious images figured so heavily. This might be confirmed by the Old and Chuvash word *kap*, the Old Turkic *gib*, and the Uighur word *kep*, all of which meant “a picture”.²⁵⁰³ However the inclusion of a Uighur linguistic correlation might indicate that some of these were Manichaeic religious tapestries. That is because the second Uighur Empire had Manichaeism as its state religion.

Kapishche statues evidently existed in the Orient too; the Altai word *kep* meant “a model”, “a block”.

Places of pagan idolatry

THE NUMBER AND TYPE OF IDOLS IN A GIVEN AREA VARIED ACCORDING TO THE DEVOTIONS OF LOCAL PAGANS

The number and types of idols available in any given area, was relative to the affluence of the settlement. Merchants in particular would have been very fond of commissioning the carving of new idols to commemorate the success of business ventures. Other factors which I believe logically shaped the “pantheon” of idols peculiar to a given settlement included local environmental problems, the time of year, infestation by dark influences, rapacious demons, warfare and plagues. Very often though, Slavic idols were those dedicated to their ancestors.

In militant white communes the making of demon-idols dedicated to infernal deities, black Magi, anti-heroes (black fravashis in the form of serpents and demons) and entities from the counterworld was probably punishable by death. Militant black communes would usually had demon-idols of some kind, and being Zurvanites maybe a *kumir* in adoration of Perun, Volos or an assortment of *Daevns*.

Since dualism was practiced by the pagan Slavs, the idols would have been sited in an appropriate location.

IDOL SANCTUARY LOCATIONS

WHITE GODS

- A fenced mound
- A local grove
- A private residence
- A communal / banquet hall
- The market square
- At the side of the road, or in the fields
- A specially-erected shrine

BLACK GODS

- Earthen cellar
- Stone crypt or vault
- Bog
- Burial mound
- Log covered pit
- Cave or grotto

The death of the Rus' idols

The *Talmud* taught Jews the proper method for profaning heathen idols when encountered;

THE TALMUD SPEAKS OF METHODS FOR PROFANING IDOLS

“TRACT ABUDA ZARA chapter IV. MISHNA V.: How is an idol to be profaned? By cutting off the tip of its ear, the point of the nose, or the ends of the fingers, or by disfiguring its face with a hammer, even if thereby nothing is broken off. But if he only spat or urinated before it, dragged it about in the dirt, or cast such upon it, it is not profaned. If a heathen sold or pawned his idol it is profaned according to Rabbi, but not according to the sages.

SMASHING THEM WITH HAMMERS

GEMARA: “Disfiguring its face with a hammer,” etc. Why should it be profaned when nothing of it was lost thereby? Said R. Zera: Because it has thus been made unrecognizable.”⁷²⁰⁴

Pagans treated broken idols and altars differently, according to the rabbis. Only the former maintained an innate holiness, whereas pagans treated the latter as refuse.

ALTARS FOR ROYAL WORSHIP

“TRACT ABUDA ZARA chapter IV. MISHNA VI.: Gemara. “Altars erected for kings,” etc. Are they not, after all, altars of the idol? ... broken idols are no longer worshipped and hence are allowed, does not assert the same with regard to altars, as it would be disgraceful to worship a broken idol, but upon a broken altar an idol may always be put. ... R. Johanan and Resh Lakish said: An altar upon which idols are habitually placed is, when broken, allowable; furthermore, even he who holds that fragments are worshipped allows such an altar, as he namely says: The broken idol

is always, even when broken, worshipfully regarded by the heathen, while no godliness is even imputed to an altar—it is but a mere stand for idols—so that as soon as it (an altar) is broken, it is set aside without any regard. The, following Boraiitha expresses the same view of R. Johanan and Resh Lakish: An altar used as a stand for idols is, when partly broken, allowable; however, an altar used for sacrifices is, when broken, forbidden, until most of its stones fall apart".²⁵⁰⁴

These Jewish traditions underpinned medieval Christian theology against idolatry, providing methodologies for Christian profanation techniques in the post-conversion era. All they needed to do was put it into action.

The Slavic god Triglav's fane was choked with war booty, evidently the proceeds from pre-battle oaths made by warriors worshipping there before setting off on campaigns, over generations.²⁵⁰⁵ Amid the piles of treasure, dazzled worshippers could only have seen physical proof of the god's past munificence. Why else would their ancestors have lavished Triglav with such booty if his powers were not to be trusted? But temples like that of Triglav soon met a swift death once the Christian religious hierarchy found favour with the Holy Roman Emperor. That their idols were just about to be annihilated was totally unexpected by many pagans. They were there one day, but with the sudden appearance of mounted Christian troops, the gods of their ancestors were gone for ever. Only rarely do we have apt descriptions of organised paganism's last moments, but it no doubt went something like this.

Planning for a raid on a heathen enclave began weeks before hand, very often prompted by officials keen to lay their hands on the treasures rumoured to be inside a pagan temple not so far away. Soldiers too became allured by the prospect of booty promised them for participating in a foray. Still others, with pious intent, dreamed of uprooting the heathen sanctuaries, and consummate god's work, the conversion of their nation.

So came the fateful day. Around daybreak a bishop's armed retinue mingled with men-at-arms supplied by whatever nobles were devout Christians, plus soldiers seconded from the German Emperor or a converted Slavic prince, and perhaps even a mercenary or two. Lackeys prepared their horses, women gave them provisions to tide them over on their journey into the heathen parts. Knowing that the pagans were in dire straits, and renowned for putting up a good fight, many probably felt a little nervous, requiring steady slugs of beer or wine to fortify them. Before setting off they converged on a chapel to have their confession heard. There deacons fumigated the battle ready, who kneeled in church as the bishop said mass, to bless their endeavour. This being completed they left the church, mounted up, and headed out, carrying the bishop's standard and a saintly relic or three.

Meanwhile, not a few kilometres away, the pagans were going about their daily business unaware of developments further afield. It was a precarious world for them, the old ways were collapsing, and their dwindling settlements supported the best part of those strong in faith. Amid the defensive works they had slaved so hard over, children played their games, chickens squabbled, and old women sat on doorsteps sewing clothes. Outside the palisade men and women toiled in the fields, along with their straining plough oxen.

The first signs of the impending calamity would have come from a sentry, who spotted a formation of armed riders making their way towards the holy groves nearby. With the sounding of a horn, the alarmed inhabitants ran every which way, adrenaline coursing about their bodies unchecked. The men sprinted into their homes to retrieve weapons, and speedily returned to the parapets or the grove, as others mustered the cows into their pens, or waited for the last of those in the fields to make it back in through the gates, so they could be closed. But the element of surprise got the better of them and many wouldn't even get that far.

The wary and exhilarated Christian horsemen hurriedly dismounted, entering into the grove after killing the irate sentry. Some extinguished the centuries-old holy fire in a split second, yet others set to work kicking down or angrily chopping apart the idols. Some attacked the holy trees, laying them low with woodsmen's axes, others smashing asunder the grove's delicately carved and painted perimeter fence.

Sometimes luck was not on their side, and the pagans made it to their desecrated sanctuary while the Christians were committing the act; red with hate. At such a moment the Christian militia-men could expect a pitched battle, the melee fierce and unforgiving. Perhaps the pagan women were there too, along with their men, firing hunting bows at the grove ravagers. Elsewhere stalwart pagans flocked around their *flamen*, desperately trying to shepherd the priests and priestesses to safety. For their part they would have been most fearful of losing the holy books (in whatever places books were maintained), for if the Christians got ahold of them too, they would lose not only their

sacrificial intercessors, but the knowledge to preserve their religion.

The following account was provided by Helmold, and it adequately describes such happenings:

A RAID INTO HEATHEN
POLAND

*“When we (Bishop Gerold and his followers) came to that wood and place of profanation, the bishop exhorted us to proceed energetically to the destruction of the grove, Leaping from his horse, he himself with his staff broke in pieces the decorated fronts of the gates and, entering the courtyard, we heaped up all the hedging of the enclosure about those sacred trees and made a pyre of the heap of wood by setting fire to it, not, however, without fear that perchance we might be overwhelmed in a tumult of the inhabitants”.*²⁵⁰⁶

PAGAN TEMPLES WERE
STOCKED WITH RICHES

Temples were far bigger prey.²⁵⁰⁷ Once a Wendish pagan temple was gutted, the overburdened temple coffers, and every other furnishing of value, were ripped out and snatched away as booty for the triumphant Christian temple-raiders.²⁵⁰⁷ This is precisely what happened in Frisia and throughout Slavia.

Colourful additions were sometimes added to the more earthly recollections of the Arkona temple’s demise. There, Christian onlookers swore they had flushed out “a demon ... in the form of a dark animal” from the fane’s inner sanctuary.²⁵⁰⁸ Prodigious quantities of bullion stocks, temple donations and taxes were ferried off into Christian coffers.²⁵⁰⁹ What greater incentive could there have been for undertaking the risky business of destroying the holy sites of people ready to die and kill for their faith in the old gods?

RUSSIAN CHRISTIAN
PRIESTS APPLAUDED
THEIR ABANDONMENT OF
IDOLATRY

But as a general rule, the death of publicly practiced paganism was rarely recorded, preserved only in highly sanitised bravado. Russia’s abandonment of idolatry was recorded by Hilarion (the first Russian Metropolitan);

*“Then the murk of our idolatry began to clear, and the first rays of true piety glimmered. The darkness of demonolatry dimmed, and the sunlight of the gospel illumined our land: pagan shrines were torn down, and churches set up; the idols were smashed, and icons of saints were installed; the demons retreated, and cities were graced by the cross; and bishops - shepherds of Christ’s spiritual flock - brought the bloodless sacrifice before the holy altar.”*²⁵¹⁰

ORGANISED PAGAN
RELIGIOUS CENTRES TOOK
A REAL BEATING AROUND
THE YEAR 1,000 AD

At the time of the conversion in 989 AD, Christian soldiers began tearing down “demonic” idols at Khagan Vladimir’s command, Vladimir, the very one who erected them in the first place! According to the *Primary Chronicle* they were soundly whipped with lengthy rods of iron, to punish the “demonic vitae” lurking in the image. Thereafter they were hacked up with axes, smashed asunder by hammers and tossed in nearby lakes and rivers. Many of them were decapitated. Symbolically, through the power of sympathetic ritual, this beheading passed on to the person or deity whose image was defaced in that manner. By beheading the idol, one decapitated the god.

THEY MOVED THE OLD
IDOLS INTO OUT-OF-THE-
WAY PLACES

Volkhvy from the frontier regions no doubt caught wind of the destruction of the *kapishche* and *kumirs* in the major cities, and organised teams of people to uproot the idols and holy fires, and make off with them to more discrete locations. These were re-erected in thick remote forests, or less likely in swamps, caves or wherever the authorities would be unable to find them. Some boyars who sponsored safe-havens for the *Volkhvy* on their estates might also have concealed *kumirs* on their property, tucked away in a barn, which also doubled as a cult site for the local pagan peasantry.

RUSSIAN ORTHODOX
PRIESTS STILL
ENCOUNTERED THESE
IDOLS IN THE 15TH-16TH
CENTURIES AD

As of the 15th-16th Centuries AD, the Russian Orthodox Church was still coming across groves and idols as important as *Kapishche* (and more predictably *kumirs*) in use by local peasants!²⁵¹¹ This helps explain the longevity of Rus’ and Finnish paganism, for undiscovered (and therefore undefiled) groves and major idols were still being employed towards the end of the 19th Century. For the most part though, Vladimir’s policy of extirpating the idol temples sounded the death knell for Europe’s last intact civilisation of idol-worshipping pagans. From that time the priests and priestesses could barely rest, keeping their heads out of the noose, hoping against hope that they, their holy books and teachings would make it into the future ... that they would not be the last of their kind.

SO BEGAN THE BOOK
BURNING, AND THE SO-
CALLED BURNING TIMES

In Part II you will see what grim fate awaited them, as Europe’s much older history went up in flames. It can only be described as an ancient ‘Kristallnacht’ as misguided stooges flung untold numbers of books into the fires of

the new age, and a good many 'disappeared' in like fashion. With the problem permanently 'fixed' history could now be eagerly rejigged, emerging as the much-vaunted Judaeo-Christian version of events, as taught in school.

Endnotes for Part I

Old and New Testament Bible quotations are sourced from the Old King James version. Select quotations from the Magian holy texts come from English translations first published by Oxford University Press in the 1880's, and subsequently reprinted by Mortilal Banarsidas in 1965, having been otherwise out of print since 1887. All other quotations are for research purposes, and are provided here, not for profit, in accordance with fair usage conventions.

1 - *History Begins, The Penguin Encyclopedia of Classical Civilization, The World of Ancient Times, The First Civilizations*, just to name a few books

It has particularly puzzled archaeologists why the more archaic architectural forms of our earliest civilizations were so well executed. What is even worse, these architectural styles by and large lacked any predecessors. In other words there is little evidence they were pre-dated by intermediate architectural forms illustrating the steady evolution of their engineering capabilities. Instead, they appear as fully developed, precision construction projects. If anything there is an over all tendency for the architectural styles to degenerate in complexity and ingenuity as the centuries past. This is a fact. Over the years people have been willing to put forward a variety of outlandish theories to explain this phenomenon, everything from extra-terrestrials to the intellectuals of Atlantis. According to scholars the most believable answers to these questions may well lie in Babylon and Sumeria, the cradle of human civilization. It would appear that the reasons for this were altogether earthly. They were developed by human beings who were the receptacles of knowledge which we would not normally associate with those times. Such technology has been excavated by archaeologists over the years and can be found in the amply documented *Ancient Inventions*, a most engaging book which lifts the lid on the more important discoveries by the scientific communities of antiquity.

The lion's share of humanity's most revolutionary discoveries occurred in Sumeria, Babylon and Ur. And this is the most enduring enigma of Sumerian civilization how did so many startling scientific, cultural and engineering innovations sprout in a single place in such a short period, while humanity lived in virtual barbarism? The search for the evidence which will one day answer these important questions are still being looked for by archaeologists. Soon the Near-Eastern innovations would spread to cities which the Sumerians had considerable dealings, like Mohenjo Daro in India, where an advanced pre-Aryan civilization thrived.

One possible explanation for the sudden blossoming of the more grandiose forms of architecture is the importation of skilled architects and stonemasons from elsewhere, who kept their ground-breaking construction techniques a closely guarded secret, and brought with them the capability to build fully developed styles.

The World of Ancient Time, p. 54-60. In the two earliest eras of Egyptian civilization, the "Archaic Period" and the "Old Kingdom", one sees that their tombs and pyramids have many points of likeness with those of the Sumerians, with the only difference being that the Sumerians had a tendency to use sun-baked bricks rather than granite or other similarly hard substances. On face value, the Sumerian architects may have had some influence on the architectural styles of the Egyptians. The oldest of their pyramids was at Saqqara, and in some ways it echoes the form of the step-ziggurats of Ur. However not too much later than this (c. 2600 BC) the Egyptians excelled themselves by building the geometrically precise Great Pyramids of Giza. Until that point in history, these "true pyramids" were the only ones of their kind in the history of the world. Fairly soon after this, the Egyptians either lost the skills necessary to build such fine structures, or lacked the willingness to engage themselves in such projects. It should be noted though that the quality of their later pyramids seems to go down hill following this earliest phase.

In India, the earliest Buddhist temples were the most precisely executed, and were hewn from substances such as granite. They mirrored the forms of the local Indian wooden temples, but strangely show the influence of Iranian craftsmen, who may even have been responsible for their adoption of stone as a temple-building medium, or may even have been built them in the first place.

The most likely reason for this is that the earliest variants were made from wood, or materials that disappeared with time. Such perishable monuments were witnessed by Herodotus on the steppes of Russia c.500 BC. This point will be explored a little later in this book.

In Pagan Rus' lore, it is said that at the final age a wolf would be released that would consume everything in the cosmos. The origin of this teaching might subsist in Magianism. The Norse Fenris wolf might have similar beginnings.

Jones, H. L. - *Geography , Strabo 15:20* Hospitality was very important in ancient Persia; bestowing gifts and fond greetings among friends were the order of the day. Persians kissed each other on meeting, offering their cheek to a person of lower rank, or kissing the cheek of those of higher rank. Those of relatively low rank neither offered, nor received a kiss, but simply bowed or nodded. This was known as the “kiss of peace”. A similar range of customary greetings seems to have survived in Europe, whether in France, Russia or the Balkans.

208 - There is a common perception that early wheel usage was confined to the building of rickety or cumbersome ox-drawn carts or light chariots. On the contrary, Assyrian seige frescoes (mid-8th Century BC) and Indian texts such as the *Sama Veda* may reveal they had some complexity. In books like *War in Ancient India* and the *Sama Veda* various kinds of vehicles are described which had a variety of applications in commerce and war. Obviously these writings could well be deemed the product of wild imaginations, and it is only too easy to arrive at this conclusion.

Until I saw a wall mural of Sennacherib's army undertaking a siege on Lachish (as shown in *Exploring the World of the Bible lands*, p. 93-95) I had never been willing to entertain the thought that these Vedic references might be actual descriptions of advanced wheel usage. The Assyrian murals depict siege engines (of a uniform design) advancing *up the slopes of a siege ramp under their own power*, followed at the rear by infantry which are firing their bows at the parapets from behind the cover of the vehicle. Modern examples of this can be found during World War 2, when soldiers huddled at the rear of advancing tanks whilst walking into battle devoid of cover, in order to gain some protection against incoming small arms fire. These Assyrian "vehicles" were not drawn by cattle or horses (as were the other carts and chariots shown in the mural), and show no pictorial evidence that they were propelled by soldiers walking on ground. We will never know for sure how they were made mobile, but the answer may be something as simple as soldiers operating systems of pulleys and wheels within the confines of the siege engine.

209 - For an insight into their technological achievements read Thorpe, P. J. and N. *Ancient Inventions*.

210 - *History Begins, The Penguin Encyclopedia of Classical Civilisation, The World of Ancient Times, The Rise and Fall of Civilisations, The First Civilisations, Ancient Iraq*, just to name a few books. In *The Indo-European Language and the Indo-Europeans*, I am told that a Russian scholar utilises extremely involved linguistic arguments to postulate that the Aryans originated not in Russia, but in Anatolia specifically.

237 - Cannibalism, though an uncommon occurrence, remained in India for some time. It was mentioned in India c 500 BC by Herodotus (*The Histories II:99*), and later by *The Primary Chronicle* during the Middle Ages. Even last century British colonial troops hunted down the Thug gangs of India which kidnapped and murdered travellers as an act of devotion to the Goddess Kali who wore jewelry made from human skulls.

450 - Zoega. Western readers will probably be disgusted by this Nordic linguistic reference, which preserves extreme anti-negroid undertones, and what some would call white supremacist notions. Still this is a history book. So a little bit of background is warranted under the circumstances, to explain it in an historical context. Firstly racism is not peculiar to Europe's Aryan immigrants. It's found on every continent throughout the world ... India, Japan, Vietnam, China, Rwanda, Iraq, Israel etc. Since the happenings of WWII white Caucasians have been touted as super-racists *par excellence*, when infact they have embraced racial diversity on a scale never attempted among any other 'racial group'. In the case of the Aryans, the following factors played a decisive part in crafting a xenophobic psychology found throughout certain points in their history.

* **Genetic preservation.** Fair hair and complexions are recessive genetic characteristics. By interbreeding with negroes and Asiatics the fairer skinned segment of the Aryan nations would eventually disappear. In fact the very existence of blondes is undeniable evidence for exclusive interbreeding within that same gene pool over a long period of time. Otherwise it would have died out a very long time ago. Having said that the Persian Empire was built of diverse racial and tribal building blocks. This did not necessarily result in racial inter-breeding on a massive scale, merely societal coexistence united under the king's law, a unified rule frequently undermined by disunity among racial groups.

* **Natural order** Magians were very big on natural order ... things are the way they are because that's the way they were intended to be. Acting contrary to the natural order was considered inverted demonic behaviour. For instance women were tasked with rearing children. This was never questioned simply because women were physically equipped with breasts to feed infants. Men do not have breasts, but are physically stronger, and so better suited to hunting and protecting the group. And so this is what they do. It sounds very primitive, but it has stood the test of

time since the stone age. Now if we take this concept to another level and suggest that humanity consisted of varied primitive racial archetypes (eg; caucasians, semites, mongoloids), interbreeding between these groups might be deemed contrary to the natural order, since it was by the Creator's will that they fell into these categories originally.

* **Geopolitical conflict** Caucasian Europoids (blondes, red-heads, brunettes) had settled in distant China and Siberia some 4,000 years ago. Archaeology gives some insight into their initial east-meets-west experience. In the early phase they lived apart from Asia's traditional inhabitants, wandering the countryside as nomads. But as time went by they progressively interbred with indigenous locals, whether in China or India. Several hundred years before Christ the Asiatics started pushing Caucasians out of the region, compressing them back in toward Europe. From this came a period of two-way mistrust and military conflict between Europeans and Asians, mainly due to, as has been supposed, the former's predatory raiding.

* **Aryan mythology** Now in relation to the racialist ideologies encapsulated by the word *heljar-skinn*, certain unspecified schools of Magi, without question, identified particular human races as belonging to the devil, on the basis of philosophy and certain visual indicators (the relative lightness and darkness of skin colour, physiological traits, disorderliness, crime, laziness, intellectual sloth, a tendency to destroy rather than build civilisation etc). These views were enshrined in Iranian mythology. For example; *"This, too, they say, that in the reign of Azi Dahaka (the Demoness of Greed) a young woman was admitted to a demon and a young man was admitted to a witch, and on seeing them they had intercourse: owing to that one intercourse the black-skinned negro arose from them". (Bundahishn XXIII:2)*. Negroes became, in effect, part human, part demon. This was of course not typical of all Magians, only the white isolationists and preservationist elements. Many Magi mixed in with the Hindus and Semitic races of the Near East, especially during the early period when Asuras and Daevas were adored in equal measure.

Olmstead, p.124. As a point of reference the Babylonian monarch Hammurabi seems to have taken pride in his treatment of negroid or Indian subjects stating *'I was not careless nor was I neglectful of the black heads whom Bel presented to me and whose care Marduk gave to me'*. It looks to be a boast, indirectly stressing that his impeccable and lofty regal behaviour stood well above that of his subjects who, one might guess, thought rather differently about the matter. In some respects Persian monarchs hoped to model themselves on Hammurabi in this respect, though some may have adhered to a more dualistic perception of the matter. This gave rise to a certain multi-culturalism which had its own pitfalls for the integrity of the Achaemenid Empire, not the least of which was the profusion of different languages which, at times, must have made the Persian army difficult to coordinate.

* **Philosophical/Religious conflict** The Aryan priesthood widely regarded Jews as demon spawn, not so much because of their race, but owing to their theology. The Magi expounded that, based upon the scripted activities of Yaweh, the god of the Jews was the *'fiend who is leader of the hell which is the den of the gloomy race, whom the devilish defiled ones and evil people glorify by the name of the Lord, and offer him homage'*. (Sikand-Gumanik Vigar XIV:82-86)

"In these three modes (Judaeo-Christianity, Judaism and Islam who equally teach of god's jointly merciful and punitive aspects) the sacred being gives evidence of different kinds about his own creatures. One is this, that he himself is Aharman; one is this, that he is himself the deluder of the creatures; and, in the other, he makes his own creatures confederates involved with Aharman in deluding". (Sikand-Gumanik Vigar XI:273-275)

Jewish Magi, being party to the old Aryan cosmology, did not fall under the same level of anathematisation as their pharisaic and sadducean brothers. That is because they felt god was not the ultimate source of harm. Through their efforts notions of the devil begin to infiltrate rabbinical judaic literature in the post-exilic era. The *Book of Job* seems to indicate the existence of an independently-acting evil, destructive force, unrelated to the supreme being. It, and its fiendish ilk, wandered about the world, suggesting that its preferred dwelling space was the material world. The new-fangled teaching, alien to pre-exilic judaic ideologies, undeniably comes from white Magianism, inevitably imparted to certain Jewish priests and rabbis, plausibly in the royal courts of Cyrus and Darius. The following *Old Testament* scripture will give you a better idea.

'Now there was a day when the sons of God came to present themselves before the Lord, and Satan came also among them. And the Lord said unto Satan. Whence cometh thou? (ie; where in the hell have you come from?) Then Satan answered the Lord, a, and said, From going to and fro in the earth, and from walking up and down in it'. (Job I:7)

The statement "Whence cometh thou?" is a profoundly important portion of this scripture, a novel yet wierd introduction to Jewish monotheism. Here god appears to greet the Evil One as though they'd never met. From here

it appears to diverge into a sort of Magian Zurvanism as Satan tells the Lord he can make even his most pious creations despise him as their creator. God decides to put Satan's theory to the test and accepts his dare. But first of all Satan suggests that god should invoke the calamities personally, saying *'Put forth thine hand now, and touch all that he hath, and he (the pious man Job) will curse thee to thy face'. 'And the Lord said unto Satan, Behold, all that he hath is in thy power; only upon himself put not forth thine hand. So Satan went forth from the presence of the Lord'. (Job I:11-12)* In other words god said *'Satan, you go and do it'. 'And the Lord said unto Satan, Hast thou considered my servant Job, that there is none like him in the earth, a perfect and an upright man, one that feareth God, and escheweth evil? and still he holdeth fast his integrity, although thou movedst me against him, to destroy him without cause'. (Job II: 3)*

Here the devil is sufficiently powerful enough to entice the supreme being into destroying a righteous and innocent man. What follows for Job is a period of relentless, excruciating destruction and chaos. Under the more ancient rabbinical model you have to take out an eraser and remove the devil entirely from this picture. This leaves only a single deity, who, if you displease him in only some small way, your punishment may be out of all proportion, and in no way related to your level of spiritual piety.

A comparable event is chiselled into the teachings of the Magi, the most likely source of the doctrines which led to the tale of Job. In Magian theology, god is the fountain of endless light, originator of all purity, wisdom and goodness. This tranquility came to an abrupt end the moment the dark spirit of evil stumbled across the light, somewhere in infinity. *'The evil spirit, on account of backward knowledge, was not aware of the existence of Auharmazd; and, afterwards, he arose from the abyss, and came in unto the light which he saw. Desirous of destroying, and because of his malicious nature, he rushed in to destroy that light'. (Bundahishn I:9-16)* He was convincingly beaten back, though returned with reinforcements to attempt a victory through renewed violence and supreme malevolence. And the devil beheld all that god had made and he was jealous indeed at their magnificence. The wicked spirit imperiously declares that he will ensnare all god's special creations, enticing them to worship him, and his entirely different value system. He will lure mankind into worshipping the abomination himself, namely the root source of all desolation. He would usurp the place of their true creator, masquerading as the divine being, so as to win over creation from its original source. For this reason the white Magi identified the doctrine of a creator-destroyer (the single principle), as the cardinal sin, the very reason for mankind's fall from grace in the first place.

As in the tale of Job, the Magi tell us that the material world is the devil's domicile; *"Hell is in the middle of the earth; there where the evil spirit pierced the earth and rushed in upon it, as all the possessions of the world were changing into duality, and persecution, contention, and mingling of high and low became manifest"* (Bundahishn III:27)

In Magian legend a similar dare to that found in Job, from the Evil One to the supreme being, proved to be the origin of the war between light and darkness. *'And Auharmazd spoke to the evil spirit thus: "Appoint a period! so that the intermingling of the conflict may be for nine thousand years'. Then the evil spirit, unobservant and through ignorance, was content with that agreement' (Bundahishn I: 18)*. It amounted to a declaration of war, of finite duration. The battleground? ... the chessboard of physical existence. So began the primordial duel.

The sublimely pure and majestic spiritual being lauded by the Magi wasn't good at destroying through fighting. It wasn't in its nature. To hold his ground in the world Ahura Mazda needed the assistance of loyal servants, ready willing and eager to tackle evil-doing head on, to cross swords with the Evil One and his earthly minions. Normally these servants took the form of kings, white magi, soldiers, doctors, teachers, judges, lawmen and imperial officers, very often incarnate angels and saints. Their job was to suppress lawlessness and chaos throughout the world.

* **Under siege** Aryan Magians were hunted down like filth for the last 2,000 years, mainly for daring to suggest that the god of the Judaeo-Christians, Jews and Muslims is practically indistinguishable from the devil when you sit down and examine their holy texts in elaborate detail. Their real crime was to suggest that the supreme being is a whole lot more loving and compassionate than he is portrayed in these other faiths. Spiritual damnation did exist, but it was not an act of god, merely a parting of the ways on Judgement day. One flock goes off to the heavenly father, the other to their father in the underworld. They were chased out of their homelands, slaughtered throughout Iran and Europe. As they were squeezed into smaller and smaller parcels of land, especially after the European conversions to Christianity, they became significantly vengeful. In this book you will see their forces attacking various locations, whether it be Jewish Khazaria, Iran, Moorish Spain, the Holy Roman Empire and

Byzantium, followed by enemy counter-attacks and ceaseless warfare. As you will see in Part II many of them were left with no other option than to convert to one of these other faiths or be stripped of property and title, burned alive, tortured or summarily executed. It was like repeatedly thrusting a stick into a wasp's nest. At the end of it all you end up with a lot of very angry people who just want to be left alone, to live life according to the ways of their ancestors ... or else!

- 595 - Cross, Sherbowitz-wetzor. *The Primary Chronicle*, p. 72 *"The Russes set out across the sea, and began to ravage Bithynia. They waged war along the Pontus as far as Heraclea and Paphlagonia, and laid waste the entire region of Nicomedia, burning everything along the gulf. Of people they captured, some they butchered, others they set up as targets and shot at, some they seized upon, and after binding their hands behind their backs, they drove iron nails through their heads"*.
- 596 - Rawlinson, *The Histories Book IV:103.*
"They (the Tauri) offer in sacrifice to the Virgin (the Tauri told Herodotus she was the daughter of the Trojan King Agamemnon) all shipwrecked sailors, and all Greeks compelled to put into their ports by stress of weather. The mode of sacrifice is this. After the preparatory ceremonies, they strike the victim on the head with a club ... and nail the head to a cross ... The man who has taken a captive cuts off his head, and carrying it to his home, fixes it upon a tall pole, which he elevates above his house, most commonly over the chimney ... These people live entirely by war and plundering".

- 675 - The involvement of Magyars in support of a fledgling Christian regime is difficult to reconcile with a host of other information indicating that a certain number of Magyars were Magian. Were these particular Magyars of another faith, say Christians, Animists, Muslims or Jews? Or might the garrison have been indirectly led by white Magi deeply concerned by the political activities of other Magi to their north? With a name like Amos, one might guess that the Magyar force was headed by a Christian or Jewish Magyar.

- 734 - I first obtained a copy of the *Book of Veles* in mid-1999 and was stunned to see how many points in the text matched various findings in *Before the Burning Times*, which was virtually completed by that time. Many of these features could only have been deduced via a multi-disciplined study, incorporating historical, mythological, historical and comparative religious sources. If it is a forgery, then it would probably have been a collaborative effort between academics. The dating of the inscribed boards becomes crucial. If for arguments sake they dated to before 1850 AD, the chances of them being a forgery are negligible, because the information contained in them was simply unavailable to academics prior to that time frame.

There a large palace was built using what seems to have been classical Roman architectural principals. Pliska remained the Bulgar capital until the relocation of primary rule to Prejслав.

- 971 - Ibid. , p. 349-350. However unrelated it may be, one chap I met in Ireland in 1998 claimed that he saw his parent's farm in County Galway fall on very lean times. Their property had faltered agriculturally despite their intense efforts, whereas all the surrounding farms were thriving. To make matters worse they found an object resembling a nest, hand woven, placed at one corner of the field. From this arose suspicions that their misfortune was not entirely natural ... witchcraft perhaps.

- 1008 - Moulton, J. H. *The Treasure of the Magi*, p. 137
- 1009 - *The Treasure of the Magi*. Unfortunately Moulton regarded their penchant for rote-learning as symptomatic of their lack of intelligence, when in fact it really signified their desire to propagate their faith in a relatively pure and undefiled form. It's a demanding method that mindless cretins should steer well clear of. Although Moulton studied the Zoroastrians, such comments show that he held their priests in little regard. These were men of extreme piety, albeit a piety which others may not appreciate.

- 1075 - I believe that the level of perfection achieved in the crafting of stone idols and earlier stone architectural forms, as noted in India (performed by Persian masons), Egypt (especially), and to a lesser extent Greece and Rome, was achieved, in a number of instances, without any great need for metal tools. Instead rock surfaces were hewn and shaved back quickly and easily with the aid of dolerite (a very hard rock which archaeologists have found shaped into hand tools), or by diamond tipped cutting instruments, and diamond dust scourers (for polishing granite, basalt, etc) which the Babylonian gem engravers are known to have used.
- To give you an example of the excellence attained by these craftsmen we find in India a casket dating to the Mauryan period (c 322-185 BC), which was made to house Buddhist relics. The object was carved from a large piece of crystal and is one of the finest examples of stonework ever seen in Asia. (*The Penguin Encyclopedia of Classical civilisations*, p. 215.)

- 1208 - The Tokharians have been equated with the Yuehzhhi in ancient Chinese historical sources, a folk characterised by their white Caucasian complexions and red, brunette or blonde hair. Following hostilities with the Chinese (the most catastrophic being in 140 BC), the Yuehzhhi were largely expelled from the Tarim Basin region. Many of them were Buddhists, and therefore carted their belief system toward the setting sun.
- The later Huns possessed Caucasian and Eurasian physiology, and their constituent tribes controlled a broad expanse of land stretching from Europe to the quite distant Tarim Basin area. The period of the Hunnish excursions into Europe typified the westerly dispersions of these diverse nations out of Asia, which, as mentioned, began in earnest from the second century BC onwards, owing to heightening levels of conflict with the Chinese.

This trinity is, I believe, the true origin of the Bogomil or more especially the venerable Massalian trinity (see p. 781), heretical creeds which arose among the Balkan mediaeval heretics, and no doubt the result of Pagan Slavs migrating into the Balkans following the conversion of Kievan Rus'. This point will be addressed later throughout Part II.

1274a - In Zoroastrian and Magian mythology, Gokard was the world tree that sprouted from the ocean on the first day. It provided the fruits and seeds that led to the restoration of the world and the immortality of creatures. *And here is where the similarity with Nemet' comes in.* The roots of Gokard were constantly being attacked by serpents, in particular the lizard, a beast dear to Ahriman, but nevertheless it stood defended by 10 large fish, creatures big and mean enough to chew through anything, and who fought only for Ahura Mazda. Towards the end of the world it became spindly, with a single root, and *denuded of foliage*, through the actions of the fiend.

Bundahishn XXVII: 2-7. From Gokard came three types of medicinal plants, some which cured bodily ailments, others to restored waning "vital energies" to the body, and others which performed both forms of treatment at the same time. Bundahishn makes mention that the Magi knew of 55 cereal grains, 12 medicinal plants and 110,000 other plants which supply dyes, gums, oils. But above all Gokard was the great tree of immortality. It grew at the base of the mountain from which all the water flowed. These life-giving waters nourished the tree. The fire bird landed on its branches and flew down into the water carrying the seeds of regeneration with it. After the great fire bird (Russian: Zhar Ptitsa) swished the grains in the water, the constellation Sirius caused the waters to rise up annually, which had the effect of spreading new buds and sprouting vegetation. Ancient Egyptians also realised that Sirius caused flooding.

Bundahishn XIX: 1-7. In the ocean, beneath that tree, was a mammoth creature that defended the good servants of Ahura Mazda. It was known as the three-legged ass. It was white and had many eyes, ears and mouths, plus a single large golden horn which sprouted a thousand smaller horns (*a formidable set of antlers maybe?*). The story of Gokard and the three-legged ass with ambergris dung carries possible linkages with the *Haoma* imagery found on a Rus' temple wall. If so, the poetically charged description of the ass was referring to a hart which stood in the presence of the mighty *Haoma* (ash) tree!

- 1513 - Instances where Europeans set foot on Australian soil before Captain Cook's arrival escaped the historical record. We see aboriginal cave paintings of ships in Arnhem land, and obscure etchings thought to have been left by sailors on the Western Australian coast. By and large they seem largely mythological, as for instance the mahogany

ship, guessed to be a Portuguese shipwreck. Travellers occasionally claim to have seen buried in sand near Port Fairy, but it has eluded the clutches of professional and amateur archaeologists so far, if indeed it exists at all. Far more bizarre is the case of the Geelong keys, a set of keys hacked from the walls of a mine during one of the earliest phases of Victorian colonisation, in the 1800's. They caused a sensation at the time but subsequently disappeared so that we can no longer verify the matter. Perhaps they constituted physical evidence of a pre-British European presence on the Australian mainland, perhaps even a very ancient one considering that they were found embedded in underground sediments.

1516 - *The Histories*, p. 103

1517 - *Reader's Digest - Quest for the Past*, p. 180-181. One scholar has written a book which shows that some of the data supplied by Ptolemy was potentially forged by himself (or later transcribers), with the odd measurement fabricated using predictive mathematics to validate Ptolemy's theories. His main accusation against Ptolemy is that his work is too accurate, even by modern standards, though I am willing to suggest that this might only be because Ptolemy used data which had been tested and retested by his predecessors over centuries, or even the product of data extracted from astronomical computers they used such as the Antikythera mechanism shown on p. 518

1540 - This system used multiples of 6 and 60. Based upon an equation found on a tablet unearthed at Kuyunjik, we know that Babylonians toyed with numbers of such immensity that they would never again be written by human hand until the Renaissance. With astronomically unfathomable numbers like 196 thousand billion, they were so much more than bean counters. These sort of sums were beyond the comprehension and capabilities of later Greek and Roman mathematics prodigies. (Ceram, C. W. *Gods, Graves and Scholars*, p. 219).

1541 - As depicted in *Magic in the Middle Ages* and *Ancient Hindu Astrology - for the western astrologer*.

- 1622 - In relation to the Alphabet of the Kings I would like to single out the diligent compilation of magical symbols put together by Gettings in *The Dictionary of Occult, Hermetic and Alchemical Symbols*. The author of this tome has gone to great pains, combing through manuscripts of a magical nature. All the examples he provides have their date and source listed. This book traces (amongst other things) the propagation of the Alphabet of the Kings from the 2nd Century AD through to the Middle Ages, then the Renaissance, then throughout the 16th, 17th, 18th, 19th and 20th Centuries.

1768 - *The Three Books of Occult Philosophy I*, XXXIV

1769 - Freaque's translation of Agrippa is a super-tome of almost 1,000 pages, containing anything you ever needed to know about the ancient occult traditions of the Classical, Mediaeval and Renaissance worlds, plus a sumptuous range of footnotes that explain any and all terms unfamiliar to the modern reader. Some would call it a masterpiece. Although it contains much invaluable information, it does lack the incantations which would have accompanied these operations. We might presume that the incantations were especially sacred, and only ever passed down orally.

The Jewish Talmud, codified in 4th Century AD Babylon, appears to mention similar re-usable graves.

VOLUME VIII.--EBEL RABBATHI. CHAPTER XIII.

A. *One who gathers or guards the bones is exempt from reading Shema, prayer, and all the precepts commanded in the Torah, and if he desires to be rigorous with himself, he must not do so, for the honor of the dead. R. Johanan b. Nuri, however, said: He should step outside a distance of four ells and read. Ben Azai said: If they were with him in a boat he should remove them to another place and read. R. Itzhak said: Only from the bones of relatives he is exempt; from strangers, however, he is not. R. Simeon said: He is exempt only on week-days, but not on Sabbath. R. Nathan, however, said: He is exempt only when the bundle (of the bones) is on his shoulders, because the duty of guarding it is on him, but not of prayer.*

B. *One who removes bones or the Scriptures from one place to another, must not place them in a wagon, a boat, nor on a beast under his seat: however, in order to preserve them from thieves or robbers, he may.*

C. *It is not allowed to pass through a cemetery with the phylacteries on, nor the Scriptures in the hand, as it is considered disrespectful to the dead.*

D. *One finding a corpse in a grave must not move it, unless he is certain that the place was only borrowed for him. One finding bones on marshy ground, must put them in a grave. Such is the decree of R. Aqiba. The sages, however, say: He must not move them. One who finds bones in a grotto or a cavity must not move them. A corpse or his bones must not be moved from one place to another, even if they are equal in esteem, much less if the other place is lower; he may, however, do so from a lower to a higher place. However, if he moves them to a place on his estate, he is allowed to do so, even if the former place is more esteemed. D1*

Two corpses must not be buried in one grave, nor a corpse with bones, and vice versa. R. Jehudah, however, said: If they used to sleep together when alive, they may be buried together.

E. A building over a grave which was vacated, no benefit may be derived from it; if, however, it was excavated in a rock, and also the grave itself, when it was vacated a benefit may be derived from it; nevertheless, it must not be used for low purposes, such as a cow-house, straw-barn, etc. A grave which was dug for a person who was yet alive may be sold; but if for one who was already dead, it may not. The same is the case with monumental stones.

No benefit may be derived from a vacated coffin. If it is made of stone or clay, it must be broken, and if of wood—burned. Boards of the cemetery must not be moved from their place.

1942 - Vasmer. *Vol III*, p. 26. The Old Russian word *mov'* (meaning 'a bath house') was derived from the verb *myt'* ('to wash'), and other Slavic variants with similar meanings; *miti, muti, muji*. It is also apparently related to the Irish word *mun* ('urine'). The earliest antecedents for these words might have been the Old Indian *mutram*, or the Avestan Persian *muthrem* ('uncleaness' and 'filth').

- 1998 - If we apply Iranian lore concerning Ahriman's control of the celestial bodies, then the Great Judges of the

Pagan Russians were probably controlled by Chernobog (in other words Ahriman). The Magian holy books depict the planets as the henchmen of Ahriman, who daily crashed into the celestial sphere of the zodiacs in order to sow grief in the world.

1999 - Not only did the auroras tend Khors' chariot, steeds and every whim, but they ensured that the "Great Hound" remained in firm bondage within the celestial realm of the Little Bear. If it should ever free itself from its fetters, all of existence would be devoured by its awesome jaws.

Part II

The Beginning of the End

Foreword

In the closing decade of the 16th Century, an enterprising Dutch scholar named Callidius sent the Catholic Church apparatus reeling in dire panic. Foreboding news had reached them. Somebody was trying to publish and circulate a book that drew a clear distinction between Magi and devil-worshippers. Someone was about to break the silence.

Motivated by a desire to rectify a perceived legal travesty in his day, Callidius boldly advocated that the death penalty due to maelific witches ought not fall upon certain Magi. These particular Magi were, more properly, white witches, many of whom were also devout Christians. As a result of the inquisitorial process they were being improperly branded as dark or 'satanic' witches, and sentenced accordingly. By his estimation the Inquisition was out of control.

What was even more troubling, is that Callidius managed to ferry his writings to Cologne, to be run through the print presses ... destined for mass circulation. Sensing the grave urgency of the situation they apprehended the author, and interdicted his work before it could ever be made public. Still they could not rest easy. Some remained deeply concerned that copies had somehow vanished out into the urban sprawl. In 1593 AD, after his subsequent arrest and imprisonment, Callidius was hauled before the courts, and there renounced his detested articles. In the main, onlookers were oblivious to the magnitude of what was being ideologically buried that day.

Who could have guessed another 412 years would have to elapse, before the general thrust of Callidius' repressed book can finally be made known to a lay readership. *The Forbidden History of Europe* tears the lid from an enigmatic historical sepulchre, to reveal what is arguably the most willfully-abandoned era of European and Islamic history. Over all, the plot line bests that of any fantasy novel, all the more so because the following events actually took place. Witness a time quite alien to ours; an age of kings and wizards, when a dying religion found refuge in Europe.

Introduction

Two thousand years ago a brown-haired, blue-eyed¹ child was born of royal Jewish stock, who came to change the face of the world in untold ways. Rarely in history do single individuals affect not only centuries of human experience, but millennia. Jesus of Nazareth, the Virgin-born, was one such person, who, we are told, was God, and

at the same time a man of flesh and blood. In this book, we will examine the formation of the Christian Church, the 'Mystical Body of Christ', tracing it from its earliest years, through to the Middle Ages.

According to the teachings of the Church, initially gathered and formalised at the First Holy Council of Nicaea (325 AD), Christianity is a monotheistic religion based on a belief in 'the Holy Trinity', one God consisting of three indivisible persons - The Father, Son and Holy Spirit. Each part may be described as follows.

God the Father

The Father is the Creator of all things, from whom nothing evil comes. He is omniscient, omnipresent, omnipotent and eternal. He is love, mercy, goodness, light and truth. He does not tolerate darkness or evil, and judges them swiftly and righteously.

God the Son

Christians are taught that God impregnated the Virgin Mary by virtue of the power of His Holy spirit, and gave birth to Himself in the flesh, thus becoming the Messiah, the once-off earthly manifestation of the creator himself. This entailed the fertilisation of a human ovum (within a sealed womb) with the divine spirit, a supposedly historical event which, in theory, meant that Jesus was that part of god which for 33 years existed in the flesh. Jewish prophecy foretold that the Messianic saviour of their people would be born into the world to walk amongst us and share our humanity. The greater part of Christ's life is however largely unknown, which seems strange indeed. On Good Friday He suffered death and was buried. He descended into the world of the dead for three days and revealed Himself to the souls who had long awaited his coming, yet had been unfortunate enough to have been born in an earlier age. He then returned from beyond the grave to instruct his twelve apostles about further mysteries concerning himself, following which he ascended up into Heaven, where now He is said to sit at the right hand of the Father, until he returns again to judge the living and the dead. Jesus is also referred to as the "Second Adam", who undid the sins of the first, by alighting upon the world, to be sacrificed for the sins of humanity throughout all ages. His coming as the long awaited Jewish messiah of David's line caused much conflict. He fulfilled every past prophecy concerning this "anointed one" and travelled about performing miracles so compelling that blind, lame, diseased and possessed people were healed. He is recorded as displaying control over the forces of nature, plants and animals, and on several occasions raised the dead. His remarkable and chilling prophecy about the destruction of the Jewish temple found fulfilment in 70 AD under the legions of Titus. The destruction of the Jewish genealogical records at the command of the despotic Herod, and the Roman programme for the liquidation of the royal house of David² further complicated the messianic expectations of the Jews. If Jewish royals with Davidic blood were no longer verifiable, how could the Messiah belong to a future time?

Christians believe eternal life is only possible through repentance and belief in Jesus, as Christ himself emphatically declared that he was the one and only gateway to the Father, the tool of redemption so to speak. He was going ahead of us to build a new kingdom with his own body, and mansions for his flock, each member of which he already knew by name. Christ's mission did not herald an overturning of the current Aryan or Jewish strata of society, for to do so would have been to destroy the very things the Father created; a denial of the goodness of His creations. Instead, he would build on and reinforce the order of society by reiterating the powers of authorities. His coming was not so much to change the world, but to make humanity stop sustaining Satan, *His Adversary*, by feeding him the food of sin. Inherent in His great mission was the desire to kill the supremacy of sorcery and the people's belief in inescapable fate, which was governed by the cosmic rulers of the universe.

God the Holy Spirit

The Holy Spirit is "The Helper", that part of God which is said to have been sent into the world as a sign of his seal on the souls of His people, on the prophets more so. God's life-bringing spirit would come to dwell within our temples (bodies), sanctifying us and teaching us God's laws. Appearing as a raging fire, or a white dove, the Holy Spirit, the divine sanctifying force, reached unto the farthest reaches of the cosmos, and giving life to God's many creations.

CHRISTMAS CELEBRATES THE DIVINE INCARNATION OF JESUS CHRIST

COLOGNE CATHEDRAL, ALL THE MORE HOLY DUE TO THE PRESENCE OF THE THREE WISE KINGS' RELICS

WHY AREN'T CHILDREN TAUGHT ABOUT THE IMPORTANCE OF THE WIZARDS IN CHRISTIAN HISTORY

WITH THE PRESENT LEVELS OF JUDAISING IN THE CHURCH THE ARYAN WIZARD RELICS ARE BECOMING A LITTLE EMBARRASSING

Every year, around the winter solstice, Christians all over the world gather to celebrate Christmas, the birth of Jesus Christ, God the Son in flesh. As they assemble for Christmas mass, most will notice the nativity scenes so characteristic of the festive season. Bored children often feel drawn to investigate the small statues which, in some small way, remind them of the toys they've just received from Santa Claus. They see sheep, a cow and a donkey, not to mention St Mary and St Joseph. They behold their saviour as a baby, laying in a common crib, over straw. To one side stand Jewish shepherds and the other an entourage of eastern kings with expensive presents for the prophesied Messiah. Very early copies of the Bible refer to the kings as Magi, the spiritual lords of the Orient. Generally these priests of the old Iranian religious order were held to be divine and incarnate archangels, possessing miraculous spiritual powers, and an impressive command of medicine and the sciences. The event itself was known throughout the early Church as the Epiphany (from the Greek *Epiphaneia*: brightness, manifestation).

Inside the grand imperial cathedral of Cologne, in Germany, one will be in the presence of what is alleged to be the mortal remains of these same Three Wise Kings. At other esteemed European cathedrals Christmas parishioners have the added bonus of staring up at gargoyles and weird engravings. Collectively these things point to an alternative Church history, one no longer to be discussed.

Children attending Sunday school will no doubt have been taught the significance of Mary, Joseph, baby Jesus, and the shepherds. But the meaning of last remaining elements of the scene, the Magi, remain obscure to them. They are, to be more precise, deliberately passed over in silence. Roughly 700-1,000 years ago, after a period of papal reform, the Magi became a topic of disdainful reflection, and the key subjects of medieval censors keen to rid the so-called nativity texts of their presence. This almost-extinct species of ancient and medieval literature referred to the 'lost years' of Jesus, and placed the Messiah in very unusual places; Egypt, India and Mesopotamia.³ All the fuss is hardly surprising, particularly considering that the Magi were wise men, the good wizards.

As youngsters look into the faces of the Three Wise Kings none will perceive in them Christianity's greatest controversy. In Part II you will explore the possible importance of this delegation of wizards at the birth of Christ. To achieve this you must be taken on a journey back some 2,000 years, to a celestial observatory somewhere inside

the Persian Empire. Later you will venture to Europe in the grip of genocidal fervour, with Christian wizards being burned to death across the face of the continent ...

It is night time and magus astronomers are busy adjusting a Greek-designed fixed astrolabe, examining certain constellations. Meanwhile other Magi are busy scanning the heavens for portends from the divine being Ahura Mazda. The desert air is chilly, so they rug up, and rub their hands to keep warm. A shrill shout is heard, as a nervously-excited astronomer points to a quadrant of the heavens, drawing his colleagues' attention to what he has observed. An unknown star has suddenly appeared, perhaps a comet. Intrigued astronomers look heavenward in awe, their straining eyes intently fixed on the event. All concur; stellar phenomenon of this kind represents the descent of *khwarenah*, an archangel bearing heavenly glory, signifying the birth of a divine prodigy. The sages consult the astrological almanacs and prognosticatory texts of the ancient fathers, their pages faintly lit by a torch, and flapping somewhat in the breeze. The verdict is beyond question; a great king is almost born. Since it is around the winter solstice it can only mean the birth of a Sun, a Sun-king. 'Who is this king that Ahura Mazda should light the sky in such a way?' Foreboding tones reply 'judging by its appearance a king who is in great danger'. They note its westward movement. Exhilarated by the star's importance, the astrologers enter into consultation with their monarch, who advises that a delegation be sent to this Lord whose earthly incarnation was imminent. Heading a small diplomatic retinue, the magus-kings, Lords Gaspar, Melchior and Belthazzar⁴ are dispatched in haste, bearing gifts and greetings, some on camels, others on swift white chargers. Some say another nine Magi accompanied them. They follow it far, over many lands, until at last they see it enter the land of the Jews. They ponder over how they will find the boy among Jerusalem's many houses and workshops. Perhaps the locals would know, and since most Jews spoke Aramaic they had but to ask. Everywhere they enquired:

'Where is he that is born King of the Jews? for we have seen his star in the east, and are come to worship him'.⁵

News travelled fast that the Magi were in Jerusalem seeking out a Jewish king, and this greatly troubled the authorities. If such a thing were true the chief priests and scribes of the Jewish temple would surely know the child's identity. But since Herod had burned the tribal genealogical listings such a question may have been harder to answer than in prior centuries. So King Herod summoned them into his presence, enquiring where this birth might eventuate. They replied;

'In Bethlehem of Judaea: for thus it is written by the prophet, And thou Bethlehem, in the land of Judah, art not the least among the princes of Judah: for out of thee shall come a Governor, that shall rule my people Israel'.⁶

His worst suspicions confirmed, Herod summoned the Magi and sought a private consultation with them, hoping to ascertain what significance they attached to the star. At the conclusion of the brief meeting, the Roman puppet Herod told them to seek this 'king' in Judea, but bade them return to his palace with news of the potential regal interloper with legitimate claim to his throne.

'When they (the Magi) heard the king (Herod), they departed; and, lo, the star, which they saw in the east, went before them, till it came and stood over where the young child was. When they saw the star, they rejoiced with exceeding great joy'.

'And when they were come into the house, they saw the young child with Mary his mother, and fell down, and worshiped him: and when they had opened their treasures, they presented unto him gifts; gold, and frankincense, and myrrh'.⁷

These three gifts had special spiritual and symbolic significance to the Magi, for in presenting them to prince Jesus the wizards had an opportunity to divine an omen from the heavenly lord. In a superficial way their attendance in Bethlehem resembled Buddhist monastic visitations, as monks wandered the countryside looking for a replacement Dalai Lama, the reincarnation of one just passed. By presenting children with a departed Dalai Lama's goods monks hoped to identify which infants recognised personal possessions from the Lama's life.

Jews BELIEVED A MESSIAH WOULD ARRIVE TO SAVE THEM FROM THE STERN HAND OF THE GENTILE

SOME FELT CHRIST WAS HE. THESE JEWISH CONVERTS WERE NAZARENES

NAZARENES BELIEVED THE NEW MESSIANIC FAITH WAS STRICTLY AN EXTENSION OF JUDAISM

born to woman, unprecedented that is except for the Buddha, himself an Indian prince in his first incarnation. Was Jesus' far-reaching popularity due to an act of god, or were there additional extenuating political and religious factors that allowed for his worship on a world-wide scale, through the passage of two thousand years.

The ancient Jewish writings spoke of a Messiah (literally 'The Anointed One', and by inference a king, priest and prophet) who would one day appear and save them from the predations of their enemies. He was to be of King David's line. Many aspiring candidates surfaced throughout Jewish history to claim that title, usually with disastrous consequences for their followers. At the time of his ministry, the Sanhedrin typecast Jesus as a magician and false-messiah who duped swathes of Jerusalem into believing that he was God (infact an incarnation of the divine being himself), in an attempt to rip apart Judea. But in reading the accounts of Josephus (a Jewish traditionalist who sided with the Roman invasion force) concerning the siege of Jerusalem, it does not appear Christianity achieved any major successes among the Jews. Christ received only a cursory, though favourable mention.⁹ By and large mainstream Jewry simply ignored Christ. After all he had gone on a moral crusade throughout the holy city. He had overturned the tables of money lenders in the temple precincts, castigated the Rabbis as sons of perdition, teaching that the ten commandments were merely a sketchy outline of a more perfect law of goodness. He even prophesied the utter demolition of Solomon's temple, and slaughter such as they could never imagine (more than a million Jews are said to have died in the rebellion). Be that as it may, Josephus' writings suggest isolated segments of Jerusalem's populace, maybe several thousand strong, saw Jesus as a divine being.⁹

From the very earliest pool of Jewish converts came the Judaeo-Christian Church of Nazareth, the Nazarenes. The sect maintained that Gentiles (Hebrew: *goyim* meaning 'heathens', 'locust') had to become Jews through circumcision before they could become Christians, an ideology found condemned in the *New Testament*. Following a formal council of the Apostles (held c. 49 AD in Jerusalem), members of this Church faction (whose original church building has been excavated by archaeologists in the Middle East)¹⁰ either withdrew back into mainstream

Jesus' birth was an incarnation rather than reincarnation, and so differed from the conceptually similar Buddhist tradition. In the comparable Magian custom by choosing gold the child was bound for earthly kingship, frankincense priesthood and myrrh the craft of physician. According to medieval lore Christ is said to have selected all three, and indicative of his station as king, priest and healer.

As the Magi chatted with the mother, adoring the swaddled new-born before them, they learned this was a virgin birth. They stared at each other in wonder. In Magian prophecy such a detail could only reveal the baby king's status as a divine saviour prophet. As these ostentatious proceedings unfolded, humble Jewish shepherds looked on quietly in the background, having made their way to the birthplace as well.

*'And being warned by God in a dream that they should not return to Herod, they (the Magi) departed into their own country (Persia) another way.'*⁸

Joseph too experienced a prophetic dream from God, advising him to escape to post-Ptolemaic Egypt. And so they left in haste, rushing the baby Jesus to safety until the death of Herod. In hindsight they must have been grateful for this spiritual insight, since within a short space of time Herod ordered the death of all infants two and under (the so-called 'Holy Innocents'), in the hope of slaying this potential royal adversary.

On that one starlit night Jews and pagan kings shared the cramped confines of the stable, looking down into the innocent face of Jesus Christ. Little could any of them know what marvels would occur through him in the years to follow. And so it all began, the unprecedented global worship of one

Jewish or Christian religions or stayed with their own Judaeo-Christian community. Considered heretics by the wider Catholic (ie; Universal, or Jewish/Gentile) Church, the cult suffered isolation and is thought to have died out over centuries.

As hateful as the Rabbis and temple priests may have been of Christ, it is noteworthy they did not proceed to claim his many miracles were a sham or non-event, but all too real. The list was considerable. Curing incurables, transmuting physical substances, walking on water, controlling the elements, expelling demons and, most importantly, resurrecting the dead, one of whom passed away days previously. Instead, according to a long-standing Jewish tradition, Christ went into Egypt and there learned the arts of the magicians, with which he then proceeded to deceive the people and trample the vineyard of Israel.

He was, by their estimation, a magus, a wizard. From that time Christians were regarded as *Minim*, the heretical servants of Balaam. Accordingly, Jesus' name was struck from the *Talmud* forever, and only in unexpurgated versions, which existed until 1645 AD, appeared as 'Na-Notzri', 'The Fool', 'The Hung', 'That Man', 'the so and so', 'He whom we may not name', 'Absolom', 'Ben Stada' and 'Ben Pandera'.¹¹ The strongest attacks against Christ appear in the *Toldoth Jeshu*, a treatise formed from Jewish apocryphal legends and sayings concerning Christ.

If Jewish attempts to identify Jesus with the royal Magi are to be hypothetically believed, Jesus must have come to Jerusalem not merely as a reformer of contemporary Judaic religious inadequacies and malpractice, but to confront prevailing rabbinical notions about the divine being, centring on the worship of their tribal God Yaweh, their name for the supreme being.

And there is certainly evidence, not only for this, but a very ancient connection with the Far-East. You see the biblical patriarch Abraham (who had a special rapport with the Most High God) once lived in Harran, the prestigious holy city of the Chaldean wizards, the priests of ancient Ur in Mesopotamia (Iraq). Acting on spiritual locutions from the Most High, Abraham migrated, with his family, to Canaanite districts, then into Egypt to weather a famine in the former parts. Abraham then returned to find the promised land. It was there that Abraham first met King Melchizedek (literally the 'King of Righteousness'), who ruled at Salem (the old name for Jerusalem). Nothing further is mentioned of the king at that point. Later, in the book of *Joshua*, Jerusalem is said to be ruled by the Amorite King Adonizedek (possibly a descendant of Melchizedek). As with Abraham, the Amorites originated in Mesopotamia, but had resolved to colonise the geographical area of modern Israel. The inward easterly migration of Israelites from Egypt to such an agriculturally marginal zone inevitably brought war to the Amorites, Mesopotamian settlers spread throughout the area. After a great battle Adonizedek was hanged by Joshua, along with another four Amorite monarchs. It goes on to say 'As for the Jebusites the inhabitants of Jerusalem (presumably a sub-division of the Amorites), the children of Judah could not drive them out: but the Jebusites dwell with the children of Judah at Jerusalem unto this day'. Moving on to the second book of *Samuel* the Jebusites had regained control of Jerusalem. David recaptured the city and ordered the mass-killing of Jebusites. After this a temple was built for the God of Israel at Jerusalem, remaining forever more, the primary holy site of the Jewish people. Gone was the tented tabernacle. Now the home of the Israelitish God was immortalised and glorified in stone.

One could be forgiven for thinking that the Jebusites were entirely liquidated had it not been for the *New Testament*. The book of *Hebrews* 5-7 explains that Jesus was proclaimed by the Most High God to be a priest 'after the order of Melchizedek', presumably a reference to the ritual order once practiced by the priest-king Melchizedek, and therefore the Amorites, and by extension some kind of eastern tradition. It goes on to say that Jesus came to re-teach the Jewish Levitical high priests, the 'first principles of the oracles (ie; ancient prophecies) of God'.

'If therefore perfection were by the Levitical priesthood, what further need was there that another priest should rise after the order of Melchizedek, and not be called after the order of Aaron'.

Jesus was from the tribe of Judah, a people unmentioned by Moses with respect to the priesthood. Being, as it were, drawn from the rubrics of Melchizedek, Jesus' priestly order belonged to a pre-existing nation, a pre-Mosaic nation then dwelling in Jerusalem, and not to Aaron's temple high-priesthood. As a priest-king, Melchizedek's office and power continued beyond death; and so everlasting.

JEWISH TAKEOVER

CHRIST DISDAINED THE
LEVITICAL PRIESTHOOD

Christ fulminated against the Levitical priesthood in inflamed sermons, as graphically portrayed in the *New Testament*. Shortly before prophesying the desolation of Solomon's temple, Jesus launched his most vilifying salvo.

HE CALLED THEM A
BROOD OF VIPERS

*'Wherefore ye (the Rabbis) be witnesses unto yourselves, that ye are the children of them which killed the prophets (ie; those who performed miracles, and heard spiritual messages from the Most High). Fill ye up then the measure of your fathers. Ye serpents, ye generation of vipers, how can ye escape the damnation of hell?'*¹²

Jesus foresaw a continuation of this mutual animosity between the two camps. Speaking of His future missionaries Jesus said to the priests

*'Wherefore behold, I send unto you prophets, and wise men, and scribes, and some of them ye shall kill and crucify; and some of them shall ye scourge in your synagogues, and persecute them from city to city.'*¹³

THE MAGI WERE WARY
OF CERTAIN ASPECTS OF
JUDAISM

Christ was not the only one to crusade against Jewish religion. Jesus' florid, demonising invective closely resembles that found in Magian scripture, that openly linked Jewish teachings with the dark side. On account of the great demon's crushing retribution against Ahura Mazda's creations and devoted followers, the Magi saw the God of Israel as essentially demonic. His outlandish behaviour, and seemingly destructive and vindictive nature was hardly divine, matching that of the great demon, as these excerpts from Magian scripture testify. In the beginning there was only darkness. That the God of Israel uttered '*Let there be light*' (to give rise to the light amid the darkness in which he lived) was, they believed, a sure sign that he was in reality a demon, even more so because he paused to consider the light that he had made, stating '*it was good*'. Light was therefore a novelty to him at the moment of its creation ... he was simply mesmerised. According to the Magi, the *Torah* was full of '*iniquity and demonism*', little more than '*twaddle*'.¹⁴ Here the Magian texts probably allude to lines of Jewish scripture like;

BY THEIR RECKONING
YAWEH'S WAS TOUCHY,
UNPREDICTABLE, GIVEN
TO REVENGE AND THE
UNLEASHING OF
ATROCITIES

*"I form the light, and create darkness: I make peace, and create evil: I the LORD do all these things".¹⁵
"And I will give thee the treasures of darkness, and hidden riches of secret places, that thou mayest know that I, the LORD, which call thee by thy name, am the God of Israel".¹⁶*

THEIR CONCERN OVER
THESE PHILOSOPHICAL
MATTERS WAS RECORDED
IN MAGIAN SCRIPTURE

These must have been profoundly disturbing passages for your typical non-zurvanite Magian of Sassanian times, seen as empirical testimony for demonolatry.

The Magian refutation text begins with a summary of Jehovah's attributes

'I am the Lord, seeking vengeance and retaliating vengeance, and I retaliate vengeance sevenfold upon the children, and one does not forget my original vengeance'.¹⁴ It goes on to say; 'His charger, also, is the drying wind, and from the motion of his feet is the arising of a whirlwind of dust. When he walks the arising of fire is behind him'.¹⁴

MUCH OF WHAT THEY
SAID WAS UNFLATTERING

Condemning his behaviour yet further, we hear '*he slew six hundred thousand men, besides women and young children, out of the Israelites in the wilderness; only two men escaped*'.¹⁴ As if that wasn't enough, '*he casts distressed worshippers who are reverent, listening to commands, and pure in action, together with others who are sinners, into eternal hell*'.¹⁷

The Magians were scathing of Jehovah's seething hatred of their religion:
'the sacred being (Jehovah), at the day of the resurrection, gives the sun and moon, together with others who are sinners, to hell for the reason that there are people who have offered homage to them'.¹⁷

His justice did not appear modelled on any reasonable standard of fairness;
*'though Adam committed sin, the curse which was inflicted by Him (the Lord) reaches unlawfully over people of every kind at various periods'.¹⁸ In summation the author of the Magian text *Sikand-Gumanik Vigar* states:*

'Now if he be a sacred being of whom these are signs and tokens, that implies that truth is

far from him, forgiveness strange to him, and knowledge is not bestowed upon him. Because this itself is the fiend who is leader of the hell which is the den of the gloomy race, whom the devilish defiled ones and evil people glorify by the name of the Lord, and offer him homage.⁷⁹

In effect devotees of Yaweh were typecast as demon-worshippers. The Magi, like the Jews, also expected the coming of a Messiah, a final saviour. His primary function was to destroy the apparent victory of the Evil One through his power to resurrect everything from the eternal annihilation visited on creation by the devil. At the hand of the provident Redeemer, Death lost its horror for all time.

Whereas those beholden to a more Jewish monotheistic model saw the Magi as vile blasphemers, and retaliated with taunts of their own. During the Middle Ages it seems the radiant *Ahura Mazda* was dubbed Lucifer, the demon of the false light.

Having earlier compared Magian and Jewish conceptions of the divine being, we can now proceed to tackle the history of Europe's conversion from paganism to Christianity, armed with the most important tool of all, a basic understanding of several similar, and in once case radically different, monotheistic models.

Chapter – The primitive church

A traditional portragal of The chureh's first gears

With the bodily ascension of Christ to heaven after his crucifixion,²⁰ Jesus' apostles, greatly gifted by the Holy Spirit, dispersed to preach the Gospel in the East, in Asia Minor (formerly Anatolia and now called Turkey) the cradle of Christianity. Some apostolic preachers were to evangelise the Jews, with the remainder tasked with converting the pagan 'gentiles', who covered the remainder of the earth, as the sea engulfs the beach.

The first missions took place in Asia Minor primarily (Ss Peter, Paul, John and most of the apostles), then Greece, the lower Balkans, the whole of the Middle East, Egypt and Africa (St Mark), the North (St Andrew), also spreading to Rome in the West (St's Peter and Paul), and *even as far away as the Caucuses and India* (St's Thomas and Bartholomew). Then came a series of deadly reversals. Disturbing reports emerged concerning this new sect of the Christians, who conducted their ceremonies behind closed doors. Christian priests saw these affairs as arising from a persecution devised by the devil himself, to thwart the spread of Jesus' Gospel. *'The demon who hates the good, sworn enemy of truth and inveterate foe of man's salvation, turned ... against the church.'*²¹ To this extent the Demon used *'impostors as ... ministers of destruction ... cloaking themselves with the same name as our religion, should ... bring to the abyss of destruction every believer they could entrap'*.²¹ Their brand of Christianity allegedly required their preachers to *'teach that the vilest things must be done'* for admission to *'these "mysteries" or rather abominations'*, and *'rendering to them all the due performance of unspeakable rites'*.²¹

The pagans were a very pious lot, deeming it imperative that local and state gods receive their proper dues, so as not to offend them. What full-blooded patriotic Roman did not have a kind thought for Romulus? By patronising the state gods families and the Empire only stood to gain.

In Asia Minor's far-eastern provinces a Christian preacher, Polycarp of Smyrna, was haranged as *'the destroyer of our gods, who teaches ... people not to sacrifice or even worship'*.²² Consequently Polycarp was executed by the Roman authorities at the behest of a conglomerate of pagans and Jews, affronted by what they saw as sacrilegious doctrines, *'the Jews as usual joining in with more enthusiasm than anyone'*.²²

Allegedly Christians were beholden to *'a sham spirit'* babbling *'crazily, inopportunely, and wildly'*. In defense of the nascent faith Christians condemned maverick sectarians among them for *'prophesying in a way that conflicted with the practice of the Church'*.²³ Pursuant to an enquiry about these eastern prophets Catholic authorities *'pronounced them profane and ejected the heresy'*.²³ Such were the early beginnings of the apostasy, which followed on from the dire schism between the apostolic hierarchy and implacable Judaeo-Christian converts.

Then there were tales of their orgies, cannibalism, and incest within one's own immediate family. Roman pagans were truly incensed at what they were hearing. It had all the tell-tale signs of the dark art, the condemned system of demonolatry long banned under Roman law. From within and without it seemed the faith was being

gnawed away by a spiritual necrosis of *pseudadelphos* (false brethren), *pseudoapostolos* (false apostles) and *pseudoprophetes* (false prophets). As a consequence of these sordid happenings early Christians suffered persecution under Nero and his successors, which continued unabated for 200 years, when Christian-hunting was halted by the Spaniard, Emperor Marcus Trajan.

St John was the last of the apostles to pass from this world, and with his passing came a realization that Christ had not yet returned, as was alluded to in the Lord's sermons. As a consequence of this the world's bishops had to formally arrange themselves into an earthly Church capable of taking the Gospel into the future and keeping watch over the flock until such time as He did return.

In the wake of Christ's execution, it appears there were no formal plans to speedily compile a single volume of holy writings, but instead do most of the preaching face to face, via the agency of apostolically empowered preachers. However, the demi-Christian ministrations of gnostic heretics over the next 60 years demanded the compilation of a complete holy book, in the form of the *New Testament* (NT). Nowadays it consists of four separate Gospels (stories of Christ's life) and some 23 letters entitled to the Christians of ancient times (mostly from St Paul). Amounting to 27 different versions of apostolic writing in loose circulation, plus the Clementine Epistles, few people probably even knew the sum total of authentic documentation, or indeed if there were others that had been destroyed during the persecutions. The penning of these highly significant apostolic memoirs began as early as 27 years after the death of Christ and lasted until about 100-120 AD. Bearing in mind the almost haphazard formation of the *New Testament* and its release during a later rather than earlier period, the Christian Bible hardly seems to be the product of a focused and specially commissioned team of authors, intending to place the absolute and undivided focus of the religion into the holy books alone (*sola scriptura*), such as is the case with the *Qur'an*. The mere fact that they had to be compiled into a book by bishops of the early Church²⁴ further illustrates this. Indeed Christ, who was literate enough in Hebrew to read to the Rabbis in the temple could have written a handful of Gospels Himself.²⁵ And yet He never did. He saw the people face to face, just like the apostles who He sent out into the world after him. Moreover, Christ had sufficient literate followers to enable at least a small band of scribes to attend His public meetings, and record His every word. St Paul had his own scribe. St Mark the Evangelist was St Peter's writing clerk. Later, Origen (a pre-eminent theologian from the See of Alexandria, and a professional Christian scholar of the 4th Century) used scribes during his orations. Teams of shorthand clerks were on hand to record his speeches and lectures verbatim, churning out volumes of theological discourse. When they did write, it was in Ancient Greek, signifying their mission to heathenry rather than jewry.

Most importantly, the writings of the *New Testament* were only to include the writings of the apostles. For example the prime accounts of the games in which the Christians were fed to the lions are found in the *History of the Church* by Eusebius, bishop of Caesarea (in the See of Jerusalem), though these same events are not specifically mentioned in the *Bible*. This serves to show that the *Bible* was first and foremost a compilation dating only to the apostolic era, a time capsule of the first Christian generation. The writings of Church figureheads from succeeding generations automatically fell under the umbrella of apocrypha, not due to any admission that they were flawed works, but simply that they were not written by one of the apostles or their learned assistants such as the evangelists.

In assembling the current *Bible*, bishops were faced with an unruly assemblage of purported Christian books and letters, in circulation throughout the Christian world. Upon closer examination it was found that many were totally unacceptable to the faith. These they termed false gospels. Surviving examples show them to represent a broad cross-section of Gnostic expositions decrying the physical world as an evil abomination created by a lying demonic force, and jewish apocrypha.

An example from the *Paraphrase of Shem* reads "But the winds, which are demons from water and fire and darkness and light had intercourse unto perdition. And through this intercourse the winds conceived in their womb foam from the penis of the demons".²⁶

In the heretical *Gospel of Philip* we become acquainted with Gnostic traditions on the Holy Spirit; "Some said. 'Mary conceived by the Holy Spirit'. They are in error, They do not know what they are saying. When did a woman ever conceive by a woman? Mary is the virgin whom no power defiled. She is a great anathema to the Hebrews".²⁷ In this Gospel the Holy Spirit is

ST JOHN WAS THE LAST APOSTLE TO DIE

THE NEW TESTAMENT IS SIMPLY A COLLECTION OF LETTERS AND GOSPELS, MOST OF THE FORMER WRITTEN BY ST PAUL

CHRIST NEVER WROTE A SINGLE PART OF THE CANON

ONLY APOSTOLIC WRITINGS WERE TO BE INCLUDED

SOME CHRISTIAN TEXTS WERE HELD TO BE FAKE

EARLY BISHOPS EXCLUDED THEM FROM THE BIBLE

GNOSTICS WERE RESPONSIBLE FOR MANY OF THESE WRITINGS

declared female in gender in line with Gnostic teaching.

Spurious texts were condemned and excluded from the Canon, where clear evidence of 'heresy' was shown.²⁸ In analysing these texts the Church Fathers based their decisions on Church writings extant during the 3rd Century and inherited personal knowledge that a given work received credence in apostolic times. In his *History of the Church*,²⁸ Eusebius covered at length the vetting process used by the Church fathers, which books passed their scrutiny, and which flunked miserably. The acceptable writings in turn became the Old and *New Testaments*, which are in use until this day, with great reverence.

In many places that were evangelised, parishes sprang up. Later, these became centres of religious power (Sees), the greatest being (in order of seniority at the time) Rome, Alexandria, Antioch and Jerusalem. The See of Rome was established first, and its bishop, a linear successor of St Peter (later, in the 6th Century AD to be renamed as the pope) became the senior bishop of the Universal Church, jointly ruled by his peers, the blessed patriarchs of the other Sees. In their unity, the faith of the apostles solidified, going from strength to strength.

In 311 AD bitter political and military dissension tore asunder the beleaguered Roman Empire. This came to a head on Milvian bridge upon the Tiber river. There, in 312 AD, the Mithrasian Caesar Constantine did battle with Maxentius for control of the capital, and the ideological dominance of Christianity.²⁹ With Constantine's victory came power and prestige, which he used to good effect. As a consequence he ended the persecution and martyrdom of Christians throughout the empire. In the years that followed Constantine brokered a power-sharing arrangement with Licinius, but later turned on him. Licinius' execution in 326 AD effectively made Constantine Emperor.²⁹ The year 330 AD saw the Emperor establish a new city, far from the Italian mainland. It was named Constantinople, in honor of its founder, and was to be regarded as the New Rome, the capital of his eastern Roman Empire. His ambitious construction project was intended to be an earthly mirror of 'the Lord's heavenly realm', with the magnificent Hagia Sofia Basilica, and monuments to the apostles on top of the hill, overshadowing the entire city. It was grand, well protected, and located on the Bosphorus Strait at the nexus of crucial and highly profitable east-west trade routes. This new city, the headquarters of the Patriarchate of Constantinople, was elevated to the status of the second most important See and would eventually become a rallying point for the eastern Patriarchates in a world fast becoming Muslim. The freshness of this Hellenistic-Latin renaissance succeeded in eclipsing a declining Rome in the west, both militarily and culturally. Such was the birth of Byzantium.

Councils or synods of bishops (impossible to conduct for the first 300 years of the Church's history for security reasons) were held annually to try and standardise articles of ritual and doctrine, which had begun to diversify on account of the considerable distances separating parishes. Bishops from bishoprics throughout Christian lands converged on some pre-arranged place for extensive discussions about the nature of the faith and the progress of evangelisation missions occurring in many and varied places. Goths, Armenians and Georgians all embraced Christianity during the 2nd and 3rd Centuries AD. One to two hundred years later the Church breached the walls of paganism in Britain and Gaul. As you will later see, many of the Germanic nations, the Saxons and Goths in particular, had a staunch adherence to Arian Christian traditions.

Forth-Century historical records relating to the first synodal decrees of Nicaea on the nature of God, described an almost unanimous understanding throughout the four original Holy Sees, that God was made of one Holy Trinity. The controversial non-trinitarian views of Arius were widely condemned at this synod and received the endorsement of only two bishops (one of which was Eusebius, though he later recanted this 'heresy') throughout the episcopal college.

This congenial ecumenical solidarity was shattered in a very short time. The first split of the Church came at the 4th Ecumenical Council at Chalcedon, in the year 451 AD, over the degree of Christ's humanity, and from the 5th Century, the churches in Armenia, Ethiopia, Egypt and Syria peeled away from the others. These five Churches were cut off by the forces of Islam over the following centuries; contact between the varied Churches becoming almost non-existent. Never was there a more profound commonality of belief than that which existed between the eastern churches (which prided themselves on not changing anything), and Rome in the West, which was tirelessly

innovative. Though the Church was one, a plethora of legitimate individual regional customs often became a source of constant mistrust. So, the forest became obscured by the trees. Even as early as the year 158 AD some particularly divisive issues arose between East and West, such as when Easter was supposed to be celebrated, how baptisms should be carried out, and so forth. Since the eastern churches espoused doctrines and rites inherited from a number of apostles (especially St John), they could not accept Roman rulings that contradicted their inheritance. According to Eusebius although Victor, the bishop of Rome knew his See's customs where inherited from St's Peter and Paul, he did not consider excommunicating all of the Asian churches over the issue, since they were only observing the customs of the Church fathers in that part of the world, John foremost.³⁰

Christianity & Church Diversity

What emerged out of these earliest missions, and more especially from the Council of Nicaea, was a number of regional churches. Mediaeval European politics was in a state of flux. To the East and West, Christian Kings and Emperors ruled supreme. In Eastern Europe princes made the often political decision to convert their peoples to Christianity, in order to acquire for them some sort of international standing or prestige. Converted pagan nations, once looked upon as a mass of uncouth, sub-human barbarians, soon acquired respectability in the eyes of these distant monarchs and their (supposedly loyal Christian) subjects. Throughout Christendom though, talk of unity was cheap. Though Christians were technically linked by common apostolic beliefs such as those numbered below, they were paradoxically bogged down in petty political in-fighting over the seniority of Sees, allegiances to secular authorities, possession of valued relics and holy sites, and some doctrinal view points. In dealings between Christians, anyone belonging to a different group was viewed with deep mistrust and loathing. For instance travellers such as crusaders, relic-hunters, mercenaries, merchants, pilgrims or tourists had considerable trouble dealing with the Arab-friendly Churches of the Middle-East! After the Crusades, many belonging to the See of Antioch enjoined with Rome.

THE COMMON TEACHINGS OF THE CHURCH, IN ALL SEES

1. There was a common ecclesiastical infra-structure. Priests *in every part of Christendom* were called Father, recounting St Paul's claim that those who brought you the Gospel were your fathers. The Church's 12 foundation stones, the apostles, and the most important early Church figures were called "*Church Fathers*".
2. The sacraments, morality, penance and abstinence were viewed similarly.
3. The veneration of Saints, and use of holy images and relics was universal.
4. All maintained a belief in the actual presence of Christ in the form of bread and wine at the Eucharistic celebration.

THE STATE OF THE CHURCH CIRCA 900-1000AD

I have separated the Mediaeval Christian Churches into four distinct groups, and included the rough geographical boundaries of their religious jurisdiction. "In Schism" is a term which I have used loosely here to denote views at variance with the decrees of the 1st Council of Nicaea; this provided the basis for dividing the Churches four ways.

<p>GROUP 4 See of Antioch - Nestorian Church - Assyrian/ Chaldean Church - East Syrian Church - "St Thomas Christians"</p>	<p>"In Schism". Christ was seen as God, also with the separate nature of a Man. They refused to use the term Theotokos (Mother of God) The Middle East (Syria, Asia-Minor) The Middle East, Caucasus and Babylon The Middle East, Caucasus and Asia-Minor Malabar in India**</p>

* Once part of the See of Antioch.

** Historically speaking the pre-Nestorian years in India were very hazy, meaning that the allegiances of the Malabar Church (during the first few hundred years after Christ) are still unclear. When Jesuit Roman Catholic missionaries came to India they were surprised to find Christians there, claiming that their Church was founded by the doubting Thomas. At that time the Malabar Church exhibited Nestorian characteristics and affiliations. But what form of Christianity prevailed in India between the time of Thomas' alleged arrival, and the advent of Nestorianism (5th Century AD)?

Church and State

In the Gospels Christ expressed the importance of obeying the governing authorities. Since any sovereign ruler's right to rule was pre-ordained by God, for better or worse, they were to be loyally served by their subjects, and paid their rightful taxes. Such views were adequately stated for Russians in the *Izbornik of 1076*;

"So too he who fears God fears also the prince who punishes transgressors, for the prince is the servant of God before men, both in mercy and in the punishment of the wicked" ... "Be afraid to speak a lie before the prince, for the Lord will cause those who utter a lie to perish, but obediently give honest account to him as to the Lord Himself".³¹

Slaves were urged to be particularly obedient towards their masters, especially when their owner was deemed a good and fair man. Despite being enemies of the Jewish people, even the conquering Roman Emperors were entitled to Christian respect under this system, which he received as long as he didn't require them to worship him as the god Jupiter. Many Christians were martyred because of their refusal to do this.

From time to time this "law of civil obedience" would regretfully require them to partake of military service, and bloodshed in the defence of their fatherland, friends and loved ones, just as it had in Jewish and Aryan times. Cowardice and desertion were deemed the worst of evils. As was true under Aryanism, anarchy, rebellion and treason were forms of chaos which came from Satan. Secular authorities imposed harsh penalties for those whose aim it was to destabilise the order of their society.

Any state was fully entitled to receive taxes from its citizens, especially heavy taxes, which were seen by the Church as a stabilising and binding force within society. Not only were they good for funding the material needs of the community (assuming they were spent properly), but they installed a system of order. Consider a person running through a town and giving everyone a horse and a hundred pieces of gold; what would happen? Prices would rise, many would just walk away from their jobs and livelihoods. Having "hit the big time", many would go and live somewhere else, where that amount of money would last them the rest of their life. They would never have to work again, leaving society to crumble! Invariably, the place would disintegrate into anarchy.

It was the Khagan's authority as ruler of all the Rus' that compelled the masses to be converted from the pagan rituals so long a part of their lives. Thus refusal of baptism could be deemed a civil offense against their ordained

ruler and was probably a punishable offense. Whether you lived in Germany, Britain, France, or Russia, under mediaeval Christian law (as under the old pagan laws), the message given to the peasantry by the authorities (royalty) was plain; transgressions of the law would be severely dealt with.

Rulers, war and expansion

Very often kings hoped to expand their kingdoms. In so doing they acquired more subjects, more soldiers, more land, more resources and food.

The Old Prussians, Lithuanians, Latvians and Finns were freedom-loving people, and good at heart, but when it came to accepting foreign domination, it really was time to pick up their swords. For, as their eyes scoured the lands around them, they realised that the coming of Christianity, in a material sense, meant one thing, and one thing only; Franks (the ancestors of modern day French and Germans), plenty of them.³² To the Old Prussians and their resilient pagan Baltic neighbours, these foreign powers were all hell bent on defiling their springs and groves, hacking their idols apart, and installing a nicely paying feudal overlordship, *on their land*. They resisted these attempts to enslave them to the last. Even though they were assailed on every side by a storm of German (Christian) military orders, such as the Knights of the Sword, it took several hundred years to break the Prussians, some of the hardest of all pagans to crack. But, the endurance record must surely go to the eastern Finns, whose formal evangelisation began in the 13th Century, and continued without hope of success until the beginning of the 20th Century, *a good 800 years later!* This I attribute to the fact that they lived in such sparsely populated wilderness areas, which allowed them to maintain the purity of their groves and springs. Their paganism lived on!

Similar political observations were not lost on eastern pagan rulers. Simon of Bulgaria and Vladimir saw that the adoption of Christianity would place them under the Byzantine Patriarchate's sphere of political and economic influence. Since their realms were situated within the eastern precincts of Christendom, they would naturally fall under the jurisdiction of Constantinople. How much of the pie would they want? What say did the Greeks and Romans want over *their* kingdoms? How much tax would they want?... Now? .. In ten years? Both of these rulers decided against handing their people over to foreign powers piecemeal. In time theirs would be autocephalous Churches, self-governing, with the monarch as personal head of the Church, ordained to rule over their people "by the hand of God" (as in pagan times), and answerable to no foreign power. So great would be the degree of freedom exercised by them as religious leaders, that the Rus' maintained ongoing, mutually respectful ecumenical dialogue with the Papacy until the 1500's, whereas the Greeks did not, especially hateful because of the 4th Crusade's orgy of destruction, and relic pilfering.

As in ancient Jewish times, war was considered a divine instrument of righteous retribution, a scourging that God allowed. When two rival states met each other on the battlefield, it was seen as a trial by combat between two rulers, with the side of the more just ruler winning the day. Combatants suffered or enjoyed the fortunes of their liege, sieved by God, who separated the "chaff from the wheat" in battle. Armies took their own priests, and their best and most suitable relics to the battlefield to celebrate mass, hear confessions and petition God's good favour for their leader. This happened even during the bloody civil wars between the Russian principalities.

During the time of the First Crusade, for instance, the Emperor, Alexis, asked the Papacy to raise an army to help the beleaguered Byzantine forces expel the Muslim Seljuk Turks from their lands. News of the Pope's call for the raising of a multi-national Christian army spread like wildfire, for this war was a penitential rite, a redemptory penance which would atone for their most grievous sins. To be sure, there were many rich and powerful lords amongst that band of soldiery which worked its way through Byzantium and Syria, expelling the Mohammedans before them, and yes, they got rid of the Emperor's enemy, much to his delight. Relations between Byzantium and Rome even started to look good, with mutual overtures of Church reconciliation. But, as usual, there are always some who had other plans. A Norman lord, one Bohemund I, after liberating Antioch from the grip of Islam, liked it so much that he thought he and his army should stay on there, with him as the self-styled, self-appointed ruler of Antioch. "Victorious under God" (and greatly out of pocket after going there in the first place), he felt that as the new ruler, he was more than entitled to receive taxes, misappropriate relics from other people's Churches and install his own sponsored clergy, after the old

Church custom. He and his men (the uninvited overlords of Antioch) then set about tax-collecting, shamelessly fleecing the locals of the silver and goods they sweated so hard to earn, and evicted all of the local Greek bishops. For Bohemund I, Christian theology was manipulated to line his own coffers with pure and lustrous metals, or at the very least recoup his out of pocket expenses. The Emperor naturally fumed. Isn't it funny how it only takes one or two people to cause irreparable damage to the way whole nations perceive each other!

The Church believed that all people in authority would be judged according to the way they used or abused their civic powers. Perhaps for this reason the Khagan Vladimir I was quick to institute a regular series of feasts to which the lame, infirm, foreigners and the poor were welcomed. This was like the old Christian *Agape*,^{19a} but Russian-style. He devised a whole host of charities that provided extra clothing, rations and small goods to his more needy subjects. These goods and victuals were distributed directly from churches and the few monastic communes, or from wagons and sleds that reached some of the more remote areas of Rus'. Likewise, these vehicles were used to bring the seriously ill back to the churches for medical treatment and care, whenever possible. Whilst he gathered a frightening weight of taxes from the masses, he was certainly not adverse to redistributing this wealth back to the poor. His attempts at changing the heathens into Christians was done with fervent zeal for his new faith and the sword was only used in more serious cases. This vision of St Vladimir is greatly at variance with the imagery conjured by pagan rumours of his abandoning the faith shortly afterwards only to finance a heathen monastery in Albania. Intrigues such as these were part and parcel of the ongoing battle between Rome and Byzantium versus the Magi and the heretics which held great sway over the royal families.

Ordained ministers

Anyhow, to convert people you needed priests. Since Heaven was said to be composed of choirs of angelic beings, each ranked according to its own power and authority, the earthly Church, like the church buildings they served in, were designed to emulate the heavenly kingdom in splendour; it too was hierarchical.

Throughout christendom the multi-tiered Christian priesthood was formed by single and married men specially empowered by the ancient sacrament known as Holy Orders. In this sacrament three bishops called down a special charism (gift) of the Holy spirit and imparted the unbroken touch that the apostles passed down through each successive generation.

Whilst the person was still a human being, they were now regarded as a special mystical channel for the Holy Spirit. This was a major point of divergence from the Judaeo-Aryan-structured priesthood the Church appears to closely resemble. By the Church's authority, bloodline was no longer the criterion for the reception of priestly powers, but an act of God channeled through bishops who wielded the power of the apostles. Thus the priesthood was open to any male who wished to follow in the footsteps of Christ, rather than the members of just a few families. Nonetheless these other high-born clerics existed side by side with the others, known by such titles as prince-bishops.

The secular church

The secular clergy, also known as the white clergy, were Church ministers whose vocation it was to administer parishes. They consisted of married or unmarried deacons, pops and svyashchenniki, many of whom were themselves the children of clergymen. A prospective priest or deacon had to consider the essential issue of celibacy. Those who chose marriage had to receive that sacrament before becoming a deacon, otherwise they would not be permitted to marry once ordained. Those already preferring celibacy were channeled into monasticism where such austerities were their bread and butter. We might guess the early Church hoped to draw many sons of the high born into the priesthood. It might have been better to do this, than release them from their church schooling back into the wider society. In those early years they would have been subjected to the incessant pressure of aunts, uncles and grandparents who reproved the things taught to them by the monks. Those who succumbed to the relatives might easily revert to the old ways, and undertake their pagan sacral functions instead.

During the 10th Century, both Rome and Byzantium allowed married men to serve as parish priests, but soon after 1073 AD, Rome demanded celibacy for all its clergy for political reasons outlined later.

In Russia the hierarchical clergy was arranged as follows;

SECULAR CHURCH HIERARCHY

THE POPE	Senior shepherd until 1054 AD.
PATRIARCH OF CONSTANTINOPLE	Regional leader of the Church. Later the supreme Orthodox bishop.
METROPOLIT	A Greek-appointed Archbishop, often of foreign extraction.
EPISKOP	A Bishop; successor to the apostles.
SVYASHCHENNIK	An educated priest trained by the Greeks.
POP	A country priest; Russian-trained.
DEACON	A non-ordained parish helper.

Bishops

It is difficult to understand the politics of Christianity, and the nature of the priesthood, without grasping the precise meaning of a bishop, his rights and duties. Eusebius detailed the first lines of bishops arising from the apostles, who ruled the four main Sees during apostolic times.³⁴ In each succeeding generation this continuity of episcopal office was conferred by ordination of successors by preceding bishops, which helped to ensure the teachings of the Church, and the power of the apostles, was handed on from one generation to the next, from each bishop to his next successor. This continuity was like the umbilicae of successive generations of daughters, connecting to their mothers, back to the beginning; in this case the apostles, the mother Church.

Full apostolic authority was said to be granted by virtue of the Holy Spirit, whose wisdom and lordship the pope, patriarchs, metropolitans and bishops were said to embody. In the East the sign of their office was a staff surmounted by a bronze snake (like the one Moses made), and in the West a crozier, or shepherds crook.

It was the ancient custom in Byzantium that bishops were to be selected by the parishioners of their diocese. Once the priestly candidates seeking the post of bishop were assembled before them the people cheered "Axios" which meant they esteemed a certain priest as worthy of the bishop's post. *In theory the selection of Apostolic bishops had nothing whatsoever to do with bloodline*, yet during the Middle Ages this custom lay in tatters.

In accordance with Church doctrine, bishops and more senior figures within the Church were seen as apostles of the present age. Parish priests only gained their office, or became empowered to act as confessors by virtue of their deputisation by their local bishop, within whose diocese they operated.

Bishops had special duties. Only bishops were empowered by the Church to confirm others (ie; to place the fire/gift of the Holy Spirit in a person), to make the oil of chrism (vital in so many sacraments), or to ordain priests under training in their area. Only bishops were said to be sufficiently empowered by the Holy Spirit to make executive decisions relating to new and unforeseen problems facing the Church in their diocese.

Bishops had the right to conduct missionary work outside of their own dioceses, as long as it didn't impinge upon the rights of another bishop. The kidnapping of English missionaries by the Germans during an early Scandinavian mission, was just one method of dealing with "spiritual poachers".

One of the most atrocious cases of inter-jurisdictional rivalry saw Methodius, the Apostle of the Slavs, imprisoned, flogged and tortured by Bavarian clerics for a considerable time, with blatant disregard for the papal correspondence regularly arriving, demanding his emancipation.³⁵ Once freed Methodius trained somewhere in the vicinity of 200 ordained priests and novices, sending the German priesthood into a fit of rage. So they captured his students, subjected them to similar treatment, then sold them off to Jewish traffickers in human chattels.³⁵

Bishops had the power to run their dioceses in a manner that suited the blend of local pagan customs, which were tolerated where possible, as long as they didn't interfere with the apostolicity of the Church. For example the priests of the "St Thomas Christians" in India were classified as part of the Brahman caste, and dressed in a similar style. Though they were later censured for this. Bishops determined the number, dates and forms of the feast days which were to take place in *their* bishopric, during a given liturgical year.

Generally the validity of their deliberation on religious matters was beyond question. Just as the apostles were 12 in number, bishops also wielded power as part of a group, or college as it was called. It was possible, though, for a mere handful of bishops to err in their judgements, so when

WESTERN CHRISTIANS
PROFESSED THAT THE
POPE WAS THE HIGHEST
PRELATE ON EARTH, THE
VICAR OF CHRIST ... THE
PONTIFEX MAXIMUS

perplexing issues of widespread importance needed discussing throughout Christendom, they were addressed on a scale commensurate with the importance of the question. The largest of these collegial gatherings were called Holy Councils. Smaller scale regional synods were also convened by patriarchs.

On the question of the pope, the West saw him as the supreme bishop, *with the final say* in any and all matters religious, whereas the East viewed him as an ecumenical icon, occupying a post of significant power or seniority in the world college of bishops, but *not as the supreme ruler* capable of making his own decisions on doctrinal matters without any type of collegial consultation with his fellow patriarchs.

The Christian world was full of bishoprics, also known as dioceses (spiritual kingdoms), each of which was composed of a number of parish church buildings. The epicentre of any bishopric was the Cathedral, the church building in which the bishop has his throne.

Although money was not seen as inherently evil, just its misuse and the lust for it, some bishops were not above growing fat of pocket by means of the bishop's tax, their due income. However in a number of areas, bishops began to abuse the system, and lived affluent lifestyles far in excess of the peasants and priests who gave money to support them. This in turn greatly destabilized the standing of the Church among the masses in many places, especially with the emergence of the Neo-Manichee heretics.

During the Christian era, when the Russian Church received the backing of the Russian royal family, it was permitted to gather its own taxes, which were needed to build monasteries, schools and parishes, and to pay for the upkeep of the clergy, orphans and the disabled.

RUSSIAN CLERGY AND
ROYALTY LEVIED TAXES
FROM THE MASSES TO
UNDERTAKE PUBLIC
WORKS

IMMORALITY TAX

The immorality tax was incumbent upon "women of ill-repute", prostitutes, "merry widows" and those possessing bastard children. This tax was in their mind necessarily heavy to prevent the local women from lapsing back into the heathen ways.

BISHOP'S TAX

The Bishop's tax was collected from a bishop's subordinate clergy and their parish congregations and used to finance religious works in the diocese. The amount of money levied was relative to diocesan needs (very heavy indeed), and accordingly the parishioners had to work hard to supply this tithe.

PRIESTS PAID A SPECIAL
TAX TO THEIR LOCAL
BISHOP

Another levy was the scales tax, which guaranteed that bishops would get caught up in the financial sector, administering weights and measures. It came to pass that *certain* bishops had become more greatly tainted by this interaction with financiers and merchants than their fellow-bishops, and were beginning to rip into the Church coffers for their own gain. They were paying far more attention to their account books than their hagiographies or Bible readings to put it that simply. Power does corrupt, and it is only natural that the odd bishop or priest here and there (like magistrates and other secular officials) would succumb to the allure of the many powers and privileges imparted by their appointments. Earthly splendour to match the heavenly was their desired intention one would suspect.

BISHOPS BECAME
INVOLVED IN
MERCANTILE MATTERS

As in Western Europe, bishops were said to be surprisingly wealthy when compared with the average monk or parish priest (who were often exceedingly poor).³⁶ I have had some difficulty pinpointing historical accounts of the excesses of the Russian bishops (as mentioned by Basil Dmytryshyn),³⁷ but to illustrate the point, a Mediaeval social commentator in the West, called William of Newburgh, mentioned that financial corruption was rampant among the bishops. Bishop Longchamp was recorded as having an army of personal retainers so large that it would bankrupt for months any estate, parish or monastery at which it chose to stay for only a few days. He took with him almost 100 horses, 20 or so dogs and several hawks. Many priests and monks were so incensed by these extravagances they wrote to Rome hoping these individuals would be reprimanded or removed by the holy father. Consequently the 11th Century 3rd Lateran Council prohibited the clergy from keeping dogs and birds of prey and severely limited the number of retainers they were permitted to keep.³⁸

MANY WERE RICH AND
POWERFUL INDIVIDUALS

This may seem like a small point, but the activities of the greedy bishops greatly destabilised the standing of the Church in the Middle Ages and provided a back drop against which the Neo-Manichean heretics, the "Poor men" could gain large numbers of converts from among the irate general public.

Educated Russian parish priests (*soyashchemiki*) typically obtained disbursements from their congregations to

cover the costs of baptisms, weddings and funerals. The bishop was entitled to a portion of these earnings, while the priest retained the remainder.

Country priests (*popi*) received *only a very meagre stipend* from the Grand Prince himself, as an incentive to lure ethnic Russians into the priesthood, and out into the wider countryside. The Velikiy Knyaz' issued laws making them exempt from the payment of all civil taxes. The bishops tax was however payable in full, something which helped ensure that the bulk of the Russian priesthood was financially little better off than the people they preached their sermons to.

Parish priests

In Russia parish priests were termed *Svyashchenniki* and *popi*. *Svyashchenniki* were better educated than the average village pop. Frequently they began their priestly vocation by attending an informal seminary, or their training was simply sponsored by a priest or noble in Tsargrad or Kiev, and who knows, maybe even in Rome during the period before the schism. In Kiev or Byzantium they were schooled in the Byzantine rites of the Holy See of Constantinople and thereafter left on missions of conversion within the cities. Those that could be spared, which were few, fanned out into the farthest regions of Rus'. Such well educated clergy were the very people who entered the politico-religious limelight once the time of the conversion arrived, for they had to seize power from the pagan priests and priestesses in many areas, and step in to fill the vacuum left behind by the pagan priests who fled.

Christian priests in Iceland earned their ordination only after completing exhaustive studies. This would have been typical of most Roman Catholic ordainees. Often they did not attend seminaries though. Prospective priests usually began their career as a priestling, a lad of 16 years old who was given over to the custody of a priest, who acted as his teacher.³⁹ The child was required to fulfil all his study obligations, such as becoming fluent in Latin.³⁹ During the initial conversion missions to Scandinavia, priests acquired children from the races they hoped to convert, sometimes purchasing them in the slave markets and emancipating the boys to begin their studies.⁴⁰ These young men applied themselves to the tasks assigned to them by their mentor, whether it be household tasks, or their tuition. Slackness was in no way tolerated.⁴⁰

In Rus' of the early period, there was some considerable difficulty finding enough ordained clergy to celebrate mass and other vital sacraments outside the hustle and bustle of the cities. The promise of no civil taxes and a small wage proved sufficient to convince enough peasant males to seek the robes of priesthood, though they formed the nucleus of a far less cultured clergy, with only the most basic level of education. These candidates, who were usually family men, were originally found among the farmers, ex-warriors and artisans of the lower social strata, who in addition to their priestly duties were just as likely to work out in the fields, make footwear or pump the smithy's bellows, and then, after work, go down to the place where everyone flocked for a beer or two with the locals. Unlike the monks and *svyashchenniki*, they were not required to undergo any extensive theological training, just simply the ability to conduct the indispensable sacraments, "the spiritual treasures of Christ". Others received tuition in reading and writing, allowing them to understand scripture well enough to do the readings, and figure out their homilies (sermons).

VERY MUCH A PART OF
THEIR COMMUNITY

The monastic system

In Russia monks were termed black clergy. This was probably a reference to the style of habit they wore, but might also be related to the fact that the secular arm of the Church viewed them with disdain on account of the many penitent heretics who lived concealed among them. A *monakh* (monk) or *monakhinya* (monastic nun) lived in a religious community with other brothers and sisters, serving Christ and the Church, by pursuing good works, hard work, severe regimes of prayer, and obedience to ecclesiastical authority. Orders, which was the general term for Christian brother and sisterhoods, were usually named after the founding cleric. There were two types of monks and nuns; those that were ordained, or had taken vows, and those that had donned the habit as a form of penance

MONKS LIVED A
SECLUDED LIFESTYLE

for very severe sins. Ordained monks were exactly the same as a *svyashchennik* each fully able to celebrate mass, and perform every other priestly office. Monks and nuns had to remain celibate throughout their religious life. As in the West, monks were tonsured and wore a black cloak, a fundamental part of their habit.

THE MONASTIC HIERARCHY

ABBAT	Abbot (Head of a monastery)
MONAKH	Monk
MONAKHINYA	Nun

Monastic life

In Russian monasticism there were two areas of monastic service;

1 COMMUNAL LIFE

The *monakhinya* settled down in a place needy of spiritual cleansing and hard work, and set about forming a small religious community by attracting lay settlers and new converts. These communes centred around providing services for the sick and poor, as well as establishing cottage industries, whose wares were sold in nearby villages and towns. A typical commune attracted many and varied characters; foreigners, travellers, scholars, pilgrims, widows, orphans, the blind, the sick, artisans, musicians, craftsmen, peasants, the elderly, people who had been the subject of miracles, not to mention the mentally or physically disabled. As we saw in Part I, *kolduny* sorcerers wishing to avoid being drawn into the old ways by militantly pagan relatives would turn themselves into the monasteries, fearful of the consequences of engaging in their family's long-standing tradition of sorcery. At other times banished criminals being pursued by vigilantes (hoping to take vengeance upon them in accordance with the law), would have appealed to the monks for sanctuary. For this reason one might find penitent criminals and sorcerers inside the monasteries also, as incongruous as it may seem.

2 HERMITIC LIFE

The Eastern Church has a very lengthy tradition of hermits from the earliest years of the Church. In places like Mt Athos (where they lived on the peaks of mountains) and Cappadocia (where they camped in caves), large numbers of hermits sought every possible avenue to find complete solitude, to be alone with god. In other instances they were dubbed wandering priests, who trekked far out into the wilderness, where they met the pagans and other non-believers eye to eye. The movements of these monks are for the most part undocumented, though they were probably efficacious in bringing Christianity to the country side, little by little.

Occasional historical references from throughout christendom note that the poverty of the country side provided little inducement for city preachers. It's a small point, but it had a very real relevance to the spread of Christianity. Those that did make it into the forests would have been implored to provide charity to poorer regional inhabitants. Accordingly they were left out of pocket giving aid to unfinancial parishioners, and in the end were drained of whatever resources they had. For this reason many clergymen were content to mill around the cities where they could at least make a basic living. That the Russian Grand Prince paid stipends to the village priests no doubt helped the promotion of Christianity. Without this royal safety net many frontier ministers would have lived at near starvation levels, or be forced into secular roles such as craftsmen or agriculturalists.

Enter the penniless monk, bound by a vow of poverty, and a sustained church presence in remote regions automatically becomes possible. They need little to live on, and poor peasants could not cajole them as hypocrites for not befriending the poor with money.

In Rus', monastic hermits were termed clergy of the "Great Habit", which was a reference to the heavy robes which they wore about them. These monks and sometimes nuns lived a life of total seclusion, on rugged mountains, or in the remote forests deprived of all human company. Their only activities were prayer and austere penance in the form of exposure to beasts and the elements, not to mention thirst and hunger. These often mystical monks were usually of the ordained type.

During the later Middle Ages the monastic vocation fell under the intense scrutiny of the secular Church, for it proved to be a haven for heresy, and provided an aperture through which heretics were able to enter the Church.

MONKS HAD A VARIETY
OF DUTIES

SOME WERE HERMITS

OTHERS WERE PENITENTS

Christian churches

In the Bible the pagans were encouraged to continue with their communal gatherings, as they always had done, though understandably this was to worship Christ rather than pay homage to idols or sacrifice beasts, upon which heathen banqueters later dined. In those earliest years many therefore proceeded to meet in former pagan temples, or buildings roughly similar to them, but to hold Christian church services rather than heathen ordinances.

During this earliest phase of Christianisation there is, archaeologically speaking, a relative absence of specifically Christian church buildings.⁴¹ This is largely because believers conducted their services in the domiciles of wealthier Christians, who from time to time were forced to expand the dimensions of their premises to meet the growing needs of a maturing Christian community.⁴¹

Many of Christianity's earliest churches were destroyed by successive Roman and Persian leaders, leaving us with few examples of Christianity's primitive religious architecture. It may interest you that the oldest existing Christian church parish building on the face of the planet is situated along the Euphrates River (but I am unsure of whether it is actually in Iraq or Syria).⁴² The Dura-Europus epitomised these earliest chapels, and probably allowed for no more than 60 worshippers at a time.

It wasn't until Constantine's era that ostentatious Christian basilicas first appeared in various lands subjected to the Romans. Church buildings world-wide encapsulated the flavour of the area in which they were found. In Babylon, they were humble stone rectangular buildings, with the sanctuary partitioned by the tanned hide of an ass, and where believers sat on large mats and rugs instead of pews. In Ethiopia they were carved out of single rocks, in Byzantium as in Rome, they were grand domed buildings, resplendent with iconography and relics.

In Scandinavia they were the impressive stave Churches. There farmers traditionally maintained churches on their properties, and were expected to oversee their ongoing maintenance. Amongst the Russes, parishes were an adaptation of their pagan *khrami*, re-designed to form new houses of Christian worship

So with Rus' undergoing its earliest years of Christianisation, the Church was understandably more concerned with missionary activity than setting up lavish buildings. A parish without parishioners is rather pointless. *Soyashchenniki* and *popi* probably held religious services in the homes of the faithful, or in small chapels (izba's of log construction) designed to shelter members of the congregation from the harsh weather during services.

The establishment of more complex cathedrals, churches and monasteries in Russia only began in the early 11th Century. It still took several hundred years for monastic communes and parishes to spread out and multiply, thus giving rise to many of the most famous Russian churches, very few of which still standing today. By that stage however, the Golden Horde had utterly annihilated Kievan Rus' and many diocese in a whelter of blood and gore.

Each Church possessed a sanctuary, a sanctified area wherein the Holy Eucharist was consecrated and celebrated during the mass. The laity were barred from entering this holy place, especially women.

Christian churches all contained holy lamps, whose flickering flames signified the presence of God within the building. Like the Zoroastrian/Zurvanite flames (which were temporarily doused during the last few days of the year), these lamps were extinguished on one day annually, but for Christians, this occurred on Good Friday, when Christ, the "Lord of the Resurrection" was slain for the iniquities of the world.

"In the year of the Lord 988, and the 6496th year after creation", Vladimir I ordered that chapels (mainly of wood) be built over the elder pagan temple ruins. In every major city of Rus' where heathen cult sites once stood, a church was built. The following Russian Church buildings were noteworthy sites in Mediaeval Rus', since they were constructed from stone.

St Elias' Church (Kiev)	completed 944 AD
Church of the Holy Virgin (Kiev)	completed 1004 AD
Church of the Holy Virgin (Tmutorokan)	completed 1022 AD
Cathedral of St Sophia (Kiev) and library	completed 1037 AD
Cathedral of St Sophia (Novgorod)	completed 1043 AD
Church of St Michael (Pereslavl)	completed 1070 AD
Church of the Holy Apostles (Berestvo)	
Church of St Basil (Vyshgorod)

WITHIN A DECADE OF
VLADIMIR'S
CONVERSION, KIEV HAD
ROUGHLY 40 PARISH
CHURCHES

By 1000 AD Kiev had 40 parish churches. Outside of the cities there were few Church buildings to speak of. The Kievan Cave crypt was the largest of the monastic communes. This popular modern tourist attraction in Kiev consists of grottoes and passageways stretching down some 900 or so metres, possessing numerous offshoot galleries, many of which are blocked off to the public for safety reasons. Along its walkways there are niches containing the remains of long dead clergymen, still dressed in their priestly robes, their faces draped in paten covers (symbolising Christ's burial shroud). This site must surely be of a high priority for archaeologists, though I am unaware of whether any excavations or surveys have ever been conducted there. In surveying such a site, one might discern valuable information on early Russian Christianity, or perhaps even find that it had been used by the pagans before them. In a land where Mithraism once flourished I find in inconceivable it had not been used by them at some stage for the performance of their underground rites. Interestingly, in the 11th-12th Century monastery situated at the crypt, one can see panel friezes depicting the pagan gods Hercules and Dionysius.⁴³

IT TOOK AT LEAST
ANOTHER TWO
CENTURIES BEFORE THEY
PENETRATED INTO
FINNISH AREAS

During the 12th-15th Century missions among the Finns, the Russian Orthodox Church built many northern monasteries, which provided an infrastructure for these arduous evangelisation journeys.

Lay investiture

LAY INVESTURE
ENTAILED THE
ORDINATION OF PRIESTS
BY ROYAL COMMAND
RATHER THAN THROUGH
CENTRALISED AUTHORITY
IN ROME OR
CONSTANTINOPE

During the Middle Ages priests were not automatically granted a parish by their bishop upon completion of their theological studies. Instead, they wandered the countryside looking for a benefactor who would finance a new parish in their local area. In the Holy Roman Empire and the western Church (during the Christian era) the private sponsoring of priests by secular lords continued to be the practice, with relic-laden clergy scouring the countryside seeking more charitable nobles, a grant of land and a steady flow of funds. Once such a financier was found, the priest established a parish, and stayed on there to service the needs of the local Christian community. This was known as lay investiture, a method of parish formation which relied on the generosity of chieftains, nobles and other eminent persons, rather than bishops and the orchestrations of a centralised Church hierarchy.

Lay investiture was most likely the predominant form of parish formation used by the indigenous Russian clergy. We do know that Vladimir took his own retinue of Greek priests back up to Rus' to undertake the conversion, many of which stayed on there. Among their number was Anastasius of Cherson, who first caught Vladimir's eye and trust by telling him how to seize Cherson. Following this Anastasius became Vladimir's personal confidant and was granted a large sum of money to help build a church and undertake other missionary programmes.⁴⁴ But, this custom also had dire religious and political ramifications, which in the end weighed heavily against it, and saw it outlawed by the Papacy. Not only did it prove to be the means by which the Magian-Christians could set up their own "parishes" by winning over to their cause the princes and highborn, but it caused big headaches in their dealings with other Holy Sees. When Bohemund I evicted all the Greek priests and bishops from Antioch and installed his own, he was merely enacting a fairly standard custom, yet one which well and truly helped de-rail Church unity.

Christian statues

EARLY CHRISTIANS ARE
KNOWN TO HAVE
EMPLOYED THREE-
DIMENSIONAL CHRISTIAN
ARTWORK IN THEIR
DEVOTIONS AND SERVICES

As you should now be aware, the 'religious science' which formed the basis of the telestic arts (see p. 573) guaranteed that idols and religious images would be directly linked with the deity it represented. According to Iamblichus, at no time did the pagan Gnostics regard a slab of engraved rock or wood as the deity itself, but an earthbound image or reflection of that which resided in the heavens or the underworld. By paying respect to an idol or fresco one was paying direct homage to that god, for this act of worship transcended physical space and time, reaching heaven through the agency of the said image. By destroying the heathen idols, the Church robbed pagans of contact with these deities. It was like cutting a phone line.

These customs seem to have spilled over into the Christian era, but were directed towards the depiction of Christ and all the saints, to the exclusion of every other pagan effigy. For Christians the affection shown toward the image of their Saviour, the Virgin Mary and the saints was believed to pass directly to Jesus and the mother of god, or to the holy saint displayed in a given religious image. Similarly the harming or defilement of these prized renditions was believed to cause affliction to God.

Christian statues were present from earliest times. The Christian citizens of Rome once erected monuments to the memory of St's Peter, Paul and the other apostles on the Osstian way and Vatican hill, where their mortal remains were said to rest. A marble statue of St Peter was unearthed at the Vatican a few years ago by workmen, perhaps the very one mentioned by Eusebius in the *History of the Church II: 25*. Some of these may also have been taken to Constantinople by Constantine to adorn his "New Rome", the capitol of the Eastern Roman Empire. Another early account by Eusebius relates that he was heartened by the way in which some people in the Holy See of Jerusalem had chosen to represent their saviour in a memorial caste bronze statue, where many miracles occurred.

AN ANCIENT STATUE OF ST PETER WAS FOUND IN ROME

But did this transgress the first commandment against the worship of false gods and idolatry? Looking for precedents one finds that the Jews made three-dimensional and painted images; the bronze snake, the holy angels perched atop the ark of the Covenants, the fantastical creatures and bronze bulls inside Solomon's temple. It would seem that these were not idols in the true sense, but holy images of Yaweh's angels.

SOME THEORISTS BELIEVE THIS CONSTITUTES A FORM OF IDOLATRY UNDER THE GUISE OF CHRISTIANITY

Icons and paintings were the prevailing form of religious imagery in the east and west, but in the west the continued use of three-dimensional holy statues provoked cries of idolatry from the other Sees. But Rome could always appeal to a section of scripture which stated that an idol was a depiction of something that did not really exist. Therefore the portrayal of Christ, the Virgin and the Saints was, in their minds, not in any way idolatrous. For them, the Saviour most assuredly did exist, and was the very foundation of the faith. That god himself had come down to walk among us in human form made it imperative they depict him as he once was, for 33 years portrayed in the flesh as the face of Jesus Christ. Nor were parishioners to worship these images but treat them with due reverence, and as a prayer aid. Similarly Jews did not worship Solomon's holy images, and most certainly did not smash them asunder as evil idols.

The early Russian church seems to have made use of three-dimensional religious art, from its very inception Following the fall of the pagan "demonic" idols there came a steady flow of relics into Rus', and somewhat strangely, two statues and a set of four horses, all of which were shaped in bronze, and shipped in from their original site in the Crimean city of Cherson.⁴⁵ These were then placed somewhere to the rear of Kiev's Church of the Theotokos (St Mary). This is a highly revealing story, yielding three possible interpretations.

CHRISTIAN IDOLS REPLACED PAGAN IDOLS

- 1 Vladimir dethroned the very pagan pantheon he installed and replaced them with several other pagan idols, which he decided to place in juxtaposition with his newest and most prestigious church. This seemingly incongruous option would only have been the case if Vladimir was a member of both faiths at the same time (as was stated in a document seized during a raid on a pagan monastery in Albania).⁴⁶ Vernadsky speculates that these may have been idols of Zeus or something similar. If they were pagan idols I believe it would most likely have been of Khors, a Magian Christian rendition of Jesus Christ.
- 2 Vladimir imported Christian statues to be venerated by the locals. I am inclined to think that these statues were in reality Christian religious statues maybe of Christ, St Mary, the apostles, or one of the saints, and, perhaps most fittingly, the four horsemen of the apocalypse. Christian statues (most likely those of the apostles) and horses were originally brought from Rome to Constantinople after Constantine's nominal conversion in the 4th Century. Though it is not mentioned whether or not the statues were venerated by the Kievan parishioners, it is interesting that this Chronicle entry is located after he makes mention of Vladimir's selection of religious objects, so it is probable the two issues are linked.
- 3 These idols were of historical, sentimental or aesthetic significance to Vladimir and he felt that they would give added prestige to the newly founded Church if they could be positioned within the church grounds.

That 11th Century Russian Christians had religious statues appears to be confirmed by the *Izbornik of 1076*, in which the faithful are urged to;

"Reflect on the statues of the Lord and meditate on His commandments at all times; He will strengthen your heart, and your desire for wisdom will be granted".⁴⁷

These are not the only account of Christian statues in far eastern Europe either. During the 15th-16th Centuries the Estonians were discovered venerating the wax effigies of Pekko, Tonnis, Katri and Juri. These are believed to be the images of St Peter, St Anthony, St Katherine and St George respectively.⁴⁸ Was this only a later development prompted by the German annexation of their lands under the Teutonic knights and the Hanseatic League, or was it a continuation of more ancient practices regarding the veneration of three-dimensional Christian religious imagery?

Christian schooling

VLADIMIR ORDERED THE FORCED RE-EDUCATION OF THE NOBILITY

Following the expulsion of the pagan priests, Vladimir ordered that the progeny of every Russian nobleman be taken from their families and brought to the Christian priests for schooling. In the classes of their new mentors they learned the art of writing and reading Cyrillics and the fundamental tenets of the Christian faith. The mothers that had borne these youths cried bitterly for them in such a way as it was likened to the wailing of mourners.⁴⁹

The amount of birchbark scrolls unearthed at Novgorod by archaeologists (dating to the 11th-12th Centuries) shows fairly graphically that there was a high level of literacy among the early Russians as a result of schooling which was supplied by the Russian Church. The ability to read and write was by no means confined to the nobility, but in every day use, allowing *ordinary people* (for the first time) to record the deals they had made, or to send away for supplies.⁵⁰ Many of the scrolls that have been unearthed show just how mundane their writings were, and

Fig 4.1. and 4.2. Writing implements from a medieval Russian school, unearthed in Novgorod. 10th-11th C. AD.

IN SOME WAYS THE CHURCH TURNED BACK THE CLOCK IN INTELLECTUAL ADVANCEMENT. IN OTHERS IT RAISED THE BAR, BRINGING KNOWLEDGE INTO THE HANDS OF THE COMMON MAN

prove beyond doubt that the Church had greatly contributed to the basic education of most Russians.⁵⁰

Since archaeologists have found instruction boards displaying rows of inscribed Cyrillic characters we know that most Novgoroders learned to write in a classroom environment, the students writing on wax tablets (tsery) with styli.⁵¹ Since it is difficult to identify a classroom in an archaeological context, we are unlikely to know the size of these classes. Certainly the conversion was spurred along by the education of all noble children, taken from their parents against their consent, and re-indoctrinated in the Church schools. Considering the role of the royals and nobility in the administration of the old faith, this act was particularly devastating to the old faith. We might think that the education programmes in Kievan Rus' assumed epic proportions in order to break the back of paganism, to re-programme an ardently heathen society to think along Christian lines.

Having said this, one of the most common misperceptions is that the Church turned back the clock on scientific discovery by destroying pagan knowledge (which was highly evolved). As you will read in Part I, having seen the remarkable academic achievements of the Arabs in utilising the learning of the ancient philosophers, the papacy was very keen to modernise the demi-sciences of antiquity, and propagating that same knowledge. The factors which helped cause the dark ages centred around the fact that knowledge was no longer in circulation. The reasons for this were two-fold, namely the Church's destruction or concealment of unknown pagan treatises (we will never know what went up in flames), and most importantly, the lack of willingness on the part of the pre-Christian

intelligentsia to share their knowledge outside of their select group.

The Church's most major achievement was eradicating the notion that knowledge was the exclusive domain of a privileged priestly class and the nobility. Moreover, in western Europe it made amends by founding the universities, at which the sciences were studied and de-occultised. The fruits of this sifting process gave rise to the modern sciences. As in every age, the highest levels of education were accessible to anyone with enough money to spend. If one were to identify a precise point for the destruction of the wizards' power, it would not be a battlefield in Central Asia. It would be in the halls of Oxford, Cambridge, Paris and Bologna, or Islam's Bayt-Al-Hikhma. For it was there that the new order strived to distill pure, natural science from the scientific quagmire left by the Magi, heavily impregnated as it was with the Magianism of its former custodians.

The eventual formation of compulsory schooling by the Russian state (during the 19th-20th Centuries) was, I believe, one of the main factors behind the ultimate demise of paganism, for not only did it serve to modify and re-educate the heathen mind, but it caused the eventual defilement of everyone who attended class, through mixing with unbelievers.

A typical Church library contained hand written copies of the separate books within the Old and New Testaments, plus prayer books and Psalters (*Litourgion*), hymn books (*Octoekkos / Menaia*), service books (*Triodion / Pentekostarion*), apocrypha, apologetics, hagiographies (works detailing the lives of the saints and the miraculous happenings associated with them), secular works, historical documentation, and articles pertaining to law, taxation and commerce.

Considering that the Mongols razed the entire city of Kiev to the ground in the early 13th Century, it is absolutely certain that much, if not most, of the Russian Church's earliest documentary treasures, suffered a fate similar to that they themselves inflicted on the heathen texts. As the rapacious Asiatic horsemen burned the city, laying waste to homes and human life, there is little reason to guess they spared the monastic libraries and scriptoriums. As a result there are very few extant historical texts, pertaining to the transition period from paganism to Christianity. Based upon the immense quantity of birch papyri found in Novgorod we can infer that the greatest of the Kievan libraries contained an extensive range of written material.

In short we cannot be entirely certain that every Russian monk hoped to avoid speaking of the past in their writings, but the works of those that did perished in the Mongol conflagration. Those that came after them directed their efforts toward penning scripture and the many other varieties of text needed to run Christian society, rather than turning their minds toward the 'murky' past.

Psalms contained psalms, and were known by the Greek terms *Antiphons*, *Stichera*, *Troparia*, *Kathism*. During mass and the main prayer vigils (which were held at midnight, 6 am, 7 am, 9 am, noon, 3 pm, 6 pm, and 9 pm, psalms and beatitudes were sung to the glory of God. Clergy regarded it as a dereliction of duty to avoid attending these prayer sessions. At midnight prayer, priests, nuns, monks and some of the faithful maintained a prayerful watch over the world, as darkness, 'the hours of Satan', fully enshrouded the earth. Nocturns (the midnight office) was akin to manning the heavenly battlements; falling asleep during it was viewed as a very serious misdemeanour.

The sanitised chronicle

Reading the greatest written treasure of old Rus', the *Primary Chronicle*, one senses historical discrepancies. Chronicle entries concerning the conversion polemic at Kiev do not seem to reveal the full story, for the writer of the *Primary Chronicle* at some points appears to avoid telling the whole truth. Ever so keen to present an image of a Catholic Church revelling in evil and heresy, "Nestor" drove the nails into Rome's coffin yet further. He records that Vladimir was sternly warned against becoming part of the German Church, which was said to be riddled with simoniacal priests who demanded that their parishioners pay money in order to have their sins forgiven - "they absolve sins against money payment, which is the worst abuse of all". "God guard you from this evil, oh Prince"²² is the dire warning given to Vladimir. There is much truth in what he said, and yet it is what he does not say that gives us cause to question the objectivity and motives for the Chronicle.

If the Magi were largely present within the clergy and general populace of Germany, France and Britain, then how is it that in Rus', a land once ruled by Magians who gave homage to Iranian idols, that the Chronicler could not muster the courage to mention that *simony had to have been present in Rus' also*. I personally believe that this is a little

SOMEWHAT STRANGELY HE AVOIDS TELLING THE READER THE FULL STORY ABOUT WHAT WAS HAPPENING IN HIS COUNTRY

hard to swallow when you consider that Rus' constituted a de-facto Magian homeland during the Middle Ages! No, the Chronicler wanted Rus' to have a *squeaky clean image for later generations, something which testifies to the nature of the Chronicle, and the reason why it was written!* Now that the Volkhvy were crushed as a political entity, now that their idols and pagan temples were destroyed, the embarrassing heathen past could be swept under the carpet without a sigh.

CATHOLIC DOCUMENTATION IS RIFE WITH EVIDENCE OF PRACTICES VOCIFEROUSLY CONDEMNED BY THE CLERGY

What he also gleefully neglects to mention is that many Popes were not happy with the situation either, and were prepared to go to any lengths to eradicate the Magi and the simony that went with them. Pope Leo IX saw it as so horrifically evil that he ordered the re-ordination of any priest who had been ordained by a simoniacal bishop. This has been a cause of surprise for some, because according to canon law a person ordained by a bishop is technically ordained for life (unless defrocked and excommunicated). This being the case, how is it that the mere act of committing the sin of simony while a bishop could render a priest's ordination null and void? The answer is, that the offender might not be an apostolic bishop at all, but a Magian-Christian priest, and the ordination was therefore not of the Apostles, invalid and needing to be redone. Leo IX's reordination policy made a lot of sense, when viewed in this light. The wider implications of this are explained later.

Another glaring inconsistency lies in the Chronicle's mention of the Byzantine Church's alleged rejection of the papacy following the supposed reign of Peter the Stammerer, and yet it chose to quote the threat of excommunication made by the Pope as being binding and universal against whomsoever among the Christian flock denounced the Slavonic liturgy.

MIRACLES ARE FREQUENTLY DESCRIBED IN MEDIEVAL CHURCH LITERATURE

The age of Miracles

Rivers pouring from icons, crying Madonnas, saints sailing over raging seas on slabs of basalt carved with the cross, people halting rivers, or sleeping with groups of wild bears; Christian history is riddled with amazing tales of miracles given in answer to earthly prayers. Technically a miracle was a marvel in which physical substance was changed in some remarkable way. These were not normally made manifest in every day life, but rare and unusual manifestations of the Holy Spirit as outlined in *NT; 1 Corinthians 12*. By and large miracles exhibited spiritual, rather than physical power; a strong message against evil and the wiles of the Devil.

WHAT IS THE DIFFERENCE BETWEEN MAGIC AND A MIRACLE?

The mission of evangelisation was accompanied by miracles, but long before the Middle Ages, the Church had been torn apart by recurring bad experiences with "Holy Spirit-inspired preachers", starting with the highly seductive Montanist "doomsday cult" of Phrygia. At an outward glance, the line between miracles and magic was all too fine. Sometimes the performance of mystical feats by clergy, and by lay persons especially, came under intense scrutiny to see whether the alleged miracle was "good" or "evil" in nature, for Satan was said to impart to his flock the ability to perform false-miracles, presumably granted to help strengthen the infernal kingdom on earth, and wage war against the cross. Whenever miracles were supposed to have occurred there was always a formal investigation by the local priest or bishop (whose final approval was required before a happening could be declared holy in nature). In Mediaeval Russia those who appeared to have been graced by a miracle ended up living in a monastery. Perhaps local Church authorities might have insisted they stay there for a while, so their activities could be closely monitored in an attempt to deduce whether heresy was involved or not.

SEERS AND DREAMERS

In pagan eyes, miracles, saintly intervention and relics might have been seen as powerful magic, which could have raised cries of hypocrisy among their dissenters. Nonetheless many pagans eventually came to believe in their power during the conversion era, and beyond. Clearly the Church deplored magical objects forged by witchcraft or the celestial powers of the planets, rather than 'the sanctity of the Holy Spirit'. Believers were exhorted to use prayers and relics instead of things fashioned by *magia*.

While the Church was firmly against dream interpretation and night auguries, there were instances where holy dreams brought portends and news so clear they needed no interpreting. Nuns were virgins spiritually wedded to Christ, and although there are many instances in which they were credited with miracles, there is no evidence to suggest that they performed a role in any way similar to the sybills or virgins of the white Magi, who were exceptional prophetesses. However almost every one of St Philip's (the apostle's) daughters were endowed with prophetic gifts, though this was supposed to have been due to divine ministrations from the Father and Son

through the Holy Spirit rather than the arts of divination.⁵³

Hesychastic prayer was a Byzantine prayer method which used inner peace and “The Jesus Prayer” to ultimately attain a vision of the divine light. From c. 922 AD St Symeon the New Theologian’s style of prayer gained new adherents, especially among the monks, and this became known as the Hesychast movement. A whole new era of Byzantine mysticism sprang up around this. The Hesychastic movement, rightly or wrongly, eventually felt the sting of official scepticism, disapproval and denunciation.

The history of relics

While pagans had recourse to magical objects, the early Christians made use of holy relics and blessed items able, by virtue of a person’s faith, and the linkage of the object to a certain saint, to provoke miraculous occurrences. Merely touching a handkerchief or *apron* worn by one of the apostles was believed enough to eject demons or cure diseases ;

*“And God wrought special miracles by the hands of Paul; So that from his body were brought unto the sick handkerchiefs or aprons, and the diseases departed from them and the evil spirits went out of them”.*⁵⁴

It was these relics that turned the newly converted Gentiles from their devout use of planetary produce, the magical objects, amulets, talismans, charms of the age. Relics, however, were relatively few in number when compared with the ubiquitous and iconic magicked articles of that age.

One might think that by the time the Mongol “Golden Horde” had finished with the Rus’, several hundred years later, very many of these holy objects had been lost for all time. Moreover, the rapid expansion of Islam in the south saw the desecration of many Christian holy sites and further destruction of relics.

Icons

Icons began at the hand of St Luke (St Paul’s companion), and in his own right a skilled physician and artist. The theory behind icons was that since the boundless almighty God had come into the world in the flesh, and become the knowable, the definite, the portrayable, it was incumbent upon the Church to depict him in his glory. Through Luke’s colour portraits, and descriptions of Christ recorded by Nicephorus and St John Damascene, we know today what Christ looked like. In the early 4th Century, Eusebius tells us he saw other saintly icons of some antiquity, especially those of St Peter and Paul, as well as a statue of Christ. The deep veneration displayed by Christians towards sacred images was often mistaken for homage toward the object itself. The Iconoclasts, an heretical intra-Byzantine religious movement which advocated that people must abandon the use of holy images in worship were forcefully stamped out and regarded as heretical. Influenced by Islamic (and most likely Orthodox Zoroastrian) thinking these believers defaced and mangled any kind of holy icon, until their spree of destruction was halted.

Eusebius tells us that the bodies of the Saints were venerated during the earliest anti-Christian persecutions. To combat the strengthening presence of Christianity, the persecutors of the faith hit upon ingenious ways of robbing believers of the martyr-relics. One technique was to immerse their holy bodies in quicklime to dissolve them away. In life these remains were temples of the Holy Spirit, serving as receptacles for god’s active power, and the powerful divine presence and inspiration that fuelled their martyrdom or saintdom. With the cessation of the Roman and Jewish persecutions, the faithful could at last rest easy, knowing saintly relics were no longer on the hit list of Rabbis or the Roman state.

While each and every Christian could hypothetically become a saint, rather few did, with the result that saintly relics were a finite resource in the spiritual inventory of the Mystical Body of Christ. As a result the various, Holy Sees kept relics within their safe walls, preserving them for prosperity as best they could. They needed to control or monitor the private ownership of them, since, being of a limited number, they would be sorely needed far in the future beneath the altars of other newly consecrated churches.

Relics were to be treated with utmost respect, to this end they were stored in relic chests or caskets known as reliquaries.

We can classify relics as major and minor;

MAJOR RELICS

RELICS INCLUDED BODY
PARTS OF THE SAINTS

Major relics were body parts, blood or indeed the uncorrupted full corpse of a saint! They could only be officially obtained through the Church or perhaps in the Middle-East, where Mohammedans (especially the Seljuks) were committing the wholesale destruction of the more ancient saintly burial places. Other major relics were articles owned by the saint during their lifetime. More often than not these were only a slight fragment of the full object from whence it came. For example a patch or even a thread from a cloak owned by a saint would constitute a major relic. Besides the True Cross, one of the greatest relics of Constantinople was the Mantle and Girdle of the Holy Virgin, though I am unsure of their appearance and manufacture.

MINOR RELICS

MINOR RELICS WERE
OBJECTS SIMPLY TOUCHED
BY THE HOLY ONES

Minor relics were things said to had been touched by the saint at some time during their life, or items touched or rubbed against a major relic. Often these had a family story attached to them, including how the saint was allegedly connected with the item and the miracles attributed to it in years gone by. This category must have been notorious for many forgeries.

THE NUMBER OF RELICS
FOUND THROUGHOUT
EUROPE BLOSSOMED IN
THE 10TH-11TH
CENTURIES AD

According to the writings of the Western monk Ralph Glaber, the 10th-11th Centuries marked a new era in the history of relics, with an explosion of exotic religious objects appearing in Europe, as if by some miracle.⁵⁵ This was owing to the unprecedented number of pilgrims making their way to Jerusalem and returning home with things they had bought or pilfered whilst overseas. No doubt a certain proportion of relics acquired in the holy lands were counterfeit items purchased from Arabs and Jews who saw gullible Europeans coming a mile away, in much the same way as modern Egyptians sell phoney ancient artifacts to eager tourists.

PRESTIGIOUS RELICS WERE
IMPORTANT STATUS
SYMBOLS IN THE MIDDLE
AGES

Official trading in icons and relics was not unknown in mediaeval Europe, and the rich paid exorbitant sums to get their hands on them. Not only was there a legal trade in them, but also an illicit one, with many charlatans peddling bogus relics, often with very sad consequences for sincerely devout villagers intent on getting a bit of extra spiritual aid for themselves against life's many privations and woes.

Rich Christians often sought to outdo each other, hoping to own bigger and better relics, perhaps to gain success for their earthly ventures, or to show off to family, friends, and business partners. In extreme examples, they organised expeditions to Tsargrad and the Holy Lands in search of more obscure and prestigious items.

Since Rus' had been newly evangelised, there was not yet a tradition of home-grown saints. Instead, many relics came from Eastern or Western saints, or much, much older ones, whose bodies and personal effects had been exhumed by grave robbers or enterprising Muslims. For this very reason, some relics were more easily encountered than others.

RELICS WERE PART OF A
KINGS BATTLE ARSENAL,
HOPEFULLY TURNING THE
TIDE OF VICTORY IN THEIR
FAVOUR

The acquisition of relics and icons always began with a trip to major city parishes, or at the estates of the rich and powerful. But, if you had enough money to fork out, anything was possible. Icons and mounted relics were fashioned by *monakhi* (ex-tradesmen), or specially commissioned craftsmen who spent a lot of time fasting and praying as they worked, producing items of distinction.

In the 20th Century, generals plan to overcome their foes with superior technology, and weapons of mass destruction like biological, chemical and nuclear weapons. But during the Middle Ages the relics of the saints and religious icons were the secret weapons, the keys to success in warfare. And so commanders deemed it necessary to have them on the battlefield when confronting the enemy. As two rival armies formed up preceding the battle, the holy relics were carted to the front lines, in relic chests borne by censer waving acolytes and deacons, and manoeuvred into position with all the confidence and surety of a cruise missile.

JUST WAR

The Church has always seen warfare as most regrettable, since it resulted from an inherent flaw in the human nature, and was caused when those with power wished to exercise it unjustly, or to crush the weak and gain more vassal states. Nonetheless the Church would be there on the eve of battle, just as it was on either side of Omaha beach and the Somme, hearing confessions on both sides, and imploring god's aid for the soldiers under their chaplaincy, for they were so to speak their parishioners, or the militias of their secular sponsors. Most lords had their own military chaplains who went to the front with the troops to keep God on side. During Rus's civil wars, each army had its own Russian priests, as did their opponents. War was a time of great danger and excitement;

perhaps the most traumatic time in any man or youth's life. And it was at these times that they probably felt most vulnerable and in need of God's help. Many soldiers carried their own "holy armaments" to ensure they left the field of battle safe and sound. Russian archaeologists sifting through the debris of the Rus' Mediaeval civil war battlefields have uncovered equipment bearing images of Christ and the saints. One particularly fine helmet had St Michael embossed in silver, and mounted on the plating above the nasal guard.

The True Cross is arguably the greatest of all Christian relics. The tale of its recovery is a story in itself. It was the Jewish custom that the cross on which the condemned soul was hanged should be buried before the sun of that execution day had set. According to legend, St Helen, the mother of Constantine, organised a mission to Jerusalem in the early 4th Century AD, to find Christ's cross. Golgotha, its original burial spot, was said to had been covered over by the earthworks Titus' legions used to besiege Jerusalem. Using the old Roman siege survey maps which Constantine had inherited from old Rome, they were said to had tracked down the place of the crucifixion, and with the help of a small army of workmen dug up the "True Cross". Relics of the true cross might also be pieces of wood or nails touched by the real.

By means of sanctifying prayers a priest was capable of blessing physical substances, converting them into holy things. A bishop mixed oil of Chrism once annually during *Paskha* (Easter), for use in unctions, or to fuel icon lamps. Holy water too was consecrated in this manner. Benedictions were also used to expel plagues of pests, rodents or sickness should there be an outbreak in a given area.

They could rid a portion of ground, a building, or some other area, of troublesome spirits, thereafter replacing them with the Holy Spirit. Usually the area was sprinkled with holy water as blessings were uttered, and purified with a censer of burning incense. In this fashion, the soil within a cemetery was sanctified, thus becoming hallowed ground. With Russian priests being as scarce as hen's teeth in most areas between the 10th-13th Centuries, many people who didn't expect to see one for some time (such as hunters, soldiers, and merchants), got the *svyashchennik* or *pop* to bless items which would hopefully guard them against the uncertain pitfalls of the open woods.

Holy weapons such as blessed crucifixes and crosses, foliage from "Palm Sunday" or any icon would confer blessings and protection upon the user or wearer. Holy oil (blessed once annually during *Paskha* (Easter), by a bishop), or holy water would bestow blessings if the user made the sign of the cross with them.

One Englishmen visiting Russia noted they were a people virtually addicted to lighting candles when seeking intercessions from heaven, and during the mass. The burning of blessed candles had long been a tradition in the Church, in both the Orient and Occident. When lit, the light of their flame, and the petitions attached to them, were seen from heaven itself. It was common for a person to retain their baptismal candle, to be burned in the future during cases of special need.

The Holy Sacraments

According to the Church, Jesus instructed the apostles in a variety of sacramental mysteries, the spiritual treasures of Christ. From that time the divine authority to carry out these functions passed from the apostles, to the apostles of later ages, the bishops. By virtue of the apostolic sacrament of Holy Orders a man was empowered to carry out a variety of sacramental functions. Through their agency alone the sacraments enabled the reconciliation of sinners with the almighty father. Their power resided within the ritual itself, and was in many ways divorced from the celebrant's personal sanctity. In ancient times the sacraments were considered so sacred that the "unholy" could not look upon them. The Russian word *Tainstviye* ("Sacraments", literally "the secrets") conveys the hidden or once secret nature of the rites.

During the performance of any sacrament, a priest wore ecclesiastical apparel of differing colour and design, as well as the accompanying stoles and other vestments. The choice of vestments in any given ceremony were determined by tradition.

According to the four original apostolic sees, the sacraments were without question vital to the salvation of humanity; to have never heard of them was said to be pardonable, but to freely reject them, was unequivocally tantamount to rejecting Christ. Rus' Church ritual of the earliest times is difficult to study, owing to a lack of documentation from that period.

The catechumenate

Anyone wishing to undergo conversion to Christianity entered into the Order of the Catechumenate, a one year probationary period, during which they were instructed in the faith by the parish priest, but still prohibited from viewing the Eucharistic sacrifice (the Christian holy meal). Having reached a suitable level of understanding they were inducted into the Church *community*, normally during the following Easter celebrations.

BAPTISM

THE SACRAMENTS OF BAPTISM, COMMUNION AND CONFIRMATION (IN RUSSIA CALLED KRESHCHENIYE I MIRA POMAZOVANIYE)

In the East prospective parishioners joined the Church by receiving a single rite. Baptism (the washing away of sins by means of a triple, full-immersion in water), was followed by the consecration and sealing of the soul with the oil of Chrism (blessed by a bishop). This was the "sacramental fire", the anointing of the Holy Spirit. All the senses and main body parts were crossed with the oil. Lastly, the newborn child, or neophyte, was dressed in a white garment of purity and received the Eucharistic bread for the first time.

According to Church teaching, without baptism, you couldn't proceed into the highest Heaven. At the moment of baptism the baptisee was said to have entered into union or fellowship with God and begun the first step in their life's journey towards heaven. All that was left was to remain in that union. Adults undergoing conversion (catechumens) and children who had reached the age of reason verbally confirmed their faith at this time. Each person joining the Church received a spiritual parent or friend, who would aid them materially and spiritually wherever possible in times of misfortune. This special person usually took part in the ceremony, holding the neophyte's baptismal candle. *All persons present verbally reaffirmed their baptismal vows to renounce Satan at every available opportunity.*

During the Middle Ages a Roman baptismal celebration differed from the Eastern rites since baptism, communion and confirmation were held separately as three different sacraments. Baptism was achieved either by immersion or the pouring of blessed water over the forehead.

HOLY COMMUNION

THE SACRAMENT OF HOLY COMMUNION - THE EUCHARIST (IN RUSSIA CALLED PRICHASTIYE)

To understand the origins of the Christian Eucharist, we must look far back to the time of the Jewish exodus from Egypt. Following their emancipation from Egyptian slavery, the people of Israel wandered across the parched and unforgiving Sinai desert, led by their prophet Moses, a former Egyptian prince, but Jewish by blood. There they lamented their hunger, for the ground yielded not enough food for that distraught band of refugees in search of a home.

"And the whole congregation of the children of Israel murmured against Moses and Aaron in the wilderness: And the children of Israel said unto them, Would to God we had died by the hand of the Lord in the land of Egypt, when we sat by the flesh pots, and when we did eat bread to the full; for ye have brought us forth into this wilderness, to kill this whole assembly with hunger. Then said the Lord unto Moses, Behold, I will rain bread from heaven for you; and the people shall go out and gather a certain rate every day, that I may prove them, whether they will walk in my law, or not. And it shall come to pass, that on the sixth day they shall prepare that which they bring in; and it shall be twice as much as they gather daily.

And Moses and Aaron said unto all the children of Israel, At evening, then ye shall know that the Lord hath brought you out from the land of Egypt: And in the morning, then ye shall see the glory of the Lord: for that he heareth your murmurings against the Lord: and what are we, that ye murmur against us? And Moses said, This shall be, when the Lord shall give you in the evening flesh to eat, and in the morning bread to the full: for that the Lord heareth you murmurings which ye murmur against him: and what are we?

Your murmurings are not against us, but against the Lord.....And it came to pass, as Aaron spake unto the whole congregation of the children of Israel: and they looked towards the wilderness, and, behold, the Glory of the Lord appeared in the cloud.

And the Lord spake unto Moses saying, I have heard the murmurings of the children of Israel: speak unto them saying, As even ye shall eat flesh, and in the morning ye shall be filled with bread: and ye shall know that I am the Lord your God. And it came to pass, that as even the quails came up, and covered the camp: and in the morning the dew lay round about the host.

And when the dew that lay was gone up, behold, upon the face of the wilderness, there lay a small round thing, as small as the hoar

frost on the ground. And when the children of Israel saw it, they said one to another, It is manna; for they wist not what it was. And Moses said unto them, This is the bread which the Lord hath given you to eat. This is the thing which the Lord hath commanded; Gather of it every man according to his eating, an omer for every man, according to the number of your persons; take ye every man for them which are in his tents. And the children of Israel did so, and gathered, some more, some less. And when they did mete it with an omer, he that gathered much had nothing over, and he that gathered little had no lack; they gathered every man according to his eating. And Moses said, Let no man leave of it till the morning. Notwithstanding they hearkened not unto Moses; but some of them left of it until the morning, and it bred worms, and stank; and Moses was wroth with them. And the Lord said unto Moses, How long refuse ye to keep my commandments and my laws? See for that the Lord hath given you the sabbath, therefore he giveth you on the sixth day the bread of two days;... And the house of Israel called the name thereof Manna; and it was like coriander seed, white; and the taste of it was like wafers made with honey. And Moses said, This is the thing which the Lord commandeth, Fill an Omer of it to be kept for your generations; that they may see the bread wherewith I have fed you in the wilderness, when I brought you forth from the land of Egypt ..."⁵⁶

MOSES TOLD THE ISRAELITES GOD WOULD SEND MANNA TO FEED THEM IN THE DESERT

Following the miracles of the loaves and the fish, Jesus proceeded to give one of his most important sermons, but the meaning of it was lost on the many Jews present to hear it. In essence, Christ taught them he was like the manna which sustained their Jewish forebears, the manna proving whether or not they were obedient to God's laws. He proclaimed that he was both man and bread, the bread which, like the manna, had come down from heaven to give them life, when otherwise they would have died. The teaching was difficult for many Jews to accept, and so from that time they ceased to be followers of Jesus. The sermon went as follows;

"Verily, Verily, I say unto you, He that believeth in me hath everlasting life. I am that bread of life. Your fathers did eat manna in the wilderness, and are dead. This is the bread which cometh down from heaven, that a man may eat thereof, and not die. I am the living bread which came down from heaven: if any man eat of this bread, he shall live for ever: and the bread that I will give is my flesh; which I will give for the life of the world.

JESUS PROCLAIMED HE WAS THE BREAD OF LIFE

The Jews therefore strove among themselves, saying, How can this man give us his flesh to eat? Then Jesus said unto them, Verily, verily, I say unto you, Except ye eat the flesh of the Son of man, and drink his blood, ye have no life in you. Whoso eateth my flesh, and drinketh my blood, hath eternal life; and I will raise him up at the last day. For my flesh is meat indeed, and my blood is drink indeed.

HIS BLOOD WAS WINE

He that eateth my flesh, and drinketh my blood, dwelleth in me, and I in him. As the father hast sent me, and I live by the Father: so he that eateth me, even he shall live by me. This is the bread which came down from heaven: not as your fathers did eat manna, and are dead: he that eateth of this bread shall live for ever.....

CONSUMING THEM GRANTED IMMORTALITY

Many therefore of his disciples, when they had heard this, said, This is an hard saying: who can hear it? ...From that time many of his disciples went back, and walked no more with him"⁵⁷

Later, on the eve of the betrayal which led to his crucifixion, Christ gathered his disciples in an inn to celebrate the passover of the Jewish people, the meal which represented their deliverance from oppression and their arrival in a homeland which god had specially put aside for them. But it would turn out to be a very different kind of passover meal, a meal which was the culmination of this earlier sermon.

"And as they were eating, Jesus took bread, and blessed it, and brake it, and gave it to the disciples, and said, Take, eat; this is my body. And he took the cup, and gave thanks, and gave it to them, saying Drink ye all of it; for this is my blood of the New Testament, which is shed for many for the remission of sins"⁵⁸

THIS SACRAMENTAL MEAL GRANTED THE REMISSION OF SINS

From that time, until this very day, Christians celebrated their deliverance from the shackles of death and sin, by attending the Eucharistic celebration, during which they feasted on bread and wine, the body and blood of their Saviour. So what form did this ceremonial meal take?

In the East, the precise order of the Eucharistic mass varied throughout the liturgical year. In Byzantium the feast of the bread and wine was celebrated in the manner of St John Chrysostom's liturgy, or the gruelling liturgy of St Germanus of Constantinople, which incorporated most facets of Christ's life in the sacramental feast. In Rome they used the Roman Rite (spoken in Latin), in Egypt the Liturgy of St Cyril of Jerusalem and in the Oriental East, the Chaldean Christians used the Liturgy of Addai and Mari, the Apostles. Nestorian and Chaldean liturgical

IN VARIOUS PLACES THE EUCHARISTIC LITURGY TOOK ITS OWN DISTINCT FORM

arrangements were based on the rites of St Theodore of Mopsuestia or St Nestorius, and were used throughout Persia, the far East and India. Armenians utilised their own rite.

The Eucharist was the single most important and common thread uniting *all of the original churches*, and which had always been the *focus* of the entire Church from the very beginning, allowing each eater to become fused into one single “mystical body of Christ”. So solemn was it, that on the whole, this ceremonial mystery is essentially unchanged even 2,000 years later. All liturgical variants possessed the *Epiclesis*, the precise moment in ritual, when the Holy Spirit is called down by the priest to enact the transformation of the fruits of the earth, the water, the wine and the bread, into the actual body of Christ, the Redeemer. The ‘timeless’ mass, the pivotal celebration of the Church’s unity and strength ceremonially transpired in two parts. The formal consecration ceremony took place in the sanctuary, which was partitioned from the nave because it was ‘holy ground’, the inner sanctum of God’s presence. In Mediaeval Rus’ the congregation stood in the Church nave during the mass, which was conducted as follows;

PART 1 THE SYNAXIS

When Russian and Byzantine parishioners first entered the chapel it was mandatory that they kiss the Cross. This would have been a powerful means of detecting heretics such as the Manichees, who considered it greatly sinful to perform this act.

According to the *Primary Chronicle*, the Western custom for entering Church during the 11th Century consisted of the parishioner kneeling down and blessing the ground with the sign of the cross. They could then stand upon this spot. In rhetoric true to the period, the Chronicler “Nestor” launched a tirade against the German Catholics for grinding the sign of the holy cross beneath their feet. If this account is reliable then apparently the Catholic church might not have adopted the practice of blessing themselves with holy water before attending mass at this point in its history.

Next came the procession of the *svyashchennik*, *deakon* and main party into the Church or Chapel; the Gospel was carried in and placed at the lector in readiness for the readings. Numerous hymns, litanies, the occasional psalms were recited and sung, followed by the Gospel readings and a sermon (homily), followed finally by the litanies for intercession on behalf of the living and the souls of the faithful departed. The catechumens were dismissed before stage two began.

PART 2 THE EUCHARIST

Next came the procession of the offerings to the altar, in the form of gifts to the Church, as well as water, bread and wine for consecration during the next part of the ritual.

Ordinary Jews once used barley loafs for passover, whereas the Rabbis of the temple employed flat wheat based loafs for their ritual consumption.⁵⁹ It was a symbol of the divine providence God had displayed toward the people of Israel, in providing a leader such as Moses to lead them out of Egyptian bondage.⁵⁹ In all both items of ritual fare differed remarkably little from that of the pagan Gentiles.

In time the Christians of the early Church utilised ordinary leavened loafs to celebrate the Eucharistic sacrifice, which they themselves had baked at home in their own ovens, and brought to church.⁶⁰ This continued to be the case for a number of centuries.⁶⁰

The officiating *svyashchennik*, *pop* or assistant *deakon* (if present) fumigated the sanctuary and altar area with a censer of purificatory incense, to burn away any evil essences likely to contaminate the area during the sacred celebration. Next came two brief litanies, a sign of peace, the recital of the apostolic creed, the thanksgiving, the “Last Supper” narration, the recollection of their sins, and the remembrance of all the faithful departed. Just prior to the Eucharistic ritual the celebrant’s hands were washed in holy water, to cleanse away any sins the priest might have on their person. The water and wine were then mixed with a golden spoon, and the bread later blessed in the proper manner. Then came the raising, consecration and breaking of the bread. Bread with a drop of wine (which had by that stage become the blood of Jesus) was then given to each member of the congregation on a golden spoon.

It was common for church-goers to place all their requests on the altar, so that their hopes and dreams would be lifted up to heaven by the priest during the Ascension of the Host. Pardons were obtained on behalf of the dead, or

those living in sufferance.

According to the Church, the Eucharistic mass was like the last supper, the final Passover, when man gathered to celebrate, for the first time, his passage from death into eternal life. Jesus asked His disciples to commemorate His coming sacrifice by imitating the feast that they were to perform that night, with the breaking of the bread and the sharing of the wine. And so they came to the mass, to Christ's table. In their mind this Eucharist became "living bread" which had gone up to Heaven, where He continued to sit at the right hand of the Father, and pleaded our case. Once eaten He was capable of forgiving sins in great number, since Christ now lived in them. Through this meal all who ate of it became a Eucharistic brotherhood in Christ; immortal neighbours.

Communicants were required to fast before the sacred meal and this fast was seen as essential to the respectful reception of the Sacrament. In the West parishioners received the bread of life weekly or even daily. In the East the practice of accepting it only two or three times per year (at Christmas and Easter time) had developed, and even then only after a 40 day fast from meat and dairy products on each occasion. Only baptised people were allowed to receive it and heathens, heretics and Christians in an overly impoverished spiritual condition were forbidden from knowingly consuming the host.

In cases where an individual, through an act of apostasy, had fractured the nature of the Eucharistic brotherhood they were *cast outside of it*, and could not re-enter it without the need for redemptory penitence. The custom of the Church had always been that people who had not made a serious attempt to maintain their sanctity, or to live a holy life, should not partake of the meal without prior confession and penance; to do so was in many ways to condemn themselves.

Following Russia's surprise conversion, pagan libation makers and resident Magi developed a policy of locking out whoever was starting to attend Mass, considering them defiled. These were "excommunicated" from the local pagan community and only reluctantly re-admitted after completing gruelling purifications. Fearful of losing access to the time-honoured pagan libation, many Dvoeveriye (people stuck in a blurred spiritual state wherein occurred a 'fearful' blending of both faiths) limited the number of times they received Holy communion. For some, the shunning of the Eucharist was an intentional snubbing of the sacrament. For others, the moral conflict of their shadowy double-life may have influenced them to stay away from Church as a sign of reverence for the sacred meal. This sort of behaviour resulted from widespread, deep seated confusion in a newly-converted country haunted by spiritual dilemmas of every kind. The significance of singling out milk, dairy products and meat for the penitential pre-eucharistic fast may also have served to reinforce the Church's teaching that *dvoeveriye* had to abstain from pagan libations and holy meat, offerings which would have been made before the idols.

The forebodings and even loathing of the freshly converted pagans, are found in the writings of St Cuthbert. In 7th Century England a group of bystanders jeered some monks in danger of drowning. Refusing to render them any assistance they cried "Let no man pray for them and may God have mercy upon none of them, for they have taken the old religious observances away from men, and nobody knows how the new ones are to be observed".⁶¹ Again the inference here is that the pagans had formal sets of dearly-held beliefs and ritualism prior to their conversion, and the arrival of the Church sacraments caused unimaginable confusion and grief in their troubled hearts.

As had occurred in other nations with similarly large numbers of pagan-Christians, the Apostolic cross only continued to be carried and fortified by a sturdy band of saint-like, die-hard Russian parishioners. Like the English and Irish saints, these Russian Christians really were individuals ready to place their lives on the line in defence of the new faith. In the earliest phases of the missions, when Christians were a minority, it took a lot of guts to walk single-handedly into a grove of worshippers with an axe and start lopping the Holy trees. That's when people want to kill you, and martyrdom was maybe only moments away. Those Russians who actively supported the teachings of the Church would most likely have received Holy Communion far more frequently than the bi-annual Christmas and Easter Eucharistic celebrations experienced by the majority of the *dvoeveriye*. Who knows, some may even had communicated (received the Body of Christ) weekly.

Based on historical sources from the Holy See of Rome, Constantinople, Alexandria, Antioch, Jerusalem and the Church in India, there is every reason to believe that Christianity started off not only as a philosophy or way of life, but as a meal which imparted "salvation" and a number of ritual ordinances which ensured the ongoing nature of that salvation.⁶² Deiss' book contains transcripts of Christianity's oldest surviving liturgical writings, revealing their

deep love for the sacraments. Occasionally these texts employed allegories or phraseology linked with pagan libations and customs. At first these comments seem almost insignificant until you discover their real origin. You see in certain parts of Western Christendom, and the Eastern Church, the holy Trinity was likened to the sun. Take this example;

*“To stand before the blessed and holy Trinity and clearly see its ineffable glory and by its unchangeable and overpowering light-the rays of the three Suns-be made resplendent and shine, and to receive the glow and the rays that emanate from there and to rejoice in them, trusting in Christ that if one dies by the law of nature, yet he shall live with Christ in the ages”.*⁶³

During the 13th Century AD anti-pagan Crusades in the Baltic, the Teutonic Knights were required to attend mass daily, be celibate, observe their strict rules on poverty (they didn't even own their clothing or swords!), all as part of their obedience to the charter of the Germanic Catholic military orders they served in. Such vows sometimes clashed with their duties as soldiers on active service. For example during the Winter months soldiers ideally needed to set off on patrols before daybreak in order to make as much of the available day light as they could. To facilitate such an early start, and at the same time allow them to receive holy communion in the mornings, the head of one Teutonic order wrote to the pope requesting his authorisation for them to celebrate the Eucharist before sunrise. The reply from the Holy Father was that they were in no way to consecrate the host during the hours of darkness. He allowed them to begin mass before sunrise, but the exact moment of the consecration, when transubstantiation took place, was to be timed in conjunction with the initial emergence of the rising sun's rays, at the very earliest. Is it a coincidence that, in this case, the Western Church celebrated morning mass to the rising sun, or that Christian altars pointed eastward, towards the rising sun? More will be said of this later.

ACCORDING TO ONE
TRADITION THE
EURCHARISTIC RITUAL
WAS ONLY TO BE
PERFORMED DURING THE
HOURS OF DAYLIGHT

THE MEDIAEVAL ROMAN CATHOLIC MASS

As in pagan times, it was commonplace that everyone from Mediaeval villagers to highest lords sought the assistance of magicians and diviners to have their ailments healed, *rather than turning to the Eucharist, “the Body of Christ”*, which was the Church's most potent remedy for any form of illness.⁶⁴

In typically Aryan fashion European pagans very often hung items of (usually raw linen) cloth or clothing from the branches of grove trees. The current theory is that these customs were a form of sympathetic magic, in which the sacrificing a garment worn by a someone ill would take away their sickness. I believe one further explanation for these “superstitions” might be found in *Din-Vigirgard*:7, where it is explained that pious individuals had to consecrate items of clothing on behalf of departed souls, or the *Puranas* which describe the practice of adorning grove trees with cloth. These customs continued to be practiced throughout the Christian era of the Middle Ages. The sheer prevalence of these and many other pagan practices presented great difficulties for Rome concerning the Eucharistic celebration.

PARISHIONERS WERE
BANNED FROM
PROVIDING BREAD AND
WINE FOR THE MASS

With these and many other heathen devotions happening behind the scenes, the spiritual state of very many parishioners was such that, in the reformist mediaeval Roman Catholic Church's eyes, dispensing the consecrated host to them would have been akin to casting pearls before swine. By the Middle Ages, many changes were brought about in Eucharistic ritual of the Franks, in order to guard the sanctity of Christ's body and blood.⁶⁵ Firstly, the lay members of the parishes were no longer required (or permitted) to produce the bread and wine used during the mass,⁶⁵ as was the custom for pagan celebrations. Instead monastic brethren were solely entrusted with the production and pressing of the Eucharistic wine, as well as the baking of the hosts.⁶⁵

CATHOLIC AUTHORITIES
CHANGED FROM THE USE
OF A LOAF TO A WAFER
IN THE 9TH CENTURY
AD

In superficial ways, the manner in which the eastern Eucharistic sacrifice was celebrated differed from Western liturgy, such as the type of bread used, and the exact moment of the bread's divine consecration, and transformation into the body of Christ, but its essentials were almost identical. Interestingly this occurred because the Roman Catholic host took on a new appearance during the ninth Century AD, in a smaller form which allowed it to be placed on the tongue of the communicant.⁶⁵ The bread was no longer made with the use of yeast (the method still used by the orthodox Churches), the direct result of this being an extremely flat disk-shaped loaf.⁶⁵ Later, at the very beginning of the 11th Century, a change in recipe saw them assume the character of a wafer.⁶⁵ These wafers were what the Slavic Orthodox clergy called *Oplatki*, a pun that likened the Catholic Eucharistic wafer to a payment or coin. Yes, so prevalent was the Byzantine perception of a Roman church engaged in endemically avaricious

simony, that their propagandists portrayed Western Christians as eating coins during mass! The use of *Oplatki* during the Roman mass was slammed in the *Primary Chronicle* as unfitting when compared to the traditional raised loafs of the Eastern Church. The form of the holy bread still continues to be a point of divergence between the Orthodox and Catholic forms of Eucharistic celebration. But, with so many Magi finding positions inside the Mediaeval Christian communities, it was a very shrewd move on the part of Rome, to adopt the use of these wafers.

Firstly they were significantly different from the buns used by the Magi, and secondly they were an exact description of the manna which God sent down to the people of Israel, "And the house of Israel called the name thereof *Manna*: and it was like coriander seed, white: and the taste of it was like wafers made with honey".⁶⁶ This is yet one more instance where Rome went out of its way to seem substantially different from the Magi, not only in the appearance and teachings of their clergymen, but in the performance of the sacraments, which in some respects resembled the rituals of the white Magi too closely.

On the testimony of Emperor Charlemagne's personal clerical advisor Alcuin, the transformation in the form of the Eucharistic bread from a leavened loaf into a flattened or unleavened one, took place in the pre-wafer era to permit a return to the customs of bread making once practiced in the early Church. In those times they used bread stamps to flatten out the bread and leave an impression on the face of the loaf. The oldest surviving bread stamp belongs to a North African parish at Djebeniana (dated to the 6th Century AD) and may well have been Coptic.⁶⁷ I was amazed to discover that it carried the image of a deer beneath a tree, surrounded by Christian Eucharistic phraseology⁶⁷ (see the pagan nature of this image on p. 481). All of this might be prima facie evidence that the earliest methods for producing the Church's disk shaped bread were very close to those used in the making of Magian drons, though far from being the same as wheaten dron disks.

Changes to the Catholic mass happened in the 9th-10th Centuries AD, among the Franks, and occurred owing to a *sharp decline in the number of people attending mass*.⁶⁸ Whereas in the past large numbers of people had gathered at mass, to see the produce of their very hands (bread and wine) carried to the altar in the offertory procession, the 9th and 10th Centuries saw so few people going to mass, that in many cases the procession could not even be conducted.⁶⁸ One reason for this was the proliferation of private parishes (sponsored by secular rulers, merchants etc), and the celebration of mass in peoples' houses, which were performed by wandering monks.⁶⁸ Another reason was that people were not encouraged to attend mass when they were in a spiritually impoverished or "unholy" state, for fear that their attendance would do more harm than good to the blessed host.

For this same reason the clergy began shielding the chalice from the laity in the 9th-10th Centuries AD, and were extremely fearful that communicants might deliberately spill some of the consecrated wine on the ground as they drank from the chalice during Mass. By the 1200's AD communion in both species was simply not on, and parishioners no longer partook of the chalice. Similarly the priests became reluctant to use bread and wine supplied by parishioners, apparently since there was a perception that many people were dubious in their everyday lives; very likely semi-pagans. In short there was a fear within Church circles that the danger of desecration of the blessed sacrament by parishioners during the mass was very real, continually present, and had to be guarded against. For example Catholics of the early Middle Ages originally received the sacrament in the hand, but at that point the Church brought about the custom of placing the host into the person's mouth. I am willing to suggest that this was to ensure that the Body of Christ was eaten by the person then and there in front of the celebrant priest, and not stealthfully placed in their pocket, and carted off elsewhere to an uncertain fate. Perhaps this was the other great merit of the wafer, for it dissolved fairly quickly and did not require chewing, as would normal bread. Indeed, in this 20th Century I have heard the occasional tale of a parishioner here or there who had been caught doing this very same thing, and when challenged by the outraged priest admitted that they could make good money from selling them! But such things were happening long before our day.

"Instead of eating the sacred bread like other communicants, they kept it in their mouths and went out (most likely clenched gingerly in their teeth). Then they walked round the Church outside nine times, and at the ninth time the Evil One came out from the Church wall in the form of a frog, to whom they gave the bread from their mouths, and by doing this wicked thing they were supposed to be selling themselves to Satan and become witches. There was an old man in North Pembrokeshire, who used to

say that he obtained the power of bewitching in the following manner: The bread of his first Communion he pocketed. He made pretence at eating it first of all, and then put it in his pocket. When he went out from the service there was a dog meeting him by the gate, to which he gave the bread, thus selling his soul to the Devil. Ever after, he possessed the power to bewitch".⁶⁹

EUCCHARISTIC
DESECRATION

The desecrations of the Eucharist in these preceding English accounts, necessitated that the Holy wafer be fed to an animal, perhaps the first animal seen upon leaving the Church. Toads and dogs would have been perfectly understandable recipients for the desecrated body of Christ from the black Magian perspective, mainly because toads were a personification of a certain group of demons evicted from Heaven, while the dog might have represented Ahriman himself.

The trend towards downsizing ritual equipment used during the mediaeval Roman Catholic mass was the inevitable result of the drastic fall in Church attendances. With the waning number of laity prevented from sipping the Blood of Christ, the chalice became reduced in size too. Patens shrank in diameter as the holy wafers too became smaller.⁶⁸

THE SACRAMENT OF HOLY MARRIAGE (IN RUSSIAN SVADBA)

MARRIAGE

I have been unable to find information on the precise year that marriage became a formal sacrament in Russia. Prior to that time, the typical Russian marriage began with songs and theatrical plays taking place in the houses of the couple's families and relatives, a rite of passage from youth into married life. Two (usually baptised) people were joined by the blessing of parish priest, in whom resided the power of binding and loosing. For it to take place, the union had to first be authorised by a bishop, or failing that a priest, who ensured that the liaison was holy, and free of incestuous relations.

The exact wording for the ceremony may have varied from place to place, but usually consisted of a blessing, and an exchange of vows, plus several readings from the Old and New Testaments. Both the bride and groom were crowned with floral wreaths, or, if possible, with golden crowns signifying that they had not succumbed to the sins of the flesh prior to this day. Then they both drank from the same cup of wine to seal the covenant. It was customary to arrange marriages with other reputable families, as much for business or village politics as it was for love (and lust).

THE SACRAMENT OF THE ANOINTING OF THE SICK (IN RUSSIAN SOBOROVANIYE)

THE LAST RITES

A ritual anointing was performed if the intended recipient was seriously ill, gravely wounded, unconscious or in a near death state. This sacrament could be repeated as often in a person's lifetime as need be, as long as the criteria of gravity was observed. The sick person was anointed with olive oil blessed by a bishop (Oil of Chrism) as the rightful healing prayer was uttered. The eyes, ears, lips, hands and feet were each in turn marked with the sign of the cross beseeching the Lord to forgive any sins that may have evolved from these body parts. In an emergency, a single cross on the forehead would suffice.

Where the person was actually unconscious and dying, the svyashchennik spoke prayers of protection into their ear, so as to thwart Satan, who remained active even at this very late stage.

THE CHRISTIAN SACRAMENT OF REPENTANCE (IN RUSSIAN ISPOVED')

CONFESSION

Jesus came into the world for the remission of sins;

'If we say that we have no sin, we deceive ourselves, and there is no truth in us. But if we confess our sins to God, (then) he will keep his promise and do what is right: he will forgive us our sins and purify us from all our wrongdoing. If we say that we have not sinned, we make a liar of God, and his word is not in us'.⁷⁰

'It was late that Sunday evening, and the disciples (ie; the apostles) were gathered together behind locked doors, because they were afraid of the Jewish authorities. Then Jesus came and stood among them 'Peace be with you,' he said. After saying this, he showed them his hands and his side (which bore the wounds which had killed him before he arose from death). The disciples were filled with joy at seeing the Lord (they thought he was

dead and gone forever). *Jesus said to them again, 'Peace be with you. As the Father sent me, so I send you.'*⁷¹

Then he breathed on them and said, 'Receive the Holy Spirit. If you forgive people's sins they are forgiven; if you do not forgive them, they are not forgiven.'

What the book of John the Evangelist speaks of here is a precise moment in time, when Jesus gave to his disciples the ability to forgive sins on his behalf. He didn't give it to just anybody, but to his disciples, the apostles.

In Rome and the East, the spoken confession of each major sin was commanded by the Church, although in the Nestorian church, only heretical felons needed to submit to this sacrament. The power to erase the punishment attached to someone's sins could not reside within man alone, and was the exclusive prerogative of God. To this end the Church believed its ministers were tasked with carrying out the mission of forgiving sin in the world, by acting as Christ's special helpers in this matter. Each successive generation of bishops passed on to the next this same charism of the Holy Spirit granted them by Christ. Parish priests took Christ's spiritual cleansing out into the world only once a bishop had passed this gift on to them; the office of Confessor. In truth however, no priest had the right to conduct the sacrament of confession without being deputised as a confessor by his bishop. Therefore the sacrament of confession⁷² obtained the forgiveness of one's sins, via an ordained and suitably empowered Church minister (through the power of the Holy Spirit), who was able to bind and loosen the sins from the person's soul. The bishops of the Roman Catholic Church regarded themselves as the principle dispensers of this gift (due to their belief that St Peter founded their Holy See, and personally ordained their stream of bishops), and that those portions of the Church that were no longer doctrinally united with the Bishop of Rome (later called Pope), no longer had the power or divine authority to carry out this task. This claim was based on (NT) *Matthew 16: 13-19*;

'When Jesus came into the coasts of Casarea Phillipi (where Eusebius would later be bishop), he asked his disciples, saying, Whom do men say that I the Son of man am?

And they said, Some say that thou art John the Baptist: some, Elias; and others, Jeremias, or one of the prophets.

He saith unto them, But whom say ye that I am?

And Simon Peter (St Peter) answered and said, Thou art the Christ, the Son of the living God.

And Jesus answered and said unto him, Blessed art thou, Simon Barjona: for flesh and blood hath not revealed it unto thee, but my Father which is in heaven. And I say also unto thee,

That thou art Peter, and upon this rock I will build my church; and the gates of hell shall not prevail against it. And I will give unto thee the keys of the kingdom of heaven; and

whatsoever thou shalt bind on earth shall be bound in heaven: and whatsoever thou shalt loose on earth shall be loosed in heaven.'

If we are to believe the historical accounts of the Church historian Eusebius, it would appear that there was a pan-Christian belief in the authority of the Bishop of Rome, but the other Holy Sees, once they had eventually broken off ties with Rome, no longer subscribed to this view. The Holy See of Constantinople considered that they too shared in the right to send forth confessors, since their city was the New Rome that Emperor Constantine had built. Thus it seemed that there were two Romes, one in the East and one in the West. Just who and where the authority to forgive sin resided, and who had the right to bind and loosen the flock through Church edicts (which would be honored in heaven) was the main thing that the fragmented Church squabbled over. During the Eastern Christian rite of confession (which the Russians called *Ispoved'*), the sinner walked before the priest who stood openly beside the person directly in front of the Gospel and the Cross. The *svyashchennik* (priest) recited a prayer, urging the person to confess everything openly. The Christian off-loaded every sin that could be honestly remembered, *nothing major was to be hidden*. Upon completion of the rite, the priest granted absolution and placed his stole upon the person's head as he did so. Thereafter the penitent was required to carry out an act of self-humiliation, normally in private, but perhaps even in public. These acts of penance, or deep contrition, could range from self denial (food, water,

ACCORDING TO THE
ANCIENT TEACHINGS
JESUS EMPOWERED HIS
PRIESTS WITH THE
ABILITY TO FORGIVE
SINS

sleep, clothing), to severe penitence (self scourging, hair shirts, shaving of the head). It was customary for all Christians, as Christ mentioned, to fast (ie; to renounce or say no to the very things that the body craves for).

Christian burials

It was the Church's solemn teaching that the souls of the faithful should be respectfully laid to rest, allowing them to find slumber in the grave, until that final glorious moment arrived, the Resurrection and Judgement of all humanity, when the dead of history would rise and break free from their tombs. Thereafter they would be divided into two groups by Christ; a flock of billy goats destined for hell, and the lambs deserving everlasting bliss in the heavenly Jerusalem. The following Mediaeval Russian homily aptly explains this concept;

"they that have done good shall come forth unto the resurrection of life, and they that have done evil shall come forth unto the resurrection of damnation".⁷³

The exact location of a person's soul after their death was never adequately explained in the Bible, although the Church's teachings pointed to several things. Firstly the person's spirit, or essence separated from their body and left this world to undergo the trials which stemmed from their immediate first judgement. Following the funeral service, the soul, the person's immortal being was said to reside within the grave itself, awaiting the great and terrible day of Judgement. In Russia, these souls were known as the *usopchie*, or "the sleepers".⁷⁴ The burial ceremony carried out by the priest put to rest the soul of the departed so that it could slumber peacefully. While there were numerous examples of Christians being visited by the souls of saints and martyrs, these visitations were unexpected and never a result of summoning up the dead. Spirit mediums and necromancers were seen as defilers of the sanctity of the resting soul, who were greeted not by the soul of the *usopchie*, but a demon masquerading as the dead person, hell bent on performing deceptions and wrecking havoc.

In the Christian era, Russian burial rites maintained their heathen flavour, especially with regard to mourners' behaviour. Whilst cremation was the subject of an ecclesiastical ban, many Christians could not resist having their sword, food and drink put into the plot. This would raise a few eyebrows amongst the clergy, who saw it as a stubborn adherence to pre-existing pagan beliefs about the Resurrection.

In addition to the formal funeral service, the mourners began a deeply moving mourning, wailing and series of chants known as the *panikhida*. Women were especially trained and even paid to carry out the predictable dirges. A grave-side vigil was maintained for the next 40 days. Annually, just after Easter, the deceased's relatives returned to the grave to eat, drink and make merry. Easter eggs were dyed and brought there for consumption, washed down with copious amounts of mead or later *shtof*. As has long been noted, many of these post funeral activities appear to be the survival of pagan customs, which might have originated in Aryan times. During the Christian era, the egg was, naturally, seen as a symbol of new life.

During the Russian easter (*Paskha*), the officiating *sovyashchennik* wore white vestments during the funeral, and no mourning was permitted.⁷⁴ This was to imitate the joyous Ascension of Jesus. At other times of the year, it was carried out in black, made all the more sorrowful by the drama of the *panikhida* which usually followed bereavements.⁷⁴ The body was placed on a blanket spread upon the floor, bathed in clean water, *dressed in fresh clothing*⁷⁴ and laid down in its casket. Next it was taken to the chapel on a sled or cart dragged by friends and laid there for viewing prior to the funeral service. Relatives and friends came to kiss and view the deceased for the last time. A birch paper crown was placed upon the head of the corpse, signifying the "crown of glory" and a petition scroll was placed in the deceased's hand. This scroll contained an outline of their lifetime and good works, as well as a plea for the intercession of angels. These angels were to help the person's spirit make its way through many well-manned weighbridges of accusing daemones (each checkpoint entailed the weighing of a person for a certain species of vice), hopefully allowing the deceased's entrance into Heaven relatively unhindered.⁷⁵ This scroll (made by all who attended the funeral) was to be handed to St Peter at the pearly gates of Heaven upon arrival. The funeral service was presided over by an ordained clergyman with prayers hymns and blessings, followed by Holy Communion within the chapel, or at the grave side where churches were lacking.

The body of deceased clergy held a bible or a cross while slumbering in state, and in later centuries, after the

anointing, it had the cloth paten-cover draped across the face. Holy oil and ashes from the funeral censer might be scattered over the coffin as it was lowered into the grave. Lastly, sods of earth were tossed in.

The body was transferred to the burial plot on a sled, or simply carried over the shoulders of kin, in a procession headed by candle-bearing mourners, in company with a priest or deacon waving about a smoking censer.⁷⁴ A graveside service was normally held, in which all present farewelled the deceased, signifying that not even the grip of death itself could shatter the eucharistic union between the living and the dead.⁷⁴ The body was then interred. Next the rites of mourning took place, which began with everyone returning back to the family's house for a wake, or funeral banquet. Food and alms were then distributed to the poor.⁷⁴

Sometimes pagan rites sneakily rolled in over the top of the Christian service. To lay to rest souls not yet in a state of peace, the funeral dirge was sung loudly by a local woman, just to make sure the deceased knew it was dead. This appears to be a survival of a Finnish custom (formerly enacted by the local shaman, but which later became the sole responsibility of the *Tietaja*). If successful, this melancholy wail would automatically and miraculously lay to rest and banish from the earth any troubled soul which happened to be hanging around.

Christian exarnation in the middle ages

Primary Chronicle accounts relating to the handling of Christian Russian princely corpses, reveal echoes of Zoroastrian/Magian funeral practices, and very close to the royal throne of the Eastern Slavs. According to Magian dogma, any corpse which could not be carried from the place of death by the corpse-bearers could be wrapped in a carpet, without fear of contamination to the carriers, but the carpet was seen as unclean unless washed several times with *gomez* (a consecrated mixture of water and cow's urine). If one of the faithful died at a height (say up a tree or on a roof), then the body could be lowered to the ground below by rope without fear of contamination. If the deceased expired near or touching the doorway, then the threshold was desecrated by the death demons, and so the bearers were unable to remove the corpse via that portal. Under these circumstances Magian corpse-bearers would have to make a new exit point from the building, by cutting a hole in the floor or wall. They could then exit the room using this impromptu portal, as mentioned in *Vendidad, Fargard VIII, II:10*. In relation to the latter custom, there are virtually identical folk superstitions in Germany,⁷⁶ though I am unaware how far these go back.

The Magi were adamant that no person was permitted to carry a body alone, for to do so meant one had taken the defilement of Nasus (the Demon of Death) into their body. Once contaminated in this way the grievously polluted individual had to be taken to the top of a mountain to live there for the rest of their life, and when old, they were cleansed, decapitated and flayed, to save their immortal soul.

In an illumination from the Radziwil codex (fig 7.2) the body of the seditiously murdered Russian prince Igor' is unceremoniously dragged away by two men who had looped his feet through a rope. This was a perfectly acceptable way for Magians to transport the bodies of the faithful. In doing so they avoided the contamination of the death demon. Although one person was capable of carting Igor's body, the use of two men might have been symptomatic of Magian prohibitions against singular corpse bearers.

Fig 7.2.

EXCARNATION WAS ALSO PRACTICED BY CERTAIN MEDIEVAL CHRISTIANS

Fig 7.1. The resting place of Archbishop de Gray, York Minster, 13th C. England. His stone effigy lies openly beneath a roof; evidently a representation of an earlier Saxon funerary method.

THE DEATH OF VLADIMIR

Two further historical anecdotes⁷⁷ show incidents in which the bodies of princes were rolled up in a carpet for cartage. Following his unexpected death, Vladimir's body was discretely spirited away, wrapped in a rug and lowered down through the hole in the floor boards by ropes. Perhaps he had died near an upper story doorway, and could only be removed from the premises in precisely the same manner as Magian custom. We can therefore infer the *Chronicle* account is an invaluable clue, suggesting that Magian-style funeral rites were being enacted inside the Rurikid royal household. The mere mention that Vladimir's body was ferried off in a carpet, also led to rumours that he had not died, but had relapsed and was living in the seclusion of some Albanian pagan occult monastery, having turned his back on Apostolic Christianity.⁷⁸ These legends acted as a rallying point for Russian pagan activists, who saw it as a cue for insurrection, and enacted the same. Professor Hollingsworth mentions that while the cults of Ss. Boris, Gleb and Ol'ga were an important part of the religious life of the Rus' Church from its earliest years, many scholars have been perplexed as to why the veneration of St Vladimir (the very person who converted Russia) was absent in their infant Church,⁷⁹ only emerging later on. Perhaps there were problems with his canonisation amid the many rumours of his alleged return to paganism and subsequent abdication?

And what can we discern in *Igor's tale*⁸⁰ where the wounded and dying prince looks skyward to witness the eagles descending upon the bodies of his slain *druzhdina* (members of the prince's personal bodyguard). The tone of the passage is more romanticised than riddled with horror. He seemed glad. The parallels between Magian funerary rites and those of the Russes may be a coincidence, but this is doubtful considering the immense Magian influences in Olden Rus'. They probably signify several things:

1. That only a few years after the conversion, vestiges of Magianism were still present in the community, at all levels. As much could be expected during a period of transition from paganism to Christianity. The continuation of customs espoused by one's parents through sheer force of habit remains the most likely explanation for these Magian-parallels in the Christian era.
2. That the servants of the princes were still pagans, or *duoeveriye* (literally meaning 'Twin-Believers'), and not being corpse-bearers, felt uncomfortable about man-handling the dead or martyred Christian princes' corpses. So they handled their remains according to the old ways.
3. That stories revealing Vladimir as a closet pagan, may have had some foundation, and that the Princes wished their bodies to be treated according to the pagan Magian rites, following their deaths.

Fig 8. Merovingian mortuary masonry. Note the presence of griffons.

The 'French' Merovingian royal dynasty was formed by magus-kings,⁸¹ whose magus blood must inevitably have come from Iran. Since at least some druids (Gaelic-speaking Magi) were termed Magi by the Alexandrians, we might think that the Merovingians were blood descendants of the Gaulish druids and kings, against whom Julius Caesar once directed his legions. And why not, the supreme pagan druidic shrine of Gaul, at the time of its conversion, was called *Argentomagus*,⁸² and this is unlikely to be fortuitous. Caesar was only one of a number of Romans who saw the druids as the subversive enemies of Rome, not just on account of their bloody sacrificial rites, but because they carried immense political clout and were well able to stir the barbarian chieftains into undertaking punitive military actions, for their word was law. To kill the druids was to kill a potent force able to raise consolidated Gaulish forces in but a short time, to rise up and strike Roman frontier garrisons with all the potency of a death adder. Perhaps they were intriguers, at least in the Roman mind.⁸³ Pliny stated that if persons were caught in the city of Rome carrying druidic serpent eggs (crystal spheres and gems), they were executed without hesitation.⁸⁴ Some believe the druids controlled the gold trade in Britain, and parts of Europe,⁸⁵ and if they did, then I am willing to suggest that gold was very holy to them on account of its resemblance to the glittering halo of the sun, who the Magi worshiped as the face of God. Not only that, but druids would have

been military as well as economic power-brokers; the sorts of enemies that Rome didn't want while it was trying to rule the known world.

Merovingian lords had similar interests to the Magi. The magus-king Dagobert paid considerable attention to the art of astronomy.⁸⁶ As with the Magi, the powers of the Merovingian magus-kings lay not only in their magical blood, but in their hair, which was purposefully grown long, and in the case of the Merovingians dyed red in colour.⁸⁷ This was perhaps to impart the potent iron-wielding, blood-shedding capabilities of Mars, that most worrying of planets, for in Roman times these barbarians only grew lengthy hair preceding hostilities between them and the Roman state. Thus, I believe long hair was a feature of war, and their manly power.

Though the Merovingians have long gone, their royal cemetery at Kirkheim am Ries (France)⁸⁸ contains some very interesting features which hint that the Merovingian royal family were not Magian, but Magian-Christians, a form of 'primitive' Christianity discussed at length throughout this book. A more detailed examination of this site (which can even be called a Merovingian time capsule), such as is being conducted at the present time, might yield the necessary answers.

The Merovingian royal graveyard was founded between the 500-700's AD to house the remains of some five hundred or so people (of diverse age and gender), clustered into three separate areas. Without exception the graves were aligned along an East-West axis, and as time progressed, and the graveyard filled yet further, the plots were dug progressively more eastward, giving the impression that the graveyard was growing in the direction of the rising sun. While the plots were not specifically arranged in rows, the deliberate easterly grave alignments prove to be the primary element of uniformity in positioning.⁸⁹

Since there were no deviations from this practice over the space of some 200 years (beginning around 550 AD) we can consider the easterly alignment to have been of some importance, perhaps a religious observance rather than a fad, habit or custom.⁹⁰

In the past archaeologists felt inclined to associate the east-west graves with Christianity.⁹¹ Though nowadays it is seen as distinctly pagan.⁹¹ In Britain especially, a good many Christians chose to continue digging their plots according to the time-honoured tradition. Usually the skulls of the deceased are found facing into the rising sun.⁹¹ We find this in Gaul and Bavaria, as well as pagan Slavia and Finland too.⁹¹

The Merovingian King Childeric's presumed grave site contained numerous interments of horses, quite possibly ritually sacrificed,⁹² but we can't say for certain. Anyhow these paganisms faded out with time.

In many instances at Kirkheim am Ries, graves deviate from true east by a few degrees,⁹³ which I believe may indicate the time of year the plot was dug, but that is assuming that the plot alignment was established by the direction of light emanating from the emerging sun (by a shadow cast by a stick stabbed into the ground?) at dawn on the day it was dug, rather than absolute east. If such a method was employed for each plot, then, in conjunction with the dating of grave goods, it might be possible to determine the day and span of years during which the plot was dug. By doing so we may discover the identities of the persons buried by matching this data against the historical records of burials, where the day of death/burial is recorded. Until this point, identifying the graves of specific historical personages has proved elusive, in the absence of inscribed grave markers.

That Merovingian rulers had links with Eastern Europe is evidenced by the existence of Eastern funeral goods in a number of the graves; things such as Eastern style single-edged swords.⁸⁹ From historical sources we know that they entertained ties with the Bulgars who dwelled in the Balkans.

Merovingian graves show that they were a patriarchal family, with women having a lesser, though still important status within the family group.⁸⁹ Historical sources tell us that a typical Merovingian household was kin-based, and it is believed that *fellow siblings lived together under the one roof, even during their adult years*. This might indicate endogamous royal unions within the Merovingian dynasty, which later commentators termed physically decrepit.

Merovingian *Adelskirchmen* (members of the royal Church) were not the only Western European royals implicated in the continuing fostering of the old faith under the guise of Christianity. Redwald of Kent *was seduced by his wife and by certain evil teachers and perverted from the sincerity of his faith ... After the manner of the ancient Samaritans* (the

EAST

tribe that Simon Magus belonged to), *he seemed to be serving both Christ and the gods whom he had previously served; in the same temple he had one altar for the Christian sacrifice and another small altar on which to offer victims to devils*.⁹⁴

OSSUARIES

In spite of their prevalence, these customs were not a development of the Dark Ages or medieval period. Catacombs and ossuaries (bone collection places) are to be found in the very earliest Christian communities, where bodies were exposed in a rocky niche (wrapped in a grave shroud like Christ) or placed in a casket, rather than buried in the soil. Some of the oldest monasteries have fairly large ossuaries, where the bones of the monks were removed from the grottoes and heaped into one great pile. This gathering of the bones of the faithful was once common to the Magi, who retained skeletal material within the *dakhmas*, in a central pit, where they disintegrated with the passing of ages. From the 10th Century writings of the German cleric Adam of Bremen we hear that there was a group of Christians in a place called Morvern (in Scotland) using de-fleshing funerary practices.⁹⁵

EXCARNATION AT MORVERN

According to the Morvern rites the bodies of commoners were left exposed in the pastures or roadways, or in the case of nobility lashed to the trunks of trees to be eaten by birds. The corpses of the rich were plunged into the water, weighed down with a weighty piece of stone, tied about the neck by rope.⁹⁶ While the custom must have been sufficiently strange for him to make mention of it, he did not then proceed to condemn the Christians employing excarnation there.

QUITE POSSIBLY IN IRELAND TOO

The noticeably weird practice of corpse exposition was known in Ireland too. *... there is an island in the sea west of Connacht (Aran island)... In this island human corpses are not buried and do not putrefy, but are placed in the open and remain without corruption. Here men see with some wonder and recognise their grandfathers, great-grandfathers, and great-great-great grandfathers and a long line of ancestors*.⁹⁷ As for how they might have avoided rotting to nothingness we are left with three options. Either it was a miracle (the island was said to have been blessed by St Brendan), or the bodies had been mummified with waxen unguent and embalming fluids (an ancient Magian and Scythian custom), and lastly the story may be untrue. But against the latter proposition, why would Gerald of Wales bother to fabricate such a story? That gulls and other carrion birds did not lift the flesh from their generations-old remains is problematic, unless of course the corpse-ground was manned by keepers tasked with scaring them off.

LEAVING CORPSES OUT IN THE OPEN TO BE EATEN BY BEASTS OR BIRDS WAS A REASONABLY SERIOUS CRIME IN ICELAND

The comprehensive early medieval laws of Iceland, after the conversion of the vikings, contain provisions seemingly formulated to halt any and all instances of excarnation. If one were to kill a person *'he is to cover his corpse so that neither birds nor beasts may eat it'*, and if not *'the penalty is lesser outlawry'*.⁹⁸ Evidently laws were promulgated to force people into burying their dead rather than leave them exposed to scavengers and the elements. It may be difficult to prove specific instances of de-fleshing in Christian Iceland. Whensoever an Icelandic Church fell into a state of ruin, through calamity, it is believed they relocated all the skeletal material from within the church yard to the newly consecrated cemetery, wherever that may be.⁹⁹ Upon arrival the bones were placed in a mass grave, or distributed over a number of plots.⁹⁹ This naturally presents problems for any archaeologist attempting to discover excarnated bones in Iceland, where bone piles are datable to the post-conversion era. That is because cemeteries are frequently jumbled masses of skeletal material, consistent with excarnation sites. These graveyards need to be examined very, very closely indeed. For example at Repton, in England, a massive accumulation of disarticulated skeletal material was discovered in the yard of a Saxon Church. It has long been assumed they were the remains of invading Danish warriors historically known to have been in the area. Subsequent examination of the bones, which lack evidence of wounding, point to the remains being those of well-fed Anglo-Saxon Catholic monks rather than plague or battle victims, for they were deposited in the communal ossuary over a couple of centuries rather than at a single time as the result of some cataclysmic event.

REPTON

SOMETIMES BODIES WERE BOILED TO REMOVE THE SKELETON FOR A LONG

Some scholars have attributed medieval skeletons showing signs of prolonged exposure and dislocation prior to the interment of the bones, as indicating the transportation of dead friend's mortal remains back to their home or settlement. This would have been more prevalent amongst merchants, travellers and soldiers, but few others, and no doubt did occur among those groups. To illustrate this, if a person was to pass away some distance from home (such as during the Crusades, or on a long journey), the body might be boiled in a cauldron to remove the fleshy parts.¹⁰⁰ The bones were gathered, and placed in a clean funeral cloth to be transported home, while the rest of their soft remains were buried at the place where they died. Burying body parts, such as the heart, in different locations,

was also present in western Europe, a custom which raised the ire of the clergy. Such disarticulation customs failed to gain the approval of Pope Boniface the VIII, who proceeded to invoke laws aimed at banning the practice of de-fleshing or embalming.¹⁰¹ Sound evidence, to be sure, for high level ecclesiastical censuring of heathen funeral customs.

There were once a number of Christian charnel houses in Europe. At one site in Paris (the Church of the Holy Innocents) there was an ossuary, where piles of skeletal material stood piled up for all to see.¹⁰² Surprisingly this was also a favourite meeting place for the locals. If such locations could be in any way linked with Magian de-fleshing in Europe, then the gatherings at the charnel houses inside some medieval churches would have been to perform prayers for the remembrance of the dead.

Much of the architecture and artwork of Europe during the high Middle Ages was exceedingly grim in nature. Almost exclusively they concentrated on the assault of demons dragging damned souls off to their Judgement at the hand of Christ and his angels, and thereafter an excruciating fate in the Abyss. Many items of exquisite monumental masonry created during the Middle Ages were very revealing, and help prove that Magianism was absolutely rampant within the nobility (the only people who could afford to commission such elaborate stonework), and perhaps even the general community. One 1400 AD tomb carving shows the body of the person interred there, riddled with worms, his face covered by toads.¹⁰³ One can only wonder what the stone mason was trying to tell us in this particular work. Obviously it was not the way one would wish to be remembered for eternity, and not typical of standard tomb imagery. What was standard though, was the representation of one or more dogs sitting at the feet of the deceased (a custom that appears very Magian). Another popular motif was that of a man hanging from a tree, as serpents gnawed away at its roots¹⁰⁴ (yet another Magian image; that of the holy tree under attack by Ahriman's reptiles).

A detailed bass relief at Rhiems Cathedral clearly depicts clergy, royalty and other high born people being thrown into Hell's boiling cauldron.¹⁰⁵ This frank representation of a Church administered by Magi and 'heretics' was by no means concealed from the public by the Church. Evidently it must have been common knowledge in those days, and only in later centuries have we lost contact with the events of that time, largely by haywire inquisitorial censorship. Magian Christians evidently occupied very important posts within the medieval Church. One French Cardinal named Lagrange specifically requested that his body be dismembered and de-fleshed with a boning knife following his death in 1402 AD, so that his bones and flesh could be interred at separate locations.¹⁰⁶ He was most likely a Magian Christian operating among the Cardinals.

One would think that practitioners of primitive or alternative forms of Christianity had trouble keeping their identities a secret from the papal reformists, but then again they might have been numerous and brazenly open about their true nature. By the time the Dominicans (the so-called 'Hounds of the Lord') set the wheels of the Inquisitions in full motion however, these covert Magi needed to be very discrete, or else they would almost certainly have gone up in flames if they remained 'impenitent'.

Were medieval Christian de-fleshing practices merely a manifestation of Magian customs that had not fully died away following their conversion, and which the Church tolerated only until the 15th Century? Or were they being steadily imported from the East? Only further archeological examination across the breadth of Europe is likely to answer these questions.

Accounts of medieval Christians practicing excarnation yield two main interpretations. Either these were a continuation of older pagan practices, which the Church was trying to phase out. Or it was a habit that resulted from the importation (or renewal) of covert Magianism within the Church. The time frame for the penetration of Magianism back into Europe could easily be established by a thorough analysis of tomb masonry and skeletal remains stretching back throughout the first 1,000 years of Church history.

Pagan steadfastness

For many hundreds of years, Christianity had plenty of trouble genuinely breaking into the pagan heartlands of Europe, in both East and West. It was not until the Irish monks and the sword of Charlemagne were entered into the

PAGANS HUNG ON TO
MANY OF THE OLD
CUSTOMS

equation that the "impasse" was finally broken. With this last lot of conversions, all of Europe and Asia Minor could be considered nominally Christian, yet all the while "forbidden activities" continued in some quarters, on the underbelly of the Church. Once Christianity came to their lands, the *Soma*-drinking and *Haoma*-drinking European pagans of the ancient Aryan lineage found it very hard modifying the beliefs which lay behind their respective pagan communions. Unlike the Zoroastrians and Zurvanites, the vedic pagan substrata of Europe was *utterly divorced from the concept of any such "messiah"*, making the Gospel message far less poignant to them.

In the Baltic zone and among the Rus' who knew of paganism's demise all around them, there was also an extra anti-Christian backlash. Many people simply refused to toss out their drink which gave them immortality and a place amongst the gods. Certainly from a purely clinical point of view, the Eucharist could never be as "fun-packed" as something so highly laced with narcotics, alcohol, hallucinogens, and even *Ephedra*. Such potent cocktails easily launched drinkers into a festive mood, sending them merrily buzzing along in a carnival atmosphere of religious singing, dancing and revelry.

The staunch paganism of the Russes, the Baltic countries, the Franks, Frisians, Hunns, Goths, Germans and English, did not subside following the conversion of their nations. Many continued to live double lives, and pilgrims from Europe and Greece still visited the Baltic hinterlands, for a shot of nostalgia. Thus, the Church found it necessary to carefully grill so-called pilgrims en-route to holy sites, trying to gauge whether they were bone fide or not.

PAGANISM AND HERESY
WERE ELEMENTS OF A
THRIVING MEDIEVAL
SUBCULTURE

Pagans in uncertain company wanting to obtain pagan communion might bring up "age old stories". "Did you ever hear the one about the lost water of immortality?. Oh you have!...Good..." A quite harmless way of pulling fellow pagans out of the woodwork. Then the people "in the know" could prepare a pagan ceremony or two, in some secluded spot. The phenomenon of double-believers elsewhere in Europe would not be anywhere near as pronounced as in old Rus'; but it was ever present. Such is the likely origin of the Grail legend, which has never been endorsed by the Catholic church. That churchmen shunned such a chalice of kings (which brings life to the land) is a sure sign that it was a pagan libation, and unlikely to be an allegorical reference to the Christian chalice, which contains the blood of Christ. To give you some idea of this so-called impenitence, we will look at the sorts of things you would find in a mediaeval garden.

Under Eastern influences, Europeans developed a love for fastidiously-designed symmetrical gardens during the Middle Ages. In a typical lay out there were specific areas for medicinal patches, vegetable plots, orchards, herb gardens and coppices.¹⁰⁷ A mediaeval English coppice was a stand of trees bordering the edge of a property, some might even call them groves. It was far from being a haphazard accumulation of various species of trees, cramped with wild entanglements of undergrowth and chaotic sproutings of saplings, weeds and suckers. Instead of being some primeval wood, coppices were scrupulously-maintained stands encircled by a hedge, which as a rule contained three types of tree, namely the oak, the hazel and the Golden Ash (*Fraxinus Excelsior Aurea*, the most likely contender for the title of the *Haoma* tree of the Magi).¹⁰⁷ Many different varieties of beautiful flowers, such as the violet were grown beneath these trees.¹⁰⁷ During the Middle Ages these coppice trees were widely used to provide building materials for the construction of housing, or to provide hearth fuel.¹⁰⁷ At some time during a 5-25 year cycle, Mediaeval gardeners would sheer off the trunks of Ash and hazel tree some several feet off the ground, with the result that numerous straight poles or rod-like growths shot up from the stump, and these would be cut off later in the year.¹⁰⁷ Ashes and hazel were lopped in this manner *with the precise aim of producing uniformly sized rods* (golden rods or boughs in the case of *Fraxinus Excelsior*) which could be cut off (using a pruning sickle).¹⁰⁷ If we could liken this to a typical heathen grove, the Magi might have left one Ash grow to full maturity, that was never to be cut, while other Ashes were pruned to produce barsom twigs made from ash rods specially grown in the manner outlined above. In Mediaeval England, Ash rods were sliced off every winter prior to the emergence of the sugary Ash sap, or gum, and this was the very reason for them doing so at that time.¹⁰⁷ If, as I believe, these many Ash rods were being employed in *Haoma* ceremonies during the Middle Ages this would make a lot of sense, for it would have been sacrilegious to allow the holy gum to fall on the ground; it was destined to feed the (holy) fire (the son of god) instead. And as if these correlations aren't enough, the rods were collected up and bound into faggot bundles, or carried over the shoulder using two uniformly crescent-shaped forked branches. The parallels between these crescent-shaped rod-carriers and the moon-shaped barsom stands of the Magi (*Mah-ru*) is of some interest. It

is possible that some Ashes were left to grow to full size while the vast majority of saplings, which grew about the parent trees, were thinned by the constant fussing of gardeners. The Golden Ash, if treated and nurtured in this manner, is capable of surpassing its standard 200-year life cycle, to live to a ripe old age of 1,000 years.¹⁰⁷

Unless the infrequently-harvested, coppice-trunk timber was burned or fashioned straight away, then presumably it was stored away to season, perhaps for many years. It was used in England to make elaborately carved posts, housing beams, fence posts and trellises.¹⁰⁷ Even the standard wattle and daub hut was built from them. If the Mediaeval Englishmen viewed the Ash in the same way as the Magi, then even their housing was holy, the holiest that could be, and a magnificent fortress against the powers of evil.¹⁰⁷ It was noted by archaeologists in Novgorod that the typical northern Slav dwelling was made from pine wood, with ash only being used to make intricately painted eating utensils, *which were fashioned on lathes during pagan and Christian times*. I have not got archaeological data for construction materials in other parts of pagan and Mediaeval Rus', so I can't say whether or not it was the norm to use pine there.

These Mediaeval horticultural practices may well provide us with essential clues as to the form of activity that took place prior to the performance of a *Haoma* ceremony. *This may not have been gardening in the strictest sense, but the ritual harvesting of the Golden Ash*, and its Golden Boughs, before the foliage was taken by a Magus to pulverise in the mortar. Based on data gathered by folklorists until this century it is possible that the exact moment of the harvesting was all important during the Middle Ages, and linked to specific celestial conjunctions.

If Mediaeval Ash-cutting practices were observed in pagan times, then the thick sections of trunk cut from the tree in 5-25 years intervals (as distinct from the rods cut annually) might have been used to make idols.

And then there is the oak, the tree formerly associated with the Balto-Slavic thunder god, Perun (ie; Indra). According to Frazer, the oak is supposedly struck by lightning more than any other tree,¹⁰⁸ but I am unsure what statistical data he might have used to arrive at this conclusion, perhaps a common belief prevalent at the beginning of this century. Certainly the statistical probability of a specific tree being hit is minimal, perhaps even implausible within ones own lifetime. However the pattern of lightning strikes might have been vastly different during the Middle Ages when compared with today, mainly because of the sheer number of tall earthed metal structures that stud western civilisation. In those days oak groves might well have been struck with greater frequency.

There is some reason to believe that heathens wanted to draw down lightning from the sky, which would cause a spot fire upon striking the earth. As we know the Magi saw fire generated as a result of a lightning strike, as the divine spark which had come down from heaven, a divine gift in no way man made. In the form of lightning, the Holiest of all fires, the son of god, came down to man. The following two instances from ancient Slavia contain features suggestive of such a practice

In one case Perun's idol was described as having a sheet of iron wrapped around its legs. In a relatively metal-free society one might think that this idol would have been a particularly good lightning attractor. Consider also the Bronze Age Scythian "Ziggurats", mountainous constructions built from faggots of brushwood (perhaps the leftovers from generations of religious ceremonies). Each one had a large iron sword stabbed into the top; a perfect lightning rod. If it happened that any of these temples was hit by a lightning bolt, it is probable that they caught alight. Depending on the time of year they might only have smouldered, and at other times burned quite readily. Might it not also be possible that it was fully intended that they should go up in flames one day, and that there would have been no attempts to extinguish any blazes caused by lightning. If these ziggurats were only 300 metres tall (the base dimensions were 600 x 600 metres, but the height was somewhat less, perhaps as little as half the base width), this would have amounted to roughly 108 million cubic metres of combustible material. The result would have been a conflagration so enormous as to be unimaginable.

If Frazer's comments on the oak are correct, it is plausible the siting of numerous oaks in the Mediaeval English coppices, situated on a property's farthest boundaries, served to draw lightning away from the main household. If Magus wizards were present in some mediaeval manors (which historical and inquisitorial accounts constantly allude to), it may have presented them with an opportunity to view lightning at close proximity, and prognosticate future events or retrieve the holy fire from trees struck by the blow of a lightning bolt. According to Frazer oaks bludgeoned by lightning were regarded as extremely holy in various parts of Europe.

Moreover Magians required various species of fire for the annual relighting of the vahram fires, the foremost

MANY CHRISTIANS
KEPT ASH TREES IN
THEIR GARDENS

OAKS ATTRACTED
LIGHTNING

being heavenly-fire. So one might think that if a grove oak was hit by lightning, then the Magi would run out and capture the resulting divine fire using a torch. This might be another reason for keeping a coppice well cleared, to prevent major damage to other holy trees if a fire should take hold inside the grove. Admittedly such a fire would be unlikely to spread out of hand in the inclement weather accompanying the lightning-strike, but based on Russian folklore, those who promptly arrived at the scene would have doused any uncontrolled flame with milk or *kvass*, and perhaps even mead, instead of water.

As it turns out the trees and flowers popularly chosen for a typical Mediaeval garden might have been selected for reasons beyond their pragmatic or aesthetic virtues. The violet, the Oak, the Golden Ash, and the Hazel were *all* once dedicated to the God of the Heavens (ie; Jupiter, Zeus, Ahura Mazda).¹⁰⁹ These were just 3 out of some 13 trees so dedicated,¹⁰⁹ including the Manna Ash.

WEEDING WAS A HOLY
DUTY

Weeding was very important in such areas. One 10th Century monk considered weeding an almost religious duty. Once he had uprooted them, he hung them up *so that the sun could scorch their bitter roots, and kill them for all eternity*.¹¹⁰ His loathing of the weeds can best be likened to the white Magi's weed hatred, for they were the corruptible and noxious debris of Ahriman's defilement of the plant kingdom.

ASH TREES WERE CLOSE
TO THE PEOPLE'S HEART

There were many different English folk beliefs concerning the Ash tree (the so-called "snake-hater"), stretching down to the present day.¹¹¹ In England the mere shadow of the tree was sufficient to cause serpents to flee, and even to crawl to their deaths in a nearby fire, merely by looking upon one.¹¹¹ It provided security against the threat of witchcraft and maelstroms, plus cured bleeding and the effects of poisons, especially snake venom.¹¹¹ If one drew a circle around a snake with a switch of ash bough, it could not leave these bounds.¹¹¹ Ash trees were examined annually to determine the amount of seed on its branches. If it was less than in previous years it was a sign of impending calamity on a grand scale.¹¹¹ The surviving superstition regarding the Ash is that *Ash twigs had to be cut from the tree, not snapped, and what is more they had to be cut at a precise, and astrologically auspicious moment*.¹¹¹ Breaking the tree in any way was most unwise, and would cause misfortune.¹¹¹ Bearing in mind the Ash's past affinity with the god who causes thunder and lightning, it is hardly surprising that it acted as a ward against lightning strike.

Ash trees promoted healing. Several folk customs surround the Ash, including passing the sick through a hole made by splitting and stretching open the trunk, or placing meat rubbed on a diseased body part under the bark. In both cases the disease would heal, as the wound to the tree healed. In Mediaeval England many gardens possessed flower-covered semi-circular lattice tunnels made from bent rods of ash and oak. Might passing through these ashes have procured healing?

The time of the conversion

For the Church in early Rus', the problems of truly converting someone's heart and mind was nothing compared to the logistics of trying to manage the religious life of a country which had become Christian almost *overnight*. Whilst Apostolic Christianity was not an entirely new concept to them (much of the "known world" was Christian), St Vladimir's decision to draft his subjects into the faith no doubt took a good many people by surprise.

The first acts of the conversion are largely unknown, especially the fate of the Volkhvy. The major thrust of Christian anti-pagan strategies brought the irrevocable destruction of the idols, groves, major temple fires, holy springs and most likely the imprisonment or execution of Magian dasturs, who alone were able to rekindle the divine fires of this magnitude. As with the druids, the eradication of the priests and priestesses rendered their religion extinct. The pagans retaliated by trying to assassinate Christian bishops, who in turn protected themselves by living inside fortified enclosures within the cities, forts within forts. We hear of one such slaying in the saga of the Norseman Arrow Odd.¹¹² The newly-converted Odd was travelling a certain route when he saw a small group of knife-wielding assailants attack a rider, kill and decapitate him.¹¹² Unconcerned by Odd's presence, they made off past him, carrying the man's head.¹¹² Clearly they were not brigands, or else they would have set upon Odd also. Odd felt morally obliged to avenge the victim, so he pursued them to a subterranean hideout.¹¹² There he battled and slew the waylayers, and brought all their heads back to the Church.¹¹² Odd hoped to discover the identity of the rider by asking the parish priest. He informed Odd that the victim had been their bishop.¹¹² How much of the tale is true is uncertain, but the anecdote is perfectly in keeping with similar events, described less graphically by Adam of Bremen.

During the Middle Ages there must have been a virtual war between the priests, heretics and Volkhvy. Only in the years when the Church had full royal backing could the clergy arrange for the incarceration of wandering heathen intercessors.

Owing to the sheer scale of paganism throughout Rus', clergy mingled freely with heathens and Christians alike back in those days, though if pagan and heretical "zealots" proved unwilling to convert or "repent", and still perpetuated "unsound beliefs" amongst settled Christian flocks, the priest could demand, where practicable, to had them slapped in irons, or banished from the area.

For protection *popi* and *svyashchenniki* engaged on missions engaged the services of Christian warriors and knights (who had pledged their swords to uphold the cross of the Redeemer), or royal officers (as was mentioned in the Chronicle). In Eastern and Western Europe, Bishops' retinues were especially well-manned with soldiers. In those uncertain times they were necessary for their personal safety, and to enforce their designs in the surrounding community if need be. With this stout backing they set out to defend the teachings of the apostles and spread the word of God in a world none too receptive. As with all major endeavours, joint expeditions by clergy and militia probably only occurred with episcopal (a bishop's) blessing.

In (OT) *Deuteronomy* 7 : 1-6, 16, 25, 26 we discover a reading which demands that the enemies of God, their astrologers, soothsayers and sorcerers be slain, without mercy, and all of their pagan temples and idols destroyed. This message was much harsher than that of the *New Testament*, and perhaps not the ideal way to prompt speedy conversions. It was, nonetheless, in the often bloody manner of *Deuteronomy*, that some Kings, princes and Emperors chose to divert their pagan subjects from their "devilish ways".

Others preferred to avoid killing militant pagans (which would have been counterproductive), and instead chose to pull the heathen religious hierarchy apart at the seams, by destroying their books, groves, springs, fires and temples. We don't know how often mediaeval pagans were burned at the stake; perhaps dank prison holding pits, bread and water were the norm, perhaps not. But if St Avraamij of Smolensk had fellow clergymen wanting to burn him at the stake, then how much more certain is it that by the 12th-13th Centuries, many pagan priests and activists met a fiery end. Ironically none of these inevitable killings were recorded in any of the sources that I have encountered.

Once the eternal temple fires had been culled, home hearths were the last remaining source of repose for the Svarozhiches (the sons of god), which on important pagan observances were pooled, by flaming torch, for the construction of village bonfire, around which cleansing rituals and mead ceremonies were discretely conducted under cover of darkness. In both Rus' and Britain peasants ran their cattle between such fires to purify them against sickness and plague.

The official dismantling of the pagan priesthood promoted the demise of the public continuity of the old faith, for without them it could no longer be sustained on any large scale, no one else besides those of the Brahmana/Magian bloodlines could make the offerings on behalf of the people, or brew the sacred mead, beer or *Haoma*. No doubt whole families of Volkhvy and their knowledge survived the conversion, and melted into the surrounding populations, ferried to distant towns by the sworn brotherhood, who ensured their anonymity could be guaranteed in a new locale. Where they ended up, and how many survived was not a matter of public record.

Sometimes they wandered back into major cities. From one account in the *Primary Chronicle* it is self-evident that the Christian authorities felt extremely threatened by the miracles of the Magi, powers which helped ensure that they would continue to muster large followings, even though Russia itself had been converted for at least a hundred years. I would like to cite the case of the magician who came to Novgorod, and won much of the city over to his side, by claiming that he would walk on water to show all present that his faith was more powerful than that which the Church had brought to the Slavs. To prevent this spectacle from occurring Prince Gleb cut him down with an axe that he had concealed. Yet behind this mortal attack on the Magus, one can see that the local authorities were not keen to allow him to attempt the feat of walking on water, which is in itself not easy to do, I'm sure you'll agree. The point is this; if the princes believed that the Magus was incapable of fulfilling his boast it would have be far smarter to let him do it, fail in the attempt, make a public fool of himself, then kill him. Surely this would have lost the Magi large numbers of followers. And yet the prince's chosen response was to kill him before he had an a chance to try it.

Malleus Maleficarum also explains that the astrologer Magi and mathematicians very often accurately foretold future events, and for this reason many commoners placed a great deal of faith in them. This proved to be Gleb's rationale for killing the Volkhv when he did, to show his citizens that the pagan priest was oblivious to this own fate. As a result their arts of prophecy amounted to naught, when they could not see the death that was coming upon them.

The Church had big headaches from the very first. It did not have the full force of secular law behind it. Secondly, some princes were lending robust support to the Volkhvy, figures such as Igor (son of Yaroslav), and Sudislav.¹¹³ Thirdly, pops had to be recruited in the villages and cities, to administer the sacraments. These were ideally people who were fairly well liked, former pagans of good character who were trusted by the residents of the settlement. These new recruits were then taken to their bishop for training in the execution of the vital sacraments and eventual ordination. Everywhere besides the main cities, there was an acute shortage of priests, without whom Christ's sacrificial meal, the focus of Christian religiosity could not be enacted. For many years after the conversion, people hardly ever saw them. Perhaps a monk might drift their way to say Mass every now and again, but that was about it. Needless to say endemic heathenism was unofficially alive and well, though more subdued and covert than it once was. The lack of priests was merely symptomatic of the "unrepentant" paganism of the people and their total lack of faith in Christ.

Monks and heresiographers travelled the countryside, getting a feel for what was happening out in the forests, reporting their findings back to the bishop for his deliberation. Unlike quasi-paganism, the proven existence of organized heresy in a given locale was a genuine cause for concern and in extreme cases might have elicited an immediate response from the bishop. Many preachers were operating at this time; wandering rasputin-like monks who were said to be so prodigious that the Church was almost powerless to stop them. But who were they? Some must have been Magi, Bogomils, Manichaeans, Gnostics or Paulician converts, while others were people who had picked up a bit of theology here and there. In any case, many of them were very well received by the pagans. However, when it came to Manichees, there was one thing that apostolic Christianity had over the heretical Elect, a stout belief that physical creation was in itself good, and not evil. The gloomy contempt for the world, so strenuously espoused by the Manichees, was an alien concept to the Russes. Sure, life was a war zone, but it wasn't corrupt; on the contrary it was the deeds of humanity which were seen as the great corrupter of law, order and all things good. In both pagan and Church eyes alcohol was seen as *good*, but a lazy, layabout drunk, who wouldn't work and drank his family's food money into the bargain was wicked.

Religious communes found to have been infected by heresy were disbanded and burnt down (perhaps to torch any undiscovered "forbidden books" and erase heretical imagery), while the offending clergy were disciplined and placed under *extreme* penance.

Generally speaking, the infant Church had so many pressing issues on its plate that it was almost impossible to exert any kind of ecclesiastical discipline in a nation that had only recently been converted. According to Lozko, Bishops in the end became fairly frustrated and heavy handed with the local populations, especially where paganism was still known to be going on behind the scenes. Local restrictions determined by the bishop alone were brought into effect. Based on western accounts, controlling the movements of "pilgrims" and "torch-bearers" were probably favoured weapons in the fight against pagan Russian migrations to towns with healthy populations of practicing pagans and a functional secret priesthood. Lastly there were uprisings against the Church in some areas which had to be quelled militarily. These usually led to serious initial defeats for the Christian troops, who eventually won the day, but at great cost.¹¹⁴

The arguments of conversion

As in Bulgaria, the Russian boyars, (being close to the people of the land, or sensing some political mileage for themselves) came out swinging, favouring the continuation of paganism as an option for personal worship. But the Church would in no way countenance this, and strove to lead pagans away from the old faith through varied means. This included programmes for dispensing charity, and tasking gifted missionaries to evangelise certain areas.

We do not know what sort of things preachers said to the pagans to win them over. Missionaries like St Avraamij of Smolensk might have explained the Christian faith to them in a pagan context, in a manner they could readily understand. Considering the magianised environment the preachers were working in, their sermons might have touched upon the similarity between Christianity and the faith of the Magi. Superficially, apostolic Christianity was not too different from Magianism, and these similarities could be turned to the Church's advantage, in the hands of an astute and well-schooled orator. Yet this methodology was perilous for the Church's apostolicity unless converts were repeatedly told that a number of major changes were still required, if the old believers wished to join the Church.

According to apostolic teachings, the time for fear and foreboding, the time for looking over one's shoulder every hour of the day, or fretting over how much food you had, or what tomorrow would bring was all over. Evil had been defeated 1,000 years ago by the Resurrection of the Redeemer. From that time, God no longer required that cows, mead, buns, silk, food or lives be sacrificed to the idols, just a simple trip to Mass, in which was conducted the "one eternal and only befitting sacrifice", the crucifixion of God made flesh, the King of all Kings, their Messiah, linked as one single moment throughout all coming millennia. Following the Epiclesis, the congregation would be standing in the visible presence of their Saviour, the bread with which they could "sanctify their unworthy bodies". Pagan converts then presented before "God's table", food, gifts or money, which were redistributed to fund community based projects for the common good. Via this new form of veneration of the Creator, the Church taught that man would enjoy eternal life.

Well, that must have suited the pagans down to the ground, in theory any way. The demon lords, the vampires, dookhi, drakony, velikani and every other unholy entity which had made their life hell all these years, would now be obliterated by the radiance of Christ. What a relief! But then then Russes were told to tear the idols down (even those of the white celestial gods), since the Church asserted that these effigies were the handiwork of devils, whose unholy essences lurked behind the image, duping devotees, and seeking to receive lavish gifts and human worship.

Many peasants probably sensed strange conflicts at work. Why weren't the white Volkhvy suitable priests any more? What was the difference between a magical object and a blessed relic? Why did they have to abandon the time honoured worship of the essentially good creator gods, who had proven themselves time and again? Why couldn't they have them too? By their agency, people had escaped certain death before, cows were made well again, and so on. Why couldn't they continue drinking their beer and mead libations to the gods and become immortal another way; just to be sure? Their answer to all these questions was easy, just sit on the fence; be a pagan-Christian, a *Dvoeveriye*, and have it both ways! But, this was the one thing the apostles said they should never do.

Dvoeverige – the twin-believers

In Rus', as elsewhere, Christians (Jews and Muslims also) frequently resorted to magical means, when their prayers didn't seem to work. Known as *Dvoeveriye* (twin believers), they constituted the bulk of the Rus' country populace (in a few places right up until the 19th Century). Even during Igor's Polovtsy wars of the 12th century, half of his army were still practicing pagans. Bishops, priests and Christians delegated as community elders were always on the look out for signs of astronomy, public rhetoric, philosophy,¹¹⁵ sorcery, the creation and use of magical objects, heresy, pagan gatherings, the worship of local land and water spirits, the conjuring of dead ancestors, bonfires, necromancy, unhallowed marriages and concubinage. Such were the hallmarks of paganism.

In the eighth century Germans had to desist from "*pagan rites, divination, fortune-telling, soothsaying, charms, incantations and all Gentile vileness*".¹¹⁶ The situation was much the same in York around the year 1,000. All good Christians were implored to proffer information to their bishop concerning (Scandinavian) diviners, residual idolatry, magic, or gatherings at groves, wells and holy stones.¹¹⁷ Menfolk were not, under any circumstances, to wear beards and moustaches.¹¹⁷

The Church realised that paganism was not going to evaporate overnight; they had a real battle on their hands. They spoke of their concerns about these acts, and were forced to turn a blind eye to some of the more well engrained beliefs. The best they could hope for was that people would gradually supplant those aspects of Christianity that proved appealing to the heathen mind, hoping that other facets of it would also rub off on them. As long as people kept their paganism at home, the outward vestiges of these beliefs would die out over centuries.

ZONE BETWEEN THE
OLD WAYS AND THE
REFORMS BEING
INSTITUTED BY ROME

NO LONG HAIR, NO
BEARDS

MAGIC AND WITCHCRAFT
WERE OUTLAWED

Public mustering of support for pagan assemblies in the earlier years was something countered by proposing Christian feasts of a similar nature, or instituting the feast of a saint on whose day the pagans might celebrate something locally. After 996 AD criminal proceedings ensued, *if* the local heads of authority were sufficiently pious. Since paganism still flourished in many ways during the earliest years of the Russian Church, people tried and convicted of these crimes probably received the lowest penalty for the first offense, getting steadily more harsh with each subsequent offense. The severity and impact of their agitation was another thing weighed up by the bishop and churchmen; if they were too harsh they risked getting moderates off side, and if they were too soft, then the people might have lapsed further back into the old ways.

Black witchcraft, the perennial corpse impalings, and similar corpse degradations merited austere penances. The exposure or sacrifice of newborns and infants was always investigated with vigour and met with the full force of secular law if encountered after 996 AD. Before that there was an atmosphere of tolerance for deeds of this sort; once considered normal, or commonplace, and certainly not beyond contempt. In reality the term *dvoveeriyе*, which Russians used to denote demi-paganism, is best equated with the concept of Christian heresy.

As it was, folk employed a wide range of Christian folk amulets to protect them from the maleficia of *kolduny* (sorcerers) and *ved'my* (witches): they wore crosses, burned incense, carried garlic, and so on.¹¹⁸ Since Volkhvy slew cattle ritually, Christian peasants of the post-conversion era drew the sign of the cross near cattle pens and barns to keep the heathen priests at bay.¹¹⁹

Rival communions of immortality

REPLACING THE OLD
COMMUNION OF
IMMORTALITY WITH A
NEW ONE WAS A VERY
TRAUMATIC EVENT FOR
HEATHEN CONVERTS

To the people of Rus', just like people today, the question of their spiritual immortality was one of the greatest single factors in their lives, and the advent of the known world's Christianisation painted either joyful, or extremely disturbing pictures in their minds. The Church's introduction of the Eucharistic "feast" as the replacement for *Soma* and *Haoma* and the communal banquet, was not well greeted by many pagans, especially in Russia, Germany, England, Frisia, Finland and the Baltic, where a considerable number of them took their conversions very hard. *Many pagans still continued receiving both varieties of communion at the same time*, long after their peoples had converted to Christianity; something which was endlessly denounced by the clergy.

In the period spanning the 10th-11th Century AD (ie; some 200 years after their conversion) Adam of Bremen recorded the following about Frankish parishioners in the Holy Roman Empire;

He (the Bishop) complained, also, that even to his own times many were so steeped in the delusions of pagans that they dishonoured the sixth ferial day by eating meat; that they desecrated by debauchery and fornication the vigils and feasts of the saints and the venerable season of Lent; that they thought nothing of perjury; that they held the shedding of blood in esteem. Similarly, adultery, incest, and other kinds of uncleanness contrary to nature were condemned by scarcely any one of them. Many of them had two or three, even innumerable, wives at the same time.....Although the metropolitan often denounced in church these and other popular transgressions in rhetorical sermons, the people regarded his paternal reproofs with disdain, nor could they be turned or moved to have any reverence for the priests or for the churches of God".¹²⁰

There you have it in a nut shell; in many localities Mediaeval parishioners were little more than pagans, and paying little or no heed to the anti-heathen sermons squarely directed at them by their archbishop.

MANY RECEIVED BOTH
FORMS OF COMMUNION

The blending of honey and milk with the Eucharistic wine was known in Europe and greatly condemned by the Church authorities as far back as the 6th Century AD in France.¹²¹ Perhaps such milk and honey libations were once practiced by the Gaulish Druids, but to gain a clearer picture of this one would have to go back and examine the writings of the 4th Century Christian missionaries who went to Gaul, though I am unaware how many such treatises exist.

Having examined Christianity as it once was, during the Apostolic age, and during the troubled Middle Ages, we will now advance onto the conversion of Europe's pagans in general, and in particular the missions launched to convert the heathens of Russia. In it the profound reasons why pagans so readily converted to the new faith, on a superficial level. I also expound why they didn't think it incongruous to practice pagan rites, all the while regarding themselves as Christians. Christ's extraordinary appeal was, it would seem, attributable to him resembling a pagan Messiah long foretold by the sibylline oracles and the wise Magus-prophets of olden Iran.

In this chapter you have seen historical information from Church sources which enable us to understand the Church's stance on issues arising from the old ways, and the manner of the transition from paganism to Christianity. While the following two chapters are predominantly written from the Catholic Church's perspective, we can still read between the lines to see not only what the Church sought to confront and destroy, but how such designs mutated into the Pan-European witch blazes ... the shameful Burning Times which swept away very many good, virtuous pagans along with the bad.

So much for what is conventionally known about medieval Christianity. As we look back over the history of the Apostolic Church it is easy to forget one very crucial point. It, like the Gospels, is almost 2,000 years old, a *living relic of a time quite remote to modern thinking*, an era which scholars can only ever access by archaeology and scant historical writings, the *written relics* of an extinct past. It sprouted during an era when the pagan gnostic philosophers, the Egyptian priesthood, druids and Magi were alive and well, still manning their temples and holy sites. These faiths are of course no longer with us, but the Church is. And, with the exception of Judaism, this makes Christianity a fairly unique historical institution, in a western context.

The foundations of the new religion in the 1st-3rd centuries AD were set into the bedrock of an even more ancient world, a world within which it grew, matured and flourished. As time progressed, Apostolic Christianity carved its own niche. Christian theologians of the 3rd and 4th Centuries AD brushed shoulders with the best of the royal advisers, the heathen philosopher-scientists, attempting to gain some formal recognition for the deep philosophical undercurrents present within the Christian faith. Progressively they remolded the views of their erudite and studious listeners.

Many things concerning the dawning of the Church in that first three-hundred year period, were a complete mystery to even the earliest Christian generations. They were a matter of faith. The Church historian Eusebius, notable for his priceless records of the primitive faith, does shed some extra-canonical light upon the happenings. But even he started to run out of formal accounts of the 'lives of the faithful' during the traumatic persecutions of Nero and successive Roman leaders. Most interestingly, each of the four Holy Sees had preserved their own little pieces of Church history in the form of local traditions (as distinct from the body of Church tradition), but none more so than Rome, which had always boasted that it had maintained the first customs of the Church with utmost fidelity. The effects of Judaism on the Church are obvious. Things such as the use of the *Old Testament* in the *Bible*, and resorting to bread and wine as the substances for the eucharistic celebration. However there are other facets of *official Church tradition, and portions of the New Testament, which without question could only have come from Zoroastrianism, the religion of the Magi*. An exploration of why this is so, leads one along pathways of enquiry, not nearly as speculative as one might guess. Perusing this untidy mass of evidence with a sleuth's magnifying glass in hand, allows the observant and astute to zero in on crucial points of similarity between Christianity and the faith of the ancient magicians ... the fingerprints of a lost past.

Having briefly visited the Middle Ages we shall now enter a time machine, and take a journey back a further thousand years, to the Church's very beginnings.

Chapter

The eastern situation – What first encounter with the ‘pagans’

In spiritual terms the mission of the Apostles began at Pentecost, when the Father sent down from heaven, the power of His Holy Spirit upon them, in the form of fire. From that moment the fiery divine presence came to dwell inside their bodies, making them conceptually similar to fire temples or tabernacles.

‘And when the day of Pentecost was fully come, they were all with one accord in one place. And suddenly there came a sound from heaven as of a rushing mighty wind, and it filled all the house where they were sitting. And there appeared unto them cloven tongues like as of fire, and it sat upon each of them. And they were all filled with the Holy Ghost, and began to speak with other tongues, as the Spirit gave them utterance. And there were dwelling at Jerusalem Jews, devout men, out of every nation under heaven. Now when this was noised abroad the multitude came together, and were confounded, because that every man heard them speak in his own language.’¹²²

And how hear we every man in our own tongue, wherein we were born? Parthians (Graeco-Persians), and Medes (ie; Magians), and Elamites (Persians), and the dwellers in Mesopotamia (Chaldeans), and in Judaea, and Cappadocia, in Pontus and Asia. Phrygia, and Pamphylia, in Egypt, and in parts of Libya about Cyrene, and strangers of Rome, Jews and proselytes, Cretes and Arabians, we do hear them speak in our tongues the wonderful works of God’.¹²²

For the most part, the religious messages spoken that day were intelligible to the native inhabitants of distant Turkey, Iran and Iraq, and locales far inside Asia, not to mention Egypt, Rome and Libya. God was reaching out to the East spiritually, and before too long, physically.

Christian missionaries fanned out into the Balkans, the Middle East, Persia and Anatolia which at that time were peopled by Roman, Greek, Jewish and Zoroastrian inhabitants. As Jesus’ disciples walked about meeting the locals and preaching their message to the Jews, they could not have failed to notice a lot of pagan ears pricking up, scratching their heads in disbelief at what they were hearing. Many of the things the gospel-preaching apostles were saying about this Jewish Messiah were close to, if not identical to, the beliefs that every sun-worshipping

Magian learned from childhood. To them the Gospel proclaimed the arrival of *Sraosha*, the World Messiah, to whom they and all preceding generations prayed each day, offering *dron* buns and incensed sandalwood billets.

Far beyond the Roman-Persian borderlands, in Bactria, Bardaisan spoke of the region's Hindu Brahmins and Christians.¹²³ That was in the 2nd Century AD. Based on earlier traditions, certain apostles had evidently captivated a sensational number of listeners in the East, St Thomas in Persian Parthia and the Punjab (India), St Jude at the court of King Abgar in Mesopotamia. It was in this part of Asia Minor that Magi and Chaldean wizards flourished. News of Jesus' many miracles had reached Abgar's ears in a very brief time. Hoping to be healed of an incurable disease, Abgar sent correspondence to Jesus, asking if he would be good enough to attend his court to effect the sort of miraculous cures being reported in Jerusalem: His letter starts;

'Abgar Uchama the Toparch (of Edessa) to Jesus who has appeared as a gracious saviour in the region of Jerusalem' and ends with 'I may add that I understand the Jews are treating you with contempt and desire to injure you: my city is very small, but highly esteemed, adequate for both of us'.¹²⁴

Jesus apparently sent a reply to Abgar's correspondence, which Eusebius supplied. It stated that he would send one of his disciples to Abgar after he had ascended into heaven.¹²⁴ After the crucifixion, the Apostle Thaddeus was duly dispatched to the Far East, to Abgar. Thaddeus told Abgar that he was sent to heal him because he faithfully believed in Christ.¹²⁴ To which Abgar responded;

'I believed in Him so strongly that I wanted to take an army and destroy the Jews who crucified Him, if I had not been prevented by the imperial power of Rome from doing so'.¹²⁴

Moments later Thaddeus placed his hand on Abgar, who was instantly healed of the infirmity. Following this Thaddeus greatly expanded his Christian ministry in Mesopotamia, gaining innumerable converts. He also conducted missionary forays into Egypt.

We hear of Christ's similar level of popularity in Phrygia; a spontaneous eruption of Christianity.¹²⁵ Nowhere else in the world is the rapid explosion of the Christian faith more visible in the archeological record than in that part of the East.¹²⁵ In fact Christianity seems to have become widespread throughout certain parts of the Middle East and much of Asia Minor before 200 AD. On his way to Rome at around that time, a Syrian bishop from the Far-East, named Abercius, stated; *'I also saw the plain of Syria and all the cities, Nisbis on the other side of the Euphrates. I met Christians everywhere'.¹²⁶*

During the northern ministries St's Paul and Andrew (the Apostle of the North) seem to have pulled a rabbit out of the hat, so to speak, converting quite a few pagans. One can almost imagine Christ's disciples to the Gentiles running into a band of 6 foot tall white Scythians buying provisions at a market somewhere in Trebizond, Northern Anatolia, covered from shoulder to wrist in griffon tattoos, lynxes and other body art. With long brown and flaxen hair flowing down over their menacing, heavily-muscled frames, they looked every bit like today's heavy metal musicians or Hell's Angels, and one might think Paul felt an uneasy reluctance to speak with them, especially if some had a human scalp or two hanging from their belts, as they once did.

It seems Paul took his life in his hands fraternising with barbarians of this calibre, but as you will shortly witness, there are special reasons why he had a head start on St's Peter, James and John, who confined themselves to the relative comfort of Jerusalem. Nor was he in nearly as much danger as the latter.

"After the Ascension of our Saviour, the Jews had followed up their crime against Him by devising plot after plot against His disciples. First they stoned Stephen to death; then James the son of Zebedee and brother of John was beheaded; and finally James, the first after our Saviour's ascension to be raised to the bishop's throne there (at Jerusalem), lost his life in the way described, while the remaining apostles, in constant danger from murderous plots, were driven out of Judaea".¹²⁷

ZOROASTRIANISM WAS
RAVAGED IN THOSE
EARLY YEARS BY
DEFLECTIONS TO
CHRISTIANITY

Fig 9. Cross worn by Scythian converts. This one found in Russia

Anyway, the apostles absorbed vast multitudes of these 'pagans' in that first hundred years, and the Magi were none too happy about it. Witness Chosroes attack on Constantinople in Part I. Nonetheless the Zoroastrian faith was left relatively intact inside Persia, though savaged by these defections to the apostles. So alluring was this Christian Messiah to the Magians that in one of the few historical accounts from Persia of that time, a whole city was described as being Christian down to the last man, woman and child, "*even the magistrate*", a place that was destroyed by Roman troops campaigning against the Persians.¹²⁸ For all intents and purposes the pagans of this area of Asia Minor and its environs had *vanished from sight*, and faded from memory; they weren't pagans any more, but Christians. Gentiles, it would seem, had readily 'converted' or 'transformed' into Christians. As you will soon see there were specific reasons for this phenomenon.

THE PERSIAN KINGS
ACTED TO HALT THE
MASS-CONVERSION

At the command of the Persian Emperor Shapur I, many of these converts were cut off from the rest of Christianity, as fragmented as it was, and suffered terribly at the hands of Persian religious authorities following the reformation of the Zoroastrian faith. These forgotten Christians lived further afield in remotest Iran and Central Asia, and would not encounter any serious Christian missionary work for many centuries. The Phrygian Christian city of Orcistus attempted to provoke Roman military intervention in the area because it was being down-trodden by a nearby urban centre around the year 324 AD,¹²⁹ which is guessed to have been Zoroastrian. Whereas for the same period barely three Middle-Eastern settlements had turned Christian.¹³⁰ The Christian populace of Rome (though still vague in nature) was positively well documented when compared with the eastern Christians who were little more than rumoured to exist. And as the repression continued St Augustine spoke of Persian Christians filing out of the region at some speed, resettling as far away as Rome.¹³¹ How tinged with Magianism their doctrines were was not preserved though.

Certainly eastern Christian traditions entered the Balkans shortly after the mid-3rd Century AD. What writings we do have from the pagan gnostic philosophers at that time say precious little about the activities and devotions of Christians in their respective regions.¹³² As late as the mid-200's Roman Salona, later called Split (Croatia), had hardly any. But when the faith did arrive, it was with preachers from Asia Minor rather than Rome or Greece.¹³² The situation was much the same in North Africa.

THE COLLAPSE OF THE
PERSIAN CHURCH

After the persecution of the Aryan Persian Church, the faith fell into disarray. No longer were there books, preachers or meeting places.¹³³ The faithful handed on to the next generation what they had once learned. There the core teachings of the faith began falling apart, and in all likelihood became steeped in Magianism and Buddhism.¹³³ An early 6th Century AD missionary named Symeon the Mountaineer wandered across the Euphrates.¹³³ There he found a chapel in a state of utter ruination, and long-haired mountain-dwellers who had a crude knowledge of the Gospel inherited from their forefathers, but little else.¹³³ These were Christians bereft of any form of pastoral guidance, with the direct result being a form of Christianity little better than superstition.¹³³ Symeon stayed among them a long while, teaching them much of what he knew. That Christians once lived in these regions in remote ages is proven by the existence of Greek-style monuments belonging to the Christians.¹³³ And there were a lot of them. These monuments were crafted by the descendants of Greeks who colonised the area after Alexander the Great's time, and continued to do so.

CHRISTIAN MISSIONARIES
BEGAN TO MAKE THEIR
WAY BACK INTO THE
AREA

A little further East, in Parthia, other equally persecution-weary Christians mixed in with the Buddhists, so consequently there was a typical eastern intermingling of religious ideologies and practices.¹³⁴ One can only guess what 'heresies' emerged from the wing of a Parthian Buddhist temple,¹³⁴ where it was reported that forlorn Christian believers gathered, far indeed from the spiritual tuition of Rome, Jerusalem, Antioch and Alexandria.¹³⁴

Perhaps the early Church knew these converted Magians and pagans lived way out there somewhere to the East and the North, perhaps they didn't. In any case they were in no position to lend them any help whatsoever. As it was the other early Christians were fighting for their own lives against the Roman state. These Persian and Central Asian believers had to wait some time before they heard from the Western brethren again. There was still a few hundred years of repression to undergo and the attempted ideological and philosophical transformation of Rome, Egypt, the Balkans and Greece to accomplish. When Christendom eventually did run into the main body of these heathens and converted pagans, it was because of an Islamic holy war taking place in Persia and Central Asia.

The meteoric birth and rise of Islam in the 7th Century AD, began to set the world ablaze with the message of the prophet Mohammed, bringing about the unification of hopelessly fragmented warring Arabian tribes, and dethroning their pagan idols at Mecca (such as *Al Suwa*). Under the pennants of the Holy Prophet, Muslim armies embarked upon outlandish military conquests over vast areas, ever aimed at converting infidels whensoever encountered. Their armies implanted Islamic culture and religion all over North Africa, Persia and Central Asia, and Baghdad became very powerful in the meantime, the recipient of countless slaves, wealth and ancient knowledge beyond measure. But it was their Jihad against the cities of Khorezm, Samarkand, Bokhara and the Zoroastrian heartlands in the deserts of near Asia, that is of utmost importance to us in understanding what took place. Just as the Zoroastrians had expelled the *Zandiks*, (Zurvanite devil/daeva-worshippers) a few hundred years previously, they too found themselves evicted from Iran and its environs, rather than convert to Islam. The Magians had only four options; flee to India, the North, the East, and most importantly for us, the West. Otherwise they could stay just where they were and become Muslim. Alternatively they remained loyal to 'the Good religion of Ahura Mazda' and, in the words of their scriptures, were '*slaughtered just like flies*'.

Magians were not the only group affected by the conquests. Apart from these streams of fleeing Zoroastrians, another notable religious group joined in the exodus, heading out into the steppe in their own direction, presumably in wagons. These were the Magian Christians, the ancestors of Magian converts to Christianity (cut off from the remainder of Christendom for up to half a millennium). In all it amounted to an immense diaspora. According to the historically unsubstantiated claims of a bishop expelled from Edessa after its fall, there were other Christians beyond Byzantium who in prior ages had fought back against the Zoroastrian state, and successfully captured Ecbatana (ie; Ctesiphon), the chief city of the Medes (the tribe from which the Magi were drawn).¹³⁵ Presumably quasi-Magian Christianity was the predominant ideology there, and considering the safety afforded by the fortifications of the old Medean capital, their brand of Christianity became very formal, with its own priesthood. They too were dislodged by the Muslims and headed eastward, mostly into Anatolia. Folk recollections of this conflict were probably contained in the myth of the Magian warrior-king Prester John, details of which appeared during the Middle Ages, in formal correspondence to the crown heads of Europe sent by Prester John himself, and in the writings of Otto of Freisingen.¹³⁶

Prester John and the Christian Magi

In Part I you heard about various European Magi, and pagans who observed Buddhist, Indo-European and gnostic traditions. The more ancient breed of Magi had been in Russia since the Bronze Age, others the Iron Age. Then there were the Mithraic Magi and their warrior fraternity, who embedded themselves in Rome, and across the breadth of that herculian empire. You also read about the Orthodox Zoroastrian fire priests of Persia who were swamped by unwanted religious trends. Under the Zoroastrian patriarch Karter, the kings gathered forces and pushed rival religions out of Iran - tackling Buddhists, Magian sectarians, devil-worshippers, Muslims, pagan gnostics and the Chaldean wizards. One final group the Zoroastrians had to overcome was the Magian-Christians and Manichaeans, who, just prior to the advent of Islam, had swollen to such numbers that they threatened the very existence of Orthodox Zoroastrianism in Iran.

One of the most far-reaching, solemn, deeply-loved and recounted myths of the Middle Ages concerned the Kingdom of Prester John (Preste-Cuan), a tale equally well known to Slavs, Germans, and Jews alike. Modern scholars are convinced there are elements of truth behind the so-called myth, mainly because it has been told and retold by so many different races.¹³⁷

I will now sieve through details found in the correspondence of Prester John, because there is every indication that it contains a profound folkloric recollection of a dispersion of Magian-Christians into the frozen north, then a southward movement to more temperate climes such as Russia, the Ukraine and the Balkans.

Reference to Prester John's migration was not just a village whisper in medieval Germany and Slavonia, but contained in letters formally dispatched by Prester-John to the pope, the eastern and western Roman emperors and many of the crown heads of Europe in the early years of the 12th Century AD.¹³⁸ In this correspondence we discover

PRESTER JOHN,
DESCENDANT OF THE
THREE WISE KINGS

that Prester John was both priest and khan, a warrior-priest who was a blood descendant of the Three Wise Kings (Gaspar, Melchior and Belthazzar who visited the newly-born Jesus Christ in the manger), supreme ruler of the Magian people, and all the lands once held by them.¹³⁹

Prester John claimed to be the highest of all kings on earth, as well as the true head of the Christian Church, rather than the pope or any of the eastern patriarchs. Much of the world's wealth was his (or so he claimed), and 72 regions and their mostly non-Christian kings were his vassals.¹⁴⁰ He pompously promised to bequeath all of Italy, Germany, the lands of the Franks, as well as Britain to his son once he had conquered Europe. To achieve this he threatened to unleash the tribe of Gog, and the other so-called 'monster-nations' which he would personally lead into Europe, to bring punishment on the masses.¹⁴¹ Independent confirmation of such spectacular boasts and trumpery was required.

After the fall of Edessa during the Middle eastern Crusades, an eastern bishop came to Rome. He recounted to the pope, that *at some undetermined year prior to that*, the Christian king Prester John had sufficient forces to challenge the last Zoroastrian princes of the Medes, Assyrians and Persians. After a 3-day battle, which for both sides was seen as a fight to the death, the Zoroastrians and Magi were defeated. Following this the victorious Magian-Christian converts took Ecbatana.¹⁴² This last great battle between the Magian-Christian converts and the Zoroastrians was probably only the culmination of half a millennium of religious persecution and internecine warfare deep inside Iran and Central Asia, which saw many Christian sympathisers martyred.

As the story goes, buoyed by his triumph, Prester John wanted to militarily assist 'the Church' in Jerusalem, but due to a swelling of Muslim forces in Iraq, and finding no suitable place to ford the Tigris, he was forced to shift north into the land of frozen rivers.¹⁴³ This is presumably a reference to him entering Russia during the 9th and 10th Centuries AD. Jerusalem was in trouble, so Prester-John wanted to help the Christians recover the city, plus undertake pilgrimage to Christ's birth place, just as the Three Wise Kings once did. At first glance one is tempted to associate Jerusalem's woes to the Islamic annexation, and the medieval Crusades that followed, culminating in the recapture of the city by European Christian knights in 1099 AD. Whatever the case, the timing of his battle with the Persians and Medeans, followed by an attempt to reach Jerusalem, renders the story inaccurate. The Arab Muslims progressively seized control of Persia much earlier, between 637 and 640 AD. Besides, to the best of my knowledge, no Magian troops were active inside Mesopotamia in the late 11th Century. Therefore part or all of this story is inaccurate.

First appearances can be deceiving. By moving the chronological slide-rule of history backward some five hundred years, one strikes pay dirt all of a sudden. As it turns out, Prester-John's crusade wasn't against the Muslims at all, but against one of the last pagan Zoroastrian kings, Chosroes II, who seized Jerusalem in the year 614 AD.¹⁴⁴

In 590 AD Zoroastrian Sassania was rocked by a catastrophic civil war between King Chosroes II and a rogue Arascid general called Bahram Chobin. Chosroes' crumbling military position was maintained only with the backing of Sassania's traditional arch-enemy, Maurice, a Byzantine emperor of the late 6th Century AD. A previously unthinkable scenario unfolded, which saw a mammoth Byzantine Christian force traverse sovereign Zoroastrian Sassanian territory to engage Chosroes' internal foe. After his defeat, supporters of Bahram Chobin, some of whom were Jews, supposedly retreated to the northern reaches of Sassania, and established their own principedom.¹⁴⁴

Some 12 years later, Emperor Maurice was put to death in a military uprising. Chosroes then turned on the Greeks. Shamelessly cashing in on the Byzantine political disarray created by Maurice's assassination, Chosroes

went on a remarkable land-grabbing spree, that saw him capture much of Egypt and the Middle East, including Jerusalem. It ended up being a political miscalculation so grave, that it eventually led to the fall of the Zoroastrian

state. Far to the south, in North Africa, General Heraclius began the Byzantine counter-attack.¹⁴⁴

Interpolating other features of the Prester-John myth raises some interesting possibilities in relation to the matter. Put simply Bahram Chobin may have been the original Prester-John, albeit a Christian magus. He found a staunch enemy in the Orthodox Zoroastrian monarch Chosroes II, but being, in effect, a Christian heretic, he also had to contend with the Byzantine Christian army. Chosroes II had been militarily worsted by the Magian-Christians, and was utterly incapable of defeating them. The only way he could restore Zoroastrian power, was by letting Byzantine legions march across his country to annihilate the heretics.

Bahram Chobin's fortunes changed as political factions reorganised in Constantinople following the emperor's demise. It may be that Bahram Chobin sympathisers hoped to gain full control of Sassania (the Persian Orthodox Zoroastrian state), by assaulting Chosroes from the rear, as Heraclius, the new champion of Byzantium, was pushing Sassanian troops from Egypt and the Middle East, from 622 AD onwards. By helping the Byzantines recapture Jerusalem, Prester John had an opportunity to ingratiate himself with the new Byzantine regime.

Despite being a 'heretic', an enemy of one's enemy, makes one a friend. Perhaps Prester-John felt the Byzantines would rather share their borders with a Magian-Christian country, than a Zoroastrian state. If that was his game plan, later history proves it tragically myopic. The Apostolic Christian authorities of Rome and Constantinople detested the Magian-Christians even more than the Magi, largely because they were more numerous, and far more influential if they began interacting with Apostolic Christians. Up to a thousand years of Judaeo-Christian dogmatism could have gone down the drain in a very short time.

Magian Christians probably had free reign throughout much of Sassania until 640 AD, when Islamic forces invaded the country. A little earlier, in 639 AD, the Arab Muslims poured into Mesopotamia. Evidently, in that same year, Prester-John couldn't cross the Tigris. Some seven years after the death of Mohammed the region was very dangerous, consumed by intense Arab inter-tribal swordplay.

In summation, the Magian-Christians deduced that it would shortly be unsafe to live in Iran, as they were surrounded by Zoroastrians, Christians and Muslims, none of whom were favourably disposed toward them. So they emigrated from Iran in 639 AD, moving northward to establish permanent settlements at frigid latitudes. In the seclusion of their northern retreat they evidently planned to invade Europe, and introduce what they held to be the true form of the faith.

John's reputation and standing was beginning to grow to unbelievable proportions in medieval eastern and western Europe, so much so that the pope of the day, Alexander III (reigned 1159-1181 AD), attempted to organise a meeting via courier between Prester John and himself.¹⁴² But it came to nought owing to the unforeseen disappearance of the emissary. Greatly intrigued by this figure, and eager to discover the veracity of a Christian Empire in the Far East, Roman Catholic missionaries were sent eastwards to make contact with him, during the reign of Pope Innocent, in the 12th Century. But no trace whatsoever was found of it. In fact, only the odd Nestorian Christian had even heard of Prester John.¹⁴³

Numerous details found in the Prester John's medieval communiques help us to take it beyond the sphere of mythology, and possibly identify Prester John's realm and nationality during the medieval period. The preeminent medieval Jewish scholar Maimonides stated that many Jews lived in the Far-East in the lands of the Persians and Medeans, where could also be found the kingdom of a chieftain called Preste-Cuan. He went on to stress that this was not a fictitious kingdom, but by the testimonies of merchant traders he had met, all too real.¹⁴⁵

1. Firstly after the debacle on the Tigris, Prester John took his people northward from the region of Iraq into areas so cold the rivers froze over. This is probably a reference to Russia or Silver Bulgaria, around 639 AD.¹⁴³

2. Secondly Prester John had subjugated a Jewish kingdom in the east. This can be none other than the Khazarian Jewish Empire.¹⁴⁶ Khazaria converted to Judaism only in the 8th Century AD, and rapidly developed a military power base enabling it to resist the advances of Muslims into their territories. The collapse of the Khazarian Empire took place over a 65 year period, beginning with the devastating 965 AD attack by the pagan Russes, a retaliatory strike prompted by their overlordship of Slavic tribesmen. This catastrophe saw much of Khazaria's

PRESTER JOHN
DESTROYED A JEWISH
EMPIRE

THE EMPIRE IN QUESTION
WAS KHAZARIA

Jewish citizenry taken into the bondage of Russian suzerainty, leaving their emasculated nation to flounder. Though stripped bare of its former prestige, the Russes still permitted the Jewish Khagans to rule over Khazaria, with the status of a slave nation under the iron rod of the heathen Slavs.¹⁴⁷

PRESTER-JOHN MAY
HAVE BEEN KHAGAN
SVYATOSLAV

Muslim encroachment into the Caspian area in 1030 AD succeeded in obliterating Khazaria, which was only a mere shadow of itself at that time. This points to the fact that Preste-Cuan (the proper transcription of Prester John) was most likely Khagan Svyatoslav (the Russian royal who led the attack on Khazaria), a ruler who was both priest and Khan (Khagan), or one of the pagan-Christian Silver Bulgar Magian rulers that took control of some parts of the Old Jewish Khazarian state. Since John's portion of the Khazarian state lay next to another part ruled by the conquering Muslims, it seems that Maimonides' version of the Preste-Cuan story was written after much of Khazaria had fallen to the Arabs after 1030 AD. On the other hand, it might also be a reference to the Khazarian state being portioned out among the Slavs and Muslim Silver Bulgars, with whom the Russes shared a non-aggression treaty.

PRESTER-JOHN
COMMANDED THE SO-
CALLED MONSTER
NATIONS

3. A further point which adds to this 'Prester John'- 'Priest Khan' connection is that one ethnic group subject to him were (again according to the letters) cannibals, who he led into battle against his enemies.¹⁴⁸ This particular race, I believe, can be equated with the Finnish Mordva tribe, who resided due west of the Urals, in upper Russia. This is based on Professor Gimbutas' identification of the Mordva as the Androphagi cannibals mentioned by Herodotus, since their name was apparently derived from the Iranian *Mard Khvar* which translates as 'the man-eaters'.

HIS KINGDOM WAS
GEOGRAPHICALLY VAST
AND WEALTHY

4. Moreover the kingdom he laid claim to was said to be the wealthiest and most luxurious ever known, and exceptionally vast in extent, stretching from Central Asia, even as far away as India and the Chinese border. Within it lay many kingdoms and every conceivable variety of earthly riches.¹⁴⁹

Unusual beasts inhabited his lands. Fauna included Indian, Asiatic and polar species, as well as mythical creatures like griffons (Russian: *griffin*), cyclopes (Russian: *мавпа-тсиклопы*), satyrs (Russian: *чугаистер*), centaurs (as shown on the walls and columns of pagan Slavic temples), giants (Russian: *великаны*), horned men (Vikings?) and phoenixes (Russian: *жар птиц*). Many of these beasts were said to live in pagan Rus', but obviously Olden Rus' did not stretch to the Chinese border. Therefore Prester John might have been a very highly placed magus-king who had later come to Russia, but whose dominion extended much further east.

HE RULED THE ALANS

5. Prester John also had a spring, from which the water of life and healing welled up. In Magian tradition such a spring was originally located further to the east, at Lake Kekast.¹⁵⁰ The spring of the 'water of life' occurs as a theme in Russian mythology also.¹⁵¹

6. Prester John ruled over the Alans (who formerly resided in Chechnya and Southern Russia), as well as a female warrior band known as the Amazons (who reputedly lived in Russia), and the Aryan Brahmins (who were also subordinate to him in authority).¹⁵² Collectively these ethnic groups were reviled as members of the monster nations, the so-called legions of Gog and Magog. As I showed in Part I, Aryan priests akin to Hindu Brahmin were operating in pagan and indeed medieval Rus', and what is more they had relinquished much of their authority to 'Prester John'.¹⁵³

AFTER LIVING IN FROZEN
REGIONS PRESTER-JOHN
RETURNED TO THE OLD
COUNTRIES

7. Prester John supposedly retreated back into his former domain owing to the grievous nature of the northern climate. This was a southward migration, but by Otto of Freisingen's account he withdrew to his old homelands beyond Armenia and Persia.¹⁵⁴ This might mean Central Asia or even India (where many Magian exiles came). By my reckoning this anecdote is partly incorrect, with many refugees also entering Bulgaria and Russia.

HIS MAGICAL MIRROR

8. Prester John had a magical mirror through which he could see everything happening in his vassal states.¹⁵⁵ The Russian Magi possessed books on divination and presumably clairvoyance by means of mirrors.¹⁵⁶

9. Prester John had a great love of gems, and attached special significance to each one, assigning to them special powers, mystical properties. Some of these gemstones aided the powers of sight if you looked into them.¹⁵⁷ This is probably a reference to crystal balls or, as you may have read in earlier, lenses. The Russian pagan priests also used gemstones for such purposes, and what is more the Russian words for gemstones have an Arabic and Iranian linguistic ancestry. In a mountain range within Prester John's domains, young lads were sent through tiny gaps which led into subterranean waterways where they collected assorted gems for days at a time.¹⁵⁷ The comprehensive assortment of gems mentioned in Prester John's letter sent to Emperor Comnenus indicate that they might have been gathered in India or the Urals. Finnish legends from the Urals indeed hint that local wizards were engaged in the harvesting of underground gemstones, many of which they embedded into their idols and towers, and perhaps even engraved.

PRESTER-JOHN ADORED
GEMSTONES

HE SENT YOUNG BOYS
BELOW THE EARTH TO
HARVEST GEMS

Prester John could not have been a single individual and is more likely to have been a religious figure who occupied the post of both Priest and Khagan; a Christian warrior-magus priest, who by some accounts was a Nestorian, though I have doubts about this. I say this because one man would not have been around to fight the Assyrians, Medeans and Zoroastrians, to destroy Khazaria, to partake in the Crusades, and to fight the Mongols. It is simply an impossibility. Moreover the Nestorians knew practically nothing of Prester-John, and are unlikely to have used magical mirrors. Such devices point towards Magianism instead of Nestorianism.

Somewhat later in the Middle Ages Prester John acquired a reputation as some kind of a Christian super-hero. Just as the Magi were workers of great marvels, so too was Prester John, the Christianised magus-king of like wonders. During a second series of western campaigns the numerically superior Mongols were routed from the battlefield by Prester John¹⁵⁸ and the St Thomas Christians, who according to the *Tatar Relation* were in all likelihood inhabitants of the Nestorian Christian settlements in India. Their force allegedly consisted of several thousand mounted archers riding line abreast to face Ghengis Khan's forces. Bewildered Mongol survivors supposedly recounted that each of Prester John's cavalymen carried a metallic device at the front of their steed containing incendiary fluids. They fired this flaming substance against the enemy operating bellows mounted either side of the saddle with their legs. Thereafter Prester John's men pursued the routing Mongols, peppering them with deadly volleys of arrows. This manner of warfare apparently terrified the Mongols and caused so many casualties that they retired from the battle field in a state of shock. The Mongols, you see, weren't used to losing on such a scale.

PRESTER-JOHN WAS A
MEDIÆVAL SUPER-HERO

Not content with significantly humiliating Ghengis' western commanders, Prester John sent threatening communiques to the Mongol Khan (who he regarded as more of a robber than a soldier), threatening an invasion of the Mongol homeland if he didn't start behaving himself any time soon.¹⁵⁹ Whether we can believe the account of the battle between Prester John and the Mongols is another thing. The technology to produce such devices was certainly available in Byzantium, and the Chinese knew how to make flame-throwers as early as the 10th Century AD.¹⁶⁰ The only thing I find hard to accept is that many thousands of horses remained calm and in good battle order as spurts of fire issued from in front of them. Perhaps some details were lost in the re-telling of the tale, perhaps this novel feature was only just a story.

HIS TROOPS USED
INGENIOUS
TECHNOLOGIES

With the disintegration of what was once a vast and quite civilised race, large numbers of refugees spilt in every direction, eventually losing all contact with each other. As the Magians and Magian Christians moved further west, they started bumping into the dreaded devil-worshippers and Zurvanite wizards they had banished from their religion centuries previously, who in turn were pressed further and further into the region of the Southern Urals, the Siberian fringe, Anatolia, Rus' and the Balkans. In prior times the nomadic Zurvanites and black families had, in all probability met up with the alchemists, philosophers and the equally banned sect of mathematicians (a brotherhood devoted to studying the sciences of Ptolemy and other ancient philosophers and natural scientists), many of which were exiled from the Roman world, and who had been living in the seclusion of these silvan realms.

In places like Baghdad and Edessa, the Christians from the Holy See of Nestorian Antioch allied themselves with the Arab Muslims. Following their ill-fated tussle with the mightier Sees of Rome and Constantinople over Nestor's theological views on Christ, they now acquired powerful defence from outside the Christian sphere. In return for their sworn allegiance to the Muslim authorities, the Caliph gave them the right to renew preaching the Christian

message among the non-Islamic Persians, whom the Arabs had no great love for. What happened next was truly amazing and must surely count as one of the most productive phases of missionary activity ever undertaken by the Church. Amid the ruins and desolation of Iranian society, where the proud and good faith of Zoroaster was once close to the hearts of the people, the first Nestorian missionaries began to arrive in the East¹⁶¹ bearing news of a virgin-born saviour who had come to save them from their troubles. Centuries before, the susceptibility of the Zoroastrians to (Christian) conversion had caused Karter to obliterate the Church of Persia and make apostasy a capital offense. The utter hopelessness of their plight, and the killing off of the Zoroastrian magus priests once again set the stage for large scale acceptance of the Christian message. But there were other preachers out there in the deserts too. The Manichaeans, a cult espousing an admixture of Magian, Christian, gnostic and Buddhist doctrines, spread a very different version of the faith, which claimed, as did the Magians, that Yaweh the God of Israel, was the Demi-urge, the wrathful Lord of Chaos. The job of the Nestorians, who followed a more judaised form of Apostolic Christianity, largely entailed visiting as many families as they could, all the while trying to guard their parishes from the Manichaean Elect. In time they found their missions so successful they had managed to convert their way as far as Mongolia and Cambaluc, now called Beijing.

The Saviour foretold - Jewish Messiah or Magian Sraosha?

THERE ARE MANY
SIMILARITIES BETWEEN
JESUS CHRIST AND
SRAOSHA (THE PAGAN
SAVIOUR)

BOTH WERE LORD OF THE
RESURRECTION

MAGIANS MIGHT HAVE
DISPENSED WITH HOLY
FIRES UPON SRAOSHA'S
ARRIVAL

Above all, Magianism (whether Zoroastrianism or Zurvanism) was a religion of prophets, and ultimately one which would be drastically altered by the eventual arrival of their supreme saviour. With him would come *'the renovation'* of their faith and the universe, and *Hush*, the new *Haoma* (a special ritual drink), which was also called *'the Immortaliser'*. The Eucharistic sacrifice, universal to all the early Christian Churches, could well have been regarded by these pagans as this sacred meal of immortality. Considering the uncanny similarities between Jesus Christ and the expected Magian Messiah *Sraosha* (which will be addressed in a few moments), there is evidence that Christianity so severely depleted the numbers of Zoroastrians in Asia-Minor during those first centuries after the birth of Christ, that Zoroastrianism, one of the largest world religions at the time, disappeared in regions of Sassania for several hundred years. Their ubiquitous and iconic fire shrines are thought to have virtually vanished in those areas, signified, amongst other things, by the absence of altar imagery from the back of all Iranian royal coinage minted in those localities during that time (which was the normal custom).¹⁶²

In that early phase of conversion Magian converts seem to have dispensed with holy fires after adopting Christianity, a normally unthinkable proposition. The rationale may be contained in their own scriptures, which state *'be ever without fail in flame; be all ashine within this house; be on thy growth within this house; for a long time be thou thus to the furtherance of the heroic renovation, to the completion of all progress, yea, even till the good heroic millennial time when the renovation (of the divine Saviour Sraosha) shall have become complete'*.¹⁶³

No doubt the ultra-susceptibility of Zoroastrians to conversion to Christianity aided the astonishing success of the Nestorian missions. Looking back to an earlier time, the Apostle St Thomas converted his way across Persia, reaching Madras in India, where his tomb still stands to this day. Sixteenth century Jesuits got a real shock when they saw it. The Near-East converted long before Europe.

We will now examine why so many Magians hurriedly rushed for baptism into the religion of Jesus Christ, and in particular the supposed heresies that were likely to arise from this union. In essence they became Christians on the strength of ancient Magian prophecies about a coming virgin-born redeemer, who would renew the face of the earth, destroy the devil, and bring murdered creation into everlasting life ... cattle, horses, people, dogs and the kingdom of plants.

In earliest times Christians converged on small private dwellings (*doma ecclesia*) to hold their Church services.¹⁶⁴ Later, once Christianity gained the endorsement and support of the Roman State, larger congregational buildings could finally materialise. In the 4th Century AD, Emperor Constantine divested large sums of money for the establishment of enormous basilicas across the Christian world. At long last the faith of Jesus Christ had fitting temples.¹⁶⁴

During renovations at Rome's St Peter's Basilica this century, an amazing piece of artwork was discovered depicting a shining solar divinity driving along in a chariot, encaptioned *Helios Christus*¹⁶⁵ (ie, the Sun Christ, or the anointed Sun of God). Clearly the mere fact that it had been built over meant it may have been a very early mosaic portrait of Jesus Christ, a view in later times abandoned in favour of the simple cross. Alternatively, it was a piece of Mithraic artwork which existed in the pagan cemetery upon which the Basilica was built by Constantine in 322 AD.¹⁶⁶ The latter view seems all the more probable, since the mosaic is believed to date to the 200's AD, existing there up to a hundred years before the Basilica was erected. Nevertheless, as Christianity attempted to establish itself in Mithraic Rome, there may well have been an unsanctioned perception in some circles that Christ was in some ways similar to *Sol Invictus*, the saviour God, the Invincible Sun first imported into Rome by the Mithraic Magi.

In ancient Russia *Helios Christus* may have been called *Khors*¹⁶⁷ (whose statue was raised in Old Kiev before the conversion), who was also known as *Khres* (perhaps a corruption of the Greek *Christos*, meaning Christ, but most likely *Keresā*, the *Avestan* word for Jesus). *Khors/Khres* was traditionally represented as a Christ-like figure sometimes racing a golden solar chariot, sometimes carrying a lamb. This is fairly good evidence for the existence of a cult centred on Jesus, the Sun of God, *Sraosha*. Such a Jesus is to be seen on the 10th Century German Quedlinberg reliquary, which came to the attention of Professor Flint.¹⁶⁸ In many ways it depicts the traditional Slavic imagery of *Khors (Khres)* the solar chariot-racer encircled by the twelve zodiacs, however it had by that stage become Christ the Good Sun surrounded by the twelve apostles of the good zodiac. The existence of such a motif in Germany, Scythia, and Rome is attributable to Aryan messianic lore, which originated among the Iranian Magi, and filtered across the Caucasus with Magian Christian exiles. In heathen times, it is feasible that a certain proportion of the Ostrogothic nation was nominally Christian. But the extent of their Christianisation, or their orthodoxy with respect to Judaeo-Catholicism hang under a very grey cloud indeed. In Byzantium, Bishop Gregory expressed the gravest possible concerns about re-admitting to the Church whatever Roman prisoners had been emancipated from Gothic captivity.¹⁶⁹ Doubtless to say he must have been rather disturbed about the matter, so much so that he felt that the issue needed to be addressed adroitly and resolutely.

What we do know is that a fair number of Goths considered themselves Christians. However the ritual slaughter of livestock to idols appears to have been a feature of this cult, based on the bishop's commentary in the surviving letter from the mid-3rd Century AD.¹⁷⁰ Something was unorthodox about their faith.

Wolfram believes the bishop's worrisome remarks were not so much directed towards the Goths, who, on the strength of surviving accounts, are not guessed to have been preoccupied with idolatry at that time.¹⁷⁰ He professes that Gregory's nervousness was due to the existence of Christian apostates and heretics among the masses of Roman captives held by the Goths (followers of Mithraism), rather than the Goths themselves. Further, these other Christians hoped to be rejoined with the Church militant, something the bishop was not keen to countenance lightly. They might have been a dangerous source of 'spiritual contamination' likely to 'poison' whatever parish they joined.

Professor Wolfram's analysis of the data is respectable, but a further explanation is possible. The heretics were Romans and Goths, and the 'dangerous heresy' found there was that of the Christian Magi, the ministers of the obscure Persian Church. Historically the Goths had kindred tribesmen throughout Cappadocia and Cilicia (in Turkey), known seedbeds of dualist Christian heresy owing to their close proximity to the Iranian nations. It necessarily follows that some of the Goths observed ancestral Christian heresies of some antiquity.¹⁷¹

Earlier I discussed at length the presence of Magi and Christian Magi throughout Russia and Eastern Europe, and in particular their connections with the Goths, Scandinavians and Bulgars. Just one example is the formerly-great town of Summerkent, once situated on a reed island in the southern reaches of the Volga, not far from the lands of the Khazars and Silver Bulgars.¹⁷² Its folk were ancestrally connected with the Ostrogothic tribesmen who had penetrated into Europe (Spain, Italy and France) during Roman times, and who continued to live at

Fig 11.1. Apollo
 Fig 11.2. Apollo
 Fig 11.3. Jesus, the Good Shepherd
 Fig 11.4. Apollo
 Fig 11.5. Helios Christos

Summerkent until the island fell to the Mongols after an eight-year siege. The inhabitants were supposedly Christians, and are guessed to have had blood kin among both the Crimean Goths and the Old Saxons (living in Germany and Poland). The Catholic author of *the Tartar Relation* saw fit to clear up any misconceptions about their ethnicity. He specifically referred to these so-called Goths as Saksins. If true, this would place a sizeable colony of Saxons at the lower reaches of the Volga. Following the Islamicisation of Iran and the subsequent Magian diaspora, one should fully expect a Magian or Magian Christian presence in this area. Feeding northward from the Caspian, the Volga may have been a prized escape route for the refugees. In the sixth century the Volga was termed Ra or Rai river.¹⁷³ I believe it was so named because it was a river route to Rai, an esteemed Persian city on the Caspian. Far from being simply a prosperous city, Rai was the supposed birthplace of the Magian prophet Zoroaster.

An extant 700 AD German rendition of Christ is clearly heathen in form.¹⁷⁴ The artisan has him looking every bit like a vanquishing Aryan warrior, menacingly brandishing his axe, sword and spear against his father's enemies.

Fig 12. Jesus the mighty warrior, grinding a serpent under foot. He comes complete with typical Saxon military equipment, and an erect phallus!

This is probably very similar to the Magian view of *Sraosha*, the tall and quick, fiend-smiting Saviour, the great conqueror, whose axe cleaves asunder the skulls of the Daevas (a class of divinities known to the Hindus and certain European pagans), when he engages them in battle. *Sraosha's* battle-lust against the forces of evil would come to the fore in the apocalyptic conflict which would ensnare the great serpent and the demon Ahriman forever.

An unlikely comparison it may be, that is until one further examines the likely christological framework behind the Vatican mosaic, or German and Russian mythological imagery, by drawing upon the many parallels that existed between Jesus Christ and *Sraosha* (who was iconographically portrayed as a rooster in olden Iran), the coming redeemer expected by the white Magi. The Zoroastrian *Spend* (nask) contained information on the portended arrivals of the saviours, including;

'The coming and arrival of Saoshans, son of Zarathust, at the end of the third millennium' and *'the renovation of the universe and the future existence ... arise in his time'*.¹⁷⁵

For Zoroastrians, this world Messiah was the incarnate word of God, a lordly, mighty-speared, fiend-smiting God; tall and powerful ...a *'protector and lover of the poor'*, who, *'never sleeping'* watched over the world and turned back the fiends, forcing them to run back into the gloom, and abandon their assaults on the goodness of Ahura Mazda's creations.¹⁷⁶ Such a Jesus is perceptible in the Russian word *chertogon*, which means 'the baby Jesus', but literally translates as 'the devil chaser'.¹⁷⁷ Ahura Mazda

said that through *Sraosha*,

'I shall have you prepared again perfect and immortal, and in the end give you back to the world, and you will be wholly immortal, undecaying, and undisturbed; or that it be always necessary to provide you protection from the destroyer'.¹⁷⁸

'The first (Sraosha), the next, the middle, and the highest; with the first sacrifice, with the next, with the middle, and with the highest. We sacrifice unto all the moments of the holy and strong Sraosha, who is the incarnate Word'.¹⁷⁸

Zoroastrians believed that *Sraosha*, the Deliverer, would grant righteousness to those who believed in him, once he came. Through him, his followers became forever righteous in God's eyes. Similarly, denying *Sraosha* was an abomination worthy of eternal condemnation. Compare this with the Church's teachings concerning faith in Christ, without which one is doomed to eternal death.

Both Christian and Zoroastrian scripture state that their Saviour (who in both cases was seen as the Lord of the Resurrection), would make a glorious second coming, a spiritual coming, *not in this world*.¹⁷⁹ Accordingly, the early Church was *never* an advocate of millenarianism, a belief that Christ's kingdom would be re-established on this earth of ours.¹⁸⁰

SRAOSHA, THE WORLD
MESSIAH, LOVER OF THE
POOR

AGAINST EVIL SRAOSHA
WAS A MIGHTY WARRIOR

People throughout every generation have seen in the *Book of Revelations* a sure sign of the impending end of the world, the 'eschatological reality' professed by the apostles since the very beginning, but which was not to take place in this world, but the hereafter. This was the official view of the early Church. One of the earliest and most shunned of heresies was that of Cerinthus, which stipulated the millennial reign of Christ was to be on earth, a purely physical rather than metaphysical resurrection. St John the Apostle (who stood by Mary at the foot of the cross as Christ hung there) was recorded as having spontaneously flung himself out into the street after discovering that Cerinthus was in the same bathhouse as he, greatly fearful that the roof might collapse on him if he stayed there any length of time!¹⁸¹ Such were the first beginnings of millenarianism, which the Catholic and Orthodox Churches oppose to this very day. Sure there were millenarian problems associated with the *Book of Revelation*, but as you will see later, it proved to be one of the most vital weapons in the "Catholic" spiritual arsenal, preventing the masses of early converts from sliding into a demi-pagan form of the faith, largely similar to Mithraism. Certainly it prevented the ideological extermination of Apostolic Christianity, and its Jewish flavour, during the Middle Ages.

In the good religion of Ahura Mazda, *Sraosha's* ultimate return coincided with the final battle against the Evil One and his infernal hosts, destined to take place on a plain outside the walls of heaven.

'On the conflict of the creations of the world with the antagonism of the evil spirit (Angra Mainyu) it is said in revelation, that the evil spirit, even as he rushed in and looked upon the pure bravery of the angels and his own violence, wished to rush back. ... And his (Ahura Mazda's) guardian spirits (fravashis) of warriors and the righteous, on war horses and spear in hand, were around the sky; such-like as the hair on the head is the similitude of those who hold the watch of the rampart. And no passage was found by the evil spirit, who rushed back; and he beheld the annihilation of the demons and his own impotence, as Ahura Mazda did his own final triumph, producing the renovation of the universe for ever and everlasting'.¹⁸²

SRAOSHA WAS TO LEAD
A GREAT ARMY OF
SAINTS IN AN
APOCALYPTIC
HEAVENLY BATTLE
AGAINST THE DEVIL

At that final reckoning God's sunny charioteer *Sraosha* led the hosts, dignified and impressive, valiant and unperturbed by the evil before him.

SRAOSHA RODE IN A
CHARIOT

'We worship Sraosha the blessed, whom four racers draw in harness, white and shining, beautiful and powerful, quick to learn, and fleet, obeying before speech, heeding orders from the mind, with their hoofs of horn gold-covered, fleetier than our horses, swifter than the winds, more rapid than the rain; yea, fleetier than the clouds, or well-winged birds, or the well-shot arrow as it flies, which overtake these swift ones all, as they fly after them pursuing, but which are never overtaken when they flee, which plunge away from both the weapons and draw Sraosha with them, the good Sraosha and the blessed; which from both the weapons bear the good Obedience the blessed (Sraosha), plunging forward in their zeal, when he takes his course from India on the East, and when he lights down in the West'.¹⁸³

BOTH CHRIST AND
SRAOSHA WERE HIGHLY
SKILLED IN BATTLE
AGAINST THE DEMONS

In the *Primary Chronicle* Vladimir raised a metallic effigy of a charioteer, drawn by four horses, outside his newly-constructed church in Kiev. It was specially shipped into the Ukraine from the Crimean city of Khorsun (the City of Khors) and so may well have portrayed Khors (Old Russia's Jesus-like solar charioteer).

Note the obvious similarities between the chariot-racing *Helios Christus*, from the mosaic under the Vatican Basilica, *Khors* and the saviour *Sraosha*, the mighty solar battle-lord, who transits the celestial vault in his golden sun chariot.

'We worship Sraosha, Obedience the blessed and the stately, him who smites with the blow of victory, who furthers the settlements, the holy ritual chief (of Haoma), as the energetic, and the swift, the strong, the daring (and redoubted) hero, who comes back from all his battles a conqueror, who amid the Bountiful Immortals (fravashi saints) sits as companion at their meeting'.¹⁸⁴

THE REDEEMER LOVED
THE POOR

*'The Holy Sraosha, the best protector of the poor, is fiend-smiting; he is the best smiter of the Drug (devils).'*¹⁸⁵

*'Sraosha the mighty, both armed with shielding armour, and a warrior strong of hand, skull-cleaver of the Daevas, conquering the endowments of the conqueror, the holy conqueror of the conqueror, and his victorious powers, and the Ascendency which it bestows, and we worship the Ascendency of Sraosha.'*¹⁸⁶

JESUS, THE YOUNG
WARRIOR

At Clonfert in Ireland there was a medieval church dedicated to 'The Lord Mighty in Battle',¹⁸⁷ complete with a pile of carved (probably decapitated) heads, a motif which can also be found at Cashel and the Church of Dysert O'Dea.¹⁸⁷ These were clearly the work of pagan craftsmen, but what was the intended meaning of the Church's name and ornamentation? Were these the heads of Daevas butchered by *Sraosha*, the 'skull-cleaver of the Daevas', a different kind of Jesus, a non-Catholic Jesus?

Similar christological symbology was present on the English mainland, possibly due to Saxon Germanic influences, which supplanted Roman culture. The following small excerpt was derived from an 8th Century AD Old English runic inscription from Northumbria, known as *The Dream of Rood*.¹⁸⁸ In it one finds a Jesus demonstrably at variance with what we are normally accustomed to, he a high king, he a great fighter, he of lustrous form;

JESUS PORTRAYED AS AN
ARYAN GERMANIC
WARRIOR

*'Then the young Warrior, God, the All-Wielder... mounted the Cross to redeem mankind ... I held the High King, the Lord of heaven ... with black nails driven ... Black darkness covered with clouds God's body, That radiant splendour.'*¹⁸⁸

JESUS IS ACCOMPANIED
BY BANDS OF MOUNTED
KNIGHTS

How similar this must have been to the Christ Jesus of the Magian Christians. Under this Germanic-Christian tradition we also see Christ's personal retinue, and they are not shepherds, but, as in Magian lore, wise, holy, fresh-faced young warriors who get about on war-horses.¹⁸⁹

In the 9th Century AD Germanic Christian text, the *Heliand* (a term arising from the Greek *helios*, 'the sun'), the Latin word *dominus* (meaning 'a Lord' or 'the Lord') was abandoned in the Bible translation process in favour of *truhtin*, the Old High German word for 'a war lord'.¹⁹⁰ The same thing transpired in England, though there the word was *dryhten*.¹⁹⁰ This might simply have been an attempt to make Jesus better understood by potential converts of that day, or indeed retain them, in a society still exposed to pagan influences. But if this was the intention, it must have been, in Rome's eyes, very misguided. Through this change in terminology, Jesus became much more than 'the Lord', he was a war lord, an Aryan warlord

THE GERMANS AND
ANGLO-SAXONS SPOKE OF
JESUS AS TRUHTIN OR
DRYHTEN, A WARLORD

But the new words had even graver implications for those of the apostolic mold, for *dryhten* and *truhtin* portrayed monumentally pagan concepts. A related term is found in Norse epic, in the ancient *Ynglinga Saga*, first recorded from oral traditions several centuries after the adoption of *truhtin* and *dryhten* for Germanic and English Bible translations. In it, the mortal-God Odin, and his fellow wizards, the pagan temple priests of the Aesir, were termed '*diar*, or *drotner*', and were worshiped by their followers. Strictly speaking *drotner* is most closely related to *drottin* (singular) and *drottnar* (plural), meaning 'a king', or 'a chief'.¹⁹¹ And the word *diar*, which appears in conjunction with *drotner* in *Ynglinga Saga*, has an etymology which is probably traceable to the older Indo-European word *daeva*, meaning 'a God'.

JESUS - SUN-KING

SUNDAY, THE DAY OF
THE LORD

For Scandinavians 'Sunday', the Christian Sabbath, was termed *drottinsdagr*.¹⁹¹ In this word *dagr* ('day'), was added onto the word for 'a king', or 'a Lord'. Therefore Sunday was 'the day of the Lord', as opposed to Saturday, the old Jewish Sabbath. But by some amazing coincidence, if we take *drottinsdagr*, and transpose the original Iranian meaning of *daga* ('fiery', and indirectly meaning 'the sun'), with that of the Norse word *dagr* ('day'), which arose from the Iranian, we get a literal translation of 'Sun-king'. If the more ancient Iranian connotations for *dagr* were still apparent in pagan and medieval Scandinavia, as they were in Slavia, Sunday could well have been construed as the day of the Sun-king.

SUNDAY, THE DAY OF
THE SUN-KING

The implications of this are staggering. The very use of these words suggests that in their day, Jesus was a sort of Sun-king, referred to by terms normally applicable to the Anglo-Saxon and Germanic warrior aristocracy, pagan

Lords, sacral kings with magical powers, of the type described in *Ynglinga Saga*. Like Jesus, and *Sraosha*, the earthly Teutonic kings had their own personal retinue of warriors, *drott* ('the king's retinue'). Clearly the Germanic and Anglo-Saxon churches were at variance with Roman Catholic practice, promoting textual changes whose true significance was camouflaged by an innocent change of words. Though we can be in no way certain that their choice of words was accidental or foolhardy. The Germanic nations were beginning to slip from Rome's grasp, and wherever they went they taught their tradition to others. As an example, the Irish *Book of Kells* was originally to be executed in Roman uncials, however Germanic runic characters were chosen instead, quite deliberately.

A short segment from the definitive Saxon literary masterpiece, the *Heliand*, uncompromisingly identifies their main doctrine, one not favoured by reigning Church authorities in Rome. It includes the dying words of a well-born Saxon, descended from the very magus kings who once followed the star. The gist of the authentic 9th Century saga is clear - the Journey of the Magi was but the culmination of an ancient vision for the arrival of God's son.¹⁹² A mighty wise man of this ancient pre-Christian tradition had, it would seem, accurately foretold the coming of Jesus Christ.¹⁹² Like Murphy, I believe this to be a concealed reference to Zoroaster's stanzas on *Sraosha*. In fact a certain surviving alternative Gospel expressly states that the Magi arrived in Jerusalem *in connection with Zoroaster's prophecies* about the awaited Redeemer.¹⁹³

One notes with interest the *Heliand's* preservation of songs concerning the trek of the Magi, which assume a pride of place almost exceeding that of the nativity scene. The motive for this excessive emphasis on the journey is philosophical and political. They were not belittling the sublime moment of the Redeemer's birth, simply stressing that their path to Christ was an extension of the Old Ways, at a time when the old teachings were under siege from official quarters.

The infancy gospels were an uncomfortable source of Magian Christian proselytising. Small wonder they suffered extensive expurgation, so much so that an entire class of Church literature was under threat of extinction, in its original form.¹⁹⁴ They cast important light on the non-Jewish religious and philosophical origins of Christianity in many parts. With the texts gone it was hoped the theological dispute would disappear, the problem 'fixed'.

Consider the pagan Russian, Scandinavian and Anglo-Saxon crucifix brooches, and shield ornament¹⁹⁵ (fig 13.8, 13.7, 13.4), which bear a crude resemblance to effigies found in Magian Luristan, Bronze Age Iran (fig 13.5, 13.6). The Luristan objects (one of which was a chariot ornament) are believed to depict *Sraosha, the pagan Messiah*.¹⁹⁶ Coupled with a wealth of other information displayed herein, the similarity between the Magian objects and the Anglo-Saxon, Scandinavian and Russian emblems seems indicative of *Sraosha*-worship in all four places.

THEIR VERSION OF
CHRISTIANITY FEATURED
HELIOLATROUS CUSTOMS

Their faith probably exhibited aspects Christian heliolatry.¹⁹⁷ At the 337 AD episcopal Council of Laodicia, Canon 29 was passed to reinforce Sunday as the Christian Sabbath, and not the Saturday, as in the case of Judaism. It states '*Christians shall not Judaize and be idle on Saturday ... but the Lord's day they shall especially honor, and as being Christians, shall, if possible, do no work on that day. If however they are found Judaizing (the Sabbath) they shall be excommunicated from Christ*'. (Hefele, '*A History of the Councils of the Church*'). To some extent eastern traditions helped carve this law. As I explained in Part I, the Chaldees assigned one of the planetary bodies to each day of the week, as its guardian, and object of veneration. This being the case Saturn (the 'Great Maelific', causer of grief, from which we get the term Satan) was allocated Saturday (ie; Saturnsday), whereas the Sunday was governed by Helios (ie; Sunday). For this reason a Saturday Sabbath was regarded as a black Sabbath in many quarters; effectively an act of demonolatry and apostasy.

THE NEW SABBATH WAS
NOW SUNDAY RATHER
THAN SATURDAY

THE SUN CHRIST

In a number of European locations, Christians equated Jesus with the sun. For example even late last century, in England, Scotland and Ireland, there was a custom whereby peasants went out into the fields the morning of Easter Sunday (the day on which Christ ascended from his three days of ministering to the souls in the underworld), to see the sun dance.¹⁹⁸ This tradition concerns the expected miracle of seeing the sun dance for joy in the sky. In pagan times such miracles might have been accompanied by the circular perambulatory sun-dancing of the peasantry. Even more greatly blessed was the person who witnessed the image of the lamb carrying a flag in the halo of the sun.¹⁹⁸ This miraculous vision signified that Christ, the sacrificial lamb of God (who came to take away the sins of the world) had risen from death. This view of Christ embodied in the radiant sun most surely belonged to the old faith. One Old Icelandic term may indicate that Jesus was perceived as a significant component within a dualistic framework, for Jesus is described as the White Christ, the *Hvita-Krister*.¹⁹⁹

THE WHITE CHRIST

In old Saxon lore, Jesus' incarnation was portrayed as an arrival in the "middle realm" (Middilgard), that is on earth, betwixt heaven and hell.²⁰⁰ It's a point of similarity with the pagan kings, many of whom touched down in the material world from their residence in heaven.

FRANKS PRAYED FACING
THE EAST

A 12th Century Muslim's written recollection of Franks (French and Germans) living in Jerusalem is suggestive of medieval Christian sun-worship in Europe, with Iranian traditions. These traditions might have entered Europe with the likes of the Scythians and Sarmatians, or other Iranian tribes like the Massagetae, Germanians and Daans. Considering the substantial evidence for Magianism in pre-Christian Europe, the Franks plausibly included descendants of an especially pious Magian clan called the *Fryanaks*. You see, as Usamah began his time of prayer in a small mosque, facing toward Mecca, he was set upon by a Frank who had only newly arrived in the Holy Land.²⁰¹ This Frank, trembling and disturbed by seeing the manner of Muslim prayer, physically moved Usamah's face eastward, not once, but several times, instructing him that this was the only proper direction to face during prayer.²⁰¹ One of the knights Templar accompanying the Frank asked the Muslim to forgive him, stating,

"This is a stranger who has only recently arrived from the land of the Franks and he has never before seen anyone praying except eastward";²⁰¹ that is; in the direction of sunrise.

THEIR GRAVES WERE
ALIGNED TOWARD THE
EAST, FACING INTO THE
RISING SUN

Medieval graves across a number of nations were oriented towards the east, with the corpse usually facing the direction of sunrise. These date to both the pagan and Christian era, and will be explained in some detail a little later.

SCOFFERS LAMBASTED
THEIR BELIEF THAT THE
SAVIOUR WOULD RETURN
IN SHINING GLORY

Iranian scripture talks of the Mazda-worshippers being mocked concerning the supposed arrival of their *Sraosha*; unbelievers taunted them, saying that he would never come to help them. Ahura Mazda said, '*I have produced the effecter of the renovation, the causer of righteousness, Saoshans, of whom mankind say that he does not come; and yet he will come, for the righteous, with that glory which becomes all-brilliance*'.²⁰²

Christians suffered similar ridicule over the second coming of Christ: '*First of all, you must understand that in the last days some people will appear whose lives are controlled by their own lusts. They will make fun of you and will say, 'He promised to come, didn't he? Where is he?'*'²⁰³

Like *Sraosha*, Jesus would also be hailed as the vanquishing conqueror of heaven, riding at the head of a mounted column of angels and saints, all radiant and invincible, the King of all Kings. Both *Sraosha* and Jesus Christ

would return not as ordinary men, but in their fullest conceivable glory, appearing in the heavens like lightning, swiftly racing from East to West. This would bring about the most triumphant moment in the cosmos, the monumental and irrevocable destruction of the Evil Principle, which from its inception had destroyed the goodness of the Creator's works. It would be a spiritual war of epic proportions. In the Christian *Revelations*, we hear:

'And I saw heaven opened, and behold a white horse: and he that sat upon him was called Faithful and True, and in righteousness he doth judge and make war. His eyes were as a flame of fire and on his head were many crowns; and he had a name written, that no man knew, but he himself. And he was clothed with a vesture dipped in blood: and his name is called The Word of God.

And the armies which were in heaven followed him upon white horses, clothed in fine linen, white and clean. And out of his mouth goeth a sharp sword, that with it he should smite the nations: and he shall rule them with a rod of iron: and he treadeth the winepress of the fierceness and wrath of Almighty God. And he hath on his vesture and on his thigh a name written, King of Kings, and Lord of Lords.

And I saw an angel standing in the sun; and he cried with a loud voice, saying to all the fowls that fly in the midst of heaven, Come and gather yourselves together unto the supper of the great God; That they may eat the flesh of kings and the flesh of captains, and the flesh of mighty men, and the flesh of horses, and of them that sit on them, and the flesh of all men, both free and bond, both small and great.

And I saw the beast, and the (antichristian?) kings of the earth, and their armies, gathered together to make war against him that sat on the horse, and against his army. And the beast was taken, and with him the false prophet that wrought miracles before him, with which he deceived them that had received the mark of the beast, and them that worshiped his image.

These both were cast alive into a lake of fire burning with brimstone. The remnant were slain with the sword of him that sat upon the horse, which sword proceeded out of his mouth: and all the fowls were filled with their flesh.'

'And I saw an angel come down from heaven, having the key of the bottomless pit and a great chain in his hand. And he laid hold on the dragon that old serpent which is the Devil and Satan, and bound him a thousand years, and cast him into the bottomless pit, and shut him up, and set a seal upon him, that he should deceive the nations no more, till the thousand years should be fulfilled: and after that he must be loosed a little season'.²⁰⁴

ACCORDING TO THE
BOOK OF REVELATION ,
WHICH CONTAINS
JUDAISING ELEMENTS,
THE KINGS AND THE
GREAT BEAST WERE
SUPPOSED TO HAVE
BEEN ON THE SAME SIDE

Medieval European Christians jubilantly sang carols about the Three Wise Kings at Christmas and the Epiphany. The following Russian festive folk song belongs very much to this tradition, illustrating the role of the magus kings in bringing the worship of Jesus Christ to prominence among the heathen, at least according to their tradition anyway:

'The Virgin Mary gave birth to Jesus Christ, and placed him in a manger. A star shone brightly, showing three kings the way: Three kings arrived, they brought gifts to God, they fell on their knees, they exalted Jesus'. An alternative translation for the last stanza reads 'they made Jesus great'.²⁰⁵

THE MAGI HELPED
CHRIST BECOME EVEN
MORE POPULAR

Sraosha was also a demon-fighter and witch-hunter, who wrestled and punished dark heterodox spirits and their earthly minions. For this reason Magian Christians are likely to have held their own trials against dark, maelific (not white) witches and heretics. Of *Sraosha* it was said *'And one is the producer of bodies (the bodies that the resurrected shall have), the renovator Saoshans, who is the putter down, with complete subjugation from the world, of the glorification of fiends and demons, and of the contention with angels in apostasy and heterodoxy of various kinds and unatoned for'.²⁰⁶*

SRAOSHA WAS A
DEMON-FIGHTER AND
WITCH-HUNTER OF THE
FIRST MAGNITUDE

According to the Church, Christ (like *Sraosha*) had always existed, living in heaven with the Father. The concept was utterly alien to Judaism. His coming into the world would only be an incarnation of the divine presence. (NT) *Mark 12: 35-37* served to illustrate that Christ existed long before King David. Arius' view that Christ was a created being caused an uproar in the Christian world, and was almost universally condemned. Christ had existed since the beginning, and ever shall be. His coming into the world was not the moment of his creation, but much rather his advent before the eyes of humanity.

The transfiguration of Christ with light (as related in (NT) *Matthew 17* and other readings) resembles, in some respects, the expected transfiguration of *Sayoshant*, the World Messiah.

JESUS AND SRAOSHA
WERE BOTH
TRANSFIGURED

*'And (Jesus) was transfigured before them: and his face did shine as the sun, and his raiment was white as the light. And behold, there appeared unto them Moses and Elias talking with him. While he yet spake, behold, a bright cloud overshadowed them: and behold a voice out of the cloud, which said, This is my beloved Son, in whom I am well pleased.'*²⁰⁷

On the Mount of Olives, awaiting the time of his betrayal, and crucifixion, Christ prayed in anguish, causing sweat beads to form on his brow. When help was brought to him by an angel from heaven, these sweat beads fell to the earth as bloody droplets.²⁰⁸ This can be compared with *Dinkard IX:XXXII:9-10* in which we find that after thirty centuries, the time of Gayomard's (a name for the first man to live in heaven with God, his son) affliction had arrived, in the form of a demonic host which caused sweat to form on him. Owing to the prayers of Ahura Mazda in heaven these demons were cast down from him into the gloom.

In the *New Testament* sequel to the *Book of Genesis* Jesus' relationship to the divine being is expounded. The narrative features clear allusions to the unhealable dualistic antagonism between the two polar opposites. *"In the beginning was the Word, and the Word was with God, and the Word was God. The same was in the beginning with God. All things were made by him; and without him was not any thing made that was made. In him was life; and the life was the light of men. And the light shineth in darkness; and the darkness comprehended it not"*. Nowhere in the Jewish creation sequence of *Genesis* does it mention Yaweh having a first born son, and probably for this reason it was a teaching few Jews could stomach. It was an assault on their understanding of monotheism. In fact it was this very suggestion that led to the High priest pronouncing the death sentence against Christ so alien was this teaching to Jewry.

SOME PARTS OF THE
CHRISTIAN GOSPEL WERE
UTTERLY ALIEN TO
JUDAISM

"Again the high priest asked him, and said unto him, Art thou the Christ, the Son of the Blessed? And Jesus said, I am: and ye shall see the Son of man sitting on the right hand of power, and coming in the clouds of heaven. Then the high priest rent his clothes, and saith. What need we any further witnesses? Ye have heard the blasphemy; what think ye? And they all condemned him to be guilty of death. And some began to spit on him, and to cover his face".²⁰⁹

RABBIS REFUSED TO
ACCEPT THAT THE
CREATOR HAD A SON

Pre-eminent in the hearts of Zoroastrians and Christians alike was a glorious Virgin.²¹⁰ In both religions she was to be blessed like no other woman in the history of the world, having gained exceedingly powerful graces for carrying in her womb the instrument by which God would snatch back his creations from the clutches of the fiend, and the angel of death. This is her story, as told by the Magi.

MAGIANS AND
CHRISTIANS REVERED A
HOLY VIRGIN, MOTHER OF
THE MESSIAH

"That maiden whose title is All-overpower is thus all-overpowering, because through giving birth she brings forth him who overpowers all, both the affliction owing to demons, and also that owing to mankind. Then she sits in the water, when she is 15 years old, and it introduces into the girl him "whose name is the Triumphant Benefiter, and his title is the Body-maker; such a benefiter as benefits the whole embodied existence, and such a body-maker, alike possessing and possessing life, as petitions about the disturbance of the embodied existences and mankind. Not before that has she associated with men; nor yet afterwards, when she becomes pregnant, has she done so before the time when she gives birth". When that man (Sraosha, the saviour) becomes thirty years old (note the age at which this Messiah's transfiguration occurs), the sun stands still in the zenith of the sky for the duration of thirty days and nights, and it arrives again at that place where it was appointed by allotment".²¹¹

THE MAGI BELIEVED IN
AN IMMACULATE
CONCEPTION

THE VIRGIN HAD
MIRACULOUS POWERS

*Concerning the marvelousness of Sayoshant as to splendour and glory of person, it says that when the coming of the last rotation of those rotations of the seasons of Aushedar-mah occurs the man Sayoshant is born whose food is spiritual and body sunny (that is his body is as radiant as the sun).*²¹²

*“Sayoshant is born in Khvanims (the Central Patriarchate of the Magi), who makes the evil spirit impotent, and causes the resurrection and future existence”.*²¹³

*“The first (Sraosha), the next, the middle, and the highest; with the first sacrifice, with the next, with the middle, and with the highest. We sacrifice unto all the moments of the holy and strong Sraosha, who is the incarnate Word”.*²¹⁴

In Christian terms St Mary was the most revered of Christian saints, alternatively known as the *Theotokos* (God-bearer) or amongst the Nestorians, *Anthropokos* (Man-bearer). To the Russians she was their beloved *Bogoroditsa*. As a virgin her sealed womb was impregnated by the Holy Spirit, allowing God to come into the world in the form of the Son; God made into flesh. St Mary therefore was seen as having an indispensable place of honor in the scheme of salvation, for from her body proceeded the Lord of Lords, King of Kings, the Resurrector. On account of this St Mary was never worshiped, but instead greatly venerated in every Church from the East of Christendom to the West. The story of the ‘Dormition’ (the death of Mary and the in-gathering of apostles in Asia Minor), has been handed down since the very earliest years of the Church. Since Christ was bound to honor his own mother, just like at Cana, Mary became a most powerful voice before the divine throne.

Consider also the following Kievan Russian sermon on Our Lady. Eastern sun symbolism is clearly apparent;

*‘Who will proclaim the power of our Lady? ... Through her our salvation flourished, through her we were raised from our first fall. She broke the curse of our first mother, she poured forth blessing for us. From her did the Sun of Righteousness shine forth for us, dispersing the darkness of ignorance and enlightening us with the light of the knowledge of God. From her and for her sake was the true Light revealed to us, for she is the mother of life, she is the source of immortality’.*²¹⁰

Detractors of Christianity thought it vital to condemn the virgin birth, for it was a pivotal sign of the Aryan messiahship. Jews saw Mary as a hussey with an illegitimate child. These contrary stories made her an unexpected stumbling block for potential Jewish and Gentile converts, a topic freely exploited by antichristian rabbis and unbelieving Magian conservatives alike. Mary is spoken of in the *Toldoth Jeschu* only in the most defamatory terms (eg: ‘whore’). This is what Jews are taught on this topic in the Talmudic Tract *Kallah*, 1b:

*“Once when the Elders were seated at the Gate, two young men passed by, one of whom had his covered, the other with his head bare. Rabbi Eliezer remarked that the one in his bare head was illegitimate, a mamzer. Rabbi Jehoschua said that he was conceived during menstruation, ben niddah. Rabbi Akibah, however, said that he was both. Whereupon the others asked Rabbi Akibah why he dared to contradict his colleagues. He answered that he could prove what he said. He went therefore to the boy’s mother (Mary) whom he saw sitting in the market place selling vegetables and said to her: “My daughter, if you will answer truthfully what I am going to ask you, I promise that you will be saved in the next life.” She demanded that he would swear to keep his promise, and Rabbi Akibah did so - but with his lips only, for in his heart he invalidated his oath. Then he said: “Tell me, what kind of son is this of yours”? To which she replied: “The day I was married I was having menstruation, and because of this my husband left me. But an evil spirit came and slept with me and from this intercourse my son was born to me.” Thus it was proved that this young man was not only illegitimate but also conceived during the menstruation of his mother. And when his questioners heard this they declared: “Great indeed was Rabbi Akibah when he corrected his Elders”! And they exclaimed: “Blessed be the Lord God of Israel who revealed his secret to Rabbi Akibah the son of Joseph”!*²¹⁵

To help stem the flow of Magians to Christianity Magian polemicists wrote passages aimed not so much at attacking the virginal nature of St Mary, but lampooning why the Creator chose a Jewess to carry the Messiah, which they found extremely odd and unexpected; *‘And there are some even who say that the Messiah is the sacred being himself.*

Fig 14. Shrine dedicated to the Virgin Mary

THE VIRGIN MARY WAS VENERATED FOR BRINGING THE MEANS OF RESURRECTION INTO THE WORLD

WITHOUT A PURE VESSEL THE INCARNATION COULD NOT HAVE TAKEN PLACE

RABBINICAL AUTHORITIES PROFESSED JESUS’ BIRTH WAS ANYTHING BUT DIVINE

THE PAGAN MAGI WERE NOT HAPPY ABOUT THE CHRISTIAN TEACHINGS EITHER

Now this is very strange, when the mighty sacred being, the maintainer and cherisher of the two existences (ie; the material and the spiritual), became of human nature, and went into the womb of a woman who was a Jew. ... into a polluted and straightened place'.²¹⁶

THE HOLY SPIRIT

Whereas the Church has, from its earliest beginnings, had the greatest imaginable veneration of the Holy virgin.

TRADITIONAL JEWISH
EPITHETS FOR YAWEH
ARE NOT FOUND IN THE
NEW TESTAMENT

Jews, Christians and Magi believed that the Holy Spirit issued from God the creator. For Zoroastrians *Spenta Mainyu* (the Holy Spirit) was the spirit of truth and prophecy, the giver and preserver of life, goodness and creation, also called 'Holy Wind'. Equally astonishing, the words *Jehovah* and *even Adonai* are conspicuous by their absence in the *New Testament*, replaced by the Aramaic word 'Father', *Abba*.²¹⁷ Certainly Jesus never uses *adonai*, or any other readily identifiable Jewish epithet for that matter. Perhaps the word *Jehovah* was omitted to make Christianity more ecumenical, more palatable to Zoroastrians and Zurvanites. But by the same token *Jehovah* and *Abba* may not have been one and the same deity.

THIS IS A VERY
IMPORTANT POINT

Some people presently advocate that Jews did not know how to write Hebrew characters around the time of Christ, and use this to explain the absence of word *Yaweh* from the *New Testament*. Their stance is at best ill-informed, misguided, or deliberately and absolutely false. One only has to look at the many *Qumran* scrolls to see Hebrew in use during the time frame of the divine manifestation. In those texts we discover a working mixture of Aramaic, Hebrew, Greek, Nabatean amid the Essene commune. In *Qumran scroll 1QS* the eternal penalty of excommunication is appointed for those who dare utter or pronounce the tetragrammaton as it is written in the text (YHVH), during a reading or worship, for any reason whatsoever.²¹⁸ This prohibition did not cause Essene scribes to refrain from committing the divine name to writing, only that it might not be freely spoken except by the High Priest. By and large the Essene community recorded the tetragrammaton in their scriptures, although in a couple of cases, the Aramaic term *El* is substituted, but transliterated in archaic Hebrew characters.²¹⁹ The fact that the Hebrew names '*Jehovah*', '*El*, *adonai* or '*Yaweh*' do not appear in the Greek *New Testament* is very significant. The 'oversight' was no doubt a deliberate omission on the part of the 'holy-spirit-inspired authors of scripture', paving the way for the use of Indo-European terms when describing or addressing the Heavenly Father.

SOME GROUPS OF EARLY
CHRISTIANS DID USE THE
TETRAGRAMMATON

The *Talmud* provides unmistakable clues that an unknown number of Christians used the Tetragrammaton, or other Jewish substitute words, in their versions of the *New Testament*.²²⁰ These, I believe, were Nazarene, Judaeo-Christian versions of the *New Testament* (ie; books emerging from the mission to Jews of the Circumcision, rather than the apostolic mission to the Gentiles).

RABBIS HELD THAT THE
GOSPELS WERE PACKED
WITH FALSEHOOD AND
IMPIETIES

The Talmud calls the books of the Christian Minim - heretical books - Siphre Debeth Abidan - "Books of the House of Perdition". The Talmud in particular speaks of the books of the Gospels. Thus in Schabbath (116a) Toseph: "Rabbi Meir calls heretical books Aaven Gilaion (literally 'volumes of iniquity') because they call them Gospels."²²⁰

And Rabbi Jochanan calls these books Aavon Gilaion, 'evil books'. The Schulchan Arukh, Crakow edition, gives this name as Aven Niktabh al Haggilaion - iniquity written in a book.²²⁰

Buxtorf says: "In the Arukh there is a note Scheker Niktabh al Gilaion, which means, a lie written in a book."²²⁰

All the Talmudists agree Christian writings should be destroyed. They differ only as to what should be done with the names of God contained in them. In Schabbath (116a) it says:

THE TALMUD ADVISES
JEWS TO BURN THE
CHRISTIAN BOOKS

"The Glossaries of our own books and the books of the heretics are not to be saved from the flames, if they should catch fire on the Sabbath day. Rabbi Jose, however, says: 'On festival days the divine names should be torn out of the books of the Christians and hidden away; what remains must be given to the flames.' But Rabbi Tarphon says: 'In order that I may be remembered by my children, if those books should ever fall into my hands I would burn them together with the divine names contained therein. For if one is chased by an assassin, or by a serpent, it would be better to take refuge in a pagan temple than in one of theirs; because the Christians knowingly resist the truth, whereas the pagans do so unknowingly."²²⁰

In Magian doctrine roosters were close friends of the sun, serving to ward off evil, as well as signal its impending arrival (especially if it crowed after nightfall). The Greeks possibly held similar a view since *alektor* ('a cock') is derived from *aleko* ('to ward off').²²¹ In the *New Testament*, Jesus foretells Peters denial of him. This act of

apostasy occurred as a rooster crowed during the night, perhaps illustrating that the cock was alarmed at the demon of apostasy's near proximity to the apostle.

In both Judaism and Zoroastrianism, the supreme God, the one-God, lord of the cosmos, was seen as having the appearance of fire - such were the visions of both Moses (prince of Egypt) and Zoroaster. In connection with this there were a handful of apocryphal sayings associated with Christ, recorded by early Christian writers for posterity. One saying noted by the eminent Alexandrian Christian scholar Origen, and by Didymus also, is particularly noteworthy; *'He who is near Me is near the fire; he who is far from Me is far from the Kingdom'*.²²² This is clearly an allusion to Christ's followers having to be near the holy fire of God. This might be meant in a purely spiritual sense, but, if this saying (which is supposedly from Christ's own mouth) is correct, and a reference to actual fire, it might also mean that Christ saw in flame a manifestation of the Father, just as Moses did. All early Christian churches were illuminated not by fire altars, but by lamps of holy oil. The flame itself represented the real presence of Christ inside the parish building. The use of lamps is a point of difference between Christian and Magian temples, for the Magian *vahram* fires were holy blazes with a millennial pedigree. Yet apparently, in some regions fire may have had an analogous meaning and usage in Christian communities.

At least one Irish monastery provides evidence suggesting that Magian-style fire temples were being maintained by Christians. In Sligo Bay, on the island of Innismurray, are situated a series of dilapidated ancient Church buildings.²²³ Nestled amongst the ruins of this monastic settlement was the 'Church of Fire',²²³ the house or shelter of an eternal flame which continued burning there until it was desecrated by a Scotsman.²²³ According to myth, every home hearth in the region obtained their hearth fire from it (another Magian custom), and as a result the effects of the desecration were devastating.²²³ With the holy fire killed for eternity, unable to be re-lit, the offender was burned to death, and the altar stone hacked up and used locally for building materials.²²³ Fire chapels of this kind were none too 'Catholic', and if the Scot hadn't desecrated the flame, I guess someone loyal to the medieval Roman reformists would have eventually done so.

According to Gerald of Wales a perpetual fire existed at St Brigid's enclosure in Co Kildare, Ireland.²²⁴ St Brigid's enclosure (which consisted of pastures and a fire altar surrounded by a hedge) was strictly for the use of nuns and womenfolk. *'Only women are allowed to blow the fire, and then not with the breath of their mouths, but only with bellows or winnowing forks'*.²²⁵ Stock were free to eat the miraculously inexhaustible grasses inside the enclosure, but goats pastured there remained forever barren owing to Brigid's curse on their kind.²²⁵ All men avoided the saint's holy site lest they suffer calamity.

'An archer... crossed over the hedge and blew upon Brigid's fire. He jumped back immediately, and went mad'.²²⁶

The trespasser boasted of this misdeed to all and sundry, with unhinged demeanour. From the onset of his madness he made it his ambition to blow on every hearth he encountered (a demonic and capital offense in Magian lore), but met an unhappy end.²²⁶ In a further incident, another man unsuccessfully tried to vault the perimeter hedge, but suffered permanent deformity to the limb which violated the boundary.²²⁶ On St Brigid's night, the eve that she spiritually visited people's houses in Ireland, villagers placed gifts for her outside the home, including swastika-style crosses, butter, bread loafs and cakes.²²⁷ How difficult it must have been to differentiate between the sight of St Brigid's enclosure and the ubiquitous heathen enclosures of Slavia. Folk beliefs surrounding her seem rather pagan too.

Yngvar's Saga contains a number of instances where they, as Christians, were performing what outwardly appear to be pagan rites. Consecrated fire with miraculous power is repeatedly mentioned throughout, but it was Christian fire.²²⁸ The flame was generated using a flint and steel blessed by a Norse bishop named Rodgeir (Roger?).²²⁸ The bishop in question also threw consecrated die a total of three times in order to gather what course of action God wished them to take.²²⁸ Judging by the number of ecclesiastical condemnations of dice sortilege reformist popes were none too happy about these divining customs. Having said that the old testament is rife with prophetic divining and dream interpretation.

*'HE WHO IS NEAR ME IS
NEAR THE FIRE; HE WHO IS
FAR FROM ME IS FAR FROM
THE KINGDOM'*.

THE CHURCH OF FIRE

DIVINES WITH DICE

And then there were the candles and lamps, an indispensable trapping within any of the early church buildings. Not only were they present on the altar during the mass, but the faithful lit candles in remembrance of their dearly departed, and to seek to have their petitions heard in heaven. The Magi also used candles in their ceremonies.

BYZANTINE CLERICS
CONDEMNED FIRE-
WORSHIP AS STUPID, AND
UNCHRISTIAN

Despite this, Magian-style fire-worship was not part of apostolic Catholic tradition, at least not in centres of power like Constantinople. Gregory of Tours recalled that around 572 AD, the Magian King Chosroes I sent an embassy (most likely of Zoroastrian fire-priests) to the Byzantine emperor, seeking assurances they would honour their peace treaty, and not intervene in Chosroes' war with the Persarmenians (Caucasians of mixed Persian and Armenian stock, probably Christian in their devotions).²²⁹ As it happens, Armenian envoys arrived just prior to the Persian delegates, and were present as the Persians were ushered into the emperor's presence.²²⁹ The Byzantines agreed to keep their word, but the Persian emissaries would not accept the truth of this unless they worshiped fire after the manner of Chosroes.²²⁹ A bishop present amid the congregation of politikers interjected saying, '*What is there divine about fire, that it should be worshiped?*'²²⁹ adding further that it was simply the product of combusting wood. '*The envoys were furious when they heard the bishop continue in this strain. They abused him roundly and hit him with their sticks (priestly wizard staffs).*'²²⁹ At the mere sight of their bloodied bishop the Christians fell upon the Zoroastrians, killing them outright.²²⁹

The saints

CHRISTIAN SAINTS

The first Christians gathered the remains of their slain brothers and sisters and thereafter held Church services over the resting place of their earthly remains. They became 'beacons of light' for those left in the world, separated by death and yet one in faith and truth; sharers of a common inheritance, fellow warriors against evil in its many forms.

HOLY SOULS

Although the relics of the saints and martyrs had been venerated since the earliest period of Christianity's tribulations, it was not until the year 325 AD, during the first ever synod of bishop's (Nicaea I), that they made a formal declaration on saints. It stated the 'Communion of Saints' was a fundamental and indispensable truth of the Church. Whenever a person died in a state of special grace, they were said to be lifted up towards heaven and there resided for ever more. The martyrs, we are assured, were in the very presence of God having purchased eternal life for themselves by their deaths and many other sacrifices in the service of goodness. Many of them, especially the most holy of saints, kept a watchful eye over what was taking place here on earth, particularly amongst friends and loved ones. Christian custom and worship emphasized the annual commemoration of the deaths of the saints, martyrs and all the faithful, reassuring believers of the continuing existence of these blessed souls. When people prayed to them for intercession they were asking them to jointly petition the Lord for aid, believing that God was especially likely to listen to one of such envious piety. In this way certain saints were credited with having entreated God to impart many incredible miracles.

In the eyes of the early Church, all holy souls would be raised to a perfect state as mentioned in the *New Testament*, made immortal by the transformation of their corrupted and blemished mortal bodies into a new heavenly body, like the blossoming of a flower. Even more important were those souls which, 'through the grace of God', had shown themselves to be ultra-sanctified through the performance of miracles and the sheer goodness of their works. These souls were *heroically transformed*, more glorious than they had been glorious in this life. These were saints, spiritual warriors *on the side of goodness* who could be respectfully *venerated* by the faithful to enlist their aid. Christian saints can be favorably compared with Magian saints of the sort mentioned in *Farvardin Yast* and *Dadistan i Dinik*, and elaborately described in Part I.

MANY MAGIAN SAINTS
WERE WARRIORS

These Magian holy warriors, '*the glorious, eternally famous, good-doers*', and angels resided in heaven after death and continually '*battle and contend with the Fiend*' and his subordinate legions who brought woe into the lives of the faithful. Islam also has remaining vestiges of the cult of the saints, something which, try as they may, they have never been able to wipe out.

CHRISTIAN AND PAGAN
SAINTS WERE OFTEN
CONFUSED

There is evidence that, for much of the Church's history, there has been a degree of confusion concerning the saints. This is because like the Christians, the Magi also had saints, and called them *fravashis*, or pre-existing souls. In brief they were awesome spiritual combatants whose angelic souls were made in heaven and later planted on earth through childbirth, to assist the human race. They interceded on behalf of the living, and during the last days,

would wield their spears against the legions of that penultimate fiend Ahriman, as his rebellious army of God-killing miscreants stormed heaven. In fact, throughout various regions of Europe, words used to describe the Christian saints *have an Iranian rather than Greek or Latin etymology.*²²⁰

Without more good men and women such as these (the white *fravashis*), the battlements of the heavenly city would be undermanned and laid waste by the expected swarm of unrelenting black *fravashis*, demons of exceptional malice, single-minded in their desire to raze heaven. So the Magi exhorted humanity to aspire to natural holiness and sanctity, hoping to swell the ranks patrolling the vulnerable walls of the heavenly city.

The Church has always perceived itself as having a role in speaking out against things going on in society running contrary to the magisterium. Then (as now) abortion, the breakdown of families, promiscuity and contraception were topics of dissension, as was the need for people to support their kings and queens. The Church's fixation with the question of saints, angelology and demonology during the Middle Ages (which seems peculiar to that period) means there were other views current out on the streets, at variance with the opinions of the Church's reformist apparatus. The issue could only be properly tackled once the Church had formally made public their official stance on these beings. So who were they?

In the 9th Century AD, the Emperor Charlemagne, who took his role as convertor of Western Europe's pagans very seriously, made it an offense for his subjects to summon up angels lacking biblical names. Firstly this is an admission that pre-Christian Europeans were summoning angels, but what kinds? Considering the varieties of paganism then present in Eastern Europe, and many parts of Germany and Saxony no doubt, these angels may have been pagan gnostic Archons, or Magian angelic genii (*yazatas*) and pagan saints (*fravashis*). The fact that these 'bad angels' were described as early as the 7th Century AD as mounted on white horses and armed with spears means they closely resembled the *fravashi* saints of the Magi, as described in the *Book of Bundahishn* and the *New Testament*. Take the riders shown on a panel from Russia's 12th Century AD Mikhailev cathedral (fig 15),²²¹ they are not St George, but (pagan) serpent-killing holy warriors crowned by halos. An 8th Century AD Saxon legend allows us to guess that (in Russia and Germanic countries) this imagery was originally pagan, but it had made a rather nifty

THE PERSIAN WORD FOR A SAINT BECOMES THE CHRISTIAN TERM FOR A SAINT THROUGHOUT EASTERN EUROPE

CHARLEMAGNE BANNED THE VENERATION OF CERTAIN SAINTS AND ANGELS

Fig 15

religious transition, reappearing as Christian saints. These spiritual cavalrymen now served the Church.

A sizeable band of heathen Saxons tried to set ablaze a Christian church, but were thwarted in their attempts by a pair of horsemen on white steeds who came to its defence. The pagan Saxon raiders became afraid of the riders, believing them to be bursting with supernatural power, and being unable to start the fire, no matter how hard they tried, were forced to decamp from the scene.²²² It is highly probable the Saxons so feared these horsemen because they were viewed as white *fravashis*, heathen saints intervening against their attempts to destroy the parish. In this case it was the loose and free intermingling of Christian and Magian lore at a village level that allowed for situations where a pagan white *fravashi* earnestly fought to defend a Catholic Church that did not formally endorse the ways of the Magi, or the Christianised Magians who were themselves believers in Christ, the Good Sun. In that same century *the practice of making sacrifices to the saints was formally banned by the Church*²²³ in Western Europe, most likely showing that many pagans had difficulty distinguishing between the divine heathen saints (*fravashis*) and Christian saints. Even more than that, it shows either the emergence of new practices among Christian communities at that time, which the Church was compelled to comment on, or that the Church had finally drawn a line against observances

SACRIFICING TO THE SAINTS WAS PROHIBITED

SIXTH CENTURY GAULISH
SAINTS WERE ALLEGED TO
BE IN LEAGUE WITH THE
ANTICHRIST

which had been there from ages past.

We hear tell of the pagan-Christian saints even in the 6th Century AD; demonised by the new order.²³⁴ From Bourges hailed a man supposedly possessed and driven mad by a swarm of flies. The alleged demoniac visited many regions of Gaul before 590 AD, until finally coming to Arles where his holy mission gained impetus. *There he dressed himself up in animal skins (as the Magi once did) and spent his time in prayer as if he were a religious ... the Devil gave him the power of prophesying the future.*²³⁴ Moving onto Javols with his sister (named Mary) in tow, he so accurately prophesied, and performed so many astounding healing miracles, that everybody, including not a few priests were mesmerised and flocked to him. His devotees amounted to some 3,000 in number.²³⁴ Having witnessed his amazing feats the masses lavished him with expensive gifts and precious coins, whereafter he beckoned them to worship him.²³⁴ They did so willingly. Next he set off with his worshippers to attack the Catholic bishop of Le Puy. Sensing imminent danger the bishop devised a ruse whereby one of his retinue would feign homage toward the 'Bogus Christ of Bourges', then assassinate him at the most opportune moment.²³⁴ This he accomplished 'So fell and died this Christ, more worthy to be called an Antichrist'.²³⁴ Despite the scattering of his followers, and the torture of Mary, many long after 'continued to profess that he was Christ and that Mary had a share in his divinity'.²³⁴ But things did not die down. During the same period the Catholic cleric Gregory confesses that;

GREGORY SAW MANY OF
THESE LIVING SAINTS IN
GAUL

*'Quite a number of men now came forward in various parts of Gaul and by their trickery gathered round themselves foolish women who in their frenzy put it about that they were saints. These men acquired great influence over the common people. I saw quite a few of them myself.'*²³⁵

Quasi-pagan imagery²³⁶ loomed heavily in the minds of medieval Frankish churchmen and monarchs who financed the building of the great cathedrals. The enormous stained glass window of Paris' St Chappelle cathedral (commissioned by Charles VIII in the late 1400's) has Christ at the centre of a rose, surrounded by a variety of other Christian images forming each of the petals. Numerous petals portrayed warriors and kings mounted on white horses. Might these be derived from Magian imagery of Christ and his many warrior saints seated for battle atop their white mounts? Moreover, if we are to analyse medieval Church architecture and its propensity for renditions of Christ in connection with the rose, one could conclude that in those days Christ and the rose were inseparable. This calls to mind a pagan belief that each God had its own flower. Even the trefoil (which the Magi held especially holy), in the form of three leaved clovers, or *fleur-de-lys*, commonly constituted one of the most basic elements of Church architecture during the Middle Ages. As you will soon see, exotic embellishments adorn a number of medieval churches, things undeniably Mesopotamian and Persian in nature, not to mention gargoyles and signs of the zodiac.

Medieval hagiographies often contained stereotyped accounts of miracles which, we might presume, displayed not only the power of the Christian God, but conveyed a simple message to the listener, 'for the benefit of God', and hence fortified the reformist Church. Some of these hagiographies carry features which span the gap between Magianism and Christianity.²³⁷

Similarities between Magian and Christian sacraments and observances

Crossing the veil of death - the Resurrection

TEACHINGS ON THE
RESURRECTION

Death is the ultimate barrier that all creation must cross, a one-way exit from the world of the living. Zoroastrian teachings profess that souls spend three days in the underworld immediately after the body's passing. The same may be true for Christians. For three days Christ went down into hell to preach to souls that had awaited him in great expectation, to reveal himself to those who died before his arrival gained their emancipation from death.

One aspect of Orthodox Magian thought was utterly unacceptable to Christian authorities, namely that even evil doers will be saved as a result of the Resurrection, but only after suffering for their crimes in hell, and atoning their misdeeds in burning liquid metal (the so-called ‘supreme ablution in the melted metal’).²³⁸ Christianity teaches that those found guilty of wickedness shall suffer eternal damnation, others saved after spending a while in perdition.

This initial phase of post-mortem existence can be seen as a form of purgatory, where our ghosts ponder over how we conducted ourself in the earthly existence. The concept of a purgatorial ordeal in the afterlife belongs not only to the Magi, but to Catholicism, and unofficially to some parts of Orthodox Christianity, which derive the teaching of the purification of the soul by molten metal from both inherited tradition and the Bible itself. For the holy, the burning away of venial (less serious) sins would be a pleasant experience, only insofar as the evaporation of each lesser misdeed made one that bit closer to reunification with God. Likewise Russian Christians earnestly believed they would walk a river of molten metal after passing from this world. Purgatory was a sort of car wash for the soul.

This is what the Magi had to say on purgatory. ‘About mankind being bodily prepared also for the future existence by fire and melted ore; in the worldly existence the acquitted and incriminated, as regards the law, have become thereby manifest, and, in the future existence, the torment of the wicked and the gratification of the righteous’.²³⁹

The souls of those whose good and bad thoughts, words and deeds weighed equal in the scales of the Archangel Rashnu remained stuck in the ether, the void separating earthly existence, heaven and hell. There are obvious parallels between the Magian precinct of *Hamistakan* (the realm of the ever-stationary) and the Roman Catholic concept of Limbo. In Christian tradition Limbo was an intermediate form of spiritual existence in the next life, the destination of those who were good at heart, yet who were not Christians. Limbo is, likewise, a professed dogma of the Roman Church.

Further East, in Christian Byzantium and post-conversion Kievan Rus’, faithful souls made their way toward God by crossing over into various stations in the heavens. Sequentially they bargained their way through check points of demonic wardens who weighed the soul at each location.²⁴⁰ This corresponds to a Zoroastrian view that one had to ascend a series of star stations during a soul’s journey across the Kinvat star bridge, to merge with the white light of the cosmos.

According to the Magi, the Assembly of Sadvastaran was the premier cosmological event, with *Sraosha* presiding. For it was here that *Sraosha* the world messiah was supposed to gather all creation, complete and resurrected before him. He was the impartor of righteousness, ‘the two legs of creation’,²⁴¹ the means by which all creation was to be renewed and cleansed from the pollution and destruction of the anti-God.

Magians learned about *Sraosha*’s resurrection, being instructed that ‘the preparation and production of the resurrection are an achievement connected with miracle, a sublimity and, afterwards, also a wondrous appearance unto the creatures who are uninformed’.²⁴²

In both Christian and Magian tradition it was at just such an assembly that all people were sorted into two flocks and weighed. In both cases the faithful would share a meal with their saviour.

‘When the son of man shall come in his glory, and all the holy angels with him, then shall he sit upon the throne of his glory: And before him shall be gathered all nations: and he shall separate them one from another, as a shepherd divideth his sheep from the goats: and he shall set the sheep on his right hand, but the goats on the left.

*Then shall the King say unto them on his right hand, Come ye blessed of my Father, inherit the kingdom prepared for you from the foundation of the world Then shall he say also unto them on the left hand, Depart from me, ye cursed, into everlasting fire, prepared for the devil and his angels’.*²⁴³

At this final assembly in the next world, at *Sraosha*’s second coming, the Saviour would be seated in the presence of a myriad virgins. The same can be said of Jesus in *Revelations*.

The weighing of souls, and their partitioning into groups, are integral features of Judgement Day in Islamic thought also, ideas already well known throughout Arabia, probably since Achaemenid times. The rationale for the

PURGATORY IN MOLTEN METAL

THE SOUL IS PURIFIED LIKE ORE

THE ASSEMBLY CONVENED ON JUDGEMENT DAY

NON-BELIEVERS WILL BE SHOCKED BEYOND BELIEF WHEN THEY SEE HIM

VIRGINS SURROUND THE MESSIAH

partitioning of souls in the Islamic scheme is found in the *Imrans*, where it states;

JUDGEMENT DAY
ACCORDING TO ISLAM

"God was not to leave the faithful in their present plight, but only to separate the evil from the good. Nor was God to reveal to you what is hidden".²⁴⁴ "Those whose scales are heavy shall triumph, but those whose scales are light shall forfeit their souls and abide in Hell forever".²⁴⁵ "you shall be divided into three multitudes: those on the right (blessed shall be those on the right), those on the left (damned shall be those on the left); and those to the fore (foremost shall be those). Such are they that shall be brought near to their Lord in the gardens of delight; a whole multitude from the men of old, but only a few from the latter generations."²⁶⁴

A HOLY MEAL IS EATEN
ON JUDGEMENT DAY

Integral with the notion of *Sraosha* was a holy meal, *Hush*, the white *Haoma* of immortality, through which he causes the resurrection. For this reason the product of *Sraosha's* ritual was known as *'the Immortaliser'*. Having partaken of it, *'the Immortaliser'* brought those who had crossed over into the kingdom of death, into eternal life. What is spoken of in their scriptures is manna, by another word, a holy substance through which created existence was redeemed. In a somewhat similar manner Jesus dispensed a holy meal to his disciples at the Last Supper, the manna which was his body, the wine that was his blood, and by consuming it one earned the right to enter the kingdom of heaven. But Jesus warned:

'Verily, Verily, I say unto you ... I am the living bread which came down from heaven: if any man eat of this bread, he shall live for ever: and the bread that I will give is my flesh; which I will give for the life of the world. ... Except ye eat the flesh of the Son of man, and drink his blood, ye have no life in you. Whoso eateth my flesh, and drinketh my blood, hath eternal life: and I will raise him up at the last day.'²⁴⁷

JESUS BECOMES THE
SACRED MEAL DURING
THE RITUAL
CONSECRATION OF BREAD
AND WINE

Here one's resurrection appears conditional upon receiving the flesh and blood of Christ in the form of bread and wine, mystically transformed into the Lord. Noteworthy also is Christ's comment that he gave this bread not just for people, but for *'the life of the world'*. *Sraosha's* resurrection was one that redeemed not only the souls of the faithful, but the created world, methodically killed off by Ahriman and his many demons. Through him, God would reclaim a murdered earth.²⁴⁸ The *Qur'an* likewise details the resurrection of created existence, not just mankind; *"Know that God restores the earth to life after its death"*.²⁴⁹

At the risk of sounding like a botanist or naturalist Christ tells his followers not to worry about their earthly needs. He proceeds to explain how the Father lovingly cares for birds and plants also, and that god's children are somewhat higher in the overall scheme of things ...

THE HEAVENLY FATHER
CARES FOR NATURE

"Consider the ravens: for they neither sow nor reap; which neither have storehouse nor barn; and God feedeth them: How much more are ye better than the fowls? ... Consider the lilies how they grow; they toil not, they spin not; and yet I say unto you, that (King) Solomon in all his glory was not arrayed like one of these (plants)".

SPECIAL SACRAMENTAL
LOAVES ARE BLESSED
DURING THREE DAYS OF
FUNERAL CEREMONIALS

Back in this world the recently departed soul was lent assistance through the performance of certain rituals. The celebration of the Eucharist at a given Christian funeral mass might have a parallel in the *Satuih*, the Zoroastrian three-day ceremony, whereby one unleavened dron loaf was consecrated for each day that the soul spends in the land of the dead. The performance of this consecration would ensure the Saviour's protection against vindictive demons during that time of worst ordeal, the horrific three-day punishment.

Baptism and sacred ablutions

Similarities between pagan and Christian penitential ablutions have long been commented upon by Protestants, though in truth their usages did differ in some respects. The earliest Christians performed baptisms using river and holy water, though these were not necessarily similar to Magian exorcisms, whose use of pagan holy water was very elaborate indeed.

The Roman Catholic custom of pouring consecrated water across the baby's forehead is ever so remotely paralleled in the Zoroastrian head baptism at birth. In both cases it was believed to be the best form of baptism.

Church teaching stressed that baptism was an essential rite, allowing one to proceed into the highest heaven after death. At the moment of baptism the baptisee entered into union or fellowship with God, their first step in life's journey towards heaven. All that was left was to remain in that union. Adults undergoing conversion (catechumens) and children who had reached the age of reason verbally confirmed their faith at this time. Each person joining the Church received a spiritual parent or friend, to aid them materially and spiritually wherever possible in times of misfortune. This special person usually took part in the ceremony, holding the neophyte's baptismal candle. *All persons present verbally reaffirmed their baptismal vows to renounce Satan at every available opportunity.*

In Eastern Christendom people were sacramentally joined to the Church at birth through the reception of three rites in one. Baptism (the washing away of sins by means of a triple, full-immersion in water), was followed by the consecration and sealing of the soul with the oil of Chrism (blessed by a bishop), otherwise known as confirmation. This was the 'sacramental fire', the anointing of the Holy Spirit. All the senses and main body parts were crossed with the oil. Lastly, the newborn child, or neophyte was dressed in a white garment of purity and received the Eucharistic bread for the first time.

During the Middle Ages a Roman baptismal celebration differed from the Eastern rites since baptism, communion and confirmation were held separately as three distinct sacraments. Baptism was by full immersion or, more commonly, by pouring blessed water upon the forehead.

Despite conceptual similarities between Christian and Magian ablution rituals, there were significant points of difference. For example, no Christian priest would recommend mixing bull's urine with holy water, or command women to drink neat bull's urine at the time of menstruation.

Striving to highlight differences between Christian and pagan sacramental washings, the Church condemned otherwise heathen water rituals as they encountered them around the countryside.

'... all who shall adore a stone, spring or other creature of God, incur the charge of idolatry, it has come to our ears, we grieve to say, from the report of many credible witnesses ... that many of our subjects are in large numbers visiting a certain well and stone ... where with genuflections and offerings they, without the authority of the Church, wrongfully worship the said stone and well, whereby committing idolatry ... they take away with them the mud of the same and treat and keep it as a relic to the grave peril of their souls'.²⁵⁰

Such was the dressing down meted out to parishioners by the Bishop of Hereford in the year 1404 AD. These situations are difficult to assess, for the crux of the issue is one's intentions and interior disposition. Is worship or veneration being offered to the place or object of cult significance? These two motivations can easily be confused by onlookers. There are sufficient examples where both Jews and pagans congregated at holy springs. Jesus no less, was baptised in the water of the river Jordan. By applying Christian fundamentalist thought to the matter, one could claim that John the Baptist's baptismal practice of using river water was pagan, considering that pagans also washed in river water to gain spiritual purity. As it stands there was a holy pool outside Jerusalem's sheep gate called *Bethzatha*. It was not situated among the Jewish ritual baths found inside the city, probably reserved from the use of pagans and incurable outcasts. Those who bathed there could be healed by the water, and it was here that Christ performed stupendous healings. Subsequent archaeological examination of the site, covered by several porched areas in antiquity, reveals it to be a healing temple dedicated to Asclepius, a deified Egyptian priest presiding, as he did in life, over medical cures. Whether in Europe or Asia, pagans were also healed by holy springs and pools. As if frequenting an Egyptian temple isn't intriguing enough, Jesus cured a congenitally blind man by mixing his spit with dirt and rubbing it into the patient's eyes. The very same cure was once performed by the pharaohs. Does that make the Christian or Jewish waters of healing pagan in nature?

In Solomon's temple there was a bronze water tank mounted on a dozen bulls. Then there were ten bronze carts (with chariot-style wheels), incense burners, bowls, panels bearing images of lions, bulls, sphinxine winged creatures and spirals. Similar temple descriptions are contained in the ancient Hindu texts, the *Agni Purana*. The day Solomon's temple was consecrated to the God of Israel some 120,000 sheep were sacrificed, not to mention more

than 20,000 head of cattle. These sort of figures would do justice to any of the sacrificial passages mentioned in the Magian texts, the ground awash with blood. All the while the smoke of the fat and grain offerings billowed from the fires. But does this make the Jewish temple pagan? Succinctly, the Jews were little different from the surrounding Egyptians, Magians, Babylonians and Northern pagans in certain modes of religious expression, or when it came to the overall appearance of their temple interiors. Archaeologically, the sorts of artifacts described in the first *Book of Kings* ((OT) *1 Kings*) can be found in a number of locations, spread from the Near East, through to Bronze Age Northern Europe. Some of these effigies clearly fall into the category of graven or at least cast images, and yet, when viewed in the light of Mosaic law they were not seen as the product of idolatry in their day. If one had unleashed Reformation-period Protestant fundamentalist Christians or medieval iconoclasts inside Solomon's temple they would have torn it apart, in probably the same way they destroyed images of St Mary, Jesus and many other saints. The point is this; there is a very real difference between worshipping a carved object, and adorning a place of worship with sacred images, or venerating and celebrating the sanctity residing behind such images.

SOME PROTESTANTS WERE
ICONOCLASTS

Even so there is every reason to accept that pagan water-worship had lived on into the Christian era. Even on the eve of the 21st Century, 'Aryan' holy wells, springs, tanks and rivers are still a part of quotidian life on the Indian Sub-continent. Liberation from physical and mental infirmities can be achieved by visiting these holy wells, observing the ancient lore attached to the place, and tossing a coin or two in.²⁵⁰ People expect to be healed.^{250a}

ARYAN HOLY WELLS

Due to the arid nature of Iran and India, it is perfectly understandable that they had a greater than usual respect for water and the life it is capable of nurturing in the parched earth. But water-worship in Britain and Ireland is a wholly different proposition. The lands there are well and truly inundated with rainwater year round, to saturation point. The reverence for water once displayed by the ancient Celts and Britons can only be attributable to its spiritual properties, and certainly not because of an acute shortage of running water. Archaeologically it can be proven that the pagan Celts made frequent offerings at these wells; weapons, armour, money, torques, arm-rings.²⁵¹ Wells were able to impart prophetic knowledge, remedies for ailments and injuries, and bestow gifts of fertility.²⁵² Ill stock could be healed with holy water too; one only had to call on the proper saint.²⁵⁴ At Abergele though, a horse had to be slain if one wanted to ensure the utmost efficacy of the water's healing powers.²⁵³ Here a pagan rite is additionally performed, a sacrifice conceptually similar to the Hindu *Asvamedha*.

WATER IS TREATED WITH
UTMOST REVERENCE IN
ARID INDIA AND IRAN

DRINKING WELL WATER
FROM THE SKULL OF ST
TEILO

Relics were sometimes vital to unlocking the powers of the holy wells. One Irish relic illustrates this. The most famous relic of St Teilo, a 6th Century AD bishop at Llandaff, was his skull.²⁵⁴ It was able to cure a wide range of malaises if water from St Teilo's well was imbibed from his skull.²⁵⁴ The full rite would only ever be efficacious if it was officiated by a member of the Melchior family, who since time immemorial had acted as custodians for the relic.²⁵⁴ If they did not dip his skull into the water, bring it up and give it to the sufferer, no results could be expected.²⁵⁴ The Melchior family bloodline has long since passed away, so too the well which is no longer frequented, and the skull which was sold for less than \$100.²⁵⁴ I cannot resist adding that the name Melchior was the same as that used by one of the Three Wise magus Kings. Traditionally the cult of skull libations in pagan Britain and Ireland was interrelated with the business of '*Kings, heroes and ancestors*'.²⁵⁴ By the mere act of quaffing holy well-water from the relic-like bones, one took into their body the powers of those whose head they drank from.²⁵⁵ Strictly speaking though, Wales seems to have been more deeply immersed in the practice than their neighbours to the North and West.²⁵⁵

VENIAL AND MORTAL
SINS

Confession

Like the Christians of the apostolic era, Zoroastrians also perceived two very different varieties of sin, both of which had enormous implications for the soul of a trespasser in the afterlife, and one of which could only ever be expiated by the renunciation of the sin during the Zoroastrian *patet* confession ceremony. In *Shayast la Shayast VIII*, these were termed *Hamenal* (sins that do not lead to death) and *Margargan* (sins that lead to death). And what should we find in (NT) *1 John 5: 16-17* but none other than official Biblical reference to the existence of death sins. As in the pagan world, the Church considered that death sins catalysed our separation from the spiritual God. They could only ever occur under circumstances when the sinner had chosen to undertake the act knowing full well that

in doing so, he or she had willingly chosen to side with evil over good. This kind of sin was all the more culpable because it injured the Holy Spirit of God, fracturing unity with the Creator through rebellion against him, and would one day cause the person to plummet into a foreboding hell unless they tipped the weighing scales of the judgement to the side of good by openly confessing and more importantly rejecting the nature of that sin. And therein lies the importance of the crucial utterance that was to conclude a formal confession in both the pagan and Christian world; the promise that the person would not sin again. Only then could the person right the balance of the scale which leans closer to the side of damnation. Upon passing from this world to the next, one's soul could anticipate a full and complete reward. For the Magi expected;

'heaven and the various grades of position and reward of the righteous, according to their worthiness through the practice of good works; the most downward and worst of places, hell; and the place of punishment of the wicked, according to their sin'.²⁵⁶

While 1 John 5:16 recommended that people pray to God on behalf of a brother who had committed a sin that didn't lead to death, he sternly advised people against praying to God on behalf of one who had perpetrated a death sin. This can be compared with *Shayast la Shayast VIII* which states that offering prayers to God on behalf of mortal sinners was the equivalent of devil-worship!

During their condemnation of black witches, Inquisitors demanded a formal confession of guilt. If there was no confession, there was no forgiveness, because the obstinacy and the stain and the fraction and the alienation of the transgression against God remained, thus leaving them in an already judged condition. The alienation occurred not because of God choosing to abandon man, but man's willful inclination to abandon God. *The penalty was especially grave when the violator was a teacher of the law.* In Zoroastrianism and Church rites of confession, the bonds of mortal sin (a Roman Catholic/Zoroastrian term) were wiped away after confession, *but only once the person had placed him/herself at the disposal of a priest to perform penance or even a quest.* Could it be a coincidence that in (NT) 1 John 1: 8, God's forgiveness of human sin was also linked with oral confession, a confession the Church requires be made before one of the apostles (or their earthly successors), who alone were empowered to loosen the sin?

NO CONFESSION OF
GUILT = NO
REDEMPTION

The Church has always taught that the 'Seven Deadly Sins' of Wrath, Greed, Lust, Avarice, Gluttony, Pride, and Envy were the root of all evil, and punishable in the afterlife. By no small coincidence this view is close to that of the white Magi, who saw each of these major sins not only as a shortcoming, but as archdemons;

SEVEN DEADLY SINS

'The reply of Ahura Mazda to them was thus: 'You rush out, astute in evil, to the extremity of that horrible gloom; so you are all from the demon, your race is really from Evil Thought, that is, your race is from there where Evil Thought, as well as Lust the destroyer, and also Greed the well accumulating resides, and where, moreover, Indra, the Slayer is the spirit of the religion of apostasy and further deceives the worldly existence of mankind, as to proper living and immortal progress, and first confines their thoughts''.²⁵⁷

"You are mankind, neither for Greed, nor for Envy, do you throw away the warm entrails, nor do thou throw them away warm on account of custom, now you slay for slaughtering (to provide food), so that thus it may be beneficial for you and your servant''.²⁵⁸

Magians regarded gluttony as a very great sin, and as spokesmen for a simple agricultural society this is to be expected. They taught that a person was only entitled to as much food as they had earned by the sweat of their brow in the fields. Overeating was therefore a form of theft from those who had legitimately earned the right to eat the food which they grew. Those who were fat in this world would be skinny in the next, and conversely those who refrained from gluttony, and the malnourished, became robust and strong in the next world.

Indulgences

INDULGENCES WERE A
FORM OF SPIRITUAL
PAROLE FOR THE
AFTERLIFE

Indulgences, that is, spiritual reprieves, resulted from the performance of good works and prayers. These helped right the scales of justice in one's favour on Judgement Day, by diminishing the spiritual contamination of past sins.

Whether Christian or Magian in origin, indulgences diminished the horrors of the fiery purgation. In the Roman Catholic 'Treasury of Saints' we find formal indulgences (reprieves) attached to given acts once they were performed in this world, which were supposed to lessen the amount of time spent in the purgatorial blaze by a given amount. While this could conceivably include the giving of money as alms to the poor, Christianity has never endorsed handing money over to a priest in payment for the expiation of a given sin.

SIMONY

Sin payments have never officially belonged to the Church, and yet it was this 'grave heresy' which raised its head during the Middle Ages. In the Christian world the act became known as simony, so-named after Simon Magus the Samaritan.²⁵⁹ The dramatic emergence of medieval European simony seems linked to an influx of white Magian-Christians immigrating from the East (and maybe even from the north), practicing the Zoroastrian custom of paying a magus penitential monies to alleviate suffering in the next world. These the archangel of Justice Rashnu added to the good weighing pan, thereby lessening the weight of sins on the other side of the balance of divine justice. Here a weight of money cancelled a weight of sin.

SINS WERE CLASSIFIED
ACCORDING TO THEIR
SEVERITY. SINNERS
COULD EXPIATE
SUFFERING IN THE
AFTERLIFE BY PAYING
MONEY TO THEIR
CONFESSOR

The Magi had their own price list of forgiveness. *Vendidad* prescribed that each wrongdoing be relegated to a certain class of sin, according to its severity. Atonement for each was achieved by a certain number of strokes of the scourge and whip. These blows could be mitigated by paying silver dirhems (Persian and Arabic) in lieu. The classes were as follows, and the price legalistically allotted to each indicative of the seriousness of the acts in that particular sin class. *Farman* sin - 3 dirhems; *Sroshokaranam* sin - 1.5 dirhems; *Agerept* sin - 132 dirhems; *Aivirist* sin - 132 dirhems; *Aredus* sin - 120 dirhems; *Khor* sin - 240 dirhems; *Bazai* sin - 360 dirhems; *Yat* sin - 720 dirhems; *Tanaphur* sin - 1,200 dirhems.

MORTIFICATION OF THE
FLESH

This may account for why pagan Slavs and other Europeans loved silver coinage during the Middle Ages, particularly dirhems. Silver coins were good to gain exoneration, but some might have felt dirhems were the best, simply because it was the precise denomination mentioned in later Iranian scripture. Dirhems found throughout Europe are frequently of a type struck before the advent of Islam, during Zoroastrian times. Consequently they were probably associated with exculpation in the old faith.

THE HERETICAL
BROTHERHOOD OF
FLAGELLANTS

Penitential scourgings were yet another vestige of the old spiritual obligations, to make a profound revival during the medieval Christian era. The flagellant movement, first appeared on the Italian mainland during the earliest years of the 11th Century AD, and during the 13th Century AD spread roughly simultaneously throughout the Holy Roman Empire and the Lowlands, in the form of the so-called 'Brotherhood of Flagellants'.²⁶⁰ The travelling pilgrim penitents (who wore a standard uniform of a long white skirt, perhaps even an apron tied around the waist) gathered in circular fashion around a central figure called the 'Master of the Pilgrimage', who undertook the scourging of sinners.²⁶⁰ Following the beating administered by their master, the penitents proceeded to mercilessly flog themselves with their own scourges.²⁶⁰ The secondary self-scourging was probably a form of penance which followed the primary whipping performed by the master, and which might have been imposed upon each of the atonees by this figurehead. This behaviour is reminiscent of the two forms of whipping prescribed by the Magian *Vendidad* for each given crime. Interestingly, the mere presence of a Christian priest (or a woman) inside one of these circle gatherings was believed to wipe out the spiritual merits obtained by whatever scourgings had occurred up until the time of the priest's arrival.²⁶⁰ The required quantity of floggings had to begin again from scratch, even despite the large number strokes already received until that point, or the severity of the torn, bruised and shredded state of their backs.²⁶⁰ Whenever these bands came to a new place, they drew large crowds of onlookers who hailed them as heroes, and gave them funds and alms in support of their cause.²⁶⁰ In short they were deeply loved by the people, at all levels of society. If the flagellant ringleaders were Magians or Magian-Christians, then these accounts are indicative that white Magi had immense influence over the populaces of numerous medieval countries, and that the reformist papacy (and its version of the apostolic faith) was far from being the high

and mighty apparatus of the Middle Ages (as is commonly portrayed). It was simply treading water in its battle against the Old Faith, trying desperately to keep its head above water. This may explain why the flagellants, and the miracle workers and prophets reputed to be integral members of the group, were banned by the papacy in 1349 AD as heretical. The most senior figures in the brotherhood were executed by immolation at the stake at Breslau,²⁶¹ thus hastening the sect's demise across a number of nations.

PAPAL REFORMISTS
ORDERED THAT
FLAGELLANT LEADERS
BE BURNED TO DEATH

As you will later read, outbreaks of simony in medieval Europe, were invariably indicative of a thriving Magian or Magian-Christian presence. Despite being dedicated to the concept of simony, the treatise *On Simoniacs* fails to condemn a 'small gift' of 50,000 gold solidii offered up in honour of the deceased Pope Leo IX.²⁶² The means by which the money was given was important, as also whether it was handed to an ordained clergyman in payment for the performance of a religious service, or the buying of holy office. In this instance it is stated that the 50,000 is surrendered to the departed Leo in the hope that the former pope would pray to God on the giver's behalf, to obtain divine intercession and forgiveness!²⁶² Clearly this 'small gift' was given as a payment for a spiritual gift, expiation of past sins.²⁶² It therefore seems to have been simony, but we cannot confirm this because the text does not extrapolate upon how this money was to be transferred to the sainted pope. Perhaps the coins were given to the poor, in which case such a gift would be not only acceptable, but highly commendable. Perhaps it was used to finance the building of shrines and churches, another equally praiseworthy act insofar as the Church was concerned.

Prayer sessions

Five regulated prayer watches existed in Zoroastrianism and the early Church. By the Middle Ages however, the Church timetable had become marginally more complex.

ORGANISED PRAYER
SCHEDULES

Magian daily prayer sessions (Gahs) were duly attended by magus priests who prayed before the holy fire and fed it with the sacred woods and incense, on an around-the-clock basis. As soon as one shift of Magi finished, the next group took over from them, ensuring that the holy fire was never unattended. At such gatherings Magian pagans used prayer beads for the repetition of the *Yasts* (lengthy prayer formulas), reciting them over and over as they worshiped Ahura Mazda, *Sraosha*, the *fravashis* and angels.

Gah Havan	6am-10am	Gah Rapithvin	10am-3pm
Gah Uziren	3pm-6pm	Gah Aiwisruthrima	6pm-12pm
Gah Ushahin	12pm-6am		

Comparable organisational features appear in a Christian context. Christian prayer vigils were frequented by priests, monks, nuns and parishioners. In the Latin Church the prayer watches were known by the following terms; *Prime* (6 am), *Matins* (7 am), *Tere* (9 am), *Sex* (noon), *None* (3 pm), *Vespers* (6 pm), *Compline* (9 pm), and *Nocturn* (midnight).

From the 1200's Christians used the rosary or a prayer string, only it carried the official title the '*holy rosary*', perhaps indicating that there may have been other kinds of prayer beads in use in Europe, chaplets deemed unholy by the Church authorities. Mention is made in the Bible of the need for Christians to avoid praying repetitiously like the pagans. Clearly the exact form of rambling prayers recited differed immensely between the Christians (prayers for the intercession of Christ and St Mary) and the pagans (prayers of *worship* offered to the *fravashis*).

ROSARY BEADS WERE
CHRISTIAN VARIANTS
OF THE HEATHEN
CHAPLETS

The holy rosary is a string of Catholic prayer beads so-called because the beads were likened unto roses. By means of this chaplet, prayers such as the 'Our Father' and 'Hail Mary' were offered up to Christ, asking not only for his intercession, but that of the Virgin Mary, as the person meditated on the life and sufferings of Christ. It had clear applications when parishioners were reciting the penances designated by their confessor (which they would have to count), or for gaining divine indulgences against time they would have to spend in purgatory. According to legend they are believed to have first entered use during the 1200's AD, through the efforts of St Dominic, but strangely, they were never depicted in art from that era. From a couple of paintings dating to the 1400's we know that they were made from glass beads (termed paternosters ie; Our Fathers) - five groups of 10 small beads, each separated by a large one. A cross was not suspended from the bottom of the chaplet as it is nowadays, leaving them resembling bead necklaces.²⁶³

NOBODY KNOWS HOW
OLD THE ROSARY IS

Although pronounced holy through a series of papal decrees (the earliest being 1495 AD), the first origins of the rosary (or the 'holy rosary' to be more precise) are ultimately unknown.²⁶³ It may go back for some time however, since the Orthodox churches use knotted prayer strings also. If the rosary was merely a 12th Century AD Roman Catholic invention, I think it highly unlikely Orthodox believers borrowed a Catholic custom during the age of schism if they felt that it was a borderline or unacceptable practice. Considering that Rome and Constantinople went their separate ways in 1054 AD, it seems the custom might be traceable to before that date, some 500 years before the decree of endorsement

MUSLIMS, HINDUS,
CHALDEANS AND
BUDDHISTS USED PRAYER
BEADS ALSO

Other types of chaplets can still be found in Asia and the Islamic East, where Muslims, Hindus and Buddhists continue to use prayer beads. In this part of the world Magian, Hindu, Buddhist and Chaldean chaplets were counteracted by the introduction of Islamic prayer beads. This being the case it is likely that the papacy decided to introduce its own Catholic chaplet to aid the process of converting Magian European pagans, by diverting their prayers away from the worship of the *yazatas* (which were praised using repetitious formulas), and directing the Magians towards a more Catholic understanding of the Gospel, in particular Rome's view of the Virgin Mary, and the nature of Christ's immaculate conception. It was probably very effective at achieving this aim, allowing prayerful devotees to meditate on Christ's sufferings and mysteries.

MAGI PRAYED TO GOD,
THE SAINTS, GENII AND
ANGELS USING PRAYER
BEADS

Contraception

CONTRACEPTION LED TO
CRIMES AGAINST
INNOCENT LIFE

Catholicism and Magianism can equally be seen as fertility religions. In Zoroastrianism, the white priests implored the faithful to protect good and innocent life at all costs. Contraception²⁶⁴ was a grave crime against life, and illicit sex was equally grave because of the sins it engendered and because eventually it resulted in the issue of child, which further caused the parties to consult midwives who brought their poisonous concoctions to extinguish that new life. The same theme of prohibiting contraception, magical infertility aids and abortifacient poisons appears in the Christian 90 AD document the *Didache* (which is said to have been tainted by heresy on account of its quasi-dualistic tone).²⁶⁵ The topic of illicit sex (translated by the Church fathers by the word *porneia*) was given wide coverage in those early days too. For the white Magi the willful destruction of the human seed was deemed inexpiable in this life and the next, on account of the level of 'crime against the Holy Spirit', the giver of life, and meriting an horrendous three-day punishment in molten metal.²⁶⁶

SODOMY WAS THE
ULTIMATE MISUSE OF THE
GENERATIVE ACT

Traditional Zoroastrian, Jewish and Christian teachings speak of homosexuality as an abomination that would be severely punished in the next world. Magian doctrine was very clear on this point.

'About the enmity of the Kai sodomite Akht, the heretic of the dark existence, to Zarathustra; and the causing of disturbance, by him and the wicked of similar kinds to him, among those who follow Zarathustra is extreme and the primeval hellish existence is for them'.²⁶⁷

Jews and Zoroastrians originally believed they should not wait for the hereafter to witness the destruction of the sodomites, they were to begin their divine punishment and destruction in the here and now, by killing them on the spot when they were caught in the act. The Church has always preached that homosexuality was evil, but has never espoused the need to kill them. Instead, it called upon the laity to understand their human frailty, whilst at the same time avoiding this form of sexuality.

MARRIAGE IS NOT
PECULIAR TO
CHRISTIANITY

Marriage

Marriage existed throughout the heathen world, predating the onset of Christianity. The Magi preached that,

'It is necessary for mankind to make an endeavour, so that they may espouse a wife in their youth and beget a child. And for women, in like manner, it is necessary that there should be a longing for espousing a husband.'

Because it is declared in revelation that every duty and good work a child performs becomes the father's and mother's, just like those which they have performed with their own hands'.²⁶⁸

Because Rus' society was a melange of Vedic and Iranian religiosity we can infer that marriage was an integral part of their society. For instance the Russian word for 'a wife' *zhena* probably came from the Avestan Persian *ghena* 'pertaining to women'.²⁶⁹ In modern Russia when people marry, they are said to *Igrat' scadby*, or literally 'act a drama of marriage'. Furthermore the woman is said to *Vykhodit' zamyzh* (lit. go outside for the man). These terms seem to be fossilised remnants of marriage rites once performed in heathen Russia. Vernadsky mentions that pagans married after the performance of a play which began with the search for the bride, a drama which took the various actors from their own home to that of friends and family, and then finally to that of the future wife, who would come outside to greet the husband as he arrived. Apparently riddles were another important part of marriage also.²⁷⁰

This Old Russian custom has an immediate parallel among the Parsees (modern Zoroastrians) who perform a play, that serves as a rite of passage into married life. During the act the groom begins a lengthy search for his bride, checking out the houses of those known to him, and finally ends up at the place where the bride-to-be lives. Following the acceptance of the groom by the bride they were joined together in a ceremony conducted by two Mobeds (the modern Parsi word for the Orthodox Zoroastrian white Magi). The rite itself was a binding, requiring that a couple be encircled by a length of holy chord, tied to symbolize their union. Marriage literally meant tying the knot, a very familiar phrase to westerners.

In Russia, during the Christian era, Christian priests tried to prevent *Volkhvy* (Magi) participating in wedding ceremonies, and so protected married couples from their influence. Presumably the Russian Magi wanted to celebrate marriages, but were prevented from doing so.²⁷¹

Marriages usually occurred within the same village, but may have included out-of-towners. Future couples were betrothed rather early in life, typically after the female's first period, since it was considered sinful to leave a field unsown. This provided topical discussion for relatives, because even more than being a union between two people, marriage was a joining of two bloodlines. People required parental permission to marry, and wives were selected or given the nod by the father of the house.

Wives had more legal standing than a concubine and legally entitled to own property, so husbands had to be more respectful of them.

With Aryan traditions being so patriarchal, women naturally adopted their husband's family name and status. Should their husband die prematurely, they promptly lost their current legal status, and would remain so unless they were wed to someone else. Further east in India women often chose to die on their husband's pyre, rather than suffer the degradation and humiliation of life without them. This custom is known as *suttee*. In the past it was a common practice among the Hindus, and the *Law Books of Manu* talks of the spiritual merits enjoyed by women who die on their husband's pyre. Nowadays Indian authorities still encounter the custom, and aim to stamp it out.

Suttee appears known to the Slavs, for as the *Strategikon* states "when their husband dies, many (Slavic women) look upon it as their own death and freely smother themselves, not wanting to continue their lives as widows".²⁷²

Women were entrusted with maintaining the household, including the home finances. Men normally gave their wives much of the housekeeping money to look after, which was usually placed inside their belt pouch. Many Russian women carried daggers (hung around their neck on a chain) for their own protection and to ward off would-be thieves.

In Aryan times, women were married after receiving a silver thread (*thali*) which was sewn into their scarf, but in pagan Rus' that thread probably took the form of a highly valuable marital-necklace. This was the thread used to bind their new family together. In the epic tale *Svyatogor, Mother Earth and Destiny*, Svyatogor ran across a smith who was forging fine metal threads, that held the fate of a couple soon to be married.²⁷³ Rus' women received one silver status necklace for every 10,000 silver coins of their husband's accumulated fortune at their wedding. Thus, wives were a very expensive business in both the Christian and pagan times.

Sure, failed marriages did exist, but divorce and social disintegration were rare in the extreme. So committed were the pagan Saxons to the concept of marriage, they demanded that adultresses string themselves up, and that

following their death and subsequent cremation, that the offending male should have a rendezvous with the noose.²⁷⁴ Alternatively the pagan fornicator, if she be a woman, might be paraded through the streets, and along the way buffeted and kicked, as groups of women beat her to the point of death with sturdy rods.²⁷⁴ St Boniface confirmed that the pagan Western Slavs held the institution of marriage in such honor that widows accompanied their husband's remains into the flames. In Ibn Fadlan's account of the Rus' funeral on the Volga, a concubine offered to die, to accompany her chieftain into the afterlife. In effect Ibn Fadlan's recollections amount to a visual confirmation of what Boniface noted, though in Rus' rather than western Slavia. Collectively the writings of Boniface and Ibn Fadlan provide information which supports the existence of Aryan marital customs in Europe.

As stated in Part I of the *Forbidden History of Europe*, the Magi believed in the next-of-kin marriage, namely marriage to relatives. This can be traced back to a belief that humanity sprang from the loins of Masha and Mashoi (a Magian version of Adam and Eve), and hence everyone was related to each other anyway. Wedding cousins, for instance, helped preserve the purity of one's family bloodline. Inter-family liaisons were regarded as especially holy as a consequence of this. Therefore it is plausible that incestuous marriage was practiced by the pagan Slavs. Incest was certainly known in Early Modern Norway, where twice as many were burned at the stake for it in the Christian era than for witchcraft.

MAGIANS PRACTICED
EUGENICS

Among the Magians some families were more admirably endowed with the royal blood, and it was of great benefit to intermarry with them if the purer family considered such a liaison acceptable, and unlikely to degrade the progeny destined to issue from the union in future.²⁷⁵ It was therefore imperative that such unions be carefully planned and arranged.

THE WHITE PRIESTHOOD
WAS CONCERNED WITH
THE ADVANCEMENT OF
LIFE ON EARTH

The Magi served as custodians of life and growth. It was their holy duty to promote the propagation of trees, crops, flowers, herbs, livestock (especially calves) and above all children. To fail in these matters was to fail the God of the Light, to fail life itself by allowing naturally created things to cross over into death's clutches unopposed. Marriage, childbirth, agriculture and animal husbandry became potent weapons against the great demon of chaos Ahriman, causing him a great deal of pain and anguish. In this respect the white Magi and the Church were in full agreement; fostering life is a holy duty. Practically and doctrinally speaking contraception, abortion or infanticide were regarded as profoundly evil in both faiths. Catholic and Magian families tended to be rather large for this very reason. As stated in Herodotus Persian kings awarded special prizes to those women who gave birth to extraordinarily large numbers of children.

The souls of children that died well before their time were to be dedicated to the heavenly lord through the performance of the *Sroshi Yast*, the ceremony of Sraosha the Deliverer, which would see it lifted straight up into heaven, where it could plead with Ahura Mazda on behalf of its parents. If this ceremony was not carried out, then the child's soul would depend utterly on the destination of its parents' souls.²⁷⁶

IT WAS A CRIME TO
LEAVE THIS WORLD
WITHOUT SIRING/GIVING
BIRTH TO A CHILD, OR
WHERE INFERTILE,
ADOPTING A CHILD

Magian scripture records a number of marital customs, which the Church regarded as impious or dastardly. For example, if a white Magian man died without having had a son, then it was believed his soul would not make it over the Khinvat star bridge. Without a son (who they termed 'a bridge') to pray for his parents' souls, and carry on his father's name, the parents, both mother and father would fall down into the abyss and rot in hell. Why? because their lives were unfulfilled, utterly contrary to the sacred mission of bringing life into the world. To this end if a man's brother or father-in-law had fallen in battle, without having had a son, then it was a kinsman's or kinsman-in-law's duty to sleep with the wife in order that they might give birth to a child, but, more particularly a son. Such a child belonged not to the relative, but to the deceased. A similar custom was known to the Vedic Daeva-worshipping Aryans,

*'Should the husband of a childless woman die, she must go to her brother-in-law, through desire to obtain a son, after having received the required authorisation from her Gurus. And he shall have intercourse with her, till a son be born. When a son is born, he must leave her. It would be sinful intercourse otherwise.'*²⁷⁷

Christian condemnation of these Aryan mating rites probably ignores the fact that such social obligations were actually a fantastic way to care for and honour war widows. In this manner a woman continued to be accepted by

her late husband's family, who provided moral and physical support. By having a child to the family, the woman was more likely to have someone to care for them in their old age.

Owing to the presence of widespread Magianism in various parts of Slavia, the heathen Russian royals probably observed similar traditions. The Russian *Primary Chronicle* records that following the war between the Russian princes Yaropolk and Vladimir' (in which Yaropolk was killed), Vladimir bedded Yaropolk's Greek wife (a former nun), who bore by Vladimir the son Svyatopolk, who Vladimir did not love.²⁷⁸ There is also a different tradition concerning this tale listed in the *Tale and Passion and Ecomium of the Holy Martyrs Boris and Gleb*. According to this version, Yaropolk's wife was already pregnant when she came under Vladimir's roof.²⁷⁹ Which story is correct is impossible to say. Very little has been written about the earliest trends in pagan Slavic family life, so it is difficult to guess what the true extent of these things might have been. As you will later see, these and other unusual living arrangements were not unknown in Christian Europe, yet stridently opposed by medieval papal reformists. This suggests a heathen point of origin for the customs, if nothing else.

Pagan Russian royals believed it was acceptable, if not desirable, to possess numerous concubines. In his early pagan days, Khagan Vladimir I, *the Ardent Sun* (later a saint), had a harem of 10 wives and 800 delectable concubines²⁸⁰ whom he kept for the satisfaction of his every whim, just as the Greek, Indian and Persian kings once did. Grand princes, petty princes, boyars and eminent personages could be expected to have any number of wives too. The *Primary Chronicle* does not state if Vladimir's predecessors kept harems also, though in fairness few personal details were preserved concerning the pre-Christian Rus' monarchs. Even so, harems could well have been the expected thing.

Rogned, the daughter of Rogvolod, a Norseman who was the prince of Polotsk, refused to marry prince Vladimir' because, though still a prince, his mother was a slave, and instead she preferred to wed Prince Yaropolk.²⁸¹ Not only does this account reveal a desire for intermarriage between Norse and Slav royals, but it also shows that while both Vladimir' and Yaropolk were 'sun' princes by blood, they both had a different status with respect to each other, not centering so much on whether or not a prince was a prince, but the degree to which a prince was a prince. Rogned's marriage to Vladimir' was detestable on account of the fact that he was of lower birth than his brother (by a different mother). Despite the lowliness of his mother's side Vladimir' wasn't prevented from becoming the highest of all princes, though he was looked upon disdainfully when compared with other royals possessing a more prestigious pedigree.

If a woman of such low station (in fact *the lowest*) could sleep with a prince and still beget a prince (of lower status), then what can we say about the number of princes born annually to the several hundred women which graced Vladimir's harems situated at Vyshgorod, Berestovo and Belgorod?²⁸² Hundreds of princes and princesses might have been born yearly from them alone, and that is before you take into account the many other women he allegedly seduced, or the offspring of the many other petty princes who ruled olden Rus'. But something is strange here. Literally hundreds, if not thousands, of princes and princesses are absent from the historical record. *We find no mention of these other princes in the Chronicles*. Who were they? Where did they reign? What happened to them? One possibility is that since *Bieloknyazi* (literally 'the White Princes') was a Western Slav name for pagan priests, harems were tasked with producing white Magi, in addition to sacral kings, princes and princesses who assumed governmental rather than religious posts.

The cited example concerns Russian royals. Even so, Western monarchs and clergy were similarly captivated by such marital customs in the post-conversion era, and repeatedly censured by the reformist Catholic Church for doing so.

Despite the fact there are no surviving details concerning pagan Russian or Persian harems, we can still gain an insight into life within a typical Aryan harem by consulting the *Puranas*. Within them we find various provisions stipulating acceptable harem conduct.²⁸³ These religious regulations applied in equal measure to the Aryan monarch, as it did to his wives and concubines. Women who brushed aside the king's advances, who stirred trouble with the other women, or acted disrespectfully could be ejected from the harem.²⁸⁴ By the same token the king had to keep his women supplied with valuable clothing, gifts and amusements, and protect them from every danger.²⁸³ In return the

king's ladies had to treat him with utmost reverence, showing every gratitude, and delighting in his presence.²⁸³

The king was to revel in the petting supplied by his wives, yet not become debauched and overly lascivious, for it could lead to 'disease'.²⁸³ Upon retiring at the end of the night the monarch enjoyed the attentiveness of his most favoured women, thereafter retiring to his bed chamber alone.²⁸³ His wives woke him in the morning with love play and scented oils, paying particular attention to dressing the 'edible thing';²⁸³ a bright start to what could otherwise be an ordinary day. The harem, therefore, served as a palace of earthly pleasures. Whether or not Aryan harems existed for the sole purpose of producing royal successors is not mentioned in the *Puranas*. Successors were no doubt desired by the king, and it was here in the harems that they were conceived. Yet having so many wives entailed a certain element of risk. Harem wives who carried the king's children were to be particularly watched, and their intra-harem machinations and intrigues guarded against, at every stage.²⁸³ The issue of succession amongst the royal progeny loomed large in the minds of royal mothers, and could give rise to damaging conflicts.²⁸³

As they grew, princesses were carefully schooled by the king in proper behaviour and etiquette, and his sons, the princes, were placed under the care of a foster-guardian, who gave them a good grounding in the arts of lordship.²⁸³ These would one day be needed, should they ascend the throne after their father, or simply perform regional appointments bestowed upon them.²⁸³

In pagan Rus' the average freemen might have had as many concubines as he could afford, and probably the more one owned, the more respect one gained socially. From Ibn Fadlan we find that most concubines were slave girls, either personal or tribal, or I guess widows who did not ride the cremation flame. Concubines were to be obedient to their master, any refusal being a sign of gross disobedience, demanding immediate disciplinary action, or abandonment. In cases where they had been insolent to their master in public they would be certain to cop a real beating (or whipping) irrespective of whether guests were there or not. Children born to bought concubines were not legal people, they, in their turn were slaves, the property of the 'Man of the House'.

'The issue of those women who have been purchased for a price (ie; slaves) belongs to the begetter. But when nothing has been paid for a woman, her offspring belong to her legitimate husband'.²⁸⁴

Ritual garments

Zoroastrians considered it sinful to remove their sacred shirt and girdle, so although initially made of white linen, they frequently acquired a grubby grey appearance due to their prolonged wearing. *Early Christians are not known to have worn these garments for daily wear*, although they did don a pristine white robe during the ritual reception of baptism. In analysing one description of parish life in the ancient See of Antioch, we can see that the Church may have countered the wearing of this Magian 'Robe of lesser priesthood' by demanding that parishioners only attend mass in clean clothing.²⁸⁵ Islam made Zoroastrian converts pray without belts or shoes. On the other hand the Magians believed that;

'At night when they lie down, the shirt and girdle are to be worn, for they are more protecting for the body, and good for the soul. When they lie down with the shirt and girdle, before sleep one shall utter one Ashem-vohu (a particular prayer), and with every coming and going of the breath is a good work of three Stroshe-karanams (scourgings)'.²⁸⁶

'The sin of running about uncovered (ie; without the holy belt and shirt on), as far as three steps, is a Farman (3 dirhems) each step; at the fourth step it is a Tanapular sin (1,200 dirhems)'.²⁸⁷

Medieval black witches were in the habit of wearing silken belts and clothing. This might be related to *Shayast La-Shayast IV: 1 'A sacred thread-girdle, should it be made of silk, is not proper'*. Silken belts (and perhaps raiment) probably signified black Magian attire, since it was sinful for white Magi to dress in that manner.

Even medieval monks concerned themselves with the matter of girdles. In an account tendered by one Western

European abbot, he exclaims how the demons made his body bloated with gas that distended his belly to such an extent that *he was even forced to untie his belt*, which amounted to a breach of obligations then current. But after their assaults had passed, he was then able to re-tie the belt in the prescribed way.²⁸⁸ Clearly the abbot regarded the removal of his belt as a serious matter, and made every effort to stress to his readers that he adhered to the proper procedures on belt-wearing; only the efforts of the demons could thwart his pious attention to such details.

The priest's curse

The notion of a divine curse (anathema) is not one that sits well with Christians, yet we see Jesus invoke such a curse on the tree that bore no fruit, an allegorical description of the unrepentant sinner. We find such a curse directed against a practitioner of incest within the immediate nuclear family, in Paul's letter to the Christian congregation at Corinth;

'It is reported commonly that there is fornication among you, and such fornication as is not so much as named among the gentiles, that one should have his father's wife ... For I verily, as absent in body, but present in spirit, have judged already, as though I were present, concerning him that hath so done this deed. In the name of our Lord Jesus Christ, when ye are gathered together, and my spirit, with the power of our Lord Jesus Christ, to deliver such an one unto Satan for the destruction of the flesh, that the spirit may be saved in the day of the Lord Jesus ... Therefore put away from among yourselves that wicked person'.²⁸⁹

Christians of some notoriety, who had been a persistent participant in serious evil, especially in a public place, were likely to fall under the priest's curse; that of excommunication. Excommunication was a spiritual banishment from the Church community, an eschatological act preordaining abandonment by God, indeed a condemnation to the well-stoked eternal fires until repentance occurred. It was so to speak the sword of God, one that cut away the bad from the good, the diseased from the healthy. Normally this damning penalty was reserved for apostates and heretical agitators. Accordingly all practicing magicians were automatically excommunicated by the nature of their deviation from Church practices. As St Paul put it, the individual was formally 'handed over to Satan'. Once excommunicated an offender could not enter a Church, or accept communion. Nor could they be buried in holy ground unless the curse of banishment was lifted by a bishop, or clergyman permitted to do so.

Western tradition declared that not even the slightest good deed performed by the excommunicated soul would be acknowledged by God until absolution was sought, through the sacrament of reconciliation. Byzantine priests meted out penalties of excommunication from time to time but did not agree with such rigid and relentless Catholic severity.

The Christian priest's curse, has many parallels with the Iranian *yazad* curse (the 'Curse of the Wise Ones'), the mightiest weapon of the white Magi in their war against blackness and evil. With white wizards being incarnate angels and archangels, it amounted to a formal curse of banishment, the most painful penalty they could ever direct against a human being. In so doing the malefactor was cleaved away from God, pushed aside to the camp of the arch-nemesis Ahriman.

The white Magi exhibited hyper-phobias about ceremonial irregularities, deeming them an integral feature of ritual demonolatriy. And it is probably for this reason that converted pagans and Magian Christians felt rather disturbed by changes to their ritualism, which took place as the Church gained power, as the old guard ceded to the new. The forebodings and even loathing of the freshly converted pagans, are found in the writings of St Cuthbert. In 7th Century England a group of bystanders jeered some monks in danger of drowning. Refusing to render them any assistance they cried *'Let no man pray for them and may God have mercy upon none of them, for they have taken the old religious observances away from men, and nobody knows how the new ones are to be observed'*.²⁹⁰ Again the inference here is that the pagans had formal sets of dearly-held beliefs and ritualism prior to their conversion, and the arrival of the Church sacraments caused unimaginable confusion and grief for some, but by no means all.

CHRISTIAN PRIESTS AND WIZARDS WERE ABLE TO UTTER CURSES AGAINST THE UNHOLY

THE CURSE WAS CALLED EXCOMMUNICATION

THE MAGI CALLED IT THE YAZAD CURSE, THE CURSE OF THE WISE ARCHANGELS

MAGIANS FEARED CEREMONIAL IRREGULARITIES

CONVERTING TO CHRISTIANITY DISTURBED THEIR PREVIOUS RITUAL OBLIGATIONS

The uninvited guests who sat at Christ's wedding table

And Christ said to the Jews that he preached to:

*'I am the Good Shepherd: and the Good Shepherd giveth his life for the sheep. But he that is an hireling, and not the shepherd, whose own the sheep are not, seeth the wolf coming, and leaveth the sheep, and fleeth: and the wolf catcheth them, and scattereth the sheep. I am the Good Shepherd, and know my sheep, and am known by mine. As the Father knoweth me, even so know I the Father: and I lay down my life for the sheep. And other sheep I have, which are not of this fold (flock): them also I must bring, and they shall hear my voice: and there shall be one fold and one shepherd.'*²⁹¹

St John the Apostle recorded this parable which serves to imply that there was another flock besides the people of Israel, who would surrender their allegiances to Jesus Christ, and accept him as their shepherd. From a Jewish-Christian angle, this is a parable about the salvation of the Gentiles, the advent of their acceptableness to God. In unison with the Jews who believed in him, the Magian converts formed a new Church, an outgrowth or culmination of both Old Faiths.

In another *New Testament* parable told by Christ,²⁹² the king's messengers were to bring an invitation to his intended guests (the Jews), asking them to attend the wedding feast of his son (Jesus). But it goes on to say that these expected guests refused to come, at which their Lord was greatly disappointed. Not content with rebutting the offer, they even went so far as to beat and kill the messengers. Their king's anger consumed him upon hearing of this outrage, so he sent his army to destroy the city. He then told the servants to go out into the streets and tell whomsoever would listen to come to his kingdom in the afterlife. Behind this scripture lies an inference that the pagans, those who were originally 'the uninvited guests', would eventually become the invited guests of the Father in heaven. Whereas the Jewish people, who had been *the desired guests* would snub his offer, and suffer the destruction of their city for killing the Father's messengers.

So who were these other unexpected guests? While the Gospel may or may not have been deliberately written in such a way as to entice the Magians into believing that Christ was *Sraosha*, the fact remains that to the Magian mind, it is jam-packed with blatantly obvious scriptural references which they would have guessed had special significance for them; unveiling the life and death of a figure, both man and God, whose worldly actions matched those of their much-awaited pagan Messiah, *Sraosha*. In their quest to identify *Sraosha*, Zoroastrians (and by inference Zurvanites) were faced with pagan scriptures that stressed the sufferance attached to making a wrong choice. To follow a false-Sayoshant was an abominable apostasy, but to abandon the real one when he came meant certain doom, for the *Sayoshant* was the giver of righteousness and eternal life. With the emergence of the Gospel, the life-story of Jesus Christ, the Magian nations, like the Jews, were left to deliberate upon the unenviable question; 'but is he the one?' For many he was truly the one, Christ, the King of all Kings. Ardent Zoroastrians and Jews stridently opposed any such supposition, concluding that Jesus wasn't the *Sayoshant* or Messiah, but a deceptive magician or vile apostate, hell bent on provoking a mass apostasy from their respective faiths.

Whether a missionary grasped the many similarities between Christ and the *Sayoshant* was utterly irrelevant, for the Gospel story itself contained all the essential ingredients, enabling Magians to formally identify Jesus as the World Messiah who the Magian texts termed the '*incarnate Word of God*', a phrase also found in the *New Testament* with respect to Jesus. As a result Persia and Asia Minor were an El Dorado of very eager potential converts. All a preacher had to do was walk around the bustling markets and taverns, and speak the words. It was like the story of Peter re-casting his net into the water at Jesus' command, after a fishing trip gone wrong. Each preacher found himself struggling to bring on board the massive hauls of fish, that he snatched up with every casting. It must have seemed like a miracle to the earliest missionaries, unwise to the secretive religion of the Magi. But it also meant conversions were haphazard and difficult to control.

GAINED CONVERTS TO
CHRISTIANITY IN THAT
PART OF THE WORLD

While the Apostles marvelled over these gains, little could they have known that the catch was in danger of turning sour on them, in so far as Jewish primacy in the Church was concerned. Zoroastrians and Zurvanites may have been Christianity's largest pool of early converts, but paradoxically they were the well-spring of *every major heresy* of the Middle Ages. As you may recall, the pagan faith of Zarathustra was not expected to end, but undergo a renovation that would take place following the arrival of their Saviour *Sraosha*, and the Resurrection. If Christianity was the product of a 'renovation' of their Magian beliefs, and the Apostolic Church charged with stripping away the unwanted layer of the old faith, then it was essential that clergy stress to the flock what was fine to keep, and which traditions were unacceptable within the new order. For example, Zoroastrians believed in angels and saints and held five prayer sessions per day, at cockcrow, midday, midnight, 3 am and 3 pm. Later Christians and Muslims also maintained these same prayer schedules. What had to go, and when, were the very questions that gave 'heresy' so much breathing space in local parishes. It all depended on who a convert wanted to listen to, Apostolic priests, rabbinical Nazarenes, or Magian-Christians advocating drons, sacred shirts, barsom bundles and holy fires.

Small wonder Strabo tells us King Chosroes wanted to raze Constantinople to the ground, and turn the Christian missionary centre of Edessa into a pasture for sheep. These apostolic preachers were doing immense damage, spiritually vandalising their ancient faith, a scenario replicated among the Jews of far off Israel, but to a lesser degree. Learned Magian high priests appeared before Emperor Shapur polemicising against the Christians, who they termed '*the Nazarenes*'.²⁹³ This phraseology should not be misconstrued as a reference to actual Nazarenes. While it is incontestably a direct allusion to the sect of Judaeo-Christians, formerly deemed heretical in apostolic times, I believe it relates more to the wider Church which had mutated into something very similar to Nazarenes, owing to successive centuries and layers of censorship and intense judaising within episcopal fora. In the Magian mind Christians and Nazarenes were considered one and the same. In response to homilies enunciated by missionaries, Christian converts were contaminating holy fires and causing all sorts of havoc for the Magi. These intrusive acts aimed to disrupt and degrade Zoroastrian public worship. Being the religion of state these activities signalled a call-to-arms in defence of Ahura Mazda. And so came Sassanian state repression of Christianity on a grand scale, which at some points appears to have focused on bishops, most destined for the death sentence. In a trial leading to the execution of two bishops Shapur informs them he is '*of the race of the yazads (archangelic genii)*',²⁹³ and reviles their discordant anti-Magian behaviour, in particular the extinguishing of holy flames, long considered the product of demon worship. In a parting snipe at their god Yaweh the king rhetorically asks the condemned clerics '*Who is the God who is better than Ohrmazd, or whose anger is harsher than Ahrimans*'?²⁹³

The backlash ran hot and strong until the reign of Hormazd IV. Unlike earlier Sassanian monarchs Hormazd IV was well known for his ecumenical spirit and multiculturalism, hoping to glue his kingdom back together. This astute monarch evidently realised that Orthodox Zoroastrian bravado,²⁹³ and its vigilante-style persecution of non-believers was destabilising Sassania and his own sovereignty. The situation was bound to degenerate even more drastically following the clamp-down on conversions by the Orthodox Zoroastrian priests.

With their movements curtailed, Christian priests could no longer monitor and guide the progress of these conversions. Consequently the apostolic version of the faith climbed on board a roller-coaster of uncertainty, taking a very great number of infant Christians out of school, and down unpredictable, untravelled pathways. After 1,000 years in this state, Magian-Christians could only have believed that theirs was the true version of Christianity, and would have been very annoyed with Byzantine and Roman Catholic insinuations that it could be otherwise.

Over the next few chapters we will examine a range of historical sources, mostly written by Christian clerics. Considering the phraseology employed one might guess they are questionable as an historical yardstick. Yet those who have attentively read the preceding chapters of this book will instinctively know what sort of issues are being attacked.

The conversion of Europe

Franks and Saxons convert

GAUL BECAME CHRISTIAN IN THE 3RD-4TH CENTURIES AD, BUT HAD TO BE RE-EVANGELISED FROM THE 6TH CENTURY AD ONWARDS

Much of Gaul had been evangelised by Christian missionaries during the 3rd and 4th Centuries AD. But all their work dissipated after a series of political and religious reversals, thus requiring a secondary wave of missionary work by Irish monks from the 6th Century AD onwards.²⁹⁴ It is thought the heathen Franks were responsible for the widespread de-christianisation of Gaul under their initial period of rule.²⁹⁵ A similar situation unfolded in early Christian Britain with the arrival of the Anglo-Saxons, who inherited a land where the culture was still distinguishable as Romano-British, long after the Romans had pulled out. With them came the very Germanic kings that changed the political orientation of Britain away from Rome towards heathendom. With them came at least one:

'temple ... filled with various adornments, where the barbarians of the area used to make offerings and gorge themselves with meat and wine until they vomited; they adored idols there as if they were gods, and placed there wooden models of parts of the human body whenever some part of their body was touched by pain'.²⁹⁶

To recover lost ground in Gaul, a counter-missionary adventure was launched by bishop Remigius of Rheims to entice Christian backsliders and pagans to enter or re-join the fold.²⁹⁶ Through his efforts, and the accomplishments of his successors, the long-abandoned ruins of former parishes (and even cathedrals) were reclaimed from their dilapidated states to once again house the faithful.²⁹⁶ This was the greatest phase in the evangelisation of Europe, and its speed and efficacy was perhaps only bettered by the Nestorians in the Far-East.²⁹⁶ Under the Irish clergy, Roman Catholicism received its greatest boost through the conversion of the Merovingian King Clovis (early 6th Century AD), though the path to realising a faith in those regions that even faintly resembled the faith espoused by medieval Roman reformists was still very distant.²⁹⁶ Gregory of Tours tells us how it happened.

THE CONVERSION OF CLOVIS

The son that Clovis sired in Clothild was to be baptised for Christ according to her wish. But Clovis opposed the consecration of his heir to a foreign God. She went on the attack *'The gods whom you worship are no good ... carved out of stone or wood or some old piece of metal. The very names which you have given them were the names of men, not gods'.²⁹⁷* Clothild went on to deride Saturn and Jupiter (a seducer of his own sisters and cousins), adding: *'What have*

Mars and Mercury ever done for anyone? They may have been endowed with magic arts, but they were certainly not worthy of being called divine'.²⁹⁷ These very gods featured in Chaldeanism and Magian Zurvanism, each accorded a mortal representative and an idol fashioned by the telestic art.

Clovis defended paganism, saying that all creation was made 'at the command of our gods'.²⁹⁷ In open defiance of her regal spouse, Clothild bade him baptise Ingomer, but the child died just after being removed from the holy water font.²⁹⁷ A similar fate almost befell their second son.²⁹⁷ These incidents were seen as omens, reasons for not seeking to convert. Not much later Clovis' forces were practically annihilated in warfare with the Franks, but a drastic change in fortune took place the moment he looked heavenward to Christ, petitioning him for assistance. He thus converted, but feared that his subjects would resist a change in faith. Gregory of Tours notes that Clovis' fears were unfounded for they unanimously, and quite spontaneously cried out 'We will give up worshipping our mortal gods, pious king'.²⁹⁷ It stretches the imagination too much to think that the transition to the new faith occurred with such apparent ease. Everywhere pagan customs prevailed. For instance during these missions in relapsed Gaul, a certain Christian set ablaze a heathen sanctuary.²⁹⁶ The man involved hastened to Clovis seeking protection against the armed pagan gang which had tracked him there, intent on putting him to the sword for his transgression. It was only due to the skillful intervention and diplomacy of Clovis that the man escaped with his life.²⁹⁶ Clearly the Old Believers were powerful enough to waltz into the royal court intent on avenging the loss of their holy site. Nor did they take kindly to other alien customs imported by the Irish missionaries, things such as tonsuring.

Rome might have got its foot in the door, thanks to the Irish, but its problems were far from solved. Internal chaos resulted from Clovis' conversion, as militantly anti-papal factions gained ascendancy among the Franks. The Church lost considerable ground from then on. Not until the coronation of Charlemagne did the papacy find stout Frankish backing. Charlemagne preferred no-nonsense sword evangelism, requiring his Saxon subjects to adopt Christianity as a matter of obedience to the crown he wore, or die.²⁹⁸ This very ethos might have been a tenacious, though clouded, survival of an old belief. The 9th Magian book of *Dinkard* tells us that Magian kings were duty bound to oppose those who opposed *Sraosha* the Redeemer, becoming 'at every time a distresser of the wicked'.

Death was Charlemagne's prescribed penalty for anyone caught refusing baptism, cremating the dead, harming the Christian clergy, *desecrating churches*, or not observing the Easter feast days.²⁹⁸ Easter was dedicated to celebrating the Resurrection of Christ, the eternally-great moment when the Father purchased forgiveness and eternal life for mankind through the death of his only son. Charlemagne defended the festival with the most draconian of reprisals; capital punishment. As brutal and unforgiving as this method may have been, it did bring about an outward semblance of pious Apostolic Christianity among the Saxons, yet the old ways were never far away in the background.³⁰⁰

Life was not easy for the foreign missionaries working in Germany and Saxony. The earlier preachers could only look forward to risking their lives in confrontations with pagans and heretics, or starving from week to week.³⁰¹ St Boniface complained that his subordinate Catholic Christian missionaries 'lead a very bare existence ... cannot procure clothing without help'.³⁰¹ Evidently they were not drawing big congregations, hence few donations for their upkeep.³⁰¹ Evidently the aristocracy didn't want to pay for them either.³⁰¹ Financial attrition could be employed against the new order with great effect.

There was a great deal of conflict between the priests of the newly converted Saxons, and the Anglo-Saxon Christian clergy who came across from Britain to evangelise them. These Saxon priests (and the nobility) carried much influence with the emperor, and affected the manner in which the Holy Roman Empire was formed. In the years prior to their conversion the Saxons had a prosperous pagan religion, which was lorded over by their own special king, *who, as in so many other places, was an embodiment of the Sun, the embodiment of prosperity, and the mortal enemy of a dark entity called Death*.³⁰² As you will recall, Sun-kings of this kind were fairly commonplace in Assyria, Persia, Parthia and among the Slav pagans, and not forgetting the Khazarians who became Jews in the 8th Century AD. Certainly Rus' royalty carried 'Sun names', such as Yaroslav (Bright Slav, Bright Glory).

Anglo-Saxon clergy from the British Isles, were not always champions of the Roman Catholic cause either. Many still maintained the old conceptions of the role of kings and the intricate link between the reigning monarch's life and

the level of prosperity experienced throughout nature and society.³⁰³ Earlier, during the 6th Century AD, Pope Gregory sent a missionary monk by the name of Augustine to Britain on papal business, to discover the state of the Church in England. Upon arrival, he noted latent unorthodoxies which had come about because significant elements of the local British clergy originated among converted pagan Fire-priests; the *flamens* and *arch-flamens*. As in the Armenian conversion experience they conveniently slotted into their Christian vocation by fulfilling roles with a status similar to those once held during pagan times. And it is probably for this reason that Anglo-Saxon priests were heavily influenced by pre-existing customs of an essentially pagan nature. Elements of the Saxon clergy, though Christian, were still fairly pagan and continued to carry out the old ordinances. One wife of Louis the Pious mingled freely with the magicians who loitered about her husbands court, and was herself regarded as a perpetrator of demonic rituals.³⁰⁴

Many of the Merovingian and Carolingian kings considered themselves Christians, yet the way in which the faith manifested itself in their realms was at variance with what Rome expounded. Some tried very hard to maintain the high ideals of the faith, yet their ability to shrug off, or differentiate Catholicism from the ways of the past was minimal. Some behaved as would any good Christian ruler, but if they did otherwise, it was far more discrete. Still others gave the papacy cause for concern, for their misdeeds were not the byproduct of poor judgement, but 'crimes against the faith' and 'heresy'. At Amanburch in Germany, St Boniface converted two rulers who were guilty of *'the sacrilegious worship of idols which was practiced under the cloak of Christianity'*, and who *'practiced pagan ritual'*.³⁰⁵ These lords were pagan Christians. Though nominally Christian, a number of Germans persisted in the old ways;

'some continued secretly, others openly, to offer sacrifices to trees and springs, to inspect the entrails of victims...divination...auguries ... sacrificial rites'.³⁰⁶

The situation was made demonstrably worse in Saxony by the presence of Christian heretics in areas where the dukes had been overcome by the pagans;

'false brethren were brought in (by persons un-named) to pervert the minds of the people, and to introduce among them under the guise of religion, dangerous heretical sects'.³⁰⁶

'... by being misled by the insidious doctrines of heretics, they (the faithful) had forfeited their right to eternal bliss. For so thoroughly had the heretics quenched the light of (Catholic) religious teaching among the people, that a dark impenetrable gloom of error had settled down over a large section of the Church'.³⁰⁷

That is how Boniface's writings immortalise Rome's horror upon discovering the magnitude of things, the mass patronage of poisons, the soul-destroying heresies. Further eastward, Euthemius Zigabenus, Constantinople's top-gun heresiographer visualised the heretics as an impious snare for the unwary. Whatever the case, countless heretics were excommunicated following the fall of the Merovingian dynasty, with the help of armed force during his royal highness Pippin's time. They burned at the stake. These serial executions paved the way for synods aimed at ensuring the dissemination of 'true Catholic teaching', so that it could make stalwart progress. In 722 AD a similarly dismal picture was painted by Pope Gregory II, who stated;

'some peoples in the parts of Germany that lie on the eastern bank of the Rhine have been led astray ... and now serve idols under the guise of the Christian religion'.³⁰⁷

To them he sent the emboldened missionary Boniface, to remedy the said errors. Throughout Germany the 'mendacious perversions' which vampirically sucked life from the Church's doctrinal stance, only came to an end once *'the devil's disciples and the insidious seducers of the people... had been banished'*,³⁰⁸ for they and their ilk were the hungry, soul-consuming 'precursors of Antichrist',³⁰⁹ or so it was said. These heretics were not small fry either; a number of the German bishops were to be found amongst them.³¹⁰ For example, in 722 AD, at his swearing in, Boniface was required to make an oath of loyalty to the pope, and not to the Holy Roman Emperor, as had once

been the norm.³¹⁰ In it he professes that he would have no dealings with heretical bishops, and report their identities to Rome once they were identified.³¹⁰ Come 739 AD, Pope Gregory III sent his trusty legate Boniface on a fact finding mission to assess whether local Bavarian bishops were ‘true bishops’, not congregational shepherds of heresy.³¹¹ By Boniface’s estimation most appear to have been suspect.³¹¹ In Bavaria Boniface re-installed the teachings and sacraments of the Catholic Church, after reclaiming the Bavarians from beneath the noses of unidentified heretics (termed ‘immoral priests’) who had *provoked the destruction of parishes, and who had their own non-catholic bishops and ordained clerics.*³¹¹

Various points of heresy were not specifically due to the teachings of heretical sects, but poor immersion in Apostolic Christian religious dogma. Boniface hoped to heal this wound by enhancing the level of tuition offered to novice priests, but to do so he had to obtain from Rome significantly greater copies of the books of the Old and *New Testaments*, which as of the 8th Century AD, were still being circulated separately.³¹² The various books of the bible could not be effectively amassed in single volumes containing the complete range of scripture, because of the bulkiness of hand written manuscripts, their costliness and the amount of time needed to produce them. Once the German priests had been properly taught he guessed the heresies would fade away. And yet even in the face of reproof, some, if not many, continued to preach displeasing variations to the faith. In these instances the heresy was not generated through ignorance, but willful rebellion against apostolic doctrines.

Still Boniface might not have been wholly orthodox himself, perhaps ‘soiled’ by the ‘diabolical errors’ of the many ‘heretics’ he ungraciously and reluctantly mingled with daily, and who outnumbered Rome’s new spiritual ambassadors to a very great degree.³¹³ In correspondence sent to Nithard c. 716 AD, St Boniface wrote ‘.. *at the moment of death, the minion of the baneful Pluto (ie; the Lord of the Underworld), barks at the door, foaming at the mouth ... Finally they are snatched by the claws of fiends and borne off to the gloomy caverns of Erebus, there to suffer everlasting torments. There is no doubting the truth of this.*’³¹³ The Erebus mentioned here is most likely Mt Albruz, which the Magi held to be the mountain from which the star bridge led to heaven. But, according to the Magi, the ‘*concourse of the demons*’ lay beneath it, the infernal hollows above which hovered devils ready to steal off with the souls of sinners who had toppled off the star bridge, weighed down by the burden of their wrongdoings.

Reform movements did not only belong to Rome. Pagan preachers went on their own counter-attack, attempting to coerce Boniface into abandoning Roman Christianity. They recommended he ‘*return to the worship of idols.*’³¹⁴

The correspondence of St Boniface provides an insight into the preaching methods they employed when attempting to convert the pagan, as well as the level of support bishops from different countries gave each other in this venture. The English Bishop of Winchester was Boniface’s shoulder to cry on.³¹⁵ Like a wise mentor, he proposed that Boniface refute the teachings of the German pagans using various forms of reasoning, broaching the subjects ‘*not in an offensive and irritating way.*’³¹⁵ Handy topics worth using included the family lineages of the pagan gods (which the Northern pagans were apparently unable to agree upon at that time), and why it was that the fertility gods seemed to have abandoned the pagans to the frosty and agriculturally marginal north (whereas the Christians held the choicest fields).³¹⁵ ‘*From time to time their superstitions should be compared with our Christian dogmas and touched upon indirectly.*’³¹⁵

Among the many things which Gregory II demanded of Boniface we find a prohibition against the selling of slaves to pagans for the purpose of sacrifice, and that genealogical records on parishioners were to be kept to the 7th degree of consanguinity.³¹⁶ Marriage was not to be solemnised where both parties were closer than the 4th degree.³¹⁷ Priests now delved into Europe’s genealogical infrastructure.

In 726 AD Pope Gregory II replied to Boniface’s earlier questions that ‘*it is not fitting that two or three chalices should be placed on the altar during ... mass.*’³¹⁸ Boniface was evidently coming across masses, during which the celebrant was using 2-3 chalices.³¹⁸ Outwardly such a ceremony might resemble the multiple chalices of the Mithraic rites, the Magian *Haoma* rites, or the rubrics of the first heretical anti-pope, Hippolytus of Rome (which used two chalices for wine, and one for milk and honey).

Pope Gregory also made reference to pagans performing a baptism of their own, and he commanded the re-baptism of these same souls.³¹⁹ The baptism practiced by the white Magi may afford a good parallel, but insufficient

THOSE BAPTISED BY THE ‘FALSE-BRETHREN’ WERE TO BE REBAPTISED AS CATHOLICS

details were provided by Gregory to enable any further exploration of this possibility.³¹⁹

Pope Zacharias vociferously condemned the activities of the German/Saxon false priests, bishops and deacons; their multiple wives; their flagrant abuses of ecclesiastical law; their patronage of ‘*infamous unions*’,³²⁰ and the perpetration of murders. ‘*Are they not afraid to handle the sacred mysteries?*’ he asks rhetorically.³²¹

King Aethelbald was strongly reproved by Boniface in 746 AD, for seducing large numbers of nuns in the convents that lay within his realm.³²¹

‘*...when these harlots, whether nuns or not, bring forth their children conceived in sin they generally kill them*’.³²² Two other Mercian monarchs were likewise condemned for ‘*the violation and seduction of nuns*’,³²² but their expanded list of crimes included the destruction of monasteries.³²²

Boniface stressed the difficulties he was experiencing eradicating the use of magical incantations, divination, and talismans in Germany.³²³ The situation was even more intolerable considering that Roman parishioners were using similar ordinances and customs *beneath the very roof of St Peter’s Basilica in Rome, the nerve centre of Roman Catholicism*.³²³ If they couldn’t counter heathen rites at Rome, what hope did Boniface have in Germany, especially when Germans were holding up the happenings in Rome as the green light for such doings? ³²³ In 743 AD Pope Zacharias admitted that these unholy misdemeanours were rife in Rome once more, but added ‘*Because these evils were cropping up again, we strove to abolish them from the very outset of our pontificate*’.³²³

The many points raised here in connection with the activities of the Germanic, Saxon and Anglo-Saxon priests, lead on to the next subject, which concerns papal attempts to reform the Germanic clergymen.

Relapsae – The Heathen Dawn

At a time when the Holy Roman Empire and the papacy were busy squabbling over control of the Germanic Church apparatus, the lands of Western Slavia were fairly overflowing with pagan groves, temples and shrines.³²⁴ For those who made the crossing from one realm into the other, it must have seemed as though they were stepping into another world, setting foot upon the dark side of the moon

Extracts contained in Helmold and the *History of the Archbishops of Hamburg-Bremen* graphically illustrate the pure hostility of the environment in which the priests and monks operated during the mission to convert the Slavs (and pagan Saxons) on the periphery of the Holy Roman Empire.

It had always been so. In early Christian Gaul, before St Martin of Tours established his episcopal seat, Tours lacked a permanent bishop because ‘*In those days those who were Christians celebrated the divine office secretly and in hidden places. If any were discovered by the pagans to be Christians they were either beaten severely or had their heads cut off with a sword*’.³²⁵

If that is what it was like in areas with permanent parishes, it must have been an even more frightening experience for those clergy who worked up enough guts to walk across the barbarian frontier, bible and sacramental paraphernalia in hand, into what might easily be the jaws of death. If the medieval armies of the Frankish emperor were encountering stiff resistance from the multi-pronged assaults of Magyars and combined Dano-Slavic forces, that could penetrate the Western Roman empire even up to the gates of Cologne, how much more worrying and precarious was the predicament of the wandering priest.

Returning to the penetration of pagan themes into Europe, we might ask how it was accomplished. Earlier I raised the spectre of a pagan holy war, in which the pagans sought to protect ‘paganism’, by pushing back Christian expansionism into heathendom. It may well be that the following accounts were a manifestation of their dream to protect, and even advance, the Old Faith whatever the cost.

During ‘*the Saxon rebellion, ... Widukind, stirring up a persecution against the Christians, devastated the territory of the Franks as far as the Rhine*’.³²⁶

The Frisian monarch Radbod incited his pagan subjects to make repeated raids into the lands of the Frankish Prince Charles. As a result ‘*the greater part of the Christian churches ... were laid wasted and brought to ruin. Moreover, the pagan shrines were rebuilt and, what is worse, the worship of idols restored*’.³²⁷

THE PAGAN HOLY WAR
AGAINST CHRISTIANITY

'In the meantime the Northmenn ... subjected the Frisians to tribute' ... they besieged Cologne and ... set fire to Hamburg. The celebrated city was utterly ruined by the pillage and the fire. The church, monastery, the library collected with utmost effort, were destroyed'.³²⁸

'Saxony was overwhelmed by a most frightful persecution, as from one direction the Danes and Slavs; from the other the Bohemians and Hungarians wrought havoc with the churches. ...Hamburg was laid waste by ... the Slavs, ... Bremen by ... the Hungarians'.³²⁹

In bishop Unni's time 'the Hungarians devastated not only Saxony and the other provinces on this side of the Rhine but also Lotharingia and Francia.... The Danes, too, with the Slavs as allies, plundering first of all the Transalbingian Saxons then ... this side of the Elbe'.³³⁰

'the rebel Slavs wasted ... Nordalbingia with fire and sword; then, going through the rest of Slavia, they set fire to all the churches and tore them down to the ground. They also murdered the priests and the other ministers of the churches with diverse tortures and left not a vestige of Christianity beyond the Elbe'.³³¹

(The Saxons) 'Ordulf and Hermann ... were mindful of the ancient though concealed hatred ... their fathers had borne against the Church'. They decided that 'vengeance was now openly to be wrought on the bishop and the whole cassalage ... Duke Ordulf ... devastated ... the bishopric of Bremen in Frisia and blinded the vassals of the Church'. By his command the captives were 'to be publicly whipped and shorn; lastly, he in every way assailed, plundered, struck, and insulted the Church and its ministers'.³³²

During the early Middle Ages paganism was rampant in Saxony and among the Slavic nations.³³³ And there were other players. In the year 954 AD battles abounded as Magyars pierced the Bohemian heartlands, bringing to everyone's attention the dangers of the eastern menace, for they were widely regarded by the papacy as minions of the Antichrist, an appellation which presumably might have rubbed off onto those Bavarians who worked in closely with them.³³⁴

Come 955 AD, an alliance of several Saxon nobles and Slav chieftains was formed, which launched aggressive frontal assaults on Saxony, an uprising which was put down by the emperor, and provided the *causa bellum* for projecting his forces against the insurgent Slavs and rebel Saxons.³³⁵ The emperor's plans for war in the East were beyond his capabilities in many respects. The logistics of the operation necessitated a financial burden that was barely sustainable, and what is more, his troops had a poor knowledge of siegecraft, and were unlikely to have much success in assaulting the formidable fortifications of the Slavs. He had only to look to the past to see a litany of military failures, which greatly outnumbered whatever successes had been made by Frankish troops in military expeditions against the Slavs.

In 959 AD the arrival of a communique at Otto's court, from Ol'ga the Christian mother of the heathen Khagan Svyatoslav, requesting that he send a bishop and a priest to Kiev, allowed him to sense new possibilities for building an eastern power base.³³⁶ He would couple the acquisition of power with evangelisation, and use this as his platform for the eastern campaigns. But many things conspired against this, not the least of which was the fact that no priests were willing to undertake missions among the Slavs, preferring to leave them remain pagan.³³⁶ We might think that this was due to a climate of fear, especially when it came to light that Adalbert, one priest who did reluctantly go to Kiev, had only just made it back alive after his entire retinue had been slaughtered.³³⁷

Missionary work among the Slavs suffered setback after setback as viking raids increased in frequency and ferocity during the 9th and 10th Centuries AD. The fate of the border priests evangelising eastern Slavia was made especially precarious as numerous Slav tribes fell in behind the Norsemen.³³⁸ Rapidly multiplying pagan forces, acting with a greater sense of direction and purpose, provided certain Norsemen with enhanced military and naval capabilities. Slavic combatants were gainfully employed to wage war across a number of fronts, and bring conflict even father afield, even to Constantinople.

These audacious pagan military gambles, which split asunder the dominion of the western Christian emperor, were not only a reaction against the new faith, but the burgeoning taxes of greedy Dukes like Billung.³³⁹ Between 911 and 918 the Hunnish Magyars devastated all the German and Saxon provinces east of the Rhine River, and even fell upon Francia and Lotharingia, on the other side of the Rhine.³⁴⁰ During that same period a double-foe emerged, a combined Dano-Slavic force that unleashed a wave of terror in Saxony. One of the key figures in this incursion into the Holy Roman Empire was Gorm a 'savage worm'³⁴⁰ with a ferociously anti-Christian spirit. *'In his determination utterly to destroy Christianity in Denmark, he drove the priests out of his territories and even tortured many to death.'*³⁴⁰

THE EMPEROR
RETAIATED

In retribution King Henry began a series of retaliatory strikes against the heathen hosts which had violated the Imperial frontier. Attacking them one by one, he assailed first the Magyars with devastating effectiveness, then the Northern Serbs and Bohemians of Central Europe. Next he repeatedly triumphed over large formations of Slavs fielded by diverse tribes between 928 and 932, and again in 933-934 AD. His grand finale though, was an invasion of Denmark, where he beat Gorm into submission, and pushed northward the border as far as the Eider River. Though Gorm remained adamantly hateful of Christianity, King Henry still gained sufficient concessions to enable missionaries to operate there, if somewhat tenuously. The task of co-ordinating this missionary effort was left to Archbishop Unni, the only recorded preacher to attempt conversions on Danish soil since the failed missions of Ansgar and Rimbert some 70 years previously.

A DUKE HATCHED A
PLOT AGAINST THE
EMPEROR

Newly appointed to the Dukedom, Bernhard planned insurrection against the Western emperor.³⁴¹ To bring his conspiracy to fruition he stirred dissension among the Saxons, inflicting debilitating tyrannies on those who would not rally behind his cause, or who supported the Church.³⁴¹ He turned on the Slavic Winuli tribe, with whom the Germans and Saxons had come to be on good terms.³⁴¹ No longer able to stomach the outrages perpetrated by the Duke, violence simmered over, as Mizzidrag and Mistovoi advocated the abandonment of Christianity, and an immediate return to paganism.³⁴¹ The act which finally tipped the Slavs over the edge was an unbearable insult which the Duke flung at them somewhere between 963-983 AD. For the Slav chief had given a thousand horsemen to the Duke to engage in his campaign against the Italians, on the promise that he could wed Bernhard's niece.³⁴¹ With most of the Slav auxiliaries dead on a far off battlefield, Bernhard rescinded the proposed marriage deal, and labelled them dogs.³⁴¹ Mistovoi's response was *'if we are dogs then we will take big bites'*.³⁴¹ By this he meant the Slavic war machine would rain down on the Germans, and do immeasurable damage. Thence began the Polish insurrections of bitter memory, that gutted huge tracts of the Holy Roman Empire.³⁴¹

SOME OF THE SLAV
RAIDERS WERE SPOKEN OF
AS CRIMINALS

The Saxon Duke Billung Ordulph, son of Bernhard II, conjured even greater troubles for the Church through his alliances with the Abrodites and Wilzi tribes.³⁴² These pacts were formed after Billung seized upon an insidious plot according to which he could consolidate his domination of the area by harnessing the Slavs into raising their deadly hand against the Franks and Saxons.³⁴² This he calculated would draw down the emperor's fullest wrath and lead to vicious reprisals against the Slavs, following which Duke Ordulph could rule the area with minimal church interference.³⁴²

EVEN ONE MISSIONARY
WAS A DANGER TO
PAGANISM

Next came a new round of wars. The chief protagonists were an unlikely bunch; some Slav chieftains and a 'bad Christian', in addition to the Duke of Saxony and his Saxon subjects, who had caused the degeneration of Christianity in their region, by cutting off funding to the churches, thereby starving out the priests.³⁴³ *'Having brought together a multitude of robbers, he (the pagan Slav Gottschalk) smote, out of vengeance for his father, the whole land of the Nordalbingians.'*³⁴⁴ There, only two well-fortified settlements escaped his unrelenting carnage, until he was captured by the Duke's forces, and slapped in irons as though he were a 'robber-chieftain'.³⁴⁴ Prior to his apprehension he had tried to arrange a truce.³⁴⁴ The wording of his peace offer was preserved, and in it he declares he would hand over the 'band of robbers' who had aided him on his retributive forays into the Holy Roman Empire.³⁴⁴ Gottschalk went to live in the court of the Danish king Canute, and served abroad with Canute's forces in Britain, as well as Normandy, distinguishing himself by his heroic exploits.³⁴⁴ This Gottschalk then married into Canute's royal family and, upon Canute's death, returned to Wendland to recover his possessions, which had been commandeered by pagans in his absence.³⁴⁴

GOTTSCHALK
CONVERTED ONE THIRD
OF THE POLES SINGLE-
HANDEDLY

Missionaries were dangerous, even just one of them. After their relapse into paganism, roughly 30% of the Polish tribesmen were re-converted through the efforts of Gottschalk alone.³⁴⁵ Whereas previously the Western Slavs received precious little tuition in the teachings of the Catholic faith, Gottschalk's new initiatives created far better pastoral care than before.³⁴⁵ New religious centres were founded by brethren at Mecklenburg, Lubeck, Ratzeburg, Lenzen and even as far as Oldenburg.³⁴⁵

It was not long after that, in 1057 AD, that pagan upheavals again revisited the Church in Western Slavia. Internecine warfare broke out between the Wilzi (ie; the tribal federation of the Circipani, Kicini, Tholenzi and Redarii) and the Luticians.³⁴⁵ The trouble makers during these hostilities were the Tholenzi, and the Redarii foremost, militants who other heathen Slavs looked towards.³⁴⁵ They sought to install themselves as Western Slav rulers, with their claims to lordship planted firmly in the pre-eminence of the pagan holy sites gracing their domains, and the greatness of their noble stock.³⁴⁵

*'The Redarii and Tholenzi desire to rule because of the high antiquity of their stronghold and the great reputation of the fane in which there is exhibited an image of Redigast. They claimed for themselves special preferment in respect of nobility because, on account of the oracle and the annual offerings of sacrifices they were frequently visited by all the Slavic people'.*³⁴⁶

And there is no forgetting the influence of the Rani;

*'Now the Rani, who are called Runi by others, are a fierce people who dwell in the heart of the sea. They are given beyond measure to idolatry. They maintain a primacy over every Slavic tribe and have a king and a very celebrated fane. Wherefore, too, on account of the special veneration paid this fane, they hold first claim to respect. Although they impose their yoke on many, they themselves are subject to no one's yoke, since they are hard to reach by reason of the nature of their situation'.*³⁴⁷

Following the collapse of the Church's infra-structure during the pagan uprisings, the Slav temples were built anew. These resurrected Western Slav pagan temples were not re-modelled or refurbished Christian churches. After all, every last one of the chapels had been burned to the ground.³⁴⁸ But in a very short space of time immense capital outlays were made to rebuild the heathen temples.³⁴⁸ For their part, overseas contributors helped make this happen all the quicker; probably pagans sympathetic to the cause.³⁴⁸

Some clergy felt it was best to keep lobbying certain Slav rulers, to see if they could re-convert the Wends tribe by tribe. Bishop Gerold made one such risky venture into Slavia. After visiting the court of a prominent Wendish pagan, bishop Gerold recalled the following:

*'Still the cups of the Slavs were neither sweet nor pleasing to us because we saw the shackles and diverse kinds of instruments of torture which they were wont to use on the Christians brought here from Denmark. We saw there priests of the Lord, emaciated by their long detention in captivity, whom the bishop could not help either by force or by prayer'.*³⁴⁹

These incarcerated Danes were religious prisoners, layfolk and clergy, held by the Western Slavs. They languished there not because of their race or political persuasion, but because of their faith. Such sufferings were a foretaste of what the pagans themselves might expect in Christian jails once the tide had turned against them.

But there were other issues. The Ottonian emperors were supposedly supportive of the papacy, and leading lights in the reform papacy's push to wipe out simony and any other non-canonical heretical vice within the clergy, that seemed linked with the old ways. This succeeded in getting the German clergy off side, because his policies constituted a direct attack on them. The truth is, I believe, that the German clergy, like every level of German and Saxon society, was deeply connected with the pagan Western Slavs. They were in no mood to take Rome's judaised version of the faith to the Wends in the East. They simply refused to go. Despite this we have cause to wonder about the secret allegiances of Otto, who was addressed by the non-reformist Avignon Pope Sylvester II (himself of

'suspect' nature) as *'ever august Caesar ... my Glorious Lord Otto'*.³⁵⁰ Now Otto does not seem to have been the sort of ruler that later apostolic popes would have hoped for, somehow steeped in the Mithraic mysteries. He partook of ceremonial banquets at a horse-shoe table, that sat atop a dais, just as the brotherhood once did.³⁵⁰ Before him, onlookers and his many attendants witnessed the unfolding proceedings, bowing, in eastern fashion,³⁵⁰ in his presence. Apocalyptic motifs decorated his full robes,³⁵⁰ and *gold filagree zodiac signs* his cape.³⁵⁰ In his hands rested the orb of dominion, and a spear granting temporal power, otherwise known as the Spear of Longinus, or the Holy Lance (the Roman spear supposedly used to pierce Christ's heart as he hanged on the cross).³⁵⁰ A web of special, nay secretive offices were instituted by him, each bearing some semblance to those of Ancient Rome.³⁵⁰ If Otto III's personal entourage of clergy were party to the same warrior-priesthood, who in a very Mithraic way were also worshipping Jesus as an incarnation of *Sol Invictus* it may explain a recurring tradition of Christian warrior-priests. Boniface wrote *'We have forbidden the servants of God to wear showy or martial dress or to carry arms'*.³⁵¹ Similar traditions may have existed in Ireland. One Irish bishop of the blood, Cormac Mac Cuilleannain, had his seat at Cashel. He once dreamt of installing himself as the High King of Ireland, but his grab for power perished, as he fell mortally wounded in the thick of battle. Obviously he fancied himself as a bit of a warrior, not to mention a fitting king. Perhaps the military orders of Templars and Hospitalers were the last vestiges of this Christian sub-cult, an outgrowth of the ancient Mithraic mysteries.

SLOWLY THE EMPEROR
WORE DOWN THE
RESISTANCE OF THE SLAVS

Having eventually subdued many of the Slavs, the Frankish emperor put forth his desire for the right of political control over the entire Slavic East, but Pope Agapitus II allowed them as far as the Oder river only.³⁵² Agapitus was a man much preoccupied with the task of reforming the German clergy, and, in addition to that, intent on extending the influence of the Catholic Church over the pagan Scandinavians and Slavs. The sway of the Frankish emperors was to be halted there for the pope did not grant the German clergy permission to go proselytising in areas which it personally sought to tackle.³⁵² This might have been due to suspicions he held concerning undesirable influences in the German clergy at that time. Otherwise the pope might simply have wanted to curtail the emperors military exploits, where campaigns were conducted under a vague pretext of evangelisation. But the tide changed, as anti-reformists periodically gained power at the Vatican.

HE WANTED TO REVERSE
THE SITUATION AND
INVADE THEIR
HOMELANDS

UNDER THE OTTONIANS,
THE HOLY ROMAN EMPIRE
WENT FROM STRENGTH
TO STRENGTH

The creation of an exulted German nation under the Ottonians caused much disquiet among the other crown heads of Europe.³⁵³ Nevertheless Otto III (reigning 996-1002 AD) did manage to gain the upper hand in Germany, perhaps riding high on the nationalistic sentiments of a Germany which had climbed to ascendancy over the French under his family. Thus he began implementing his designs in the east, which were intended to win the Slavs over to the papal cause; since he desired to place the Poles and Magyars under the jurisdiction of the papacy, thus freeing them of the German Church.³⁵³ Under the standards of the emperor, Frankish troops waged war against the pagan Slavs who offered strong resistance to the overtures of Christianity. On the death of the last Ottonian emperor (1002 AD), his successor Henry, a Bavarian Duke, together with Polish mercenaries, attacked the Poles once again, and proved so victorious that his troops marched into Bohemia.³⁵³ Little quarter was given, with pagan Slav war prisoners often strung up.³⁵³ This came back to bite them during the 1030 AD pagan Polish uprisings against the Church, when many clergy were murdered.³⁵³

A MASSACRE OF SLAVIC
WAR PRISONERS IN
BOHEMIA

CONVERTED SLAVS
SWAPPED SIDES, JOINING
FORCES WITH THE
CHRISTIAN EMPEROR

As constantly relapsing heathens they were seen by the Franks as 'stinking' lawless brigands; debased and most untrustworthy. And yet once they had converted to Christianity their 'stink' disappeared in some people's eyes, as Slavs were granted their own autonomy by Emperor Otto, who ensured that they were very favourably treated. Might it not be that the stench disappeared once they ceased using urine in their purificatory ablutions? Otto probably had some understanding of the Slavic mind, after all his wife, the Empress, was formerly a Rus' princess. While many Saxons were significantly allied to the Slavs, other Franks and Saxons wanted nothing whatsoever to do with them, for the Slavs (the Poles especially), were supposed to have been *'born criminals'*.³⁵⁴ It seems evident that Otto's animosity towards them centred not so much on the Slavs as an ethnic group, but on their staunch adherence to the pagan faith in the face of Christianity. By converting, many Slavs at once regained the friendship and respect of the Germans. Indeed many of these Western Slavs accompanied the Teutonic knights on their crusades further to the East.³⁵⁵ Paradoxically, the emperor's evangelisation plans for the East caused fissures to

appear within Frankish society. Not all Germans were in favour of converting the pagan Slavs, and would have preferred it if the emperor left them well alone.³⁵⁶ No doubt those who held such sympathies were in some way related to the Slavs in either an ancestral or religious sense, and might have been fearful of what would happen to the Slavs once the upgraded Ottonian military machine bore down upon them.

Many Western Slavs lived in the German states of Thuringia and Brandenburg, especially the Lutizian tribe.³⁵⁷ Naturally Saxons had elaborate ties with them, largely through intermarriage, especially at a royal level, and had initially been reluctant to go crusading against them.³⁵⁶ But beginning with the Anti-Slav battles of 930 AD, Saxons and Lotharingians (at the instigation of Otto III) became steadily more embroiled in warfare against these Western Slavs.³⁵⁶

Despite the large number of Frankish troops deployed in the East, the evangelisation missions to the Wends and Magyars (dating to the mid to late 10th Century AD), were predominantly spearheaded by the Czech bishop Adalbert, under the patronage of their princes. The Czechs appear to have been staunch allies of the Catholic Church in this respect. So highly regarded and trusted were they that Pope Sylvester II placed on the head of King Steven a crown imparting the apostolic right to found Czech parishes as he saw fit; no small gift during an age when the papacy eyed the many surrounding monarchs with deep suspicion, and sought to remove their powers of lay investiture. Owing to the timely diplomatic marriage of their princess Dobrawa to the Polish Duke Mieszko, the Poles abandoned the old ways in favour of the Cross of Calvary, and in 966 AD became a nascent Catholic state. And like a falling domino, next came the conversion of the Hungarians. Thus the Hungarians and the Poles became committed allies of the papal State (rather than the Frankish Church) on the very periphery of Western Christendom.

Without question the pagans who had crossed over into the Christian faith must have found the whole experience very confusing, for they were greeted by vistas of bickering, faction-riddled Churchmen from the Frankish Catholic Church, not to mention Orthodox missionaries. In the Balkans, amid the strife caused by the jockeying for political control of the region (by the Eastern and Western Church), it was not uncommon for the average Slav or Bulgar to become lost amid the disputation. This is precisely the thing Alcuin warned of during Charlemagne's attempts to convert the Saxons. Alcuin, a clergyman acting as advisor to the Frankish monarch, implored his liege not to baptise by the sword without properly teaching the newly-conquered barbarians the basic precepts of the Christianity. Little heed was paid to his words. The Slavs had been 'converted' and 'baptised', yet had little understanding of the faith. In time this changed due to the efforts of far-sighted missionaries like Cyrill and Methodius, but even still the political agenda was never far from away on the horizon. And so it all turned sour.

Although the Poles had converted in the late 10th Century AD, they began relapsing into paganism soon after.³⁵⁷ Accordingly, Saxon-orchestrated, anti-Slav crusades began anew during the 12th Century, which caused Pope Eugenius III great disappointment.³⁵⁷ All they succeeded in doing was solidifying the pagan resistance, and unravelling the past gains made by missionaries sent into that area.

In Ukrainian and Belorussian we find the word *kostjol*, which meant 'a Catholic Church'.³⁵⁸ It is related to the Polish *kościol*, the Czech *kostel*, which have the same meaning. This says something about the Catholic Church's tenuous state of security in Western Slavia, for in the Latin and Old High German such words indicate 'a castle or fortification' rather than 'a church'. There was a preponderance of lay invested parishes in Germany prior to the medieval papal reforms, and many were no doubt situated inside the castles of their sponsors. Even so this did not lead to a surviving linguistic correlation between 'a fortification' and 'a church' in Germany or Rome. Since *kostjol* and variants of it are not found in the Baltic languages this connection is unlikely to have arisen during the Northern crusades. Therefore the overlaying of both concepts most likely dates to the 10th Century attacks visited on the Church by the Hungarians and Slavs. As a result churches of the period were probably heavily fortified.

That it does not appear in the Serbo-croat, Rumanian, or Hungarian is problematic, and suggestive that Polish and Czech parishes were particularly risky places in former times, more so than in the Balkans. Either churches were regularly attacked, or priests and bishops were vulnerable to assassination; hence the need for permanent protection.

That the connection is preserved in the Belorussian and Ukrainian suggests that these populations were living in

close proximity to fortified Catholic parishes, or were mixing with people who worshiped at such places. Either situation is likely considering that Orthodox Belorussia and the Ukraine abutted the remotest of Catholic regions.

The conversion of the Slavs and the mission to Kiev

ST ANDREW SUPPOSEDLY
BROUGHT CHRISTIANITY
INTO SCYTHIA

The origins of Christianity in Russia are exceedingly vague, and traceable to a period many centuries earlier than what is normally supposed. In truth the Scythians were the first Christians to inhabit Russia, and had done so for some time prior to the 325 AD Nicaean council. Scythians kindly supplied their own ecclesiastical delegates to this first synod;

PERSIAN AND SCYTHIAN
BISHOPS ARRIVED AT THE
NICAEAN COUNCIL OF
325 AD

*'A Persian bishop too was present at this conference, nor was even a Scythian found wanting to the number. Pontus, Galatia and Pamphylia, Cappadocia, Asia and Phrygia, furnished their most distinguished prelates...'*³⁵⁹

Scythian parishes probably continued to exist throughout most of the 400's. I say this because of what *Canon 28 of Chalcedon* stated, written in 451 AD;

PARISHES EXISTED IN
BARBARIAN DISTRICTS

*'For the Fathers (ie; the Church Fathers) rightly granted privileges to the throne of old Rome, because it was the royal city. And the 150 most religious bishops, actuated by the same consideration, gave equal privileges to the most holy throne of New Rome ... and enjoys equal privilege with the old imperial Rome, should in ecclesiastical matters also be magnified as she is, and rank next after her; so that, in the Pontic, the Asian and the Thracian dioceses, the metropolitans only and such bishops also of the dioceses aforesaid as are among the barbarians, should be ordained by the aforesaid most holy throne of the most holy church of Constantinople.'*³⁶⁰

CONSTANTINOPLE WAS
GRANTED
ECCLESIASTICAL POWER
THROUGHOUT THE EAST

In this passage the Holy See of Constantinople possessed equal privileges to those of Rome, especially the right to deliberate on ecclesiastical matters in the eastern jurisdiction in the same way Rome did in the West. Eastern ordinations became the preserved domain of Constantinople. Note also the existence of *dioceses which were situated in 'barbarian' regions*. It is plausible that this is a reference to Scythian dioceses, in addition to the Anatolian, Balkan and Asiatic dioceses.

SCYTHIAN MONKS AND
THEOLOGAINS
PERIODICALLY
TRAVELLED TO ROME

Later, just after 520 AD, during a time when Rome was embroiled in problems arising from the smoky aftermath of Chalcedon we discover that Christianity was still present in Scythia. Scythian monks appeared in Rome seeking St *Hormisdas* (the then Bishop of Rome) to discuss a possible solution to the crisis, a novel teaching which they had put together. This became known as the Theopaschite formula.³⁶¹ Though essentially in accordance with the anti-monophysite stance of Chalcedonian christology, the Scythian formula was rejected as having monophysite affiliations. Yet it might also be that this home-grown brain-child of the Scythian monks was formulated by peace-makers, hoping to provide an equitable solution to the Chalcedonian schism. Anyhow it did not gain endorsement for fear that monophysite adherents could subvert its intended meaning and turn it to their own use.

CHRISTIANITY
DISAPPEARS DURING THE
EARLY 6TH CENTURY AD

And it is at this point, some time after 519 AD, that we lose track of any reference to Christianity in Scythia. For some reason pagan dualism displaced the ancient Christian Church of Scythia (however big or small it may have been) and found favor with the Slavs until officially ousted by Vladimir after his 989 AD decision to (re-)baptize the cities of Russia.

MISSIONARIES ATTEMPT
TO RE-CONVERT THE
SLAVS

The almost impossible task of re-evangelising the Slavs began around 850 AD when Constantinople, under Patriarch Photius, tasked St's Cyril and Methodius with bringing the word of God to the Slavs. These two saints became champions of the Slav cause and, with papal blessing, were instrumental in having the Slavic tongues introduced into Christian worship, by translating the Bible using the cyrillic alphabet. This legacy of the written word still remains today, a virtual insignia of Slavic society.³⁶²

So it came to pass that German clergy represented the Western Church at the polemical mission to Vladimir of

Kiev during the reign of Pope John XV, at which legates from Islam, Judaism, and the Byzantine Church also arrived. Unwilling to trust in the mere words of delegates and underlings, the Russian royals decided to send trusted nobles abroad to see these other faiths in action for themselves. What particularly struck the Slavic boyars (nobles) when they visited the native countries of these faiths was that the grandeur of Byzantine architecture and Church ritual outshone by a very great degree everything else they had witnessed among the German Catholics, the Khazarian Jews and the now Islamic Bulgars of the Upper Volga. Certainly German Church buildings were more primitive during the 10th Century and would have seemed insignificant when compared with the engineering and artistic magnificence of the Byzantine Hagia Sophia basilica, for it was not until the 12th Century that the awe-inspiring medieval western cathedrals were built. Largely unimpressed by what they saw elsewhere the Slavs gravitated towards what was arguably the greatest Empire in the world; Byzantium. It had it all; power, majesty, and wealth. Despite their acceptance of Byzantine ecclesiastical influence, the Rus' Khagan and subsequent generations of reigning princes continued to interact with the papacy for many centuries.

GERMAN PRIESTS
TRAVELLED TO KIEV

THE RUSSIAN KHAGAN
DECIDED TO ALIGN
HIMSELF WITH
CONSTANTINOPLE

Fig 16. Jesus Christ on the dome of the Hagia Sopia basilica, Istanbul

During the 10th Century AD German, Bulgar and Byzantine Christian missionaries sent their own representatives to Kiev bearing aloft the message of Christ to the (Magian) heathen Khagan Vladimir. And so began the lead up to Russia's adoption of Apostolic Christianity, for the conversion of the Eastern Slavs took place more through diplomacy than by punitive military expeditions, such as were pitted against the Magyars and Western Slavs. It is unlikely that these missionaries even faintly understood what was required to convert the Eastern Slavs, but most assuredly Vladimir did. Following his baptism under the Byzantine rites, Vladimir gathered sufficient troops and a number of Byzantine clergymen and set off for Mother Russia, cross in hand. Whether Vladimir prepared the entourages of priests from Tsargrad and the Crimea for what their eyes would see upon crossing the Rus' frontier is hard to say; certainly their priestly tutors couldn't have. Split-level sunken temples, towers, idol sanctuaries, sacred fires, white and black magic, demon-worship, astrology, magus-mounds, writing, human sacrifice, towered celestial observatories. These were elements of a civilisation that in some respects technologically surpassed that of Byzantium, and yet threatened to destroy it. The 2,000 wheeled-ship attack on Tsargrad in 907 AD (found in the *Primary Chronicle* and Byzantine sources) proved they were of some concern.

CHRISTIAN PRIESTS
WERE PROBABLY
DISTURBED BY WHAT
THEY ENCOUNTERED
INSIDE RUSSIA

At once St Vladimir's newly baptised troops began their search for the pagan *Volkhvy* (Old Russian: 'Magi'), a prey who, like the wolves, proved most difficult to track. Catching wind of Vladimir's surprise plans for conversion, many *Volkhvy* were spirited away by the *Boyar* nobles, or fled to more secluded locations, where they were likely to evade detection. As the new lawful faith of the people, the Church had to try and 'install piety and reverence into the heathen', but the job was beyond measure. Trouble was brewing, sworn alliances between the *Volkhvy* and the princes, merchants, nobility and the private standing armies of the *boyari*, guaranteed safe-havens for the *Volkhvy* that stayed on. Others migrated out into the deepest recesses of the forests, or to the militant pagan strongholds of

VLADIMIR'S PERSONAL
TROOPS WERE BAPTISED

THE VOLKHVY MAGI
WERE OUTLAWED

the Baltic states, and rural Bulgaria. The Baltic forever remained a wasp's nest of paganism, vitriolically repulsing any form of Church expansion onto their turf. This same area, *Askala*, 'Land of the Wizards' was festooned with indigenous Baltic Magi.³⁶³ In the Balkans, too, the cup of heresy was filled to overflowing, and spilled out into Europe and Byzantium, making them drunk on such heady brews as Bogomilism, the new association of heretical sects galvanised under the 'Black Pope', the supposed grand master of all heresies (ie; the head of the pagan religious apparatus).³⁶⁴

It has long been assumed the conversion polemic was called by Vladimir, due to evolving political and economic considerations. While these two factors might have played a major part in it, I believe that deep down there was a religious reason for their having to abandon the old pagan faith.

VLADIMIR REJECTED
ISLAM, BECAUSE IT
REQUIRED THINGS HIS
FOREFATHERS NEVER
EXPECTED

Vladimir's rejection of the Muslim delegate allows us to delve inside his mind. When the Muslim told him that by converting to Islam he and his people would be required to give up pork and alcohol, Vladimir dismissed their religion on the spot, exclaiming, '*Our forefathers followed no such teaching*'.³⁶⁵ Here his thought processes become accessible. The religion he expected to adopt had to be practically identical to the old faith, or at least partly based on it. That Muslim prohibitions on pork and alcohol were sufficient to have them immediately discounted from the selection process, was as much a testimony to the expected continuation of libations inside the new faith, as it was the expectation that the new faith would in some way be allied with the teachings of his ancestors.

The writer of the *Primary Chronicle* had his own agenda to think about; it is clearly a political-religious document, rather than a strictly historical treatise. This is something I have been very careful to take into account when using anything from it. While *it does contain a large amount of invaluable historical source material*, it is more famous for what it does not tell the reader. And, I hasten to add, it is a far cry from Roman Catholic documentation from the period, which, in addition to its many references to good things, hung out its dirty washing for all to see.

I have found no evidence of blatant lying in it, but put simply, it is one of the best acts of censorship you're ever likely to see. It served to steer the mind of the reader in certain directions, rather than record for posterity a full account of what the Russian pagan world looked like before the advent of Christianity, or preserve the exact nature of the polemic which led to the conversion of the Russes.

The order in which the delegates were seen by Vladimir was Muslims, German Catholics, Jews, and Byzantine Orthodox Christians. The Chronicle has only a few brief things to say about what the first three faiths put forward. The Chronicler writes that he could not record what the Muslims said during the Polemic, out of sheer decency. The Catholic emissary's speech was several sentences long if you are to believe the Chronicle. In no way does it explain Christianity from a Catholic viewpoint, and likewise very little was written about what the Jews said. When at last we reach the Byzantine delegate, we see a lengthy discourse lasting 12 pages!

But it does yield some interesting morsels of information. The forefathers of the Slavs were not circumcised. Herodotus mentioned in the *Histories*, that circumcision was a peculiar custom practiced only by the Egyptians, and those who they taught it to, namely the Jews and the Armenians.

Vladimir's mention that his forefathers practiced no such fasting to the German emissary *sent by the pope*, tells us that Vladimir's pagan faith was not Manichaean in nature; asceticism and restraining the sexual act was not part of the old faith. While the Magi believed that gluttons would be thin in hell, and the malnourished robust in heaven, this did not cause them to recommend fasting, in fact they disdained it. On the contrary white families partook of religious feasts, and shared their food with those who had less. Food was good and wholesome, a gift from God.

EVENTUALLY THE
RUSSIAN CHURCH
BECAME AUTONOMOUS

And so he chose to formally ally his Church with Byzantium. The Church of early Russes did not possess its own nationalistic autonomy, but was under the direct authority of Constantinople (Tsargrad). Its first 70 or so years were spent in brotherly communion with Rome, largely in name only, thereafter it became exclusively answerable to Byzantium. All Rus' metropolitans (arch-bishops) were appointed by the Greeks, but the *Velikiy Knyaz'* or *Khagan* had a right of veto concerning any prospective metropolitan. In turn the metropolitan could appoint bishops, who in turn ordained *soyashcherniki* and *popi* to serve in their own diocese.

Whilst effectively being an agency of a foreign power, the early Russian missionary Church was still permitted freedom of operation by the prince, partly as a diplomatic concession, and partly on account of his gradual

embrasure of the Orthodox Catholic faith.

With the establishment of the Church's rights by the formal first statute of the year 996 AD, the Russian Church became for all intents and purposes a powerful and legitimate socio-political entity.³⁶⁶ Prior to this time Christianity was an impotent political force, devoid of any authority amongst the Russes. As always the countryside proved an untouchable seed bed of the old ways, separated from the early Russian missionary centers by considerable distances and thick forests. From that time the Rus' Church could expect the total support of the secular authorities, especially with regard to the implementation of Christian laws and the mission of conversion. After 1054 AD adherents of Roman traditions were most likely seen as followers of untruth, and vice versa.

1054 AD - The Great Schism

With several unresolved issues at hand, and the bishop of Rome (by virtue of NT; *Matthew 16: 13-19*) increasingly asserting primacy in religious doctrine over the immovable eastern Patriarchs, Christendom was fast on a collision course with major schism. While the physical distance between Rome and Constantinople was great, differences of opinion about the ways the two camps enacted the scriptures were not nearly as distant, but significant. Issues such as purgatory, the type of bread used during mass, the filioque and the use of statues proved difficult to solve. For the East the inclusion of "and the Son" to the Apostolic creed was the last straw. The Holy See of Rome (due to the modifications made to the creed by the German bishops), they believed, had gone too far this time. The inability to resolve these vexing questions led, in 1054 AD, to not the first, but certainly the greatest schism of Christianity, one which led to an ideological partition between the eastern and western parts of christendom. The fact that these individual Churches were so similar in their beliefs made the rifts of this time all the more ironic and tragic for all concerned. In that year, the Papacy and Constantinople exchanged anathemas which stayed binding until 7 December 1965. Until then Orthodoxy and Roman Catholicism regarded each other as heretics.

The fledgling Church in 10th Century Rus' was cognisant of the Pope's seniority amongst bishops until the time of the split. No doubt some polarisation did occur between pro and anti-papists, with supporters of the Papacy moving closer to Poland. Germany, France, Italy, Poland, Moravia, Bohemia, Croatia, Hungary and Transylvania stayed with Roman traditions, under the title Roman Catholic. Byzantium, Cyprus, Georgia, Bulgaria, Serbia, Makedonia, Rus' and Ossetia parted with their "latin" brothers, as the Orthodox Churches.

In the main, most Christians barely knew of the major rifts emerging between the hierarchies of Rome and Constantinople. Instead they were absorbed in the problems of day to day living, or more importantly trying to lift Christianity up from the mire of local pagan fervour and "impenitence".

The misdemeanors of Bohemund I, Reynald of Chatillon (1st Crusade), and the 4th Crusade in the early 13th Century (in which the entire Crusade was diverted by the Venetian Doge to capture and sack Constantinople) did more damage to Church unity on a parish level, than the split could ever have done.

But that was nothing compared with Reynald's grand plan to pillage Islamic coastlines throughout Africa and Arabia using an enormous naval flotilla launched from the Mediterranean into the Red Sea.³⁶⁷ This culminated in them violating and plundering the harbours of Medina and Mecca, two of the holiest places in the Islamic world.³⁶⁷ Nothing could have so easily reactivated the tenuously dormant military pennants of Islam than this. What then ensued was protracted warfare with Saladin and a rapidly swelling Muslim army formed in response to their war-mongering.³⁶⁷ But, all the problems between Rome and Constantinople in those days were just symptomatic of Frankish-Byzantine political wranglings, and jealousies exacerbated by Charlemagne's surprise coronation by the Pontiff at Christmas in the year 800 AD, which Constantinople saw as a threat to its worldly power. This led to a confusing situation in which Christianity experienced the presence of both an Eastern and Western Roman Emperor.

From an early Russian Calendar of saints it has been ascertained that until the time of the "Great Schism" (in 1054 AD), the east and west of Christendom shared a plethora of saintly devotions.³⁶⁸ From the small selection of foreign saints published by Bishop Kallistos Ware, these included mainly English saints. There is no degree of academic consensus concerning the degree to which western (and even Byzantine) saints were venerated; some believe they were widespread, others think they existed on a much smaller scale. The fact that there is no clear picture of the number of western saints in Russia of the Middle Ages is no doubt a bi-product of inter-sect rivalry between

SOME WESTERN SAINTS
WERE VENERATED INSIDE
RUSSIA

Catholics and Orthodox believers as time went by.

The cults of St's Ol'ga, Boris and Gleb predominated in the early Russian Church, but besides them it has been very difficult to reconstruct folk beliefs regarding the minor saints of the early period. Some examples of saints were St's Columban, Alban, Martin of Tours, Paraskeva-Pyat'nitsa (patroness of weavers), Katherine, Joseph, Blaise, Illya (Elijah) and Valentine. Obviously there needs to be more work done if we are to expand our knowledge of the Mediaeval saints in Russia, particularly the patronages that they held. In Kievan Rus', who were the patron saints of jewellers, bee-keepers, cobblers, carpenters, inn-keepers, the blind, the sick, the mentally ill, accountants, infantrymen, cavalry, farmers? Since only a handful of transcripts appear from the thousands of birch papyri surviving from the earliest period of the Church there, I am unaware of the number of instances in which saints were mentioned. This might be the very source that enables us to rebuild a faithful Calendar of Saints during the early Russian Mediaeval period.

From the time of the schism though, any new saints were seen as particularly eastern or western in nature, so much so that one side was less likely to venerate the saints of the others faith and vice versa. There was also some degree of denigration of "rival" saints at this time. For example, although beggars were in his line of work, the marvel-working French warrior-saint, St Martin of Tours became relegated to the patronage of drunks, petty thieves and tricksters in Russia!³⁶⁹ I believe Saint Martin of Tours (the western saint of cavalry) might have been (in reality) as close to the hearts of the Slav bogaty'r, as he was to the Frankish and English knights.

Foreigners venturing into Rus' might have brought their own privately sponsored priests along too, to say Mass. This is just another small reason for the existence of Western saints in the East.

All parish Churches possessed their own patron saint and therein, beneath the parish altar, resided the foundation relic of the Church, usually a personal item of the saint in question. Indeed, many saintly relics were said to possess remarkable powers, which strengthened the faith of the Church in their love of the creator. For instance the "Shroud of the Virgin Mary" (once known to have been in Constantinople) was attributed with decimating the marauding 860 AD pagan Rus' invasion tasked with taking the Holy City.

THE SHROUD RELIC OF
THE VIRGIN MARY

The dedication of a person to a saint was not to be misconstrued as worshipping the saint, but spreading the word that the Lord had a heavenly servant, higher even than a guardian angel which was available to aid, or join in prayer for the living in their earthly life. Just as angels were tasked to come to our rescue and enter into the Lord's presence under specific circumstances, so too were the saints similarly active, since in their rising to heaven, they had become like angels.

From the *Primary Chronicle* we know that some of the Norse Varangians who settled in Rus' were staunch Christians ready to die for the faith. Some might have received baptism back home in Scandinavia as a result of St Ansgar's or Unni's missions (by Roman rites), whilst others (that saw service in the Varangian guard) entered the Church via the Byzantine rite. The major spin off of this amongst early Rus' Christian communities was a *unique* inter-familiarity between both rites. Western customs were widely tolerated, but probably not widespread. Rarely though did small chapels of a thoroughly western nature exist, except perhaps amongst the Varangian colonies. St Olav's Church built by the Norsemen in Novgorod was perhaps one such example of Western religiosity in the East. This was where the famed King Olav Tryggvason supposedly went to mass during his formative years in Novgorod. In a 13th Century Russian account of those times, we are further told that,

*"The Norwegian king Olav went to the court of Vladimir' in Gardarike (ie; Rus') and there he went with him to the (pagan) temple, and having brought the sacrifice to the idols, Olav stood behind the door, and awaited prince Vladimir'."*³⁷⁰

Catholic Church reforms in the Middle Ages

The tussle between the Scandinavian King Svein and a German archbishop was noted by Adam of Bremen. The seriousness of this particular clash between a representative of the Church and a crowned head of state, epitomised the reform papacy's struggle to totally eliminate a range of practices seen as serious heresy;

KING SVEIN CENSURED
FOR HIS INCESTUOUS
MARRIAGE

King Svein *'by and by forgot the heavenly King as things prospered with him and married a blood relative from Sweden. This mightily displeased the lord archbishop, who sent legates to*

the rash king, rebuking him severely for his sin'. Excommunication would surely follow if Svein failed to comply. 'Beside himself with rage, the king .. threatened to ravage ... the whole diocese of Hamburg. Unperturbed ... our archbishop, reproving and entreating, remained firm'. Eventually 'the Danish tyrant was prevailed upon by letters from the pope to give his cousin a bill of divorce.... Soon after he put aside his cousin he took to himself other wives and concubines, and again still others'.³⁷¹

HE THREATENED TO LEVEL THE BISHOPRIC

During the Middle Ages it was noted that royalty and simoniacal members of the clergy had very many concubines who were financed by the parish. These were often hearth girls who carried the children of priests in their wombs. Again all of this was contrary to Church canon law. Clerical unchastity was outlawed and vigorously policed during the 11th Century AD, especially during the reigns of Pope Leo IX, Stephen IX, Nicholas II, and Alexander II. These were just some of the popes responsible for reforming a Church, which according to the *New Catholic Encyclopedia* was bordering on decadent. However the complex reasons for the so-called decadence have not been apparent to everyone. In any case, these popes did not enjoy the full support of the Church elsewhere. In Germany and France indigenous clergy reviled Rome's attempts to reform the Saxon and Germanic priesthood. Alexander II's edict that married priests were no longer permitted to serve at mass would have incensed not only the covert and overt Magian converts within the clergy, but clergymen who had nothing whatsoever to do with them, and whose only wrong was to be married.³⁷² These men too paid the price.

CLERICAL UNCHASTITY AND SIMONY WERE NOTED

THE PAPACY INTRODUCED POLICIES TO ELIMINATE THESE PRACTICES

Around 1063 AD, the pace of reform was reaching dizzy levels, with successive popes dispatching powerful and trusted deputies abroad to ensure that reforms were being implemented. As time progressed, the inquisitors became intertwined with the business of Church reform. Via such agencies, the papacy hoped to discover what was *really* happening out there in Christendom. Certainly it successfully identified reprobate clerics and nuns, who Rome hoped to expel from the Church; such as an inner circle of five simoniacs (Magians or Magian-Christians) acting as advisors to the emperor.

THE POPE DEMANDED CONTROL OF ALL GERMAN PARISHES

The last straw came when Gregory VII decreed the German emperor was no longer to have any say over his bishops, who were to be placed under full papal control. Similarly, his right to oversee lay investiture was rescinded, where a specific appointment had not been countenanced by Rome. This robbing of the emperor's powers over the German Church provoked a synod of Frankish bishops at Worms which renounced the pope and discourteously installed bishops favourable to the emperor in major sees across Germany and Italy. In retaliation, Gregory invoked the penalty of excommunication against Emperor Henry IV. By this stage the pope had lost the support of some thirteen Cardinal bishops, and a host of other clergy. The whole issue of internal reconstruction was tearing the Catholic Church apart. Driving the wise men out of the clergy entailed a very rocky road, which must have seemed unbearable for either faction.

THE EMPEROR AND HIS BISHOPS WERE FUMING HENRY WAS EXCOMMUNICATED

As far as the Magians were concerned, the act of celibacy was believed to aid and abet the demonic forces. The pope's banning of married priests, and enforced celibacy was bound to ruffle their feathers badly, and proved to be the very decree which shunted his adversaries into even greater militancy. To add to the confusion of the period, the emperor plotted with bishops in Lombardy and France, to get them to consecrate his preferred candidates for positions in certain sees. Not wanting to be outdone, the pope inserted his own candidates into the sees instead. This frequently led to situations where archbishoprics unofficially had two archbishops, though in reality one only ever presided, since their opponent was usually militarily ousted from the city, or subjected to even worse sufferings.³⁷³ Just whose candidate prevailed depended a lot on the secular powers of local barons, dukes and lords, and how close it was to Rome. Naturally the further away it was, the less able the pope would have been to get control of the situation.

THE OLD BELIEVERS COULD NOT REMAIN CELIBATE

IT WAS AGAINST THEIR BELIEFS

So who were the unchaste priests with all the concubines? Well it is just possible that during plagues, or in times of war, when there were large numbers of casualties, there would have been a certain number of childless widows. Perhaps the priest was being a nice guy, and helped with their upkeep. But if these priests were Magian-Christians, then we might think that some were fulfilling their Magian duty to fallen kinsmen who had died without sons, by looking after their wives, and siring children by them.

Wolves' among the flock

Regarding the outbreak of witchcraft, *Malleus Maleficarum* stated that witches were present, even among the clergy.

*'...in certain territories which lie along the borders of the Rhine, nevertheless not a few clerics and lay folk of those countries, seeking too curiously to know more than concerns them...'*³⁷⁴

Despite the many synods held during the papal reform period (which denounced simony and clerical marriage), some bishops appear to have refused to implement the decrees in their own dioceses.

*In that council (at Mainz) a certain bishop of Speyer, Sigebod, who stood accused of the crime of adultery, was cleared by sacrificial ordeal. Many other measures besides were there adopted for the welfare of the Church, in the fore of which simoniacal heresy and the abomination of clerical marriage were forever condemned, over the signatures of the synod. That our archbishop, when he came home, did not keep silence about these evils is proved'.*³⁷⁵

MANY HIGH RANKING
GERMAN PRELATES
REFUSED TO IMPLEMENT
ROME'S NEW EDICTS

The last line intimates that some archbishops returned back to their respective dioceses without as much as telling anyone about the events of the Mainz synod. Such clerics obviously did not agree with the reforms. These might have been suspect bishops, who were still largely present during the 10th and later centuries;

THESE BISHOPS
FRATERNISED WITH
"FALSE-PROPHETS"

*'But there were with the bishop others, false prophets, who made promises of a far different kind, and in them he had greater faith'.*³⁷⁶

Cardinals such as La Grange are likely to have been Magian-Christians, judging by his desire to be defleshed after his death.³⁷⁷ They may have succeeded in installing one of their kind as pope. Pope John XXIII, for example, was charged not only with murder, gross sexual indecency and immorality, but *simony*. And there's that word again! Behind the ejection from office of Pope John XXIII at the Council of Constance (15th Century AD) can we discern the apprehension of an enterprising Magian dualistic infiltrator? A man politically removed by his adversaries among the bishops? Or the Church's rebuttal of a man greatly weak in the flesh, who was dragging the papal seat into disrepute, turning into little more than a sham during his reign?

SOME BISHOPS WERE
PROBABLY MAGIAN-
CHRISTIANS

One of the most highly placed heretical personages to have ever usurped a post inside the reformist Vatican was perhaps none other than Pope Boniface VIII, who was arraigned and convicted as a practitioner of the infernal arts after his death in 1310 AD.³⁷⁸ His principal accuser was one Nogaret, who was linked with the French monarch (the pope's main political enemy), with whom the pope had entered into a bitter struggle over taxes.³⁷⁸ Nogaret kidnapped Boniface to bring him to trial, and held him detained inside a castle.³⁷⁸ So harrowing an ordeal was it that Boniface died barely a month after being released from imprisonment by a crowd of sympathisers.³⁷⁸ Boniface VIII's successor, Pope Benedict excommunicated the intriguers who had incarcerated him.³⁷⁸ However, within a year Benedict had passed away, only to be succeeded by a French Pope, Clement V, who moved the papal throne to Avignon (*a phase during which no German cardinal bishops were recognised by the papacy*).³⁷⁸

BONIFACE VIII WAS
EVIDENTLY ONE OF THE
OLD BELIEVERS

As it stood German Popes were always related to the nobility.³⁷⁹

Clement, it just so happens, was a friend of Nogaret, Boniface's original accuser.³⁷⁸ Accordingly Clement removed the heavy sentence of excommunication from Nogaret's shoulders and ordered a full enquiry into the matter. The trail of evidence that emerged was lengthy and damning of Boniface VIII, who in prior years was called Benedict Caetani. Having missed out on election as pope the first time around, Caetani was said to have been repeatedly seen entering his private chamber, to summon up demonic serpents and beasts amid billowing clouds of incense. These supposedly made the earth belch and quake upon their arrival.³⁷⁸ On one occasion he was allegedly heard to have derided and blasted the essences within the room for not granting him the papal throne, only to receive the reply, *'It was impossible this time. Your papacy must come from us, you must not be a true, legitimate pope'*.³⁷⁸

HE IS ALLEGED TO HAVE
INVOKED SPIRITS

There was no end to the number of (supposedly hand-picked) witnesses who came forth offering evidence at Boniface's trial in 1310 AD, though later, during the Roman phase of the trial, a handful of monks provided additional accounts. These were clergy in no way connected with the power factions involved in this particular case.³⁷⁶ According to their testimony, Boniface VIII was in league with three demons, one of which was bestowed upon him as a gift by a *Hungarian* fellow.³⁷⁶ Boniface always wore a magical gem ring which contained an unspecified spiritual essence, and which carried images such as the head of an unnamed animal, images which were seen to change from time to time (perhaps a reference to his choice of different talismanic rings on a given day).³⁷⁸ A parallel can be drawn here with Magian and Chaldean gem engraving, which turned ordinary gemstones into magical talismanic devices. According to the *Malleus Maleficarum*, witches used such paraphernalia.

Fig 17. 4. The controversial Pope Boniface VIII - Is this the face of the most daring heretic to ever infiltrate the Catholic Church?

One monk testified that Boniface VIII payed homage to an idol *which held a demon within it*, whom Boniface regarded as God himself.³⁷⁸ This effigy might have been made via the telestic or Chaldean art of idol making, which required that a lower *daemone* enter into the fashioned image. Far from reverencing the idol behind closed doors, Boniface thought nothing of standing for lengthy periods before the idol in plain view of the *many unconcerned guests* he had invited to attend a dinner party at his residence. Shocked at what he was witnessing, a monk who had arrived there late enquired of a guest what was going on, only to be matter-of-factly informed that Boniface VIII was worshipping the '*evil majesty*'.³⁷⁸ Another account relating to events some thirty years prior, saw him inscribing a magical circle of protection with a *sword*, as a prelude to the *slaughter of a chicken*, and the bleeding of a canister of fiery embers. To add to the mounting case against him, Boniface was not only accused of being a blaspheming apostate, who in private unashamedly attacked the core beliefs of the Church magisterium, but the murderer of Pope Celestine V, a sodomite (performed on children, amongst others by all accounts), a simoniac, as well as in

league with the Knights Templar. The evidence fielded at trial cleaves two ways, which I will now illustrate. One interpretation is that Boniface was an innocent man who had his life destroyed by the intrigues of the French king and his co-conspirators. The trial may well have been a wicked character assassination. Perforce this required a high level conspiracy against him, spearheaded by a fistful of prevaricated testimonies based on a wide spectrum of informed knowledge about Magianism and Chaldeanism

But the other view is that the evidence was all too true. I myself have suspected that Boniface was a 'heretic' for some time. Not because of anyone's specific (supposedly libellous) account, but because of a statue of the man himself. This effigy shows him wearing a peculiar conical shaped mitre, which deviated somewhat from the types normally worn by previous popes. So numerous were Boniface's statues, that he was accused of virtually preening society for the idolatrous worship of himself. As if that isn't enough, he wore the double-headed eagle insignia,³⁸⁰ a symbol used by numerous European royal families, which can be traced back to Ancient Rome, the Turks, Persia, and finally to the Aryan Hittites. Just about every aspect of the case implicated him in the performance of the Magian Zurvanite or Chaldean rites of wizardry, which included fairly precise descriptions of the Chaldean arts. Boniface's lack of beard and long hair, plus his intense opposition to medieval defleshing customs in some quarters of the Western Church probably signify that he was a Chaldean-style wizard rather than Magian or Magian-Christian, because Chaldees only excarnated criminals.

Pope Sylvester II was yet another contender for the title of usurper. Formerly known as Gerbert of Aurelliac, Pope Sylvester was a great scholar, well versed in geography, geometry, astrology and astronomy.³⁸¹ Rumour had it that Pope Sylvester's personal concubine was an Arab witch, who taught him the most part of the sinister arts, including the fabrication of astronomical devices, terrestrial orbs and the like.³⁸² At the time of his death, gossip spread that he wanted his corpse reduced into pieces, *a rumour which in the 17th Century was found to be false* when his tomb was broken open and his remains found perfectly intact.³⁸³ Was this just wishful thinking on the part of the people, hoping for a return to the old ways, or were there other mischief makers out there trying to stir up pagan sympathies by concocting false stories? Or might his bones have been reclaimed by the heretical faithful for use as relics, and the sarcophagus filled with some unidentified corpse?

They held positions of great esteem inside the Church even in the 6th Century. In Part I, I described the Mithraic presence in Rome, Mithraism being, in effect, an outgrowth of the Magian mysteries. It was, from very early times, led by the heathen Roman *Pontifex Maximus*, who the Persians themselves termed *Magupat u airharpat Rum* (ie; the Chief of the Roman Magi and fire priests).³⁸⁴ Bearing this in mind, the existence of a Pope Hormisdas in the 6th Century AD is suggestive of a significant Magian-Christian presence within the Vatican beyond the primitive period.

The question of Pope Hormisdas³⁸⁵ (St Hormisdas) is an interesting one indeed. How is it that a Catholic pope chose to be named after the high God of the Magi (Hormisdas being derived from Ormazdes, a hellenisation of Ahura Mazda). Surely if he charmed Catholics with names like Pope Horus, Pope Hephaestus, Pope Pythagorus, Pope Jupiter, Pope Mithra or Pope Zeus academics would ask serious questions not only about his religious sub-affiliations, but the politico-religious atmosphere inside the Vatican during the early 6th Century, which could be so receptive to such a name. Instead all we hear is that the pope had a Persian name. Well it was a Persian name with a difference, and no doubt a religious statement. The saga probably began with his papal predecessor and colleague Symmarchus, whose name I believe came from the Magian deity Simurg, the fire bird. Symmarchus was a heathen convert who as a lowly deacon found himself as head of the Church toward the end of 498 AD, his election secured by the Ostrogothic king Theoderic, a Christian of the Arian persuasion. Not surprisingly this took place amid intense opposition. After all, far more senior Church prelates lost their chance to become pope, by-passed in favour of a deacon. Either the man was outstanding, or there was more to this Symmarchus than met the eye ... his bloodline I expect. His captaincy at the Holy See was marred by controversy, he himself being reproved and ignored by not a few dignitaries. Yet he is probably best known for running the Manichees (a Christian heretical cult shown next chapter) out of Rome. By my estimation, his interaction with Hormisdas, a Roman noble, runs a close second. Features of St Hormisdas' reign included interaction with Scythian monks who had found

their way to the Holy See, and the birth of his son Silverius, who would ascend the papal throne in 536. Its a recurring theme ... the son of a pope becomes vicar of Christ, in his turn. As with Symmachus, Silverius slid comfortably into position once the Gothic king's bullying was applied to his opponents, in timely fashion. What a stroke of luck it must have been for a man who had not even reached the trifling level of deacon!

As for whether a large faction of Magian-sympathetic clergy existed at the dawn of the Church we must resort to an analysis of the names used by bishops in the four Holy Sees until 324, as supplied by Eusebius. Amongst them we find a Symmachus a bishop at Jerusalem somewhere between 138 and 161 AD. Then there was Elagabalus (Rome 218 AD), Babylas (Antioch c. 238 AD), and unquestionably Mazabanes (Jerusalem c. 249),³⁸⁶ not to mention Bishop Cyrus of Poti.³⁸⁷ In all it amounts to a very small percentage with positions of eminence within apostolic Sees. Even so, none were so bold as to use the name Hormisdas. Clearly times were different in 6th Century Rome. Perhaps Gothic pre-Christian religious sensibilities and clout were the decisive factor.

Somewhere between the mid-740's and 780's AD, an Irish bishop from the diocese of Salzburg (perhaps Virgilius) had loyalist Catholic clergy foaming at the mouth, by postulating that there was another world beneath ours, complete with its own sun and moon.³⁸⁸ With only a little imagination it is possible to glean that he was spreading the word about the 'counterworld', or *antichthon* as the Greeks called it. The counterworld was where demons lived, a miserable, light-starved precinct. As the opposite of heaven high, the counterworld contained an infinitely-enormous, bottomless abyss, the lowest point of existence.

In the writings of St Boniface, two notorious heretical priests are recorded as having been tried before an emotionally charged Roman synod in 745 AD, which led to their imprisonment.³⁸⁹ One of the many errors divulged at the hearing was that Christ had descended into the underworld in order to resurrect not only Christians, but pagan idol-worshippers.³⁸⁹ The more damaging of these and other schismatics claimed to be apostles specially sent by God, living saints who charged their many followers to build chapels and churches in their honour while they were still alive.³⁸⁹ Catholic bishops listened on in horror as their diverse heretical doctrines were read from 'abominable' writings which they had assembled and circulated to the faithful, texts that the synod unanimously condemned to be burned, but on better judgement recommended be placed in the Vatican archive to serve as an eternal condemnation of their evils.³⁸⁹ In concluding the Holy Father at length decried them as '*slaves of the devil and the precursors of Antichrist*'.³⁸⁹

Trouble in the papacy

In the above examples we find potential evidence that some popes were not exactly who they purported to be, and not necessarily supportive of the new reformist stance, which gave rise to the Catholicism and Orthodoxy we know today. Magian Christians were resilient to many of the new changes, and eager to have their people on the papal throne. You may ask how a 'heretic' could bypass the entire system and see himself made the Vicar of Christ? Well, for want of an example, it may have gone something something like this.³⁹⁰

Pope Steven V³⁹¹ (reigned 885-891 AD) moved to forbid the usage of Slavonic in the liturgy, and tried to bring German and French clergymen under closer papal scrutiny and control. Whereas he had initially sought the aid of Arnulf in these matters, he soon found himself talking to a brick wall, and was in some respects forced to look elsewhere. And it was to Duke Guido of Spoleto that he turned, and in him found someone who would be a guardian for the papacy at a time when Muslim military power was on the rise, and threatening Italy.

During the 800's AD Western Christendom technically had two emperors, one of the House of Spoleto (who underwent coronation to the Imperial throne under Pope Steven V in 891 AD), and the other being the Frankish rulers who stemmed from the kin of Emperor Charlemagne. The, some would say, ill-conceived coronation of Spoleto (which may have been performed by Steven V under duress) ignited warfare of such magnitude that it shook the papal throne to its very foundations, and divided the entire Catholic Church into two factions; those who believed that the Frankish kings should rule over the Holy Roman Empire, and those who followed the Spoleto dynasty. Behind this series of intrigues, European royalty and nobility hoped to gain control over the papacy, to reduce it to little more than their puppet. It is possible to infer that other factors were involved, *namely the degree to*

which clerics permitted royal personages with magus blood to continue influencing the papacy, or even rule as pope. Unfortunately we don't know if the issue of flourishing Magianism and Magian-Christianity in Francia in any way influenced Steven V's decision to crown Duke Guido III. Within a very short time Guido had moved on Rome and reduced it to vassalage. Following the death of Steven V (in 891 AD), Pope Formosus was enticed or cajoled into re-confirming the nature of Spoleto's Imperial investiture by performing a repeat coronation of Guido and his son in 892 AD. However, Pope Formosus³⁹² had realised the potentially disastrous mistake of Pope Steven, and summoned the aid of the Frankish King Arnulf, who, having gathered considerable forces, marched onto the Italian mainland in 896 AD and defeated the army of the Spoletan emperor. At this point the Franks recovered control of the Holy Roman Empire.

ARNULF INVADES ROME

Arnulf was also involved in a pact with the Bulgar prince Vladimir-Rasate to mount a two-pronged war against the Church, in both the east and the west, aiming to re-install the old faith.³⁹³ We also find a Bulgar connection with Pope Formosus, whom the Bulgars wished to be their personal Metropolitan (Archbishop), a hope that was ultimately quashed by regulations within canon law. Formosus was highly active in the promotion of missionary work in Britain and Germany, and one might suspect, had much to do with the formation and development of the ecclesiastical bodies of these countries.

Anyhow, having taken Rome, Arnulf was struck down by a mysterious paralysis (poison?) and thus forced to return to Germany. But on his departure Pope Formosus (no longer able to rely on the protection of Frankish forces) passed away under unknown circumstances (I believe foul play) only to be replaced in April by the son of Hadrian, an Italian bishop. This (formerly?) unsavoury figurehead (who had been excommunicated more than once in prior years for debauchery) took the papal mitre at the head a mob of pro-Frankish Roman citizenry. He in turn ended his all-too-brief 15-day reign as Pope Boniface VI³⁹⁴ by dying, we are assured, of an attack of gout. Enter Pope Steven VI,³⁹⁴ an obscure priest who had switched sides from the Franks, and placed his full weight behind the Spoletans. Steven sought to continue the work of exerting Roman papal control over the German clergy, and aimed to head off moves among the Normans to start returning to the old pagan ways. Arguably the most controversial, and the gravest decision of his reign, was the disowning of any clergyman ordained via Pope Formosus. Equally scandalous was the posthumous kangaroo court which he ordered for Pope Formosus, whose rotting cadaver he had dug from the ground and seated before the trial body. Following this, the corpse of the humiliated and discredited pope was abandoned in a grave for the lowly, only later to be retrieved by his followers and taken for proper burial elsewhere by a monk. This act came back to haunt Steven VI, for it amalgamated large numbers of incensed clergy, in addition to the numerous Frankish-sympathetic supporters of the late Formosus. In the wake of miracles reputed to have been effected by the mortal remains of Formosus, insurrection and violence ensued among the pro-Formosans, who fell upon Steven VI, whom they dethroned and incarcerated. In jail for only a brief while, Steven was strangled to death. Some would say his murder was an act of assassination, others the action of an enraged jailer or prisoner. I am willing to speculate he may even have been sacrificed by the particularly pagan method of strangulation, which probably carried with it an infernal destination for the deceased.

THE ROTTING BODY OF
POPE FORMOSUS PLACED
ON TRIAL

THIS WAS A
PROPAGANDA STUNT
THAT WENT TERRIBLY
WRONG

He was in turn replaced by Pope Romanus,³⁹⁵ a supporter of the late Pope Formosus, who had no particular claim to fame, and who, after a mere four month stint, was arrested, removed from office, and shunted off into a monastery. It has been speculated that his moderate stance saw him cast aside in favour of a more militant successor. Next came Pope Theodore II who ruled as pope for barely 20 days during the month of November in 897 AD and then suffering an untimely (and undocumented) death. After him came John IX, a militant pro-Formosan clergyman. Not only did he concern himself with clearing the name of pope Formosus, but he attempted to intervene in religious matters in Bavaria, but was kicked out by the Bavarian bishops. That's right, the pope was told to keep his nose out of their business! He died an apparently natural death in 900 AD after a period of exactly two years in office, but strangely *the papal throne lay vacant for roughly four months* until the ascension of the pro-Formosan Benedict IV,³⁹⁵ perhaps owing to the lengthy soul-searching and politicking among the bishops who had to elect a successor. Violence among the pro and anti-Formosans continued unabated during his reign, however the Formosan faction to which Benedict was party was thrown into disarray by the death of Lambert the

COUNTRY

FOR FOUR MONTHS THE
PAPAL THRONE WAS
VACANT

Spoletan emperor, who left no heir apparent. Accordingly, by this twist of fate, Benedict was left no other option but to crown as Emperor Louis the Blind, thus allowing the Franks across the threshold of the Vatican once again. But any Frankish presence was short lived once the Italian King Berengar arrayed forces against them, and ejected the Franks from Italy. Shortly thereafter Pope Benedict IV was apparently murdered only to be replaced by Leo V³⁹⁶ in August 903 AD, who was sympathetic to Formosan overtures. Within 20 days Leo fell victim to a coup masterminded by an usurping pro-Formosan clergyman (commonly referred to as Anti-pope Christopher) who had him tossed in jail. Christopher was in his turn deposed by Sergius III,³⁹⁷ a figure who had been previously invested as pope back in 897 AD, but owing to the prevailing pro-Formosan faction (where it counted) was forced to step down to make way for John IX. As leader of a military force, he seized Christopher, who was subsequently imprisoned with Leo V, the very pope he himself had deposed. Most likely sensing them to be a threat, in 904 AD Pope Sergius ordered that Christopher and Leo be executed while in detention (once again by choking). Sergius had the support of the noble houses of Rome, and clamped down on the pro-Formosans. Having won over whatever nobles wielded substantial financial and military power he set about involving himself in quarrels with Constantinople and strengthening his grip on the Vatican and Rome in general. He was intimately involved with the nobility, and with a girl of high birth in particular, who had a son by him, who would later become a pope. Interestingly, his mitre deviated from previous papal examples, and was tall and cone-shaped, like Boniface VIII's mitre. Following his death in 911 AD he was succeeded by Anastasius III³⁹⁸ who by all accounts was a conciliatory ruler, who did not overly involve himself in the Formosan affair or its lengthy backwash, and attempted to heal the differences between Rome and Constantinople. After the natural death of Anastasius in 913 AD, Lando³⁹⁹ became pope for just over half a year before dying naturally.

The next pope was John X³⁹⁹ (from the diocese of Ravenna), who enjoyed a lengthy reign until 929 AD, his stance on the Formosan issue being far from clear. John was the rumoured former lover of Theodora (one of the most powerful women of the Patrician families in medieval Rome), whose claim to the papal throne caused outrage. Despite these early troubles he helped regain the people's respect for the papal institution, and readied Italy for war against the Muslims. Politically he seemed inclined toward an Italian ruler, namely King Berengar, upon whom he bestowed the mantle of emperor, over the Frankish monarchs. John X also played a part in throwing aside the Slavonic liturgy, and at the Swabian synodal meeting of 916 AD, sought to bring the German clergy to heel. Meanwhile forces were mustering against him in Tuscany, where nobles bolstered by Magyar forces planned to depose him. This they achieved in 928 AD. Accordingly, John X wound up in prison, where he stayed under lock and key until asphyxiated about 929 AD. As John sat rotting in prison, Leo VI⁴⁰⁰ took his place for a reign of seven months. It would seem he was highly favoured by Marozia, the woman who, at 15 years old, apparently bore the child of Pope Sergius III. Following Leo VI's death, after a relatively uneventful period of office as pope, Steven VII⁴⁰⁰ served on in a similar manner, as a political marionette of the Theophylact nobility. He held this position for three years, until being superseded by John XI,⁴⁰¹ the bastard son of Pope Sergius III. John was denuded of all political power, and reduced to being little more than a convenient tool with which she could cement greater ties with Constantinople. Marozia's marriage to the Italian king permitted her to become even more firmly entrenched within the halls of early medieval Roman power, and allowed for a period of stable rule which stretched until 954 AD. At his death, Leo VII came to power in 936 AD, and set about facilitating the exile of Jews, plus the overhaul of the monastic scene and the Germanic clergy. Three years later he was superseded by the saint-like Steven VIII,⁴⁰² who ruled for just three years under the watchful eyes of the Spoletan, Alberic II. Even so, Steven was closely tied to the court of Otto I, the Frankish German king. When it was revealed that he had been conspiring with the Germans against Alberic, Alberic had him tortured to death.

Marinus II⁴⁰² came along after this, and did much in the way of church building. He made the archbishop of Mainz his personal legate, and bestowed upon him the right to scrutinise the entire German Church. The papacy was now on its way to rectifying any travesties of canon law once they were detected. This was a pruning phase, which, as you shall see, snowballed and culminated in the uprooting of the Magian-Christian clergy from within the German churches.

BENEDICT MURDERED

A COUP AGAINST LEO

CHRISTOPHER DEPOSED

TWO DEPOSED POPES EXECUTED

THE INFLUENCE OF THE ROMAN NOBILITY

JEWES SENT INTO EXILE IN 936 AD

Pope Gregory VII⁹⁴ acted in unison with Henry III and loyal monks to recover the lay invested parishes from their secular sponsors and protectors. Stamping out ‘infernal’ simony, priestly marriages (together with the clergy’s attendant concubines) was equally high on his list for the reconstruction of the Frankish Church.

With such intrigues a regular part of life at the papal court, little wonder popes changed quicker than a game of musical chairs. The many advisors, retainers, envoys, clerks, priests and nuns close to the papacy must have swooned at the political developments ever unfolding at the Vatican (and Avignon), wondering about the labyrinthine allegiances permeating the Holy City. These tribulations were merely a prelude to those unfettered by a series of reformist popes who aimed to rid the Church of deeds condemned in repeated synods.

The old ways had a special longevity, a supernatural resistance to change. And so they remained, colouring the spiritual landscape of Old Rome. The reformist situation became somewhat less tenable and desperate during the Middle Ages, as Europe experienced a massive influx of people from Eastern and Central Europe, displaced by waves of immigrants arriving in the previous zones from Central Asia, the Caucasus and Iran. Things looked bleak for the reformists.

Chapter

Intermediate states of Christianity

The heretics so-called

From this point on the reader will repeatedly come across the terms heretic, heretical and heresy. I use these words partly to add some flavour to the text, partly to recreate the racy and unrestrained jargon of inquisitorial heresiographers. Unfortunately much of what we know about the Christian heretics and witches comes only through Church sources, and it is commonly thought, not without good reason, that this renders them entirely suspect, especially considering they were the very people burning the said heretics. So it is assumed that the clergy's recollections of the heretics are notoriously unreliable, their written testimonies and demonological writings rife with clichés. And yet, as one delves ever deeper into the close interrelationship between paganism, heresy and witchcraft one begins to realise that much of what the priests wrote about heretics and witches could not have been purposefully fabricated on any large scale, despite the state killings. Their records become a window through which the discerning eye can visualise non-Jewish Christianity in its rawest form, and understand its special allure to the people of bygone years. If anything medieval Catholic and Orthodox clergy were overcome by a bewildering range of alternative religious beliefs then present in Europe, and much of which had freshly arrived out of the East. For these mortified clerics of the apostolic mold it was like waking in the middle of the night and seeing a large hairy spider resting on the pillow, right next to their face. Like any true arachnophobe the churchmen leapt up in fright, flicked it onto the floor and squashed it. It was an instinctive reaction driven along nicely by panic and fear. Their solution to these alternative forms of Christianity was to kill them off, ideologically and physically; to eliminate their entire infrastructure. In some respects Catholic and Orthodox theologians were utterly incapable of reasoning out points of difference between their more-Jewish version of the faith, and dogmas championed by the dualistic Christian schools of the East. Nowadays, thanks to advances in DNA research, paleo-linguistics and archaeology, not to mention historical and religious studies, we, of this age of enlightenment, have the necessary tools enabling a peremptory understanding of heresy, and what actually took place.

So far the reader has witnessed the convoluted relationship between Christianity and Magianism, especially Zoroastrianism. One other religious movement warrants close attention, for it greatly contributed to the heretical notions espoused by a later wave of medieval European heretics. As with the Magi this tale too begins in Persia;

EUSEBIUS' COMMENTS
ON MANICHAISM

MANICHAISM WAS
FOUNDED BY MANI, FROM
LONG EXTINGUISHED HERESIES

'Meanwhile, the maniac whose name (Mani) reflected his demon-inspired heresy (Manichaeism) was arming himself with mental derangement, since the demon, God's Adversary Satan himself, had put him forward for the ruin of many. A barbarian in mode of life, as his speech and manners showed, and by nature demonic and manic, he acted accordingly, and tried to pose as Christ: at one time he announced himself as the Paraclete, the Holy Ghost himself, being a maniac and a boaster too; at another he imitated Christ, and chose 12 disciples as partners in his crazy ideas. Bringing together false and blasphemous doctrines from the innumerable long-extinct heresies, he made a patchwork of them, and brought from Persia a deadly poison with which he infected our own world. From him came the unholy name of Manichee, which is still in common use. Such then is the basis of Knowledge falsely so called, which grew up at the period mentioned (3rd Century AD).'⁴⁰⁴

HERETICS WERE TREATED
IN A VARIETY OF WAYS

In this passage, Eusebius mentions, behind all that bluster and bravado, that the heresy of Mani was founded on 'long-extinct heresies'. If this were so, then some of the most damaging heresies to first afflict the Church were those of Magi who had themselves deviated from certain core teachings of Zoroaster in order to worship Jesus, plus devotees of Mani's doctrines. The vast teachings of the Magi and Manichees subsequently gave rise to underground pagan-Christian movements in no way allied to the Apostolic Church,⁴⁰⁵ yet which parodied it in so many ways. Most Christian heresy is therefore traceable to pagan customs accidentally or intentionally brought across into Christianity with heathen converts.

WHITE MAGIANS AND
THE CHURCH SAW THEM
AS MINIONS OF THE DEVIL

You should, by now, appreciate the role of dualistic Magianism in the formation of invidious heretical doctrines. This chapter largely draws upon the observations of Catholic and Orthodox heresiographers, examining the manner in which the old and new faith mixed, and ultimately formed new heterodox cocktails based on a synthesis of the former and the latter.

I cite here one brief example. In England, the Venerable Bede wrote of a church with two altars, one dedicated to Christ, and another to Devils! This account has long been seen as a parish with one altar for the new faith and another commissioned for gods of the old. Yet if dualistic notions are applied to the interpretation, Bede might really have been describing a dualistic sanctuary, with an altar to Christ on one side, and one to cthyonic morbidities on the other. If King Edgar worshiped Christ side by side with devils, his brand of Christianity was founded on the principles of practical, and not just philosophical, dualism.

Beliefs common to Heresies'

HERESY IS A TERM
RELATIVE TO
TRADITIONAL
THEOLOGICAL
BENCHMARKS

Heresy can only exist relative to the views of a given belief system. With the exception of hardened devil-worshippers, Christian heretics did not perceive themselves as advocates of falsity, but much rather a corpus of learning that, for the most part, differed from that of the judaised Apostolic Church. Many medieval heretics subscribed to dualistic philosophy, a belief in the existence of two gods, one good and one evil, or indeed a multiplicity of angels, devils and deities. Quite apart from the common geographical regions in which they arose, features of this kind suggest unmistakably Magian, gnostic and Chaldean beginnings for Christian heresy. Elements of pagan philosophical gnosis were additional pigments dropped into this ideological and spiritual paint vat. This raw and often uncontrolled synthesis allowed for highly evolved cults to emerge, such as the immensely popular Mithraism. The nuances of belief and understanding employed within a dualistic framework differed considerably from sect to sect.

DUALISTIC ELEMENTS

The bipartite (and even tripartite) nature of cosmic dualism dictated that heaven *had to be* mirrored below ground in the Abyss, so that cosmic equilibrium was maintained between the greatest height and the most unimaginable depth: *'Just as it is above, so shall it be below'*. While this philosophical dogma is only contained in *The Emerald Table: 2*, in a treatise attributed to Hermes Trismegistus, it nicely encapsulates the fundamentals of practical dualism. Without doubt the earliest Christian texts shed much light on the nature of Christianity's ideological womb. The *Didache* (also called *The Teaching of the Twelve Apostles. The Lord's Teaching to the Gentiles by the Twelve Apostles*),⁴⁰⁶ the most important surviving document of the early church (besides the Gospel), is believed to have

The very concept of Antichrist as a man-devil was very much in accordance with Hippolytus' view that *'the wicked one'* would eventually materialise in a form antithetical to Jesus Christ's incarnation. Whereas Jesus (a royal Jew from the line of King David) was true man and true God, the Antichrist, on the contrary, would be both man and demon, all in one.⁴⁰⁸

A much later opinion, as postulated by St John Damascene, held that the Antichrist could unspiritually possess the bodies of those he wished, to enact his own plans.⁴⁰⁸ So too was it believed that Antichrist-like individuals had always existed throughout each successive generation, and yet ultimately he himself would come to annihilate the world, walking the earth in human form.⁴⁰⁸

Visions of the apocalypse

The fast-approaching millennial doom

THE YEAR 1,000 AD WAS FILLED WITH FOREBODING

The year is 999 and Glaber, the most celebrated of the mediaeval apocalyptic writers, unveiled that *"Satan will soon be unleashed because the thousand years (since the incarnation of Christ) have been completed"*.⁴⁰⁹ The upheavals and missionary reversals of the past century had really taken their toll. War was an enduring fact of life across much of Europe, the Holy Roman Empire particularly scorched in anti-Christian uprisings. For many it was not just a matter of the faith's survival, but a grim struggle to stay alive. Such were the catastrophes which singed the Christian psyche.

ARMIES AND DRAGONS SEEN FIGHTING IN THE HEAVENS

In France, fiery armies were seen fighting in the heavens, as well as flaming meteors and a catalogue of celestial aberrations like dragons and sky chasms.⁴⁰⁹ There too, a worshipful wolf began paying homage to god in the Church, serving as a bell-ringer, and being a cause of scandal and disquiet.⁴⁰⁹ Assassins made after abbots.⁴⁰⁹ What fearful times it must have been.

PROMISCUITY

Others threw all care to the winds. A number of low born Christians took after the high, engaging in concubinage, promiscuity and incest. Vicious crimes of every nature found currency, as well as warfare and disjointed seasons. With the agricultural sector so ravaged, crops failed miserably, leaving bellies empty everywhere.

FAMINE

CANNIBALISM

The hunger was unbearable. People ate the basest of fare not the least of which was human flesh, often of their own children. At Tournus the flesh of men was carved from murdered wayfarers and peddled as fresh meat in the marketplaces, snapped up by the grimly emaciated. There were instances where the desperately hungry fell upon more recent graves, gouged the body from the earth, rending it and ghoulishly feasting on the remains. Serial cannibals were apprehended and executed, burned alive.

MANY CHRISTIANS TRAVELLED TO ROME TO SEE OUT THE FIRST 1,000 YEARS OF CHRISTIAN HISTORY

Small wonder then that the end of the world was prophesied for the not to distant future. Christians took to their heels heading straight for Jerusalem where it was hoped their sufferings would be minimised once the floodgates of hell burst open bringing armageddon, judgement, and the end of all god's creations.

Still others made their way to Rome to hear the pope say mass Christmas mass in the year 1,000, trembling to be sure. They assumed that this would be the final moment, though the passage of midnight brought relief to the nervous and exacerbated throngs, which converged there to be with the Holy Father when the end presumably came. Yet if they felt that this earned them prolonged respite from 'the horrors' they were misguided; centuries of conflict ensued. For many and varied reasons the German Franks suffered the grievous affliction of continuous internal warfare from the year 1198 AD until 1208 AD, some of which may well have been due to religious factors, be it resurgent paganism, or the divisions invoked by the Papal attempts to reform the German Church.⁴¹⁰

CHRISTIAN APOCALYPTICISM

Traditional Church sources of the Middle Ages regarded the 10th Century outbreak of heretics in the Balkans, and the heathen uprisings as the official fulfilment of *NT Revelation 20*, with the emergence of Satan from his 1,000 years of incarceration in the Abyss.⁴¹¹ According to this prophecy, the armies of Gog and Magog would burst out from their lair of 1,000 years, to surround the Holy city and the saints. Just as the Gospel would be circulated to the ends of the earth before the end of the world, so too would Gog spread their deceptions from one end of the earth to the other, in the shadow of the Gospel. However this was only one small chapter in the history of Christian Apocalypticism. Worse was yet to come. From time to time during the Church's battle with the old beliefs of the

Europeans, they came face to face with sectarians that even the pagans were very wary of, the avowed devil-worshippers. Some were disciples of the Antichrist, of whom much was said. Notions of what his coming entailed changed slightly with time, and so some of the more important aspects of the Antichrist myths are here recounted.

There was general consensus among early Christians that the fate of the earthly Church would mirror the life of Christ. Like Christ, it was born in obscurity; worldly rulers tried to kill it, so that it was raised in persecution. Like the youngest years of Christ, it grew up in obscurity, and eventually emerged as a powerful force of good in the world. But at the very end of its time, it was to undergo its most traumatic ordeal, perhaps worse than anything it had ever experienced, when the Church, like the Saviour, would be crucified. In the end the Church, like Christ hanging on the cross, would be abandoned except by the very few faithful, the remainder having run in panic, in a climate of fear. But this was only a prelude to its glorious resurrection.

St Augustine reveals the prevailing beliefs of the early 4th Century AD regarding that final period of 'the Church's persecution'; few baptisms, the dumping of the saints and parishioners peeling away from the faith in droves. At the 'end of the world' just prior to Armageddon and the return of Christ, the Church would exist in an almost crucified state, with the malice of Satan's deceptions having reached the zenith of their potency. If the crucifixion and ascension of Christ was the pivotal moment in the redemption of human souls, the arrival of the Antichrist, meant the advent of the saviour's primary antagonist, the living embodiment of damnation.

That the devil came to tempt Christ on a number of occasions, is sufficient proof of a genuine apostolic belief in the evil principle. The very notion of Antichrist strongly suggests the Church possessed a significant undercurrent of dualism from its birth.

The second millennium of Christianity saw a radical distancing process, waves of secular and ideological repression that hoped to divorce parishioners from these obvious dualistic trends within the faith. In the Middle Ages soul-saving inoculation from the 'Infernal One's deceptions' came by way of the inquisitors, who strived to rid mother church of the 'Great Heresy', that fatal malady. St Boniface aptly characterised the attitudes of the soul-doctors, with the comment '*one diseased sheep will infect the whole flock*'.⁴¹²

Even so, the inevitability of a once and future 'Antichrist' is driven home in St Paul's *Epistle to the Thessalonians*. Evidently the existence of the detestable Antichrist was, in truth, a legitimate part of traditional Christian dogma.

*'And to you who are troubled rest with us, when the Lord Jesus shall be revealed from heaven with his mighty angels. In flaming fire taking vengeance on them that know not God, and that obey not the gospel of our Lord Jesus Christ: Who shall be punished with everlasting destruction from the presence of the Lord, and from the glory of his power; When he shall come to be glorified in his saints, and to be admired in all them that believe (because our testimony among you was believed) in that day.'*⁴¹³

'That ye be not soon shaken in mind, or be troubled, neither by spirit, nor by word, nor by letter as from us, as that the day of Christ is at hand. Let no man deceive you by any means: for that day shall not come, except there come a falling away (from the Church) first, and that man of sin be revealed, the son of perdition; Who opposeth and exalteth himself above all that is called God, or that is worshiped; so that he as God sitteth in the temple of God, shewing himself that he is God.

Remember ye not, that, when I was yet with you, I told you these things? And now ye know what withholdeth that he might be revealed in his time. For the mystery of iniquity (in some translations called the Mysterious Wickedness) doth already work: only he who now leteth will let, until he be taken out of the way. And then shall that Wicked (One) be revealed, whom the Lord shall consume with the spirit of his mouth, and shall destroy with the brightness of his coming: Even him, whose coming is after the working of Satan with all power and lying wonders, And with all deceivableness of unrighteousness in them that perish: because they received not the love of the truth, that they might be saved. And for this cause

THE ANTICHRIST
PERSONALLY

God shall send them strong delusion, that they should believe a lie: That they all might be damned who believed not the truth, but had pleasure in unrighteousness. ... Therefore brethren, stand fast, and hold the traditions which ye have been taught, whether by word, or our epistle. ... Now we command you, brethren, in the name of our Lord Jesus Christ, that ye withdraw yourselves from every brother that walketh disorderly, and not after the tradition (of Christianity) which he received of us'.⁴¹⁴

CHRIST'S RETURN WOULD
BRING CONFLICT AND
SPIRITUAL WARFARE

What is spoken of in 2 *Thessalonians* is the advent of a false-Messiah, preceding the avenging return of Christ. In that time, the devil's age, the Lord Infernal will come to be seated in the temple of God, worshiped as the Lord God himself. He will persuade the masses that the path of sin and unrighteousness is not barred to mankind, that these things are permissible. He will come to savage every religion, and further install himself as a God higher than all other gods, as holier than every sacred thing. Here the devil masquerades as the supreme being, hateful not just of Christianity, but all religion. The epic can be equated with what was foretold of the wicked one in the scriptures of the Magi, and the *Papyrus of Ani* too - the final rebellion against heaven, and the glorification of non-belief.

WOULD REBEL AGAINST
RELIGION

Further indications that the Antichrist originated not in Christianity, but in eastern dualistic paganism are subtly buried beneath Muslim legend, for they held that the Antichrist would, during the last days, pit his forces not only against Christianity, but Islam. In this Islamic tradition the Antichrist's emergence preceded the second-coming of Christ.⁴¹⁵ The forces of the Antichrist (who the Muslims, as indeed Magian converts, portrayed as legions of Jews) would be led by the Adversary himself, riding confidently on a donkey as his accompanying troops visited untold destruction on the world.⁴¹⁵ From an Iranian perspective these Muslim notions of Antichrist appear to contain a dualistic parody of the *Book of Bundahishn's* account of *Sraosha*, who was to sally forth from heaven not on a slovenly, cantankerous ass, but in a speedy chariot drawn by fleet footed horses, and leading a vast throng of mounted angels and saints to destroy the Lord of Demons and the evil host. But in the Muslim legend it is Mecca and Medina alone that will be spared from the harm the Antichrist would bring.

ANTICHRIST WILL
HUMILIATE THE EARTHLY
KINGS

'only he who now leteth will let, until he be taken out of the way. And then shall that Wicked (One) be revealed'.⁴¹⁶ Perceptions of what held back the Antichrist were widely agreed. It was the kings, who were the faith's sword and shield. But they too were destined to fall at the end time, and in so doing Antichrist would enter the Church unopposed. The chameleon-like 'Evil One' would pose as the Most High.

HE WOULD MAKE
CHANGES TO "TIMES AND
LAWS"

In Augustine's discourse on the Antichrist we find his appraisal of Daniel's *Old Testament* visions in relation to the matter. Four kingdoms were to pass '*the Assyrians, the Persians, the Macedonians and the Romans*', and thereafter ten kings would find ascendancy. '*And after them will arise another who will surpass in wickedness all who preceded him. He will humble three kings, and will speak insulting words against the Most High; and he will harass the saints of the Most High, and will conceive the notion of changing times and laws*'. After that, all kings would surrender their powers of dominion to the saints in heaven above. St Augustine continued as follows.⁴¹⁷

THERE WOULD BE
HARDLY ANY KINGS LEFT
WHEN HE ARRIVES

'... in respect of the ten kings whom Antichrist, as it seems, is to find, who are ostensibly ten men; I am afraid, that is, that Antichrist may come unexpectedly, seeing that there are not as many kings as that in existence in the Roman world'.⁴¹⁸
Then 'there will be a time of distress unparalleled from the first beginning of mankind on the earth until ... those who are sleeping in the heaped-up earth will rise up (at the Resurrection), some to eternal life, some to shame and eternal disgrace'.⁴¹⁷

ANTICHRIST COMES
AFTER THE FALL OF THE
HOLY ROMAN EMPIRE

In the prevailing theory of Augustine's day Antichrist was expected some time after the fall of the last Roman emperor. Historically speaking, the assassination of Franz Ferdinand and his heirs in 1914 (the spark which fired World War I) saw the conclusion of the Empire.

SOME BELIEVED THE
FINAL PERSECUTION
WOULD BE UNLEASHED
BY CHALDEANS

In the late 12th Century Joachim of Fiore, a reformist writer on apocalyptic issues drew parallels between the persecutions suffered by the Israelites, and those of the Church. The successive persecutions were, in turn, that of the Jews, heathens, Arian Christians, and Muslims.⁴¹⁹ The final persecution was reckoned to be a Babylonian putsch, which would see Chaldeanism enter the Church in no small dosage.⁴¹⁹

While himself a king, the Son of Perdition will turn on the few kings remaining in the relatively-kingless world of that time. But amid this prophesied turmoil, the Church would succeed in gaining a very large number of converts from the army of Satan, a mass exodus from the ranks of the deceiver which would help bring about his ultimate downfall, and the collapse of the Satanic kingdom. Augustine remarks that this shall be a miraculous occurrence, befitting of the majesty of Christ, and a testimony to the redeeming power of the spirit of God. And it was precisely at that point that Christ was supposed to return to pass judgement on the world.

The Middle Ages marked a period of renewed apocalypticism. End times prophecies were again popular to say the least, prompting discussions among the literati and commonfolk alike; especially so between the 5th and 9th Centuries.⁴¹⁷ Medieval apocalyptic Christian literature acquired a Persian spin, particularly through the prophetic ministrations of the Pseudo-Methodius.⁴²⁰ Or at least that is the source so attributed. *The Revelations of the Pseudo-Methodius* were written somewhere between 660-680 AD, in Syria no less, but spread at a rapid pace throughout much of the Middle East and Eastern Europe.⁴¹⁹ It was translated into Latin around the 8th Century AD under the title *A Sermon on the Kingdom of God and Sure Demonstration of the Last Times*,⁴²⁰ perhaps to achieve a greater readership. Besides being a fountain of end times theory, it had a distinctly anti-Islamic agenda. Some would even call it an open incitement toward warfare with the Muslims.⁴²⁰

The text begins with Alexander the Great's imprisonment of the 'monster nations' (which included Alans and the Iranian Sarmatians amongst others) behind the mountains in Gog and Magog, a tale also found in the *Quran*.⁴²¹ Alexander's quick, though fictional, engineering project gave the world a momentary reprieve from the predations of the monster nations, a godsend for mankind.⁴²¹ But some day in the future they would break free once more, and war would come.⁴²¹ The tale pans into the future, to the unleashing time, and the conflict of ages. The chief champion of the Christians in this war of wars would be the Last World Emperor, defender of the Holy Roman Empire, and God's right hand man on earth.⁴²¹ This theme was even more elaborately built upon in the *Play of Antichrist*, penned by some erudite visionary within the Frankish royal court.⁴²¹ In the *Play of Antichrist*, the last emperor of the Holy Roman Empire heroically makes his way to the Holy city of Jerusalem, an army in tow.⁴²² Otto of Freising sycophantically thought to cast the illustrious King Louis in this virtuous role, but it could have been any one of them.⁴²² In the last great act of defiance against the devil, the emperor awakens Jerusalem from the catalepsy of its Babylonian captivity.⁴²² Wherefore, upon completion of his divinely inspired mission, the emperor relinquishes his office to Christ, the King of Kings.⁴²² Offering his orb and sceptre skyward, he steps down. With Imperial power now vanished from the earth, the stage is set for the dramatic emergence of the Antichrist.⁴²²

Born and raised in the Church from its inception, that unknown man, who is the incarnate Antichrist, comes to Jerusalem, flanked by his two lieutenants Hypocrisy and Heresy.⁴²³ Then, this enemy from within proclaims:

*'The hour of my kingdom is come! ... I have nourished you for it thus far ... The nations honour Christ ... Therefore, blot out his memory, and transfer his glory to me'.*⁴²³

At what could only be called a public inauguration ceremony, Heresy and Hypocrisy pompously swear fealty to Antichrist, wholeheartedly endorsing his proposal that they win over the laity, and destroy the apostolic clergy. This objective attained, Antichrist is invited by the masses to sit on the throne of Jerusalem.⁴²⁴ He accepts their offer and sets about dismantling the Church's ancient ecclesiastical and sacramental infrastructure, confounding the old order by issuing new laws to the people.⁴²⁴ It would seem that Antichrist had no temporal power originally, but it would be given him by popular consensus, by those well groomed by heresy, including a certain number of priests 'deceived' into his way of thinking.⁴²⁴

As the lamentable proceedings unfold, the King of Jerusalem (probably one of the Crusader kings) hurriedly decamps to the court of the former Emperor. There he rebukes him for abandoning his role as defender of the Church, thereby handing it over to the jackals. But, again according to prophecy, the damage is irreversibly done.

Meanwhile, back in Jerusalem, the Antichrist, now magnified in his evils, is inaugurating his own kingdom, or so Guibert of Nogent foretells.⁴²⁵ In this additional tradition, Guibert further divulges that the Antichrist vents his rage against one institution only, namely the Christian church. Heathens and Jews would be spared this suffering.⁴²⁵ The

INFRASTRUCTURE

10th Century AD monk Adso finely honed the more time-worn apocalyptic traditions; now Antichrist's image was taking even firmer form. *'He will destroy the Law of the gospel, call the worship of demons back into the world, seek his own glory, and call himself almighty God'*.⁴²⁶

ANTICHRIST WILL CLAIM
TO BE GOD

It would be true to say that these images and acts do not appear in the Bible in precisely this form. Other authors stuck more faithfully to the *Book of Revelations*, breaking it down, scene by scene, painting in extra explanatory details. These embellishments imbued the dramatic though etheric moments of the apocalypse with a certain semblance of medieval modernity. It became relevant to their time.

SOME WRITERS
ASSOCIATED THE
ANTICHRIST WITH
ARMIES OF HERETICS

Notably there was Anselm of Havelberg's discourse on the seven seals of the Apocalypse.⁴²⁷ In it the black horse is equated with *'the dark teaching of the heretics whom the great dragon we mentioned raised up against the Church of God'*,⁴²⁸ so that the devil *'might now disturb (the Church) by the most wicked dogma of the heretics'*.⁴²⁸ With the 4th seal came *'false Christians or false brethren of whom there is now an innumerable multitude'*.⁴²⁸

SOME SAID THE BATTLE
BETWEEN THE PAPACY
AND KINGS WAS A
SYMPTOM OF THE
ANTICHRIST

In his *Investigation of the Antichrist* 1:19, Gerhoh of Reichersberg advocated that the rift between the papacy and the empire was of its self, the primary manifestation of the beast's roaming.⁴²⁹ For following hard upon that time, clergy had become prone to the evils of simony and lewdness, adding that *'The rare bishop who wished to correct his clergy did not dare to do so through fear of the Roman curia'*.⁴³⁰

Russes - Typecast as the legions of gog and magog

FOR SUCH A LONG TIME
THE RUSSES WERE
TYPECAST AS THE BAD
GUY, THE SERVANTS OF
THE EVIL ONE

The quasi-Scandinavian tribe which found themselves linchpins in the formation of the Old Russian state are recorded variously as *Rus'*, or *Ros*. If the *Ros* were one and the same as the *Rus'*,⁴³¹ which I have to admit is a much closer phonetic match than *Ruotsi* (the word currently favoured by academics), then the *Rus'* had long inhabited the far north, particularly the Volga area. This is supported by Greek records, which, in 838 AD, stated that the name of the tribesmen who devastated Amastris was the *Ros*. Moreover a number of rivers in Russia bore the name *Ros*, or *Rhos* - part of the Nieman River, an offshoot of the Bug River, and according to a Greek map *dating to the 400's AD*, the Volga river was known as the *Rhos* river.⁴³² The *Ros* seemed particularly connected with the Volga area. *Rus'* traders frequented this zone upon their arrival among the Slavs in the 9th Century AD, from whence they traded with the once Magian city of Rai, Baghdad and other Caspian cities, together with the Volga Bulgars.

SOME CLERICS
ASSOCIATED THE RUSSES
WITH THE LEGIONS OF
GOG AND MAGOG

No scholar has ever managed to conclusively solve the problem of the *Rus'* tribes ethnicity, there are just too many loose ends. It has long been taken for granted that the *Rus'* were a group of Scandinavians who just decided to budge their way into the Slavic lands and settle there (as stated in the *Primary Chronicle*), and that in a short time they became completely Slavified. After all, the *Rus'* were kindred to the Norse, a hard-fighting, hard-drinking, high-spirited breed of "Nordic" stock, who saw great merit in using strong arm tactics on the surrounding tribes of sedentary Slav farmers, in order to get whatever they wanted.⁴³³ However, in the mid 800's AD, the Arab Ibn Khurdadhbih regarded the *Rus'* as sort of Slavic, but he didn't extrapolate. It is fairly obvious from this account that *the Russes were Slavs who weren't really Slavs*.

From Greek sources we have a few bits and pieces written down by the chroniclers in relation to their early attacks on Tsargrad and Byzantine provincial towns, as well as information gleaned during the formulation of one Russo-Byzantine peace treaty. As it turns out a group of *Rus'* lived in the far north of Russia (perhaps near Rostov), who had ties with some Finns, Slavs and Bulgars, and were demon-worshippers. Indeed Rostov was well known to the Varangians as *Rathstofa*, a locale which later figured heavily in the anti-church uprisings. It became an undeclared pagan protectorate during the time of the conversion, a safe-haven for fervent pagans and the pagan Russian priests, the *Volkhvy Magi*.⁴³⁴

The *Ros* allegedly indulged in bloody Taurian sacrifice, sparing no one from their deadly hands, especially strangers, who were particularly at risk.⁴³⁵ Most notorious were the *Arsa* (also translated as *Artha*), a clan sub-unit of the *Rus'* tribe,⁴³⁶ who slew and/or drowned anyone who came into their lands, then tossed their corpses into the water, at places where their Lord the Great Serpent frequented.⁴³⁷ In the *Ros* (*Rus'*) attack on Amastris it was noted that they deliberately desecrated churches, derived much pleasure from the spilling of blood and destroyed almost any living thing they came across. As for their holy sites, the *Ros* worshiped springs and trees.⁴³⁸

The main demon worshiped by the Ros was Zmeya-Volos (the Great Serpent), the enemy of the earthly/celestial god Perun (who was the Thunder God of the Slavs, Balts and Prussians under diverse names; the god of both war and justice, and the primary champion of the Creator).⁴³⁹ Zmeya-Volos is said by some to be an alter-ego of Azi-Dahaka,⁴⁴⁰ an Iranian demonic prince of darkness enshrined in Magian/Zoroastrian thought and fear, a serpent who in some respects also resembled Apollo Delphinios, the pythonian genius of the famed Delphic Oracles. By my reckoning Zmeya-Volos had its origins in Magian religious tradition⁴⁴¹ rather than the Greek, for according to traditional Russian (and for that matter Norse) mythology, the highly venomous serpent dwelt in the watery underworld somewhere near the roots of the World tree (the Sacred Ash).⁴⁴² This I equate with the Magian tale of Gokard, the world tree (the Golden Ash), whose produce, the *Haoma*, was destined to play a significant part in the resurrection of the pagan Magi and their followers. The Norse recounted (as did the Magi in their Book of *Bundahishn*), that a Great Serpent (Nithogg) chewed away at the roots of that tree. In Magian lore, it did so to kill off the sacred *Haoma* and so prevent the much longed for revival of the deceased in the afterlife.

SERPENT WORSHIP

Therefore, Zmeya-Volos would be more properly equated with Ahriman, the Magian equivalent of the devil (rather than Azi-Dahaka), who the Magi believed could appear as either a serpent, or a black winged goat or dog, covered with a shaggy fur. Thus can we account for the name Zmeya-Volos, a title which seems contradictory and dubious, for it denoted a being who was both a serpent, and a hairy creature. The Norsemen spoke of a similar beast known as the Midgard Serpent, who would emerge to wage war against the Gods of heaven during Ragnarok, and whose sworn foe was Thor. As you will read later in this book, there is some reason to believe that the Slavs had not inherited a belief in Zmeya-Volos from the Norse, nor the Norse from the Slavs, but that a few Slavs and Norsemen (and I stress only a few) paid homage to a serpent which had its origins in a common Magian source.⁴⁴³ Since Zmeya-Volos was thought to reside in many bodies of water, it was there that some Slavs drowned or slew cattle, cocks and babies to it in sacrifice.⁴⁴⁴

The Rus' warriors went raiding in dragon ships (perhaps in emulation of their venomous snake lord who plied the watery realms), and were linked in with the Alans (Asii) and Goths by past military allegiances, and common ancestry to the old Bosphoran city-states (founded in the Crimea by Mithridates IV⁴⁴⁵ of Mesopotamia c. 100 BC) referred to by Ptolemy as Metropolis and Azagarium.⁴⁴⁶ During this historical phase the indigenous Graeco-Scythian clothing was replaced by traditional Iranian dress and administration.

DRAGON SHIPS

One vitally important heraldic connection existed between Magian Khorezm, these Bosphoran Kingdoms of old and the Rus' Rurikid dynasty which would eventually rule over the fragmented Slavic and Finnish tribes during the 9th Century AD.⁴⁴⁷ Both the Bosphoran and the Rurikid royal houses possessed the same style of royal tamga (a heraldic device) as the Khorezmians, and the Asii (Alanic) Burgalty clan, which incidentally equated to the letter "r" of a unique magical script designed by the Pharaohs, called the Alphabet of Kings (it was assigned the Hebrew sound "resh")⁴⁴⁸, a script which has had a very long history of usage among sorcerers and alchemists from Egypt to Asia Minor.⁴⁴⁹ Both the bident and trident devices were stamped into ancient Russian coinage. These kingdoms were later annexed by the Goths (c. 300 AD), which provided the basis for a permanent Germanic presence in Crimean Bessarabia, until this century (though the last confirmed sighting of the Crimean Goths was in the 16th Century AD). Here dwelled the Tetrakhitae Goths (ie; Scythian Goths associated with the Indo-Iranian *Tigraxauda* sub-group of the Messagetae) who were partly composed of Melanclaenae and Iranian Sauromatians.⁴⁵⁰

THE TRIBESMEN IN QUESTION WERE BELIEVED TO BE A CULT OF DEVIL WORSHIPPERS

So, what is the possible significance of this place Azagarium, that Mithridates IV founded in southern Russia. Well *Cosmography*, a mediaeval copy of Ptolemy's 2nd Century AD world map *Geographia*,⁴⁵¹ shows a number of cities in Scythia beginning with the Iranian word *Az*, perhaps indicating the presence of Iranian settlements on the Steppe. Certainly the cities of Metropolis and Azagarium were associated with a period of de-Hellenisation in this region, which as mentioned saw the adoption of Iranian-style dress codes. In Iranian, the name of the city of Azagarium is translated as "the Hill or Mountain of Az".⁴⁵² And this is where the connection with devil-worship comes in, for *Az* (pron. *As*) was an Iranian word which caused a fearful surge of adrenaline in many a Zoroastrian, Zurvanite or Manichaean. *Az* was the "Black robe of Wickedness", the powerful magical garment of darkness worn by the Black God Ahriman and his devoted black-magian priesthood.⁴⁵³ It was also the name of the libation of the Black Magi, which they drank from a chalice "filled with all the sins of the world".⁴⁵⁴ *Az* embodied the powers of vice, chaos, theft, corruption and lust, which in turn has a phonetic parallel in the Avestan word *Azi*, which means

“serpent”.⁴⁵⁵ In relation to this, the Ros were described by one Byzantine Chronicler as drinking libations of lawlessness. Were they drinking Az, or was this just high blown rhetoric? Az could also be another title for “the Great Serpent”, who was also known as Zmeya-Volos, or Azi-Dahaka,⁴⁵⁶ “the very essence of concupiscence and insatiable avarice”. Azi-Dahaka’s iniquitous hobbies, robberies, scandals and greed were an endless theme for Manichean, Zend and Pahlavic scriptural literature. Consider the following Magian passages;

HIGH DEMONS WERE
CONDEMNED
THROUGHOUT THE
SCRIPTURES OF THE MAGI

*“The Demon Az (Greediness) is he who swallows everything, and when through destitution nothing has come he eats himself; he is that fiendishness which, although the whole wealth of the world be given up to it, does not fill up and is not satisfied... Pus is the demon who makes a hoard, and does not consume it, and does not give to any one; as it says, that the power of the demon Az is owing to that person who, not content with his own wife, snatches away even those of others”.*⁴⁵⁷

THEY BROUGHT DEATH,
INIQUITY, DESTRUCTION,
LUST, CRAVINGS AND
MOST OF ALL GREED

*“And the fiend of gloomy race, accustomed to destruction, changed into causes of death the position of the brilliant, supreme heaven of the pure, heavenly angels - which he ordained through the power of Mitokdt (falsehood) and the triumph of the world’s creatures, as ordained through two decrees: one, the destruction of the living by the power of death, and one causing the manning of souls by a course of wickedness. And he made as leaders therein that one astute in evil who is already named, and Asto-vidad who is explained as the disintegration of material beings; he also entrusted the demon Bushasp (lethargy) with the weakening of breath, the demon Tap (fever) with stupefying and disordering the understanding, and the (serpent) demon Az (greediness) with suggesting cravings and causing drinking before having the thirst of a dog”.*⁴⁵⁸

GREED CONSUMES
EVERYTHING

The depiction of the super-greedy Azi-Dahaka as a serpent who eats itself may be reflected in the *ouroboros*, a pagan Gnostic insignia (such as can be found engraved into gems, or in rendered in alchemical texts) which shows a serpent devouring its own tail. If the worship of Az the serpent-demon was to be found there at Az Mountain, at the Azagarium settlement, then one might expect that the devotees of Az assumed the character of armed robbers, and brigands who plundered other people’s women-folk and hard earned wealth, and who were gluttonous eaters with a massive thirst. It is known that one of the major preoccupations of the Russes was the extortion of grain and stock from nearby farmers, and numerous plundering raids on Constantinople and the Caucasus.⁴⁵⁹ Coincidentally some Slavic tribesmen were known to have taken wives only after they had seized them by force.⁴⁶⁰

THEY STOLE OFF WITH
WIVES

From the preceding examples of Zoroastrian scripture we discover that the earthly arrival of Az (and a number of other princely demons) was an essential part of Magian eschatological doctrine concerning the coming of evil into the world. They arrived in the form of demons and reptiles, each to the last evicted from the Iranian heaven, by the archangels and saints of the white Magi, and the radiantly sunny Ahura Mazda. The serpent Ahriman hit the water and slithered down inside the world,⁴⁶¹ as his other demonic creations smashed through the earth’s crust, then rumbled and growled in the middle of the earth, causing mountains and hills to sprout where the putrefying swarm collided with the ground.⁴⁶² Azagarium might therefore have been the impact site for the arrival of the demon Az, a holy site for Iranian devil worshippers, a mountain wherein lay a dragon of immense might and greed. Maybe Azagarium, the Hill city of Az, was also called Azgrad (ie; Az city) if you were a Slav, or perhaps even Azgard (ie; Az city) if you were a Norseman. Whether there is any connection between Azagarium and the Norse Asgard is difficult to prove; personally I doubt it. The name of the subterranean holy place in which Odin’s underground feast hall *Val-holl* is translated as “the hall of the Dead” or “the hall of the slain”, in the Old Norse. There in that underground realm Odin (the magician-god), raised the bodies of fallen warriors from death. Turville-Petre speculates that the term *holl* came from *hwall* (“a hill”), thus signifying that burial mounds served as homes for the dead. This is yet another seemingly Iranian custom, that of the *kurgan* burial mounds. By some coincidence the Scythians built extensive underground kurgans, many of which were emptied of treasure by fossickers. A maze-like complex near Cherson⁴⁶³ was dug some 8 metres below ground.

Such Iranian parallels seem well engrained within Norse and Slav circles. I, like Vernadsky, deliberately make this connection with Asgard.⁴⁶⁴ Firstly there seems to be a connection between the Norse, Slavs, Alans and the Magi - the Iranian word used to describe the walled ramparts of Ahura Mazda’s heavenly City of the Good was *Garodoman*. The Norse and Slav words for city seem to be derived from the Magian *Garodoman*; the Russian word for a walled city is *Grad*, or *Gorod*, and the Norse word is *Gard*. Azagarium can thus be directly translated into the Norse as Asgard, which in *Ynglinga Saga* was called the principle settlement of Asaheim (the home of the Asii, or

Alans). Thus, Azagarium might have been linked with, or even dedicated to, the worship of the widely venerated serpent (Iranian: Azi), who was still being revered and *deeply loved* in 10th century Rus' under the name Volos, and perhaps in Scandinavia as the Midgard Serpent! Sadly neither Metropolis nor Azagarium have been unearthed as yet by archaeologists (nor such *massive* sites as Gelonus which was burned to the ground by Darius), but we can only hope. The most likely location for Azagarium is under a mountain or hill sited near the wide-flowing Dnieper.

The reasons why the Ros made sacrifices to serpent demons were many and varied, but included buying their friendship to avoid evil, and some may even have felt sorry for them, viewing them not so much as evil, but more human than the other celestial essences.

Zmeya-Volos (also called Veles) was the serpent of knowledge (gnosis), the arts, music and prophecy, and widely consulted by seers for the purpose of fortune-telling.⁴⁶⁵ There is some reason to believe that the serpent did not confine itself to Russia, because as far as the Catholic clergy of the Middle Ages were concerned, all witches, mediums and fortune-tellers were said to be under the power of the "Pythonian spirit", the serpent.⁴⁶⁶ As you will read later in this book, this may well indicate that the worship of the Great Serpent was present in western Europe during the time of the Inquisitions. Volos shared the same patronages as the Greek Apollo or Hermes, or the Roman god Mercury, in particular the fine arts. Divine serpents had long been in worshiped in Russia. Ginzburg tells us that the serpent lauded by the Scythians was a pythoness. Whether this serpent was the same as Zmeya-Volos is unclear; but Azi-Dahaka was a female. Magian tradition makes mention of several great serpents of the underworld, so this is another explanation.

Anyhow, the 842 AD attack on Amastris by the Ros resulted in the wholesale destruction of villages, stock, crops, simple folk and churches, as they pillaged and raped their way across the countryside. According to eyewitnesses, their eyes reflected a greedy lust for Byzantine booty, and their enormities defied description. Having broken down the doors of the parish churches at Amastris they sacrificed prisoners and offered pagan libations on the desecrated altars. Churches were razed to the ground.⁴⁶⁷ They used prisoners for archery practice and punched iron spikes into their brains. Such delinquent behaviour reemerged some 18 years later as Rus' longships offloaded their army of fury on the vulnerable outer suburbs of Constantinople and the Byzantine monastery at Terebinthos. In one go they are said to have wiped out whole generations of Greeks.⁴⁶⁸ Following these accounts all mention of the Ros faded until their re-emergence as the Rus' not too many years thereafter.

If the Rus' (Ros) were anything like the Germanic Goths which they once associated with, then these accounts echo much more than a shade of truth. This is precisely the type of treatment the Romans received from the Goths some centuries earlier when they descended on a dying and barely recognisable Rome. The Goths were a race fearsome in the extreme, and the greatest army of the east.⁴⁶⁹ In a few days they could pull apart a city as big as Rome, and they did. Their unprecedented looting spree, saw them rob both living and dead, for they broke open sepulchres deep in the multi-storey subterranean Roman catacombs, in search of skeletal material, particularly that of the saints.⁴⁷⁰ Who knows, they might even have got their hands on the bones of St's Peter and Paul, which according to legend were held at the crypt of St Sebastian in Rome until around that time.

An historian's task is to study the many events of yesteryear with a view to reconstructing what once took place. How incomplete that reconstruction is without a character sketch of the long-dead participants, without fathoming their frame of mind and perceptions. One concept that repeatedly intruded upon the thoughts of Mediaeval Christian men, women, or children, was the notion that all hell was about to break loose, quite literally. Forces had been freed which would soon ravish Christian civilisation as they knew it. These widespread forebodings materialised as a result of the intense and uneasy happenings then taking place beyond the farthest German and Byzantine frontiers, in the land of pagans. From there issued war-like hosts and alien idolatry, that pounced on even the largest Christian cities like a wolf. It was the emergence of pent up forces, heathen Slavs, Norsemen, Hungarians, and Bulgars, that so terrified them. Some advocated that these events amounted to the fulfilment of the Bible's most chilling prophecies.

During the Hunnish explosion of 433 AD, Proclus, the then Byzantine Patriarch, spoke of the dawning barbarian upheavals as the emergence of the Prince of Rosh, heading the army of Gog. To be sure Attila had come out of Scythia intent on war. Scythian Goths and their one-time enemies the Massagetae were just some of the easterners filling his ranks.⁴⁷¹

ATILLA THE HUN GOES
ON THE WARPATH

Turbulent chaos adequately describes the Ukraine throughout the 4th-5th Century AD, judging by the level of insurrection and inter-racial combats taking place. Something monolithic was taking transpiring beyond Rome's Dacian frontier, out of visual range, depositing a debilitating smell of danger in the air. Catastrophic events were building. Roman sentries patrolling the Dacian wall were oblivious to Atilla's coming fist. Around 360-370 AD Hunnish and Hunno-Bulgar forces tore through Southern Russia and into Dacia, like a cyclonic maelstrom, his army fattened by recently absorbed Indo-Iranians (Alans, Sarmatians). Khan Atilla put paid to the Germanic Goths inhabiting the Bosphorus area and pressed them into service also. Unluckily for Rome there was no stopping there. Ukraine looked and felt like a marshalling point for the destruction of a chronically ill Rome, whose dwindling strength was in some cases propped up by former enemies serving as auxiliaries. The Hunnish barbarian vulture, emboldened by their herculean grip on the region's militarists, circled the frontier, ready to pounce. Thrace, Rome, Francia, Roman Gaul; they were all on his hit list.

SOME GERMANIC AND
GOTHIC TRIBES LENT THE
HUNS THEIR SUPPORT

The Hunnish arrival had a drastic effect on Germanic tribal unity. Only those willing to submit to the Khan were safe to stay on, others loyal to the Germanic kings were progressively squeezed from their homes, moving west. As time went by a good many (Ostrogoths, Herulians, Alans) stuck with the Hunns, while others (Visigoths, Alans) drew back to join their arms with the Franks, Lombards. Some Teutons, it would seem, were won over by the Romans, and encouraged to offer spirited resistance to the barbarian incursions. Others, seeing the once-invincible Empire dying before their very eyes, turned to opportunistic looting, as opposed to open warfare.

OTHERS WITHDREW
FURTHER WESTWARD
INTO EUROPE, PREPARING
TO COMBAT THEM
SHOULD THEY ARRIVE

Obviously Proclus was mistaken that the end times were underway in his age, for with Atilla's death Christians breathed a welcome sigh of relief. The danger had passed for the time being.

Later, in the 9th Century AD, it was the Mediaeval pagan Russes who ended up carrying the infamous title of Magog, almost as if it were Atilla's passing of the baton, in an apocalyptic medley relay. According to the author of *The Life of St George of Amastris*, the very name Ros was infinitely more horrific than the many terrible afflictions they visited upon their prey,⁴⁷² because, in the same tradition as Proclus, he identified them with the army of Gog from the land of Magog.

Thus the Rus' tribe was linked in two separate Church traditions with the prophesied Prince of Rosh (the Greek pronunciation was Ros) of the septuagint, the leader of the army of Gog. It is of interest that the 10th Century AD Rus' Rurikid tamga was identical to one letter in the so-called Alphabet of the Kings, which in Cornelius Agrippa's later work *De Occulta Philosophia* was assigned the Jewish sound "Resh". In other words the Rus' princes may have worn as their emblem the device of Resh, *thus indicating they might have in some way identified themselves as being the Princes of Rosh*. For those unfamiliar with the ancient prophecy, the dawning of the nations of Gog is shown here, as recorded in the Jewish *Old Testament*.

"Son of man set thy face against Gog, the land of Magog, the chief prince of Meshech (Rosh) and Tubal, and prophesy against him....And I will turn thee back, and put hooks into thy jaws, and I will bring thee forth (Gog), and all thine army, horses and horsemen, all of them clothed with all sorts of armour, even a great company with bucklers and shields, all of them handling swords...Persia, Ethiopia (some translations have Sudan) and Libya with them: all of them with shield and helmet. Thou shalt ascend and come like a storm, thou shalt be like a cloud to cover the land, thou and all thy bands, and many people with thee....And thou shalt say, I will go up to the land of unwall'd villages; I will go to them that are at rest; that dwell safely, all of them dwelling without walls, and having neither bars or gates. To take a spoil, and to take a prey; to turn thine hand upon the desolate places that are now inhabited, and upon the people that are gathered out of the nations, which have gotten cattle and goods, that dwell in the midst of the land. Sheba and Dedan, and the merchants of Tarshish, with all the young lions thereof, shall say unto thee, Art thou come to take a spoil? Hast thou gathered thy company to take a prey? to carry away silver and gold, to take away cattle and goods, to take a great spoil?And thou shalt come from thy place out of the north parts; thou and many people with thee, all of them riding upon horses, a great company, and a mighty army. And thou shalt come up against my people of Israel, as a cloud to cover the land: it shall be in the latter days, and I will bring thee against my land, that the heathen may know me, when I shall be sanctified in thee, O Gog, before their eyes. And I will lead against him with pestilence and with blood; and I will rain upon him, and upon his bands, and upon the many people that are with him, an overflowing rain, and great hailstones, fire, and brimstone".⁴⁷³

This passage is connected with the later *New Testament* prophecy concerning Gog, which reads as follows -

*“And he (the angel) laid hold on the dragon, that old serpent, which is the Devil, and Satan, and bound him a thousand years, and cast him into the bottomless pit, and shut him up, and set a seal upon him, that he should deceive the nations no more, till the thousand years should be fulfilled: and after that he must be loosed a little season....
And when the thousand years are expired, Satan shall be loosed out of his prison, and shall go out to deceive the nations which are in the four quarters of the earth, Gog and Magog, to gather them together to battle: the number of whom is as the sand of the sea.
And they went up on the breadth of the earth, and compassed the camp of the saints about, and the beloved city: and fires came down from God out of heaven, and devoured them”*.⁴⁷⁴

Things were not looking good for Christendom during the 9th and 10th Centuries AD, with the Moors in Spain, and Muslim forces from Libya having gained a foothold in Sicily and throughout the Middle east. But following the campaigns of the combined Rus', Slav, Finn pagan army against the Khazarian Jewish empire (where the Jews of the diaspora finally gathered), and its piecemeal destruction at Khagan Svyatoslav's hand, nervous Byzantine onlookers had even greater cause to dwell on the old septuagint prophecy, and link the heathen northmen with the hosts of Gog. This was not strictly a Christian perception either; even Mediaeval Arab geographers like Ibn Hawkal regarded the Russes as inhabitants of Magog. The Muslims and Jews of the far-east were similarly loathe to allow them free passage into the Caspian Sea, for fear of the destruction they would bring.

The cleric who wrote the *Life of St George of Amastris* (in which he recorded the Ros attack on Amastris) didn't go on to specify why the name Ros provoked feelings of horror and revulsion, but his readership evidently knew the reason, so much so that he didn't need to expand upon the point. It was enough to make them shudder at the mere mention of it. We can only guess why this was so, but presumably there was a logical explanation for his comment, known to the people of his day. One possible reason for the "horror" which the hagiographer felt was inherently attached to the name Ros might exist in the writings of St Augustine. Like so many Christians, St Augustine tried to fathom the true meaning of biblical prophecy, however he stated that nobody knew the timing for the events except God himself. In the following passage he theorised about the meaning of Ezekiel's ancient prophecy (as countless Christians have tried to do, before and after him), and supplied what he understood to be the meaning of Gog and Magog. What language he derived the definitions from he does not say.

“For the nations called Gog and Magog are not to be taken as standing for some barbarian peoples, whose home is in some particular part of the earth, whether the Getae (Goths) and the Massagetae (as some have guessed on account of the initials of their names), or some other peoples of foreign race, outside Roman sway. It is indicated, in fact, that they exist all over the world, when the first statement about “nations in the four corners of the earth” is followed by the remark that those nations are Gog and Magog. I find that the names mean Gog, “a roof” and Magog “from the roof”.⁴⁷⁵

These, then, are the nations in which, according to our interpretation given above, the Devil is shut up, as it were, in an abyss; and the Devil himself is, in a way, one who rushes out and proceeds from them; as they are “the roof”, he is the one who proceeds “from the roof. If, on the other hand, we refer both names to the nations, instead of applying one to them and the other to the Devil, then they will be “the roof” (ie: Gog) because the ancient enemy (the Devil) is shut up in them and, in a sense covered by them; and they will also be “from the roof” (ie: Magog) when they burst out from covert into overt hatred”.

The Russian word for “a roof” *Krysha*, comes from the word *Kryzh*, which has the following cognates - *Kryzh* or *Kryti* (Old Slavonic: “to conceal” or “to hide”), *Kriya* (Bulgarian meaning “I am concealing or hiding something”). These are cognate with *Kriti* (Slovenian, Serbo-croat), *Kryti* (Czech), *Krys* (Polish), all of which mean “to conceal”, “to hide”, “to drown”, or “to cover with a roof”. Then there is *Krauju* (Lithuanian) and *Kraut* (Latvian) both of which mean “to impose a burden on someone”). Lithuanian *Kruva* (“a heap” or “a pile”), Latvian (“a load”), *Krauja* (“a hole in the ground” or “a cliff”), *Kruties* (“to impose yourself on someone”), *Hraukr* (Old Icelandic meaning “a pile”), and *Cruach* (Irish meaning “a pile”).⁴⁷⁶ The Russian word for “roof” *Krysha* is not only connected with *Kryzh*, but with *Hroyzar* and *Hroyse* (Old Icelandic), *Ros*, or *Rose* (Danish), and *Ruse* (Low German) which in these Germanic tongues meant “a pile or cairn of stones”.⁴⁷⁷ See how similar *Ros*, *Ruse* and *Hroyse* are to *Ros*, *Rhos*, *Rus'* and *Hros* (the latter group being names exclusively applied to the Russes). Is this why the churchmen were afraid of the names *Rus*, *Rhos*, *Hros* or *Ros*? Were they terror-inspiring words because the Danish or Old Icelandic words are cognate with the Russian

word for “a roof”, therefore signifying they were the actual race of Gog (ie; the Roof)?

The Muslims (unlike St Augustine) regarded Gog and Magog as elements of a specific barbarian race renowned for its brutality, which had been around at least since the time of Alexander the Great.⁴⁷⁸ They existed as instruments of God’s punishment, especially against the Jews. In the *Qur’an* we find:

IN ISLAMIC SCRIPTURE
ALEXANDER THE GREAT
BUILDS A WALL TO HOLD
BACK THE MEN OF GOG
AND MAGOG

“Then he followed yet another route until he came between the Two Mountains and found a people who could barely understand a word. “Dhul-Qarnayn” (ie; Alexander the Great) they said, “Gog and Magog are ravaging this land. Build a rampart between us, and we will pay you tribute.” “He replied: “The power my Lord has given me is better than any tribute. Lend me a force of men, and I will raise a rampart between you and them. Come, bring me blocks of iron.” “He dammed up the valley between the Two Mountains, and said: “Ply your bellows.” And when the iron blocks were red with heat, he said: “Bring me molten brass to pour on them.””⁴⁷⁹

The *Qur’an* goes on to say;

GOG AND MAGOG
WOULD ARISE IN THE
LAST DAYS

“It is ordained that no nation We have destroyed shall ever rise again. But when Gog and Magog are let loose and rush headlong down every hill (just before the Last Judgement); when the true promise nears its fulfilment; the unbelievers shall stare in amazement, crying: “Woe to us”! Of this we have been heedless. We have done wrong.” You and your idols shall be the fuel of Hell; therein you shall all go down”⁴⁸⁰

In Islamic thought the re-emergence of Gog and Magog is commanded by God at the end of days, when Alexander’s wall is finally taken out of the way by divine edict. *Surah 18* states;

THEY ARE TO BE
UNLEASHED BY GOD’S
COMMAND. THE EVENT
WILL BE A SIGN AND
PUNISHMENT ON THE
UNBELIEVERS

“Gog and Magog could not scale it, nor could they dig their way through it. He said: “This is a blessing from my Lord. But when my Lord’s promise has been fulfilled, He will level it to dust. The promise of my Lord is true. On that day We (the Archangels) will let them (the legions of Gog and Magog) come in tumultuous throngs, The Trumpet shall be sounded and We will gather them all together. On that day We (the Archangels) shall lay Hell bare before the unbelievers who have turned a blind eye to My admonition and a deaf ear to My (the Archangel Gabriel’s) warning”.

Similar feelings to those mentioned by St Augustine were held by Adam of Bremen concerning the Goths then living among the Norsemen. In his *History of the Archbishops of Hamburg-Bremen* we find Adam linking the Goths with the army of Gog, just as many people did during the time of St Augustine.

ST AUGUSTINE DIDN’T
FEEL IT WAS PROPER TO
ASSOCIATE GOG AND
MAGOG WITH A SPECIFIC
RACE

“And unless I am mistaken in my opinion, the prophecy of Ezechiel about Gog and Magog here appears to have been very aptly fulfilled. “And I will send,” says the Lord, “a fire on Magog, and on them that dwell confidently in the islands.” Some think that this and similar sayings were spoken about the Goths who captured Rome. When, however, we consider the fact that the Gothic peoples rule in Sweden and that all this region is dispersed in islands scattered far and wide, we are of the opinion that the prophecy can be applied to them, especially since the prophets made many predictions which as yet do not appear to have been fulfilled”⁴⁸¹.

Two Mediaeval Norse texts (*Arrow Odd* and *Hauksbok*) equated Rus’ with Magog.⁴⁸² These writings stemmed from the Christian era, so the references are more likely to be a Christian gloss, than a traditional heathen Scandinavian tradition.

SOME HISTORIANS MAKE
A LOT OUT OF THE OLD
MYTHOS SURROUNDING
THE RUSSES

Professors Rybakov, Vernadsky and Florovskiy have had a tendency to give credence to the writings of mediaeval clerics (such as the Syrian who wrote *History*, the Greek who wrote *The Life of St George of Amastris*, not to mention Patriarch Photius himself), and make an actual linkage between the Rus’ and the armies of Gog and Magog which lived at the farthest reaches of the world. We must use caution when examining their position. The mediaeval texts written by these figures are either historical evidence that Church leaders believed that they were witnessing the startling reappearance of the race of Gog, or that they wanted to falsely persecute a pagan tribe known as the Rus’, or that the Rus’ were in truth Gog.

PETRUKHIN FEELS IT
SHOULD BE TAKEN WITH
A GRAIN OF SALT

Petrukhin⁴⁸³ quite logically points out that analogies between Rus’ and Gog belong only to legend and should in no way be taken as evidence that the mysterious Nordic Rus’ tribe and the mythical biblical legions of Gog were in any way connected. For instance in the Syraic text the *Hros* are mentioned as inhabiting realms wherein also lived

amazons and dog-men. Such inclusions tend to denude the account of any believability, and for this reason I felt inclined to favour Petrukhin's views. And yet as I sat there year after year, thumbing my way through reams of archaeological, linguistic, mythological, folkloric and historical data I began to find amazing shreds of information (that were more tamper-proof than historical documentation) which intimated that maybe, just maybe, there was more substance to what Rybakov, Vernadsky and other like-minded scholars had been saying. At least more than I was initially prepared to admit anyway. Though I would temper this comment by adding that something was truly re-emerging from that geographical regions with cataclysmic implications for Christian civilisation, and to the Christian faithful this could be emotively termed Gog.

As you will read later, the emergence of the long forgotten Ros/Rus' was a source of deep anxiety for the Jews and Church alike, amply fuelling the apocalyptic fears⁴⁸⁴ that riddled Byzantium during the early Middle Ages. Most importantly, the spontaneous materialisation of the Ros after dusty, long-forgotten ages, along with the Bulgars, Magyars, Serbs, Croats and others eastern heathen nations, set the stage for the flowering of heresy, as Iranian dualistic religion (which permitted the worship of light and dark forces) mingled unchecked with Christianity in the lands of the Slavs. With pagan Magyar horsemen lunging across the frontiers of the Holy Roman Empire, the western Church got to share in the same smorgasbord of fears as the Christian citizens of Byzantium.

Merlin's prophetic cycle of the last days played its part in medieval apocalypticism too, as did his *Book of Kings*. They were popular reading in at least five countries, especially so in the 12th-13th Centuries.⁴⁸⁵ But they were ultimately confined to the British Isles alone, owing to the Counter-Reformation's condemnation of Merlinist writings.⁴⁸⁵

A significant number of Celtic prophecies have persisted down to the present day, recorded right throughout the low to high middle ages. At the behest of Lincoln's bishop, Geoffrey of Monmouth applied himself to translating the Prophecies of Merlin. It includes a raft of demonizing phraseology like: "Woe to the red dragon for his banishment hasteneth on. His lurking holes shall be seized by the white dragon, which signifies the Saxons whom you invited over: but the red denotes the British nation, which shall be oppressed by the white. Therefore shall its mountains be levelled as the valleys, and the rivers of the valleys shall run with blood. The exercise of religion shall be destroyed, and churches be laid open to ruin".⁴⁸⁶ It is my belief prophecies in this vein provided excellent propaganda tools for reformist clergymen desperately trying to place a bridle in the mouth of the 'wayward' Germanic and Saxon church. People's sentiments could be raised, opposing forces could be mustered with greater ease.

One such prophecy concerned repeated invasions of Ireland. "On the arrival of the Tuatha De Danann in Ireland, a vision was revealed in a dream to Eochaid, son of erc, high king of Ireland. He pondered over it with much anxiety, being filled with wonder and perplexity. He told his wizard, "Cesard ... employ your skill and knowledge, and tell us the meaning of the vision".⁴⁸⁷ Cesard did so, and by means of ritual and the use of his science the meaning of the king's vision was revealed to him: and he said: "I have tidings for you: warriors are coming across the sea, a thousand heroes covering the ocean; speckled ships will press in upon us; all kinds of death they announce, a people skilled in every art, a magic spell; an evil spirit will come upon you, signs to lead you astray ... they will be victorious in every stress".⁴⁸⁷ Such tales are fairly typical of Irish seership, even that of Merlin (originally called Myrddin), which seem to hover over the topic of Anglo-Saxon and Viking invasions that would swamp the Celtic people.

The Celts hoped for a pleasing reversal to their misfortune, a repeated theme of their Seers, appearing in uplifting visions. Ambrose's prophetic glimpse of the future mentioned "the two serpents are two dragons; the red serpent is your dragon, but the white serpent is the dragon of the people who occupy several provinces and districts of Britain, even almost from sea to sea; at length however, our people shall rise and drive away the Saxon race from beyond the sea, whence they originally came".⁴⁸⁸

One tale of Merlin is recounted in psalmody in the first person, and seems to identify him as a pre-existent soul whose origins lay in heaven (similar to a *fravashi*), and who was repeatedly reborn into the world as a provider of assistance to those in need of knowledge and protection ...

"Primary chief bard am I to Elphin, and my original country is the region of the summer stars; Joannes the (Egyptian) diviner called me Merddin, at length every king will call me Taliesin. I was with my lord in the highest sphere on the fall of Lucifer into the depth of hell; I have born a banner before Alexander; I know the names of the stars of the north and

I have been for three periods in the court of Arianrod; I have been chief director of the work of the tower of Nimrod, I am a wonder whose origin is not known ... I was in Africa before the foundation of Rome, I am now come here to the remains of Troia ... I have been with my Lord in the manger of the ass; I strengthened Moses through the water of Jordan ... I have obtained the muse from the cauldron of Ceridwen ... I have been a teacher to the whole universe; I shall be until the day of doom on the face of the earth ... I was for nine months in the womb of the hag Ceridwen: I was originally little Gwion, and at length I am Taliesin".*⁴⁸⁹

The Old Believers promoted their own texts of import. One such example, the *Great Battle of the Antichrist*, contains lines like;

*'Now it will be clear who has faith! ... The moon is black, the sun darkened. I see the stars fall from heaven. The ancient dragon seems to be unleashed... The sun is Christ who now gives no sign to strengthen his servants ... The whole of the clergy has galloped off and taken the wrong way'.*⁴⁹⁰

A good deal later Lauch issued end times sermons in the final years of the 16th Century. The monster nations of Gog were Turkic by his reckoning.⁴⁹¹ Such a detail conforms to Magian thought concerning the devil's people, but his association of the Turks with the devil-worshippers, might have been grounded in the activities of the Ottoman Turks who occupied the Balkans.

But for the present time, the currently-reigning kings were their sworn enemies, the adversaries of their imprisoned master. It was standard belief that the kings and queens were the only forces able to physically stop the spread of the devil's religion. At the end of the day this was probably because a number of European royals could trace their ancestry to the pagan sun kings, and hence were the ultimate foes of the great demon, the light which melted away the darkness.

So much for the prophesied activities of Antichrist. How did these events materialise in this world? There are instances where black witches admitted they were participating in the foundation of the Antichrist's universal kingdom.⁴⁹² They were key players in his plan to bring the world out of order, an order enforced by the king's laws. Some of them, perhaps the worst of them, would be kings and queens in the infernal kingdom, once the appointed time arrived.⁴⁹²

It was expected by witches and Christians alike, that the world would truly be inverted with the coming of Antichrist, and with it everything we knew and understood would be turned on its head.⁴⁹³ People fully expected that their heads would be planted in the earth, their feet in the sky.⁴⁹³ The earth would become heaven, and heaven hell. All religion would be abandoned, material existence would be our paradise.⁴⁹³

In the early 1600's Jean Boucher was one of many to note in writing the rites of the dark witches.⁴⁹⁴ Their rituals were usually, but not always, performed naked.⁴⁹⁴ When celebrating their unholy feasts the officiating celebrant hung upside down.⁴⁹⁴ They were very intent on aping what normally happened during white ritualism, so much so that they are alleged to have ensured that their arms, while fully outstretched, were the precise distance from the ground, had the celebrant been standing in the upright position.⁴⁹⁵ Unlike the white Magian or Christian host, theirs was black.⁴⁹⁵ If they were really angry at the time they might go that extra mile, mistreating and abusing their ritual equipment.⁴⁹⁶ And so ceremonial irregularities were the order of the day, or rather disorder of the day, a small but key element to unlock the ancient chaos once more.⁴⁹⁷ At these very low masses of contrariety, their blasphemous head witches and warlocks, the grand masters of disorder, delivered their chilling sermons. The need to rob, tell lies, revel in our lusts, to bring burdens on others, to murder if you can, or indeed should, to turn your back on God, or even the gods, and to look after yourself at the expense of everyone else.⁴⁹⁷

In casual prayer they might bend over backward, kicking their legs up in the air, or somersault, so that, for that brief moment, they were truly upside down.⁴⁹⁷ At other times they prayed to the demons, their eyes peering down upon the ground, their hands reaching out to the timeless evils beneath them.⁴⁹⁷ With trepidation they made their way towards the demons who attended, normally walking backward, or else sideways.⁴⁹⁸

THE ANTICHRIST TENDED
BY INFERNAL WITCHES
AND WARLOCKS

INVERTED RITUALISM

As with the long list of pretender Messiahs, there may have been false Antichrists, owing to the lies the demons were supposed to give in their locutions. One of the most atrocious cases encountered was that of Gaufridy.⁴⁹⁹ In 1611 Dominican inquisitors had cause to investigate and burn a Catholic priest from Marseilles, in relation to incidents at a convent situated in Aix-en-Provence.⁵⁰⁰ By the testimony of a nun, Gaufridy had been seducing them, and bringing them over into his devilish ceremonies.⁵⁰¹ Now laterally connected with this case was another convent of Brigidines at Lille, France.⁵⁰¹ Particular nuns at that convent had engaged in the same sort of ceremonies at Aix, but were far more engrossed in it, able child killers, and could recount the ritual order they observed.⁵⁰¹ What was even more disturbing, the statements they separately tendered to the Dominicans, about such things as their twisted canticles, corroborated statements made by at least two others.⁵⁰¹ Clearly they had shared in ceremonies of the most infernal kind. More startling was the claim that they had seen the birth of the Antichrist, who was born to a female Jew. Gaufridy and the witch nuns were his guardians.

THE TRIAL OF
GAUFRIDY IN AIX-EN-
PROVENCE

While Christ had his nativity at Christmas, the winter solstice, the Antichrist was said to have come into the world on the Summer solstice, but in the year 1613 AD.⁵⁰² They assured the inquisitors that the people would truly embrace him.⁵⁰² What were at that time considered secular and religious crimes would be countenanced and blessed by the people of the future.⁵⁰² Evil would become good, and good evil. They stressed the point that they, as infernal witches, had been present to see Antichrist's birth, and this was seen as a parody of the white Magi's journey to see the new-born Christ in Bethlehem.⁵⁰²

ALLEGEDLY BORN
DURING THE SUMMER
SOLSTICE

Having been castigated by a king's secular tribunals, or by the Holy Inquisition, dark witches and warlocks were sentenced to death. But before that, God knows, the white Magi tried to wipe out the wicked ones, the devil's own children. And as they waited near their well-fuelled pyres the remorseless convicts issued unimaginable curses upon the onlookers, plagues and every misfortune, even as they burned. Still others remained. There was much work to be done, to prepare for their master's coming.

On a lighter and more innocent level, peculiar medieval and Renaissance social events conformed to the principles of inversion; the carnivals of misrule,⁵⁰³ the Saturnalias,⁵⁰³ where attendees donned the masks of witches, concealing their real selves, and men cross-dressed. Indeed dressing in male clothing was taken as a sign that Joan of Arc had abjured her recantation. And so she was burned as a relapsed witch. So the many dualistic legends, folk beliefs and cult activities of the Middle Ages can be seen for what they really were. They were drawn from Magian scripture and eschatology, shaped by Christian scripture. Both Magians and Christians alike spoke of the wicked one's coming. Meanwhile the Byzantines took every care in eradicating the alleged perfidies of Luciferian black witches, Bogomils and Paulicians. All were high on their hit list.

CARNIVALS OF MISRULE

As early as the 4th Century AD, the apostolic, Nicaean Creed served to teach successive generations of parishioners that *there only ever was one Son*. But among the absolute dualist heretics, this was a teaching to be hotly contested. Dissecting the apostolic profession of faith line by line, one discovers that it served to clarify certain misconceptions the faithful may have had about the nature of Jesus and the Apostolic Church. It advertised points of distinction between Apostolic Christianity and the many high profile mystery religions of their day, including those that mingled Jesus in an overtly dualistic system of belief.

1. Both the Father and Jesus were light.
2. The phrase *'Maker of heaven and earth'* disenfranchised whatever gnostic dualist heretics postulated the earth was in some way the realm and creation of the devil or demi-urge. According to Apostolic Christianity the Father was the Cosmocrator, and he alone.
3. Both Jesus and the Father were God.
4. Jesus was the only son of the Father; there was no other. This simple sentence served to disassociate the apostolic Church from Mithraism, Zurvanism, pagan gnosticism and many of the Eastern Mysteries. So, at least according to the Church and Apostolic Creed, neither Satan nor the Antichrist were Jesus's brother.
5. He came down from heaven, was made flesh, and sacrificed himself. This line served to distance the Church from Manichaeism, which, along with gnosticism, did not profess a belief in the crucifixion or incarnation of Christ.

6. 'Begotten not made' was an anti-Arian Christian clause.
7. Jesus will come again to us in great glory, not walking the earth in a mortal body. Only when he does it will be to impart a judgement on us all.
8. There was an afterlife that the faithful would share in.
9. 'We believe in one holy Catholic and Apostolic Church' was a blunt declaration of allegiance to the apostolic teachings, as opposed to the many species of Christianity that had formed a symbiotic relationship with the eastern mysteries.

In summary, the Nicene Creed is a time capsule of ancient refutations against heresies, much of which is no longer understood by the average believer, who recites it parrot fashion each Sunday at Church.

Brotherhoods of 'heresy'

Apart from the not-so-discrete Manichaeans and Paulician sects (which will be covered in a short while), heretical groups were highly secretive organisations, most reticent about their creed until the confidence of an aspiring convert was assured. Considering the repressive measures pitted against them, it could hardly have been otherwise. In the Christian era, contact between heretics was made possible by means of special passwords or handshakes, which allowed networks to openly flourish under a veil of greatest secrecy. Because so little was absolutely known about them by the Church authorities, they were often referred to by the blanket term 'Manichaeans',⁵⁰⁴ as distinct from the heresy of that name. Heretics were regarded as pernicious and mischievous due to the nature of their societies and teachings, which helped demolish apostolic teaching. Their perceived penchant for subversion, their distortion of biblical texts and their clandestine distribution of pseudo-gospels and apocrypha amongst infant Christian communities was lethal to the apostolicity of the Church.

During the Inquisitions city parishes were better policed, and mostly rendered 'heretic-free' as time went by, through awareness of heretical methods and tenets, though rural communities were especially vulnerable, proselytised by these 'wandering preachers', often with startling effectiveness.

Throughout this book I have identified Magian-Christians as the most prodigious of the 'heretics' present among early Christian and medieval Christian communities. As years passed they, and diverse spiritually picaresque societies, settled in far flung regions, sometimes in lands barely visited by missionaries, and sometimes in the Holy Sees of the Christian world. These we will now explore.

The Marcionites

MARCIONITES

MARCION, THE
PROGENITOR OF AN
ENDURING TRADITION OF
DUALISTIC CHRISTIAN
HERESY

In *The History of the Church*, Eusebius' quotations of early Christian Church texts mention the wolf-men. These accounts put the two-legged wolves in the area of Pontus (Turkey) and the steppes as early as 300 AD, if not earlier. In Eusebius' scant references to the 'Pontic wolves', the themes of gnostic heresy, mass-apostasy and remarkable miraculous powers surface. Amongst them, no doubt, was the Marcionite heresy, a resilient 2nd Century unorthodoxy overwhelmingly attacked by just about every major Christian writer of the time. The cult was begun by Marcion, a small time shipping magnate and son of the then bishop of Sinope, in Anatolia (Turkey). He was excommunicated before a special synod of Roman bishops in July 144 AD in retaliation for his active opposition to the Church.⁵⁰⁵

Marcion chose to re-interpret the Bible, in a way that differed from apostolic teaching. For him, the *Old Testament*, and the mosaic law which Jesus had spiritually liberated us from, was evil and no longer to be obeyed by true Christians. Every Gospel and apostolic treatise fell into disuse besides Paul's writings and Luke's Gospel. These were the only texts, he said, which showed the relevance of Christ's coming. He felt it had nothing whatsoever to do with the coming of a Jewish Messiah, but a world messiah. He brought dualism into the fray by suggesting that Christ's Father was utterly divorced from Yaweh, who was evil and utterly demonic, and a creator of a corrupt and blemished universe. Therefore, he charged the entire Church with propagating the teachings of inept apostles and the falsification of holy books. St Polycarp, (made bishop of Smyrna by St John, the author of the 4th Gospel), refers to him as the 'first born of Satan',⁵⁰⁶ presumably meaning he was only one of a number of false teachers (*pseudoapostolos*) destined to lead Christ's flock astray. From this we might gather that dualism was

ST POLYCARP CALLED
HIM THE FIRST BORN OF
SATAN

regarded by many in the earliest generations of Churchmen (Polycarp was born only one generation after Christ, and personally ordained by St John) as unspeakable lies, the detestable Persian poison, whose only antidote was the sound and authentic teachings of the Church proper. Moreover, Polycarp stressed the importance of not exchanging words with such people, since in doing so, there was every risk of being infected by their life-threatening heresy. Al-Nadim stated that many Marcionites were still present among the Christian communities of Islamic Khorezm and Baghdad during his day, and what is more their religious texts were still available. One of them was called *Antithesis*. They therefore thrived in regions formerly populated by Magians, Chaldeans and most likely the Magian Christians. Al-Nadim did not know where he could get copies though, because they were ‘concealed among the Christians’.⁵⁰⁷ One Marcionite doctrine allegedly maintained that while God was ruler of the kingdom of Light and the Devil the Lord of Darkness, Jesus was said to be the ruler of the earth, that third place wherein light and dark, good and evil mixed. Marcionites did not believe in consuming animal fats or alcohol.

MARCIONITES EXISTED
AMONG THE CHRISTIAN
COMMUNITIES IN
BAGHDAD AND
KHOREZM

There was a sub-sect of the Marcionites, a splinter group which the Muslims called *Al Mahaniyah*. Its doctrines were hardly known and so avoided entering the historical record.

The Massalians

As a point of origin for the Massalian sect we need look no further than Northern Mesopotamia and Armenia,⁵⁰⁸ where they were known and feared as early as the 400’s AD. It is generally believed most of them faded away in the Middle East somewhere during the 600’s AD, but their presence was noted in the Balkans after the year 1,000 AD, leaving one to conclude they had migrated there, having slotted in among the Paulicians.⁵⁰⁸

THE MASSALIAN
HERETICS

The Balkan Massalians of the early Middle Ages were supposedly closely associated with the Bogomils, and also went by the name Euchites, or Enthusiasts. Their sect espoused the same ‘dark and evil Trinity’ (as the Inquisitors regarded it) as the Bogomils, yet often allowed the open worship of Satan in order to placate him and stave off evil. These were so to speak crisis sacrifices, of a sort not unknown in heathen districts. But in an intriguing liturgical twist they felt sorry for the Devil, perceiving in him the biblical ‘prodigal son’, who squandered his share of his father’s inheritance on wine and prostitutes, but who would one day be warmly accepted back by his father. Using (NT) *Matthew 21: 28-32* and *Luke 15: 11-32* as validation for their doctrine, they claimed that Satan was the Father’s beloved, because he honestly admitted he was evil. One sub-sect of the Massalians worshiped Satan singly in ‘thanksgiving’ for all of the earthly riches and hedonistic pleasures they received on earth. Licentiousness of every species was supposedly practiced in their veneration of the worldly prince.⁵⁰⁹

TEACHINGS ABOUT
SATAN, THE PRODIGAL
SON

In these details I perceive the strong influence of Yezidis beliefs, which, in the *Mashaf Resh* follow along this line. It states that Jesus was flung into the dungeon abyss for disagreeing with god, while the fallen angel Melek Ta’uz was redeemed through his contrition, and ascended to heaven. And so Christ remained entombed there in a sorrowful state until “He remembered Melek Ta’us. He then sought his aid ... When Melek Ta’us heard this, he descended from heaven to earth quicker than the twinkling of an eye, removed the stone from the top of the den, and said to Jesus, “Come up, behold I have brought thee out”. They both went up to heaven. When the great God saw Jesus, he said to him, “Oh Jesus, who brought thee out of the den? Who brought thee here without my permission? Jesus answered and said, “Melek Ta’us brought me out of the den and up here”. Then god said, “Had it been another, I would have punished him, but Melek Ta’us is much beloved by me: remain here for the sake of my honour”. So Jesus remained in heaven”.^{509a} The preacher added “Notice that those who are without do not like Melek Ta’us. Know ye that in the resurrection he will not like them either, and he will not interceded for them. But as for us, he will put us all in a tray, carry us upon his head, and take us into heaven”.^{509a}

ASPECTS OF THEIR
THEOLOGY RESEMBLE
YEZIDIS TEACHINGS

Elements of text found in the *Mashaf Resh* appear very old, such as “The people are to give the *kochaks* (priests) money to fight the Roman army, and thus save the Yezidis sect from the wrath of the man of the year (probably the Byzantine Emperor)”.^{509b} This is probably a reference to Byzantine military exploits against the eastern ‘devil-worshippers’, which are due for discussion a little later in this book. There is however some suggestion of Islamic tinkering with the book’s content in several places.

From a Christian perspective the medieval Massalians were regarded as the progenitors of what is today commonly referred to as Satanism, the Church of the ‘mystical body of Satan’.

Through baptism, asceticism and spiritual baptism, the Massalian expelled a demon said to be attached to each

person's soul from the time of their birth. This done the devotee was said to be cleansed enough for the Holy Spirit to enter the adept's body. Once this occurred, the person received a wondrous vision of God and was considered to be 'saved'. Thence they could live life in a totally uninhibited way, without need for restraint of any kind. According to the Orthodox writer Michael Psellus their rites included infernal rituals, drunkenness, orgies, gluttony and other 'serious sins', and these were said to be commonplace amongst them. Gross-indulgence in orgiastic carnal incest and black magic⁵¹⁰ were just some of the charges levelled at the Massalians, extreme behaviour by anyone except Zurvanites, heathen Chaldeans and dark Magian devotees.

So Massalians seem to have worshiped the devil (with prayers in the form of blasphemies), and in the case of their Bogomil affiliates, we hear they did this to give the devil his dues and *to stop evil from happening*. This preoccupation with fealty to misunderstood demonic forces singled them out for special attention by Inquisitors. Massalians claimed that through their spiritual purgation they had become 'Children of God' and not 'Children of the World'. Besides these things, not much else was known about the Massalians.

The full wealth of Byzantine gnostic tradition and texts were kept alive by the Massalians, who acted as gnosticism's *avente garde* custodians, ensuring that their creeds remained 'a living faith' for some time.⁵¹¹ In unison with the Bogomils, the Massalians proved to be masters of monastic infiltration and by the 1300's had for a time usurped positions within the Orthodox communes of Mt Athos, until discovered.⁵¹²

Further evidence for my assertion that pagan Russian priests were key founders of the Bogomils, and somehow deeply related to these gnostic Massalian Euchites, lies in the fact that each Massalian initiate underwent a deification process, *eventually becoming a living-God*.⁵¹³ We also find demonolatry of the sort known to the Slavs elsewhere, rituals which themselves conform to the creed of the Zurvanites and black Magi, first mentioned in the Magian texts.

A belief in Satan's potential redemption is still formally held by the Orthodox churches, though according to their teachings (which were derived from Gregory of Nyssa and Isaac the Syrian), this is because of the overwhelming mercy of God, who until the end of time can muster enough pity to forgive the many depravities of the 'Evil One', and reconcile the choirs of fallen angels to himself, if only they will come to their senses, confess and repent.⁵¹⁴ According to this formula Satan might conceivably find peace through the love of God, though he might equally perish in the eternal fires, if he so chose.⁵¹⁴ This appears outwardly seeded with Massalianism, however it is fundamentally different. The redemption of Satan was a pivotal belief of the medieval Balkan Massalian satanists, who expected that their master would one day be forgiven and reunited with God, becoming thereafter God's favoured son. According to their brand of Massalianism, the day Satan comes walking down that road begging his father's forgiveness, just like any sinner, is the day that his faithful son (Christ) would become despondent and envious in his self-righteousness indignation at the sinner's change of heart. But unlike the Orthodox tradition, the Massalian Zurvanitic interpretation of the parable of the prodigal son symbolised the ultimate victory of Gods evil son, over his good and faithful son not by storming heaven, but by mending his ways.

Catholic doctrine on the matter of Satan's fate is that *he will be struck down and consumed forever more*. Thus would disappear the evil one for all time, unrepentant to the last, as he always had been. During the 16th Century Council of Trent, the Catholic Church declared the hope of salvation was barred to Satan, and that he was destined for perpetual annihilation at the hand of the living God (as mentioned in the *Book of Revelation*). By virtue of the edict issued at Trent, to admit contrary to this was heretical. Any talk of prayers for the salvation of demons, as mentioned by Isaac the Syrian was simply not on! Catholic doctrine clearly follows the line put forward in the *Book of Revelation*, that right up until the ingathering for the Last Judgement, Satan the irredeemable, the cunning opponent of God, will still be about his work, laying waste to the fold.

The Paulicians

In speaking of Prester John, and his eastern kingdoms, one is looking at large enclaves of converted Magians, including Armenia and Anatolia. They continued to inhabit the orient throughout most of the first millennium of Christ until the early medieval period. A certain portion of the Magian Christians were later referred to as Paulicians.

During the 8th and 10th Centuries AD their centre for missionary operations had moved out of the East, and was sited in Bulgaria. Most numerous in the East, Paulician families lived under the protection of the Arabs.⁵¹⁵ Prior to this they were found in Byzantium, though some remained in Armenia and the Anatolian provinces, especially in Cappadocia. By the 10th Century, the Paulician heresy, though only a few hundred years old, was just about eradicated from Anatolia. The fortunes of their faith took a turn for the worse during that period, following their eastern uprisings against the Byzantine State, which saw about 100,000 of them executed in Asia Minor; mainly crucified.⁵¹⁶ In the 10th Century a further 200,000 of their brethren were forcibly re-settled in the Byzantine city of Philippopolis,⁵¹⁷ in the Balkans, thus creating what was the greatest bastion of Magian-Christian heresy in all of Europe, sporting practitioners or ritual demonolatry. From there they fought an intense guerrilla war against the emperor, with their armed bands causing maximum possible mayhem. Byzantium's slaughter of so many of their believers kindled vengeance in later generations of young Paulicians. They displayed fearsome skills on the battlefield when confronting apostolic Christian forces, and served as shock troops on the side of Islam during the Crusades.⁵¹⁸ By the 9th Century, Paulicians living under Arab rule in colonies near the Euphrates, and those sheltering in Armenia, began to link up with the Balkan Paulicians, thus galvanising their solidarity. Since the Caucasian Paulicians were heavily involved with the Muslims, it is just possible they acted as agents for the Arabs.

Whilst other heretics conducted their affairs in secrecy, the Paulicians, like the Manichaeans, preferred to preach and worship openly. In the 11th Century, Emperor Alexius I Comnenus completed, for the most part, their guaranteed conversion or extermination, thus killing off the Paulician heresy for all time. Even so, pockets of them were able to hole up in fortresses deep inside Bulgaria, where they weathered the storm until eventually converted to Roman Catholicism some time during the 1600's.⁵¹⁹ Whereas Paulician sectarians inside Bosnia were absorbed into the wider Muslim community.⁵¹⁹

Paulicianism's beginnings

The Paulician movement, by some accounts, first began in the See of Antioch, via the ministrations of Bishop Paul of Samosata, 'an unspeakable evil' which saw bishops from all over the Christian world converge on that 'malignant diocese', to stamp it out once and for all.⁴²⁰ It never worked! The Catholic Church's view opposes this Armenian line, instead attributing the foundation of the Paulicians to a Manichaean by the name of Paul, son of Kallinike, and his brother John.⁴²¹

The independent Armenian Church branded them *Arewordik* (meaning the 'Children of the Sun'),⁴²² and was none too impressed with them either, with John IV, their leader and keen heresiographer, denouncing the Paulician heretics for worshipping the Good Sun, the devil and idols, for sleeping with their mothers and relatives, for practicing cannibalism, and the exposure of their dead, which were laid out on rooftops to feed the buzzards⁴²⁴ (a funerary method echoed in the roof top *astodans* of parched Sassania and Khorezm). So far these details appear unmistakably Magian. Its only when you hear of their night gatherings, that things take a turn for the worse. They were supposed to have roasted a baby (born from a mass orgy) over a fire, reducing it to 'the holiest' ash.⁴²³ The initiates then ate the charred remains.⁴²³ This, I believe, is what distinguishes them from ordinary Magian-Christians, who took no part in the dark arts. Presumably this was a form of anti-eucharist, akin to the ancient heathen Chaldean August rite.

If this is a truthful telling of their activities, then it is evidence that the Paulician priests also included dark Magi of the blackened habit, who had been hard at work, diligently nurturing yet another impiety, the highest form of accolade they could give to Satan, their master, 'the deceiver'. If we compare this information with the work of Margaret Murray, in her anthropological studies of the witches across many countries, we can perceive in this Paulician rite an exact description of a medieval black sabbath.

Writing in the 9th Century the famous Muslim scholar Al-Masudi specifically stated that Paulicians held the beliefs of both Magianism and Christianity,⁴²⁵ a sort of twin belief in Christianity and Magian paganism. When we tally this with John of Ojun's detailed commentary on the dualistic customs of the Paulicians, we can be fairly certain that the Paulicians were very much more than Christian dissenters with different views to the Church,⁴²⁶ these were

MASS CRUCIFIXIONS

200,000 RELOCATED TO THE BALKANS

THEY FOUGHT AGAINST APOSTOLIC CHRISTIAN TROOPS

THEY FOUGHT ALONGSIDE THE MUSLIMS DURING THE CRUSADES

SOME FEEL IT BEGAN IN ANTIOCH

THEY PRACTICED EXCARNATION

AL-MASUDI SPECIFICALLY STATES THAT THEY WERE MAGIAN-CHRISTIANS

HE SAID THEY LEFT ISLAMIC COUNTRIES TO LIVE IN BYZANTIUM

Christianised Magians, some of whom were black witches and warlocks. Yet the brand of Magianism described could only have been of the absolute dualistic variety, which, amongst some elements accommodated the infernal arts, and homage to Christ's chief protagonist the Antichrist. In short it was not drawn from traditional Zoroastrianism. Masudi adds they no longer lived in Islamic lands, but had relocated inside the Byzantine frontier, in Anatolia (ie; Turkey).⁴²⁵

BYZANTINE FORCES
EXTERMINATE 100,000

A great deal of damage was done to the Paulician cause during the Byzantine campaigning of 843 AD, resulting in a devastating loss of life.⁴²⁷ A figure of 100,000 dead⁴²⁷ was fielded by a Byzantine writer, but this remains historically unverifiable since, to the best of my knowledge nobody has thought to undertake archeological excavations in Cappadocia, in the location where the massacres are recorded to have taken place. A death toll of this magnitude dwarfs current educated estimates concerning the number of persons executed for witchcraft in Europe, nor has it generated a similar amount of interest, perhaps because the all-important 'gender issues' are not involved.

PAULICIAN REGIONS OF
ANATOLIA INVADED
WITH THE AIM OF WIPING
THEM OUT

The year 872 AD saw a sizeable Byzantine invasion force led into Paulician districts by Christocheir. Toiling to the utmost with sanguine resolve, he set about dealing death to the remaining heretics.⁴²⁸ The overwhelming speed and efficacy of the campaign suffered a final impedance. It could not be fully consummated without a full attack on Edessa,⁴²⁸ a point suggesting a substantial Paulician presence in that city, which housed the so-called '*School of the Persians*'.⁴²⁹

ONE OF THEIR APOSTLES
WAS CALLED "THE
JOKER"

Paulicians usually adopted names cited in St Paul's writings, but by the late 9th Century AD, the greatest Paulician apostles were known by Russo-slavic names like Shutil and Subotin, perhaps betraying high-level Russian or Bulgar participation in Paulicianism, even before 900 AD! Meaning 'the Joker'⁴³⁰ and 'Child of the Sabbath', these names equate with the Russian words *Shutit'* ('to play a trick or joke'), *Subbota* ('Saturday' - derived from the word Sabbath) or *Subbotnik* ('unpaid charity work, performed in a group'). To this list we can add the name Sergius, their supreme doctrinal heresiarch. This suggests Balkan Paulicians were members of the Sergite Paulician sub-sect. During Al-Masudi's time, the Paulicians were led by a patriarch known as Corbeas, who died in the year 863 AD.⁴³¹

ROBBER-MONKS

The name of the Paulician apostle 'the Joker' may be related to the habit of undercover heretics playing pranks within the monastic communes. Their mischievous behaviour included outrageous asceticism, tempting the brothers and nuns to rebel and break their fasts and vows, despoiling food, disrupting work details and Mass, or using potions to make monks sleep through night prayer sessions. Luring others to fall from grace was their primary aim. In all it smacks of old-school 'Luciferianism'.

ROBBING THEIR HOSTS

Their methods may not have been exclusively confined to the grounds of the monasteries. The Church had always known that some people were not cut out for tonsured life. Even during the 3rd and 4th Centuries the number of monks taking to their heels reached endemic proportions.⁴³² In the 11th and 12th Centuries AD, absconders trod the highways and by-ways of Eastern and Western Europe, evading militia and local clergy however possible.⁴³² If apprehended, they were returned to their orders for chastisement.⁴³² Regarded by the authorities as little more than '*Pharisees*', these 'debauched' fugitives allegedly reveled in crime, using their habits to fraudulently gain entry to roadside houses.⁴³² Having sought alms, and besotted the inhabitants with prayerful gesture, the artful deceivers were invited in, fed, and supplied with wine.⁴³² After pretending to sleep, they would wait until the thick of night and burgle their unsuspecting hosts, making off with whatever caught their eye.⁴³² Relic thefts were another specialty, as well as Church break-ins,⁴³³ and for this reason it was standard practice to keep churches under lock and key when not in use. While hungry monks (who in any case should have been billeted with their order) might have recourse to theft when starving, it was this prevailing beggar-monk-petty thief syndrome that did irreparable damage to the reputation of the Church and the monastic vocation in particular. Just the same, who could know how little or how great the activities of the monastic infiltrators were, who had been active from the earliest years of the Church.

ROBBING CHURCHES

THEIR JOKES

Shutil might be related to customary Bulgarian religious witticism, and would therefore have been an element of their paganism. The jesting of the Bulgars (the *yoka*, which is related to the English *joke*),⁴³⁴ or as I believe pagan

pantomimes, were banned by the Church after their conversion. Nor were Bulgars to carry battle-amulets, follow superstitious customs regarding good and bad days, or do war dances. That the Eastern Slavs observed similar habits is proven by early Russian church attacks on the devilish games, performances and plays of the heathens.

Bearing in mind the customs of the Paulicians, the Magi-Paulician connection is far from fanciful. Cappadocia was a 'spiritual home' not only of the Magi, but of every conceivable kind of heresy, especially Paulicianism. Moreover it was there that large numbers of Zurvanites lived, during the age when the Christian apostles first evangelised the area.⁴³⁵ Considering this, the case for Paulicians being Christianised Zurvanite dualists is especially strong. As you may recall King Chosroes I saw it as his sacred duty to annihilate Edessa forever. This may have been due to a considerable Magian Christian presence in that city, a sinkhole from which the twin-believers launched proselytising missions, both ways, into Persia and Orthodox Christian Byzantium. How far west the Paulicians reached is unclear. Interestingly, medieval Icelandic laws governing priestly matters state that non-Latin-speaking clerics were not to be given disbursements for performing Church services there, 'whether they are Armenian or Russian'.⁴³⁶ It is rather difficult to assess the motivation for, and the implications of this law, mainly because it is uncoupled in the accusations of heresy so familiar elsewhere. Evidently Armenian and Russian Christian priests were disembarking in distant Iceland to perform religious services. Obviously there was nothing prohibiting them from doing so, apart from this law which served to starve them of funding, thereby minimising a proliferation of transient Russian and Armenian missionary priests on the island. During the 12th Century Catholic clergy would probably have seen Russian Orthodox priests as heretics, and Armenians definitely so. Thus eastern 'heretics' were coming to Iceland unopposed, presumably to visit Icelandic Norsemen with eastern affiliations, if not ancestry. Some of these Armenians might have been dualistic Paulicians, but this is pure speculation. One overwhelming conclusion provided in this article, is that Iceland was extremely tolerant of foreign belief systems.

The Manichaeans

Since the early 3rd Century AD, the 'Religion of Light', begun by Mani, proved to be an extremely durable heresy, with a widespread following and eminently successful missionaries, who promoted this religion throughout Europe, North Africa and all the East.

What sort of a man was Mani? We know that he belonged to the Magian priestly caste,⁴³⁷ and grew up in Chaldea.⁴³⁷ There he undertook his duties as a Magian sage,⁴³⁷ and became knowledgeable in the sciences, including the construction of terrestrial globes.⁴³⁷ Thereafter he converted to Christianity, received the sacrament of holy orders, and served as a Christian priest until defrocked and excommunicated.⁴³⁷ As he went about his work he donned a scintillating blue mitre, robe, and carried a staff.⁴³⁷

The young Mani was said to be very wise, and at last learned of his mission to spread a new gnostic religion to the world. Through the agency of his tutelary angel Tawm (who spoke directly to him) Mani set about composing the books of enlightenment which contained the core teachings imparted to him from above.⁴³⁸ These he illuminated with religious drawings, just as he would later do his temples.⁴³⁸ Once he had grown old and brave enough to begin his mission, he managed to gain an audience with the unusually liberal-minded Emperor Shapur to explain the principles of divine light, but in typically white Magian fashion, Shapur wanted to slay him then and there as a heretic.⁴³⁸ However as fortune had it, the emperor's attitude changed, and his meeting with him was propitious. From that time Mani gained powerful Persian royal backing for his cause.

From its very earliest days, the religion of Mani succeeded in gaining large numbers of conversions throughout Europe, North Africa, Asia Minor, China and Central Asia, mainly due to its powerful amalgamation of religious theories from major world religions.⁴³⁹ Manichaeism was a popular religious movement built from elements of Buddhism, Zoroastrianism, Christianity and Judaism, using the myths, legends, lifestyle and beliefs devised by Mani. Accordingly, Manichaeism drastically gnawed away at these other faiths, a fact which, from its earliest beginnings, drew it into direct conflict with the religious authorities of these various creeds (and Ancient Rome), and guaranteed that Manichees would be systematically exterminated as time went by. They devised missionary texts, to implement their conversion efforts. Those written by Mani himself were:⁴⁴⁰

MANICHAISM, THE RELIGION OF LIGHT

MANI, THE FOUNDER OF MANICHAISM WAS A BLOOD MAGUS

MANI WAS TOLD MANY ASPECTS OF THE NEW RELIGION BY AN ANGEL

MANICHAISM GAINED MANY CONVERTS IN EUROPE, AFRICA AND ASIA

MANICHEE TEXTS

<i>The Living Gospel</i>	<i>Treasure of Life</i>	<i>Treatise</i>	
<i>Book of Mysteries</i>	<i>Shapuraqan</i>	<i>Psalms and Prayers</i>	<i>The Book of Giants</i>
<i>Historia Arcana</i>			

Other Manichaeian titles scribed by various authors after the 2nd Century AD were,⁴⁴⁰

<i>Immundissimi Manichaei</i>	<i>Letters of Mani</i>	<i>Coptic psalms</i>
<i>Mysteries of Mani</i>	<i>Pragmateia</i>	<i>Manichaeian myth</i>
<i>The Gospel of Life</i>	<i>Adam, child of demons and his salvation</i>	
<i>Hymn cycles</i>	<i>Mani, apostle of Jesus Christ</i>	

THEY WERE CONSTANTLY REPRESSED BY OTHER RELIGIONS

Since there was a great deal of popular support for the teachings of Mani, the fortunes of Manichaeism rested almost exclusively on the amount of repression wielded against it by successive Zoroastrian, Christian and Muslim regimes. The Zoroastrian priesthood regarded the Manichees as heretics, not apostates, which is a sure sign that it deviated from Zoroastrianism only to a *minor, yet unacceptable degree*. As it turns out, the biggest cause for concern was their ability to create political subterfuge, a wish to destabilise worldly authorities, especially the kings. During the last days of the Sassanian Empire, Zoroastrian society had collapsed to the point where it only consisted of autonomous areas under the control of certain Iranian princes, who were the cement holding their faith together. But, just when the Magian people were at their weakest, the Manichaeans endeavoured to undermine the people's support for Zoroastrian Orthodoxy, and thus corroded the resistance of struggling Zoroastrian princes at ground level.⁴⁴¹

MANICHEES HELPED BRING DOWN MAGIAN SOCIETY THROUGH THEIR INFIGHTING

MANICHEES GAINED FAVOUR WITH THE CENTRAL ASIAN TURKS

As the Zoroastrian Emperor Bahram afflicted the Manichees with persecutions and capital punishment, many ventured eastward across the river Oxus and found a degree of support among the Turkic Khans. The Manichees' greatest coup was the conversion of the Uighurs, a Turkic race from Central Asia. This allowed for the formation of the First Uighur Empire, which was overthrown by the Kirghiz Turks in 843 AD, and later re-established in a region of China, near Tibet.⁴⁴² Both of these Empires served as spring boards for the penetration of their religion into China. Banished from the Western world, Manichaeism found sanctuary in the East, where it received a favourable reception, surviving at least until the 1600's AD. It is noteworthy that oriental Manichees had representation within the various subversive lotus groups then active throughout Imperial China.⁴⁴²

MANY CROSSED THE RIVER OXUS INTO THE TURKIC HEARTLANDS

IN 762 AD THE UIGHUR KHAGAN CONVERTED TO MANICHAISM

With the dispersion and depletion of Turkic power, the Uighur dynasty rose to prominence and scraped together an empire west of the Altai mountains, which was to last between 744 and 840 AD.⁴⁴³ Its strength lay in its close interaction with the Chinese in matters of commerce, and the use of Sogdian administrators who oversaw much of the trade and taxation which kept the Empire afloat.⁴⁴⁴

HE TRIED TO IMPOSE IT ON HIS SOCIETY

It was in the year 762 AD that the Uighur Khagan I-ti-chien resolved to become a Manichee, following his seizure of Lo-yang.⁴⁴⁵ Forthwith, the Kaghan gathered a trusty band of Sogdian Manichees, and embarked upon a mission to convert his many subjects.⁴⁴⁵ This he achieved in a very short period by apportioning his populace into self-governing 10-person Manichee cadre groups.⁴⁴⁵ This had the effect of bringing the faith to the very lowest rungs of Uighur society. As happens with any spontaneous conversion polemic, there was dissension among various societal groups.⁴⁴⁵ Little co-operation could be expected from the nobility, or the far-travelling Turkic nomads who rejected many aspects of Manichee asceticism.⁴⁴⁵ Sporadic schismatic anti-Manichee revolts materialised which blasted holes in the Uighur trade and governmental infra-structure.⁴⁴⁵

It took until 795 AD for the Manichaeans to establish any credible presence among the high-born Uighur families.⁴⁴⁶ Though the harnessing of the aristocracy had the effect of helping legitimise its appeal, it still could not enjoy full hegemony in the eclectic religious forum of Central Asia.⁴⁴⁶ There the Elect vied with Buddhist and Nestorian Christian preachers for the attention of the masses.⁴⁴⁶ As a consequence of this Uighur society became polarised between the countryfolk who adhered to a traditional Mongol shamanic lifestyle, and highly literate Manichaeian mercantile groups and city-dwellers.⁴⁴⁷ Out in the sparsely populated grasslands and deserts of Middle-Asia hybridised variants of the Manichee creed no doubt gained footing, as elders and wise-women passed on their muddled, under-educated beliefs to their descendants.⁴⁴⁷ Such heterodoxies may have been formal

enough. As with any newly born child, it is often hard to see whether it resembles the mother or father more closely. So too it is with heresy, or religious hybridisation.

The Roman Catholic Carpini mission recorded in their travel log, the presence of a certain group of pagans (as the Fransiscans called them) in China, who also happened to worship Jesus.

'Although they are heathens, (they) have an Old and New Testament, together with their own way of writing, many lives of the Fathers, hermits, and buildings like churches in which they say prayers at the appointed time. They allege also that they have certain special saints of their own. They worship one God, and believe in Our Lord Jesus Christ and in life eternal'.⁴⁴⁸

Their clean-shaven adepts thought well of western Christians generally, and were prolific alms-givers. But they differed from traditional Christians in that they didn't believe in the idea of baptism. Technically no known religion or heresy fits the above description in its entirety. Some details may be incorrect, or poorly understood by the Fransiscans, thus resulting in an improper reporting of the facts. If we assume that the details are a faithful record of this religion, then the source of such a creed could be as follows:

Nestorians The most likely explanation is that these folk were Nestorians, albeit ones who had been infected at some stage by the Manichaeian heresy of renouncing baptism with water.

Manichees Manichees could agreeably conform to this description, but references to the Old Testament render such an identification impossible. That is unless they were followers of an heretical form of Manichaeism, which had by that stage begun using the *Torah*. Such an eventuality seems slight, especially when you consider that Yaweh was considered demonic, though nonetheless possible in a truly dualistic world.

Buddhists The Fransiscans might have encountered Buddhist monks, monasteries and literature. The only thing is, they must have forgone an immense body of Buddhist literature in favour of the OT and NT, plus renounced many aspects of traditional Buddhism.

Magian Christians The likelihood of them being Magian Christians is reduced if the Old Testament mentioned is the *Torah*, and not Magian pre-Christian scripture. Refusing to baptise the faithful (in a river) could be part of such a faith, but only if the Magian influence was an ancient one.

The peace-loving nature of Manichaeism proved to be the Uighur Empires undoing, for it resulted in a de-facto demilitarisation which only encouraged attacks by the multifarious Kirghiz warbands that savaged the Uighurs, in unison with Mongol associates.⁴⁴⁹ The year 840 AD saw the total collapse of their state, and a diaspora that took disenfranchised Uighurs of every social group into China, and westwards too.⁴⁴⁹

It comes as some surprise to learn that Manichaeism was extant in Africa during the 8th Century AD, many hundreds of years after its supposed eradication there. As it happens, Manichees were finding their way into Germany at that time, from unspecified locations in Africa, or so Pope Gregory claimed. The pope warned St Boniface in no uncertain terms *'under no circumstances should he accept Africans who dare to apply for admission to ecclesiastical orders, because some of them are Manichaeans'*.⁴⁵⁰ Africans in this case might mean negroes (of the sort later depicted in Bosch's manichee-style paintings), but might also relate to the ancestors of Germanic Vandals and Goths, who once settled in North Africa.

Once they had gained Imperial favour in 9th Century China, Manichees began returning to Baghdad, Samarkand, Khorezm and other places, which aroused feverishly anti-Manichee sentiments among Muslims there. The potential for Islamic reprisals against Manichee immigrants was quelled by a threat from their powerful Manichaeian ally in the East, the Chinese Emperor. He declared his intention to obliterate every Muslim in the area if they harmed even a single Manichee. Even so, in the 9th Century AD, Islamic theologians undertook the systematic persecution of the Manichees, which still had a lot of grass roots support in Arabia.⁴⁵¹ Manichees must always have been numerous there, for after Mani's death, the Manichees were led by his successor (the *Archegos*), a supreme religious monarch, whose seat of power was in Babylon. According to a long-standing tradition the Archegos had no degree of authority if he did not reign from his seat in Babylon (in reality Ctesiphon, ie; Ecbatana, the Medean

capital). For this reason Manichees tended to congregate in that region.⁴⁵²

Nevertheless this doctrinal point later gave rise to a schism between mainstream Manichaeism and a group which 9th-10th Century AD Arabs called the *Dinawariyah*, which was led by a dissenting member of the Elect named Mihr.⁴⁵³ These schismatics moved their headquarters away from Babylon to the Amu Darya river.⁴⁵³ Other leaders such as Buzurmihr and Yazdanbakht created further chinks in Manichaean unity with the result that the Manichees became split into the *Al-Mihriyah* and *Al-Miklasiyah* factions.⁴⁵³

Come the 10th Century AD and the Zoroastrian uprisings of 930 AD, large numbers of Arabian Manichees took to the roads to take their message of the illusory crucifixion, and Christ, the saviour serpent to the masses.⁴⁵⁴ Any potential resurgence was very short-lived though, as Muslim authorities of the Abbassid Caliphate suppressed the putsch and started hunting down Manichees, from the lowest to the highest.⁴⁵⁴ They left no stone unturned. As a consequence of this the number of Manichees had thinned so drastically that by the 10th Century AD there were hardly any of them left in Arabia.⁴⁵⁵

Their principle belief that the world was evil proved counterproductive to their cause. A standard non-procreationist doctrine emerged from this, effectively banning the Elect from breeding, and certainly curtailing any sustainable birthrate among the hearers. In effect sodomy and oral sex were not unlawful, since pregnancy could not result. So if an authority wished to exterminate their religion, all one had to do was wipe out the Elect. And this is exactly what the Inquisitors tried to do. Once the Elect were gone, the rites of Mani could not be carried out, souls could not be liberated, Manichaeism could no longer spread by missionary endeavour, nor could it be passed down to descendants, who would have been unlawfully born in any case. If one were thorough enough a Manichaean civilisation could be deconstructed over the space of a few years.

The Manichaean world view

Manichaeans saw the entire world as a demonic abomination created by Ahriman (the Prince of Demons), a place where both light and darkness mingled. Ahriman's second-in-charge was Kuni who made war against Ahura Mazda and swallowed all the light emanating from the Omnipotent one, just as black holes consume entire star systems. This was one of the most traumatic and cataclysmic moments in the life of all spiritual existence.

The material world was formed in such a way as to mirror the divine and heavenly realms in almost every detail, but instead the radiant light and goodness of the majestic Ahura Mazda was thrust into bodies, tombs of flesh. From the demon's skin was created the sky, from his bones, the mountains. The forests and plants were the hairs which sprouted from the scalp of the Kuni demon. Everything, every creature in the world, was demon-made; four-legged animals were four legged demons, two-legged animals were two-legged demons etc.⁴⁵⁶

The entrapment of humanity came to pass when the Archon of Darkness bludgeoned the Primal Man (who was a manifestation of the human spirit), and cast him down into the very lowest extremities of the darkness, where he lay bewildered and pondering his fate in execrable suffering, fear, and loneliness. But as he languished there the Primal Man hollowed in grief to the Living Spirit in the upper limits of the celestial sphere, petitioning him to come to his rescue. And at that came the voice of the Unknowable Father promising to come and loosen him from the imprisonment of the blackened archons. Down into the depths of the lower spheres the Father sent his five heroic warrior sons, who descended fully armoured, to make war on the archons, and who also served to hold back the portended eschatological destruction of the cosmos by divine fire.⁴⁵⁷

Thereafter humankind was created in the form of Adam and Eve, and Cain and Abel. From that point their creation story exploded into a star-spangled gnostic extravaganza. It happened like this according to the Manichaean doctrines outlined in the writings of Al-Nadim. Various divine archons had sex with each other, thus conceiving Adam.⁴⁵⁸ Once he was born Eve arose from a second sexual encounter between the archons.⁴⁵⁸ Thereafter Jesus came and shut up the archons so that they could not cause any more trouble, and he set about schooling Adam about the importance of celibacy.⁴⁵⁸ After a further successful attempt the imprisoned archontic power impregnated Eve with a child called Cain, who was also called the Red Man.⁴⁵⁸ Once born, Cain sired Abel by his mother, plus gained another two daughters as a result of a further union with his mother, and later bedded

them also.⁴⁵⁸ The gross sexual impropriety continued. An angel known as Al-Sind molested one of Cain's daughters by Eve, and once the child of that union had been born he did not recognise it as his and wanted it slain.⁴⁵⁸ Taking pity on the newborn, Adam made off with the babe to protect it.⁴⁵⁸ He fed it with lotus milk and fruit, but later fled to the garden-like Paradise of Light once he discovered that Al-Sind was out to kill him for raising the child.⁴⁵⁸

Heaven contained many trees, walls, gates and towers, whereas Hell was a foreboding primordial subterranean region choked with bracken, cavernous chasms and vents 'of violence' which spewed smoke from ever lower depths.⁴⁵⁸ There fetid water tainted the landscape.⁴⁵⁸

In the heavens were the Mazendaran demons, who swallowed all the light radiating from the two great luminaries, the sun and the moon.⁴⁵⁸ Periodically the Glorious ones (the Lords of the Zodiac), attempted to spring the incarcerated light from these Mazdendaran jails, by bringing the virginal daughters of Time (which were associated with the zodiac) before these aerie demons.⁴⁵⁸ Upon seeing the ravishing maidens, the demons spontaneously ejaculated, and their seed fell down inside the earth in the form of light particles, which gave birth to flora.⁴⁵⁸ This entrapped light climbed up out of the soil in the form of trees, cereal crops and bushes.⁴⁵⁸ From that moment on, all life on the face of the planet was skillfully nurtured and maintained by Ahriman, who desired that countless forms of life should spring forth in abundance.⁴⁵⁸ Paradoxically, while Ahriman was the creator of the material world (not the spiritual), he was also the agent of its destruction, through the dispensing of manifold afflictions. The demon, so to speak, readily giveth and taketh away according to his whim. The Manichees perceived that existence in this world was but temporary, a house of cards blown down piece by piece each time something died. Their proof of this was that, once dead, the same living object disappeared from the earth for all eternity, never to grow again.⁴⁵⁹

The Elect saw it as their duty to undo the harm of creation by liberating the imprisoned light.⁴⁶⁰ Once light was freed, in a typically Magian way it re-ascended into the heights of space to the Sun and the Moon, and thereafter made its way towards heaven on a Pillar of Praise.⁴⁶⁰ There it mixed with the highest light forms and was subjected to a kind of purgatorial burn-off which further refined the escaping light by eating away whatever darkness was still mixed with it.⁴⁶⁰

Manichees also believed in the Great Architect, one name for the Great Power of the Greek philosophers, maker of the physical and metaphysical world. The Great Architect was the builder of the next world, the creator of the new heaven and earth, the place of repose for all existence rescued from the primal darkness.⁴⁶¹

Their philosophical emphasis was on the corrupt nature of the physical universe, the differing principles of extremes and their eternal battle with each other. The Manichees worshiped Jesus, the serpent of salvation; who encouraged mankind to dispel the evils of the world by becoming spiritually perfect. They claimed that Jesus didn't assume a physical body, but a mystical one, and hence did not come here in a tomb of flesh, but spiritually. To them, the crucifixion was a preposterous lie. By Manichaean accounts, Mani, their founder, was Christ's successor, who claimed to be the personification of the Holy Spirit, the 'helper' Jesus promised to send to his followers. He portrayed himself and his teachings as the final evolutionary stage in the missions of a series of prophets, such as Buddha, Zoroaster and Christ. For this reason Mani took for himself twelve apostles in imitation of Christ, and wrote seven gospel-like works.

In his commentary on the Manichees, Al-Nadim recorded that Mani claimed the Jewish prophets of old were 'demon-inspired', not the least of which was Jesus Christ, whom he termed Satan himself.⁴⁶⁰ This claim is difficult to resolve logically; if Mani was sent by Jesus, and Jesus was Satan, does it then follow that Mani was a minion of Satan? It is likely that this detail was incorrectly gathered and noted by Al-Nadim, or otherwise spawned by baseless, anti-Manichee rumour-mongering.

Mani was eventually flayed and decapitated by Karter, the most influential high priest of the Zoroastrian Magi.

Manichaean dress and ritualism

Very few details are recorded of Manichaean ritualism, but one might envisage that it was very elaborate, with great pomp and ceremony. Incense, hymns, music and a feast of fruit were the predominant features.

The Listeners or Auditors met on a day separate to the Elect, the former on Sundays, the latter on Mondays. Their service consisted of singing hymns and fellowship. Few indeed had any contact with the Manichee bishops and the

HOW THE LIGHT WAS TRAPPED BY THE DEMONS

AHRIMAN WAS BOTH CREATOR AND DESTROYER

RITE

larger circle of Elect, in their region, perhaps as a safety measure. Each group of Manichees would expect to be administered by their own member of the Elect, a sort of parish priest if you like.

AFTER THIS THE ELECT
HAD TO LIVE IN A
PERFECT STATE

The ultimate Manichaeian rite was a ceremony which transformed a hearer into a member of the Elect. This was the long awaited moment of every Manichee's life, taking the novice from being a prisoner of the world, to a liberated soul, no longer bound by the shackles of death. But this was not a ritual to be taken lightly, for it could only ever be performed once. Having received this Manichaeian sacrament, the Elect was not permitted to kill anything, nor were they to perform a whole array of tabooed acts, such as having heterosexual intercourse (because of the ever-present danger of pregnancy).

THEY COULD NOT DRINK
WINE OR HAVE SEX THAT
WOULD LEAD TO THE
CREATION OF A CHILD

Only the most stoic of individuals dared undergo the rite in their earlier years, for the office of the Elect demanded a life of utter austerity. So demanding was this lifestyle that the ordinary Listener shuddered at the thought of not being able to meet the proper commitments of the office, even despite the fact that becoming an Elect meant sure salvation. For this very reason, most Listeners would only undergo the rite on their death-bed. If however the person recovered from their life-threatening malaise, they were left with the unhappy prospect that they may inevitably fall back into the damnable ways of the world. If a consecrated Elect felt himself lapsing, invariably they went on a hunger strike, thereby ending their life, and therefore any chance of lapsing altogether. This suicidal death-rite was known as the *endura*.⁴⁶¹

SOME SUICIDED ON THEIR
DEATH BED, BY STARVING
THEMSELVES TO DEATH

It was particularly important that the Elect never lapse, for whomsoever they had consoled or liberated would be dragged down with them, in their fall.⁴⁶² For this reason we might guess that they were watched by their followers like hawks.

IN THE 4TH CENTURY A
MANICHAEAN
COMMUNITY EXISTED IN
ROME

In the apostolic Christian text *De Moribus Manichaeorum*, penned by the ex-Manichee St Augustine, in the year 388 AD, as a refutation of the Manichaeian way of life, we see the intense scrutiny the Elect lived under.⁴⁶³ Apparently the Manichaeian bishops in Rome liked to blend into the local scenery to escape the keen gaze of their underlings, but the efforts of one extremely zealous and wealthy convert there made life hard for them.⁴⁶³ All the bishops were gathered together at one and the same safe-house, so that they could be well cared for, and their every move monitored.⁴⁶³ After only a while living there it was discovered that none of them were capable of living up to the rigid ascetic standards prescribed by Mani. In the end they cracked under the strain.⁴⁶³

MANICHEE ELECT WORE
WHITE ROBES AND MITRES

As one of the Elect, a Manichaeian wore robes of pure white, with a tall white bonnet, which had a chin strap, and two ribbons trailing down the back (similar to those of the Magi). At the front of the robe was a white panel breastplate of embroidered cloth, bordered perhaps in squares of red, and with other insignia.⁴⁶⁴

The fruit feast

ANGELS PROTECTED THE
ASCENDING SOULS OF
THE ELECT

To explain the importance of Manichaeian feasts, one has to gain an understanding of their religious views. At the moment of death the corpses of the Elect disintegrated and fell back into the gloom of the underworld, while their souls separated from the flesh, which had become corrupted.⁴⁶⁵ Once in the ether the souls of the Elect were greeted by angelic guides who rallied to their aid fending off any demons that came to pounce on the soul.⁴⁶⁵

THEY TRIED THEIR BEST
TO HELP THE LISTENERS

The souls of those who were simply hearers were merely guarded from the demons by the angelic essences.⁴⁶⁵ While they might have rendered pious aid to the elect, their actions were still incapable of lifting them up to paradise in the Garden of Light.⁴⁶⁵ From that time their soul remained in limbo in this world until one day liberated by an Elect.⁴⁶⁵

LISTENERS COULD ONLY
ENTER HEAVEN IF THEY
WERE REINCARNATED AS
A PIECE OF FRUIT, AND
THIS FRUIT WAS EATEN BY
THE ELECT

These Listeners (who had not received the *consolamentum* ceremony) were doomed to be reincarnated as a piece of fruit until rescued by one of the Elect.⁴⁶⁵ Since light was originally swallowed by the demons, in their mind it was only fitting that liberation, and re-unification of the soul with the divine light, could only be accomplished once their light particles (contained in the fruit) were swallowed by a being of light, namely the Elect. The ceremonial consumption of Listeners' souls may have given rise to rumours of ritual cannibalism.

MANICHEES HAD RITUAL
FRUIT FEASTS

Whenever the Manichaeian communal fruit feasts took place the Listeners gathered in their local place of worship, normally a building with walls elaborately decorated in asiatic geometric and floral symbols.⁴⁶⁵ From Manichaeian illuminated manuscripts we know that carpets were laid out on the floor in several sections, with the

Listeners on one side of the room and the Elect on the other. In the middle of the room two of the highest ranking elect (one male and one female), sat on thrones. In front of them were two tables, one which held a platter of bread buns, and the other which supported a large bowl of fruit. The melons were piled at the bottom and the lighter fruits placed on top of them. This mound of fruit was crowned by grapes.⁴⁶⁶

The fruit feast was central to Manichaean ritual. Augustine tells us their holy foods consisted of those edibles which were receptacles for light particles (ie; light and souls that needed liberation). One could assess the relative holiness of a given foodstuff using three separate criteria, taste, aroma and colour. Augustine comically mocks them about pork fat, saying that by their own standards it should be very holy, but is banned.⁴⁶⁷

To release the light particles, prior to consuming them, the Elect rolled the fruit about, and this had the effect of releasing the rays of light.⁴⁶⁸ The most popular fare consisted of pears, apples, melons, cucumbers, cabbage and mushrooms. Golden grains like wheat could have their light liberated in the form of beer, or where the grain was milled, mixed and baked, in the form of cakes and biscuits.⁴⁶⁹

Certain inhabitants of the pre-Islamic Volga Bulgar region were said to have written in Manichaean script,⁴⁷⁰ and this seems indicative of a Manichee presence there. During the 10th Century these devotees were flushed out Arabia by reprisals against them,⁴⁷¹ no doubt causing a fair number to relocate into Russia, along with Magians and other committed pagans. It is probably for this reason that the Russian and Polish words for 'fruit' or 'a water melon' are *arbutz* and *harbutz*.⁴⁷² These were derived from the Persian *garbutza* ('melon') via the Kipchaq, Turkish and Crimean Tatar words of similar form. In the Ukrainian *garbutz* means 'a pumpkin'.⁴⁷³ This seems to indicate that a diverse range of fruits and vegetables were imported into Russia and Poland by the various Asiatic immigrants, a number of which also happened to be Manichees. Melons were certain to have been on the menu, *baklazhan*⁴⁷⁴ also, the Slavic word for 'egg-plant' (of Arab/Persian origin).

One Russian word for a garden *bashtan* came from the Turkic/Persian *bostan*. In an eastern religious context this word might have applied to holy groves, or perhaps even Manichaean orchards.⁴⁷⁵

Listeners normally did all the work for the Elect, who had to be supplied with food, clothing and all their other earthly needs, and who did little more than eat, pray, chant and meditate for the freeing of light particles, which were trapped during the fall of the physical world. Because the Elect were prohibited from killing any living thing, they ate only fruit, which did not require the uprooting or destruction of any plant. Contrary to root crops like carrots and parsnips (which were full of darkness), the fruits which hung from fruit-tree branches were believed to be repositories for large quantities of light particles.⁴⁷⁶

Daily Listeners gathered a lavish feast for the Elect to dine on. Before any one of these feasts, Listener servants walked about the orchards, picking their fruit (the reincarnated souls of dead listeners) by the basketful; apples, pears, and other fruits, but more especially grapes and melons. These were then presented to the Elect.⁴⁷⁷ With the commencement of the ceremony, the Elect scoffed down cakes, flowers, fruit juices, beans, mead, cereal grains, beer, mushrooms, filling their distended bellies to bursting point.⁴⁷⁸ In Rome some of the things they ate were regarded as 'rare and foreign vegetables',⁴⁷⁹ indicating that the Manichees had their own supply sources for Asiatic vegetables. Hopefully the fruity souls of one's loved ones would be eaten during the Elect's daily ritual feast, for it was stated that Listeners were continually reborn as pieces of fruit until one day devoured by a member of the Elect.⁴⁷⁹ Once eaten, the soul was emancipated from the moribund world into a perfect body, and thus extricated from the entrapment of darkness, through the Elect's body, a gateway to the spiritual realm of best existence.⁴⁷⁹

The Magi reserved harsh condemnation for Manichees, speaking of 'the fiend, the broken-down Manih, and the destruction of the wicked who were listening to him'.⁴⁸⁰ He tried to kill the world of righteousness, and proclaimed that the Creator and Destroyer were one and the same. Magi further described his doctrines as 'that excretion', which is 'a perpetual effusion', 'and they who stirred up the effusion afterwards think it theirs, and that which is a perfect ceremonial of the demons occurs'.⁴⁸⁰ Manichaeism, though partially borrowing from Magianism, was seen as devil-worship in one of its finest forms. Their stance on them closely resembled that of medieval Christian clerics.

The predictable execution of Mani by the Zoroastrian religious hierarchy, and his passion were enacted annually during their month-long *Bema* solemnities,⁴⁸¹ which for Manichees was their version of the Christian Paschal sacrifice

THE MANICHEES HELD A CEREMONY CALLED THE BEMA

THE ELECT HAD THEIR OWN WARRIOR GUARDIANS

of Christ crucified. Little is known of the ceremony's format, mostly because the most important of their ceremonies were held behind closed doors. Again, it probably centred around a meal of fruit.

Only a person who was capable of abstaining from sexual intercourse, wine and meat was able to join the esteemed ranks of the elect,⁴⁸² though hearers who wished for a higher level of involvement with the cult could serve the Elect as personal servants, or warrior Guardians.⁴⁸² The Elect were forbidden to kill under any circumstances, whether trees, flies, ants or people. It was a major point of difference with the Magi. As the Turks themselves noted, this level of pacificism rendered them vulnerable to attackers. To guard them from the threat of slaughter (which they were so often exposed to) a specific class of listeners known as the Guardians was instituted, whose duty it was to defend the Elect from all aggressors. Even in the French Neo-Manichean colonies of Languedoc and Montsegur, we find evidence of the Guardians, whose heraldic devices very much resembled the Manichee cross (ie; a Maltese cross), but with three pearls at the end of each arm of the cross.

SUN WORSHIP AT VARIOUS POINTS THROUGHOUT THE DAY

Every day at dawn, a Manichee had to wake from slumber and, after having washed himself, lay prostrate on the ground before the rising sun as prayers were uttered.⁴⁸² Like the Magi, the Manichees had other prayer sessions scheduled for various times of the day, in accordance with the position of the sun.⁴⁸² Their elaborate calendar of fasts was dictated by the position of the sun throughout pre-defined stations in the Zodiac. Inevitably Manichees were engrossed in the science of astrology, perhaps not just to perform ceremonial calendrical calculations, but for the formulation of predictions also. Mani's commandments⁴⁸² were as follows:

MANI'S COMMANDMENTS

- | | | |
|-------------------------|--------------------------|-------------------------|
| 1. Do not steal | 2. Do not lie | 3. Do not kill |
| 4. Do not be greedy | 5. Do not be an idolator | 6. Do not fornicate |

Neo-Manichees

The Bogomils

IT WAS AS THOUGH THE BOGOMILS INSTANTLY MATERIALISED AROUND THE YEAR 1,000 AD

The faith of the Bogomils (literally 'The beloved of God') was particularly prolific in Bulgaria and Macedonia at the turn of the first millennium, though they could also be found in Bosnia, Serbia, Albania, Asia Minor (10th C.), Byzantium (10th C.), Italy, France and Germany (12th C.). The standard tools of their trade were preachers armed with the Bogomil catechetical texts *Liber Secretum*, *Vision of Isaiah*, and the *Legend of the Cross*, amongst others.⁴⁸³ So effective were the wandering Bogomil priests, that in the nearest reaches of Byzantium's eastern Anatolian provinces, whole cities were converted to their heresy.⁴⁸⁴

THEY BELIEVED IN A TRINITY

They appeared as if from nowhere, yet from the outset Bogomilism already possessed a fully structured priesthood, closely resembling that of the Manichees. Evidently such an organisation could only have come about in heathen lands, already steeped in Magian and Manichee dualistic traditions, places like Russia and the Urals. The essential teachings of priest Bogomil (the alleged founder of the sect) were encapsulated within a Bogomilian version of dualism, described by inquisitors as an 'unholy trinity'.⁴⁸⁵ It was comprised of God, the 'unknown father in heaven' and his two sons, Jesus and the Devil, both of whom were entitled to at least some worship. Satan (or more precisely *Satanael* or *Satanail*, the Hebrew terms)⁴⁸⁶ was the 'hard-done-by son' in need of some real understanding. This devil was the creator of everything that we see, the entire material world.⁴⁸⁶ According to the Russian *Hypation manuscript* of 986 AD, Satanail was 'the adversary', the 'enemy of God'. The Bogomil heretical godhead has a significant parallel, namely the Rus' pagan triumvirate of Svarog, Belobog (Dazhbog or Khors) and Chernobog, perhaps indicating that the cult began in Slavia, and was known in Rus'.⁴⁸⁷

SATANAIL WAS THE BAD SON; HE MADE THE MATERIAL WORLD

WE FIND DUALISTIC CHRISTIAN TEACHINGS IN PONTUS AS EARLY AS THE 3RD CENTURY AD

THEY WERE SAID TO WORSHIP THE ANTICHRIST

This Unholy Trinity (which was totally different from the Christian Holy Trinity) was devised by individuals attempting to integrate the existence of the independently-acting evil principle into their belief system, and the son of the same, the absence of which deprived them of a full and complete understanding of the cosmos. It might conceivably have begun in Pontus as early as the 3rd Century AD, as the following passage from Eusebius intimates;

*'Others like the Captain himself, Marcion introduced 2 sources (dualism), these included Potitus and Basilicus, who followed the Pontic wolf and failing, as he had done, to find an answer to the problem of evil, took the easy way out and announced 2 sources (dualism) boldly and without proof. Others of them again plunged into still worse error and posited not merely 2 but 3 natures (an Unholy Trinity).'*⁴⁸⁸

One frank admission made before a Byzantine heresiographer revealed that the Bogomils displayed fealty and devotion towards the Antichrist,⁴⁸⁹ whom they regarded as their spiritual father, and creator of the world. If this comment was not in reality a gloss included by the inquisitor (who the detained suspects had earlier tried to convert!), then we might be looking at evidence that the Bogomil movement was the creation of black or grey sorcerers who had migrated into the Balkans from Rus', and who subscribed to a form of dualism that incorporated the dark side, complete with demoniacal devotions.

The first stage of becoming a Bogomil (meaning 'beloved of God') was the *Baptisma*, where Christians belonging to the apostolic Church were *re-baptised to rid them of the Holy Spirit imparted upon them by the Church*, in order to prepare them for higher levels of knowledge and initiation. During this ceremony, the teachings of St Paul, certain Gospel readings and psalms were recited, whilst an *edited Bible* was placed on the candidate's head.⁴⁹⁰

A period of rudimentary tuition and extreme regimes of asceticism were experienced by the novice until the grandest initiation phase was undertaken. In the elevation to the *perfectus* level (the perfect ones), a mock sacrament of holy orders took place, whereby the bible and the presiding *perfectus'* hands were placed on the initiate's head as the spirit was called down. Having received this Spirit, (the inquisitor Zigabenus called it the 'Seal of the Devil'),⁴⁹¹ the member of the Elect was then able to enter the final, highest grade of initiation.

The Bogomils enacted heathen ceremonies akin to those performed by the ancient Greeks, or at least that is how the Byzantines described them.⁴⁹² Hellenic ritualism is presumably a reference to bread buns, the pouring of libations and cattle sacrifice. Bogomil rituals also concerned the performance of spells and alleged *daemone*-worship.⁴⁹³ Other Balkan carvings, depicting a pair of riders facing each other, imply these deities were Mithraic rather than Greek. However the inclusion of *fleur-de-llys* and swastikas on their stecci carvings,⁴⁹⁴ I would guess, points to a Far-Eastern origin for the cult, a Magian origin, taught by Magian Zurvanites powerfully present in Bulgaria, and in pagan Rus' also.

Of all the Christian heretics under the sky, none were as successful, crafty or skilled at waging war against the cross as the Bogomils. Their elaborate missionary activities saw them gain the confidence of traditional Christians. They used sly ploys to effect this; the veneration of icons, saints and even the construction of churches, which were intended to be seen as public signs of their orthodoxy.⁴⁹⁵

There is some evidence for the veneration of bogus saints and icons, but in the following instances it is difficult to say which specific group of dualists was responsible. Under dualism, just as there was a Virgin in heaven above, there *had to be* a corresponding defiled Whore in the dark half of creation below, an inverted, topsy-turvy reflection of that which was above in heaven. From Magian scripture we know that such a whore was Geh, the harlot who acted as the devil's advisor in certain matters. Since the dark side of existence was very important in the lives of the black families, it makes you wonder whether the pagan heretics ever rendered Ahriman and the Whore into religious icons. In relation to this there seem to be distinct parallels with this Pure Mother/White Son and Filthy Mother/Black Son of the heretics, and a series of icons found in various Christian parishes in Poland, a land where Zurvanite pagans once lived.

Apparently there are a number of icons in Eastern Europe which significantly differ from standard Church iconographical standards, which, I might add, were very, very stringent indeed in their requirements for the depiction of saints, martyrs, Christ and Our Lady. These protocols required them to be shown in silver framing, radiant colours, gold leafing, pearls, inlaid gems, to give them a fittingly glorious appearance. The dubious icons in question are the so-called 'Black Madonnas', a series of religious paintings in which the Virgin Mary and her son, Jesus, are depicted as being as black as the ace of spades, instead of radiant white. Clearly, even by Church

standards, something is amiss here. Let's examine the facts and search for plausible reasons for the blackening.

1. Almost all icons of antiquity were executed with paints made from a base of albumen (egg white), tinted with various pigments, powdered gems and gold dust. Frequently the image was painted over a board made from layers of wood veneering. As the icon aged, the albumen began to naturally darken, and blacken due to the accumulation of a murky film left by candle and lamp smoke, which built up over centuries. Thus, today's museum curators and art-dealers gauge the age and authenticity of any genuine icon by its degree of blackening and discolouration.

2. Perhaps these icons were painted or carved by Zurvanite/ Christian 'dvoeveriye' dualist heretics a thousand years ago, who had originally been worshipping the black Madonna, not as the Virgin Mary, but the Great Whore, the unholy goddess of black witchcraft and vexation. According to one source, a number of 'black Madonnas' came into Europe via the Middle East, which dated back to Roman and even Phoenician times. Thus these black mother images are believed to be of eastern origin, and pre-date Christianity by a considerable amount of time. The ancient Aryan Hittite insignia of the double-headed eagle, so profoundly linked with European royalty, also appears to be associated with the image of the black madonna. A golden two-headed eagle can be found on the hem of the Madonna in the famous Eastern European icon 'Our Lady of Czestochowa'.

DOUBLE SAINTS

In this icon you will note the angels holding her crown are white in appearance. Bearing this in mind it's hard to explain why the mother and son are so dark.

3. Some black madonnas might be icons defaced during the Byzantine iconoclastic controversy. Having said that, images were normally destroyed in these incidents. So blacking out images with paint is unlikely to have been your typical iconoclast's weapon of choice.

4. Another option is that they were heretical icons slotted into the local Church by heretics, allowing it to receive the veneration of parishioners, blissfully unaware of the icon's nature, or something that was blatantly venerated by heretical dualist Christians since the earliest years of the Church. Pranks such as sprinkling 'black relics' among the Christian community's 'authentic' ones was apparently a common Bogomil ploy.

Certain renditions of the Madonna were *actually executed in black paint, black stone or ebony*.⁴⁹⁶ Considering the level of Magianism found in Europe, particularly in the Christian sphere, these icons are plausible depictions of Geh, the Great Whore (dressed in her scarlet finery), holding Ahriman (Satan), 'an innocent little boy', and in no way a depiction of Christ and the Virgin Mary. Some postulate that the black Madonnas represented the Earth Mother, but if so, why was she never depicted surrounded by crops, sucklings, and herd beasts, but instead frequently shown with a starry moonlit night in the background, carrying a single child in her arms? You be the judge!

From a modern perspective each of the black Madonnas deserve to be examined in their own right, to determine the cause of the blackening in each case. Only in this way will controversy surrounding them be settled, once and for all.

I will now present a comparatively isolated case of a saint whose complete mortal remains are to be found in more than one location. It certainly seems that unknown persons had successfully installed the body of a bogus saint in addition to that of the real. How might such a thing transpire, and could it be connected with the perfidious intrigues of practicing dark heretics? The case of St Canice is particularly illustrative of the issue. In Ireland there was famous saint by the name of Canice. Now upon her death there was a major dispute between the citizens of Aghaboe and Kilkenny concerning the ownership of her mortal remains, which, as with all saints, would no doubt provide miraculous cures, intercessions and so forth.⁴⁹⁷ Both parties were so adamant in their claims, that it developed into a fight to the death.⁴⁹⁷ In the aftermath of the battle it proved impossible to identify Canice's body, because two coffins lay among the debris strewn on the field of conflict, and neither could be opened.⁴⁹⁷ Consequently both factions returned home, a coffin a piece.⁴⁹⁷ One St Canice now became two St Canices. It seems wild beyond belief that people willing to feud over her remains didn't even know what she looked like. Or was there an imposter who had duped the inhabitants of Aghaboe and Kilkenny into believing that she was Canice, giving rise to the feud? Here we find the most plausible reason for the phenomenon of double or even triple saints.

THE CASE OF ST CANICE
IN IRELAND

In cases like this, what motives would an imposter have? Did it start as a joke that got out of hand? Was it a totally unrelated corpse, that of someone who posed as the saint in their daily life, and was officially proclaimed as such after the person's death, by clerics who did not adequately know the true saint?

At the end of it all we are left with a real dilemma. Do you discontinue public access to both remains, knowing that one of them is the real saint, or do you allow public access to continue knowing that one is false? The fact remains; one group of people gathered about the remains of a charlatan, or someone mistakenly identified as a given saint. A tightening of canonisation procedures, including desiderata such as a detailed analysis of the candidate's life, ever aimed to avoid a repeat of fiascos like this.

For the pseudo-monk and the demonic prefecture (as the inquisitors regarded them), no river was too wide, nor mountain too high in their quest to invent new and even more ingenious ruses to destroy the Church and its teachings. Their most notable achievement was the deepest possible penetration of the Byzantine Church, in just about every province you care to name; barely a diocese was left untouched.⁴⁹⁸ The level of damage done to the Orthodox ecclesiastical mechanism, by their infiltrators, was said to have been so extensive that they constituted a virtual subterranean component to the Church of the east, that, in the view of Euthemius, was quickly enveloping and swallowing the newly ordained into their web of godlessness.⁴⁹⁹

The Orthodox monk Niphon, proved to be an committed advocate of Bogomilism, a travesty against his religion for which he was tried, defrocked and thrown into jail.⁵⁰⁰ Even as Michael II ruled the Byzantine Empire, his supposedly trustworthy Patriarch Cosmas II emancipated the anathematised Niphon, and was regularly seen in company with him, even inside the patriarch's chief residence.⁵⁰¹ Perhaps he was only trying to win Niphon back for Christ, but it all looked rather suspect. Inevitably Cosmas lost his high office by virtue of his heretical affiliations.⁵⁰¹ In short, the Bogomils had proven themselves capable intriguers and proselytisers.⁵⁰¹ Who else could have swayed the minds of the leading Orthodox figures in the land, if not learned and highly skilled orators? The dynamic spread of Bogomilism was formally reported in the writings of Theodore, the Antiochan patriarch some time after the year 1185.⁵⁰² According to him the whole region was fairly embalmed by this heresy. The chief remedy they sought was to immolate the key proponents of their unorthodoxy,⁵⁰² and the total expurgation of their written works,⁵⁰² which, it was guessed, would slay their teachings.

The Bogomil anti-pope

Stoyanov deals with the surprise emergence of heresy in medieval Europe, including 'The Antipope',⁵⁰³ a figure that can ultimately be traced back to a pagan pontiff of the Bulgar Magi. This so-called 'Father of heresies' was the driving force behind the intense barrage of heretical missionary activity venturing forth from the Balkans. He himself was deemed the ultimate adversary of Rome and Byzantium. It was not long before Pope Urban declared the Balkans the most spiritually forlorn place on the face of God's earth.⁵⁰⁴

The Bogomil pseudo-pope was rumoured to have his throne in Bulgaria, the nerve-centre of all heresy. This anonymous arch-heresiarch acted as the grand mediator between all heretical sects and plotted the stratagems needed to catalyse the downfall of the Church, especially via monastic infiltration. Even in the 10th Century he was laying the groundwork for the wholesale export of Manichaean heresy to western Europe via Arab-occupied Sicily. Bogomil preachers, now well-primed for their western peregrinations, departed the safe company of their spiritually profligate potentates in Bulgaria.

The role of these ministers in the wider penetration of dualistic heresy into greater Europe can be seen by tracing the passage of one Bogomil treatise, the *Liber Secretum*. It was originally written in Bulgaria, then sent to the heretical Cathar parish of Concorezzo in the North of Italy, which in turn influenced their brethren in Desenzano, Lombardy and French Languedoc.⁵⁰⁵ *Liber Secretum* proved too controversial for many absolute dualists, provoking a damaging internal schism. By the early 11th Century they were beginning to secretly plant Catharism in Flanders, Northern Italy and certain parts of the Frankish kingdom. Through obscure Orthodox accounts of two-way religious discourse between the Bulgars and Franks, come hints that east-west heretical liaisons already existed in the period just prior to the coming of the new millennium. And so it came to pass that the newly-coined French word for heretics was *Bulgares*,⁵⁰⁶ showing once again that (Magian) Bulgars and heresy were like candles on a cake.

The Bogomils enter Europe

Anecdotal historical evidence alludes to doctrinal discourse between a small group of Franks (Germans and French) and the Bogomils. This was confirmed by the arrival of Frankish pilgrims in Bulgaria in the 10th Century AD, an event which pre-dated the entire French Cathar movement, and a datable thread in an heretical alliance which soon flailed Europe.⁵⁰⁷ A number of grave-markers (engraved with *pentagrams* and *roses*) can be found in Europe and the Balkans, religious images normally ascribed to Bogomils, *so there appears to be a physical connection between the Balkans and the West as well.* The same could be said for the artificial cranial deformations found in Languedoc.⁵⁰⁸ It was a known Bulgar practice, caused by the constrictive tightening of turbans and head bindings.⁵⁰⁸

As early as the mid-1100's, Bogomils ejected from the Balkans by the Byzantine and later Bulgarian anti-heresy crusades were pouring across the borders of the German Holy Roman Empire at a steady rate.⁵⁰⁹ But would they be strangers in a foreign land? Far from it! The wearisome travellers were well greeted by the German people upon their arrival, who virtually saw them as long lost heroes. Were they? Was this the glorious home-coming of the Magi to Germany, after an enforced absence first brought about by Charlemagne? By Church accounts, the people's love for them was so great that their activities could not in any way be halted by the Church authorities.⁵¹⁰ It is unlikely these figures received such a rapturous welcome if they were part of some obscure Bulgarian cult. Instead they were religious figures honoured by the masses, even before they had arrived in the Holy Roman Empire. Either Bogomilism was already endemic in Germany by the 12th Century (which is doubtful), or the Bogomils were in actual fact Magian-Christians infected by quasi-Manichaeism ideas, entering Germany from both the Balkans and Slavic east. Many Bogomil missionaries were involved in mercantile pursuits abroad, and in Germany these figures tended to congregate around Cologne,⁵¹¹ the future home of the relics of the Three Wise Kings, destined to lay in the grand imperial cathedral. In Germany heresy tended to centre around Cologne, Strasburg and Havelberg.^{511a}

The notes of Roman and Byzantine inquisitors investigating detained Bogomil agitators revealed confusing sources for the heresy which remained the subject of constant deliberation; namely, Massalianism, Paulicianism, Zurvanism, Manichaeism and magical gnosticism, with Paulicianism and Manichaeism being the least influential of all the sects involved.⁵¹² Rampant low-key *devil worship of the Chaldean variety*⁵¹³ was employed by Bogomils, an activity without too much difficulty tied to Massalians, Slavic dualistic *Volkhvry* and Russian Chaldeans (otherwise known as *kolduny*). Chaldean devil worship was discussed in the *True History of Wizards and Witches*, and as you may recall it required the use of God's name while in a state of spiritual grace and perfection to effect the bullying of *daemones*.

Bearing in mind these factors, the Bogomils almost without question owe much of their beginnings to a mass arrival of dissident Black Bulgar, Magyar or Rus' *Volkhvry* Magi and Chaldeans. These newcomers brought their quasi-Zurvanite beliefs, dualistic-magic and hierarchy into the movement almost intact. In support of this, Zaehner, a major authority on Zoroastrianism is convinced of a Magian Zurvanite genesis for the Bogomil heresy.⁵¹⁴ This seems highly likely. However, in the Bogomils one can also perceive genuine Chaldean influences, ancient Chaldeanism of the sort once found in Mesopotamia or the back woods of Russia.

The Bogomils mutated from a pagan into a nominally Christian heresy somewhere towards the end of the 10th Century AD. A *Volkhvry* document discovered in an Albanian heathen monastery possessed an unusual Magian-style chronology, roughly synchronised with the Christian calendar.⁵¹⁵ At face value Balkan heathens were 1,000 years into the period of renovation brought by *Sraosha*, the pagan Messiah. As Constantinople and Rome progressively converted Eastern and Western Europe, the various Chaldeans, Manichees and Magians, whether Christian or not, found themselves squeezed into smaller parcels of land. Whereas previously they found sharing the same breathing space a little unbearable, their new situation forced a level of interaction normally avoided in prior times. From this came a sharing of ideas. From varied sources, Christian priests learned that the Slavic and Bulgar Magi had dissolved away into nothingness, only to form the Rotu, a clandestine brotherhood that served as a pagan occult university.⁵¹⁶ The oath-sworn candidates themselves constituted that invisible institution, and their supposed aim was to keep alive the miracles of the occult, divination, necromancy and mediumship for future

generations.

And due to their great diligence and zeal in the dissemination of the Bogomil creed, they had a full heretical empire to their credit, stretching from the Balkans to the farthest reaches of the Holy Roman Empire and the English Channel. Their many successes were, at every stage, under-pinned by an ability to re-organise and amalgamate heretics from diverse philosophical backgrounds into one coherent unit. The beliefs of the once illustrious gnostics, and heretical bulwarks such as the Marcionites probably suffered extinction through ignoble anonymity; their individuality, and waning vibrancy ultimately consumed by the sheer focus, ingenuity and determination of the Bogomil elite.

For the Byzantine inquisitor Zigabenus', his confrontation with the Bogomils was akin to being face to face with the Devil's ritually invested priesthood, who, by their own admission, were 'Magi'.⁵¹⁷ Theologically, his comments are not as evangelically fundamentalist as they first seem to the modern reader, especially if he had been in any way dealing with black Magi and quasi-heathen Chaldeans.

For the Bogomils the arrival of the 11th-12th Centuries AD brought a time of reckoning, and so they dug in their heels, taking the fight to the core of the Church, *surrounding her from within*. Bogomils successfully penetrated monasteries in the East (especially in Anatolia), and the orthodox monasteries of Mt Athos. Due to the offbeat activities happening there, one could easily suspect Bavaria's Benedictine monasteries (Salzburg and Reichenau) as well.⁵¹⁸

The Bogomil brotherhood doubled as a finishing school, wherein heretical brethren learned all that was necessary to live among Byzantium and Rome clergy free of detection. Not long afterwards (in the 12th Century), western Christendom experienced outbreaks of simony and concubinage in certain parishes, as frenzied magical activities (including necromancy), and advanced stereoscopic star maps⁵¹⁹ were found among errant clergy. In the East, the monastic brothers at Chios were found performing what were described as Mithraic magical rites, whilst in the Benedictine brotherhoods, equally bizarre occult performances bore all the hallmarks of Bogomil or Magian infiltrators.⁵¹⁸ Heads rolled ... literally!

As with the Manichees, it was crucial that Listeners live in close proximity to the *Perfecti*, who were their only means of mystically entering into heaven. It was almost a fate worse than death to die without the *consolamentum*. Consequently, some have theorised that Bogomils formed whole communities within gnostic dioceses, each thought to faithfully mimic apostolic diocesan boundaries.⁵²⁰ So remarkably resilient were they that the cult only began to fold under the Ottoman Turkic annexation of the Balkans. Unconfirmed reports suggest that isolated neo-Manichaeon splinter groups were still extant in the Balkans in the 1600-1700's.⁵²¹

The heretical hierarchies

Church officers

The four original Apostolic Sees commonly taught that Christ invested the power of the Apostles upon selected members of his Church by means of the Holy Spirit,⁵²² leaving a priesthood consisting of apostles (bishops) and presbyters (priests), and the minor office bearers of deacons, readers, ushers and exorcists. It seems to have been a priesthood formed by God's Spirit rather than a purely Magian or Rabbinical bloodline, and this if nothing else was a major departure from pagan religious thought, and yet they had very many similarities with these other priests.

By analysing the hierarchical structure of the various medieval heretical movements it is possible to discern a series of *organised religions* which sprang from a synthesis of the Magian, Manichaeon and pagan gnostic priesthoods.

Their battle with the Church

With such a sizeable influx of dualist heretics entering Byzantium and the Balkans in the 8th-10th Centuries AD, it is only natural their mere existence provoked a severe backlash. For the Church, heresy was a crime worse than homicide, the mass-murder of souls. It was to be purged from the face of the earth, by repeated and vigorous polemical re-evangelisation missions in the first instance, or physical force in the face of continued intransigence. As sworn enemies, the Church and heretics waged war against each other, seizing their opponents by the throat with a tenacity barely imaginable. Both eastern and western Europe was scorched by this hidden war (mainly aimed at the Elect and Magi), which touched many families, and affected generations.

Byzantine and Roman inquisitorial authorities from this period, right throughout the Middle Ages were convinced that heresy and the occult went hand in glove.⁵²³ Everywhere the same recurring theme of devil-worship and fortune-telling seemed to crop up.⁵²³ These perceptions later shaped and nurtured the so-called 'stereotype' of the witch and her (and his) craft. In some cases, occultism probably only constituted a minor co-existent element, or fringe undercurrent within heretical communes, rather than a professed dogma. Bearing in mind the Magian and Chaldean philosophical/religious foundations of the Bogomils, and their apparent charter for the destruction of the Church, it really is not all that surprising that evidence of a magic-heresy linkage began surfacing. This was a primary reason for the Church's overkill in their handling of heresy, for it was now inexorably married to the 'co-evil' of sorcery.

In the pope's '*Pressing Danger*' letter of 1434 AD, he specified various archetypal witches frequently found consorting with devil-worshipping heretics. These included '*Christian and Jewish magicians*' (ie; Jewish Magi and Magian Christians).⁵²⁴ Those scholars who cleave to a belief in the learned origins of witchcraft insist that the cited comment is vacuous, utterly baseless. Instead all blame for the witch persecutions rests squarely on the sort of religious jingoism found in papal encyclicals of this kind. Bogus traditions circulated in medieval demonological texts are touted as an equally great culprit. However, excavations at Novgorod Russia have proved beyond all doubt, and for all time, what witch trials have specified all along, the factual existence of practicing witch-Christians. For it was there, in layers dating to the 13th Century AD that they chanced upon demi-Christian spell scrolls, with Christian prayers written backwards, in cyrillic mirror writing.⁵²⁵ Certain Novgoroders were etching topsy-turvy Christian prayers in their spells, a distinctly Chaldean practice. The precept behind this style of sorcery belongs to the due order and rites of the devil, '*as it is above, so shall it be below*' ... so shall it be backwards. So to pray to the devil, or more particularly to the Antichrist, one said anti-prayers, a deviant reflection of the prayers offered to his enemy Jesus. From Stuart Clark's book, *Thinking With Demons*, we already know that many early modern tractates on diabolism simply encompassed European folk magical traditions on ritual inversion. On the other hand, many centuries previously, we heard of *ergi* in Scandinavia, a class of pagan rite using perversion and 'upsidedownness'. A considerable number of *zmeiovik* (serpent) medallions were also found at Novgorod,⁵²⁶ showing Christian imagery on one side and the face of a medusa-like fiend on the other. Some had been confiscated, and were thus excavated from the house of a Christian priest. Others were loose finds around the city. Elsewhere in Europe we discover the 'Black Pater Noster',⁵²⁷ the black 'Our Father', in connection with maelific witches. Even today the *Catechism of the Catholic Church* contains the strongest possible condemnation of prayer-magic, damning it as a gross violation of God's first commandment.

Heretics loathed the Church for several reasons, not the least of which was its denial of their right to preach dualism and alternative biblical interpretations. On more than one occasion heretics confessed to the inquisitors that Christendom was practicing an improper form of the faith, and that they alone held to the true tradition.⁵²⁸ Some claimed apostolic successorship, others to the contrary.⁵²⁹ The latter heretics championed a form of Christianity that formed under peculiar circumstances, such as those described in Chapter I. By their reckoning Rome and Byzantium had got it all wrong. The Neo-Manichees, being of Manichaean origin could not see a scriptural basis for the sacraments, and like Marcion, accused the Church of leading the people astray with unsound teachings, useless works and rituals. Since the Church was very much involved in the protection of creation, and maintaining the world order, Manichaeans lambasted it as 'Babylon the Great Whore', which stood in

opposition to the blinding light of their Elect.⁵²⁸

In this age, politics and religion were so deeply related, that an ideological attack on the Church became an attack on the state political apparatus. As defender of the faith, the state refused to sit idly by while such an unmottley crew of dissenters forged on unabated. State responses to such spiritual rebellion varied depending on the level of relations enjoyed between a given monarch and their Holy See.

As time went by both sides turned to violence to defend their rights of belief and worship. It was a religious war rarely fought on the streets, but which proceeded with renewed atrocity, time without end, partitioning whole communities wherever heresy had taken root. The pyres of heretical martyrs, a growing conflagration, provided the eternal fuel for anti-Church sentiment. It seems the more who died, the bigger that hate became. What started out as a fight over the penetration of dualistic dogmas into Europe, ended up a protracted conflict over the execution of heretics by the state.

For hundreds of years heresy and astrology had been cut out of Western Europe like a gangrenous sore and all but ceased to exist. But from the 10th Century AD, the timetable for the re-introduction of dualistic heresy, astrology and high magic was going ahead at some pace, the invasion had begun, with Magi, Manichees, Neo-Manichees, Magian-Christians, and pagan gnostics pitting themselves against the Byzantine and Roman inquisitors and heresiographers. The latter officers played lead roles in the war of attrition, as the battle to save the teachings of the Roman and Byzantine churches from the corruption of practical dualism mutated into a vortex of incendiaries and wafting smoke.

The first canon released by the 4th Lateran Council in 1215 AD amounted to a frontal assault on the dualistic doctrine of 'the Good God' and 'the Evil God'.⁵³⁰ It deemed the teaching forever heretical. The council's message was simple; there only ever was one God. Far from being a God, Satan was really a devil, a deceiving force who prompted man to commit evil acts and engage in the worship of all things false and non-existent.

Pagan holy war in the balkans

EVIDENCE FOR A PAGAN
HOLY WAR AIMING TO
RE-INSTAL THE OLD WAYS

Aside from these Norse activities one wonders if the west-east, Arnulf-Vladimir-rasate pact ever really get off the ground in the west? During the 10th Century Franks and Saxons became embroiled in several anti-Church conflicts (esp. in 1075 AD). From that century onwards, the city of Rome (and in particular the Vatican) was repeatedly invaded by several power factions, especially the Franks, who on more than one occasion dethroned popes and flung them into prison, only to install their own anti-Popes in their place. Such were the predations visited on the papacy during those times that *a number of Popes had a life expectancy of just 20-30 days once they had been elected*, that's if they were elected at all!⁵³¹ Just how much of this was attributable to political gesturing, and how much was due to the machinations of Magi inside the royal courts is likely to remain a mystery. Nevertheless this topic will be covered in greater detail later in the book.

PAGANISM REVITALISED
IN THE BALKANS

In the Balkans though, there is every reason to believe the pagan resurgence was *well and truly under way*. Although dualist pagans (who believed in the divine forces of light and darkness, and in some cases worshiped demons) had firmly entrenched themselves in Bulgaria at least since the time of Krum, the renewed Bulgar pagan offensive (of the late 10th Century AD) seized virtually the entire Balkans, including Albania, Macedonia and Greece! Byzantium had lost the Balkans.

BULGARS SEEN AS
NOTORIOUS APOSTLES
FOR DUALISTIC DOGMAS

The situation there was extremely confusing for the Byzantine Emperors. Not only was there an unwelcome presence of hostile pagan troops, but heretical pagan-Christian and Manichee dualists were running the place under the noses of the struggling Bulgarian Church, an unbearable situation made even worse by the 975 AD resettlement of 200,000 Paulician dualist heretics from Anatolia to Philippopolis in Greece.⁵³²

As you will read the attacking pagan armies were the least of their worries. The dawn of the 10th Century AD saw the core teachings of the Magisterium (a Roman Catholic term denoting the essential teachings of the Church) besieged by Dualism - "the Great Heresy". Bulgar heretical preachers made their way into Europe from the Balkans, into both Germany and France.⁵³³

RENEWED INTEREST IN
DUALISTIC THEOLOGY
PROVED DISTURBING FOR
THE CHURCH
AUTHORITIES

In the east, the indefatigable Bulgar Bogomil heretics were infiltrating and taking over whole Byzantine monasteries. For both Rome and Constantinople these preachers were more insidious and devastating than any military attack could ever be, because they demolished the traditional teachings of the Church, which unlike razed churches, were much harder to rebuild. If the Norsemen caused Christianity much grief during this period, it would be nothing compared with the heathen Bulgars, which eastern and western Christendom saw as the ultimate enemies of the Christian faith, the forces of the Antichrist.⁵³⁴ In the east, uprisings against the Church were by no means confined to the Balkans. The year 1030 AD saw catastrophic attacks on the Polish church, facilitated by the widespread murder of clergy from the lowest to the highest. Following the conversion of Russia in 989 AD, rebellions against the Rus' Church broke out in 1071 AD, at Kiev, Rostov and other places, which led to church burnings and the assassination of clergy. Suzdal experienced the re-emergence of the Volkhyv in force during the year 1024 AD.⁵³⁵ In Rus' there were real security problems for the bishops, so much so that they had to dwell inside palisaded enclosures within the cities themselves; behind a wall within a wall.

And where can we read of the reasons for the unceasing warfare between the Russians, Bulgarians and Byzantium? Just why were they all fighting? The Bulgar offensive against the Roman and Byzantine Churches were much more subtle than these military adventures, focusing on attempts to destabilise Christendom by infiltrating the priesthood, and by exporting the pagan sciences into Europe.

But wouldn't something as important as a viking and Franco-Bulgar holy war against Rome and Byzantium be amply recorded, or spelled out in bold black and white throughout most mediaeval texts? Surely? As astounding and important as this information may be to the understanding of mediaeval history, politics and religion, it is still something that was never broadcasted openly, perhaps for reasons of internal security, if no other. Certainly many aspects of this religious conflict are to be found in Mediaeval sources. If the level of pagan impenitence was as deep-seated as history suggests, the authorities in Byzantium and Rome would have been loathe to release news of plans for a full pagan revival by a pagan army then amassing in Russia and the Balkans during the 9th-10th Centuries AD, and repeatedly laying siege to Constantinople, the largest city in the "known world". Any broadcast of that nature would have been absolute insanity, and could have sparked panic or riots in many places.

Rome would have no respite from this pressure, for from this time it would appear that large numbers of pagans were again coming back into Europe; many of these would be the very people who the Church labelled

heretics, Manichaeans and Bogomils.

In time the Bulgar Bogomil heretics became quite brazen in their attempts to enter the halls of power, including a “winner-takes-all” attempt to convert the Byzantine Emperor himself!⁵³⁶ What was unveiled during the Bogomil conversion mission to the Emperor was never publicly released, and considered “classified information”, to use a modern term. In this way, anyone found with it could not claim that they were only studying the heretics. Much rather, they could be directly jailed or burned as politically subversive cult members, a danger to the existing community and the faith. And not only that. As I perceive it the transcripts of the Bogomil attempt to convert the Emperor (which contained all the essential doctrines of the dualists) were held under lock and key because their release into the Christian society of the Middle Ages would have been damaging to the social order, and might have undone centuries of Christian missionary work. Try as they may, there was no way of stopping these teachings from finding their way out into the suburban streets of Constantinople or the Anatolian monasteries. Concerning all Orthodox and Imperial findings on the Bogomil movement, there was an air of sombre reticence about “the whole sorry affair”. Both Anna Comnena (daughter of Emperor Alexius) and the Byzantine inquisitorial figure Zigabenus had declared openly, that their exposure to the heretics had unsettled them to the point that they *no longer wished to desecrate their tongues with another word on the subject*.⁵³⁷ For Zigabenus, his tussle with the Bogomils’ *Babylonian thought processes*⁵³⁸ had pained him deeply. It was perhaps in this same “pristine tongue” that “Nestor” wrote *The Primary Chronicle*, deliberately omitting some of the key information. We know that this sanitisation process occurred because of the types of things the Church encountered in Rus’ and yet chose to bury so deeply that it would never see the light of day.

There is compelling evidence that the hierarchy of the highly political Eastern Dualist pagans and heathen Gnostics were, from c. 800 AD onwards, waging a holy war against apostolic Christianity in Byzantium and Rome, by conducting military campaigns, and more especially by re-introducing astrology, magic, and the natural sciences into Europe, with which they could regain the allegiance of Europe’s recently converted pagans.

After the Christianisation of Russia in the year 989 AD, and the subsequent repression that followed, these Magian and pagan Gnostic sages went underground, and via the agency of secret brotherhoods, such as the “Rotu”, the “Imperishable Monastery”⁵³⁹ and the Bogomils, re-entered Europe with the aim of ensuring that occultism and the old faith survived for future generations. This led to a kind of pagan revival one might say; the desired aim of the venture. As a consequence of their arrival an intense war erupted between them and the Church, a fight which for many ended on the flaming pyres of the Inquisitions. The story of the Mediaeval ideological battles between the heretical/pagan pedagogues and the Roman and Byzantine Churches is elaborately explained throughout Part II.

In the early stages of the pagan revival, Svyatoslav, the son of a raped nun, invaded Bulgaria perhaps to discipline the “Christian traitors”, and try and expel them from the Bulgaria. He chose to remain there in Pereslavets, together with his Slav army, maybe to stabilise the area, and to keep his finger on the pulse of Balkan sentiment. He remained there until dislodged by John Zimescus (the Armenian usurper of the Byzantine Imperial throne) after a war lasting three long years. Catching wind of their plans, Byzantium used every opportunity to cause strife, and wage war against them before they could loom into an even bigger threat. And loom they did, for it wasn’t long before the victorious Bulgar Cometopuli renegades had recaptured the Balkans and Olympus, beloved of the Rus’ pagans!

And the sabre-rattling continued.⁵⁴⁰ Anything Bulgarian began drawing flak from the Roman and Byzantine Church. They were singled out as being a race like Sodom and Gomorrah, and “Bulgarian” became a synonym for “poisonous to the faith”. In the Mediaeval west their very name became the new terminology to denote a heretic (in French *Bulgares*: meant “a heretic”).

Emperor Alexius I. The Sword of Byzantium

During the rule of Emperor Manuel, the problem of heretics in Byzantium had become so perilously critical that the bishops had (despite great effort), failed to stem the tide of heresy, and lost control of the situation. From that time, only Imperial military intervention would prove sufficient. In the Holy Roman Empire of the 10th-11th century, the ‘heatwave’ of heretics had not yet begun arriving *en masse*, but throughout Byzantium and the whole of eastern Europe it was a vastly different story, an image of what was yet to come in the West. During the reign of Emperor Alexius I Comnenus, right up until the time of Bohemund I’s antics in Antioch, the relationship between Constantinople and the Vatican was slowly on the mend. Pope Urban II mustered and dispatched loyal Christians

A BULGAR BOGOMIL
TRIED TO CONVERT THE
BYZANTINE EMPEROR

EMPEROR ALEXIUS
WAGED HIS OWN
PERSONAL WAR
AGAINST THE HERETICS

from other parts of Europe to rid the East of the unwanted Mohammedans and free Antioch, Jerusalem and the Holy Sepulchre.⁵⁴¹

With the visible Muslim enemy gone, Alexius now directed his anger toward the invisible heretical enemy who was spawning everywhere, declaring war on all heresy within the bounds of his domain.⁵⁴² Singled out for more intense scrutiny was Philippopolis,⁵⁴³ then widely regarded as a nursery of evil, and a blot on the face of his empire. Paulicianism was consigned to the pages of history by this campaign. In that same region Bogomils too felt the sting of the Orthodox state.

For the most part Alexis' reign was characterised by waves of denunciations against heretics and trials that hoped to weed out ancient philosophies and heterodoxies that were again coming to public attention.⁵⁴⁴ These were to some extent intertwined, something obvious to Orthodox onlookers in the trial of John Italus, in the year 1082 AD.⁵⁴⁵

Next Alexius attempted the eradication of the bold and exceedingly evasive Bogomils, who had 'weazeled' their way into every conceivable level of society, including the highest aristocratic families (through marrying their daughters to Bulgarian nobility, notably the not-so-repentant Cometopuli brothers).⁵⁴⁶ Even at this early stage, the highest strata of Byzantine clergy was being infiltrated by the 'snakes', as they called them.⁵⁴⁷

Eventually Alexius finally got his hands on Basil (whose name is derived from the Greek word *Basileuo* 'a king'), at that time thought to be the supreme Bogomil pontiff. After putting him under house arrest (the domicile was recorded as having suffered repeated ghostly attacks), Emperor Alexius himself laboured long nights to make the Arch-heretic 'recant', through debate.⁵⁴⁸ Finally, in 1111 AD, he was burned at the stake, one very happy man. Though by now, his 12 apostles, his reigning successor and a small army of adherents were very much at large, and hopping mad. Where would it all end? Where indeed! Whilst Alexius' dragnet managed to pull more than a few Byzantine heretics out of circulation, the Balkan frontiers were experiencing a heretical *tour de force*. For the emperor, the patriarch and the pope this was surely the mouth of Hades, for in Albania and Bosnia, the churches (both Roman and Byzantine) had begun lapsing so far into dualist heresy that they were deemed unrecoverable for a very long time indeed!⁵⁴⁸

Medieval intrusions of the oriental traditions

Europe on the Brink - the onset of disaster

The 'dangerous re-emergence' of the 'new-breed' heresy, Neo-Manichaeism, exploded out into Western Europe in a way that took European reformist clerics largely by surprise, a philosophy that proved to be the Church's and prevailing authorities' worst nightmare come true. It had all the hallmarks of a 'second-coming' of the Manichees, and was profoundly linked with millenarianism, the belief that Christ's reign was soon to be established on earth. The year 1,000 AD was fertile ground for many end of the world stories. Wandering preachers stirred up small communities whenever signs appeared in the sky, concurrent with wars or the outbreak of plagues.⁵⁴⁹

Among heretics, a revival of the long-disappeared Manichee doctrines figured heavily at the dawn of the 12th Century, especially intent on destroying the prevailing medieval 'world order'. As we know, beliefs of this nature had already spread rapidly from the East into the heartlands of the continent. These movements stayed true to one of the basic tenets of Manichaeism, namely that the 'evil-powers of the evil material world', in which ruled Yaweh, the Jews, royalty, the rich and the Church, had to be overthrown by a new spiritual kingdom of light, an egalitarian society, free of classes, distinctions, personal ownership of land or wealth.⁵⁵⁰ The principal means by which they proposed to achieve this aim was by resorting to anarchy in various ingenious forms. This manifested itself in incidents of civil disobedience and hysteria. They almost universally seem to have been organised and prodded along by robed monk-like figures (perhaps of the variety recorded as thronging in the Baltic, the Balkans and Rus') and not a few de-frocked and excommunicated clergy.⁵⁵¹ The most daring and infamous of these anarchistic plans was the well poisonings, a scheme in which bags of poison were to have been placed in the water supplies of major cities and when most of the cities' inhabitants had dropped dead, the new regime, and people sympathetic to it, could then take over Europe. The intended scale of this conspiracy sent shockwaves around Europe, with the alleged plot rumoured on a street level to have been masterminded by Jews and lepers. Once news of this got out it provoked a massive anti-Jewish backlash which took direct papal intervention to stop, but only after many people had been killed.⁵⁵² And later, during the 'Black Death' of the 14th Century, Jews were being blamed for causing the outbreak of the plague,⁵⁵³ something which touched off further waves of violence against them, and which only came to an end once the Church hierarchy finally managed to convince the people that Jews were dying of the plague just like everybody else. So serious had the situation become that many Jews were placed under the direct protection of the Holy Roman Emperor.⁵⁵²

Of interest was the emergence of several Messiah figures from the Low Countries (ie; Holland and Belgium) in the 12th Century, men of flesh and blood worshiped as living gods, figures such as Eon, Adelbert, and Tanchelm of Antwerp, only some of many whose names were never recorded.⁵⁵³ While there are accounts of such figures dating

JEWES WERE BLAMED

THE CHURCH CALLED THEM ANTICHRISTS

back to the 6th Century, from 1100 AD onwards there appears to have been an escalation in the number of mortal deities appearing around Europe, particularly among the Franks.⁵⁵⁴ Most importantly they were widely credited with remarkable powers of prophecy and healing (in other words they were heathen god-priests or demi-Christian saints). These figures began by gathering large followings, which generally made a living from donations and the proceeds of misappropriated loot. It was often the case that these monies were redistributed back to the poor. There are recorded instances where these 'Christs' were seen as serious rivals to the clergy, and at times required bishops to pay homage to them before their large entourage of followers, by force if necessary.⁵⁵⁵

SOME OF THEM FORCED BISHOPS TO WORSHIP THEM

THEY WERE ABLE TO MUSTER BANDS OF PEOPLE, AND LED THEM ON LOOTING SPREES

Who were these men the Church called Antichrists or false-Christs? While we might think that Eon Jesus Christ⁵⁵⁶ was a corruption of the Greek pagan gnostic Time God Aion, the appending of 'Jesus Christ' to the end of his name perhaps signifies that he might have been, as unbelievable as it may sound, a biblical gnostic. Other peasant uprisings were forged by charismatics and gifted fakes desiring personal popularity and financial gain. Most of these 13-16th Century arch-heretics (predominantly of Slavic origin) hailed from the East, and could be traced back to Poland and more especially to Bohemia, from whence they could reach out into and 'blight' Bavaria and the German heartlands.

THEY CAME LIKE THIEVES IN THE NIGHT

JUST SOME OF THE MORE INFLUENTIAL ANARCHISTS

The Adamites, Hussites and Taborite Brethren, were all led by apocalyptic visionaries and their Elect. These associations of 'Enthusiasts' in very many cases demanded that their haughty followers start killing everyone not a member of their organisation, viewing them all as 'servants of the Antichrist'; they were the instruments of God's wrathful justice, who came 'like a thief in the night'. And come they did, in the form of guerrilla bands which ransacked and torched every settlement in raiding distance, ready to make sure that the blood of the children of the Antichrist (ie; everyone who was not part of their sect) 'flowed deeply' over the face of the earth.⁵⁵⁵ As time went by there were more and more Messiahs who drew their followers into open conflict with the Church and the prevailing order. Men like the resurrected pretender, the Pseudo-Baldwin, John Milich, Matthew of Janov, Joss Fritz, Thomas Muntzer, Matthys, Hans Hut, Bockelson, the *loom-worker* Niklas Storch (the Bohemian), Janko Wirsberg (under an unnamed Franciscan absconder claiming to be the Messiah), 'The Master of Hungary' and Emico of Leiningen.⁵⁵⁵ As in the case of Hans Bohm (the Piper), robed figures (usually termed fugitive monks) could often be discerned loitering somewhere in the background, in an advisory capacity.⁵⁵⁷ Bohm (perhaps meaning that he was of Bohemian extraction), was so skilled at manipulating the masses that he could muster eager crowds in the order of 70,000.⁵⁵⁸ His charisma might be traced back to the fact that he was both a piper and a drummer, a performer who knew how to captivate crowds of people. This might simply have been one of his natural skills, but then again, taking into account his poetic and oratory prowess, it may indicate that he was a descendant of the *Skomorokhi* (pagan Slavic bards, actors, and musical magicians), or gypsy players. I say this because he was also tried on charges of working magic⁵⁵⁹ and preaching heresy against the body of the Church.

BOHM COULD GATHER UP TO 70,000 PEOPLE

THE HERETICS PERFORMED WELL ON THE BATTLEFIELD

The heretics had many astounding military successes, predominantly because they had acquired substantial military backing from bands of roving mercenaries. Termed *Brabancons*, these warriors (who loitered in the area of Brabant) made a profitable living by conducting large scale military conquests inside Europe which were little more than looting operations, and orgies of destruction. From their Frisian homeland the raiding cartel descended upon the various rural provinces of France like a '*plague of locust*', wrecking fields and particularly the manufacturing capacity of the artisans.⁵⁶⁰

THE ADAMITES

In the early 1400's there were the Adamites,⁵⁶¹ who, like the Mazdakites, adhered to a communist-like lifestyle, sharing all property, and the women folk amongst each other. Under their spiritual leader (and *sect match-maker*) Adam-Moses, the Adamites focused on Christ's words to the Pharisees, '*Harlots will enter heaven before you do*'.⁵⁶¹ Accordingly, this happy band based their whole life around the 'deep wisdom' of this one biblical line, falling into the category of a free-love nudist colony, captivated by naked romps around the communal bonfire, to the tune of hymns.⁵⁶¹

AND SO WAR CAME

From 1520 AD onwards, Niklas Storch in particular, and his collegiate Elect, mobilised enough of the peasantry to enable them to conduct open warfare against the Church.⁵⁶² The religious hierarchy of Storch's cult was comprised of twelve primary apostles, and a further seventy-two apostles (an organisational structure similar to

that of the Manichaeans). A Manichaean connection might also be discerned in comments such those of Muntzer which derided the eating and drinking of the upper class as beastly. The Manichee Elect required strict abstinence from wine and meat, but there are no records that I have read which portray the prophetic elect of the Middle Ages as vegetarians. It was either not the case, or simply went unrecorded.

By the 16th Century, the level of insurrection against the Church and the authorities in Germany had reached such a crescendo that an undetermined number of militia and clergy, and roughly one hundred thousand peasants, had died during the battles, raids, sieges and reprisals that characterised this phase of German history.⁵⁶³ The war-bands of the heretics were not always of inferior quality either. From the pages of one illuminated Church manuscript, penned during the Hussite Wars in Germany, there is a picture of a commando saboteur dressed in a diving suit. This apparatus consisted of flippers, and a hood (complete with transparent eye-holes) which was connected to the surface by a breathing tube. The insurrectionist is seen to be carrying crates, which were either victuals for a besieged heretical commune, or even gunpowder as some have suggested.⁵⁶⁴

Another anarchistic method was the hijacking of peasant crusades. Some of the saddest stories to emerge from the period of the Crusades in the Middle-East concern the formation of the later ‘peasant crusades’ which were conjured up by ‘wandering-monks’, who, by skillful oration, succeeded in mustering large numbers of pious farmers and the lowly, all armed with threshing sticks, scythes and work tools.⁵⁶⁵ These cumbersome and unruly bands set off thinking that they were heading towards the holy lands, but, not too far from home, they found themselves succumbing to seductive sermons made by the robed ‘wandering-Elect’, the ‘Pure ones’ (best equated with the Manichaean term ‘Cathar’) who assured them that they too could take part in the building Christ’s kingdom on Earth if only they would start by destroying the present order throughout Europe. Riding high on the crest of the wave, the ‘Elect’ diverted the pilgrim serf-warriors towards churches, manors and monasteries where they dragged the petrified friars out into the streets to be slain (which the Elect claimed was the ultimate act of piety), and then set about torching the countryside and Church property. Some of these not-infrequent incidents most assuredly stemmed from people’s reactions to new interpretations of the Bible gaining currency at the time (on account of unprecedented access to vernacular translations of the Bible).

However, the belief that the Manichaeans were directly responsible for causing many of these civil disturbances, and the spreading of ‘heresies’ (as discovered by the inquisitors), was discredited (by past and modern scholars) and pushed very much into the background from the 16th Century onwards. The Inquisitors’ accounts were refuted between the 16th-20th Centuries, almost solely on the basis that there were supposedly no Manichees on the continent at the time whatsoever. Not so! It is *definitively known* that the long-expelled Manichaeans were living not only in Bolgar, Siberia and Central Asia, but on the steppes of Rus’, among the Pecheneg hordes; hordes squashed into the Balkan bottle-neck due to population pressures created by the arrival of Silver Bulgars, Magyars, and Kipchaqs.

Regarding the 10th Century emergence of Neo-Manichaeism, its origins are traceable to the six main Bulgar ‘churches’ once located in the Macedonian/ Balkan region. From there, these heretics began radiating outwards into Germany, Italy and France, giving rise to a number of dissident Protestant Christian groups like the Cathars, Albigenses and so on. And wherever they sprouted, the inquisitors had to scrape the cobwebs off *Acta Archelai*, ‘the tried and true weapon’ first used by the Church Fathers against the Manichees many centuries prior, leaving a vapour trail wending from Bulgaria to Languedoc and the Lowlands.^{566a}

A world ripe for the picking – The dawn of a new pagan era

By considering sundry evidence that supports Pliny’s account that the druids of Gaul and the British Isles were Magi,⁵⁶⁶ and numerous anecdotes of the Church’s ongoing problems with handling the resident blood-Magi of Europe,⁵⁶⁷ we can appreciate how the Slavic lands, the Balkans, Hungary, Britain, France and especially Germany, which had once been part of the original Slav homeland, were already pregnant with white and black Magian views concerning the heavens, creation and the underworld. Over the past two to three centuries, academics and Protestant theologians have normally credited the widespread portrayal of malicious demons during the Middle

Ages to the inventive and repressive 'fire and brimstone' mind of the Church. On the contrary. These visages were merely representations of beliefs that had been there all along, long before the advent of Christianity. For within the pagan psyche, they earnestly believed that stinking and inglorious wretches would rush up and seize upon the fearfully distressed soul in gangs as it arrived in the underworld, all ravenous in their intent to cause affliction to the malefactor who, not having confessed the heinousness of his death sin, remained still in an even more fallen state. And it was into this hyper-fertile field of recently converted Poles and Saxons, a land where powerful magus-Princes once wielded power (and continued to do so), that the Magi, Magian-Christians and their followers chose to wander in the centuries following the conversion of Rus', to once again re-sow the seeds of their most ancient culture. In the Late Middle Ages and Renaissance period, these adventuresome bands, very often Slavs and Scandinavians, gave rise to covens of 'white' and 'black' witches and warlocks; those who healed and those who harmed, some of whom followed Christianity.

The first discovery of the Heretics

Malleus Maleficarum stated that the heretics were not an entirely new phenomenon; they had always been there;

*'I have explained all this at length that the reader may understand that these evil arts did not suddenly burst upon the world, but rather were developed in the process of time...'*⁵⁶⁸

When the German clergy first began to encounter the Magi (and perhaps even Chaldean sorcerers) in Hungary and other such places (meeting on a scale not seen since the time of the apostles and those first few hundred years of Church history), they initially thought they were Christian priests. These clergy (and the later inquisitors) were genuinely, deeply and profoundly disturbed by the manner in which the 'sorcerous heretics' sought to 'mock' the Church by 'mimicking' the Church's hierarchy, the sacraments, holy water, candles and confession. The Church saw these 'copy-cat' sacraments⁵⁶⁹ as rituals needed to 'placate their Satanic master'. In their medieval minds, this newly encountered pagan priesthood was nothing less than the 'Church of Satan'; even more especially so when the magical ordinances and devil-worship of the infernal devotees came to light. Inquisitors were most anxious to uncover further revelations concerning their movements, their infra-structure and beliefs.

In the life of the Church, the Middle Ages was the unfurling of an apocalyptic doom, for in those tumultuous centuries the many-faced beast of the apocalypse had begun to crawl out of its eastern lair after a thousand-year absence. From each of its necks sprouted newer heresies, which once decapitated, allowed others to freely grow in their place.⁵⁷⁰ In their mind the power of that beast grew even stronger, numerous and skilled at devouring souls.

Perhaps the greatest beast of all was a realisation of what probably occurred during the earliest years of the Apostolic Church, clues that must finally have dawned upon the Patriarchate of Constantinople and the papacy. What they collectively learned of the Magi, Manichees and Chaldees and their customs during the 10th to 16th Centuries, must have hinted at a range of possible scenarios for the genesis of Christianity, some of which did not look terribly good from a Judaeo-Christian perspective, and none of which could be proven or disproved with any absolute certainty. Thus began the Holy Inquisitions, a formal series of inquiries that sought to determine the source of the heretics. From intelligence the inquisitors managed to gather through diverse means, they discovered one major finding. From their crude observations, it appeared to them that the heretics sought to mock the Church and her sacraments, mimicry through which they gained the power to perform false-miracles.⁵⁷¹ In an undetermined number of instances they were probably witnessing white Magians conducting their own fertility ceremonies. However some of their detainees may well have been black witches and warlocks. Since dualist sorcerers had as their one fundamental philosophy the catch-cry '*as it is above, so shall it be below*',⁵⁷² dark warlocks and witches anarchistically destabilised many aspects of Christian and pre-Christian society, with recourse to inverted behaviour and ritualism. It's a repeating theme.

At first inquisitors may have seen actual or so-called mockery by witnessing or recording details of pagan rituals such as the *dron* or *Haoma* consecrations and desecrations. But later (according to *Malleus Maleficarum*) there was a change in the habits of the heretics, and they sought to get their hands on the Eucharist itself, to cause it defilement

and harm, in a perverse variant of the mass. However, on account of these *rudimentary* similarities between Church and white Magian ritualism, the Church was even more vulnerable to infiltration by the Magian-Christians in areas prone to the old ways, a scenario demanding the constant surveillance of the entire clergy in an endeavour to seize upon heretics as soon as they started operating in a given area. And, no one, but no one, was above suspicion. If news came to the attention of the inquisitors concerning the complicity, trial, suspicion or conviction of bishops *and the highborn* in the ‘crime of heresy’, or the sheltering of ‘white’ heretics, then the Holy See in Rome was to be informed without further delay.⁵⁷³ *Failure to do so drew the immediate penalty of excommunication.*

The study of the stars had been eradicated from Europe for many hundreds of years, without as much as basic celestial reckoners surviving the purges.^{573a} But by the early Middle Ages the situation had changed drastically, when Muslims in nearby Spain, and elements within the Benedictine monastery at Salzburg Bavaria began pumping out highly specialised works on astronomy into monastic communes and the surrounding populace.^{573a} These were books detailing the relationship between celestial harmonics and music, singing psalms by the stars, advanced flipped-image astronomical maps (evidently formed by projection onto paper through lenses) and treatises, *pythagorean* lunar spheres, lunar leech books and assorted lunaria (titles explaining the effects of the moon on fate, worldly activity and matter); plus an assortment of *necromantic treatises*. Modifying or planning the performance of one’s daily activities with constant reference to the phase of the moon was known in the Orient, and can be found in the *Agni Purana*. It was assiduously followed by the Slavs and Bulgars, who recorded the effects of the lunar phases in books known as *Lunniki*.

In the fullness of time, this snowballed into an irreversible occult revival amongst the secretly pagan believers of Europe, people hungry for anything faintly to do with advanced divinatory practices and astrology.^{573a} Is this evidence of the infiltration of the Catholic Church as much as *1,000 years ago* by discrete bands of Bogomils and dissident Volkhvy who had their own agenda to re-paganise Europe? Orthodoxy had been hit hard by them in the east, so why not the western Church?

Just the same, a certain proportion of the Neo-Pythagorean presence inside the monasteries might only have been a side-effect of academic interaction then occurring between Western Muslim and Christian researchers into the sciences. In these instances, the ‘mathematicians’ were simply clergy whose curiosity got the better of them, leading them further and further into the arts of the philosophers and mathematicians.

The mass distribution of astrolabes which reversed the de-astrologising of “Catholic” Europe, also occurred in the Muslim countries, as stated in the *Fihrist of Al-Nadim*. The impact of their continual presence within Islamic society is not mentioned, but it might have helped spur on the production of so many other Islamic works on both astronomy and astrology. With the crafting of astrolabes being such a specialised art, the Muslims took no chances and developed apprenticeships (open to males and females) in astrolabe making.^{573b}

The ‘infiltration’ of the Church by the Magi

The very moment the Roman Pontiffs heard news that the ‘witches’, Magi and pagan gnostic philosopher-astronomers were coming back into Europe (especially from the 12th Century AD onwards), they knew that very drastic measures were needed to halt their progress. The Magi and their pagan revival had to be nipped in the bud, especially those operating inside the clergy, and consorting with the nobility. If they were to gain a footing in Europe, it would only add to their twin woe of endemic demi-paganism.

The winds of change blew through the medieval Roman Catholic Church like a gale, chilling wayward elements of the priesthood to the core. It all came to a head during the 1st and 2nd Lateran Councils (in 1123 and 1139 AD respectively). Gone were the discussions on the simony and concubinage (see chapter I) then rife among disobedient segments of the clergy. Now came papal edicts demanding the overthrow of any priest found guilty of these practices.⁵⁷⁴ The time of reckoning had come, and eventually these canonical regulations became heavily codified. Just some of the more important changes to canon law formalised during the 3rd Lateran council (of 1179 AD) included measures to ensure that elected popes were installed with 66% or greater backing among the cardinal bishops.⁵⁷⁵ In this way he sought to remedy the debacles caused by the number-crunching minions of the Frankish emperors, and their usurper anti-popes, who ravished the integrity of the papacy throughout the previous century.

ROME WAS TO BE KEPT
CONSTANTLY INFORMED
OF THE MOVEMENTS OF
THE HERETICS,
ESPECIALLY ANY
CONNECTION BETWEEN
THEM AND BISHOPS OR
NOBLES

PEOPLE WERE NOT TO
MIX WITH THE HERETICS

It was decreed that bishops were prohibited from ordaining priests unless they provided them with satisfactory upkeep; one very major initiative designed to alleviate the temptation to pursue simony. And besides, the formerly widespread poverty of small time parish priests could no longer provide a shield for simoniacal Magian-Christian priests, who would no doubt have continued to accept sin payments, not because they needed the money, but on strictly Magian theological grounds. This would really flush them out into the open. Pope Alexander III went on to censure any clergyman who requested fees for performing marriages, funerals or any other Church sacrament for that matter. *Whichever priest levied or received monies from his parishioners unbeknownst to the bishop was to be excommunicated if found guilty.*⁵⁷⁶ *To impose personal fees of this nature, in this fashion, amounted to simony.*

EUROPEAN ROYALS WERE
CONSTANTLY FOUND IN
THEIR COMPANY

Clergy were not allowed to meet with women, and fraternisation with nuns was banned. It was a simple yet effective ploy calculated to deconstruct the elaborate web of hereditary benefices then extant in Europe, and to prevent next-of-kin marriages and concubinage. Now convents came to resemble places of worship and chastity instead of royal harems.

NOBLES WERE VERY
OFTEN ACCUSED OF
WITCHCRAFT

Malleus Maleficarum decreed that anyone who had contact with witches and heretics ought to be classified according to the frequency of their liaisons with the said groups. *Receptores* were those who enjoyed their company only infrequently (and who may or may not be suspected as complicit in their ‘crimes’), whereas *receptatores* were those who had deep, intimate and regular contact with them. The ‘Hammer of the Witches’ further specified that ‘those temporal Princes are always receptatores who simply will not or cannot drive away such heretics. But receptores may be quite innocent.’⁵⁷⁷ The latter emphatic observation was highly predictable considering that pagan priests in Western Europe fulfilled important roles within the pre-Christian civil administration.⁵⁷⁸ And ‘In the Italian cities of the 12th and early 13th Centuries it was tacitly accepted that highly respected noblemen and women were ‘heretics’; indeed, in Italy at this time ‘nobile’ was synonymous with ‘heretic’.’⁵⁷⁹

DRASTIC MEASURES WERE
NEEDED TO CURTAIL THE
INFLUENCE OF THE
HERETICS

IF THE ROYALS DIDN’T
RENOUNCE THE
HERETICS, THEY TOO
WOULD BE
EXCOMMUNICATED

Since a number of nobles were implicated in white witchcraft, some researchers have gravitated towards a view that the conviction of so many high born was merely the result of mischievously lethal power plays invoked by their adversaries. No doubt dishonourable aristocrats realised in the Inquisitions their best opportunity yet to mount serious attacks not only on the life, but the credibility of their opponents. As in Islamic jurisdictions relatives could seize the wealth of ‘spiritually wayward’ kin, which would come to them at their death. Norman Cohn tends to make the grabbing of the accused’s wealth a primary motivating force behind the continuity and scale of the Inquisitions.⁵⁸⁰ But one point he has totally overlooked is that in certain cases, heretics such as the Waldensians and Cathars were spiritualist, pietist sects, which required their followers to live a life of austere poverty. What wealth and estates could someone have ever hoped to confiscate from any genuine Waldensian or Cathar? So in my estimation money-grabbing was rarely a major motivating factor behind someone making depositions implicating an individual as a Cathar or Waldensian. Where Magian, rather than Neo-Manichaeic heretics were concerned, money would probably have been there in abundance, and likely to be confiscated. In any case, I have yet to see somebody provide a statistical study of the amount of property confiscated following sentencing in a number of countries.

EUROPEAN ROYALS WHO
DIDN’T TOE THE LINE
WERE IN FOR A ROUGH
RIDE FROM THE VATICAN

It is also equally plausible that many nobles were in truth, practitioners of the magical arts (as the accounts so often allege). This would make a lot of sense, mainly because the Magi and Magian-Christian priests possessed royal bloodlines, and in both pagan and medieval times (where Magi were present) would have constituted a certain, if not sizeable, portion of the nobility.

WAYWARD ROYALS
COULD LOOSE THEIR
ROYAL STATUS

Rome remained adamant. Under pain of excommunication, kings and European royals were forsworn to uphold the faith of the Catholic Church and eradicate the lively serpent of ‘heresy’ wherever it be found. For some European royals this was a hard line to follow, because it meant going against the Magi, who in many cases, were their relatives by blood. A devastatingly new mechanism was put in place by the Church whereby naughty, uncatholic royals could fast become unroyal, lower than peasants. Any heretic manifestly impenitent;

*‘can be degraded by a bishop or by an Inquisitor, declared deprived of all titles, possessions, honours and ecclesiastical benefits, in fine of all public offices whatsoever. ... this is to be understood only of the descendants on the father’s side, and not on the mother’s.’*⁵⁸¹

In practice the high-born could only have their illustrious peerage confirmed by certification issued by a Catholic bishop. This was without doubt Rome's ultimate weapon to ensure at least the public obedience of the European royal houses, a war-hammer more feared than any threat of excommunication. Otherwise they, and every succeeding generation, lost public acceptance of their status, and their royal blood. From that time the lineage faded into poverty and obscurity, unable to be confirmed. Claims to royal ancestry by later generations of dispossessed blue bloods were probably regarded as dubious, greeted with a disbelieving wink (ie; where's the evidence?), except among those royal circles who actually knew which of their kinfolk had gone under, and were still willing to provide them with discreet means of support. Relatives on a heretical father's side were singled out for punishment in the last line above. Note well that Aryan blood was patrilineal, whereas Jewish and Chaldean blood passed down the line matrilineally. Considering the main thrust of the papal reforms it becomes clearer what sort of people were being suppressed in the above-mentioned clause from the *Malleus*. Magian Christians were severely caned, taking the full brunt of the Inquisitions rage. This sort of legislation only succeeded in paving the way for Jews, Jewish magicians, heretical Chaldeanised Christians and Neo-Manichees, over the charred corpses of Magian Christians.

The alleged close-connections between the royals and pagans may have lasted some time. In his *De la Demonomanie des Sorciers* of 1580, Jean Bodin,³⁸² a witch-hater of the old school directed the following indictment against the high born, for their leniency, if not complicity with the light and dark witches:

BODIN CONDEMNS THE
NOBILITY FOR
HARBOURING WITCHES
AND WIZARDS

'Now it is not within the power of princes to pardon a crime which the law of God punishes with the penalty of death - such as are the crimes of witches. Moreover, princes do gravely insult God in pardoning such horrible crimes ... Those too who let the witches escape ... rest assured that they will be abandoned by God'.³⁸²

The penalties prescribed by the inquisitors were severe, even where the offender was royal: *'it is clear that all Bishops and Rulers who do not essay their utmost to suppress crimes of this sort (maintaining wizards in their employ), with their authors and patrons, are themselves to be judged as evident abettors of the crime, and are manifestly to be punished in the prescribed manner'.³⁸²*

Bearing these points in mind, the late Middle Ages and Renaissance was certainly a precarious age for devotees of the magical art. Not quite knowing who they could trust, wizards had to be circumspect in their dealings with others. They needed to be around folk they could trust with their lives. Very often they attempted to lob themselves on royalty. As you have seen it was a custom fraught with dangers for all parties involved, and one might guess a source of tainted joy and logistical migraine headaches for the nobility, especially where the Church had placed watchful Catholic spiritual directors in their midst.

SPIRITUAL DIRECTORS
INSIDE THE ROYAL
COURTS MONITORED
DEVELOPMENTS

In his preamble letter to Prince Hermannus, Earl of Wyda, Duke of Westphalia and Angaria, Agrippa makes known the extent of the persecution being directed against him. They were hot on his heels. With the level of attrition against magical writings being so great in the Renaissance, Agrippa's correspondence is particularly important from an historian's perspective, allowing us to visualise fraternal networking in action. In this very way Agrippa, and many wise folk before him, hoped to be invited into the safe sanctuary of an illustrious royal court. In such a prince they might find a courageous defender, bankroller, or steward for companies of other wizards.

AGRIPPA WAS ON THE
RUN

"the wickedness of some pulpit sycophants, and of some school sophisters incessantly raging against me for a declamation ... and contending against me continually with bitter hatred, envy, malice ... hindered me from putting it forth (ie; publishing his latest work)". ... Others with corner whispering from house to house, street by street, did fill the ears of the ignorant with my infamy; others in public and private assemblies did instigate prelates, princes, and Caesar (the German Christian Holy Roman Emperor) himself against me".³⁸³

HE HOPED PRINCE
HERMANNUS WOULD
GIVE HIM SANCTUARY

He describes how his life's work ground to a halt on account of this undue attention. He further indicated he was introducing to the Duke a relatively new exposition of the art, entailing matters previously disregarded by the greatest philosophical pedagogues of his time. One can only guess the deep foreboding in Hermannus upon reading that Agrippa had drawn Caesar's scornful gaze. Tucking the occult writer under his royal wing could end up being a catastrophic mistake. It might destroy his dominion, wealth and holdings, plus negatively effect public perceptions

of his entire family lineage.

In his letter to prince Hermannus, Agrippa hopes to curry favour with the famed royal recipient. To be sure his penmanship possessed a shamelessly fawning aspect, and this in itself might have been sufficient to achieve his ends. But his mere mention of Parthian customs was a masterful technique for gaining the prince's ear and favour, for in doing so he identified himself, by letter, as one versed in the ancient history of the royal houses.

*"Such is the greatness of your renowned fame (most reverend and illustrious Prince), such is the greatness of your virtues, and splendor of learning ... knowledge of many things, constant religion ... with which you are endowed beyond the common custom of others; I say nothing of those ancient monuments to your eminent nobility (ie; the landmark origins of) ... I also am resolved that your favour shall be obtained by me, but after the manner of the people of Parthia, ie; not without a present, which custom of saluting princes, is indeed derived from the ages of the ancients, unto these very times, and still we see it observed".*⁵⁸⁴

AGRIPPA GAVE THE
PRINCE A COPY OF HIS
WRITINGS AS A GIFT

The gift he proposes to lavish upon the Duke, is a copy of his philosophical writings. The ball was now rolling. All the Duke had to do was enquire among notable sages about this Agrippa fellow's *bona fides*. Was he worth the risk?

AGRIPPA WAS ON
FRIENDLY TERMS WITH
CERTAIN CHRISTIAN
PRIESTS

Agrippa also seems to have liaised with believers serving inside the clergy. In his letter to John Tritemius, the abbot of Saint James, Agrippa writes an apologetic and explanation for the practice magic in their era, and the reasons for its fall from grace, and accumulation of such considerable prohibitions. The cleric in this case seems wayward by reformist standards, but no less representative of old-time priests and religious, who maintained fruitful interaction with the heathen and demi-Christian intelligentsia;

*"and then there was one great question amongst the rest, why magic, whereas it was accounted by all ancient philosophers the chiefest science, and by the ancient wise men, and priests was always held in great veneration, came at last after the beginning of the Catholic Church to be always odious to, and suspected by the holy Fathers and then ... condemned by sacred canons, and moreover by all laws. Now the cause, as I conceive is ... many false philosophers crept in, and these under the name of magicians, heaping together through various sorts of errors and factions of false religions, many cursed superstitions and dangerous rites, and many wicked sacrileges, out of orthodox religion, even to the persecution of nature, and destruction of men, and injury of God, set forth very many wicked, and unlawful books (which he also terms 'very reprobate books of darkness'), such as we see carried about in these days, to which they have by stealth prefixed the most honest name, and title of magic".*⁵⁸⁵

AGRIPPA ATTRIBUTES
MANY OF HIS TROUBLES
TO DEVIL-WORSHIPPERS
WHO CALL THEMSELVES
MAGI, THUS TARNISHING
THE NAME BEYOND ALL
HOPE

Undoubtedly Agrippa speaks ill of demoniacs for openly calling themselves Magi, all the while entertaining a wrongful fondness for black magic and infernal demonolatriy. Sinking the boot into the dark art would likely gain Agrippa friends among receptive clergymen at best. At worst it might keep the inquisitors at bay for a while. Rather than leave them wonder about his philosophical allegiances, Agrippa of Nettesheim, dispelled any potential doubts up front ... he was a white practitioner. Being himself a magician Agrippa's writings provide additional non-clerical confirmation of the maelific arts in Europe, and a thriving infernal sub-culture.

AGRIPPA PRESERVED
JEWISH AND CHALDEAN
MAGICAL LORE IN HIS
TEXTS

Most of Agrippa's public writings drew upon classical sources, many instances of which never survived the period. The greater part of his tomes were a judicious compilation of high magical operations, readily classifiable as Chaldean and Jewish sorcery (Kabbalism). He probably included token retractions and condemnations against certain magical colleges in his texts, hoping to lessen the suspicions of the inquisitors, and for this reason he snipes at every form of sorcery save Jewish. To do otherwise, in the contemporary Church's reformist, judaising atmosphere, may have been to court disaster. And so he states *"because the old magicians and those who were the authors of this art amongst the ancients, have been Chaldeans, Egyptians, Assyrians, Persians and Arabians, all whose religion was perverse and polluted idolatry, we must very much take heed, lest we should permit their errors to war against the grounds of the Catholic religion; for this was blasphemous, and subject to the curse (of excommunication)".*⁵⁸⁶ Here Agrippa magnifies the acceptability of the Kabbala, to the detriment of other schools, perhaps to establish his catholicity or fealty to the *magisterium*.

Does this mean Agrippa was a Kabbalistic wizard, to the exclusion of all other arts? Portions of text interspersed throughout his three tomes suggest appearances may be deceiving. Agrippa explains to his readership that religion

is an integral and indispensable part of the secret, sacred mysteries, and of science too. Just as Jesus Christ refrained from divulging diverse secrets to prospective converts in plain language, to preserve their sanctity from the profane, gawking gaze of the unholy, so too would he desist from recording in his work the best part of the magical craft.

*“Therefore it is not fit that those secrets which are amongst a few wise men, and communicated by mouth only, should be publicly written. Wherefore you will pardon me, if I pass over in silence many and the chiefest secret mysteries of ceremonial magic. I suppose I shall do enough, if I open those things which are necessary to be known, and you by the reading of this book go not away altogether empty of these mysteries”.*⁵⁸⁷

OTHER THINGS, THE MOST IMPORTANT THINGS, HE FELT SHOULD NOT BE PUT IN WRITING

Freake, the translator of Agrippa’s works into English, warns the reader that Agrippa masked a certain proportion of his writings by varied means, so as to shade the higher truths and art from unwise eyes.

*“mysterious truths do not presently shine like rays of the Sun as soon as they are recovered from a long darkness, but are clouded with obscurity. Nay I will not say but this Agrippa might obscure these mysteries like an Hermetical philosopher, on purpose, that only the sons of art might understand them. He perhaps might mix chaff with his wheat, that quick sighted birds only might find it out, and not swine trample it underfoot”.*⁵⁸⁸

Wizards were of immense value to the royal houses, and it seems slavishly employed to breach besieged enemy fortifications in wartime through ingenious means. They excelled in arts the Christian priests knew nothing of. The *Malleus* declares the act of patronising wizards a pernicious and punishable crime, decrying their employment during a just war an unfair advantage:

*“for the leader, with his counsellors and advisers, must be considered to have aided and abetted such witchcraft, and they are by law implicated in the aforesaid penalties, when, after being warned by their spiritual advisers (ie; their priestly minders), they have persisted in their bad course; and then they are to be judged protectors and patrons, and are to be punished”.*⁵⁸⁹

The army, unlike the prince or commander who enlisted a wizard’s assistance, was said to be held innocent of the whole affair but *“must receive a solemn warning to hold all such practices for ever in detestation, and as far as they are able drive from their land all such wizards”.*⁵⁸⁹

Heretical sorcerers were by no means a new phenomena in Germany, and had been present there from earliest times. This was probably widely believed, for at various points in *Malleus Maleficarum* witches are termed ‘modern witches’.⁵⁹⁰ This naturally indicates that trial bodies understood that these folk were practicing a more recent form of popular witchery, which had evolved out of earlier ceremonial observances. It is my contention that between the 13th-18th Centuries this modernity led to the craft being barely a pale image of what it once was, degenerate if you like. Time only diluted the homogeneous purity of what was once core Indo-Iranian and Indo-European ritualism. Still, by interpolating what we can from the trials, with linguistic, historical and folkloric sources, a reconstruction of the purer beliefs becomes much more feasible, and with this comes a better understanding of those times. Until now only a bare handful of academic researchers have ever been granted permission to access the Vatican and inquisitorial archives. Thankfully, Cardinal Ratzinger has recently eased access restrictions to these prodigious untapped archives. This will effectively permit a greater understanding of witchcraft as it was once practiced, in different parts of Europe, throughout various periods.

Inquisitors, as distinct from parish priests, only sought to investigate certain types of suspects, mostly the aristocracy and clergy.⁵⁹⁰ This in itself probably shows that the ‘real witches’ who operated within a factual and still functional underground movement were far fewer in number than the many who practiced looser forms of the arts, picked up from village superstition and lore. The Inquisitors were tasked with bringing the former to trial. For a long time Rome was in no position to challenge them. For example, centuries before the compilation of *Malleus Maleficarum*, the Bishop of Winchester received disturbing news from his dear friend Boniface around 742 AD. In his letter Boniface spoke lamentably of the many ‘false priests’ in Germany,⁵⁹¹ who lived ‘on milk and honey’,⁵⁹¹ and who had a wide range of food taboos, including the consumption of bread.⁵⁹¹ These priests allegedly applauded the ordination of practicing criminals, including murderers,⁵⁹¹ and freely interacted with local pagans. If true, the implications

of this were grim for the apostolic missions, and even the Magians. You see, black Magian necromancers (or at the very least pagan sacrificers) were evidently being ordained as parish priests, and finding their way into the presence or service of the Teutonic kings.

Greatly troubled, Boniface sought guidance from an English bishop on the subject, especially concerning the rigid ecclesiastical oath he had made to Rome, according to which he was not permitted to fraternise with heretics. Boniface's dilemma was that in order to organise Catholic affairs in Germany (ie; protection for clergy and nuns, the security of Church buildings, and the enforced prohibition of pagan rituals and idolatry), he needed to have free access to the Frankish Merovingian Prince. Paradoxically, this oath was the one thing prohibiting him from gaining an audience in the throne-room. You see, if he adhered strictly to the oath, Boniface would never get a chance to see the Prince, owing to the multiplying number of 'false-priests' frequenting the illustrious Merovingian royal court. The distraught Boniface lamentably adds ... *'if I refrain from seeking their advice, from agreeing with their views and from taking part with them in the services of the Church, I shall have done enough'*.⁵⁹¹

Speaking disdainfully of King Louis' 'spiritually reprobate' advisory body at court, the Christian writer Radbertus detailed *'witchcraft everywhere ... lot casters, seers ... dream mediums ... and a whole crowd of other initiates in the malefic arts'*,⁵⁹² which Christians felt compelled to eject from Louis' royal company.

Frankish rogals - successors to the Merovingians

The Franks and their princes, the successors of the Merovingian kingship, were firm adherents of the old ways, even though they had formally entered the medieval Christian era, and not only them, but their Bulgar friends to the East⁵⁹³ who, in the 9th-11th Centuries, were giving the Byzantine emperor and patriarchs a very hard time in relation to paganism and heresy.⁵⁹³

PHOTIUS INFORMS THE
EMPEROR HE IS RELATED
TO THE PERSIAN KINGS.
THE EMPEROR CLAIMED
NOT TO KNOW THIS

In the mid 9th Century the exiled Patriarch Photius managed to stage his return to Constantinople by planting a document divulging that the Emperor, Basil the Macedonian, was a blood descendant of the Persian (magus) kings.⁵⁹⁴ Apparently Basil seemed quite unaware of this and wanted the implications of it further explained to him by Photius. Photius only too willingly obliged.⁵⁹⁴

For obvious reasons the magus-kings stood in direct opposition to the Church's highest prelates; they had blood which entitled them to be not only temporal rulers, but religious leaders in their own right.⁵⁹⁵ The primary aim of the medieval Christian clergy (loyal to Rome) appears to have been to win over these magus-kings to the apostolic faith, and thus abandon paganism or the demi-paganism which so characterised their era, and the old ways.⁵⁹⁵

THE GERMANIC
KINGSHIP

Back in the age of the heathen, the German kings could only ever be drawn from specific blood stock.⁵⁹⁶ It was the custom, say, of the Heruli and Burgundians that they choose their kings from among the royal family bloodlines.⁵⁹⁶ As a rule, these bloodlines were regarded as coming from the God Woden or from a serpent (in the case of the Merovingians).⁵⁹⁶ The favoured candidate was selected on the basis of his overall suitability for kingship, and in particular due to his battlefield skills and courage; in short his warrior acumen.⁵⁹⁶ They might also throw down any lacklustre king in order to replace him with a candidate more highly regarded by the people. The outgoing royal figure was normally slain by his successor. Magian scripture tells us that the slaughter of a deposed ruler was traditionally carried out among the brigantine war bands of the Zurvanite magus wizards, or by white Magians, but only if the ruler was a bloody tyrant.

PRINCES ELECTED TO
REGIONAL COUNCILS IN
RUSSIA

In Olden Russia princes were subjected to regional councils, and had to be elected by a majority of the free citizenry. In that part of the world they assumed the guise of modern politicians, doing house calls, and whatever else might enhance their community standing.⁵⁹⁷

There were two streams of thought about kingship among the German Franks. One group considered that it must be hereditary, others an office obtainable only via democratic popular mandate.⁵⁹⁸ The papacy and a number of princes worked furiously to suppress the custom of hereditary rulership.⁵⁹⁸ Not that medieval hereditary rulers were bad, it's what lay behind it all that was a cause for concern at the Vatican.⁵⁹⁸ Not that having magus blood (also called fairy blood in that age) was of itself detestable to Rome, but it was the penchant of certain members of a given house to subvert Rome's reformation cause that the Vatican treated with great disdain.⁵⁹⁸ If they acted in line

with Rome, then I suspect their ultimately Persian or Turkic lineage was of little concern to a reformist pontiff.

In the main, the 'infamous' Gallic royal bloodlines were accused by the papacy of being supplicants and abettors of the Antichrist, which it was the German people's duty to repel at any cost.⁵⁹⁹ This appears to have been a shrewd ploy to splinter ties between the Franks, which once existed on a pagan level. Some Germans heeded their call, many did not, with the result that the path towards promoting the magisterium among the Franks was an extremely arduous process.⁵⁹⁹

Louis the Pious entertained the presence of numerous diviners, including ones who performed pantomimes.⁶⁰⁰ I guess this is a reference to actors playing roles, such as in the divine comedies once enacted by the Magi, Mathematicians and pagan gnostic philosophers. Musicians of high birth found a surge of popularity around 1080 AD, and gained considerable reputations playing music in the royal courts.⁶⁰¹ As a rule their poetry and songs were especially tailored to suite the occasion.⁶⁰¹ Frequently compositions contained references to past events and ancestries, not to mention that bygone age, the pre-Christian epoch of heroes and fantastical beings.⁶⁰¹ It was counter-schooling of a different kind. The Church branded their tales false histories.

Apparently clergymen also recognised the people's interest in epic folklore. During mass, a dozing congregation would become invigorated at the very mention of the old ways during homilies issued from the pulpit.⁶⁰² With all this happening the papacy became very isolated from the halls of European power, and had to redouble its efforts to gain any sort of influence over the Franks, Lombards, Spaniards, Scandinavians, Slavs, Italians, as well as the Greeks.⁶⁰³ Inevitably it required the financial and secular support of the mighty emperors if it was to prosper and operate effectively in its missions of conversion.⁶⁰³

The Franks were not the only ones the papacy had to worry about, for to the East lay an equally great menace. Slavic and Prussian royal brides were highly sought after in Germany and Scandinavia.⁶⁰⁴ In the period between the late 10th Century AD and the 1230's repeated denunciations were issued regarding the level of intermarriage between German nobility and Slavic royals.⁶⁰⁴ This was merely a manifestation of the close ties which existed between German and Slav, and were current throughout medieval German society at that time. Western (and perhaps Eastern) Slavs from every walk of life lived side by side with the Germans until the anti-pagan crusades destroyed the close cultural and inter-familial bonds that once existed between them. Until then Germans thought nothing of offering lodgings to the Slavs.

Across in Ireland, in County Armagh especially, kingship was hereditary, and unusually unorthodox marital customs prevailed there.⁶⁰⁵

Major Frankish royal bloodlines were the Salians, the Angevins and lastly the 'accursed' Hohenstaufens (under whose patronage the Gothic cathedrals were erected).⁶⁰⁶

Another medieval bloodline was that of the Welfs (lit. 'the Wolfs', signifying it probably originated in Gothic royal bloodlines), which, together with blended Magianism and Christianised heathen Chaldeanism extended into the English, Russian and German royal families through intermarriage. The Salian emperors, who reigned from the years 1024 AD to 1125 AD, probably carried Frankish royal blood that arose from the line of the Ottos.⁶⁰⁷

The papacy and such emperors did not always find common ground, with the result that the popes often fought against their designs. It is no secret that the papacy reserved the right to depose any ruler who conspired against the teachings of the Church.⁶⁰⁸ Try as they may, the Church was in no position to achieve this for some time. For instance the office of Holy Roman Emperor rose to special prominence through the emergence of the royal German (Swabian) House of Hohenstaufen, which the papal fathers deemed to be a very great enemy of the Church.⁶⁰⁹ The Hohenstaufens had extensive ties with French bloodlines, and were regarded not only as of royal blood, but of *divine descent*.⁶⁰⁹ Henry IV attracted the detestation of the Pope (Paschal II), who regarded him as a heretic of immense magnitude, a problem that only swords could fix.⁶¹⁰

In time the German kings came to see themselves as the hammer and armour which the Church needed in its battle against the forces of the Antichrist, which were assailing the Church of Christ every which way.⁶¹¹ Others followed suite. The Bulgars, Croats and Serbs offered their loyalties to the papacy too,⁶¹¹ and the Russian prince Isyaslav sought out closer links with the Vatican around the year 1075 AD.⁶¹²

THE WELFS

When it came to interaction between popes and emperors the friction gauge was often set on red. Kings were a two-edged sword. Some rulers were so magnanimously receptive to the pontif's vision for the Church that they ended up being canonised as defenders of the faith, the greatest asset Rome could ever have hoped for.

THE CLERICAL CELIBACY
EDICT

State paganism only came to an end once kings refused to consort with the wizards of old. The demise of Irish druidism was signalled once the paschal fire was lit in the Church at Slane.⁶¹³ Those druids (Magi) still in attendance at Loiguire's court no doubt sensed the imminent end of their teachings and usefulness to the king.⁶¹³ As elsewhere in Europe, the Irish monks were compelled to administer the demanding functions once attended to by the druids; health care, education, religious benedictions and mingling with the high born. In doing so they put an end to the people's reliance on the pagan priests, healers and academics, and this greatly improved their chances of gaining converts.

POPES AND ROYALS
FREQUENTLY AT EACH
OTHERS THROATS

Many non-compliant royals still had to be subjugated. For this reason reformist popes threw their mitres into the ring with recalcitrant monarchs, increasingly so as more and more blue bloods cleaved to their version of the faith. The 12th Century author Gerard of Evermord petitioned the high born for aid in defending the Church against the beast that was soon to arrive, warning them not to act against the Church through schismatic precepts and activities:

CLERICS BEGGED FOR
ROYAL SUPPORT

'I then ask, supplicate, and beg you to meet with Margrave Albert before the conference of the princes at 'The Wood' and carefully to persuade him to show himself a spokesman of Christ and defender of the monasteries'.⁶¹⁴

INCEST WAS ABSOLUTELY
FORBIDDEN

In a manner somewhat similar to the Muslims, Christian authorities combated heathenism by controlling the types of marriages permitted in society. During the earliest years of the pagan conversions in Europe, the Church countered the growth of Magian families by expressly forbidding marriage within close degrees of kinship. What Magi there were, might be spotted around the community by incestuous nuptials, or by people organising strange custodial and intra-family adoption arrangements for their children. Others might have avoided the close scrutiny of the Church by loitering with Gypsies or other nomads, and moving on to other towns if they encountered too many problems in certain areas.

WITCHES HAD TO SWEAR
ON THE BIBLE, AND WERE
QUESTIONED ABOUT
THEIR FAMILY HISTORY

For example the initial examination of a witch or wizard required them to swear by the four gospels.⁶¹⁵ Now if they passed that test, they were then asked a variety of questions focussing on the bloodlineage of their parents,⁶¹⁵ former places of abode,⁶¹⁵ and in particular if the accused *'had lived in foreign districts, especially in such places as are most frequented by witches'.⁶¹⁵*

GYPSIES

The Gypsies (Tsigany) were a nomadic race that entered Europe in the 10th century from the East, via Rus'. They are believed to have originally migrated from India. Gypsies are said to have been endogamous, forming relationships with their nieces. Nor would they let their relatives be buried in the ground, and exhibited many overt signs of being Magi, or initially of partial Magian origin. Consider the similarity between the Persian word Ahriman (the Prince of Evil) and the following Gypsy words: *Arman* - 'an oath' or 'an evil curse'; *Armandino* - 'the damned'. Their remarkable prophetic powers were likewise noted.

If the most part of them were not exclusively Magian, some must have been pagan gnostics. Many Gypsies regarded themselves as the descendants of the Egyptian priests and Pharaohs.⁶¹⁶ Belonging, as it were, to a thriving counter-culture, it is more than reasonable to suspect that during their westward passage through Rus' and Easter Europe, they were picking up Magian passengers and transporting them all over the continent. Probably for this very reason Gypsies were subjected to horrendous persecution throughout the Middle Ages, and even into modern times. Armed militia remained vigilant for the unexpected arrival of Gypsy caravans and wanderers in their dioceses. Some towns (particularly in the Holy Roman Empire) erected signs showing Gypsies hanging from a noose. It was an obvious clue that local authorities were not keen to have them come and live in their neck of the woods.⁶¹⁷ Despite this, the harsh European anti-Gypsy legislation of the early modern era, which provided for capital punishment, was sometimes designed to make them settle down permanently, or get out of the area altogether.

Later, following the Council of Trent in 1547 AD, every Roman Catholic parish and diocese was ordered to keep formal genealogical documentation on their parishioners. Back in those days we may presume that parish priests fastidiously scrutinised these genealogical records over generations, and tens of generations, and asking an age-long question to couples petitioning to be joined at the altar (which is still asked even today!). ‘Are you related to each other in any way?’ In Russia they were less tactful. Before marriages were solemnised, Orthodox priests bluntly asked prospective couples if they possessed heretical grandfathers, and *Volkivny* (ie; Magian) grandmothers.⁶¹⁸ Only by these means could they pinpoint those families suspected of Magian or Chaldean heritage. They were then prevented from ever being married or ordained, should they attempt it. As it turns out, this happens to have been one of the primary focuses of the Inquisitorial authorities, the desire to allow the continuity of the Catholic/Orthodox Christian priesthoods free from the interference of Magian-Christians.

Reformist Christian priests versus the Magian Christians

According to Church documentation, some priests and monks were known to have been mixing in with the heathen Magi, even joining in their rites, something which sent tempers well past boiling point at the Vatican.⁶¹⁹ Priests were not permitted to fraternise with the Magi in any way, and those that did, did so under pain of excommunication from the Church.⁶²⁰ This all stemmed back to the Church’s desire to provide visible differences between the Magi and the Christian priests. Some clergymen were doing nothing to help Rome’s cause, in fact they only served to amplify growing fears of the true extent of the Magi’s presence inside the Church.

Incest was banned during the Middle Ages.⁶²¹ This is not only an admission that endogamy was occurring in the wider community, but that in prior times a next-of-kin marriage was most likely acceptable; hence the need for a ban.

In Germany there were rumours that marriage within the third degree of consanguinity (ie; the great grandchildren of a common ancestor) was sanctioned by Gregory I’s correspondence to Augustine, yet the same paperwork was never discovered in Rome or anywhere else.⁶²² Since the alleged papal dispensation had for all intents and purposes vanished, it created a diplomatic impasse in Germany, for foreign Churchmen were eager to rescind such unions, if indeed they had been validated in the first instance.⁶²²

In Cyrill’s text *Life*, the saint upbraided the German clergy for allowing the old pagan marital customs to thrive, which included ‘*illegitimate unions*’, meaning unions within close degrees of kinship.⁶²³ Cyrill records that King Ragnachar of the Franks ‘*was so sunk in debauchery that he could not even keep his hands off the women of his own family. He had an adviser called Farro who was given to the same filthy habits*’.⁶²⁴

Heretics, we are told, were supposed to have bred with relatives even in the first and second degrees. This was a very common allegation against them across numerous countries, *so much so that it was seen as an indispensable part of their religion*.⁶²⁵ Many academics regard these accusations as slander, plain and simple, but considering the overwhelming weight of Magian data throughout Europe, it is more than likely that these heretics were Magi and Magian Christians observing next-of-kin marital obligations; and in some cases black Magi. So prevalent were cases in which clergy were implicated as magical practitioners that in 1318 AD, Pope John XXII convoked an assembly to enquire yet further into the matter, and to take steps to remedy the situation.⁶²⁶ As a result of investigations into the simony and prohibited sexual liaisons of suspect clerics, many Christian priests were found to be resorting to the forbidden arts,⁶²⁷ and punished accordingly. Once apprehended they might be thrown into jail on bread and water *for the rest of their natural life, or even executed if they remained obstinate*, refusing to abjure the rites and customs accompanying the old faith. During the same period *Byzantine authorities were more lenient*, but still demanded nothing less than the formal expulsion of any priest found conducting the ceremonies of the magicians.⁶²⁸

The level of disobedience and misconduct was so widespread that every clergyman was automatically suspect, even those who had nothing to do with the Magi and other sorcerers. We might think that these innocent clergy were grieved by the incidents occurring around them, and perhaps maddened by the impact that it was having on their lives, especially those who were happily married. Although the Middle Ages can be regarded as an age of Christian miracles, there was a level of deep suspicion concerning alleged marvels, which were rigorously

investigated. So deep rooted was the level of official scepticism that some Christian saints who lived during the Middle Ages were suspected of being heretics, and suffered vilification on account of their miraculous powers.⁶²⁹

THIS WAS BANNED

And what about the case of an archdeacon in the diocese of Richmond in England, who, on his visits to wealthy estates, dragged along such an unwieldy retinue that it gluttonously ate his hosts out of house and home, sending some into virtual bankruptcy. Not only did he require over ninety horses, but was accompanied by just over *twenty dogs and several hawks*. Instances such as these might have been more common than you think, for in 1179 the Third Lateran Council saw fit to prohibit clergy from ever keeping dogs and hawks.⁶³⁰ It is perhaps only natural that these accounts conjure up images of such extravagance that the pope ended up banning them, but there is another plausible reason. If a number of Magian-Christian clergy kept hawks and dogs for funerary purposes, after the manner of the Magi, and the scale of this was discovered by Rome, this may have led them to immediately proscribed them as canonically unlawful.

THE MAGI KEPT DOGS

As strange as it may seem, clerical hairstyles were another important area which fell under the gaze of the reform Papists. Since old-style magus priests were required to grow beards and their hair quite long, and uncut (like Jesus), the Church demanded that Christian priests wear short hair, tonsured on the crown.⁶³¹ Tonsuring was practiced in both the Eastern and Western Church, once again to provide medieval Christians who were still in the twilight zone between Christianity and paganism, with clear boundaries between the Church priests and the Christian Magus wizards and wise women.

CHRISTIAN PRIESTS HAD TO WEAR THEIR HAIR A CERTAIN WAY, TO DISTINGUISH THEM FROM THE MAGI

The eastern Church still permitted its clergy to wear beards and long, though tonsured hair, whereas Rome was more fastidious. Catholic priests were almost always to be clean shaven, and their hair close-cropped and tonsured.

THE BULGAR "POPE OF HERESIES"

That the Magi were responsible for these many transgressions against Rome is well supported when one considers the emergence of isolated reports during the early Middle Ages, of an untensured 'Pope of Heresies' in Bulgaria,⁶³² and unseemly marital behaviour by priests in more remote places (such as Wales). Well we are all human, and of course prone to human frailties, especially of a sexual nature. No one, even clergy, can be thought incapable of acting upon 'pressing temptations' as they arose. As in the general populace it would be only natural that from time to time incidents would arise within the married priesthood such as adultery, or even homosexuality, and these shortcomings most assuredly attracted strong condemnation, especially in those times, for they were seen as grave affronts to the faith. But word had begun to arrive in Rome of happenings in certain parishes whereby priests were maintaining a wife and one or more illegal concubines⁶³³ (described as *Focaria*⁶³³ - hearth girls ie; fire tenders). That they were kept with the full blessing, connivance and financial support of the congregation made these cases scandalous beyond words. Perhaps some or most of these incidents were genuine cases of 'Christian charity' at the parish level, shown to the shamed parties of relationships that went horribly wrong; however it should be stressed that in some cases the ongoing nature of the illegal liaison was utterly sanctioned by these parishes, which can be suspected of unapostolic leanings. The Magian character of these little set-ups cannot escape comment, for we see not only further evidence of simony (Magian sin-payments) but a means by which ingenious Magi wandered into the area, gained ordination by marrying a local girl free of 'dubious' lineage and then had another woman out in the community who, being of Magian extraction, could bear him children and keep the bloodline alive.

SOME PRIESTS HAD MANY CONCUBINES, WHICH THEIR PARISHIONERS HELPED FINANCE

IN 10TH CENTURY ENGLAND THE OLD FAITH WAS MUCH MORE POPULAR THAN ROME'S VERSION OF CHRISTIANITY

In the 10th Century AD, the Anglo-Saxon King Edgar (who inclined towards Rome) stressed that *adherents of the old faith still far outnumbered those loyal to the Church*, and consequently this paganism had penetrated into the priesthood.⁶³⁴ Later, in 1282 AD, there were more dangerous outbreaks of witchcraft among the English clergy, which culminated in the embarrassing conviction of the Bishop of Coventry in 1303 AD for performing 'unhallowed' rites dressed as an animal with horns.⁶³⁵

MAGI NEEDED TO BREED, TO KEEP THEIR RELIGION ALIVE

Because Magi could only propagate, and even multiply their priestly bloodline through endogamous pregnancy, the papacy decided it was imperative that they not be allowed to remain breeding inside the Church. If they and their children had 'gone to seed' and begun to comander the priesthood through a series of very

The marriage ban

damaging ordinations, it could lead to the formation of Magian ecclesiastical sub-dynasties over a few centuries. Accounts from England, to name but one place, show that the sons of priests in some dioceses were inheriting parishes from their fathers, so that the Church in those regions fell into the hands of certain families.⁶³⁶ This arrangement eventually attracted the scorn of the papacy. Despite anathema after anathema, a number of parish priests on the British mainland still continued to keep their hearth girls, in addition to their wives.

Roman pontiffs (like Pope Innocent II) employed diverse measures to combat heretics, the foremost being a decision to seal off the Roman clergy for eternity, by a formal decree demanding ecclesiastical celibacy. In this way the bloodline of any Magian or Magian-Christian joining the Catholic church would be snuffed out by an inability to breed via the next-of-kin marriage. Whereas the Byzantine ecclesiastical hierarchy adopted a different stance, advancing the promotion of emasculated priests to major offices. It was a drastic measure to be sure, but nonetheless highly effective against white Magians.⁶³⁷ In this way the Byzantines were assured that their eunuch bishops were more likely to be apostolic in their understanding.

By enforcing a blanket ban on priestly offspring, the papacy could sit back and take note of who was defying it. The most likely transgressors would have been Magians or disgruntled clergy, unhappy about the impact that the decision had on their lives. This served to shield the Church from the large numbers of Magi and Magian-Christians present in, or coming back into, Europe. But this in itself was not enough to guarantee their exclusion from the priesthood. There needed to be the strictest possible vigilance as to the activities, whereabouts and the sorts of ties the clergy were having within the community.

Medieval Ireland too experienced kin-based sponsorship for the position of parish priest, as well as control of the monastic system. Postings of this nature assumed the nature of hereditary entitlements,⁶³⁸ though I have not read whether or not the same sort of matrimonial practices displayed by British clergy, were existent in 10th Century AD Ireland. As in Britain, medieval Frankish clergy were being found guilty of fathering illegitimate children, often to women of noble stock.⁶³⁹

In Bruno of Segni's treatise *On Simoniacs*, the simoniacs are portrayed as holding *immense sway* in the medieval Church, peccable priests who freely entered marital bonds that reformist Rome could only deem unholy.⁶⁴⁰ It was also noted that one could barely find a normal, non-simoniactal priest, owing to the fact that many had been ordained by simoniactal bishops.⁶⁴⁰ Simony (the buying of holy things, including payments of money to have sins forgiven) was widely attacked by the Church hierarchy once its true dimensions were discovered, and it became a centrepiece for the papacy's package of reforms, which aimed to totally eradicate such practices.⁶⁴¹ But in doing so, they had unwittingly waded into a theological battle of such ferocity that kings did everything in their power to prevent the new reforms germinating in their kingdoms, or in the lay invested parishes of their nobles. In more than one instance this led to scenarios where a given pope was held under house arrest or deposed by anti-popes loyal to the Frankish monarchy.

Simony had been part of Church life from Roman occupied Gaul right through to the coming of the Franks.⁶⁴² Henceforth simony reached endemic proportions in the 6th Century, contemporaneously with the explosion of 'false-christs' (who were in reality pagan saints) in that area, as documented by Gregory of Tours.⁶⁴²

Farther afield, and in an earlier time, we find a 'false-bishop' procuring a parish in the North African city of Cirba by bribery, much to the abhorrence of local Coptic Christians.⁶⁴³ We are told that factional disputation was the inevitable result, with parishioners angered by the many hooligans, prostitutes and miners that congregated around the usurper.⁶⁴³ But the weightier cult imprisoned the locals so that the unprincipled candidate could take the role of bishop there unopposed.⁶⁴³

In the West, the many cases of concubinage and priestly offspring directly contravened Rome's long-standing prohibitions. In the thousand years before 1079 AD a Roman Catholic priest could freely marry unless he was already ordained, though he was not to have children under any circumstances, but was to live in conjugal harmony with his spouse. This simple Church celibacy law was the most ingenious way of ensuring that any Magi who had originally converted to Christianity would be the last of their generation, thus subtly eliminating the purity of the Magian bloodlines. If accounts are to be believed, the *Focaria* concubines kept by the English clergy sought to give

THE PRIESTHOOD IN MOST PARISHES WAS THE PRESERVED DOMAIN OF CERTAIN CLERICAL FAMILIES

SONS OF CLERGY INHERITED THE PARISH FROM THEIR FATHER

ROME'S BATTLE TO ERADICATE SIN PAYMENTS AND CONCUBINAGE LED TO A CLASH OF IDEALS BETWEEN THE PAPACY, THE ROYALS AND THE NOBILITY

THE PROBLEM IS, PRIESTS WERE NOT SUPPOSED TO HAVE CHILDREN

EVENTUALLY PRIESTS WERE BANNED FROM MARRYING AT ALL

CATHOLIC PRIESTS HAD
TO BE CELIBATE

these 'priests' not just one child, but many, many children.⁶⁴⁴

These many factors proved to be *the issues which prompted Pope Gregory VII's historic priestly celibacy edict in the first place, issued in 1079 AD*. As a result of this, no Roman Catholic clergyman was permitted to marry, or to have children; ever! Siring heirs, especially heirs destined to inherit parishes was regarded by the papacy as an abomination, not because the act of procreating in the priesthood was wrongful, but what lay behind it, an unholy triad of simony, concubinage and of course magic!⁶⁴⁵ Catholic priests had to be celibate, whereas the white Magi thought it wholly improper not to breed, and what is more, that celibacy was an atrocious act against the Creator. Yes Magian-Christian priests evidently continued with the old ways in defiance of Rome, but by then they would have been visible to the discerning eye. Collectively these varied prohibitions helped distinguish Magians within the priesthood, wrenching away their camouflage. All that remained was to process the suspect, by interrogating them for further information about their heretical affiliates and placing them on trial. Afterwards they were jailed for life, or executed where they could not be ideologically reclaimed to Judaeo-Christianity.

A CLOSE EYE WAS KEPT
ON CLERGY

FRANKISH PRIESTS BROKE
THE PAPACY'S RULES ON
MANY OCCASSIONS

More studies need to be done by modern academics in an attempt to recover from medieval manuscripts the fullest extent of 'devious' matrimonial customs and simoniacal practices in continental Europe, and in particular the dates and locations for such events.

AN ARCHBISHOP
REPRIMANDS REBEL
PRIESTS IN GERMANY

Late November 1119, following the Rheims synod, Archbishop Geoffrey descended on the city of Rouen (a French city formerly known in Gaulish times as *Rotomagus*.⁶⁴⁶) ready to hand out remedial punishments to the dissenters.⁶⁴⁸ There the petulant priest threateningly brandished the sword of excommunication before them, as the prize for opposing his reforms.⁶⁴⁸ But in the eyes of the pertinacious clerics mustered before him, he saw reflected the bluntness of that sword, to his stark horror. The defaulters remonstrated repeatedly, and were heedless and contemptuous of his authority. Like impish schoolboys before their headmaster, sighs and groans of non-compliance grew loud among them. The most vocal denouncer of the new reforms was arrested then and there, sending a clear message to all present that the issue was not negotiable. The reformists were about to make their power play. Defiance filled the air as he was dragged away to share a prison cell with common criminals. Filled with uncontrollable anger, Geoffrey hurriedly vacated their company and ordered that his retinue of men-at-arms should venture back inside the building and flog the rebel priests with rods.⁶⁴⁸ The battered clergymen made off into the streets, armed themselves, and set out to give battle to the archbishop's men.⁶⁴⁸ A rolling melee ensued which saw the anti-reformists gain the upper hand, and then lose it as onlookers came to the archbishop's aid.

A FIGHT BROKE OUT

REFORMISTS MAKE THEIR
MOVE ON THE OLD
GUARD

*'They (the rebel priests) carried the sorrowful tidings to their parishioners and concubines, and, to prove the truth of their reports, exhibited the wounds and livid bruises on their persons. The archdeacons, and canons, and all quiet citizens, were afflicted at this cruel onslaught ... such unheard-of insults.'*⁶⁴⁸

But very little changed. It was in the November of 1266 that Archbishop Odo of Rigaud had reason to investigate Rouen yet again. Reports hastening from there were a cause for grave concern. Incidents of heresy supposedly resolved up to a century before were again on the rise.⁶⁴⁶ St Stephen's parish priest, Lord Gilbert, a man of the royal blood, had overstepped all bounds.⁶⁴⁶ Multiple canonical crimes mired his record.⁶⁴⁶ The lacklustre and improper manner in which he performed his priestly function were unmistakable clues that his ministry was not what it ought to be.⁶⁴⁶ First of all there was no evidence that he had ever been ordained, and few could verify his whereabouts or daily doings. Secondly there was that scandalous matter of his own niece, who he maintained as a concubine, and who carried his child.

Other lesser indiscretions could be pinned on priests in that parish; pawning holy books, gambling, drunkenness, sexual incontinence (whether with adulterers, or concubines or by casual carousal), brawling, pastoral sloth.⁶⁴⁷ Repeat offenders could expect to surrender their parish to the Church authorities, willingly or unwillingly. Either way they would never be in charge of a parish again.⁶⁴⁷

Frankish priests were renowned for their flagrant disobedience towards papal authority.⁶⁴⁸ Even so their rejection of the reformist agenda did not constitute the same level of disloyalty displayed by Merovingian clerics.⁶⁴⁸

Consequently the mere release of the papal encyclical *Ordericus Vitalis* in their region was by no means a guarantee that it would be observed.⁶⁴⁸ As the new canonical laws became better promulgated the hiatus in ecclesiastical discipline was more evident. In such a circumstance loyal factions within the Catholic clergy blasted the recalcitrants, handling the matter in whatever way they saw fit. Some saw rash and violent methods as pleasing.⁶⁴⁸

One Brother Berthold of Regensburg earned considerable repute as a public orator on apocalyptic themes, thematic indeed under the circumstances.⁶⁶² All over Germany he travelled gathering many townsfolk to his meetings.⁶⁴⁹ At each destination his assistants raised a towered belfry, surmounted by a wind-banner. From its cupola he schooled attendees about the dangers of the Antichrist, and explained the roles of the seven Asian bishops as angelic heralds of the end time.⁶⁴⁹

These reappraisals of canonical policy, and their implementation might also have had an unwanted side-effect; preparing the way for the emergence of Chaldeanism and neo-Manichaean heresies within the priesthood; the second wave of heresy. For no sooner had they managed to eliminate Magian-Christian heretics than another, different breed of heterodoxy mustered strength; in the case of the Manichees anti-Jewish, anti-royal, anti-Church.

Despite the stern level of oppression fielded against the heretics, and the attendant seriousness of the varied happenings, one comical episode stands out above all others, appearing in the annals of Jordan of Giano.⁶⁵⁰ In 1219 AD a sixty-man delegation of Italian Fransiscan brothers turned up in Germany knowing virtually nothing of the German language.⁶⁵⁰ As strangers in a foreign land they soon found that one word above all others gained them hospitality and good cheer - 'Ya' (German: 'yes'). In fact they liked the word so much the brothers chose to answer questions in the same way; a smile, a nod, a 'Ya'. Well that was until the day someone asked them '*whether they were heretics, come now to infect Germany after the same fashion wherewith they had already perverted Lombardy*'.⁶⁵⁰ As they were being dragged off to prison, divested of their clerical robes, or held for derision in the public stocks one cannot help feeling that each and every one of them lamented that poor choice of words, which so tarnished and destroyed an entire Fransiscan missionary venture.

As amusing as the event may seem, behind it can be found yet another cause for frantic finger pointing and ubiquitous heresy allegations, namely cultural and linguistic misunderstandings. For this reason it is natural that chinks appeared in the unity of the Greek, Roman and Eastern European churches, not to mention the Armenians, Copts, Antiochans and so on. Hence it came to be that these various subdivisions of the same flock eyed each other with increasing suspicion.

Magian-Christian churches

Earlier in Part II, I spoke of medieval writings which helped concretise the mythos of Prester John, a descendant of the Three Wise Kings (and supreme ruler of the Magian-Christians). In an attempt to resolve an ancient theological rift within the Church, the legendary ruler threatened to advance into Europe intent on capturing and annexing many realms by force. Indeed he hoped to bequeath these same realms (including Rome, Germany, France and Britain) to his future son. Did he not claim, that as a warrior-priest, he was Christ's true representative on earth, a Magian-Christian, the King of Kings to whom many nations gave homage?⁶⁵¹ John's letters condemned Rome and Constantinople for adulterating the faith, something which he would soon remedy, militarily. Pope Alexander was dismayed if not angered by the smug claims of Prester John, to which he responded by dispatching a letter reinforcing papal primacy.

Are these instances evidence that Magians were seizing control of traditional Catholic parishes in some areas, or were the rebel clergymen establishing new churches from scratch, built or sponsored by nobles sympathetic to their cause?

For much of the preceding thousand years the Magian Christians were out to win converts, unconverted local populations of closet pagans and Magian-Christians where possible. Even so there is just cause to suggest that a certain proportion of this rival clergy were the leaders of Magian congregations who, like the Goths, Celts, Bulgars and Hungarians, just walked into Europe from the East, in their thousands!

ITALIAN FRANSISCANS
TREATED AS HERETICS

IT WAS ALL DUE TO A
MISUNDERSTANDING

TO WHAT EXTENT DID
THE SUSPECT CLERGY
CONTROL PARISHES?

OR COULD IT BE THAT
THESE WERE NOT
STRICTLY ROMAN
CATHOLIC PARISHES,
BUT MAGIAN-CHRISTIAN
PARISHES SPONSORED
BY THE NOBILITY?

DID PRESTER-JOHN, THE
LEADER OF THE MAGIAN-
CHRISTIANS INVADE
EUROPE, AS HE HAD
THREATENED?

The latter proposition, if it did actually take place, was on a scale that boggles the mind, yet not beyond the realms of possibility. You see between the 7th to 10th Centuries AD the European populace doubled in size to approximately 22.6 million, but this figure is only an estimate. The urbanisation of Europe and advances in agricultural technologies are normally credited with being the cause of this population explosion,⁶⁵² however I would like to add a large migration of Easterners and Scandinavians into Europe as an additional, if not significant catalyst for this demographic outburst. Indeed the leaps in agricultural ingenuity and the formation of more advanced urban models might easily have been attributable to these newcomers and the esteemed learning of the Magians who accompanied them.

The most likely scenario is that some, if not many of, the suspect parishes were not strictly Magian temples, but Magian-Christian and Chaldeanised churches. And the priests who served in them were expanding and fortifying their ancient versions of the faith throughout Europe, something which riled the Catholic popes and Orthodox Catholic patriarchs to no end. In both *Malleus Maleficarum* and Eymeric's *Directorium Inquisitorium*, it was alleged that the magicians sought to re-baptise infants lost to their religion.⁶⁵³ Baptism was never a feature of Manichaeism, so white Magianism and Chaldeanism seem to be a much sounder source for the practice. And if it was, then, in a Prester-John-like scenario, the witches and heretics were assuredly hoping to unconvert Europe, and bring the children back into their fold. For their part medieval reformist clerics thought this infernal.

Building on pagan holy sites

In the post-conversion era chapels and churches retained many features commonly associated with pagan temples. Religious and historical commentators normally attribute these unusual stylistic embellishments and architecture to the finishing touches of a converted master wood-engraver or ex-temple-builder.

Some places of worship were renovated pagan temples, steered towards serving the needs of Christian congregations, and therefore provide physical evidence of the pre-existing pagan religion's form. Priests of the early Gaulish missions felt that reclaiming pagan holy sites for Christian usage (by sanctifying the area with crosses, holy water and prayers) was inherently dangerous.⁶⁵⁴ Building on them could be even more spiritually risky. By their estimation the ancient paganism apparently still contaminated the site.⁶⁵⁴

CHRISTIANS SOMETIMES
REFITTED PAGAN TEMPLES
FOR CHRISTIAN USAGE

Others held a contrary view. They took a chance, hoping to see whether converts might be reaped in greater numbers by meeting them half way, bearing a fistful of concessions.⁶⁵⁴ In 6th Century AD Cornwall, a Welsh cleric by the name of Samson came across a pagan ceremony being performed before an 'unholy idol'.⁶⁵⁴ Though some present hurled abuse at the clergymen, others explained that the proceedings were simply a theatrical performance. In retribution the cleric cut two crosses into the southern, eastern and western faces of the idol (which was in the form of a standing stone), and a single cross on the north.⁶⁵⁴ It is believed that he did this to permit the idol's resident demon a northerly escape route. In such a way had Samson recycled the pagan cult site as a place of Christian significance.

Even more ambitious projects lay ahead for the like-minded. In a letter to the Anglo-Saxon bishops, Pope Gregory informed them that the conversion of the pagans was an arduous process, destined to take centuries.⁶⁵⁵ In his opinion preachers had to be flexible and non-dogmatic to win over their confidence.⁶⁵⁵ Concerning the pagan temples and shrines on the British mainland, Gregory authorised their refurbishment as Christian churches, if their design and layout allowed for it. It was a provisional dispensation, valid only after the idols and pagan religious trappings housed within them were torn down.⁶⁵⁵ Pagan sites of an utterly dubious nature were, as ever, to be demolished, and the site of the cleared ruins used as the foundation for a Church.⁶⁵⁵

Feast days could likewise be renovated. The ancient heathen custom of religious banqueting, during which cattle were killed and feasted upon, was permitted to continue, but solemnised as Christian festivals.⁶⁵⁶ Pagan rites were prohibited during the killing and butchering of livestock.⁶⁵⁶ Instead meat was blessed in the name of Christ.⁶⁵⁶ In Scandinavia we even hear of laws demanding the brewing and blessing of beer in Jesus' name. Heathen libations were now hallowed for the new faith.

The astonishing practice of renovating heathen temples or building churches on pagan sites actually provides further valuable clues about the mechanisms of the conversion process. Any suggestion that erecting parishes on the smashed and gutted debris of pagan holy sites automatically made them holy to the heathen mind, seems ridiculous. This long-touted explanation is far from incontestable. Would a Buddhist pagoda built over a destroyed St Peter's Basilica make Catholics any keener to become Buddhists? Does the Islamic 'Dome of the Rock' (built on the razed Jewish temple) in Jerusalem make Jews want to become Muslim? I don't think so! It was one of the greatest causes of medieval Jewish-Muslim hostilities in Jerusalem, and still a sore point today.

However, if Christianity and the paganism known to European heathenry were interlaced to the point where the pagans perceived that Christianity was an extension of their creed, then this custom makes complete sense. It would have been a very helpful measure, perhaps fully expected, even demanded by converts under the circumstances. That is not to say that Christianity was incapable of spreading of its own accord among peoples whose religious beliefs were not even faintly related to those of the Church. For instance, Christianity has thrived in places as culturally diverse as South Africa, Nigeria, South America, Vietnam, the Philippines, and just about anywhere else you care to name. Nevertheless, the fact that the pagan Slavs were predominantly of the Magian faith ensured that the conversion (renovation) of their religion to Christianity was a whole lot easier once churches were built on the foundations of defunct temples and fire houses.

One school of thought is that Russian and Scandinavian stave and cupola churches represent excellent survivals of pagan temple-building methods.⁶⁵⁷ Such architecture is quite unique to these areas, but not without comparable precedent. The Slavic linguistic sub-family harbours a gamut of architectural terms once used during the Christian era, but which originated in asiatic paganism. Earlier you were greeted with a wealth of linguistic data suggesting that Slavic temples were formerly associated with the Magian religion, or, as it happens, the faith of the Magian Christians. Quite apart from that, the nearest most comparable architectural style to the Norwegian stave churches can be found in the Buddhist world, in far off Thailand (p. 257). This analogy is far from wildly speculative, since there is evidence of a Germanic Gothic Buddhist presence, indicated variously by linguistics, and second century inscriptions in Poona India, not to mention Buddhist artifacts in Scandinavia.⁶⁵⁸

Whether the Church in Rus' and Scandinavia followed the lead of British clerics, by redecorating pagan temples as Christian churches escaped the historical record. If they did, then in some regions priests were demonstrably tasked with gutting and decorating Magian fire temples and Buddhist-style pagodas. Norwegian stave churches seemingly amalgamated Buddhist building design, but incorporated facets of Magian and Assyrian imagery. Central Asia is a likely point of origin for stylistic hybridisations of this nature, for it is in such places, like Parthia, that Buddhism, Chaldeanism and Magianism happily co-existed in the pre-Islamic age.

Panning forward from the initial centuries of the first millennium, into the early medieval period, the design of major churches at senior episcopal seats becomes a good deal stranger. Magian-Christians seem to have purposefully built their own churches and cathedrals inside Europe, using exceedingly advanced architectural techniques and contraptions. For this reason Romanesque architectural examples of the Middle Ages exhibit carved imagery largely of eastern beginnings, arising out of Anatolia, the Caucasus and *Ancient Sumeria*.⁶⁵⁹ Consequently it seems inconceivable that the builders introduced their unusual craft from the holy lands. Having said that the crusaders did have a presence in Edessa, which might account for at least some of these features.⁶⁶⁰ As you will have read in Part I, orientalism, in its many forms, had been in Europe since the Bronze Age. Whatever crafts arrived home with the crusaders were only secondary to the greater part, arcane traditions that hung over the continent like fog.

Over the next few pages you will indulge in a curious array of medieval Christian art, placed in juxtaposition with their earlier pagan counterpart. Comparing these styles allows one to see that many medieval churches were decorated with Persian and Assyrian angels, sphinxes and griffons. This strongly suggests a Magian and Chaldean presence in Europe, one sufficiently well placed to be decorating churches and cathedrals in oriental fashion. It also tells us something about the original religious affiliations of the stonecutters who designed and built these ingeniously complex monuments, the pride and joy of the royal houses. And the Roman Mithraic motifs (p. 824)? They tell a story all of their own.

The Three Wise Kings in Catholic religious artwork

Fig 36.1

Depictions of the the Three Wise Kings typically conform to several styles. One variety shows them with sunny halos at least as lustrous as those of the solar coronas of the holy family, and indeed Jesus himself. Another format depicts them without halos of any kind, rendering them less divine. Others show Gaspar as an Ethiopic negro.

Fig 36.2

Holy places became somewhat taller than they used to be, now incorporating steepled or flat-topped towers and belfries as an integral part of their design. The will and know-how to construct them blossomed in Europe during the 12th Century AD in all its glory. In very many ways they resembled Magian temple towers and belfries once found in Slavia prior to its conversion, and in Persia before that. I devoted a small portion of Part I to exploring the types of holy towers and belfries situated around heathendom. Compare the illustration of the pagan Slavic tower (reconstructed from Islamic accounts, archeological reconstructions and an excavated architectural model) with British belfries (p. 824), or the tower of the Persians situated in Edessa.

EUROPE'S
ARCHITECTURE
BECOMES STEADILY
MORE COMPLEX

A certain song composed by a medieval Christian named Francis Petrarch seems to identify these towers with the heresies of distant Babylon, and so, quite possibly Chaldeanism or Manichaeism. Part of his chant reads *'Its idols will be scattered on the ground, and its high towers, enemies of heaven, and those who live in them will be burned inside and out'*.⁶⁶¹ Evidently Petrarch was a committed reformist.

The amazing scale of Magian and Chaldean penetration into Europe's churches can only be realised when you look at something as illustrious as Chartres Cathedral in France. There you will find ornamental columns decorated with the signs of the zodiac (p. 826), griffons (p. 827), gargoyles (p. 654, 826, 834), centaurs (p. 823, 825) and creatures similar to male *divas* (bird-men and women). Normally quite at home in Slavic pagan temples, these carvings now found pride of place in Christian churches. For example an excavated Roman sculpture (Fig 32.4, a Mithraic winged genii [ie; angel] perched over human remains), is conceptually similar to the pelican-headed multi-breasted creature found at Notre Dame (See fig 32.3).

PARISH BUILDINGS AND
CATHEDRALS ENRICHED
BY QUASI-PAGAN
IMAGERY

Many view these items of heathen religious art as the handiwork of pagan craftsmen. This fancifully naive remedy fails to explain the scale and preeminence of the religious sites so decorated. How is it that gargoyles jutted out from the uppermost parts of cathedrals? They seem a little peculiar on such major places of Christian worship, and yet they are there. Considering their oriental origins, and the stature of these cathedrals, it seems fairly clear that such images were well received, not by the reformist camp, but by clerics of the old school.

Christianised Rus' does not miss out on the pagan-Christian trappings either, as is evidenced by the engravings incorporated into the design of Vladimir Cathedral, or at Yurev. Evidently in France, Russia, Germany and Britain, the papacy and eastern patriarchs had no degree of authority, even to the point of being unable to prevent the construction of cathedrals with dualistic pagan effigies and decorations from Asia Minor at the very least. The Church was besieged by friezes and sculptures that epitomised everything the reformists were trying to uproot and replace. Having said that, some believe they served instructional purpose.

RUSSIAN CATHEDRAL

Yes, there was something monumental happening in Europe. Dualistic Magian-Christians and Chaldeans were dabbling in constructs far exceeding sleepy country parishes. Now they turned their hand to imposing and seemingly immortal cathedrals in nerve centres of secular power! Their projects seems to have proceeded without let or hindrance; at least initially.

The same familiar theme appears time and again; the Three Wise Kings, arguably one of the most poignant Christian images of the Middle Ages (fig 36). Not to be overlooked is Cologne, a premier site for Christian pilgrims, whose sumptuous Imperial cathedral was made all the more famous by the 12th Century AD arrival of the holy relics of *Gaspar, Melchior and Belthazzar*,⁶⁶² the three astrologer magus-kings who travelled far to see the baby Jesus at Bethlehem. The Church of Chaldon in Surrey England indulged in a slightly different style of art. Its feature wall mural appears Mesopotamian or Babylonian.⁶⁶³

THREE WISE KINGS

Devoutly Catholic Ireland could not escape the new ways either. There the Romanesque phase was ushered in by the synods of 1111 and 1152, which veered the Irish church from its ancient style of primitive monasticism.⁶⁶⁴ These earliest Romanesque buildings are thought traceable to Norman influences between the 9th and 12th Centuries AD.⁶⁶⁴ Many strange creatures adorn their walls, some with weird facial masks and woven beards. Germany was probably a further source of inspiration.⁶⁶⁴ The grandiose fortified monastery of Cashel, Co. Tipperary was expanded upon progressively over the centuries, beginning life as a castle for the monarchs of Munster.⁶⁶⁴ Such lords financed the construction of Cormac's chapel, a notable feature within the complex. The monastery is an emboldened Frankish Romanesque style, strongly resembling a church at Ratisbon Germany,⁶⁶⁴ perhaps owing to

connections between the Irish clergy, and those in mainland Europe. A five-story round tower was added to it c. 1011 AD, around the time it was confiscated from the nobility and handed over to Roman Church authorities.⁶⁶⁴

This was the dawn of the 11th Century AD. Despite the boundless impressiveness of the new monastic buildings, something unusual was happening to the faith in Ireland. It was going into a tail-spin. In 1183 AD Gerald of Wales wrote of an Ireland greatly at variance from St Patrick's Catholic legacy. Heathens frequented many districts. Religious objects found inside the churches also bore pagan features.⁶⁶⁵ Intricate 'Irish' manuscript illuminations really only began to flower from the 7th Century AD onwards. Delicate interweaving and freakish images were just some of the artistic trends that had somehow found their way into Ireland, from, it would seem, such far off places as Greece, Egypt, Persia and Armenia.⁶⁶⁶

A certain whale-bone chest proves the Anglo-Saxon ability to weld heathen and Christian tradition together without flinching. On it we find extensively carved motifs including the Epiphany's 'Adoration of the Magi', unmistakable by the presence of a runic inscription that reads 'Magi'.⁶⁶⁵ But on the same object Weyland the Smith can be seen making a skull-cup from the head of his enemy's dead son, not to mention him ravishing the same man's daughter as revenge.⁶⁶⁵

In Western Europe the ubiquitous pagan embellishments were probably due to the high level of support displayed by the aristocracy and Frankish princes towards the Magi and Magian-Christian priests. These were the very royals who bankrolled the costly cathedral projects in the first instance, and who would have liked things done their way. Royals spearheading the construction of early monasteries throughout Europe likewise felt the cold stare of the papal reformists.

Rather than being branded religious recalcitrants simply by virtue of their family line, Anglo-Saxon nobles were caustically referred to as being of 'that race'.⁶⁶⁷ This same barbed comment likewise appears in European witch trials, where indicted witches were said to be 'of the race'.⁶⁶⁸ Here European kings (and witches) are castigated not only for their bloodline, but for being part of a certain racial group (namely incarnate Aryan angels). As you shall see papal reformists hoped to exterminate this race wherever it be found, across the breadth of Europe.

Unless crowned heads (loyal to Rome's version of the faith) acted to halt these activities, then the papacy was powerless to stop them, unless of course they wanted to risk raising a papal army to storm into these countries and pull them down. This would have been exceedingly unlikely, and unwise too! Not that the papacy ever had an army of a required size. For muscle power it relied on kings sympathetic to its cause. They might be French, German or Italian. These varied kings, at various points in medieval and renaissance history were played off

against each other as circumstances dictated. It was power politics, pure and simple.

How else might something as enormous as quasi-Magian cathedrals have been built without attracting the immediate attention of Rome? Well we know that heretics had penetrated the halls of power in the Byzantine Church by the 10th-11th Century AD.⁶⁶⁹ What of Rome? Could it be that in the Western Church, heretics managed to commandeer a number of key positions among the cardinals, thus preventing the pope from discovering what was actually happening in these areas? If one were to answer based on surviving historical documentation, parish ornamentation, or extant and authenticated written folklore from the Middle Ages, the answer must be an overwhelming 'yes'. Professor Heer sums up the situation in the following terms;

Fig 37. Le Mans Cathedral, 11th Century France. Also known as the cathedral of St Julien. The edifice consists of Gothic architecture superimposed over the original Romanesque structure, which was gutted by fire on two different occasions, the second being in 1134 contemporaneously with the destruction of Chartres Cathedral.

*‘The Church was in fact becoming clericalised, a process hastened by the shocking discovery (circa 1200) that the whole of south-western Europe and western and southern Germany was riddled with ‘heresy’, heresy which in some places was so extreme that it led to the establishment of an opposition church. The church’s answer was to erect a huge administrative machine, to establish new religious orders ... to intervene directly in the external and internal affairs of the nations’.*⁶⁷⁰

He added, *‘The shock consisted in the realisation that Christendom, an indivisible unit, had suddenly become permeated and undermined by sects whose views on religion, the world, and sometimes also on politics, differed totally from those of the Church’.*⁶⁷⁰

Unless such ‘errors’ and ‘misdemeanors’ were reported to the reformist Holy Fathers by bishops and clergy in these localities, then Rome was probably none the wiser. Anyhow, the papacy did eventually find out. Drastic problems prompted drastic, often knee-jerk responses.

Earlier I examined the known process of tearing down pagan temples to build Christian churches where they once stood, and the role that this practice may have had in winning over the pagans. Yet, few readers will realise that the period of the papal reformists⁶⁷¹ saw the destruction of many important churches and cathedrals, usually by fire. On each occasion these places of Christian worship were rebuilt completely anew, even up to five times in the case of Chartres (and even then it still looks Magianised). Why demolish major church buildings that took years, even decades to build, especially those at the centre of a functional bishopric; an act which would have caused considerable disruption to the diocese? Was it to realise their dreams of owning a more prestigious icon of the faith than other nearby dioceses, and thereby attract larger numbers of pilgrims, and their fat purses? Or was it to demolish what were nothing less than than Magian-Christian churches, a practice found throughout Slavia, where Orthodox Christian authorities burned to the ground any monastery found to have been infected by heresy.⁶⁷² I believe they did so not only for spiritual reasons, but to eradicate unorthodox stylistic features.

Is it a coincidence that extremely old churches still stand in France and Germany (some dating as far back as the 4th Century AD), yet very few examples of Church architecture have survived dating to the time of the Merovingian magus-kings (481-751 AD),⁶⁷³ and their *Adelskirche* (the Church of the nobility). Could it be that these later churches disappeared for a reason?

In Russia, the practice of fabricating churches from wood led to the disappearance of all early medieval examples, perhaps by fire. The oldest surviving wooden church there today, dates to the 14th Century AD. And yet, in Norway we still have Norse stave churches that have survived since the 12th Century AD, perfectly intact. Perhaps we are just lucky that fire had difficulty torching churches in Norway. Not so in Sweden. The Christian Church raised over the pagan temple at Uppsala was torn down in the 13th Century AD, only to be replaced by a bigger one. It may be that these buildings had to be rebuilt to accommodate growing numbers of parishioners, but alternatively they might have been superseded by less-paganised architecture, which Rome was much happier with, or, in other cases, buildings which cleaved to the old school. In England, Canterbury cathedral was built on the rubble of an earlier Saxon one, which met the unfortunate fate of accidentally burning down in 1067 (a year after the Norman invasion),⁶⁷⁴ or suffered from arson. The original Cologne cathedral, extant between the 4th-13th Century AD (which later housed the very relics of the Three Wise Kings retrieved from Milan and brought back to Germany by force of Prussian arms) was also incinerated. One gets the impression that onlookers stood

Fig 38. Cologne cathedral, the greatest of all the Germanic religious collosae, was built to house the holy relics of Gaspar, Melchior and Belthasar, first acquired from the Milanese by Frederick I, Emperor of Prussia. It eventually took 500 years to complete, halting for 282 years from 1560 AD

by as it burned. The supposed reason for this was to construct a newer and more prestigious cathedral to shelter those same relics.⁶⁷⁵

How does a stone cathedral burn down anyway? Flames would have been hard pressed to reach their high vaulted ceilings. They had stone floors and walls, and usually there were no wooden pews to speak of during the Middle Ages, to fuel a blaze. And what about the parishioners sure to be inside, or priests and monks performing round-the-clock prayers during the daily and nightly offices? Wouldn't they be keen to put out a fire in their church or Cathedral if they saw one?

Although a certain number of churches were destroyed in a whirlwind of Slavic and Viking raids, many churches appear to have been demolished long after these attacks had subsided. One logical explanation is that devastating blazes were often caused by lightning strikes on the steeple, where shingles ignited, burning away most of the roof supports. But if lightning was a major culprit, some cathedrals appear to have been luckier than most. For almost 1,000 years the cathedral at Cologne avoided death by fire, but succumbed to the flames (coincidentally) during a period of papal reform. Either it was impervious to lightning strikes, extremely fortunate, or the victim of a deliberate fire-bug. If we discount the possibility of lightning strikes, then we are left with the need to explain why monumental feats of masonry just happened to burn down. The conventional explanation is that Cologne Cathedral's destruction was occasioned to build a grander, more fitting repository for the relics of the Three Wise Kings. But in the case of Chartres it was levelled and rebuilt a total of five times; *only on the last attempt it was bedecked with zodiac columns, gargoyles and others.*

Hardly any of this makes sense unless you admit that certain Church factions in France, Germany, Russia, Scandinavia and England were deliberately razing cathedrals and churches to the ground in order to rebuild on the same site, and rebuild their way. The undeniable fact is that they represent pre-existing heathen artistic styles from Scythia, Iran and Mesopotamia, entering Europe on grand and unprecedented scale. Knowing this enables one to make a number of inferences;

1. The churches in question were built by order of the nobility, who were already heavily steeped in the old ways, though under the guise of Christianity. Surviving historical sources admirably support this line.
2. The images were allowed by the apostolic church as a concession to pagan converts.
3. The affected apostolic buildings were merely renovated pagan temples.
4. These were Apostolic Churches built by pagan craftsmen, who couldn't resist dabbling in the old ornamentation, irrespective of what the local bishop or parish priest may say. I hazard a guess artisans were not invested with unilateral decision-making powers of this kind.
5. Magian-Christians were building their own parishes, in the manner they were accustomed to.
6. Magian-Christians were taking over extant apostolic Church buildings and renovating them in a way they saw pleasing.

In all they seem to constitute *physical evidence* the Apostolic Church, as we know it, was engulfed by non-Jewish influences, with a deep and abiding love of Christ. Some call it '*the period of Babylonian captivity*'.

The despised imagery persisted for some time. We find Renaissance murals showing Christ, Mary and Joseph seeking sanctuary from Herod in the Egyptian cult centre of Heliopolis (literally 'the City of the Sun').⁶⁷⁶

While they are not as durable as European monumental masonry, the surrealist works of the late medieval artist Hieronymus Bosch appear to contain important Manichaeic religious symbolism. They supply ageless proof for the additional existence of European Manichees, or at the very least Europeans exposed to their teachings. This form of demi-Christianity, also of Persian origin, is additional to the Magian Christian traditions. Oh how complicated those days must have seemed.

In the *Carrying of the Cross*, Christ is seen carrying his cross all the way to Golgotha, while in the foreground

RELIGIOUS SYMBOLISM

heretics are being prepared for execution.⁶⁷⁷ Here the heretics are likened to Christ, for in both cases they are being prepared for death at the hands of earthly authorities.⁶⁷⁷

Of note is the frequent absence of Christ's halo when he is depicted in his earthly state. St's Mary, Peter and others are similarly devoid of this traditional emblem of sanctity. This intimates that Bosch only regarded them as holy in their spiritual or risen state, or that they were not holy at all.

Christ can be seen dressed in black, standing in front of the altar and his own crucifix.⁶⁷⁹ In this state he is shown with a halo. As in many of his paintings, demons have a triumphal grip on the world,⁶⁷⁹ and in this particular painting Christ is barely perceptible in the background, standing in relative obscurity.

In *The Marriage at Cana*, Christ is again shown garbed in black, only this time he presides over a feast of wine and animal flesh.⁶⁷⁸ These may be robes of mourning, and intended to signify Christ's displeasure about having to dispense wine to the wedding guests (these things being prohibited to Manichees).

In *Terrestrial Paradise of the Third Heaven*, a congregation of nudists is shown gathered, perhaps in some kind of religious assembly,⁶⁸⁰ they are in company with a white-clad angel. But in front of them, what should we see but a figure in an elevated position, seemingly in charge of the gathering. Interestingly the not unhandsome figure holds aloft the cross, and is shown with black, perhaps even bat wings, though most of his body is obscured by trees.⁶⁸⁰ Is this a depiction of Satan, and if so, does Bosch mean it to signify that Satan is the real leader of Christian worship, that Satan is actually the anointed Christ, or alternatively that even Satan will offer homage to Christ one day? Whatever the case, any of these alternatives were blatantly heretical in nature, though somewhat similar to questionable Islamic recollections of Manichaeism. Furthermore, if it is a rendition of Satan, it is the only one that I can make out in his paintings.

In a very Manichaean sort of way, Bosch's is a world assailed and corrupted by demons, from every direction. Animals are perverted, trees withered, and buildings ramshackle, if not in an utterly advanced stage of dereliction. He painted the world with subdued colours and hues, further sullied by lively and imaginative depictions of demons. We are left with the distinct impression that devils had overrun the landscape to such an extent that it was their world.

In *The Haywain*, God is shown casting the rebel demons down upon the earth when Adam and Eve ate of the forbidden fruit.⁶⁸¹ As is not uncommon for the rendering of kings and Christ, God is shown holding the orb (sphere) of the world in his left hand, *but curiously it is a black sphere*.⁶⁸¹ The morbid portrayal of the world as black represents a significant deviation from standard means of illustrating orbs, and might indicate that Bosch, in typically Manichaean fashion, saw the material world as black and morose in nature, when compared with the spiritual existence. In the eye which appears on the obverse of *St John of Patmos*, not only is Christ seen sprinting to calvary together with a large number of fleet-footed observers, led by a man blowing a horn, but he is shown crucified, and being laid out for the tomb. For a Manichee or Neo-manichee these are unlikely depictions since Manichaeism does not adhere to a belief in the reality of Christ's material body, and for that reason the crucifixion also.

In all, I agree with Lynda Harris. Bosch was prone to portraying heretical concepts in his paintings. Although his beliefs seem to reflect Manichaean tenets, there are other facets of his art work which show that it was not traditional Bogomilism, but a curious melange of various heretical themes.

Fruit seems to be a central theme in Bosch's *Garden of Earthly Delights*, in the form of raspberries, gooseberries, blackberries, blackcurrants, cherries, peaches; vegetables do not appear to be present.⁶⁸² In this light-bathed etheric dreamscape, the animals appear in an uncorrupted state, unlike his other paintings. Angels carry items of fruit into the sky. The souls of the blessed are seen climbing out of the pieces of fruit, or still inside the fruit peering out. From a traditional Manichaean perspective, fruit carried immense stores of light particles, and became a receptacle for the souls of hearers who had left the world without the *endura* or *consolamentum*.⁶⁸² Once these pieces of fruit were eaten by the Elect the person's soul was freed from the fruit to enter heaven. Some figures are shown eating the fruit, others are shown gathering and carrying fruit, while yet others are shown crowned by berries or items of fruit.⁶⁸² Is it possible that those with fruit headdress are intended to be the Elect? Equally compelling is that there are no children shown in the painting. You see, Manichees did not pass on their religion by having children and teaching them their

MANICHAEAN THEMES
PERMEATE THE ARTISTIC
WORKS OF BOSCH

faith; instead they chose to convert others. In this way they succeeded in gathering together all the souls of light ensnared by the stifling evil of the material world. These blessed ones are shown naked, unencumbered by the music, dice, games, wine, meat and lavish clothing so typical of Bosch's depictions of the demon-choked earth. The *Garden of Earthly Delights* is a rare glimpse of happiness, a paradise. Some would call it a Manichaean paradise.

Fig 39. Bosch's
Garden of Earthly
Delights

In Arne Jönsson's *Tractatus de summis pontificibus*, it records that in the mid-1300's the Roman Catholic Swedish visionary St Bridget (while on a pilgrimage to the Vatican at plague time, and where she would later live) lamented that even the holy city of Rome itself had fallen into a deplorable state, wherein the churches were diverted from congregational worship, only to see service as urinals, kennels and stables. Contrary to our misguided view of a high and mighty medieval Catholic Church (which controlled the hearts and minds of Europe with an iron rod and fire and brimstone sermons), the Vatican was literally fighting for its very survival against a large number of parishioners and clergy, in various parts of Europe, who were indulging in heretical forms of the faith, or no longer cared. But in time Rome succeeded in clawing its way above the quagmire of heterodoxy so rampant throughout the medieval countryside. Only via the agency of the Dominican and Fransiscan friars, and in particular the Inquisition (which was truly the 'hammer of the heretics') did they come to achieve this. Inevitably Rome (and Orthodoxy) was left with a whole range of monumental Church architecture (which still survives) that still carried the scars of those heady days, when the magisterium was kissed by Chaldeanism and Magianised Aryan

IN THE 1300's AD A
LARGE PART OF THE
CHURCH IN ROME HAD
BECOME VIRTUALLY NON-
FUNCTIONAL

Christianity.

These many traumatic events (for both sides) soon came to a fiery end, due to a change in internal Church methodology concerning the treatment of apostates and heretics inside the clergy, and in the community at large. From that time on there was a clandestine war going on within the Roman Catholic Church, as the reformist popes attempted to regain control of an exceedingly desperate situation. If Rome was to succeed in this venture the first thing it had to do was win the monarchs over to its judaised version of the faith, rather than the Chaldean, Magian, or Magian-Christian philosophies they so openly adhered to.

The overt and covert implantation of Magians and Chaldeans into monastic communes, and those schooled in the ancient philosophies, with their astronomy, philosophy, the ancient sciences, bull-sacrifices and classical mythology, would not have been as difficult an achievement as one might think, especially in Western Europe, where clergy (and Magi) freely wandered the countryside seeking the patronage of Lords and Barons. These 'heretics' were not adverse to climbing abbey walls either. In Rus' ⁶⁸³ and the West monasteries had to post formal sentry watches in an effort to detect any illicit movement of the so-called 'snakes' in and out of the communes. These were religious brothers rostered to prevent criminal activity on those 'holy precincts' (ie; the pilfering of stores), and committed to stopping the so-called 'serpent of apostasy' from entering their orders at nightfall to snatch away impressionable young novices 'with their deceptions'.

Soon Rome prohibited the formation of parishes as a result of special deals done between 'wandering priests' and secular lords, instead of solemnised and authorised by bishops. From this quarter was said to emanate decadence beyond knowing, wrongdoing and heresy as a matter of course. Those parishes formed in this manner *were utterly disowned by the papacy*.

And so it came to be that the clergy, and the monks especially, came under ever increasing internal scrutiny to discover the true extent of the heathen penetration of the Apostolic Church. To effect this, the pope countenanced the order of the Dominicans, the equivalent of the Roman Catholic Church's elite internal security forces. These mendicant friars, in company with troops, moved out into the countryside, where the real action was happening. At parishes and monasteries where they stopped over, staying for even up to a year, they scoured the cloisters aiming to get their hands on any heretic who should cross their path.

Though widespread, the perception that clerics always preferred a 'seek and destroy' approach for converting pagans and Magian-Christians is flawed. Many open minded priests trod the tightrope between the pagan and the Christian faith in order to 'save souls'. There were complex reasons for this. Professor Flint's assertion that the Church was only using miracles, intricate prayers and exotic relics to declare war on the resoundingly-popular magical arts is sound, particularly when viewed in light of the examples she provides.⁶⁸⁴ But, in addition to this, it is possible to discern, through the haze of these obscure traditions, the existence of a certain number of clergy who had once been Chaldeans or Magi, and who had converted to Christianity and become priests. These ex-Magi, Christian sorcerers and practicing Magian-Christians believed that magic and astrology wasn't just a way to draw converts, but integral to the Christian faith. They knew well the way the pagans thought, and perhaps even in reformist times, took the initiative to step in with Christian substitutes for paganisms. In the end they only succeeded in creating Christianised observances barely separable from the old ways, a micron-thin wall partitioning the varied creeds. Often these attempts to provide Christian alternatives for the pagan ordinances were so borderline that they attracted howls of disapproval from fellow clergymen during the Middle Ages. For instance, growing forces within the clergy sought to utilise signs of the zodiac for Church purposes, and make them holy by giving them biblical explanations, or assigning an apostle to each sign. These practices were prohibited by the papacy, especially where Jesus was depicted as the sun, positioned at the centre of his zodiacal kingdom.⁶⁸⁵

If it happened that there was a widespread, yet unsanctioned, public perception during the Middle Ages, that the process of conversion to Christianity was merely the 'Time of Renovation' foretold in the Magian scriptures, then the degree to which paganism and Christianity remained fused together may have seemed perfectly acceptable. An aggregate amalgam of paganism and Christianity can be found on much of the monumental masonry dating to the Middle Ages. The Gosford Cross (which freely synthesises scenes from the Norse Ragnarok and Christian

MEDIEVAL CLERGY UNDERSTOOD THE DIFFERENCES BETWEEN THE VARIED SCHOOLS OF MAGI

THE EPIPHANY

Armageddon) is but one of many examples. This marriage of ideas is, once again, interpreted as the dabblings and embellishments of ex-pagan craftsmen rather than the (intentional or unintentional) intermingling of the faith of the Magi, with Rome and Constantinople's version of progressively-more-judaised Christianity. The pagan craftsman theories must be seen as wholly unsatisfying. Let's firstly take a look at what was involved with producing your typical gargoyle or architectural beast. The stonecutter probably visited a quarry to select a suitable piece of stone of the required dimensions, or placed an order for the same, for quarrymen to retrieve. Long before this the architect, probably a master mason, initially drafted a sketch of his proposed design and presented it to his aristocratic financiers for consideration and hopefully approval. Perhaps at this point the earthly lords made their feelings known, or suggested stylistic alterations, depending on whether they could be accommodated, in a technical sense. It is difficult to imagine clergy were not involved with this decision-making process. This master design probably included embellishments such as gargoyles. Only in this way could the overall cost of the project be assessed. Once approved the master converted his architectural designs into templates and sketches for workmen to follow. From that moment fantastical visions were converted into tangible physical reality.^{65a}

Cathedral construction was a very time-consuming, costly and serious business. England's Norwich cathedral had a quarrying to building cost ratio of 1:4. Whether such a cost ratio was typical across all of Europe is doubtful, fluctuating with economic circumstances, the quantity of stone available, and the distances over which stone was transported. For example the arch of a bridge built by the French in 1412 cost a total of 132 florins (60 of which was for transportation), a princely sum, even before stonemasons at the building site lay their hands on it.^{65a} So when it comes to reliefs, sculptures and similar architectural expressions, there is zero possibility the gargoyles and beasts were produced without ideological endorsement, or the financial trail associated with masonic endeavour.

Once carved the piece was raised to the cathedral's heights using scaffolding and hoists driven by ingenious contraptions and pulley systems. There, 100-200 feet above the ground below, a mason fixed the gargoyle in place with mortar, perhaps securing it even more firmly with other techniques.

There is every indication the moneyed aristocracy knew exactly what their finished cathedral would look like upon completion, from the very first. The 1459 statute of Germany's Strasbourg stonecutters expressly states that *"If a master mason has agreed to build a work and has made a drawing of the work as it is to be executed, he must not change this original design. But he must carry out the work according to the plan that he has presented to the lords, towns or villages in such a way that the work will not be diminished or lessened in value"*.^{65a}

It is, I believe, no longer possible to assert that craftsmen had free reign to style a Church in whatever manner they felt like. And by the 1400's it is no longer possible to assert that semi-heathen, non-jewish artwork was the product of renovating pagan religious sites. Moreover, the quasi-pagan imagery on many Church buildings of the time is so widespread that, for the most part, there was little or no perceptible distinction between both faiths.

Clergy in paganised areas acquired the nature of trail-blazing frontiersmen, ready, willing and able to experiment with new ways to divert and convert the pagans away from the Magians and Chaldeans, the pagan priesthoods still milling about under the eaves of the Church, and by no means crushed. Their methods did not always receive Church consent, and more than once were regarded by ecclesiastical authorities as mixing the holy name of Christ with practices which, according to some commentators, bordered on the spiritually profane.⁶⁶ Official Church denunciations of these ventures into unchartered waters reached a cacophony in the early Middle Ages. Some Church leechbooks were probably written by white Magians or philosophers. So blatant was the nature of the remedies they recommended to the reader, that other interpretations seem less likely. The Church aimed to weed out these practitioners and eject them from the flock. On one hand you had blurry pagan-Christian treatments formulated either knowingly or unknowingly, or, on the other hand, unabashed pagan rites.⁶⁶

Medieval Catholic views on the Magi

The tussle between the pro and anti reformists was so widespread and intense that some Church writers felt compelled to write treatises and sermons about the Magi, adding their weight to what Rome put forward on the subject.

The Magi in the *New Testament Book of Matthew* were looked upon somewhat differently from the Magi of medieval Europe. In no way were they termed *Maleficii* (magicians who used harm magic), but simply astrologers. This might lead one to believe that they were best likened to Zoroaster's white priesthood, and not the Zurvanite or black Magian variants which appear to have been the more prevalent in Europe. Nor does the royal nature of Matthew's Magi begin to be stressed until the 12th Century AD. These white Magi were seen as kind, helpful and basically good in nature, as the Magi were. The laudable and principled natures of these particular Magi was stressed by more than one Church writer.⁶⁵⁷

Anxieties in the community over the customary intermingling of Magian and Church rites were particularly obvious during the Church's Epiphany celebrations, on the feast day of the 'Three Kings', which remembers the joint adoration of Christ the child by both the Magi and secular Jewish shepherds. As with every mass, the officiating priest gave a homily (sermon) to the congregation on topics that were of concern to the Church in connection with doctrine, or to the relevance of scripture, and the way it should be applied in one's daily life. We are most fortunate that historical records have been preserved concerning feedback offered by parishioners in response to medieval homilies on the Epiphany. *Such inquiries in essence focused on whether or not it was truly necessary for the Magi to abandon astrology and magical practices.*⁶⁵⁸ At the dawn of the Middle Ages the Church was united in its response: the arts of the Magi were anachronistic and of no (further) use to the faith, and yet *before too long figures were already beginning to surface* who spoke contrary to this view, deeming magic and astrology to be of *immeasurable benefit* to the Christian faith.⁶⁵⁸

Medieval congregations were well disposed towards some priests and not towards others.⁶⁵⁹ Parishioners reviled the reception of communion from the hand of disliked priests, and one may wonder what the criteria for their perception of an unfitting clergyman was.⁶⁵⁹ Was it that they didn't tell enough old stories? or weren't dispensing charms and wards against evil, like they're 'supposed to'? Were they shunned for openly supporting the Church reforms of the papacy? Was it because their Christianity was a little too Jewish for their liking? The answers to these question would be just as linked with the era and place in which the priest spiritually raised his parishioners.

Bearing in mind the level of patronage offered to the priesthood by the nobility, might the high born have placed certain pressures on *their* clergy, to make them behave in a certain way. If so, what problems arose between a priest and his sponsor, when clergymen were being compelled to accept Rome's package of ecclesiastical reforms, reforms wholly or partly unpalatable to the benefactors who controlled their purse strings?

Several early and medieval Christian theological writers went to great lengths to contrast Matthew's Magi (typecast as men of exceptional piety, virtue and ethics, who received prophecies of a truly divine nature), with the *Maleficii* Magi (who were dualistic wizards, many of whom toyed with the dark side).⁶⁶⁰ Some Churchmen clearly understood the various delineations within the magus priesthoods. It seems strange they knew that traditional Magi (of Zoroaster's original priesthood) took no part in black wizardry, whereas the classical world's academia was widely divided on the subject. They saw Magi as practitioners of magical arts cognisant of, and bristling with, demonology. Clearly reputable Catholic clerics had a better overall understanding of the Magi than Greek or Roman writers on the subject. Far from being better educated in the old ways, some priests may have been covert Magi engaging in a surreptitious public relations exercise.

The white Magi barely attracted the same level of scornful revulsion that the wizards did. They were already widely mythologised in medieval lore, and deeply loved by the people. So much so that the resting place of the relics of the 'Three Wise Kings', in Frankish Cologne, was the premier destination for medieval Christian pilgrims in Western Europe. They were seen as astrologers, but not sorcerers, something amply stressed in the Persian Avesta.

Their 'infringement of the divine majesty' could not go unavenged forever. The reformists saw witchcraft, in its diverse forms, as a significant, sentient doctrinal embolism. In various regions at varied times it threatened to end the life of the Church, as we know it today. So the reformist authorities prepared to excise this offending wound to the body of the church. With mailed fist and sharpened sword in hand, the new guard stood ready to sever, once and for all, the gordian knot of unorthodoxy.

Chapter Desperate measures

The 'final solution' to the Great Heresy

'Desiring with the most heartfelt anxiety, even as Our Apostleship requires, that the Catholic Faith should especially in this Our day increase and flourish everywhere, and that all heretical depravity should be driven far from the frontiers and bournes of the Faithful ... when all errors are uprooted by Our diligent avocation as by the hoe of a provident husbandman'.⁶⁹¹

THE EXTERMINATION
PROGRAM

And so, in the 13th Century AD, began Rome's 'final solution' to the problem of the Aryan Christian ecclesiastical infrastructure throughout Germany and France. This new way of thinking was firmly rooted in the writings of St Augustine and later St Thomas Aquinas ('Let them come home'). According to this policy, the heathens and heretics were to convert to the required form of the Catholic faith, or die. Clergy were to spare no amount of effort promoting the Gospel and accepted Catholic practices. They were to persist with their efforts at all costs, even if it required lengthy periods of time. But in the end, if subjects persistently rejected 'the redeeming message' the secular authorities were henceforth commanded to bring in the troops and begin their grotesque handiwork. It was seen as an act of love.

The sentencing procedure was as follows. Those gravely suspected of heresy were made to publicly recant their errors, the bishop stating:

'Wherefore, and not without reason, holding you gravely suspect of such heresy (naming it), we have caused you as one so suspected publicly to abjure all heresy in general, as the canonical sanctions bid us'.⁶⁹²

SENTENCING
PROCEDURES FOR
HERETICS AND WITCHES

'And if with true heart and faith unfeigned you have returned to the unity of the Church, you shall be reckoned from henceforth among the penitent, and as from now are received back into the merciful bosom of the Holy Church'.⁶⁹³

And it was said to them,

'You shall put on over all the garments which you wear a grey-blue garment after the manner of a monk's scapulary, made without a hood either before or behind, and having upon it crosses of yellow cloth'.⁶⁹⁴

This penitential garb was to be worn at all times for a prescribed period.⁶⁹⁴ Whereafter such a penitent was required to show himself outside the door of a church on certain holy Catholic feast days, in default of which the penitent might have the entire terms of their penance re-assessed, or even overturned.⁶⁹⁴ These vistas of a long-

forgotten Europe conjure the unsettling images of the *Juden* from beyond the grave, who, during the Nazi holocaust, shambled about, with yellow stars of David sewn on their clothing, hated by greater society for their bloodline and beliefs, and lamenting an uncertain future. Condemned prisoners, whether clerics or laypersons were *'set on a high place in the presence of the secular authorities'*.⁶⁹⁴

THE PERSECUTION WAS
INTENSE
PUBLIC DERISION

Where the heretic was an ordained minister, his fellow, though apostolic, brethren were called to gather around and witness his defrocking;

'the bishop shall don his pontifical robes, together with the other prelates of his diocese in their vestments and copes, and the prisoner shall be clothed and robed as if he were to minister his office; and the bishop shall degrade him from his orders ... so in degrading him he shall take off his chasuble and stole, and so with the other vestments'.⁶⁹⁵

This having been done a relapsed heretical priest was handed over to the secular arm for the commission of the death sentence. But that was not before publicly recounting the extreme lengths they went to to assess the truth of their judgement of the accused's guilt. From this moment priests stood constant vigil over the condemned heretic. News came from the court, *'let them inform him of the sentence to come and of his death, and strengthen him in the faith ... console him and pray with him'*. They should *'beware and be on their guard not to do or say anything which may enable the prisoner to anticipate his death'*.⁶⁹⁶ Accordingly the detainee waited an uncertain amount of time, fidgeting, praying in the manner accustomed to their faith, until at last soldiers came. Their hands tightly trussed, and the lead clasped firmly in the militiaman's hand, the condemned heretic or witch was led off. They walked down a street lined with hecklers and jeerers. Their mind is numb, their throat parched, their lips trembling, the pulse of their heart resounding in their ears. Through the sea of faces they sometimes see someone they know, the local baker, an uncle, the innkeeper, their neighbour, their accusers. Some countenances cause them to smile inwardly for there they see a member of their group, one they refused to betray to the authorities. They know their beliefs will live on, their people. And so they mount the pyre and die, engulfed by crackling fire and smoke. European cities were often 'cleansed' of paganism and heresy in just this fashion (p. 850).

TAKEN TO THEIR DEATH

Throughout the length and breadth of Germany, the likes of Conrad of Marburg and his team of Dominican Inquisitors were up to their ears in surprise investigative raids and often arbitrary sentencing and capital punishment, summary frontier justice which severely shocked the pope once news of it eventually reached him. It was also commonplace to see the Dominicans sentence 'corrupted' priests and nuns, to burn on the pyres as witches and heretics, *a point seldom if ever mentioned nowadays when talking about the anti-witchcraft inquisitions*. This was and is evidence of a war for control of the Church of Rome during the Middle Ages, far more gruesome and historic than the later 'Great Reformation', with the reformist papacy directing everything at its fingertips against heathens and alternative Christians within the clergy, and the general community.

CONRAD OF MARBURG
EXECUTED MANY
CLERGY AND NUNS

The severity of the methods employed to repress heathenism and the craft no doubt varied as circumstances dictated, and continued for many centuries. In August 1628, extreme measures were brought to bear on the city of Wurzburg, Germany. The Chancellor's correspondence reflects his shock, disbelief and dismay concerning the alleged extent of the witch infestation, which evidently took the form of Magian-Christianity or Mithraism.⁶⁹⁷

THE RAID ON
WURZBURG, GERMANY

'As to the affair of the witches, which Your Grace thinks brought to an end before this, it has started up afresh, and no words can do justice to it ... The richest, most attractive, most prominent, of the clergy are already executed'.⁶⁹⁷

In it the reeling official described the horrors enveloping Wurzburg as the 17th Century round-up fanned out around the city. He mentions what groups of citizens were yet to be executed or taken into custody as a result of information gathered during the operation, and in the weeks that followed.⁶⁹⁷ The Chancellor seemed taken aback by the suddenness of the event. Perhaps the troops had been specially brought in from further afield to accomplish the task. Thus one avoided alerting local suspects to the planned raids. As the fateful moment approached, men-at-arms probably mustered at staging areas about the city after nightfall and, at an appointed time, speedily entered targeted premises simultaneously, right across the city. Until then Wurzburg's inhabitants continued their daily

Fig 40.3. Spanish inquisitorial procession. Witness the large number of heretics taken for execution.

Fig 40.4. These recanters escaped the pyre during a 1559 AD Act of Faith at Valladolid. Elsewhere in the same woodcut, dozens upon dozens of suspects were sat on bench seating, all wearing the same style of dress, awaiting the moment of their sentencing. Those who stood by the old teachings were taken to a nearby burning ground, forced to ride donkeys so as to mock them in their final moments. Their tragic incineration continued amid an almost carnival atmosphere.

Fig 40.5. The Parthian King Antiochus. Since the heretical mitres in 124.3 resemble that of Antiochus it would seem that we must add a wardrobe department and artists to our expanded list of conspirators who helped make the alleged show trials possible. A more likely proposition is that the indicted heretics traditionally wore Persian garb of a sort shown in 16th Century illustrations.

Fig 40.6. A Portuguese heretic is led to the wooded stake.

routines blissfully unaware of the punishment about to befall them. What is clear is that well-placed clergy were some of the first rounded up by the secular arm. This suggests that the soldiers and militia knew exactly who they were looking for, and once detained the accused appear to have been speedily sentenced. The mere fact that the Chancellor had to give the local bishop the bad news about his priests, means that they were probably summarily executed, before the bishop even had a chance to arrive at the scene. Still others remained at large, either taking flight, or shuddering in their homes, fully expecting a death blow to rain down on them any moment ... members of the judiciary and legal profession, 30% of the prince-bishop's seminarians, government officials, physicians, the high born, and individuals so highly placed that one would 'marvel' or 'scarcely believe it'.⁶⁹⁷ The Chancellor appeared especially traumatised after seeing many sons of the nobility incinerated. Their ages ranged from 9 through to 14.⁶⁹⁷ The cases against some suspects may have been damning, for he states that certain officials 'must be executed'.⁶⁹⁷ Their fate appeared already sealed. No reprieve, no need for a trial, no escape. As a post script to his letter the Chancellor mentions that an 8,000-strong outdoor gathering of Christian witches had recently been conducted, somewhere near Fraw-Regenberg. At one juncture in the proceedings the officiating devil (at least that is the term used in the text) had the name of the attendees recorded in a book. The Chancellor adds; 'We hope, too, that the book in which they are enrolled will yet be found, and there is no little search being made for it'.⁶⁹⁷

You may ask why key elements of the legal system were culled by the inquisition with some relish, in this incident. That is because in former times the Magi were widely employed as magistrates throughout the ancient world. This continued to be the case for some time.

The white Magian-Christian 'heretics' no doubt held witch trials of their own, something I will now expand upon. In the closing years of the 16th Century Nicholas Remy wrote that the poisons of black witches were highly lethal to all manner of beast and man, whereas magistrates were impervious to these toxins.⁶⁹⁸ For God had 'made them (the judges) partakers of His prerogative and honour, calling them Gods even as himself (ps lxxxii) ... they are sacrosanct and, by virtue of their duty and their office, invulnerable even to the spells of witches'.⁶⁹⁸ Here Remy uses one of the Psalms to reinforce the validity of his comments about the divine nature of the judiciary. This very psalm, derived from King David, begins 'God standeth in the congregation of the mighty; he judgeth among the gods.'. In all, it savours of the old believers, though to be fair, Remy has not misquoted or twisted the written substance or context of the psalm, which goes on to read: 'I have said, Ye (the Judges) are gods; and all of you are children of the most High. But ye shall die like men, and fall like one of the princes'.⁶⁹⁹ Here God's earthly judges are not only living gods, but sons of his. For the power of God included judging all things under heaven. The same concepts are found in the Greek word *theos*, which meant both 'a God' and 'a magistrate'. Just the same, judges armed themselves with additional sacred armaments to be doubly sure of protection.

*"the judge should wear round his neck consecrated salt and other matters, with the seven words which Christ uttered on the Cross written in a schedule, and all bound together, And he should, if he conveniently can, wear these ... and bind other holy things about him."*⁷⁰⁰

The Ordeal was a trial mechanism known especially to Aryans, Hindus and Magi, during which an accused was placed before the scrutiny of the divine being and justice gods rather than the judgements of a mere jury. Under Vedic and Magian law, defendants and accusers could undergo bizarre ordeals to prove their innocence, or the truth of their claims. No jury was required, for this trial method relied solely on the belief that God would pronounce judgement during the trial ordeal. It was believed that nobody false could survive the ordeal without damage to themselves. In Magian society ordeals were witnessed by the high priest, a sort of bishop who stood near the place of ordeal uttering prayers and spells for the efficacy of the event. The most common Magian ordeals were the 'Ordeal of the Sacred Twig', the 'Ordeal of Heat',⁷⁰¹ the 'Ordeal of Over-eating',⁷⁰² 'Ordeal by walking on a water-filled bladder containing instruments of wounding',⁷⁰³ and the 'Ordeal of Cold'.⁷⁰⁴ The barsom or heat ordeals were recorded in the *Nikadum nask*.⁷⁰⁵ To this can also be added ordeals of poison and the outpouring of molten brass over the chest. The Magian trial of hot iron is better described in the Aryan law codes. A ball of metal was heated by a smith, leaves were placed on the defendant's hands, and he was to carry the incandescent iron a full nine metres.⁷⁰⁶ By some coincidence the Old Norse trial of hot iron was roughly similar, and required the person to carry the iron

nine paces.⁷⁰⁷ The hands were examined for scarring, which served as God's verdict.

Aryans held that one who is unjust, or untrue could not win in battle. To this extent an ordeal of arms might be sought as a remedy for injustice. During a trial by arms the plaintiff and the accused faced each other in mortal combat, at a place predetermined. The winner was assumed to be the one who was victorious, since God had judged in their favour. It was also a Magian custom that a man could take the goods of another, and proclaim to be the new owner of those goods if he underwent an ordeal of combat and came through unscathed.⁷⁰⁸ This is reminiscent of the Norse duellers who made a living seizing other people's goods and then meeting them during an ordeal of trial by arms. If they won, they legally got to keep whatever was at stake. In such a way the acquisition of those goods was not illegal, though perhaps morally questionable.

The white Magi maintained the heat ordeal was best suited to trials concerning witchcraft, or circumstances in which a person was gravely suspected of a crime, for which his accusers had no compelling evidence.⁷⁰⁹ And what should we find in Christian Europe, but the application of ordeals during witch trials! Similar fire ordeals survived the transition to Christianity, and continued to be happily used by medieval Christian authorities. However *Malleus Maleficarum*, the witch trial manual, cautions judges not to rely on the outcome of fire ordeals, saying that witches have some way of coming through unscathed.⁷¹⁰

"for in the (German) territory of the Counts of Furstenberg and the Black Forest there was a notorious witch who had been the subject of much public complaint. At last, as the result of a general demand, she was seized by the Count and accused of various evil works of witchcraft. When she was being tortured and questioned, wishing to escape from their hands, she appealed to the trial by red-hot iron; and the Count, being young and inexperienced, allowed it. And she then carried the red-hot iron not only for the stipulated three paces, but for six, and offered to carry it even further. Then, although they ought to have taken this as a manifest proof that she was a witch (since none of the Saints dared to tempt the help of God in this manner), she was released from her chains and lives to the present time, not without grave scandal to the Faith in those parts".⁷¹¹

This could not have been an isolated example. Speaking of a witch burning in the German Diocese of Ratisbon *Malleus* tells us that;

"Certain heretics were convicted by their own confession not only as impenitent but as open advocates of that perfidy; and when they were condemned to death it happened that they remained unharmed in the fire. At length their sentence was altered to death by drowning, but this was no more effective. All were astonished, and some even began to say that their heresy must be true, and the Bishop, in great anxiety for his flock, ordered a three days' fast. When this had been devoutly fulfilled, it came to the knowledge of someone that those heretics had a magic charm sewed between the skin and the flesh under one arm". Only then were they successfully burned to death.⁷¹²

In the West, during the Christian era, consecrated baptismal water was employed in trials,⁷¹³ where the water itself declared the drinker guilty or innocent. If guilty the water condemned the accused (perhaps by afflicting the offender with misfortune or sickness). The notion that holy water was capable of dealing out punishment to wayward elements of society can be found engrained into the Magian psyche.⁷¹⁴ Dunking was another ordeal found in medieval Europe, but ultimately the original Aryan 'Ordeal of Water' followed a different format. The accused entered a body of water. Next an archer fired 3 arrows into the distance, and at that moment the accused submerged himself beneath the water. The archer promptly dropped his bow, ran off to find the second arrow, then ran back to where he fired the shot, with the arrow in hand. If the person was still submerged in the same spot by the time the runner returned, then he was innocent.⁷¹⁵ Much the same rationale applied during witch dunkings. If water, which is pure, rejected the witch due to her unholiness, then she was guilty.

Without onlookers to objectively record the turbulent happenings of de-paganisation, major events passed with hardly a word preserved for posterity. The Islamicisation of Central Asia and Persia affords a striking parallel. There we hear of mass-killings (especially of the Magians), but no names, no body counts, no trial records.⁷¹⁶ Still we are fortunate in the extreme that medieval Christian annalists did leave a trail of evidence for the future, albeit one that has been sieved and diluted, till it represented but a watery tincture of what was once known.

In other places sketchy details continued. It was in the year 1555 that a Father Nunez received important correspondence from St Ignatius of Loyola in Rome. Nunez's missionary outpost (situated in Ethiopia, a place famed for frankincense and other rare and pure aromatics) was said to harbour a colony of Christian heretics, devotees of Prester John the Priest-king. In this instructive letter Rome provided advice about how to persuade these heretics to the Catholic cause. Ceremonially speaking the Jesuits recommended replacing their *'baptisms and other ceremonies'* with a spectrum of festivals known in Catholic Europe. Ignatius expressed some regret about *'the exaggerated esteem they have for bodily mortifications* (penitential floggings being the intended meaning here)⁷¹⁷.

There were important reasons why a great many Manichees, Magian-Christians and white witches would rather burn than convert to Apostolic Christianity, Judaism or Islam. What led them to choose this path? What was the crux of their disagreement with Rome, one so irreconcilable that it was better die than concede to Rome's version of the faith? In attempting to answer this we happen across a gargantuan philosophical dispute that had dogged the Apostolic Church since its very inception. You see behind reformist Apostolic Christianity lay the God of Israel, who was very far removed from the Magian perception of the divine being. Their view of God more closely resembled the Father of the *New Testament*, a loving, generous creator who did everything in his power to nurture and protect the world. Such was the Father who so loved the world that he sent his only son to redeem it from death. No amount of preaching by Christian missionaries could make them think of their creator as one who hated them, or birds and trees. Not even the life or death choice of the *auto da fe* (the public denunciation of heretics, otherwise known as the 'Act of Faith') could guarantee a conversion.

To become a Jew, Muslim, Catholic or Orthodox Christian was therefore akin to becoming a devil-worshipper, according to the oriental thought process. For this very reason anti-Semitism was probably seen as virtuous by a broad cross-section of pagan and demi-pagan society throughout much of Europe and Russia. Only after the burnings, only after sermons repeated over generations, only after the church schooling would the anti-Semitism begin retracting ... ever so slowly.

As neo-Manichees, Chaldeans and Magian Christian heretics stood helplessly before the bishops, clerics and inquisitors presiding over the *auto da fe*, their life hanging in the balance, one cannot help feeling that it was a spine chilling experience for them. Their minds were disturbed by the implications of the choice. Would they buckle and become Christian, after the manner of the Jews ... and in so doing embrace demon-worship? Would they become sons and daughters of this fiend of the pit? Or would they die a martyr? Whatever the case, these views would disappear from society, one way or another ... the inquisitors would see to that.

Yet Rome's position on the Jews themselves stood perched on the edge of a precipice, tottering in the breeze. In areas where the old believers were strong in numbers, and persecuting Jews, the Church and certain Catholic kings hoped to protect the latter. Yet during the Spanish Inquisitions Jews and Muslims found themselves the focal point of the inquisitorial purges. It was a yawning chasm that threatened to swallow them up. In a Catholic state they were considered among the damned ... cut off from the sacraments ... cut off from the Most High. There was no room for them but to convert or die. The matter of the persecutions against Spanish Muslims was particularly fuelled by a desire to pay them back for the persecutions which Christians endured from the Moorish authorities. During the 16th Century especially, the scales were tipping a different way.

To effectively ensure the eradication of 'witches' from Christian society, it was necessary to uproot the nests of heresy and paganism still rampant throughout the east, and to destroy certain families lest they breed and so ensure the continuity of the bloodline. Military force was required. Though this amounted to just minor police actions and counter-insurgency operations in the West, the only manner in which they could successfully rid themselves of the magicians was to go straight for the source; Poland, Scandinavia, Finland, the Balkans, the Baltic zone and the Russian fringe.⁷¹⁸ This was a grave priority for Rome at this late stage, and in the East, Byzantium's regional assets had been literally overrun during their confrontation with the Great Heresy, leaving their forces stretched to the limit, particularly after the debacle at Manzikert, where much of the Byzantine army was wiped out by the Turks.

Despite this shortcoming, Emperor Alexius Comnenus sought to rule over an Eastern Roman Empire free of heretics, by formulating a military stratagem that succeeded in severely eroding the free-ranging heresy of the

Balkans.⁷¹⁹ By this time though, Anatolia had been consumed by Islam, and over that way the pockets of heretics no doubt happily slotted in amongst the many dualists now largely tolerated by the Muslims. Having firmly entrenched themselves as the primary faith of the region, Muslims entered a period of extreme religious tolerance, which allowed for the presence Magians and other dualists, as long as they were loyal to the Islamic authorities.⁷²⁰

In the West, the Germans (many of which sided with the pope by that time), and some Crusaders (who had been withdrawn from service in the Holy lands), formed the battle-hardened nucleus of a strike force projected into these 'trouble areas' from the 12th Century onwards. In truth the zealous northern Crusade that was unleashed on the last of the animists, witches and wizards was only partly to do with conversion, but was equally concerned with the political objectives of the papacy and the acquisition of land in the East by the German nobility. Even so they dearly hoped to penetrate right across the north of Russia, and reach Bolgar in the Urals (a former Magian centre). This arrangement between the pope and now-loyal members of the German aristocracy permitted a formal occupation of the Baltic by the Teutonic Knights, to act as a buffer zone against further incursions by Slavic Magi, and/or allow Catholic priests to operate in the Baltic without fearing for their lives.

THE NORTHERN
CRUSADES WERE VERY
BLOODY INDEED

During the 11-1200's the Balts prepared for the onslaught of the German crusaders by erecting defensive constructions in many places, and generally arming Baltic society.⁷²¹ In this way they hoped to maintain their freedom, both political and religious. The majority of the work done on the fortifications coincided with the demise of pagan Slavic unity under Christianisation, but began initially with the rise of the eastern princes between the years 800-1000 AD. *By and large Western Slav fortifications were built in the middle of lakes which were joined to the mainland by causeways.*⁷²² Originally, medieval Western Slav housing was laid down in a fairly chaotic manner, devoid of any uniformity. But as they began work on the forts they saw a need to make use of all available space, with the result that their housing was built in a more organised fashion. Archaeologists have thus far discovered several thousand Wendish hill forts dating to this period of the northern crusades, and less than 1000 in Bohemia and its environs.⁷²³ Due to the relatively high level of preservation of medieval artifacts, the magnitude of the destruction inflicted on the last of these Eastern pagan enclaves is repeatedly discernible within the archeological record.⁷²⁴ Many settlements and fortifications were obliterated with their inhabitants once taken by the German invaders and their Saxon side-kicks.

The initial penetration of the Baltic zone was led by troops representing the trading interests of powerful Nordo-Germanic mercantile groups.⁷²⁵ But before long the opportunity to convert the pagans to Catholicism (before the Orthodox priests did) became the motive for sending in the Germanic military orders.

CHRISTIAN DANES
PARTICIPATED

Danish expeditionary forces under King Waldemar departed from their coastal raids on the Balts (which so characterised the late 12th Century AD), and probed deep into Latvia during the 1200's.⁷²⁶ There he found support from the local Archbishop who, sensing an encroaching Russian Orthodox presence in the area, gave them the authority to grab whatever nearby territory still lay in the hands of pagans.⁷²⁶ This land-grabbing spree by the Danes started a mad free for all, as the Germans, and Germanic settlers in the area took matters into their own hands, and started annexing as much pagan land as possible.⁷²⁶ This 'we've got to get there first' attitude accounts for the rapidity with which Baltic lands were snapped up by the western marauders.

German clergymen accompanied the forces eastward, and were employed in the process of conversion. Yet this was only one, albeit small, face of the Baltic Crusades. As the German warriors devastated resistance within the Baltic zone, in readiness for their new overlords, the local bishop, and papal emissaries (sent to the area to report back to the pope concerning political developments in the area) ended up as little more than back-seat passengers.⁷²⁷ As the pope had feared, pecuniary interests and power-quests had got the better of the situation, as heedless aristocrats forged ahead unchecked, with clear designs on establishing their own petty kingdoms.⁷²⁷

With well honed swords the devout warriors of Western Christendom rode off into the East to convert the Slav pagans to the faith of Christ, 'through the teachings of the Holy Fathers', or wipe them from the face of the earth for all eternity. Knighted gentry from all over Europe gathered in Germany, mounted up in raiding parties and, together with their retainers, rode into the 'monstrous' Baltic and Slavonic nations to go 'Slav-hunting'. No doubt some frivolously regarded these expeditions as a kind of warriors' jaunt, a boys weekend with a little bit of

spectator sport thrown into the bargain.

Under Eric IX (c. 1150 AD), the newly-converted Swedes, the sons of the very Vikings who not too many centuries earlier had been laying waste to monasteries, were out there with Christendom's finest, fighting hard for the Cross in the Church's war against the Mohammedans, pagan Finns and heretics. This campaign again saw Scandinavian youth prepare for war like their forefathers, travelling considerable distances in search of adventure and a worthy foe, whose demise helped build many a man's reputation for gallantry. They were in there boots and all; from the deserts of the Middle East where their martial blood raged against the Crescent, to the frosty northern reaches of Scandinavia where they hunted down and slew the Lappish sorcerers in their camps, and into the Upper Baltic and the Russian fringe where they sought to crush the last of the heathen (and gain a bit of Finnish real estate). At home, much later in the Middle Ages, they stoked the fires with witches most numerous.

In the East, the German crusading campaigns proved to be counter-productive to cordial Slav-West relations, for the Slavs themselves were struggling to implement their own Christianisation missions, under difficult circumstances and against overwhelming odds. These 'anti-pagan' border incursions proved to be an unwelcome and added stress to local Russian authorities. Russian, and to a lesser extent Greek Christians did not have time to go crusading in the Middle East; their crusade lay all around them every day of their lives. Ultimately though, the pagans did not go down without a fight, especially the Prussians; it was a protracted and very bloody affair for the Germans. The Anti-Prussian military campaigns succeeded in giving the Catholic Church a permanent presence in the Baltic. Church dioceses were founded in in the Baltic zone in 1230 AD, at Reval, Fischausen (1243), Dorpat (1224), Uxkul (1184), Riga (1201), Heilsberg (1243), and Culm (1243).⁷²⁸

The task of totally eradicating the Magi from the Baltic proved an impossible dream though; too many Balts were willing to stick their necks out to save them.⁷²⁸ In Adam of Bremen's day (the 11th Century AD), before the Northern Crusades, countless pagan priests lived in Latvia and similar Baltic locations; houses were teeming with them. But by the time these areas had been under sustained Teutonic occupation their numbers must have dwindled significantly as they were captured by the authorities, or escaped further abroad, perhaps to live with relatives in foreign royal courts, or discrete rural locations. Yet they still continued to exist with relative impunity in major Baltic cities (despite the risk of apprehension), in safe houses which the faithful provided for them. So, Baltic cities were a real godsend to the fugitive Magi. Though under siege, the pagan priests could emerge from hiding to launch hit and run attacks on the invaders. Using their sacred authority they whipped up a spirit of defiance against the Germans, rousing contingents of Semogallians for battle at short notice.⁷²⁸ With so many Germans in the area they had to keep constantly moving to avoid detection, unable to build permanent shelters of their own. Those that tried their luck living out in the forests found the going much tougher, and many probably starved or even froze to death during winter, that is unless their followers kept them supplied with sustenance and shelter. In one surviving case a pagan priest was grabbed by a military patrol of Teutonic knights in a very famished and sorry condition, having lived on nuts and poor nourishment too long.⁷²⁸

Meanwhile, the Balkan Crusades (c. 1227 AD), centred on the occupation of Bosnia and the much hoped for invasion of Bulgaria to be spearheaded by King Bela IV, his Hungarian army, and the Croats (under the watchful guidance of the Dominican Friars).⁷²⁹ However the whole operation came into less than unexpected hitches. So soon after the senseless sacking of Orthodox Constantinople by the 4th Crusade, Bulgaria, the heartland of the heretics, was in no mood to have its sovereign borders violated by Roman vassals. Heretics or no heretics, this was Bulgaria, it was their land, their Church, and their heretics, a Bulgarian problem which they and they alone had the right to solve without foreign interference. Bulgarian brinkmanship thus averted the invasion, but it still took centuries before they succeeded in weeding out the heretical dualist sorcerers.

Unfortunately for the Holy See of Rome, these Bulgarian offensives against the heretics had one very unhappy side-effect; large numbers of displaced heretics and their families began crossing into Italy, Austria and Germany. And so the self-perpetuating story went on and on.

The mediaeval and later witches

SOME SAY THAT A CULT OF WITCHES NEVER ACTUALLY EXISTED

THEY BELIEVE THE CHRISTIANS INVENTED WITCHES JUST TO KEEP SOCIETY UNDER CONTROL

ONLY A SMALL AND CONDEMNED MINORITY OF RESEARCHERS BELIEVE THAT A RELIGION OF WITCHCRAFT ONCE EXISTED IN EUROPE

THE FOREMOST OF THEM WAS MARGARET MURRAY

COMMON NOTIONS OF FOLK WITCHCRAFT IN CHRISTIAN AND ISLAMIC COUNTRIES

MOST RESEARCHERS PAY ONLY CURSORY ATTENTION TO INCIDENTS OF WITCHCRAFT PRIOR TO 1500 AD

There are a jumbled menagerie of theories concerning the mediaeval and later witches. Ones with the widest currency at this time are those that are under-supported by historical anecdotal information, and based on an assumption that historical accounts generated by clerics (both Catholic and Protestant) and the Inquisitions are flawed, bursting at the seams with lies and slander. Another theory is that the witchcraze arose from accretions of mass fantasy which consumed the oppressed minds of Europe's superstitious peasantry. They contend that these ruder folk had been spoon-fed a fictitious literary tradition of Gothic "Satanism" and witchcraft, ingeniously pre-fabricated by a Church intent on casting itself as the good guy, or by misguided theologians and writers on demonology. Others regard the trials as gendercide, with a male chauvinist Church misogynistically frying some of the world's first feminists. Believe it or not, a great many researchers in this field are, for want of a better term, conspiracy theorists. By their reckoning Church and State were directly implicated in a plot to control Europe, a plot facilitated by the establishment of the Inquisitions, who acted in response to a bogus crime, which they used as a trigger mechanism to legitimise the mass killing of dissident elements within the community, many of which were little old ladies. To achieve respectability for such a stance they gleefully ignore Eastern European and Muslim sources, which mention the presence of witches in their respective communities.

The opposing theory, of the so-called "Murrayite tradition", is that witchcraft was actually the survival of an ancient sect (which she had figured was in some way linked to the cult of Diana, though I am not convinced that Diana was the central deity of witchcraft). In her books she provided translations from the Late Mediaeval and Renaissance period, across most of Europe, and what is more they show a startling degree of uniformity, an almost religious degree of uniformity. Such unusual features are found in trial excerpts revealed by other researchers too.

Murray's thesis did have a major achilles heal though. While on one hand she hoped to explain the concurrences in the surviving data by postulating that it was the residue of an ancient religion (as a number of witches themselves confessed in their depositions), she did not do the additional ground work which could have enabled her to make such a supposition. To do so she would have needed to identify the witch cult's identity with a reasonable degree of certainty (if indeed it was a single group). Next she had to show that such practices were present during the pagan era, and even before that; ie, some degree of continuity. And she needed to explain why witch-trials were not a feature of early Mediaeval documentation. Because she neglected to do this, successive waves of scholars burst through the saloon doors with guns blazing, laying low any and all sitting at Murray's table. Academia had shut the door which Murray had opened, and braced themselves hard up against it, with their fullest might. As far as they were concerned, witches were pure fable. Yet their evaluations are jailed within a sheltered cocoon that fails to consider common folk beliefs about witchcraft, witches, devils and magic, found in both Christian and Islamic countries.

The ancient cult theory was, I believe, to a degree supported by Margaret Murray, who looked at the historical accounts of witchcraft not from a religious point of view, but an anthropological one. Though the scale of her work

could not possibly hope to determine how prevalent the indictment of factual cult members was, among the diverse European trials. Yet her vociferous opponents mostly concentrate their research efforts on periods later than the 1500's. They leave us with a dark, unstudied period, a phase of European history they regard as so unimportant, that one may as well erase it from the question of witchcraft. For this reason *The Forbidden History of Europe* should be seen as illuminating the no-man's-land that, until now, many scholars have refused to touch.

One of the main arguments against Murray's work is that scholars consider it preposterous that a cult dedicated to the worship of the evil principle, could ever have existed. Moreover, they assuredly assert that elder pagan religions were incapable of surviving into the Mediaeval period intact. To subscribe to this view is to ignore or discount a great deal of evidence to the contrary. In the last few chapters we have repeatedly accessed information concerning devil-worshippers. In this chapter I zero in on further supporting evidence for such creeds in Europe. As for their survivability, you can still find somewhat less than 10,000 Zoroastrians in today's radically Shi'ite state of Iran, and you can barely get more ancient than that. And what about Hinduism! Most Indians are adherents of a religion *that was first born during the Aryan invasion of their civilisation*, though it has greatly evolved since then. Moreover, pockets of the Prussian Galinda tribe (first mentioned by Ptolemy c. 150 AD), living deep inside Russia, managed to survive for 900 years before falling to Izyaslav's Rus' troops, having fought tooth and nail to retain their racial homogeneity that whole time. Without question ancient ethno-cultural units can survive lengthy periods of time, even in juxtaposition with larger cultures, that threaten to swallow them up.

My theory, which is very much supportive of Murray's, is largely based on primary trial sources, but incorporates folkloric and sundry primary historical references from England, Russia, Finland, Scandinavia, the Baltic, Scotland, France, Flanders, Spain, and many other countries. Often the data shows direct correlations with what is known of the black Magus wizards and Chaldeans (see Part I, Chapter III), and by inference the Slav Volkhvy, and the *Garabancias*, the black priests who once served Chernobog, the horned god of the Slavs. As you will see throughout this book, there are shreds of evidence which provide vital clues that allow us to identify a certain proportion of suspected witches, as the inheritors of dualistic pre-Christian magico-religious traditions which continued to be practiced in the forests and steppes of Eastern Europe.

From what you will have read in the preceding chapter, it is obvious that many academics specialising in witchcraft studies have been asking the wrong questions for a very long time. For it is not a question of whether or not the witches ever existed; too much data from Rome, India, Mesopotamia and Persia tells us they did. What is at stake is whether or not these more ancient witches could have carried their bloodlines and traditions into the future, once again coming to our attention in Europe, especially from the Middle Ages onwards.

In this chapter we will attempt to unravel certain elements within the exceedingly complex array of surviving witch trial data. As a consequence of this I intend to show you that an undetermined number of mediaeval witches belonged to a variety of cults, which practiced a diversity of eastern pagan traditions. Some of the accused were the descendants of the Chaldeans, white Magi and the Aryan Brahmins. Others were black Magus priests and priestesses who, during the course of their lives, devoted themselves to the horned god, the Destructive Principle, that ancient goat/dog Ahriman, who existed on the flip-side of creation. Yet others perpetuated the Dionysian rites extant in the Iranian East from at least 300 BC. And finally, as you will see in Chapters XV and XVI, a substantial number of witches considered themselves to be Christians, albeit practitioners of a form of Christianity that developed inside Iran. These were more properly heretics. Still others were suspects entirely innocent of the charges, nabbed over some inopportune comment they made perhaps years previous to their arrest. Such was the emotional atmosphere that prevailed in a deeply vigilant and suspicious Mediaeval Europe.

The Inquisitions

According to statistics unveiled by the analysis of archival legal documents produced during the Spanish witch trials, the "infamous" Spanish Inquisitions turned out to be little more than a side-show, with the real action taking place elsewhere.⁷³⁰ The Scandinavians, French and Germans eclipsed the 5,000 executed in Spain by immolating or strangling a supposed 150,000 witches,⁷³¹ heretics not being counted in these figures.

Those were very brutal times when compared with today's world. People could be disembowelled, hung and quartered for what some would see as trivial offenses, such as stock theft, robberies, or other comparable civil crimes.

THE CATHOLIC CHURCH
CONVENED A NUMBER OF
COUNCILS TO DISCUSS
THE PROBLEM OF
SORCERY IN THE WIDER
CHRISTIAN COMMUNITY

Their heinousness was rooted in paganism. The corruption or debasing of a monarch's currency was another misdeed worthy of the death penalty, just as was the forging of the monarch's faith; a wrong-doing pursued at length.

The Inquisitions, or Holy Tribunals (such as Laodicea, Ancyra, Toledo, to name a few) as they were known, were religious legal bodies seldom heard of before 1000 AD, *specialy licensed* to conduct trials against heresy, and whose sacred duty was to expunge 'evil' from the community. Accordingly, they only ever really raised their heads in times or places where their presence was gravely warranted by the discovery of unusually 'unholy' activities. Just some of the holy councils convened to discuss the presence of magic and magicians are as follows:⁷³²

9th Century	Aachen, Mainz
8th Century	Clovesho, Leptinnes, Rome
7th Century	Braga, Merida, Toledo x4
6th Century	Agde, Aoxerre, Lyons, Narbonne, Orleans x2, Braga x2
5th Century	Rome
4th Century	Elvira

Thus inquisitory bodies were never the "public face" of the Church, and not even a permanent fixture. Between 500 and 1000 AD Inquisitors had been exceedingly efficient, destroying the last vestiges of astrology, magic and the occult, so much so that their councils faded from common thought for a time. But this was soon to change.

During the Middle Ages, Western Inquisitors were fairly new at tackling magicians, heretics and sorcerers, and still stood to learn a thing or two about the treatment of insurrectionist heretics from their Orthodox counterparts in the East. Byzantium had grown weary of the eastern problem of heresy, which had at times reached plague proportions there. As the menace of the heretics shifted through Byzantium and headlong into the Kingdoms of Western Europe, the Papacy mobilised the Dominican Inquisitors against the 'enemies of Christ'. These were clergy who had truly found their niche in life, and proved to be most successful in their assigned task of killing off heresy.

Many fables are attached to the Inquisition. Inquisitors were not, as is commonly believed, indiscriminate in their regime of persecution. On the contrary they were rather picky about the kinds of suspects they investigated. Regulations demanded that cases fulfil certain criteria before the Holy Office could become involved. For want of a modern analogy, there had to be a damn good reason why the presence of an FBI agent was warranted in investigations normally handled by the county sheriff. The Church understood that the magic arts were practiced by sundry individuals, yet among them were heretics who they were most keen to discover, as the following excerpts from the witch trial handbook *Malleus Maleficarum* stress;

"Inquisitors deputed by the Apostolic See to inquire into the pest of heresy should manifestly not have to concern themselves with diviners and soothsayers, unless these are also heretics, nor should it be their business to punish such, but they may leave them to be punished by their own judges".⁷³³

"For it is the same with those who worship and sacrifice to the devil. For if they do this in the belief that there is any divinity in devils, or that they ought to be worshiped and that, by reason of such worship, they can obtain from the devil what they desire in spite of the prohibition or permission of God, then they are heretics".⁷³⁴

Some cases were too hot to handle. Only the hand-picked were appointed to delve into them:

"The Inquisitors of the sin of heresy deputed by the Apostolic See or by any other authority have no power to try such offenders (schismatic Bishops and other high dignitaries) on this sort of charge, or to proceed against them under pretext of their office, unless it is expressly stated in the letters of commission from the Apostolic See".⁷³⁵

"an Inquisitor need not interfere in the case of a man who is to be punished as a malefactor, but not as a heretic, but may leave him to be tried by the Judges of his own Province".⁷³⁶

"Let the bishops and their representatives strive by every means to rid their parishes entirely of the pernicious art of soothsaying and magic derived from Zoroaster (NB: this reference to Magian ritualism)" ... We strictly forbid the temporal lords and rulers and their officers in any way to try or judge this crime, since it is purely an ecclesiastical matter; and it speaks of the crime of

heresy". But if it happened that suspects had caused injuries by their magic, then "it must be punished by the Civil and not by the Ecclesiastical Court".⁷³⁷

For the purpose of satisfying the Malleus' legal definitions pertaining to the crime of witchcraft, it was important to establish the nature of the offense, the accused's motives and interior disposition, their level of belief in the Catholic faith and so on. This probably required a certain level of sophistication in their interrogation techniques ... offering subtle questions, and attentively listening to the accused's responses. For example astrology probably wouldn't constitute a matter of witchcraft for:

"Such as contend that witchcraft has its origin in the influence of the stars stand convicted of three errors. In the first place, it is not possible that it originated from astrancers and casters of horoscopes and fortune-tellers".⁷³⁸

"In astrology there is no compact, and therefore there is no invocation, unless by chance there be some kind of tacit invocation, since the figures of demons and their names sometimes appear in astrological charts".⁷³⁹

An ultra-sacrilegious ceremony might not necessarily be witchcraft either:

"For when they stamp into the mud the Body of Christ, although this is a most horrible crime, yet it may be done without any error in the understanding, and therefore without heresy".⁷⁴⁰

Yet if the same desecration was performed in an heretical manner, with an heretical intent, or by the rites of the heretics, then there was a visible error in faith, which in turn brought the suspect under the jurisdiction of the Inquisitorial courts. Some inquisitors were more devastating than others. The many 'victories' of the 'ace' Dominican, Robert, *the Bulgar*,⁷⁴¹ are attributable to him being a reformed Bulgar heretic, and obviously a man who knew names, and the right questions to ask. Much of the cat and mouse game between heretic and Inquisitor was conducted "in-house", with many of the official findings being kept under wraps. In the Far-East, protracted wars against stubborn heretics had been a feature of Byzantine military activity; their units fought a standing army of Paulician Magian-Christian heretics at Theprice, Anatolia,⁷⁴² for instance. Over centuries, several hundred thousand had been tried and imprisoned, or executed where the subject proved impenitent, or was 'overly seditious', or likely to 'infect' large portions of the community upon release. Those imprisoned were normally held in solitary confinement. While these eastern and western tribunals had been intervening in cases of heresy and witchcraft throughout the early Middle Ages, it was not until the 15th Century that the first Papal Bull was issued on the matter, indicating a rapid escalation in the situation. In the West the fullest might of the Inquisition was unleashed in 1484 AD, beginning with Pope Innocent VIII's opening declaration of war on heresy and witchcraft.

"It has indeed lately come to Our ears, not without afflicting Us with bitter sorrow, that in some parts of Northern Germany, as well as in the provinces, townships, territories, districts, and dioceses of Mainz, Cologne, Treves, Salzburg and Bremen, many persons of both sexes, unmindful of their own salvation, and straying from the Catholic Faith have abandoned themselves to devils, incubi and succubi, and by their incantations, spells, conjurations, and other accursed charms and crafts, enormities and horrid offenses have slain infants yet in the mother's womb, as also the offspring of cattle, have blasted the produce of the earth, the grapes of the vine, the fruits of trees, nay, men and women, beasts of burden, herd-beasts, as well as animals of other kinds, vineyard, orchards, meadows, pastureland, corn, wheat, as well as animals of other kinds, with terrible and piteous pains and sore diseases, both internal and external; they hinder men from performing the sexual act and women from conceiving, whence husbands cannot know their wives nor wives receive their husbands; over and above this, they blasphemously renounce that Faith which is theirs by the Sacrament of Baptism, and at the instigation of the Enemy of Mankind they do not shrink from committing and perpetrating the foulest abominations and filthiest excesses to the deadly peril of their own souls, whereby they outrage the Divine Majesty and are a cause of scandal and danger to very many ... Accordingly in the aforesaid provinces, townships, dioceses, and districts, the abominations and enormities in question remain unpunished not without open danger to the souls of many and peril of eternal damnation. Wherefore We, as is Our duty, being wholly desirous of removing all hindrances and obstacles by which the good work of the Inquisitors may be let and tarried, as also of applying potent remedies to prevent the disease of heresy and other turpitudes diffusing their poison to the destruction of many innocent souls, since Our zeal for the Faith especially incites us, lest that the provinces, townships, dioceses, districts, and territories of Germany, which We have specified, be deprived of the benefits of the Holy Office thereto assigned, by the tenor of these presents in virtue of Our Apostolic authority. We decree and enjoin that the aforesaid

BY THE 1400’S THE
PROBLEM OF WITCHES
WAS GETTING OUT OF
HAND IN GERMANY

The balloon of heresy and pagan witchcraft was about to burst. One part of *Malleus Maleficarum* explained that the super-abundance of witches during the 14th Century and the preceding few centuries could only have been due to unforeseen factors. Apparently a fair number of witches and heretics had always been present there in the past, but during the 1400’s AD the seepage of astrological and astronomical pursuits, runes, necromancy, mystical images engraved on magical gems (Magian and pagan Gnostic), gem rings, and disks of precious metals (talismans) into Germany was starting to get out of hand. The whole thing had turned into a virtual explosion.⁷⁴⁴ My guess is that much of this can be attributed to the arrival of immigrants from the east and north bringing their amulets with them, and the mass distribution of astrolabe kits into the community, something which brought all the witches out into the open, facilitating the crafting of magical apparatus, and a general revival of paganism.

DEMON-MAPS WERE
FOUND

Now the Church was faced with having to suppress *devil-worship which had gone absolutely haywire in Germany*. According to Church sources, some types of scrolls and star maps were said to contain effigies of demons in the place of the standard planetary inscriptions normally encountered. My belief is they were depictions of constellations drawn from pagan mythology, or demonic planetary archons summoned by certain families or individuals, and which were profoundly linked with the pagan Gnostic cults of the Greeks and Egyptians, and the Chaldean arts, in the form of aerie demons.

If we tally the numbers of people that probably took part in the steady migration of Magi and Magian-Christian heretics into Moravia, Northern Germany, the Balkans, Carpathians, Italy, Byzantium and France beginning in the mid-ninth Century, and ranging right through to the 14th and 15th Centuries, we can conceptualise how Western authorities ended up executing approximately 150,000 sorcerers throughout the Middle Ages. The combined weight of witches and heretics put to death in the East is almost impossible to gauge, but could well have exceeded the 200-300,000 mark, in total. If we then consider the number of heathen Prussians, Finns, Latvians and Lithuanians dispatched during the campaigns of the Teutonic knights, together with their priests and priestesses, the ultimate number of militant pagans killed may have approached half a million throughout Europe and the Balkans. Are these numbers too inflated? Well, just think of it this way.

You will already have read about the possible numbers of Magi in Rus’ in Part I. The total number of blood Magi in 10th Century Rus’ might have been between 8,000-120,000 depending on the number of pagan Slav ic Magi required to perform the *Yasna* ceremonies during the same period. If only half of each succeeding generation formed couples, and had a like amount of children, and then we multiply this figure on the same scale over only nine generations (let’s say 450 years) you end up with figures which dazzle the mind. If the same rate continued between the 10th and the 16th Century, the potential number of Magi residing in eastern and western Europe throughout that entire period could have been astronomical. No doubt the overall scale of this would have been drastically reduced by the large number of conversions to Catholicism, Orthodoxy and Islam. Even so, that left a certain remainder which had to be tackled in the anti-pagan crusades of Northern Europe, or via witch-trials that steadily picked them off year by year.

FIRST TIME OFFENDERS
WERE SUPPOSED TO BE
RELEASED IF THEY WERE
PENITENT

The “crime of witchcraft” was chiefly prosecuted by the civil authorities, whereas charges of heresy could only ever be heard by ecclesiastical tribunals. In either case the death penalty was pronounced on the accused only where they refused to “confess and repent” the “grievous nature of their crime”. If they confessed, they were safe, but if they returned to the ranks of the *relapsae*, or people falling back into the ways of the witches and heretics, then they were putting their lives in serious peril. If one lapsed after a second acquittal they were dead!

Ultimately, the burning of 150,000 witches in Western Europe throughout the entire Middle Ages *would have made only a small dent in their numbers*. Over 500 years, 150,000 executions amounted to about 300 per annum, spread across 5 countries, or on a crude average, 60 per year in each kingdom. The bloodlines of the witches and heretics must have survived intact, but whether the purity of their bloodlines, faith, books, holy sites and ceremonial life remained untarnished by defilement is a totally different matter. As Europe became more and more Christianised, the old faith was progressively eroded as ever growing bands of travellers, woodsmen and shepherds “polluted” the constantly dwindling number of undefiled groves and springs.

What is not commonly known nowadays is that one major feature of the Inquisitions was the inward-pointing

sword, figuratively speaking, that weeded out and took supreme vengeance upon any clergy who were discovered to have fallen in with the heretics, and become traitors to the apostolic faith. The magistrate's trusty handbook, *Malleus Maleficarum*, was quite explicit in its assertion that no one should be above the scrutiny of the tribunals of the Holy Office; after all, the Manichaeans and other Bulgar heretics had already entered France and Germany via the monasteries. And, from the 10th to the 12th Centuries AD, it was from this quarter that all the Church's main problems stem, in both the east and west. Monks were in a state of revolt, often seen as fuelling the march towards heresy, whereas in ages past they had been "obedient" to the ways of the faith. The Middle Ages was a time when people could look towards the friars, and find secreted among their number figureheads preaching hatred of the hierarchy and the Mass.⁷⁴⁵ The penalty rogue clergy could expect varied, but the *Malleus* states:

"the Canon prescribes that a cleric is to be degraded and that a layman is to be handed over to the power of the secular courts who are admonished to punish him as his offense deserves".⁷⁴⁶

This may explain why some or even many witches flocked to join the priesthoods and convents, to avoid the horrors of secular law. In any case such designs were ill-conceived, and only attracted frontal attacks from the Papal reformists, who pulled the Church apart at the seams looking for them. These turbulent events are covered throughout this and the final chapters.

In 1592 AD a Dutchman named Cornelius Callidius published a controversial text aiming to publicly de-fuse the tenacity of the witch persecutions.⁷⁴⁷ He was soundly reprimanded by the Church for his efforts which, it was claimed, were "suspected of heresy and smacking of the crime of treason, as being seditious and foolhardy".⁷⁴⁷ He was compelled to rescind a number of his articles in a signed testimony, amongst which was the assertion that "*Magia* (magic) ought not to be called *maleficium* (black witchcraft), nor *Magi* (magicians) *malefici* (witches)".⁷⁴⁷ He argued that scripture recommending capital punishment for witches cannot and should not be applicable to the Magi.⁷⁴⁷ What Cornelius was attempting to do was educate the masses about the differences between white (Magi) and black sorcerers (witches).⁷⁴⁷ It is my considered opinion that Callidius was far wiser to the truth than could ever be admitted, especially during the Renaissance, for at that time white witches were being unfairly lumped together with the black, each and every one of them an enemy of the Church, and God. This marks a change in the status of white witches, who until the 12th Century enjoyed cordial relations with Catholic parish priests in a number of areas.

Other like-minded social commentators persisted with the risky business of putting pen to paper, such as the medieval Faust cum doctor, natural scientist, wizard and inventor, Cornelius Agrippa. Unlike Callidius, Agrippa was no mere onlooker hollering cliches from the sidelines, he was preaching from ground zero.

"Some willl come to hear what I can say, who by their rash ignorance may take the name of magic in the worse sense, and ... cry out that I teach forbidden arts, sow the seed of heresies, offend pious ears, and scandalize excellent wits; that I am a sorcerer, and superstitious, and devilish, who indeed am a magician. To whom I answer that a magician doth not amongst learned men signify a sorcerer, or one that is superstitious, or devilish; but a wise man, a priest, a prophet; and that the sybils were magicianesses, and therefore prophesied most clearly of Christ; and that magicians, as wise men, by the wonderful secrets the world, knew Christ the author of the world to be born, and came first of all to worship him; and that the name of magic was received by philosophers commended by divines, and not unacceptable to the Gospel. I believe that the supercilious (inquisitorial)censors will object against the sybils, holy magicians, and the Gospel itself sooner than receive the name of magic into favour; so conscientious are they, that neither Apollo, nor all the Muses, nor an angel from heaven can redeem me from their curse. Whom therefore I advise, that they read not our writings, nor understand them, nor remember them. For they are pernicious, and full of poison".⁷⁴⁸

The fact of the matter is the Aryan white priests and priestesses ended up caught in the cross-fire between the Church and the black witches, equally enshrouded by the convenient blanket term "witch", though more properly they were either apostates (ie; pagan religious mentors), or heretics (in cases where the white witch was also a believer in Jesus). The more jingoistic theologians saw the white arts as even more dangerous than the black, doubly so since ordinary folk were more inclined to seek them out, thereafter falling into the devil's clutches in a most insidious way. Still others espoused pagan Gnostic or Chaldean-style teachings. Yet, some time before this, *Malleus*

ON AVERAGE 300
WITCHES DIED PER
ANNUM ACROSS EUROPE

WITCH TRIALS WERE
VERY LEGALISTIC

DISOBEDIENT MONKS

WAYWARD CLERGY
WERE TRIED BY CHURCH
RATHER THAN SECULAR
BODIES

CALLIDIUS SAID THAT
THE MAGI WERE NOT
WITCHES IN THE TRUE
SENSE

HE SAID THE MAGI, THE
WISE MEN, SHOULD NOT
BE EXECUTED

Malleficarum ventured to drive home a similar delineation to that provided by Callidius, stating;

MALLEUS MALEFICARUM
HELPED TO DEFINE WHAT
A WITCH WAS

"We must observe that this heresy, witchcraft, not only differs from all other heresy in this, that not merely by a tacit compact, but by a compact which is exactly defined and expressed it blasphemes the Creator and endeavours to the utmost to profane him and to harm his creatures, for all other simple heresies have made no open compact with the devil ... although their errors and misbelief are directly to be attributed to the Father of errors and lies".⁷⁴⁹

The form of black witchcraft enunciated in the *Malleus* sounds distinctly like the "condemned system" of demonolatry recorded by Al-Nadim, for it adds that the witch must of necessity:

BLACK WITCHES
DIFFERED FROM
ORDINARY HERETICS

1. Abjure their faith.
2. Harness themselves in the pursuit of evil doings.
3. Offer children to the devil.
4. Revel in lustful over-indulgence.
5. Revel in "all manner of filthy delights".

Here the *Malleus* drew a very real distinction between (black) witchcraft and just about every other heresy. It is an important point - not all magic was witchcraft, except that which followed the precepts of the devil by virtue of a pact forswearing them to his service, by the above-mentioned duties. It was an inverted system of worship, intrinsically the same as the "condemned system" of the black Magi.

WITCH RITES WERE AN
INVERTED SYSTEM OF
WORSHIP

Witch trials were variously convened by inquisitors, secular lords and magistrates whether Catholic or Protestant. Surprisingly there were a number of cases in which magistrates were themselves the subject of investigations into witchcraft. I am at a loss to know how widespread this is alleged to have been, but in Scotland, Justices of the Peace were openly implicated in the infernal arts.⁷⁵⁰

PROTESTANT
AUTHORITIES ALSO HELD
WITCH TRIALS

The white Magian-Christian "heretics" probably held witch trials of their own, something I will now expand upon. In the closing years of the 16th Century Nicholas Remy wrote that witch poisons were highly lethal to all manner of beast and man, whereas magistrates were impervious to these toxins.⁷⁵¹ For God had "made them (the judges) partakers of His prerogative and honour, calling them Gods even as himself (ps lxxxii) ... they are sacrosanct and, by virtue of their duty and their office, invulnerable even to the spells of witches".⁷⁵¹ Here Remy uses one of the Psalms to reinforce the validity of his comments about the divine nature of the judiciary. In all, it savours of the old believers, though to be fair, Remy has not misquoted or twisted the written substance or context of the psalm, which reads: "I (Jehovah) have said, Ye (the Judges) are gods; and all of you are children of the most High. But ye shall die like men, and fall like one of the princes".⁷⁵² Here Jehovah's earthly judges are not only living gods, but sons of his.

JUDGES WERE THOUGHT
TO BE IMPERVIOUS TO THE
SPELLS AND POISONS OF
WITCHES

THEY WERE GODS

Owing to numerous trial testimonies stating that certain devil-worshipping witches met in synagogues, Catholic anti-semitism is thought to have been a feature of many cases. This may be so, but there is an alternative explanation. In *Sikand Gumanik Vigar*, we find (non-Zurvanite) Magian refutations of Apostolic Christianity, Judaism and Islam. Magian polemicists railed against these three faiths for one principal reason, namely that their supreme "one god" (ie; Jehovah or Allah) was, in their eyes, the face of Ahriman, a vainglorious, cantankerous creator-destroyer that slew those who displeased him irrespective of who they were (with old age, disease, war), while at the same time lavishing mercy and favours upon those who pandered to his whims, or to those he took a liking to at a given moment, even if they were the enemies of his chosen people. Unlike the Good Sun, from whence only good things came, this other god was one to be feared on account of what he might do next. Magians would therefore have seen Churches, Mosques and Synagogues as havens for the worship of the penultimate demon of the ages - devilish synagogues. If the demonic synagogues mentioned in trial documentation were so-called on account of this, then it is possible that the accused in these *particular* cases were Catholics (ie; Christians that adhered to Rome's heavily judaised version of Christianity) and Jews, or less likely Muslims since there were so few of them in Europe outside of Moorish Spain.

PANTHEONS OF DEMONS
WERE KNOWN IN THE
ANCIENT WORLD

Anyhow, there are enough Zoroastrian and Classical Roman sources to help us visualise that devil worship was far from a whimsical psychosis devised by the Church, but a burgeoning spectrum of infernal deities well known in Babylon and the Orient, which complemented their dualistic perception of the cosmos. They had been transported to many and varied geographical locations in the West by autonomous black Magi, or by those who

served in the subterranean hideouts, caves and temples of the Roman Mithraic legionaries and piratical Cilicians. Many of their infernal haunts could be found at places annexed by the Romans, and therefore where Mithraic communes had settled. In some cases these sites match former locations for pagan Gnostic observatories during Ptolemy's age. So quite possibly these black gods had been worshiped for millennia in these places, by a religion headed by astronomer-astrologers. One Roman, the highly respected natural scientist Pliny the Elder, had the following to say;

"Frail, toiling men, mindful of their own weakness, have separated these deities into groups in order to worship them piecemeal - each person worshipping the deity he most needs. Thus different races have different names for the same deities, and we find innumerable gods in the same races. Even the Gods of the lower world, together with diseases and many kinds of plagues are listed in groups in our fearful anxiety to appease them. For this reason there is a Temple of Fever, on the Palatine, dedicated by the state, one of Bereavement, at the Temple of the Household Gods, and an Altar of Bad Luck, on the Esquiline. One could take this to mean that there are more heavenly beings than men, since individuals also make as many gods, by adopting Junos and Genii for themselves. Some nations have animals - even repulsive creatures - as gods, and many things more disgraceful to relate: they swear by rotten food and other such things....But the invention of adulterous acts between gods and goddesses themselves, as well as quarrels and hatred, and the invention of gods of theft and crime, surpasses all shamelessness" "They wait upon gods with foreign rituals, they wear their images on their fingers (a reference to engraved gem rings); they pass sentence on the monsters they worship and invent food for them; they inflict dire tyrannies on themselves, resting only fitfully even when asleep..."⁷⁵³

IN ROME TEMPLES WERE DEDICATED TO THEM WORSHIPPING HORRID CREATURES, AND SWEARING BY ROTTEN FOOD

Concerning the dualistic animal killings of the white and black Magi, Plutarch wrote;

"In fact, they believe that some of the plants belong to the good god and others to the evil daemon; so also of the animals they think that dogs, fowls, and hedgehogs, for example belong to the good god, but that water-rats belong to the evil one; therefore the man who has killed the most of these they hold to be fortunate"⁷⁵⁴

Combining both accounts we might guess the black Magi worshiped water-rats and other loathesome creatures. Regarding the Iron Age Druids, Pliny, in his inimically anti-Magian style, expressed the following;

"Magic continued to be practiced in the two Gallic provinces within living memory. The principate of Tiberius saw the removal of the Druids and the whole pack of soothsayers (ie; those who prognosticated by means of animal sacrifice) and doctors. But these remarks are of little interest when one considers that magic has crossed the ocean and reached Nature's empty wastes. Today even Britain, in awe, practices magic with such impressive rites that one might think that she had given the Persians the art of Magic....An incalculable debt is owed to the Romans who destroyed these monstrous practices, in which human sacrifice was considered an act pleasing to the gods and eating the victim was thought to be beneficial to one's health"⁷⁵⁵

ROMANS UNDERSTOOD CERTAIN ASPECTS OF THE MAGIAN RELIGION

ROMANS REPORTED THE PREVALENCE OF THE MAGIC ARTS AMONG THE DRUIDS

Roman academics like Pliny the Elder, Lucian and Plutarch, tell us that Ancient Rome, and the Celtic lands (under the Druids) were admirably acquainted with the practices of devil-worship in some quarters. In Rome this was no doubt due to the influence of dualistic Iranian Mithraism and the Etruscan black magicians from the east. The down-trodden, unfortunate or impoverished could make the trip up to the Esquiline and alleviate the anxiety of their melancholy and woe, by placing offerings to the devil-gods at formal altars, which if we consider the Mithraic subterranean temples, were probably located in underground caves and diggings. In Pliny's words *the Romans had formally partitioned the Gods into two camps*; the harmful black deities and the white nature deities, both of which were liable to receive appeasement at appropriate times. These so-called devils were regarded as snubbed and disowned gods of considerable potency responsible not so much for creation in the world, but destruction of every conceivable kind. By offering them homage it was hoped that the devotee would receive protection from the very forces that these deities unleashed, and in so doing become prosperous in the world.

THE PAGAN GODS WERE DIVIDED INTO TWO GROUPS: THE GOOD GODS AND THE EVIL GODS

With two possible destinations for the soul after death, the underworld could conceivably be enjoyed if one had built up sufficient rapport with the subterranean deities in this lifetime. Traditional Zoroastrian views differed somewhat from this happy-ever-after view. In their texts the black god wished to strangle them with his own bare hands. Everything depended upon the way a person looked at these issues. There can be little doubt that the proliferation of witches during the Middle Ages and Renaissance period was overwhelmingly linked in with the

migratory movements of the Zurvanite Magi who had been in Europe since Roman times. Although it is tempting to view the explosion of witchcraft as resulting merely from the miraculous re-emergence of ancient occult knowledge (which was nonetheless still a major factor), the fact remains that *witchcraft was predominantly passed on via the family bloodline*.⁷⁵⁶ This being the case the sheer weight and suddenness of the arrival of the witches, to my way of thinking, *can only be linked to new arrivals of black (and white) families onto the continent*.

One marvels to think just how many writers disregard a pagan origin for witchcraft, with a single sweep of the hand, without ever having evaluated sources on European paganism. Don't take my word for it, check out their many witchcraft bibliographies, you'll find very few items dedicated to European paganism. How unscholarly is it to rashly presume that there was no connection between witchcraft and paganism, without a proper study that would allow one to make such a definitive statement? It's like formulating theories about the lunar surface without ever bothering to pull out your telescope and take a look. It defies belief that something so academically degenerate has gone mostly unquestioned by scholars for at least twenty years! Whether there is or is not a factual inter-relationship between the two is irrelevant. That scholars, until recently, never cared to adequately examine the proposition is. Thankfully some academics are beginning to devote their efforts to this area. Such is the impact of Post-Modernism upon the discipline of history, something given belated treatment by Windschuttle.⁷⁵⁷

The Antiebrist

No picture of the mediaeval black witch would be complete without a look at the devil, the being who was for many, the alleged focal point of their religion; the one they loved so much that they based their life around him, or would undergo martyrdom for his faith. Chernobog the infernal lord of the pagan Slavs, was a black goat or dog, and in either form he was described as having large horns, wings and a tail. This is unmistakable Ahrimanic imagery, and yet another key to linking the black witches of Europe with the black Magi who once hailed from Central Asia, Iran and the East. In Sweden Satan was normally portrayed as a dog,⁷⁵⁸ as for instance in the scene of Christ's temptation by the Evil One in the desert, as depicted in the Church at Ejsing. Remember, at no stage does the New Testament portray Satan as a winged goat or dog. Therefore the a connection between witches and a dog or goat-devil has non-Christian roots, though by the time various Inquisitory bodies were established, witchcraft had become synonymous with the worship of Satan, the enemy of Christ.

Christian authorities traditionally associated witchcraft with the religion of the Antichrist. By their estimation witches and warlocks were the Antichrist's servants. Although their perceptions of the devil's son, the devil incarnate, changed with time, many commentators on demonolatrly held that Antichrist would be a Magus, an Arch-Magus, nay one of the most powerful Magi the world had ever seen.⁷⁵⁹ Nostradamus referred to him as Mabus, perhaps a garbled reference to Magus, and the biblical Simon Magus was but an amateur alongside him.⁷⁵⁹ The witches (both white and black), the sorcerers, the diviners, they were his satellites, and would all flock to him upon his arrival, to school the Antichrist in the finer details of the arts.⁷⁵⁹ And he would fully absorb their tuition, accruing the highest possible level of occult power and understanding.⁷⁵⁹ Yet even from the outset, he was well versed in the teachings. Soon thereafter, as his doctrines and power became known, he would reintroduce the arts of devil-worship to the wider world. In time his thoroughly tyrannical nature would emerge.⁷⁵⁹ Just as the demonic Antichrist came to invert the world, to reverse or upturn the accepted nature of things (like the weather, or the flow of rivers, or the position of land masses), to wreck families and society at large, by destroying the discipline of these institutions, by perverting rituals, installing tyrants, and casting down religion, so too would the witches carry out his designs in like manner.

One 12th Century Russian Chronicle entry (which is contemporaneous with, or even predates, the large scale appearance of devil-worshippers in Western Europe) concerns encounters with at least one group of Russian magicians who, during the early 11th Century, worshiped not only devils, but their Chief of Chiefs called "*the Antichrist*", a malignant devil who had his residence deep within the Abyss.⁷⁶⁰

In distant Russia, far from the centres of western Christian higher learning, the deeply pagan Finnish Permiaks knew of the Antichrist, calling him *Antip* or *Antipka*, the great devil or anti-god.⁷⁶¹ In Pskov, Russia, there is a tradition that the Antichrist (*Antikhris*) would be only half demon,⁷⁶¹ so presumably he was half something else, man perhaps.

In Scandinavia we find the word *Antikristr* (Old Icelandic: “Antichrist”),⁷⁶² but am at a loss to know if it applied to a devil there or not. By inference the shady *Antikristr* was probably the enemy of *Hvita-krister* (Old Icelandic: “the white Christ”).⁷⁶³ Here again, dualistic symbolism is found in a Christian context.

Hilarion, Russia’s first Archbishop further clarified the issue calling this supreme devil the Antichrist. So according to the Mediaeval Rus’ Church’s reasoning, Chernobog, the black, horned god (a winged goat/dog) and the Antichrist were one and the same.⁷⁶⁴ Although it is possible to view this admission as a *fairly standard missionary polemic against any pagan deity*, it is noteworthy that Chernobog, the Black God, is regarded not merely as some devil, nor is he regarded as an Antichrist, but much rather *the Antichrist*, the potent Adversary who made war against Christ himself. In the pagan view Chernobog, the blackened Billygoat God of the Slavs was also the enemy of the nature-loving, prosperity-giving celestial deities. Strangely Chernobog is also *the life-long foe of the Good Sun, the pagan White God Khors, who in Rus’ was also known as Keresá (which comes from an Iranian appellation for Jesus)*. A coincidence? This ideological coalescence proved to be the primary basis for mediaeval dualistic Christian heresy.

In Rus’ the devil was known by nicknames,⁷⁶⁵ mainly because they believed that the mere mention of his name would cause affliction, somewhere, somehow! It was far easier and safer to use nicknames, names like *Nechistii* (“the unclean or defiled one”), *Kutsii* (perhaps a corruption of Kot, the Russian word for “cat”), *Lukovii* (a colloquialism born from the word *Lukaviiy* which means “sly, cunning or bloody”. This is in itself a link with the word *Luka*, which means “a bent or twisted”), *Kat* (From the Slav word *Kot* - Cat!), *Did’ko* (Pa or Pop!), *Okh* (from the Slav exclamation *Akh*, or *Okhi* - pains, moans and gasping), *Mel’nik* (“the dear one”?), *Nimchik*, *Lyak* (of uncertain meaning, but perhaps it came from *Lyagushka* meaning “a frog”, or a reference to the Polish *Lyakh* tribe), *Lisii* (fox-like), *Vin* (from the root word for guilt, perhaps meaning “the guilty one”, or the blamer or accuser), *Likhii* (from *Likho* “the daring-one”, or *Likhoi*, “the evil-one”), *Pan* (obviously a reference to Pan, the silvan divinity of the ancient Greeks).

A little further eastward the situation becomes clearer still. There we find *Eman* (“a wild goat”), *Iman* (Mongolian for “a goat”) or *Yaman* (a word with a two-fold meaning, which in is related to Uighur, Turkic and Tatar words meaning “a goat”, and “bad” or “evil”).⁷⁶⁶ Such words are to be found in Eastern Russia, and over the range into Central and Western Siberia. They are evidently survivals of the name Ahriman, as is *Arkhimandra*, the great demon of Russia’s Tul’ region.⁷⁶⁷ Related to *Yaman* is *Yaman Tau* (literally “evil mountain”), the Bashkir name for a certain peak in the Urals.⁷⁶⁷ Perhaps the region’s diverse inhabitants traditionally associated Ahriman with this northern peak.

Chernobog’s nicknames hold valuable clues for later Mediaeval witch trials, possibly clarifying the devil’s true form in situations where he was supposed to have appeared as a cat. How could Chernobog, the goat lord of the underworld, be described as both a cat and a goat? While Ahriman could assume varied forms, the portrayal of the devil as a cat (known as *Kat* or *Kutsii* in Russia), may have been a later iconographical gliche originating from a misrepresentation of other terms for “goat” formerly used amongst the various groups of former Turkic invaders then living in Eastern Europe and Russia during the Middle Ages.

According to Vasmer, the universal Slavic word for a nanny-goat *koza* (Old Slavic, Bulgarian, Serbo-croat, Slovenian, Czech, Polish) is apparently not (as was suggested by at least five linguists) linked with other eastern words meaning “goat”, such as *keth* or (Albanian), *katsi* (Middle Turkic, Crimean Tartar), *kadza* (Irtyshtsk), *kasaga* (Chuvash),⁷⁶⁸ though I personally cannot see why such a link is implausible. Is the Russian demonic nickname *Kat* really the Albanian *keth*, and *kutsii* the Middle Turkic *katsi*, which in either case mean “a goat”? Well the word *koza* is feminine in gender and Chernobog was a masculine demon, but then again *kozyol* (the Slavic word for “a billy goat”) is interlinked with the basic form *koza*, so the gender issue might not be significant. It has been further suggested that *koza* (goat) is related to the Middle Romny (ie; Gypsy) word *katts*.⁷⁶⁸

Murray mentions that Satan’s name among the Basques of Spain was Janicot or Cot.⁷⁶⁹ Perhaps this was related to the local Rus’ folk name for Chernobog, *Kat*, and therefore these other Turkic correlations. While one would think this an implausible association, Spaniards (and one might suspect Basques) and Greeks were known to have made pagan pilgrimages to the Baltic area to consult necromancers and diviners who wore cowled robes, which probably resembled those of Mediaeval monks. Not only that, but Frisian and British traders frequently came to Russia and the Baltic too.

Alternatively the devil’s adoption of feline visage might reside in Mithraism, the Persian mystery cult that took

root throughout Europe under Roman patronage. Ahriman (or Kronos) was sometimes portrayed as a lion,⁷⁰ or in other words, a big cat. Several statues of the winged lion (commonly thought to be Kronos) have been found in underground Mithraea temples found in Europe,⁷⁰ engraved with the name *Deus Arimanius* (Ahriman).⁷¹ This confirms that Roman Mithraism had a dark side, and what is more, cult members were worshipping Ahriman in Europe. While some Mediaeval European witch celebrations may have originated in the Mithraic mysteries that had been present in Europe for at least a thousand years, I am disinclined to ascribe this second possibility to the greater part of European witchery. That is because Mithraism was originally a male only cult and Mediaeval witches were well-stocked with the fairer sex. Unless of course the residual Mithraic rites had become less gender-conscious. Thus the linguistic correlations of which I have spoken are more likely to have come from the Iranian with black Magian demonolators.

Even so it could be a later Christian development related to the Biblical account (NT) *1 Peter 5:8*, which likens Satan to a Lion who walks the earth seeking to devour people. However it should be stated that this feline attire was more often than not linked with the worship of Lucifer (who was seen as half shining-man, half-cat) rather than Satan.

There is some reason to accept an Iranian origin for goat-worship in Russia, and elsewhere. Not only does Chernobog's general appearance and nature conform to the Magian found in pagan Russian society, but the Slav word for "a god" is *bog* (pron. bok), the plural, gods, is *bogy* (pron. bogey).⁷² The Slavic *bog*, originated in the Avestan *baga* meaning "a god".⁷³ In other words the Russians were schooled in Magian notions regarding the gods; this you already know from Chapters III and IV. Accordingly Chernobog was pronounced *cherno* (black) *bok* (god), and was therefore equivalent to 'the evil one' of ancient Iran.

That such a linguistic correlation can be found in the British Isles, is cause for amazement, and demands explanation. In Britain, the Gaelic word for the Devil was *Bouca*, and the Celtic word for the Devil was *Puck* (who appeared as a goat). According to Murray both of these words entered Britain as *bok* phonetically (the Slavic word for God), but underwent minute linguistic alteration. Therefore *puck* and *bouca* can be equated with the Slavic Chernobog. Even so the Celtic is especially close to the Avestan *Baga*, even more so than the Russian. Thus *puck*, *bouca* or *bok*, whatever you want to call him, was a demon-goat known to all three groups, and his linguistic origin was Iranian, whether through a direct Iranian infusion, or through the Slavic linguistic intermediary *bog* (pron. bok).

It is equally plausible that the Norse rather than Russian *Al-Madjus* brought knowledge of him into Ireland and greater Britain. In Scandinavia the word for "a billy-goat" is *bok*, and goats known as *ged*, which seems close to *got* meaning "a god". Ultimately the words *bok*, *bog*, *bouca*, *puck* come from the Iranian word *baga*, which means "a God". Does this intimate that the horned god of the witches had an Iranian provenance? Coupled with many other shreds of information, I believe it does. The term *puck* is also found in France perhaps attributable to Norman Scandinavian settlers, or perhaps to residue from Gallic Celtic paganism.

The goat demon of Britain is, like Chernobog, evidently one and the same as Ahriman. In Wales we find an excellent parallel between *Ahriman* (the Black God of the Magi) and *Arawn* (The Lord of Winter and the Welsh underworld).⁷⁴ And in Ireland there was *Amadan*⁷⁵ (Ahriman?) who could bring great harm to those who wandered about at night, particularly in the vicinity of the fairy mounds. God alone was capable of providing protection against so formidable an essence. *Amadan* loved to punish people for their crimes. Unless these last two dark gods were repatriated into Britain with settlers from Germany, Denmark or Scandinavia, between the 5th and 10th Century, they had probably been there since Roman times. Back then he was simply a part of the popular Mithraic mysteries; *Deus Arimanius*. The excavation of Mithraic vaults in England from time to time enable one to suggest the latter association with a fair degree of confidence.

Across the channel in Belgium the devil was called *Barrabon*, a name that appears connected with the *Brabancons*, a fraternity of thievish brigands from the Brabant region. This band caused unprovoked mass-destruction during the Middle Ages, living on the proceeds of loot which they had seized by force in all the surrounding regions. The term *Brabancons* resembles *Garabancias*, which applied the devil's priests in several regions of Slavia.

There is folkloric and ethnographic evidence for a former cult centred around such a goat devil in Ireland. It was

Murray who first brought to my attention the Puck Fair held annually at Killorglin, Co Clare Ireland.⁷⁷⁶ This fair is a three-day festival centring around the crowning of a goat which is lauded as “The only King in Ireland”. Special arrangements are in force in Killorglin during the fair, permitting extended drinking; a massive 72 hours in all. To cater for the sizeable influx of revellers, ordinary shops are converted into makeshift bars for those three days, turning the town into a large tavern if you like. The fair is enjoyed by drinkers and farmers who come to have their livestock judged and traded, and it continues to be a meeting place for gypsy travellers who converge their annually from all over Ireland. Stock trading appears to be the main reason why Gypsies come there, and this point should be stressed. There stock breeders buy and sell cattle, but more particularly horses. If the festival was in part originally a veneration of a goat-devil, it was one that also had a fertility aspect where bloodstock are concerned. In the last chapter we learned that Ahriman was both the creator and destroyer of life, so a genuine cult gathering of his would no doubt also enact fertility rites at certain times of the year. We know little of the Church’s stance on the earliest Puck fairs, or indeed what measures it may or may not have taken to halt it. But as Patrick Houlihan (a local historian specialising in the Puck Fair) related to me in 1998, the Church has never held the Puck fair in high regard within living memory. A solid three days of inebriation did little to ingratiate it.

Puck fair was always held annually on the 10th, 11th and 12th of August,⁷⁷⁷ dates which have been maintained since the earliest records were kept, stretching back some 250 years.⁷⁷⁸ Therefore we cannot historically confirm or deny the existence of the cult prior to this time. Preparations for the fair began with the menfolk dispersing out into the surrounding mountains.⁷⁷⁹ There they seize the best looking goat of all after a merry old chase.⁷⁷⁹ Following this the beast is pampered, well fed, and brought back to Killorglin in preparation for the festival.⁷⁷⁹ *At no stage is the Puck goat harmed in any way*, though some speculate that in antiquity it was sacrificed during the final stages of the fair. Come the 10th-12th of August large numbers of people converge on the township, a small to fair number in the rounded gypsy caravans that commonly frequented the fair, even until the 1950’s and 60’s.⁷⁸⁰ Bandsmen head the procession playing pipes and drums, and are accompanied by flag bearers.⁷⁸¹ The goat is carried along behind them, held in its cage.⁷⁸¹ The procession moves onto a field adjacent to the former home of one William Crowley, who earlier this century presided over the customary court action against Puck.⁷⁸² Owing to the fact that Crowley’s role was hereditary, the sentencing was carried out by his ancestors, and was to continue under his descendants.

After Puck’s conviction the goat-king’s cage is hoisted to the summit of a 20 foot scaffolded tower. The construction used for this purpose can be fully dismantled and is stowed away annually following the cessation of the festivities. The site for the erection of the scaffolding is called Puck gap,⁷⁸³ though until 1875, the use of scaffolding was absent from the proceedings.⁷⁸⁴ Until then Puck was traditionally hauled up to the heights of Castle Conway.⁷⁸⁴ Perhaps the scaffold’s design was intended to crudely emulate the appearance of Castle Conway, the previous time-honoured venue. Why the festivities moved away from the castle may be significant also. Perhaps the owners of Conway wanted to disassociate themselves from the festival. Anyhow, once Puck has reached his high station at the tower’s summit, attendees break out into various forms of revelry. All the while the goat watches over the merriment from the vantage point of the three story scaffolding. The scaffolding consists of a lower stage area upon which addresses, poetry and songs are performed, plus dancing of course. Prose is recited to the goat while he looks on,⁷⁸⁵ as onlookers exalt the only remaining King in Ireland,⁷⁸⁶ albeit a horned one. About half to three-quarters of the stage is consumed by the tower which stretches up another two storeys. The second level consists of small boarded walkways upon which men stand as they hoist Puck’s cage to the uppermost level, using ropes and pulleys.⁷⁸⁷ The fair winds down on the 12th, sometimes ending with a mad race by gypsy boys on horseback, with blackened faces, and wearing paper hats.

Considering the linguistic connections just tabled, it is particularly important that we discover the origin of the Puck fair. Killorglin was only a sleepy rural hamlet in the 17th Century, and since a mediaeval census was never conducted there, one can only guess how many inhabitants it had in the 1200’s, when the Normans first built their fort.⁷⁸⁸ Before them, the vikings had probed into the area some time around 945 AD, but were beaten back along the river Laune.⁷⁸⁸ So we don’t know how many pagan Norsemen inhabited the region prior to the Norman invasion.

There is apparently a vaguely similar goat fair at Lambert in Bavaria, Germany.⁷⁸⁹ However we cannot confirm that it belonged to traditional German folk tradition. Perhaps it was imported by Wends, other diverse Slavic groups, or even Norsemen.

A GOAT FESTIVAL IN
GERMANY

A GOAT FESTIVAL ONCE HELD IN BYELORUSSIA DURING THE WINTER SOLSTICE

During World War 1, a goat drama bearing some small resemblance to the Puck tradition, was recorded by Evreinov, a Russian folklorist, in Belorussia.⁷⁸⁰ During their Winter Solstice Kolyada festivities, he noted that a staff-bearing elderly gentleman headed a procession, in front of a young man dressed as a goat.⁷⁸⁰ The transformation was effected with the help of a goat skin, and face became that of a goat with the assistance of bark and other vegetation.⁷⁸⁰ To the rear were musicians, as well as a pair of girls impersonating gypsies, dressed as males, their faces coloured black.⁷⁸⁰ At a certain moment the goat falls down, at which the procession becomes visibly saddened. But after it is resurrected with a touch of the old man's staff, it rises up, and with that there is great rejoicing. This seems to have been the crucial part of the act, the rising up of the goat. There doesn't appear to have been anything sinister about the rite, in fact it was performed to procure fertility.

WHO ORIGINATED THE PUCK FAIR?

Moreover I have recently learned of a Spanish festival in which a goat is thrown from the top of a bell-tower, only to be caught by townsfolk waiting down below with a tarpaulin. As to its age, or the nature of the proceedings I am none the wiser. It is held annually in Mangeses de la Polvorosa but appears to have been halted by civic authorities with concerns about animal welfare.

As for who originated the Puck fair it remains largely a mystery, though I have pinpointed several groups. Only Gypsies could be found in all three locations.

	Ireland	Germany	Russia

The Knights Templar	Yes	Yes	No

LINGUISTICALLY RELATED WORDS FOR "A GOAT" ARE FOUND AMONG THE SLAVIC, CELTIC AND GERMANIC PEOPLES

Since the Old Norse word for "a goat" was the same as that in the Gaelic and French, the Norsemen or Normans most likely introduced the fair to Ireland. Unless of course the Norsemen (and Normans), Celts and Slavs shared an extremely ancient tradition, in which case similar fairs had to have been present in all three regions. Because the tradition only appears to have survived in Ireland, Germany and Russia until this century it is difficult to guess how prevalent the custom once was.

Other words from Britain with an Iranian ancestry seem linked to infernal creatures. *Bogle, boggart, boggle, bogie* and *bug* (Welsh).⁷⁸¹ In the Old English, *bugge* is a word denoting "terror". *Bogeys* (England) were seen as demonic vitae, male essences of blackened image, who were a clear manifestation of evil in its many forms.⁷⁸¹ *Bogeys* danced with witches during the night and harmed little children, something parents had to be constantly watchful for.⁷⁸¹ The light of day robbed them of their power, with the result that they could only operate after sundown.⁷⁸¹ Based on these phonetic parallels it is conceivable that some of these terrifying gods (*Bogy*) lived in bogs, or swamps; desolate places. Eastern regional folklore records a natural association between demon gods, bogs and swamps in Russia and the Baltic, serving mainly as a dwelling place. The Old Russian word *bagno* (found also in Belarus and the Ukraine), means "a swamp" or "filth", and is therefore crudely similar to the English word *bog*.⁷⁸²

The similarity between these names suggest a possible level of religious uniformity between pagan Britons, Celts, Scandinavians, Slavs and the Magi, something which would normally be considered implausible in the light of our crude depiction of paganism, which has worshippers aimlessly frolicking around trees stark naked. No, pagans were probably a whole lot more organised than has previously been admitted, and what is more they had something else in common, namely a goat who you really had to watch out for. In these references we have evidence of two things:

1. That the religion of the black god was a common facet of the Celtic, Basque, Scandinavian and pagan Slav religions, and accordingly had existed spread over much of Europe and the Balkans since very ancient times. As a result of this organised religion, all these peoples still maintained contact with each other, even in the post-conversion era in Russia.
2. The other option is that Slav or Norse black Magi had acted as "missionaries" for the Black God and spread his religion to various other parts of Europe, places like Spain, Ireland and Britain.

Having determined that Ahriman came to be known as the Devil during the Christian era, we will briefly explore another facet of his religion, namely ritual inversion. The basis for the ceremonial inversions which the Magian devil-worshippers practiced was similar to that codified in the Hermetic doctrine "as it is above, so shall it be below". As a result of these unholy misdemeanours the counterworld would reflect the realities of the upper world, but in a shady manner. And so the devil's acolytes strived to mirror those things that existed in the world above throughout their daily lives, by means of backward dancing, backward prayer, discordant music, eating rotten food, desecrations instead of purification, and swearing or blasphemies instead of blessings. These inversions, these fully-intentional ceremonial irregularities, are discussed more fully later in this chapter.

"The Kaskisrobo (mask of the white Magi) contains particulars about the explanation of the ceremonial and ritual of the sacred beings, through what arises its conversion into demon-worship, and information as to cleanness and uncleanness".⁷⁸³

Since seventy-five percent of the sub-division contained in this Persian nask was lost, and because it has not been translated into English, I cannot take further quotes from it, quotes that are obviously references to practical devil-worship by means of filthiness and the corruption of accepted religious rituals. Based on witch trial documentation we can infer that Ahriman's twisted rites made the transition into Christianity. By that time they were associated with Satan-worship, Luciferianism, and love of the Antichrist. The origin of the present day belief that Satan's (ie; the Antichrist's) emblem is an upside down cross is difficult to trace historically, but if it was an authentic tradition then most likely it came from the above mentioned doctrine of ritual inversion. Consider the viking amulet depicted (Figs 41.5 and 41.6). It is commonly interpreted as Thor's hammer, modified by the addition of a Christian cross. Taking into account that the thonging used to suspended it was fed through the mouth of the "beast's" (or dare I say "demon's") head, I think it is self-evident that this cross was normally worn upside down. Moreover the "hammer" design is a deviation in style from traditional Christian crosses (Figs 41.1 and 41.2), and other Norse amulets, which are clearly hammers (Figs 41.3 and 41.4). It does however closely resemble the Christian cross seen in the hand of the Danish Christian king Canute (Fig 41.7), with the exception that it ended in a 'demon's head', had an inverted cross carved in it, and was worn upside down. So was this pendant deliberately manufactured by the craftsman as an inverted cross slung from a demon's head? ... you be the judge! Unfortunately I know of no other such crosses from that early period when paganism gave way to Christianity, but we do hear of inverted crosses from an eminent written source during the 15th Century.

In the year 1437 AD, the Holy Father, Pope Eugenius IV, dispatched an encyclical to all Inquisitors occupied with pursuing heretics, alerting them to the presence of a devil-worshipping sect in Europe - *" Sometimes they make a reversal of the Holy Cross, upon which our Saviour hanged for us."*⁷⁸⁴ Here he associates inverted crosses with the devil-worshippers.

Against the god of heaven

"On the evil-doing of Ahriman and the demons it says in revelation, that the evil which the evil spirit has produced for the creation of Ahura Mazda it is possible to tell by this winter; and his body is that of a lizard whose place is filth...so that which Ahura Mazda shall increase he will destroy;....I, who am Ahura Mazda, have not rested at ease, on account of providing protection for my own creatures".⁷⁸⁵

Witchcraft is commonly seen as an anti-Christian cult, however it is noteworthy that many of their major oaths are not so much sworn against Christ (which do occur), but predominantly against the god of heaven; a vow which bestowed upon them the power needed to blast the fields.⁷⁸⁶ Their Black God, and the oath that they made to him were the fountainhead of their many powers and unholy duties. These duties centred around the need to cause destruction - as much as possible. These deeds were so important to their religion that they were formally recorded in the warlock's book, a tome which could even be termed a 'Book of Crimes'.

From primary historical accounts these holy duties (or should I say unholy duties, because that is the term they would have preferred to use) included sinking ships,⁷⁸⁷ crop trampling using wide soled footwear (which probably left trampled shapes in the wheat fields),⁷⁸⁸ destroying bridges,⁷⁸⁹ blasting the fields with storms and hail (through storm-raising magic), the destruction of both man and beast,⁷⁹⁰ and the killing of Kings (one Grandmaster boasted that he had no greater enemy in the world than his King. Bear in mind that the drawing up and enforcement of law and order was a duty that belonged to the King, and order was often called the King's Peace). On storm-raising an unbelieving Reginald Scott stated that ;

"they may at their pleasure send raine, haile, tempests, thunder, lightening: ... wetteth a broome sprig in water, and sprinketh the same in the aire; or diggeth a pit in the earth, and putting water therein, stirreth it about with hir finger; or ... burieth sage till it be rotten; all these things are confessed by witches". To this repertoire of weather magic Wierus added *"stirring urine or water with their finger in a hole in the ground"*.⁷⁹¹

The use of urine in a ritual context, as in the above case, parallels the white Magian bareshnum rite of purification.

In company with others, Janet Paton was supposed to have caused crop damage. She;

"trampit down Thos. White's rie in the beginning of harvest, 1661, and she had broad soales and trampit down more".⁷⁹²

Due to the paucity of systematically translated witch confessions it is impossible to say on what scale such rites took place across Europe. In Norway between 1551-1760 only 2.4% of witches were convicted of field-blasting.

Mediaeval covens

In the Middle Ages and Renaissance the witch coven consisted of thirteen figures, twelve subordinate devotees and a living man-god, who usually went by the name of Satan⁷⁹³ (was this a mimicking or mirror-imaging of Christ and the twelve apostles, or of Khors and the twelve signs of the Zodiac?). In practice it is difficult to prove that thirteen coven members were the norm, since entire covens were only infrequently apprehended and convicted.

Even so, such assemblies might have been similar to those of the Hindu brahmin priests, who, like the witches, also met in groups of thirteen on ceremonial occasions: *"Then twelve Brahmins (representing) the twelve presiding deities of the months should be fed. The priest (would be) the thirteenth"*.⁷⁹⁴

Where man-demons headed a coven they were sometimes accompanied to the sabbaths by an equally evil female concubine, known in England as the Queen of Elphane.⁷⁹⁵ Her harlotry pleased the menfolk present while "Satan" ravished whichever young witches had been diligent in their acts of destruction.⁷⁹⁵ Meanwhile the slothful, who had reneged on their unholy duties, were soundly whipped for their impiety.

Bearing in mind the many similarities between the "black" witches and the black Magi that are beginning to emerge, I speculate that a male black Magus played the role of Satan (ie; Ahriman), whereas a female black Magus became the Queen of Elphane (perhaps the divine embodiment of Geh, the Great Harlot that featured as Ahriman's consort in Zoroastrian book of *Bundahislm*). This "man-Satan" was infrequently subordinate to a Chief Priest who serviced their area, and who probably served in a similar role to that of a dastur, except in an evil way.

A PARODY OF AHRIMAN
AND THE GREAT WHORE?

On special occasions these covens met at even larger gatherings at remote and sometimes quite distant locations. Considering that these larger groupings were almost always divisible by 13 and that few attendees were acquainted with each other, we ought suspect an even larger organisational structure. As shall be discussed, one only has to look at the startling uniformity of dress and customs among the witches of Scandinavia, Britain and Europe to realise that many were members of a similar religion.

Despite an inability to determine the size of such a cult, one can deduce that its infrastructure may have been ingeniously well organised. In 17th Century England we learn of Palmer,⁷⁹⁶ who was betrayed as the true head of the *world-wide religion* (college) of the infernal witches, a creed which for varied reasons, payed homage to the forces of destruction. If his statements were true then continental and British witch activities were being co-ordinated from England during the 1600's. According to Murray, Palmer confessed to knowing every major witch in England, though this might only have been a boast on his part. We do not know his ancestry or how long he or his forebears had lived in England. Perhaps they had migrated to Britain from the East some time between the 10th and 17th Centuries?

About 1659 at Fraw-Regenburg Germany "*the Devil in person, with eight thousand of his followers, held an assembly and celebrated (an infernal) mass before them all*".⁷⁹⁷ The names of attendees were collected and given to him.

Though devil-worship appears to have been present in Europe from at least the Bronze Age, the practice experienced varied fortunes, more so with the advent of Christianity. Some of the earliest accounts of the witches are to be found in the writings of the Inquisitors. In the Balkan zone devil-worshipping witches were being encountered with an uncomfortable regularity, often initially mistaken for "Manichees".⁷⁹⁸ It is to around this time that we can trace the emergence or re-emergence of the devil-shippers onto the continent, a movement destined to have a profound effect on the Byzantine and Catholic Churches. But it did not take long for the Inquisitors to make the surprising comment that the devil-worshippers weren't Manichaeian heretics as they had first thought, but "Luciferians" that patronised pagan ordinances not dissimilar to those of the Ancient Greeks (and I would add Iranians), a communal feast of libations like wine, a large bread bun and the roasted meat of a slaughtered ox), but also sorcery and devil-worship. More succinctly, they practiced a *deliberate inversion* of the "Light-worshipping" Manichaeian heresy, and/or black rites somehow related to the Neo-Pythagorean philosophy. But the commandments of Mani deplored the use of magical techniques, and Neo-Pythagorean philosophy positively encouraged physical, moral and spiritual purity. Evidently this Luciferian movement was *mixing in with* the "spiritualist" Manichaeian immigrants from Silver Bulgaria, the Magyars and the Pechenegs. But not exclusively so. In time they filtered into the Christian parishes too. Although the Inquisitors didn't realise it, these devil-lovers were black Magian devil worshippers of a type found in Arabia, Iran and parts of pagan Europe, rather than practitioners of a corrupt form of modernised Manichaeism.

In those early days, the Inquisitors had a certain uneducated naivety regarding such matters. The difference between Manichees and Luciferians may not have been obvious, but over the course of the following centuries they had ample opportunities to find out; the Luciferians were there to stay whether anyone liked it or not.

Witchcraft was usually hereditary

The old Portugese saying "*Witches are born, sorcerers are made*"⁷⁹⁹ highlights the traditional distinction between a sorcerer and witch. The former could make magic only as a result of extensive occult studies, *whereas the witch was born with the ability to enchant and curse*. With additional tuition in *ars magica*, witches were no doubt far more powerful. Just as Magus-priests were imbued with preternatural powers by a magical bloodline, which can be traced back to the Achaemenid royals and before, the witches were, as a rule of thumb, only a member of the coven by means of hereditary entitlement.⁸⁰⁰ This saying also provides the rationale for witch burning. By burning a witch you prevent them from breeding, and giving rise to future generations of witches. During the Middle Ages we learn that witches, like many heretics and pagans were supposed to have been incestuous as a matter of course; that's what accounts tell us anyway. Parents would bring their children into the faith once they had reached the age of reason, and thus could willingly make the choice to serve the Black God.

For instance, Swedish covens of the 16th Century were some of the busiest in Europe by all accounts, with large numbers of people frequently travelling to far off towns to attend Sabbaths, and carting 15-16 children a piece to the

coven meetings.⁸⁰¹ Whether the youngsters were all their own progeny, or whether they took turns doing the rounds of their neighbourhood, to take their friends' children to these meetings, is unclear. If it was commonplace for individual witches to have this many children in 16th Century Europe, then *we way well be looking at a religion that was re-populating*, and on a scale that may have surpassed that of the Christians.

CONRAD OF MARBURG
COULD TELL A WITCH AT
A GLANCE

During the Mediaeval German witch explosion, the Inquisitor Conrad of Marburg was believed to be able to tell a witch at a mere glance.⁸⁰² Conrad was so snowed under with white and black witches as he conducted investigations in those parts, that he took many short cuts attempting to locate, apprehend and sentence them.⁸⁰² With gusto Norman Cohn portrays Conrad as a cavalier vigilante who ruthlessly consigned poor guiltless wretches to the blazing pyres without recourse to proper judicial procedure. Be that as it may, when one considers the supposedly hereditary nature of the witch it is eminently plausible that one could indeed identify genuine suspects by their general appearance. This would be all the more likely if given cliques of witches ultimately traced their ancestry back to Iran and Central Asia. Perhaps they had different skin colouration, dress sense, hair colour, stature, accent, facial characteristics, and eye shape to the Mediaeval German population. This last point will only be vindicated by scrutinising court records for seemingly innocuous details about a defendant's various peculiarities in appearance beyond the stereotypical comments of "crone" or "has witch paps".⁸⁰³ For instance there are cases in England and Russia where witches are described as black "like a moor".⁸⁰³ They may have been Arab slaves, perhaps African Moors, but, considering the vedic origins of some gods being worshiped in Slavia, it is equally likely that they were expatriate Indians or even Gypsies. In Italy witches were widely regarded as red heads.

CONRAD BURNED THEM
WITHOUT TRIAL

The Estonians believed witchcraft was hereditary.⁸⁰⁴ So too the Russians.⁸⁰⁵ The English evidently thought so as well. During English secular court trials for witchcraft (at least in the 15th-17th Centuries), witches were hardly ever convicted solely on the basis of a casual remark or threat. There had to be a convincing body of evidence pointing to their guilt. One of the points of proof needed to validate a case against a suspect was some sort of family history in the dark arts.⁸⁰⁶ The accused's mother had to have been a witch and her mother before her. If such evidence was lacking, the case against the accused became a lot flimsier.⁸⁰⁶ In France witchcraft was a blood inheritance. Take the case of a 60 year old French woman named Jennette Huart,⁸⁰⁷ who claimed under oath that she didn't know why she was being detained. The following questions were put to her by the High Justice of Sugny in an open court room, and *no torture was used*. During the course of the proceedings she attempts to escape the allegations (whether true or false) by labelling her accusers story-tellers and liars. The questioning continued ...

THE ESTONIANS, FRANKS,
ENGLISH, FINNS AND
RUSSIANS BELIEVED
WITCHCRAFT WAS
HEREDITARY

Q2 *If for more than 35 years she hasn't been known as being a sorcerer, and if she is of the race (of the witches)?*

A *Knows that her mother was accused of being a witch, and that they killed her for it; doesn't know if it was true*⁸⁰⁷

Huart's demeanour throughout the trial bore not a little hint of temerity. In response to question 16 she "Replies in closing the eyes, mocking (the trial) and with the head thrown back, that she doesn't know what the said Pihart (a witness) is trying to say". A string of allegations followed ... poisoning, harming cattle, storm raising, association with other witches. To each she sarcastically replied that the accusations were prevarications, one and all.

A FRENCH WOMAN'S
BLOODLINE ON TRIAL

But later on February 16, 1657, she was examined yet again (again without torture), and made seven minor alterations to her original statements, though her admissions were fundamentally as before. With the exception of two answers the modifications were simply a rewording of her first answers to make them sound less cocky. It would appear that in the intervening period she had developed a more serious attitude toward the trial. Two changes merit our particular attention.

Q2 *"If she hadn't been already apprehended for the same subject; under what conditions she was released."*

Old answer *"Says that everyone knows very well why."*

New answer *"Knows that she was apprehended for the crime of sortilege, then released and (a fine of) 90 by the Justics."*⁸⁰⁷

Q5 This question concerned whether she knew of the 1626 AD investigation into her mother's maiming of a person through witchcraft (for which the mother was executed). It follows

on from Q4 which attempts to establish whether or not Huart knew her mother was a witch.

Old answer *“Declares that they (her mother’s accusers) lie like a dog”.*
 New answer *Knows indeed that Jaquette Leverd has charged her, but if she was sick, it is more herself who (?), she is of the race of the witches, like herself.*⁸⁰⁷

SHE WAS OF THE RACE
OF THE WITCHES

Therefore the only significant alteration to her defence seems to be a confession that both she was of the “race of the witches”. What she is in fact admitting to is membership not only of a certain family, but a certain unspecified ethnic sub-group present in Mediaeval French society, whose ancestral homeland went undocumented.

FAIRY MOUNDS MAY
HAVE BEEN A SORT OF
HUT

Witches and Fairies

An important connection between witches and fairies has, I believe, been established by the late Margaret Murray. She conducted a study of the faeries and discovered that the perception of them as tiny beings belongs wholly and solely to the Victorian era. By her reckoning they were actually a race of people who lived in semi-subterranean housing not unlike the *khati* of the Russian steppes, which so characterised Bronze Age dwellings.⁸⁰⁸ If roofed by turf or straw these buildings outwardly seemed to be mounds or hills. Such an abode of the fairies is to be found in a 1555 woodcut, which clearly shows that it was in fact a man-made dwelling.⁸⁰⁸ In support of the potential evidence supplied by this woodcut, she provided a number of witch accounts, two of which I will now present. According to the 1566 deposition of John Walsh there were more properly three kinds of Fairies;

VARIOUS TYPES OF
FAIRIES

*“He being demanded how he knoweth when anye man is bewtyched: He sayth that he knew it partlye by the Feries, and saith that there be iii kindes of Feries, white, green and black. Which when his is disposed to vse, hee speaketh with them upon hyls, where as there is great heapes of earth, as namely in Dorsetshire. And betwene the houres of xii and one at noone, or at midnight he vseth them. Whereof (he sayth) the black Feries be the woorst”.*⁸⁰⁸

A similar thread emerged in Yorkshire, in the year 1653;

There was (he saith) as I have heard the story credibly reported in this Country a Man apprehended for suspicion of Witchcraft, he was of that sort we call white Witches, which are such as do cures beyond the ordinary reasons and deductions of our usual practitioners, and are supposed (and most part of them truly) to do the same by ministration of spirits (from whence under their noble favours, most Sciences at first grow) and therefore are by good reason provided against by our Ciuil Lawes, as being ways full of danger and deceit, and scarce ever otherwise obtained than by a devilish compact of the exchange of ones soul to that assistant spirit, for the honour of its Mountebankery.

EVIDENCE THAT THEY
WERE ACTUAL PEOPLE,
WITCHES

*What this man did was with a white powder which, he said, he received from the Fairies, and that going to a Hill he knocked three times, and the Hill opened, and he had access to, and conversed with a visible people; and offered, that if any Gentleman present would either go himself in person, or send his servant, he would conduct them thither, or shew them the place and the persons from whom he had this skill”.*⁸⁰⁸

GOOD AND BAD FAIRIES
MAGICAL BLOOD

By the reckoning of others, fairies fell into two basic categories; the good and the bad fairies, who dispensed favours or curses according to their nature.⁸⁰⁹ The *Feya* (their proper name) were supposed to have had magical blood (magus blood?), which was the vehicle for their many powers. Folk consulted them whenever they wished to obtain supernatural aid, and birth fairies arrived on the day of a baby’s birth, to prognosticate its future by natal auguries. This latter type of fairy sounds every bit like an astromancer, or pagan astrologer of the sort found in Slavia. Interestingly Murray points out that many of Europe’s Kings and royals were in some way endowed with this fairy blood, and not only them but many other people throughout late mediaeval society.

EUROPEAN ROYALS
WITH FAIRY BLOOD

It was only in later times that fairies were viewed as minute gossamer-winged creatures endowed with the ability of flight and who were of mischievous temperament; quite fond of practical jokes. Fairies had a natural ability to vanish from sight at will, and spent their time at gatherings where they invisibly pranced among the daisy rings of the fields, riversides and forest clearings. Peasants discovering their hideouts left presents of mead, floral garlands, cloth and bread, in the hope that they would be showered with gifts of luck by the feya. Perhaps this was a form of financial support for the witches, who were living in isolation from the general community during the Middle Ages, perhaps for their own safety. Fairies were frequently found at games like hurling and football, perhaps the best

PEASANTS LEFT GIFTS
FOR THEM

SPANISH AND ITALIAN
TRADITIONS ABOUT
FAIRIES

opportunity they had to mix with a large gathering of local villagers and townsfolk.

The Russian term *Feya* happens to be remarkably widespread, over geographically distant regions, which is suggestive that their kind had a more ancient origin. The Russian and Celtic words for fairies was one and the same; *Feya*. But, I hasten to add, it is difficult to trace the Russian ancestry of this word to earlier than last century, when Chekhov wrote of them. Accordingly fairies might have been a late development in Russia, or recorded late. In Estonia fairies were called *Fee*. In Iran, the Magian words for “a fairy” were *parik* or *pari*. Some Magian female names reflected associations with the fairies *Parin* (fairy-like), *Parindokht* (daughter of a fairy) or *Parizad* (born of a fairy).

FAIRIES IN IRELAND

Spaniards and Italians probably gave them a slightly different name; *dona de fuera* (Spain) and *donna di fuora* (Italy).⁸¹⁰ They too were implicated in witch trials in both countries. Therefore fairies were pagan witches known equally to Spaniards, Italians, Russians, Celts and Estonians rather than delusional flights of fancy.

FAIRY CIRCLES

There is a degree of uniformity in what the Irish believed about fairies, whom they also termed “*The Good People*”. Fairy Rathes were commonly situated on many farms, but the more eminent rathes in Ireland were found at Dundrom and Shaen Hill.⁸¹¹ In form they were circular embankments surrounded by hedges and briars.⁸¹¹ It was widely held that they should be left untouched for fear of the misfortune that would follow. Left to their own the rathes became thickly overgrown with copses of trees and thorny plants.⁸¹¹ Yet even so many had circles worn into the grassy areas contained within. Violating their precincts after sundown was almost the worst thing you could do; the penalty being a loss of cattle, haystacks and poultry. And that was just for starters. Trespassers could expect to be stricken by injuries and infirmities.⁸¹¹ In spite of the elaborate taboos designed to prevent trespassing on Rathes, there are a number of recorded instances where farmers placed their earthly needs above superstition and began ploughing them away to make more room for crops.⁸¹² Details recorded concerning the destruction of certain rathes on a Kilkenny farm in the year 1850 are of utmost interest.⁸¹² The labourers employed to toil on the site during the potato famine were paid not in money or food, but with excavated animal bones and artifacts unearthed inside the fosse perimeter.⁸¹² These they sold to eager folk after work, and made their living accordingly.⁸¹² During a catastrophic famine it is amazing that the ancient bones of deer and domesticated livestock fetched any sort of price. As it was many were simply living from day to day. Perhaps these artifacts were “holy”, perhaps one could gain intercessions from them, helping some poor soul survive the terrible hunger of the times. A bell, tools and farm implements were allegedly found there too, not to mention a book clasp. That couldn’t be right, could it? After all rathes were pagan, they belonged to the fairies! To admit as much would mean saying fairies had books and bells. A more comfortable explanation is that these rathes were the remains of Christian chapels, or the ruins of a monastery, which had been raised over the top of a pagan holy site, hence evidence for a bell and book. Alternatively they were druidic relics. In contrast to yesteryear, the business of ploughing away rathes continues at a pace on a number of farms across Ireland. In their struggle to plant enough crops to make their farms viable, many modern Irish farmers pay scant regard to what the plough demolishes, to what their starving ancestors thought more of than food. The span of time between the last days of Irish paganism and the 20th Century is extensive. Even so the many superstitious taboos surrounding the rathes continued until comparatively recent times.⁸¹³ Clearly the power that resided in them was metaphysical, active for what might seem to be an eternity.

STARVING IRISH
PEASANTS MADE A LIVING
BY SELLING BONES DUG
FROM FAIRY RINGS

WELSH FAIRIES

The Welsh also believed in the existence of fairies.⁸¹⁴ Until last century it was customary for Christian Welshmen to sell white cattle for bargain prices, just to get them off their property.⁸¹⁴ The rationale for this lay in the fact that they were too similar to the dairy cows of the fairies.⁸¹⁴ Thus, if Murray’s conclusions about the fairies are correct, then, coupled with this Welsh detail, we can guess that pagan priests and priestesses in Britain preferred sacred milk cows that were white in colour. Moreover Catholic Welshmen didn’t want to be seen as party to the old faith by having white cows on their land.

PEOPLE KIDNAPPED AND
TAKEN TO FAIRY LAND

If Irish fairies were part of the pre-Christian religious hierarchy, they probably handed down their arts and religious functions from generation to generation. From this may have emerged a widely held folk belief that fairies kidnapped children and detained them for long periods, even up to a year. Youngsters who had gone wandering about the rathes were particularly vulnerable to abduction. Not infrequently fairies permanently absconded with newly born infants, leaving changelings in their stead. So parents sometimes got stuck with changelings, that is, despicable, unlovable babies, twisted by deformity. Many were ravenous eaters, boorish and aggressive. Where

specific families had a bloodline favoured for this instructive training, but were Church attendees, the fairies might have stolen off with them contrary to a family's wishes, just to keep the old creed alive.

Evidently not everyone was happy with the practice. One Irish formula designed to release a fairy captive went;

*"You sprites and fays who pass your days in care, or milk or flood
Or roam all night in the grim moonlight, through heath, or glen or wood;
In your fairy cells, if my sister dwell or rides with your fairy band,
Let her chain be broke and her fairy yolk, and restored from fairy land".*⁸¹⁵

In one account this spell was efficacious, but the man's sister came back from her bondage, wearing long black hair, and lacerated from repeated beatings.

Building upon the notion of living fairies, the Norse term *Troll* might have meant a "black fairy". In Old-Icelandic a Troll was "an evil being", not of the human race, but it could also apply to "a person who was like unto a troll", perhaps even a living-troll.⁸¹⁶ *Troll-aukinn* meant "one possessed by a troll".⁸¹⁶ *Troll-domligr* was an adjective meaning "belonging to witchcraft", and *Troll-donnr* "witchcraft" itself. There witch sabbaths were seen as troll-gatherings.⁸¹⁶

TROLLS

In Southern Europe witches were called *dona de fuera* (Spain) and *domna di fuora* (Italy),⁸¹⁰ and were associated with royalty. During March they rendezvoused with a prince in a certain grove, and were ordered to heal people. The persons involved were also shape-changers, though they often wore "black or white" and congregated to dance together as a male member of their group played a stringed instrument. Some of their band were "fortune-tellers".

White magical fairy rites in Italy required incense, water and bread,⁸¹⁷ elements that conform to Chaldean white ritualism. In opposition to the black witches these fairies were loving towards all children, and assisted the poor wherever they could, especially in matters of spinning.⁸¹⁸ They sacrificed various animals at their gatherings, which were in turn resurrected by means of a wand.⁸¹⁹ They did so to prevent the world ending.⁸¹⁹ Moreover the head matroness of one Milanese fairy group (*Madonna Oriente*) had the same degree of authority over her secret coven as Jesus had over humanity. This seems to be a reference to her divinity.⁸¹⁹ Such a fairy queen was also associated with other companies of Italian fairies, only there she was called *La Matriona*, *La Sabia Sibila* (ie; a wise sybil, or indeed a Sabeian Sybil).⁸²⁰ The last appellation is interesting considering that an Italian fairy admitted "that they were the Wise Sybil's people who came from a cave that was in the Tower of Babylon, and that the Sybil was King Solomon's sister".⁸²⁰

FAIRIES USED WATER,
WANDS, BREAD AND
INCENSE DURING THEIR
CEREMONIES

That the Italian fairies were particularly connected with Sicily may be significant. If they were Sabeian Chaldeans then Sicily would have been an expected entry point, since North African Arabs had militarily occupied the area during the early Middle Ages. This may account for similarities between certain forms of African and European witchcraft, which might ultimately have originated among the sizeable colony of Chaldeans which Al-Nadim tells us resided in Egypt.

WISE SYBILS

Witches - learned scholars

Witches, like the Slavic *Volkhvy*, were supposed to have maintained spell books and displayed expertise in storm raising, poisons, herbal remedies, surgery, astrology and raising the souls of the dead.⁸²¹

In Russia the pagans had their own library collections formerly known as the *Chernoknizhniki* ("the black books").⁸²² The title could well be a Christian gloss, symptomatic of the demonisation of pagan knowledge during the post-conversion era. But from a dualistic angle it is nonetheless plausible that the black witches themselves referred to their many books collectively by this same title.

PAGANS AND WITCHES
KEPT BOOKS

It is ever so tempting to conclude that these Russian texts were merely Western copies imported there by exotic-book connoisseurs and traders during the 13th-15th Centuries AD. Yet, there is a certain amount of Old Russian linguistic data suggesting the factuality of a pre-Christian intellectual culture in Russia, something confirmed by early Mediaeval Arabs who viewed examples of pagan Rus' script, or saw them in the act of writing. In Part I this literary culture is identified as Magian. The existence of heathen treatises in Russia comparable to those known to late Mediaeval witches, mostly reinforces evidence that witches were beginning to wander out of their Slavic homelands and into Western Europe, bringing with them herbalism and astrology, amongst other things. Russia possessed another class of magician called the *znaxhar'*, and they were wrongly confused with sorcerers and witches at the village level on a regular basis.⁸²³ This particular brand of magician had varied specialisations, serving as a

BOOKS ON HERBAL
REMEDIES

healers, surgeons, poisoners and apothecars.⁸²³ Accordingly they had three sub-classes the *tsvetnik*, the *travnik* and *lichebnik*.⁸²³ As you have already seen, these terms were at one and the same time titles for books used by pagan priests, books containing not only the necessary spells to effect the desired aims of their clients, but presumably written texts and or herbals with pictorial taxonomic descriptions for diverse plants, not to mention the methods employed to extract useful chemical agents from plantstuffs. That they had specialised sub-classes indicates that each field of expertise was fairly comprehensive.

SPECIALISED HERBALISTS

The connection between herbalists and sorcerers is preserved in the Bulgarian word *vrač*, which meant “a sorcerer”, whereas in Russia and Slovenia the same word more properly meant “a folk physician”.⁸²⁴ The situation was not too dissimilar in Western Europe. Remy recounted just how learned the witches were when it came to manufacturing and distilling a broad spectrum of poisons;

THEY MADE POISONS
ALSO

“It has... often been proved by experience that witches also have their own laboratories stuffed full of animals, plants and metals endowed with some natural poison”.⁸²⁵

WITCHES SOUGHT
KNOWLEDGE FROM DEAD
ANCESTORS

Witches sought the council of other witches to obtain their knowledge, witches both living and dead. In 1588 Alison Peirson was convicted of summoning “*the spreitis of the Dewill ... “specialle in the visione and forme of ane Mr. William Sympsoune, hir cousing and moder-brotheris-sonne, quha sche affermit wes ane grit scoller and doctor of medicin”*”.⁸²⁶

Their botanical knowledge was skillfully applied to prepare cures for people and livestock, or make floral wreaths which they draped on trees in adoration of the gods.⁸²⁷

Consider also the “witch” burned in Poland during the renaissance for growing fresh flowers during the height of winter! She probably achieved this remarkable feat through superior horticultural expertise than devilish miracles.

Succinctly the varied scholarly disciplines known to mediaeval witches were similar to fields of knowledge originally contained in the Russian pagan holy books.

Malleus Maleficarum also records that witches were accomplished jewellers, astrologers and astronomers. They were therefore learned in mathematics, for it is difficult to draft horoscopes without such know-how.

Mortal-God

LIVING-DEMONS

Elements found in a number of witch trials show that coven heads were worshiped as living-gods, or, more properly, undeified as Satan or some other devil, to whom the witches offered their children, their wombs and dedicated their lives.⁸²⁸ For instance in 1575 Danaeus wrote of a man-devil-worship stating;

“biddeth he then that they fall down & worship him, after what maner and gesture of body he pleaseth, and best liketh of”.⁸²⁹

MEN DRESSED AS DEVILS
WERE WORSHIPPED BY
THEIR FOLLOWERS

During some Sabbaths, the devil was evidently a man dressed to appear as the horned god. Even more importantly, the coven knew he was a man dressed as a goat and yet that did not in any way deter them from regarding him as an unholy divinity, indeed “Satan” himself. The officiating warlock could at one moment be a mortal, and then after having gone behind cover would emerge in his “unhallowed” costumery, as a Devil-God, a goat-man. When encountered by modern scholars such incidents are normally interpreted as inspired acts of knavery perpetrated on groups of local women. Apparently a rogue somehow convinces a group of women to worship him; an extraordinarily bad theory which cannot explain repeated instances of this kind. As we saw in my discussion of the European heathen saints, Magi professed that man-devils truly existed;

EQUAL TO MAGIAN ANTI-
SAINTS

“There are three kinds of man, one is man, one is demi-man, and one is demi-demon” ... “A demi-man is he who performs the affairs of the worldly and spiritual existences according to his own opinion, self-conceitedly and obstinately; be thy duties and good works by the will of Ahura Mazda, or be they by the will of Aharman, they proceed from him”.⁸³⁰

A demi-demon was human in name only;

“but in his doing of every action he is then like unto a two-legged demon. He understands no worldly and no spiritual existence, he understands no good work and no sin, he understands no heaven and no hell, and even the account which is to be rendered by the soul he does not think of”.⁸³⁰

Religious priest and priestess-worship of the sort found in Magianism is therefore a far more likely scenario. Consider the happenings at Avignon in the year 1581;

*“when hee comes to be adored, he appeareth not in a humane forme, but as the witches themselves deposed, as soone as they are agreed of the time that he is to mount upon the altar there to bee worshiped by them, he instantly turneth himselfe into the forme of a great black Goate, although in all other occasions he useth to appeare in the shape of a man.”*⁸³¹

A PRIEST DRESSED AS
BLACK GOAT

Walking, living, breathing, demon-hags were known too. In 1506 AD, at Schwyz, there appeared a haggish crone clothed in filthy garments, with cloven hooves and an elaborate headdress.⁸³² The mere sight of her brought sheer terror to onlookers, petrified of the pestilence that was sure to follow.⁸³² Contagion did indeed erupt with her coming, just as they had feared. It's taken for granted that such details are historically dubious, after all how can you clarify events more than 400 years old without comparing the veracity of the information with another source? When it comes to fright-mongers ceremonially dressing as goats, linguistics, archaeology and folklore comes to the rescue. Interestingly the Old English word for “a goat” *hæcen* is connected with their words for “an overcoat” or “an overgarment” (*hæcele, hæcele*). Similarly connected is *hakuls* (the Gothic word for “a coat”), *hokull* (the Old Icelandic word for “a coat” or “an overgarment”), and *hokul* (Middle Low German for “a Billy-goat”).⁸³³ For that matter the similarities between the word “goat” and “coat” are present even in modern English, the difference being a voiced and unvoiced initial letter.

A HAGGISH DEMONESS,
DRESSED AS A GOAT

LINGUISTIC EVIDENCE
FOR GOAT-SKIN
OVERGARMENTS

Like the Teutonic sub-family speakers, the Slavs appear to have made a connection between goats and animal skins (which were no doubt worn by people). This is because the Slavic word for “a hide or skin” *Kozha* (Old Slavic, Bulgarian, Slovenian, Serbo-croat, Polish and Czech) is not derived from words meaning pigs, bears, sheep or cattle, but from a word which means a goat, or more specifically “a nanny-goat” (*koza*).⁸³⁴ One might presume at first glance that this linguistic survival is very archaic, originating from one of mankind's most basic needs (ie; clothing). But, it is this special connection between goats, garments and skins that seems peculiar and universal to the Slavic and Teutonic sub-family. Perhaps they all just loved to wear goat skins, perhaps it was only a popular and widely-spread fashion shared by the Slavo-Teutonic nations.

SLAVIC WORDS SUGGEST
THAT GOAT SKINS ARE
TRACEABLE TO THE
IRANIAN WORD AZ

The plot thickens once you examine the Old Slavonic, for here we trace the origin of the linguistic connection that bridges these concepts. The Old Slavonic *yazno* (meaning “a hide” or “a skin”) or *az'no* (“a goat skin”) are cross-linked with other Eastern European and Baltic words meaning “a nanny goat” or “a billy-goat”; the Lithuanian *ozys*, the Latvian *azis*, the Old Prussian *wosee*, the Old Persian *azak*, the New Persian *azy*, the Old Irish *ag*, and the Old Indian *ajas*.⁸³⁵ These words began with an *az-* root, and, on the strength of its state of linguistic preservation, originated in the Old Persian. This *az-* root appears in two Iranian words integrally connected with black Magian demonolatry, namely *Az* (the infernal libation offered to Ahriman, the winged, horned goat of the underworld by the black Magi), and *azi* (which meant “serpents”). We might then satisfactorily conclude that there was once a ritual connection of some kind between nanny and billy goats, animal skins, *Az* (the libation of lawlessness offered to Ahriman), and Ahriman (who besides being a goat-dog, also appeared as a serpent). The connection was linguistically preserved in the Slavic and Germanic linguistic sub-families, and to a lesser extent the Baltic.

INQUISITORS COULD
NOT HAVE FORGED THE
IRANIAN LINGUISTIC
CORRELATIONS

As stated in Part I, the Magian texts were not translated into European languages until the end of last century. Therefore Inquisitors could never have forged the aforementioned linguistic correlations, or the dualistic Magian theology attached to them. Unless of course the “Cohnish” conspiracy theorists wish to believe that the Inquisitors built this “fictitious literary tradition” from elements of Magian scripture then extant in the vernacular in Mediaeval Europe. While I don't discount the possibility that these texts were known there, I believe it is going beyond a balanced academic appraisal to seize on this as the cause of the witch rites, as the basis for portraying a false and seditiously forged Magian presence in Europe. I can just see it now, Islamic jurists called in by the Cardinals to help devise a broad-based conspiracy against seditious little old ladies. Their one demand is to make the conspiracy transparent to later generations, by making it as authentic as possible, by artfully assimilating everything the Arabs happened to know about the Magi. No, these word survivals suggest that diabolical rituals were taking place throughout Eastern Europe (in places like Rus', Latvia, Lithuania, and Old Prussia), and what is more, that they were carried out by black magicians clothed in a goat skin. This would corroborate witness depositions to the same effect, as supplied before many courts during Mediaeval and later witch trials.

AZ WAS CONNECTED
WITH IRANIAN
DEMONOLATRY

Fig 43. 4. Leather face mask, Mediaeval Novgorod, 12th C.

Fig 43. 5. A plausible artistic reconstruction of a Slavic, Baltic or Norse black Magus.

This Iranian religious concept, powerfully connected with the Baltic-Slavic region, had spread to Scandinavia, England, and over the Irish sea into Ireland during an undocument historical period, and into Mediaeval Germany. And what is even more surprising, is that the phonetic similarity between "goat" and "coat" was preserved in the Modern English language. This is probably attributable to English folk "superstition" rather than accidental preservation.

Noteworthy indeed is Murray's assertion that Satan's cloven hooves were, in reality an overboot split-sewn at the front so as to appear cloven and "hoof-like".⁸³⁶ This variety of shoe is actually detailed in a 1608 AD song from France. During excavations at the site of Mediaeval Novgorod, Russian archaeologists unearthed a large array of well preserved early mediaeval leather footwear - boots, mocassins and the like. And what should we find among them ... a strange half-boot lacking any heel whatsoever. It was cloven at the front⁸³⁷ and treated by the leather worker in such a way as to give it the texture and striations one would normally expect to see on the horny outer surface of an animal's hoof. To call it a boot is a misnomer; this was a cosmetic shoe into which the wearer placed only the front part of their foot. Having done so, the wearer would have appeared to have cloven hooves. Moreover two leather face masks were found during the Novgorod excavations.⁸³⁸ One had comical eye slits and a menacing, or even diabolical smile, lined with pointed teeth. The other had horns on it, but the facial expression is less threatening than the first. If these masks had ritual applications, as I believe they do, then they were probably devil-masks of the sort worn by coven leaders during sabbath assemblies, of the sort implied in witch trial documentation.

One trend of witchcraft and devil worship practiced in the East, gained its power not by calling on the might and goodness of God (as in Chaldeanism), but by doing evil. In his 10th Century AD Fihrist, Al-Nadim classified this form of devil worship as 'the condemned system'.

"This system which is condemned (shameful) is the system of the magicians. Those informed about it claim that Binhuikh is the daughter of the Devil, or it is also said of the Devil's son, that she had a throne on the water. If he who seeks this affair comes to her after doing for her what she wishes, she makes a servant of whomever he desires and fulfils his purposes. He is not isolated from her nor from anyone who makes offerings to her from among humans and animals, if he renounces the ordinances of religion and employs that which is repugnant to the mind. It is also said that Binhuikh is the Devil himself. Another person has stated that Binhuikh is seated on her throne, and that whoever seeks to obey her is brought to her and worships her. Almighty is Allah and sanctified are His names! One of them (the magicians) told me that while asleep he saw her with an appearance as when awake, and that he saw around her a group resembling the Nabataeans, black, barefoot, with cloven heels".⁸³⁹

The largest concentrations of this cult supposedly lived in swamplands somewhere in Southern Iraq, perhaps near Basra, and by some accounts had done so since at least the 4th Century BC. According to Al-Nadim this same group was literate. For example the cipher expert Ibn Wahshiya was one of the *Al-Kaldani* (Chaldeans), a Nabataean in fact. What is more, he was responsible for scribing many books about magic, Chaldean idol-making, talesma, agriculture, and medical tractates. Wahsih's were just some of the prized occult texts being eagerly snapped up by naughty Muslims. Residual paganism was as commonplace in Mediaeval Muslim countries, as it was in Christian Europe. Whether in North Africa, Central Asia, Persia or Iraq, many were still steeped in the shunned pre-Islamic pagan religious observances. There is moreover, a suspicious resemblance between the alleged customs of these Nabataeans and the European witches. Consider the Queen of Elphane, the goat costumes, the crime, the inverted ritualism, the black men, the black books. A little too close for comfort.

The robes

Some primary accounts drawn upon by Murray show the devil as a mortal god dressed in goat-like attire, or long black robes with a special belt or sash. Some describe a short or tall (pointy or "chisel-tipped") black bonnet, sometimes with a veil draped down the back and sides and sporting two lengthy ribbons, one hanging down over each shoulder from the back of the headdress.⁸⁴⁰ Such a bonnet would have resembled a certain style of Magian mitre (p. 244). On other ceremonial occasions the black robe was changed for a green, grey, brown or even snowy

white habit. In these instances we find possible evidence that they were Zurvanites, since most of the time they wore black (or grey/ash coloured) robes, and at other times (during “white” ceremonies?) they donned garments of white, or of various other colours. In changing their attire, they signalled a transition from light to dark worship. Compare these uniform descriptions of the coven leader spread across the British Isles, Scandinavia and Europe with the picture of a Magus shown in this rendition of a Persian wall painting.⁸⁴¹ There is a strong resemblance, so much so that one might suspect a factual inter-relatedness between the two modes of attire. Moreover, evidence of Iranian ceremonial dress elements can be found among the Russians and Volga Finns. Other forms of ceremonial dress were divulged during the trial of Agnes Sampson and her accomplices, at North Berwick England, in the year 1590. “The dewell wes cled in ane blak gown with ane blak hat vpon his head ... His face was terrible, his noise lyk the bek of an egle, gret bournyng eyn; his handis and leggis wer herry, with clawes vpon his handis, and feit lyk the griffon.”⁸⁴² A hypothetical reconstruction of such a person is shown in fig 44.1. A more ancient parallel for this sort of costumery can be found in Mesopotamia. Consider the genii in fig 44.2.

At the same series of trials in North Berwick we also hear;

“the devil wes with them in likeness of ane black man ... the devil start up in the pulpit, like a mickle blak man, with ane black beard sticking out like ane goat’s beard, clad in ane black tatie (tattered) gown and ane ewill favoured skull bormet on his heid; hauing ane black book in his hand”.⁸⁴³

Unless both accounts refer to different meetings, convened on separate days, we could be looking at a transformation from a devious-looking black man, into a griffon “devil”. This same “dewell, cled in a blak gown with a blak hat vpon his head, prechit vnto a gret number of them”.⁸⁴⁴ One Swedish witch of the year 1670 wore “.. a grey coat, and red and blue stockings, he had a red beard, a high-crown’d hat, with limmen of divers colours wrapt about, and long garters vpon his stockings”.⁸⁴⁵ At Torryburn the devil wore a pointed hat with flaps covering the nape and cheeks.⁸⁴⁶

In Part I you may recall that Ahriman gave his disciples the garment of Az, the black robe of unholy power that enabled his acolytes to perform maelific witchcraft. We have already determined that Slavic and Baltic terms for a ceremonial goat-skin garment of some kind were probably related to Az, the robe of witchcraft. Slavic and Scandinavian linguistic evidence seems to preserve notions normally attributed to Az, though the two parallel linguistic strains do not specifically connect them with a black robe. The pan-Slavic word *cherniy* (meaning “black”) is related to another Slavia-wide term *chert* (pronounced chort), meaning “a devil” or “the devil”.⁸⁴⁷ From *chert* we get *chernoe slovo* (“swearing” or “blasphemy”).⁸⁴⁷ *Chert* is related to the Russian *chary* (“spells”), and therefore the Russian word for “a cauldron”. Therefore, in Slavia there was a linguistic relationship between blackness, malediction, devils, spells and cauldrons. Now compare this with the Old Icelandic *Harma* “to bewail”, “one is vexed”, and *Harman-liga*.⁸⁴⁸ These are related to the Norwegian *har*, meaning “black”. Consider also the word *Høerr* meaning “a cauldron”. In the light of other evidence suggesting Magian-style traditions in Russia and Scandinavia, the prior-mentioned Old Icelandic words may possess a special significance, indicating that they might have originated from a variation of Ahriman, Aharman. Since we are unable to linguistically tie these Scandinavian and Slavic linguistic conceptual groupings to a black robe, we cannot ultimately confirm that the black robes of the Scandinavian and Russian witches were the robe of Az. Nonetheless they shared similar ideas about an inter-relatedness of blackness and the infernal arts, and in the case of the Norse, these words may have arisen from black Magian Ahriman-worship. I gravely doubt that these concepts are attributable to the Christian era, especially since Norse sagas set in pagan times repeatedly depict their use of maelific magic. But then again, the very existence of these ‘negative references’ in the sagas, has guaranteed that Snorri and other Saga writers would be branded as liars by those intent on fumigating the sagas, to purify away any perception that mischievous, if not abominable witchery was known and practiced by some segments of the Norse community. Save to say, many pagan Scandinavians and Slavs detested these practices also.

The belt or girdle often worn by European witches might have been the *kustik* belt of Magian fame, but could also have been a Chaldean or Brahminic version of the same.

In Christian Russia two notions prevailed concerning the origin of misfortune, one of which maintains that witches were responsible for vexation in the world. The first, as advocated by the Christian Church, was that god himself sent misfortune upon his creations, as a test for those whom he loves especially, or as a chastisement upon

Fig 44. 1

THE DEPICTION OF THE
DEVIL AS A GOAT
SPREADS THROUGHOUT
EUROPE

those who have incurred his wrath.⁸⁴⁹ The second stance presupposes that misfortune, and disease particularly, come from the devil, via his hexing-agents the *kolduny* and *ved'my*.⁸⁴⁹ The source of this latter “superstition” is Eastern dualism, and mostly identifiable with the Magian thought process.

An objective glimpse of the black magicians and witches of Eastern Europe has (perhaps until now) been difficult to achieve. Is it possible to disentangle the factual basis of an account, from what could conceivably be slander by Christian onlookers, the very ones who accused the witches? Can we really believe that a certain number of witches deliberately uttered blasphemies and maledictions, and committed crimes. Can we lend any support whatsoever, to the *Treaty of Christburg's* anecdote concerning a certain Prussian pagan priest *congratulating people for their predatory behaviour; their many crimes and thefts*? The overwhelming implication of the supporting data presented thus far, is that we ought to abandon the common notion that European black witches (dedicated to the worship and service of evil) were purely fictitious.

CRIMES CONGRATULATED

Consider the following title that applied to priests of darkness from Eastern Europe. In the last chapter I discussed the *Garabancias* or *Garabancios*⁸⁵⁰ (the black Magicians of the Magyars and Slavs). The key to understanding them lies in the Gypsy tongue. *Garabancios* is almost identical to the Gypsy word *Garambashimos*, which means “plundering”, “banditry”, “raiding” and “the unlawful acquisition of illicit wealth (preferably by force)”. If these two words are connected (and I believe they are), then we can infer that the black magus priests of Eastern Europe acted as religious intercessors on behalf of all lawlessness, wantonness and crime, which, if I may say so, would have been meritorious in the eyes of Chernobog (ie; Ahriman) their lord and master. This also tallies with the account of the Prussian “black Priest”, and his apparent reverencing of crime.

BLACK MAGICIANS IN
SLAVIA

CRIMINALS AND RAIDERS

According to Adam of Bremen, the Baltic was a notorious haven for pirates, brigands and cut-throats of the worst possible kind. The linguistic correlations quietly concealed behind words for goats indicates that a certain proportion of Baltic piracy was attributable to the religion of Ahriman (the serpent/goat god) and the black witches. As in Rus' these black Magi were probably the ancestors of the “Race of Wrath” first mentioned in the Zoroastrian texts; a nation of “*witches, devil-worshippers and bandits*” expelled from Iran under Emperor Shapur (3rd-4th C. AD).

POSSIBLE ASSOCIATION
WITH PIRACY IN THE
BALTIC REGION

Head-rings

HEAD RINGS

Margaret Murray provided one account of a warlock who wore an iron head-ring while reading his spell book. I am unaware of how prevalent the custom was among the European witches, but before their conversion to Christianity, head-rings were often worn by the Slavs and Alans (the Asii).

CRANIAL DEFORMATION

The use of head-rings, when combined with a host of other features listed throughout this title, will be of some use in detecting Slavic and Alanic witches in European trial documentation. You see, over time the prolonged wearing of head rings caused cranial deformation and elongation. Armed with this knowledge, it should be easy to identify the skulls of head-ring wearers in the archaeological context. Cranial deformation as a cultural practice has already been noticed in Eastern and Western Europe, though there is no common consensus about which race it should be attributed to. In Asia the Indo-European Tocharians deformed the heads of their infants with the aid of wooden planking.⁸⁵¹ Cranial deformations are routinely found in pagan Bulgar graves, and owing to the conical nature of the elongation, it was probably attributable to a head binding, perhaps a turban or mitre. In France it is noteworthy that cranial deformation seems clustered around such sites as Toulouse and Languedoc,⁸⁵² cities largely associated with the heretics.

In some witch accounts the coven's head devil wears a horned headdress, that was presumably intended to give the warlock the likeness of the horned god. Such practices are quite ancient. In the days of Babylon, genii, high-priests and gods were depicted wearing horns. These horns signified the divinity of the wearer, and the number of horns served to indicate the god's relative potency. In Scandinavia horned headwear can be seen on Bronze Age statuettes and Iron Age tapestries, all hand made by pagans. Moreover, a skull dating to 3,000 BC⁸⁵³ has been found in Hungary (Fig 45.1) crowned by a copper head-ring with tiny horns protruding from the front, as in Near Eastern examples. Collectively these finds signify the penetration of the elder Mesopotamian traditions into olden Europe.

Jabbing instruments

By Murray's reckoning bone jabbing instruments were once used by the witches for self-wounding, in order to draw blood⁸⁵⁴ or make the 'witches mark'. The witches punctured and lacerated their flesh with them to feed their familiars, or sign the vow of allegiance made to the black god. Ceremonial blood effusion of this kind bears a strong resemblance to a comparable Chaldean ritual, which required the flow of blood as an energy source for their witchcraft. In the chapter on the Chaldean arts, I established not only the presence of Chaldeans and Chaldean ritualism in Eastern and Western Europe, but their theoretical identification as the black Magi.

India may have been a further source for ritual bleeding. *The Fihrist of Al-Nadim* recorded pagan sacrificial wound infliction current in Mediaeval India, which may have been conceptually similar to the European witch-bleedings. Though it is unclear whether he is referring to blood-letting or ritual suicides in this instance.

*"A (Muslim) man who has been an eyewitness of ... (certain Indian temples that attracted many pilgrims) told me that the amount of blood which is shed beside them is not small in quantity ... perhaps about fifty thousand or more might offer themselves".*⁸⁵⁵

Due to the fact that witch-marks were frequently described as being of a certain animal shape, Murray hypothesised that they were an identification tattoo executed with recourse to these metal/bone jabbing tools.⁸⁵⁶ For want of an historical precedent, initiation marks were found in the cult of Mithra. Bone and metal objects were included among the equipment of the Russian Volkhy Magi, but we cannot confirm that these were jabbing instruments used in blood letting. They might also have been stylii for etching characters onto tablets and bark.⁸⁵⁷

Scourging

Both the white and black Magi appear to have scourged devotees within their respective flocks when they had broken standing rules in matters of coven discipline. In Part I, you learned of the harsh disciplinary floggings inflicted by the white Magi, and how whippings were simultaneously a penitential rite.

If we lend credence to witch trial documents, the scourging of black witches was reserved for non-attendees, the disobedient, or lax cult members reluctant to commit crimes or destroy enough things.⁸⁵⁸ Vicious blows were sometimes administered by the reigning warlock, wielding a metallic scourge or whip, as described in the following 1661 AD testimony from England.

*"We wold be beattin if we wer absent any time, or neglect any thing that wold be appointit to be done. Alexr Elder, in Earlsat, wold be werie often beattin. He is bot soft, and cowld never defend him self in the leist, bot greitt and cry, quahan he wold be scourging him. But Margaret Wiolson, in Auldearne, wold defend hir self fynelie, and cast up hir handis to keep the stroakis off from hir; ... He wold be beattin and scourging us all up and downe with cardis and other sharp scourges, like naked gwastis; and we wold still be cryeing, "Pittie! pittie! Mercie! mercie!, owr Lord!" Bot he wold haue neither pittie nor mercie. When he wold be angrie at us, he wold gime at us lyk a dowge, as if he wold swallow us up".*⁸⁵⁹

The white Magus priests were required by *Vendidad* laws to punish sinners and wrongdoers, with either a leather whip or scourge (like a cat-o-nine-tails, only with more strands). These instruments were called the *Aspae-astra* and the *Sraosho-karana*. Beatings were also a standard token of Roman (and Mithraic) secular and military justice, a practice that probably gained currency owing to Mithraism's eastern roots. In those days they used scourges, whips, clubs and sturdy rods. Since Mithraism gained favour throughout Europe during Roman times, pagan penitential flagellation must necessarily have been found in England, Germany, the Balkans, Gaul and Italy, but went unrecorded. This being the case, the flogging rites of the witches, whether white or black might owe their origins to the former cult.

The witch's broom

Along with the pointy black hat and cauldron, the witches broom constitutes an indispensable item of their stereo-typical paraphernalia. A broom is actually not the correct word for these implements, but a *besom* of heather or birth twigs.⁸⁶⁰ You see *besom* is an English word denoting a hand broom crafted from twigs (such as were once used

in the garden). The same word and this attendant meaning were present in Norway and Holland, but are absent in the Russian. Besoms, I believe, were more properly speaking *barsoms*, that is bound faggots of Barsom twigs. Barsom bundles were important ritual objects used by the Magi during the *Haoma* ceremony, and through their ritual handling by the Magians, magical events could occur, via the intervention of angels and the Good Sun.

In England witches are known to have used besoms during their sabbaths. Obviously their besoms also had a ritual context of some kind. So where witch trials display a proper Magian use of the besom, devoid of any features of desecration, we can reasonably identify the alleged offenders as white Magians. This also suggests that European Magians were using lengths of heather as barsoms, and not the traditional tamarisk, which may have had difficulty growing in Europe. On other occasions European witches reportedly carried *ash branches*.⁸⁶¹ Considering the ash's pride of place in the *Haoma* and *Soma* ceremonies, European witches might have gathered them into barsom bundles. Other varieties of besom are known from English folkloric sources. Those fashioned as birch switches had the powers of witch-expulsion in England, and if used to flog the deranged could unseat and exorcise the demon responsible for their mental illness.⁸⁶² *Rgiab* is the Irish term for "a broom" or "a besom", though I am unaware of its supposed etymology. In the same language we also find a term "besom of destruction", no doubt a magical broom imbued with powers of devastation.

The very notion that some witches rode staffed brooms to and from their witch assemblies strongly suggests an eastern origin for at least one version of European witchery.⁸⁶³ Both Arab and European witches were alleged to have ridden (magical) wooden staffs during their Sabbatical assemblies.

*"In the time of Ibn Munkidh the witches rode about naked on a stick between the graves of the cemetery of Shaizar".*⁸⁶⁴

For argument's sake this can be compared with the 1664 AD case of Julian Cox, during which the accused admitted to encountering three practitioners of the arts, riding staffs ... *"Two of them she formerly knew, which was a Witch and a Wizzard ... The third person she knew not. He came in the shape of a black man".*⁸⁶⁵ A similar practice was probably found in Scandinavia. In Old Icelandic *gandr* meant "a magical staff" and *gand-reith* meant "a witch-ride".⁸⁶⁶ The term *renna gondum* meant "to ride a witch-ride",⁸⁶⁶ or in other words to ride a magical staff. I'd be greatly surprised if the Inquisitors invented this correlation too.

Witch ceremonies *Bonfire days*

BONFIRES

The prevailing view in many quarters is that witchcraft was a hybridised literary tradition formulated by the Church, a tradition which later gave rise to mass hysteria. The other view (which I subscribe to) is that witchcraft was merely a secret or public display of ceremonial ordinances integral to the old faith. A quick look at the bonfire rites of the pagan Celts, Russians and witches indicates that this latter view has far more substance to it. Let us now examine possible correlations between these major festive events to see what can be gleaned from the data.

BONFIRE FESTIVALS

RACE	DATE	FESTIVAL NAME	FEATURES
Witches	2 Feb	Candlemas	Bonfires
Russians	27 Jan - 3 Feb	Volos Festival	Bonfires
Celts	1 Feb	Imbolc	Bonfires and purification
Witches	1 Nov	All Hallow E'en	Remembrance of the dead
Celts	1 Nov	Samain	Edible foodstuffs left out for the dead
Russians	22 Oct	Pryadko	Remembrance of the dead
Witches	1 May	May day	Bonfires
Celts	1 May	Beltain	Bonfires, human sacrifices to Belenos.
Russians	6 May	Volos Festival	Libations on bonfires
Witches	1 Aug	Lammas	Big gatherings of multiple covens
Celts	1 Aug	Lughnasa	Fertility rites and remembrance of the dead.
Russians	1 Aug	Saviour God festival	Cattle are slaughtered, and dead ancestors remembered. Fruits are shared and eaten

SIMILARITIES BETWEEN CELTIC, RUSSIAN AND WITCH BONFIRE FESTIVALS

Academics in the field witchcraft (very often detractors of Margaret Murray) have said that the bonfire rituals of the witches contained elements of fertility rituals, but this might only seem to be the case. As Murray quite rightly points out, *the four main witch ceremonies do not have anything to do with the dawning of equinoxes or solstices* (as you should expect with fertility rituals, since the Sun was the principle emblem of fertility), nor do they coincide with the sowing, or reaping cycles of these phases. That is because witch congregations met in between harvest times, solstices and equinoxes.⁸⁶⁷ Thus the witch ceremonies were probably not directed towards fertility gains in agriculture. Their rites were substantially enacted at times of the year quite distant from the equinoxes and solstices. Because herd beasts were frequently associated with these festivals Margaret Murray deduced, not unreasonably, that the witch bonfires were lit to cause increases in cattle herds, rather than enhanced levels of agricultural produce.⁸⁶⁸ Nonetheless I tend to agree with her assumption that witch bonfires were a manifestation of cult activity, because of concurrences in Russian and Celtic feast days, that included the purification of livestock, specifically cattle. Not only that, but common feasts for the Remembrance of dead ancestors are yet another point of resemblance between the rites of the witches, Celts and Russians. In the Russian tradition these feasts for the dead fell under the patronage of Volos, who was the good shepherd of the underworld, and, among other things, lord of the flocks.

In many regions of Europe May day bonfires were kindled on the heights of hills, hillocks and similarly high ground. They were called *Tein-eigin* (need fires) by the happy throngs of Irish folk, who annually converged around the flaming Beltaine pyres, that consistently drew large crowds until last century.⁸⁶⁹ Yet *tein-eigin* may divulge the ultimate origin of the rite, and explain its pan-European nature. The Irish *tein* or *ten* is apparently distantly related to the Slavic *tepliy*, which is derived from Old Indian words for warmth and heat (*tapati*, *tapyati* and *taptam*), or the Avestan *tapayēiti* “it is warming” or the New Persian *taftan* (“to give warmth”, “to be on fire”, “to shine”).⁸⁷⁰ The Latin *tepeo* “to be warm,” and *tepidus* “warm” possesses the same ancient linguistic genealogy.⁸⁷⁰ Therefore these rites were probably an Indo-European if not Indo-Iranian tradition. The latter option should be given added weight, considering the plausibility of direct Magian contact between Russia and Ireland, which is supported by linguistic and historical evidence (as shown in Chapter I). Beltain-like fire festivals were held in Bohemia, Russia, Germany, Scandinavia, Scotland, Wales, Ireland and Britain⁸⁶⁹ but unfortunately practically all of them do not share an inter-relationship between *tein*. That is despite being equal recipients of Indo-European, and to a lesser extent Indo-Iranian traditions. From details associated with the prior-mentioned bonfire days we can perceive several things.

1. Firstly that the Slavs and Celts had common pagan traditions, especially when it came to bonfires. Various linguists postulated a number of linguistic correlations between words found in the Old Russian and Old Irish. One I myself have noted is the Celtic *Beltain* (“good fire”), which could easily have been an aggregate of the phonetically similar *beliy den’* (Russian “white day”). It’s alluring, but unfortunately linguists don’t correlate the Irish *tein* (“fire”) with the Russian *den’* (“day”). Instead they believe *den’* was cognate with the Irish *denus* (“a space of time”). It is notable that Beltain was the feast day of *Belenos*, because the pagan Slavs also had a major deity called *Byelun* (which was another name for the white god, an embodiment of the fiery Sun).

There is an obvious relationship between the witch fires, and these two far more ancient traditions of heathen fire festival. That they took place on May Day might suggest the presence of Chaldean sun-worship, which took place on May day each year according to Muslim sources, as far away as Harran. In the Babylonian-Chaldean tradition the sun was called *Helios*, a term inherited from the ancient Greek philosophers, prior to which he was called *Shamash*. This detail calls to mind the brawl between St Patrick and some pagan Irishmen, which gave rise to the legendary origin of the Christian Celtic cross. During the fracas, the saint overcomes the power of the pagan sun of the Irish (recorded as *Helios* in the hagiography) by placing the cross of Jesus Christ up to the sky and obscuring it. He curses their sun-worship promising that no good shall come to those who do likewise. If the writers choice of *Helios* correctly reflected *Helios*-worship in Ireland, we might have a correlation with the Beltain May Day fires, and Chaldean sun-worship.

In Scotland and Scandinavia the fire rite had a north-south alignment, and attendees hoped to see the wind-swept flames incline towards the south. Whereas the coming years weather would be bleak if it licked towards the North. According to Magianism and Chaldeanism the North was the devil’s quarters, and this might have given rise to such customs elsewhere in Europe. That *Beltaine* is also transcribed as *Balten*, could lead one to translate it as “a Bal fire”, or “a Baal fire”; yet another potential correlation with Chaldeanism.

The Celts started their Beltain fires using a fire wheel, and in the East several weeks later, on 24th of June, the pagan Russians celebrated Kupala's Eve, during which a fire wheel was rolled down from the top of a hill. There they also generated holy fires using wheels and axles, or wheel spokes. In Part I, Chapter VIII, I identify the Russian practice with friction fires lit by the Magi each year. On both Kupala's Eve and Beltain straw effigies were burned. It has been suggested in both cases that a person or persons were formerly burned on the pyres during the pagan era. For this reason the fire-leaping found in both countries is perceived as a mock burning. However in the Russian festival many attendees jump the fire. I see it as a cleansing and protection rite, rather than a presumed act of human sacrifice.

FIRE WHEELS

FIRE LEAPING

The druids allegedly stuffed this basketry full of living victims, perhaps criminals mostly, though no such record of human kindling appears to have been linked with this feast day in pagan Rus'. It is conceivable that Caesar's account of the Druidic sacrificial burnings were politically motivated and essentially baseless, however a number of Roman authors long maintained that the Druids killed people as sacrificial offerings, penitential purifications, or attempting to divine the will of the gods. If Beltain was totally dedicated to a white god, then it is likely that the humans who were sacrificed would have been serious criminal offenders. But what if there weren't any criminal detainees? In Perthshire it was noted that young lads made the customary bannock bun in the midst of a swamp.⁸⁷¹ It was, according to the authentic tradition found throughout much of Britain, broken into portions, one deliberately blackened.⁸⁷¹ Whoever received the accursed morsel was, as was explained by a minister last century, formerly thrown into the flames as a sacrifice designed to ensure fertility and prosperity.⁸⁷¹ Forensic evidence retrieved from the corpse of the (Iron Age) "Lindow man" bog body confirms that persons were sacrificed in England, anointed for death by receiving a bannock-*lot*.⁸⁷² Blackened bannock bun was the last meal eaten by the so-called "druid prince" ritually killed in the bogs at Lindow, England.⁸⁷² That he had been strangled and bled but not burned indicates that sacrifices were not always burned, as was the usual Chaldean custom. In Lindow man's case he was sunk in a bog,⁸⁷² dare I say a demon-infested bog. Another common practice shared by the Celts and the pagan Russians was a cattle drive, in which herds were guided between two fires in order to cleanse and purify them from disease.

THE BONFIRES IN AGES
PAST

2. Secondly, that the witch ceremonies were very likely survivals of pagan rites, not something seditiously invented by the Inquisition and disseminated to the gullible masses by means of a sham literary tradition.

3. Thirdly, that these ceremonies were not fertility feasts aimed at enhancing agricultural produce, but festivities during which the souls of the dead were revered or remembered, and during which certain gods were petitioned to give increases in flock and herd sizes through the blessing agency of fire.

Esbats and sabbaths

The white Magi believed that holy fire;

MAGIAN BLACK WITCHES
GATHERED NEAR WATER
AFTER NIGHTFALL AND
BEGAN THEIR
WITCHCRAFT

"...struggles with the spiritual fiend, it watches the forms of the witches - who walk up from the river, wear woven clothing, disturb the luminaries by the concealment of stench, and by witchcraft injure the creatures - and the occurrences of destruction, burning, and celebration of witchcraft, especially at night".⁸⁷³

Such were the recollections of the Magi about their enemy the witches. Collecting together what the Magi recorded about them, we can infer that many Mediaeval and later witches attended ceremonies not dissimilar to those of the black Magi. The witches Sabbath and Esbat were the foremost of the regular religious gatherings attended by witch covens throughout Europe. It would seem that these were performed in Russia also.

RUSSIAN BLACK
SABBATHS

Russian Sabbaths are described as having taken place at night, in forests, on mountains, in valleys and swamps, on Wednesdays, Fridays or Saturdays.⁸⁷⁴ Devotees were said to arrive for their hours of debauchery on stolen horses, or bewitched brooms.⁸⁷⁴ As in the West young women (sometimes wearing animal masks) were not under-represented, performing erotic parades or acts.⁸⁷⁴ This frivolity was followed by the rending apart of a sacrifice (usually a goat), so that it was torn into the tiniest pieces.⁸⁷⁴ These morsels of flesh were then strewn around the surrounding landscape, or maybe eaten. There was also much song, drinking and riotous orgy.⁸⁷⁴ This description of a Russian witches Sabbath, therefore contains features with obvious Dionysian parallels, plus other elements

MASKS, ORGIES AND
OTHER REVELRY

which featured in Late Mediaeval and Renaissance sabbaths in Western Europe.

In Finland witches no doubt converged on specific locations. In the *Kalevala* these were called “the grounds of wizards”.⁸⁷⁵ In England witches gathered to perform rites in certain halls and houses, or at particular glens, or on hill tops, in certain woods, or near gallows.⁸⁷⁶ In every case such areas would have been suitable assembly points for white or black witches, on appointed feast days.

At the Guernsey trial of 1617 AD it was divulged that Rocquaine Castle was “the usual place where the Devil kept his Sabbath”.⁸⁷⁷ If it were true, the well-born personages involved would have been playing a very risky game indeed. Sure the castle gave them privacy, but should an apprehended coven member confess, news of their complicity in the ceremonies could have catastrophic consequences.

Elsewhere covens met at silvan locations, usually near water, where a large standing stone of special significance stood.⁸⁷⁸ In France De Lancre observed that they very often performed their rites in the vicinity of some natural water source. According to one Françoise Secretain a certain French woman had “*une infinite de fois au Sabbat & assemblée des Sorciers*”. (trans: “gone to the Sabbath an infinite number of times, and the assemblies of sorcerers”).⁸⁷⁹ Certain witch ceremonies were witnessed by a Miss de Demandouls in 1610 AD at Aix. She stated that at their ceremonies the hags and witches (who she described as “base” and “sordid”) prostrated themselves before Satan,⁸⁸⁰ who was enthroned before them, whereas Sorcerers and Sorceresses (as opposed to witches) merely knelt.⁸⁸¹ The situation was similar in Russia, for according to their folklore *kolduny* sorcerers were thought to have frequently interacted with the *ved’ma* witches, and would sometimes be found attending the witch-gatherings.⁸⁸²

The following information will give you some idea of what took place during the stereo-typical European witches Sabbath, though in truth the precise nature and order of the events would have varied depending upon what form of witchcraft was being celebrated. The references do not necessarily appear in chronological or ritual order, but serve to illustrate some of the more interesting features associated with the sabbath. Just reiterating, only *black witch* ceremonies were convened for the purpose of causing harm and destruction in the world.⁸⁸³ The rites of the white witches were the exact opposite, the promotion of fertility, prosperity, harmony and growth.

There appeared to be no pattern, or rhyme or reason for the black meetings, it was almost totally at the master’s whim and fancy⁸⁸⁴ (perhaps for security reasons, or maybe to add to the chaotic, or disorderly nature of their ritualism).⁸⁸⁵ Esbats occurred at least each week, but only the coven of witches and warlocks attended these particular ceremonies. On the other hand, Sabbaths were a grander affair, and attended by a great many others. They happened on Saturdays (the day of Saturn the Great Maelific), but at these gatherings the witches, warlock and other active coven members brought their families along.⁸⁸⁶

The devil often turned up in his excellent raiment of horns and tail. Sometimes his horns were three⁸⁸⁷ in number, with the central horn formed by a lit candle positioned between the other two. A three-horned crown was found in Ireland,⁸⁸⁸ or on the head of a figure that appears engraved into a Mithraic gem.

The witches Sabbaths (also called the black mass) and Esbats appeared to be a mirror image of the Christian mass, but with the rites performed backwards.⁸⁸⁹ For example, the candles used by the witches were often a replica of ones used during the Christian mass,⁸⁹⁰ and the desired flame for these was to be as dark as possible; blue instead of a glowing yellow. To this end the witches made their candles from substances which would *cause the flame to burn blue*; corpse fat if the sources are acceptable.

When witches turned up at Sabbaths during the 15th-16th Centuries it was the norm that strangers would be present, so much so that the names and faces could often be different on any given day.⁸⁹¹ Since witches became members of the coven only by virtue of hereditary entitlement, this account might tell us that there were large transitory populations of witches moving through Europe at this time. More work will need to be done in scrutinising the primary records to determine whether or not this was the case.

In 1617, Isabelle Bequait’s testimony concerning her involvement in the Guernsey witch assemblies, she mentions that “*at the Sabbath the Devil used to summon the Wizards and Witches in regular order*”.⁸⁹² Coincidentally in the Magian ritual order, wizards assumed their proper ritual post after being summoned into position, in a specific order, by the officiating Magus.

Boasting of wrong-doings, was an all important part of the ceremonial order, and was first item on the agenda. Unlike the Christian mass where parishioners began the service by asking God to forgive and forget their sins,

sabbath attendees had to detail whatever scandals they had caused, in front of everyone present, and in particular their most recent crimes. As the tales continued, often amid congratulatory applause, the Master (a black Magus personifying Satan), would record the best of these offenses for prosperity in his little black book,⁸⁹³ which was a sort of honour roll of crime. Perhaps he did this to brag about his followers to colleagues in other provinces.

SOME COVEN
GATHERINGS HELD IN
CHURCHES

From Western accounts we learn that these groups sometimes rendezvoused to perform ceremonies inside a Church,⁸⁹³ or Church graveyard. There they evidently performed desecration rites of some kind. Assemblies weren't always so secret either. Many Christian parishioners were incensed that witches should be meeting in their Church, and yet others might have involved themselves in the proceedings. It is difficult to say whether or not these events normally transpired with the full knowledge of the Parish priest, but in the notorious case of the Bishop of Coventry, he was a willing participant, if not ringleader of the event. If a typical parish priest lacked any involvement with such a group, and news of the nocturnal requisitioning of his church came to his ears, then he would have stepped up vigilance, with the aim of catching them. But if it was known that he was fully aware of what took place, and sanctioned their doings, then you would have been looking at collusion, a "punishable" heresy. If the priest was regarded as having complicity, it would have earned him a trip to the wooden stake, and certain immolation under the Dominicans, especially if this took place in Germany from the 13th Century onwards.

PRIESTS OFTEN UNAWARE
OF THESE MEETINGS

OTHER PRIESTS JOINED IN
THE CEREMONIES

Near the beginning and ending of any Mediaeval Sabbath was a frenetic dance, performed by all present. This dance took the form of a gyrating circle, a dance plausibly linked not only with the *Dance macabre* or "Dance of death", which became exceedingly popular across much of Europe during the Middle Ages,⁸⁹⁴ but the *Smrtno Kolo*, the Dance of Death as performed by the Slavs, especially in the Balkans.⁸⁹⁵ The Slav dance pre-dated that of the witches and the mediaeval variant of the death dance. Following the dance the coven leader cleansed his flock by mercilessly beating and scourging whomsoever had done good or insufficient evil toward others.

THE WITCHES' DANCE

THE RECITAL OF
BLASPHEMIES

The liturgy which followed consisted not of holy words, but blasphemies and profanities from the very depths of the abyss.⁸⁹⁶ Just some incantation used by the black witches were;

Basque: "*Har, Har, Diable, diable, saute icy, saute la, ioue icy, ioue la: Et les autres disoyent sabath sabath*"⁸⁹⁷

On Guernsey we find *Har, Har, Hou, Hou, danse ici ...*

They seem like gibberish, but they would have had some meaning to the initiated.

In one infernal sermon, the devil vowed that the servants of the Evil One would obtain even greater recompense in Satan's kingdom, than what Christians could ever expect.⁸⁹⁸ In the year 1692 AD an English protestant Reverend was indicted for leading a coven;

A KING IN SATAN'S
KINGDOM

*"He was accused by Eight of the Confessing Witches, as being an Head Actor at some of their Hellish Rendezvouses, and one who had the promise of being a King in Satan's kingdom, now going to be Erected..."*⁸⁹⁹

*"In 1670 we heard that the Devil appeared in the shape of a Minister, in the copper mines of Sweden, and attempted the same villainous apery"*⁹⁰⁰

WITCH FAMILIARS

Then there was another lapsed preacher "*a warlock who formerly had been admitted to the (Protestant) ministrie in the presbyterian tymes, and when the bishops came in, conformed with them. But being found flagitious and wicked, was deposed by them, and now he turnes a preacher under the devill of hellish doctrine; for the devill at this tyme preaches to his witches really (if I may so term it) the doctrine of the infernall pitt, viz. blasphemies against God and his son Christ*"⁹⁰⁰

To perform the necessary ceremonies Satan habitually appeared before his coven in macabre regalia, often dressed as a horned black dog, or cat (in some cases described as a lion), but every so often appeared as a bull, or extremely rarely as a horse, bear or deer.⁹⁰¹ This might explain a preponderance of familiars with these forms. In 1646 AD Francis Moore of Huntingdonshire was given "*a little blacke puppy*" by a witch, who warned her that ;

*"she must keep that dogge all her life time; and if she cursed any Cattell (cattle), and set the same dog upon them, they should presently dye"*⁹⁰²

THE DEVIL AS A GOAT

According to Murray, the Devil normally appeared as a goat, but in the primary texts which she had used, this was confined only to France. The horned black dog of the witches (although lacking wings) can be associated not only with Ahriman, but Chernobog of the pagan Russians.

In France the title “*Master Persin*” applied to a head witch, a name frequently implicated by French detainees.⁹⁰³ Rather often he appears as a ringleader, with a gloss of “the devil”.⁹⁰³ Nevertheless Persin might really have signified “a Persian”. Thus Sabbatical assemblies in Lorraine and other such locales might have been led by a master Persian, probably a Magus of some kind. If the term originated in the Mithraic mysteries, then it applied to a high-ranking adept, who had reached the third highest level of initiation within the brotherhood.

MASTER PERSIN

While translating French and Italian witch trial documents researchers ought to exercise care upon finding the word *alano* (Old Italian), or the Old French and later Provencale *alan*, which meant “a dog” in both cases. I say this because the texts might actually be describing Alans appearing before witch assemblies, perhaps even as dog-men. The Alans (more properly known as Asii) originally hailed from Iran where they were considered a Royal race.⁹⁰⁴ Being of Iranian stock their name probably originated from the Avestan word *Azi* (pron. *asi* meaning “a serpent”). If such an etymology is tenable they are identifiable as a faction of devil-worshippers found in Magian scripture. We know that Alans were devotees of the Iranian god of justice Mithra, and “sword-worshippers”. Despite the white nature of these beliefs, Ahriman-worship was a legitimate part of Mithraism. While serving in the Eastern Roman legions many joined the rank and file of the Mithraic warrior brotherhood, though they were probably members of the Mithraic cult long before enlisting. Alans might therefore have constituted some of Roman Mithraism’s most hardcore members.

THE DEVIL AS A DOG

At the end of their twenty years service, many Alans were settled in other regions of the Roman Empire, in areas we know as Scotland, England, Gaul and Bavaria. Vernadsky mentions that Scotland and Ireland were apparently big destinations, places where you’ll also find the common names Ross and Alan. A special fondness for these locations is traceable to their ties with the Celts and Picts that developed in remote antiquity. These Alans also lived in areas where Christians (by the testimony of Adam of Bremen) coincidentally subjected the corpses of their kin to defleshing by birds during funerals (Scotland), wore kilts (known in the East), observed rampant clan Aryanism, and played bagpipes like those played in the Balkans and India. Alanic colonies in Western Europe might also explain the similarity in shape-changing customs shared by Ossetian werewolf and the European witch shape-changers.

One thing is certain the Celts had a very special relationship with them. For this reason the Roman military in Britain developed a policy of stationing Alans along the testy Pictish frontier. And it would appear that they were able to dwell there relatively free from molestation. For instance a Alanic weapons manufacturing centre in Northern Britain was discovered to have been unfortified. This directly contrasts with level of fortification required by Roman settlements.

Accordingly trials in which covens were allegedly ruled by a devil in the form of a dog (Alan), might sometimes be better viewed as mithraic ceremonies, where the head man was an Alanic devil-priest, who may or may not have dressed as a dog.

When not garbed as Satan, the head warlock of a coven, appeared *resplendent in black robes complete with black conical mitre*. He was often *seated in a high place* (perhaps a high seated pillar), which could be either a rostrum or throne,⁹⁰⁶ and, I believe, a manifestation of their conviction that he reigned in the heavens. In the Chaldean rites the head priest also ascended a rostrum.

THE DEVIL’S ROSTRUM

The food served at the Sabbath banquet which preceded the orgy, consisted of a libation most foul. For it reeked of rancid and fetid juices, perhaps derived from animal excrement, or corpse fluids.⁹⁰⁵ Likewise the food was of a deliberately appalling nature, the meat rotten and black looking.⁹⁰⁵ In many instances pies were said to have been made from the corpses of babies, or the putrefying remains of exhumed bodies.⁹⁰⁵ Without too much difficulty these seem to be preposterous stories, concocted by people crazed by their religious zeal, but little could we know that these rites possessed an *actual religious basis* according to the scriptures of the Magi, which detailed, in caustic remarks, the damnable ceremonies of their foes, the black Magi. Aspects of the European witch pies for instance resemble those of the heathen Chaldees.

DISGUSTING,
PUTREFYING FOODS

ABOMINABLE RITUALS

Consider the parallels between European witches and the black Magi found in the following Magian text;

DEFILING WATER WITH
THE DEAD

“The one who, with a godly intent, with a godly wish, goes astray from the ways of God; the one who with a godly intent falls into the ways of the Drug, is he who offers up for libation water defiled by the dead; or who offers up libations in the dead of the night.”
O Maker of the material world, thou Holy One! Can he be clean again who has eaten of the carcass of a dog or of the carcass of a man?

*Ahura Mazda answered: "He cannot O holy Zarathustra! His burrow shall be dug out (the black Magi were supposed to have lived in burrows), his life shall be torn out, his bright eyes shall be put out: the Drug Nasu falls upon him, takes hold of him even to the end of the nails, and he is unclean, thenceforth, for ever and ever".*⁹⁰⁷

One faction of European "Waldensian heretics" called "the People of the Little Keg" demand attention.

THE PEOPLE OF THE
LITTLE KEG

*"And there are some of these people here in Piedmont, and five inquisitors already went there to remove this curse, and they have been done to death by these evil people. And no Inquisitor can be found who wants to go there and take care of it. And do you know what these people are called? They are called People of the Little Keg. And they have this name because once a year they take a small child, and throw it from one to the other until he is dead. When he is dead, they grind him into the dust and put the dust into small kegs, and then give every one to drink from this keg; and this they do because they say afterwards that nothing they do can be seen. We have a friar in our Order, who was one of them and has told me everything, that they also have the most dishonest ways that I think anyone could hear".*⁹⁰⁸

THE DEVIL'S BREAD

This "Luciferian" sect appears to have appended itself to the mediaeval pietist Waldensians, creating what was essentially a heresy of a heresy! In a ceremony resembling the Chaldean or Paulician rites they made pies and cakes which contained the flesh of an infant, often their own child. Of further interest was an admission by these Luciferian Waldensians, that once a person had eaten of these cakes, they were part of their cult for ever. In other words not only did the behaviour of these Luciferians conform to standard black Magian criminality, but they seem to have been cognisant of black Magian teachings regarding cannibalism. As stated in the above Magian scripture, eating human remains eternally consigned one to the infernal kingdom of Ahriman.

BLACK MAGI HATED THE
SUN

The white Magi advocated that one's good deeds would not be remembered by god, if believers did not pay homage to the sun each day, whereas for black magians the sun was an object of unimaginable hate, "the worst thing that eye can see". In a more practical sense black Magians probably shunned the light, never daring to even look at it. Perhaps this explains why witches wore pointy wide-brimmed hats or dark cowed robes, to keep the sun out of their face, and shield their bodies from its shining rays.

MONGOLS SAW PAGANS
GOING UNDERGROUND
TO ESCAPE THE SUN

Take the Mongols (ie; predominantly Buddhists, Animists and Nestorian Christians), who recalled their strange encounter with a queer northern race, in the land of Gog and Magog (ie; Russia and its environs).⁹⁰⁹ The inhabitants of an area near the mountains (the Urals?), *fearful of the rising sun*, habitually descended beneath the earth into caves so as to escape the noise which accompanied its rising, *and did not re-emerge until it had progressed onto the other side of the zodiac*.⁹⁰⁹ While in their labyrinthine shelters, they made a cacophony of noise using drums and other musical instruments.⁹⁰⁹ These troglodyte-like folk re-ascended to the surface only after sundown. Upon first reading the tale I felt that the Mongols had merely encountered heathen miners in the Urals. But news that these northern pagans hoped to escape the very sunshine that warmed an otherwise inhospitable Arctic landscape, *is only perfectly understandable within the dualistic philosophical framework*. Otherwise it is probably a fairy story.

THEY PLAYED MUSIC
UNTIL THE SUN WENT
AWAY

WIZARDS WHO LIVED
UNDERGROUND

Strangely though, Russian peasants and woodsmen speak of the *Albastiy*, *Lopastik* or *Lobastiy*, evil forest beings who appeared after nightfall accompanied by gales and storms.⁹¹⁰ In the Urals these *Albastiy*, *Lopastik* or *Lobastiy* were called *Lopastiy*, which is a reference to them being diggers of the ground, perhaps miners.⁹¹⁰ Finns supposedly shared the same region with the *Mos-chum* wizards, who lived underground and were like gods.⁹¹¹ Might these collective testimonies and folk recollections be evidence for a race of sun-hating nocturnal black magians and their underground cave dwellings?

SORCERERS WHO
OBSCURED THE SUN

The Old Russian *morochit'* ("to make things turn dark") is related to the Ukrainian *morochiti* ("to daze", "to stupefy", "to deprive someone of their mental faculties"), the Bulgarian *mracha* ("to bring gloom or clouds over something", or "to obscure", "to black out", "to darken"), and similar Polish, Czech and Slovenian words meaning "to become gloomier" or "to darken".⁹¹² From these correlations come the Russian word *morokun* ("a sorcerer"). Since these terms come from *mrak* and *morok* they are therefore related to the name of the demon Morok (see p. 310). Thus a *morokun* was evidently a sorcerer who served and invoked the ungodly, sun-obscuring powers of Morok. Perhaps *morokun* was simply another name for the *mos-chum* and *lopastiye*.

There is another more earthly explanations for their digging besides mining. One mediaeval Arab account tells us the more northerly Slavs made semi-subterranean housing, to escape the severity of the winter. These houses

consisted of an excavated living area roofed by turf to provide adequate insulation against the appalling cold. Therefore these dwellings outwardly resembled mounds.

The white Magi believed that dining was a ritual act. As holy as food was, one had to be clean, in a proper state of spiritual grace, and possess the correct interior disposition, in order to consume food. Food was never ever to be eaten without blessing it, nor was one to speak while chewing. Ravenously scoffing a meal was abominable, even more so if it was consumed in the dark. The maltreatment of food at meal time gave vitality to the demons. Succinctly what we call bad table manners, were for them an act of devil-worship. Contrary to this the black Magi would have wanted to sustain the demons, by eating unworthily, just as Masha (the precursor of the damned) had once done. In following European witch rite we find a version of black grace at meal time;

*“We eat this meat in the Divellis nam. With sorrow, and sych, and meikle shame; We sall destroy hows and hald; Both sheip and noat in till the fald. Little good sall come to the fore Of all the rest of the litle store”.*⁹¹³

Accordingly the witch-Satan consecrated (or should I say desecrated) beers or wines, meat (usually beef), milk, blood, and a baked loaf or cake which was normally blood red, but it might also be tough and black.⁹¹⁴ Meat was boiled in the cauldron, and all present ate of it. These cauldron rites may have been a variation of *Yasna IX:II* and *Yasna VIII*, the rite for sharing meat from the cauldron. At other times the cauldron was boiled by the black priest and tipped all over the ground. From Magian scripture we know that pouring the sacred *Haoma* or *Myazda* on the ground (even one precious drop of it) was one of the worst imaginable acts of defilement. It fed the demons, and unleashed the powers of Ahriman, the father of all demons.

During Sabbaths some mediaeval witches drank from a chalice, termed the “black chalice”.⁹¹⁵ Magianism might be a point of origin for their ritual chalice. The white Magi drank blessed *Haoma* to the Creator from a golden chalice. But, conversely, Ahriman, is recorded as having his own special brew, which was the embodiment not of life, health and prosperity, but death, destruction and harlotry. The name of this evil libation was *Az*.

In Europe, there was at least one recorded incident in which witches emptied a whole cauldron of milk upon the earth. This was evidently a black Magian desecration rite in honour of the demons, actioned by a repugnant outpouring of milk, contrary to the due ceremonial. In typically white Magian fashion Finns believed that milk should be saved from harm. The *Kalevala* divulges Finnish attitudes toward the unholiness of milk-stealing or abuse:

*“Many they are, and evil, who make milk go lost ...the herd-gift going to waste”. “Few they are, and good, who save milk from loss”.*⁹¹⁶

The Finns also recognised that cauldrons had infernal uses. Another line from the *Kalevala* read;

*“I’ll shout for a pot from the Demon, in which the blood will be boiled, and the gore will be heated”.*⁹¹⁷

Throughout Estonia it was widely believed that vexing beer with noxious creatures and throwing the ale into a victim’s residence brought on the malign power of witchcraft.⁹¹⁸ Among the indictable Finnish witchcraft offenses we also find shape-changing, the crippling or vexing of oxen, crop trampling, homicide and the extinguishing of hearths with beer.⁹¹⁸ As with the accounts of the Western European witches, the Russian witches ate the meat of cattle plus bread at their festivities.⁹¹⁹ Cattle sacrifices need not have been acts of black witchcraft either. In some trials the ceremonies of the white witches were probably mistaken for black rites, as in the following instance from Britain:

*“We killed an ox, in Burgie, about the dawning of the day, and we brought the ox with us hom to Aulderne, and did eat all amongst us, in an hows in Aulderne, and feasted on it”.*⁹²⁰

In not a few cases, members of the devil’s Russian and Western European congregations were banned from bringing salt to the Sabbath, nor was it to be eaten by them at any time. I think this prohibition can be traced back to the Magian eschatological view that humanity would not eat bread and salt (which if we draw a parallel with the Russian custom of *Khlebosol’stoo*, meaning hospitality) with their meals during the last times, before the destruction of the world. This could be prima facie evidence that black Magian witches were attempting to invoke the “millennial reign” of the Black God by putting an end to the white Magian (and Russian) food offerings that represented hospitality toward guests. By promoting those classic elements of Ahriman’s rapacious destructiveness and defilement, which the Magi foretold would become universally widespread just before the end of the world,

they would be helping to bring on his kingdom. This might be the intended meaning of a statement connected with the 1692 AD indictment of a leading English coven member; *"who had the promise of being a King in Satan's kingdom, now going to be Erected..."*⁹²¹

At the conclusion of the Christian mass the priest imparted a benediction (special blessing) on the parishioners urging them to be holy, whereas at the black mass the entire congregation had to "kiss Satan's arse", or diverse body parts of his choosing before disbanding.⁹²² Presumably if there was such a religion, we might find common religious terminology for the word "arse". Consider that the Russian word for an "arse" or "arsehole" is *zhopa*, which is connected with the word *zhupa* (meaning "a hole"). These are related to the Old Icelandic *gopi*, which meant "an orifice", or "a mouth", and the Anglo-Saxon word *cofa* ("a hole").⁹²³

POISONS HANDED TO THE FAITHFUL

The sabbath's leading devil often dispensed poisons and herbal remedies to the faithful before the assembly parted. Armed with a veritable arsenal of death (in the form of packets of poison) they were well able to bring vexation upon the world. For example a Frenchwoman accused of witchcraft at roughly the same time as Jeanette Huart, gave the following replies to the High Justic of Sugny,^{923a} free of torture (thus amounting to a free admission of guilt);

THE TRIAL OF A FRENCH WITCH

Q *If it is true that the devil ... advised her to kill Nicolas Pierret, her husband?*

A *It's true*

Q 23 *If the devil didn't give her poison for killing her husband?*

A *Yes, in a little potion*

SHE ADMITTED TO POISONING TWO VICTIMS

Q32 *Following on from question 31 in which she admits poisoning one Bertholet by lacing his beer. "If besides she didn't kill the child of Bertholet, shortly after the mother?"*

A *Yes, but doesn't know anymore what kind of powder*

The tried 14th Century Toulousian witch Catherine Delort confessed many things that conform to happenings purportedly enacted during Sabbatine assemblies - *"she worshiped the he-goat and served his pleasure ... at that loathsome feat. Corpses ... were eaten"* and *"all manner of revolting liquids were drunk and there was no savour in any of the food"*.⁹²⁴ Her statement, extracted by means of the torture, was supposedly corroborated by additional trustworthy witnesses. *"She made hail fall on the fields of her enemies, caused their whet to rot by means of a pestilential fog, and damaged the vineyards with frost"*.⁹²⁴ Additionally she is alleged to have slain some of her own relatives (to gain an inheritance), and many head of stock on adjoining properties.

THE DEVIL DRESSED AS A DOG OR GOAT

In Milan, Italy, in the year 1608 AD, Guaccio wrote of an Italian witch sabbath. The same classic features of demonic ritual inversion that one finds in the Magian texts, France, Finland, England and Russia are present. *"The Devil presides over the meeting and is seated on a throne, clothed in fearful goat- or dog-skins"*.⁹²⁵ After having adored him, the attendees were seated for a devilish banquet *"so disgusting"* that even a starving person would not eat it. *"In a filthy cup the Devil pours out wine for his guests which is like black and rotten blood"*.⁹²⁵ Human flesh was on the menu, and other fare, but this was not to include bread or salt. *"Each meal is blessed by the Devil with blasphemous words, according*

to which Beelzebub is declared to be he who creates, gives and conserves all things".⁹²⁵ The Devil's guests always complained about the failed and unfulfilling nature of the meal,⁹²⁵ which is not so surprising. Next they began "dancing in circles, always by the left (ie; the wrong way, or anti-sunwise)".⁹²⁵ Lastly attendees stood with their backs facing each other to "sing very obscene chants" and "have intercourse in a filthy manner".⁹²⁵ The filthy intercourse mentioned for this sabbath was a form of sexual inversion "copulation from behind or with demons, sodomy, promiscuity, incest and homosexuality".⁹²⁵

So sexual abuse was probably another feature of the witch rites. In accounts relating to copulation with the devil, Murray noted some common features that continually arose in witness depositions. The devil's penis never emitted semen, it was cold, and very painful because it was big, bigger than any man. Murray suggested the use of an artificial phallus, notable for its size and coldness. Therefore, she theorised, the man-devil had sex with the female witches using an inanimate object; perhaps a prosthetic penis.

We need look no further than ancient Mesopotamia and India for comparable cult objects. The stone phallus (Fig 49.2) is of Babylonian origin and was worn strapped to the body. It is unclear whether the Babylonian male in this ritual copulation effigy (fig 49.1) is using a prosthetic penis, or the real thing. I incline to the latter view.

For example two Aulderne women who allowed the devil to penetrate them, confessed that his erection was "heavie lyk a malt-sek; a hudge nature, verie cold, as yce".⁹²⁶

Meanwhile there was a religious custom in pagan Scandinavia, whereby the penis of a deceased horse was sliced off, and evidently used as a "dildo" to amuse slave-women, as evinced in an old poem, which reads: "Slave-girl, for you this volsi (horse's dick) will be none too sluggish between your thighs".⁹²⁷ As bawdy as this saga account may be, we learn that the Norse phallae fulfilled a deeper religious need beyond simple eroticism; there was actual homage paid to it. This is reminiscent of the linga worship found in India, though there the phallae are made of polished stone. It would seem that Norsefolk revered these "big plonkers" not because they came from horses (whose flesh was holy and forbidden to Christians), but due to their respectable size. Norse penis-worship might be symptomatic of the *linga* rites expounded in the *Agni Purana*, though in the East, lingas were lengthy smoothed stones rather than fleshy ones pruned off with a knife. If the Norse Volsi and Indian *lingas* possessed a similar ancestry, pagan Norse phallus worship might have been the survival of an ancient custom first brought into Europe with the Indo-Europeans.

"(The votary) should worship the linga with this (formula) since Siva dwells in the Linga for the sake of conferring his favour ... he is the conferrer of virtues, desires, wealth and emancipation".⁹²⁸

Those ungraciously negligent of their duty to venerate stone phallae risked losing earthly boons.

The witches mandatory spiritual state was unspirituality, a form of "civil and religious" apostasy that saw them severed from god and the general community.⁹²⁹ A French woman from Savoy admitted to attending a sabbath in 1477, celebrated by persons of both sexes. There they renounced Christianity, danced "backwards" and feasted on wine, "bread and meat" in the Devil's name.⁹³⁰ While he appeared as a black man (perhaps a negro), he later "changed his appearance from that of a man into a black dog".⁹³⁰ At a certain junction in the ceremony the fires were extinguished and they departed well-schooled in causing harm to the greater community, as their master the devil required.

There is also linguistic and anecdotal Saga evidence (referring to the pre-Christian era) for the black rites in Scandinavia. These arts were referred to as *ergi* in the Old Icelandic, meaning "lewdness", "lust", "wickedness", and "devilry".⁹³¹

One witchcraft researcher Robert Rowland states "More recently it has been argued that, particularly since at least some of the accused clearly did believe they had done what their confessions said they had done, we are faced with a system of belief that cannot be evaluated in terms of present-day standards of rationality".⁹³² Like Murray, Robert Rowland maintains that these features arise with some regularity in diverse trials across many European nations. He adds that since in these cases, the defendants admitted to the same, "the underlying uniformity demands some explanation".⁹³³ Bravo!

Desecrations

ERGI, RITUAL INVERSION

Desecration was a major religious ordinance not only for the Mediaeval European witches, but the Zandiks, the devil/daeva-worshipping astrologer scientists banished from Persia. The rationale behind ritual desecration is linked with the Iranian eschatological view, that the primary role of the denizens of the counterworld, was the destruction and defilement of all things holy, be they plants, animals, people or sacred objects. Through their desecrations they would strike punishing blows against the Creator. Polluting or molesting milk, *Haoma* or holy meals would be amongst their greatest victories whensoever performed.

"Mashya (the first woman) went forth and milked a cow's milk and poured it out towards the northern quarter (Ahriman's lair); through that the demons became more powerful".⁹³⁴

According to Zoroastrian law, if the *Haoma* or *dron* rituals were performed improperly in a temple or grove, it did not feed the gods their sustenance. Should serious errors be made in the execution of the ritual *outside of the Holy of Holies*, then the power of the entire meal was given over to the demons.⁹³⁵ *Dinkard VII* highlighted the demonic nature of ceremonial irregularities.⁹³⁶ Their precise form varied, but extrapolating upon Plutarch's commentary, we know that *Drons* were desecrated, and the holy *Haoma* poured into pits or bogs by the black Magi with the aim of giving vitality to the demons and their master, the prince of demons. Witches are known to have poured porridge into the

OF LIFE

Fig 50. Medieval depiction of the devil and a hare stealing milk from a cow.

ground, stole milk (a major component of *Haoma*) and desecrated the Eucharist (which once consecrated was regarded in the Church's ancient teachings as the body of Christ himself).

Later Iranian witches bestowed demonic gifts on their masters, after the manner of Masha. Like a "hussy who spills anything after sunset, or who scatters a morsel of food to the north, at night."⁹³⁷ In the district court of Parnu Estonia in the year 1641 AD, a peasant wife was accused of cursing wedding beer with snakes.⁹³⁸ The breed of Estonian witchery she practiced involved the desecration of beer with serpents, toads and other noxious pests.⁹³⁸ But in this particular instance it might be an especially vicious act of ritual inversion. This might harken back to Vainamoinen's steadfast oath "Never in this world, from this day forward, shall vipers drink our beer, worms our malt drinks".⁹³⁹ The great Finnish hero Vainamoinen made this stern declaration after noting the world's loss of beer, for until his intervention the serpents were drinking up all the beer, and the goodness with it. In England and Ireland, according to folk superstition that has survived into the 19th Century, it is believed that trouble will arrive whenever milk is spilled.⁹⁴⁰ Indeed the old saying "don't cry over spilt milk" probably harkens back to a time when a person would cry in grief for having done so accidentally.

Christian rites were also being desecrated by the devil-worshippers. The high-born dame, Lady Alice Kyteler was tried as a witch in 1324 AD. In her home investigators found;

"a Wafer of sacramental bread, hauing the diuels name stamped thereon in stead of Jesus christ".⁹⁴¹

Concerning the devil-worshippers Pope Eugenius IV reported that;

"... news has reached us ... that the prince of darkness makes many ... partakers in his own fall and damnation. ... They sacrifice to demons, adore them, seek out and accept responses from them, do homage to them. ... In their sorcery they are not afraid to use the materials of Baptism, the Eucharist, and other sacraments. ...".⁹⁴²

PROFANING AND
POLLUTING THE WHITE
RITES WAS OF UTMOST
IMPORTANCE

Centuries later we have the trial of Godfrey at Aix.⁹⁴³ The magician allegedly poured consecrated wine on his followers in the name of Lucifer, in order to promote fertility among them.⁹⁴³ Wine, beer, cakes, bread, and more especially milk, were foodstuffs shared by witch covens of the Late Middle Ages and Renaissance period, and even by their animal familiars which were kept at home, as in the following account from 16th Century Essex;

"Elizabeth Bennet acknowledged that she had two "spirits, one called Suckin, being blacke like a Dogge, the other called Lierd, being red like a Lion. Suckin this examinat saith is a hee, and the other a shee. Many tymes they drinke of her milke bowle. And when, and as often as they did drinke of the mylke: The Examynate saith they went into the sayd earthen pot, and lay in the wooll".⁹⁴⁴

THE DESECRATION OF
CHRISTIAN SACRAMENTS

People took precautions against milk stealers very seriously. For instance archaeological excavations in Scandinavia have even yielded a well preserved wooden lug which was clamped over the teats of milking cows to prevent milk being stolen from their udders.

One Russian tradition maintained that witches suffered extreme torment the moment cow's milk started to boil.⁹⁴⁵ It's a seemingly meaningless detail, but considering the existence of Magianism in Rus', and that one of the most glorious and victorious moments in the *Yasna* rite was the boiling of the sacred cow's milk in the cauldron to make *Haoma*, it is hardly surprising that black witches felt pain. In Russian folklore, Slav witches were as preoccupied as their Western counterparts with stealing milk and destroying nature.⁹⁴⁶ Remembering that porridge was very holy to both the Magi and the Aryans, what then can we make of a story from Russia last century concerning a witch who sought to invoke a deathly frost designed to wither all of the surrounding vegetation. She suspended herself upside down as she recited a spell and then buried a container filled with porridge in the ground at the foot of a crucifix. The story recounts that the plants did verily die the next day.⁹⁴⁶ An old tale it may be, but it is a tale that contains all the essential features of dualistic magical ritual. By suspending herself upside down she was inverting herself, and pointing herself in the direction of the counterworld, which was home to the subterranean demons. She then concealed the crucible beneath the earth, where presumably the beasts of the underworld gathered to feed on the offering, after having clamoured upward towards just below the surface, from the farthest recesses of the abyss. The earth would have been defiled by their very presence, hence the death of the plants. But the demons most likely acted in response to her incantation, and proceeded to kill off the plants growing in the vicinity by the agency of frost. Alternatively the raucous and knavish demons of the clouds descended from the heavens to exterminate the plants with their inventory of chilling winds and vortexes. Are these correlations a coincidence, an enduring folk superstition, or were there people in Russia who understood (and were performing) black Magian ritual lore even as late as last century?

Russian witches gathered in robes, *without a belt on*, and with dishevelled hair.⁹⁴⁷ From the perspective of white Magianism, this was a forbidden mode of dress. Sometimes they wore nothing. The bellicose Lemminkainen confirms the lack of belt in Finland, saying; "*Witches have already bewitched me ... three Lapps ... naked upon an outcrop without belt or clothes*".⁹⁴⁸ He also spoke of their wizards' knives and "*witch-arrows*".⁹⁴⁸

As in the West we know that Russian (black) witches not only held their own orgiastic ceremonies, but they entered into Churches at certain times of year to bring unholiness to that which was holy.⁹⁴⁷ It is a common Russian folk tradition that during the Christian Orthodox Eucharistic service the witches did just about anything they could to disrupt mass, and especially sought to touch the priest as he was celebrating the service.⁹⁴⁷ By outraging all present with these acts they gained magical powers. If we examine their behaviour in a dualistic context, the act of defiling a priest by their touch at such a solemn moment would have been a real bonus. Moreover during the Orthodox Easter mass (arguably the most important feast day of the Orthodox Christian calendar), witches slotted themselves in among the congregation with cheese in their mouth (it was and is forbidden for Orthodox believers to eat dairy products in the lead up to Easter).⁹⁴⁷ At a crucial point in the mass, at the very instant the priest uttered *Khristos Voskres* (Christ has risen) the witches in the congregation turned their backs on the iconostasis (the panel of icons at the front of the Church) where the Eucharist was.⁹⁴⁷ Amongst the faithful, who had undergone a solemn month-long fast, you could hardly get a more brazen act of defilement during a ceremony celebrating the resurrection of Christ.⁹⁴⁷ As we know from Russian folk tradition they rarely attended Christian services, but saved their most outlandish efforts for the holiest of feast days.⁹⁴⁷ It was at those times that they were not afraid to enter the nave in small to largish numbers. Desecrations could also be performed by word of mouth, by cursing and swearing, by maledictions and obscene language. The Russian word *rugat'* is found throughout much of Slavia.⁹⁴⁹ It differs marginally in form, variously meaning "sneering" and "mockery", "profanity", "desecration", "blasphemy".⁹⁴⁹ A pre-Slavic etymology is impossible to find in this case. Another verb meaning "to swear" was *chertykhat'sya*, which naturally arose from the word *chert* ("the devil").⁹⁵⁰ This admirably illustrates a once widespread belief that obscenities were a demonic form of blasphemy and cursing.

Grain stealing

WITCHES, VAMPIRES AND
HAGS STOLE GRAIN

In the Caucasus, Russia and Scandinavia, grain stealing was a recurring theme, the glorious aim of the witches, warlocks (the black Magi), vampires and hags who made war on the werewolves, during the night battles.⁹⁵¹ They went to great lengths to steal grain, milk and sucklings, partly because the way of Ahriman dictated that it was right to plunder that which did not belong to you, to covet with great jealousy that which others had worked hard for, and make it your own. Goods misappropriated in this fashion became for Ahriman an unsurpassed delight. To achieve his robbing and vexation Ahriman had many agents in the world, both man, beast, insect and weed, who inflicted such untold misery upon the farmers who laboured in the fields, that he hoped that they would give up on life altogether, stop sowing and reaping, walk off the land, and swap over to his ways.

AHRIMAN SENT THIEVES
INTO THE WORLD

With this end in mind, Ahriman had witches and blankets of evil pests savage the fields, rape the verdancy of the pastures and lusciousness of the crops, which the good farmers had toiled over on behalf of the people. Ants were some of the worst offenders;⁹⁴⁹ white onlookers would have been mortified as they saw trails of them carrying the sunny, golden wheat grains down through holes into the underworld. It was the duty of the white families to eradicate these creatures, with utmost vengeance, wherever they were encountered. For instance killing a single mouse (who ate much grain, and defiled the remainder with their defecation), was considered as efficacious to their spiritual warfare against the devil as slaughtering four lions.⁹⁵²

INSECTS ROBBED THE
FIELDS, AS DID MICE

For the devil's witches, it was absolutely crucial that grain be stolen, because of the number of demons that were slain by its very growth and milling. Consider the following Magian scripture, which is of utmost importance, not only in understanding the war between fertility and infertility, and the night battles, but man's relationship with food, which was a holy gift, to be consumed with all holiness;

GRAIN REAPED AND
GROUND CAUSED
TORMENT TO THE
DEMONS

When barley is coming forth, the Daevas start up; when the corn is growing rank, then faint the Daevas hearts; when the corn is being ground the Daevas groan; when wheat is coming forth, the Daevas are destroyed. In that house they can no longer stay, from that house they are beaten away, wherein wheat is thus coming forth. It is as though red hot iron were turned about in their throats, when there is plenty of corn".⁹⁵³

So dire was the need to thwart grain or fertility stealing, that the shape-shifting white Magi, in the form of wolves and other animal guises went out into the fields each year to war against the witches and demons during the night battles, of which I shall shortly speak.

SOME WITCHES TRIED TO
DESTROY A FLOUR MILL

Even more enterprising English witches were charged with trying to destroy flour mills.⁹⁵⁴ My guess is they did this to prevent untold torment to the Daevas, to halt the grinding of grain on any large scale.

Another form of grain theft was achieved by a black magic rite, that resulted in the transference of a neighbour's well sown crops to a witch's paddock. In their stead, the neighbour's crops were to be replaced by noxious plants and weeds;

OTHERS PRAYED THAT
BRIARS WOULD THRIVE
AND CONSUME A
NEIGHBOUR'S FIELDS

"The devil held the plewgh, and Johne Younge in Mebestowne, our Officer, did dryve the plewgh... and all we of the Coeven went still up and downe with the plewgh, praying to the Diuell for the fruit of that land, and that thistles and brieris might grow there".⁹⁵⁵

Stories of magical grain stealing are found even in ancient Rome. Sometimes accusations had more to do with jealousy than magic. There "*Gaius Furius Chresimus, a freed slave, obtained much greater returns from a smallish farm than his neighbours derived from vast estates. As a result he was very unpopular, as if he had been spiriting away other people's crops by magic. He was indicted ...*"⁹⁵⁶ but escaped conviction by providing sufficient evidence that his success was due to his tireless labouring in the fields and good farm management, rather than witchery.

Oboroten' Fights of the field battles

In Europe stories about shape-shifters have been in circulation for ages, at least since Herodotus first mentioned them in *The Histories* in the 5th Century BC. But just who were they, and what was their importance to the simple folk who kept their memory alive even until this century?

From the very outset, Christian priests had difficulty accepting the truth of claims made by witches, that they could physically transform into animals. Clerics and notaries thought it an impossibility, utterly illusory, and so they felt:

*“We must endeavour clearly to understand what actually happens when nowadays by the power of the devil, wizards and witches are changed into wolves and other savage beasts. The Canon, however, speaks of some bodily and lasting change, and does not discuss those extraordinary things which may be done by glamour”.*⁹⁵⁷

Over the next few pages you’ll discover what sort of things took place once a pagan adept began a career of shape-changing. The Latvians, Finns, Prussians, Norsemen, Lithuanians, Slavs, Serbs, Croats, Rumanians, Magyars, and Alans all identified persons capable of metamorphosing, who adopted the shape and mannerisms of animals, and on whose shoulders fell the inescapable duty to fight annually in a war between the demons of loss and infertility, and the guardians of the fields, spiritual soldiers of creation.⁹⁵⁸ *Oboroten'* (the Slav word for shape-changers) fell into two distinct categories; the whites which championed creation, and the blacks which destroyed life and new growth.

During the time of the Winter solstice, and especially for the twelve days that followed, the souls of the revenant dead, the black sorcerers and witches were roused from the underneath lands. Emerging from their hideouts they interspersed throughout the surrounding settlements and countryside, to spill out into the fields where they hoped to destroy the crops and livestock for the coming year, especially cattle.

European shape-changers were very often werewolves, but this was not the only form they could take. In the Saratov region of Russia shape-changers are said to have become pigs, cattle, dogs, goats and “monsters”.⁹⁵⁹ Despite considerable intervening distances, many of these altered states also feature in Western European witch trials where evidence of shape-changing was tendered before the courts. In Russia men might appear as a bear, whereas women could mutate into a sow.⁹⁶⁰ They could also become horses or birds.⁹⁶⁰ Magpies were another favoured form for Russian shape-changing witches.⁹⁶¹

In *Yngvar's Saga*, the Norse Christian Svein, encountered a sizeable group of heathens, led by a man who threw bewitched apples at him.⁹⁶² Fearing further acts of sorcery, Svein launched an arrow at him and it “struck the man on the nose with a sound like the shattering of horn, and the heathen threw back his head, and they could see then that he had a beak like a bird”.⁹⁶² Here the saga seems to be describing a pagan of some standing, who wore a bird mask. Admittedly the saga in question does have a number of historically dubious features, though it is difficult to say that this necessarily invalidates the reference to a bird-headed pagan. Consider figs 52.2, 52.3 and 52.4. They were manufactured by heathen craftsmen, and depict bird-headed men. Clearly these were not the result of a conspiracy theory!

Sometimes these animalian forms could be ascribed to infernal powers. To effect a transformation Slav *Kolduny* allegedly held conversations with devils which, once harnessed, gave them preternatural abilities.⁹⁶³ They could then metamorphosise into smoke, cats, dogs, horses, snakes, pigs and the like, and consequently gained power over nature and mankind.⁹⁶³ In a typical field battle *oboroten'* warriors on the side of creation speedily pursued an array of harm-working demi-human combatants. Normally they did so astride animals and other devices such as broomsticks. With iron whiplashes or diverse armaments in hand, they sought to vanquish the “black” invaders during the night battles,⁹⁶⁴ who in turn strived to slay those from the lands above.

Sometimes if the forces of good were strong and well prepared, they made the journey down into the underworld, in force, seeking to head off the infernal invasion of the fields and pastures before it snowballed into crop damage so severe that crushing famine would result.

There the forces of good and evil collided in mortal combat. Whether in the underworld, or on the plain of bounty, the white combatants wrestled flowers and grain from the hands and talons of the despoilers and foreign

witches, then had to make their back to the safety of their village. All the while they were hunted down by groups of vengeful black troops, who frequently discharged their bows. If struck by an arrow, the white *oboroten'* were assaulted by disease.

At this point speed was of the essence; transport capable of carrying home the victor and armfuls of farm produce was crucial to the success of the operation, for their animal spirit had to make it back to the safety of their body in the lands above. Down in the slimy warrens, bogs and black forestry of the underworld, the upper world *oboroten'* fled for their lives on hounds, rams, billy-goats, swine, swans, sows, ducks, household implements, farm implements, hares, oxen, cauldrons, or mortar and pestles, carrying barley, buried wealth, calfs, foals, fruit

Fig 51.

Fig 51. 4

blossoms, fruit, lambs, millet, rye and wheat. The mortar, pestle and cauldron are interesting vehicles for the other worldly transportation, perhaps linking the journey with the drinking of *Haoma* or some other libation of similar efficacy. These points also link shape-changing with witchcraft, a point which has long been recorded in *Malleus Maleficarum*, which utterly condemns the belief that people actually undergo any form of physical transformation.

Consider at this point the night or field battles which are said to have taken place between the *Narobonchun* (black shamans who worshiped demons) and the *Milaraspa* (white shamans) of the Far-eastern Lamaistic shamanistic tradition.⁹⁶⁵ There are substantial phonetic parallels here with the *Garabancias* (the black priests of Slavia) and *Rasdi* (white priests, most likely derived from the white Magian title *Raspi*) of the pagan Slavs. This probably indicates that the *Narobonchun* (Lamaistic Bon-po shamans,⁹⁶⁵ who were party to the armies of demons that munched on the corpses of men) were the recipients of Iranian black religious practices, via the agency of fugitive white and black Magi who originally fled into their territories. Otherwise the Slavic *Garabancias* might be

ASPECTS OF EUROPEAN WITCHCRAFT RESEMBLE ASIATIC SHAMANIC PRACTICE

the ancestors of Turkic “black shamans” who had previously invaded Iran from Turkestan, bringing their devil worship with them, as was alluded to in *Bahman Yast*. Whatever the case there are compelling reasons to associate the European night battles with the Magian-shamanistic spiritual conflicts that took place throughout much of Inner and Outer Eurasia.

In Europe night battles particularly occurred wherever Slavs, Balts and Alans have lived, but they are also attested to in the Far-East. One of the most graphic and worldly descriptions of a night battle came from a geographer accompanying Turkish troops stationed in Ossetia (the homeland of the Asii) in the late 17th Century, who unwittingly saw hostilities conducted during the “Night of the Vampires”.⁹⁶⁶ An “army of darkness” flew into the air riding on various objects or animals, and came to attack the crops of a particular Abkhazian village.⁹⁶⁶ Most interesting of all was the appearance of these witches and vampires.⁹⁶⁶ Each of them had fire issuing from their body orifices.⁹⁶⁶ Each had menacing teeth and nails, as well as lengthy dishevelled hair.⁹⁶⁶ According to his testimony (apparently many Turkish soldiers also saw it), the local Ossetian (ie; Alanic) villagers sent some of their people out to fight against them.⁹⁶⁶ Several combatants began grappling with the vampires as the infernal beings attempted to suck blood from them.⁹⁶⁶ The following morning the battleground was littered with the debris of the engagement; piles of corpses, both human and animal, plus the remains of the flying equipment used by those warriors who had fallen from the sky.⁹⁶⁶

Shape-changers are also recorded in Muslim countries, where their mystics often donned horned headdress.⁹⁶⁷ A similar, though less phantasmal, tale is related by Al-Masudi concerning an army of 50,000 ruffians and brigands who entered into battle against the Caliph’s forces stark naked, or wearing only ridiculously inadequate armour made from woven grass and matting.⁹⁶⁸ Whether or not this event was in any way connected with the field battles of pagan Europe is debatable. A portion of their army (presumably some of their leading fighters) were seen mounted for battle, riding on the backs of other men. I find it strange that elements of this *brigand army* chose to go into combat against well armoured and seasoned Islamic troops riding men as though they were horses.⁹⁶⁸ The people in question were either clinically insane, on a suicide mission, or there was some other more elaborate reason for this behaviour. Familiar nonsensical tales are to be found in accounts of the witch trials of Europe where witnesses recalled having observed witches riding fellow-coven members like horses, complete with bridle in the mouth.⁹⁶⁹

Finnish epic mentions witch-horses presumably ridden at such heroic moments. They were either fiery chargers, or mounts crafted from inanimate objects.

The Kalevala speaks of the hero Vainamoinen riding a magical “stallion of straw”, and goes on to describe the method of its manufacture, including a mane of hemp. Having mounted up he rode off to Northland/Darkland where the “cabins of the dead” existed, and where *Louhi*, the hag of the North dwelt.⁹⁷⁰ According to Finnish lore, “*man eating, the fellow-drowning places*” were to be found at those cabins.⁹⁷⁰ This steed he addressed as “O good horse of *Demonland*”.⁹⁷¹ It wasn’t easy to reach these raucous assemblies, since a demon-made serpent blockaded the northern route to Darkland. Even so, it allowed Lemminkainen to pass so he could attend the “*Northland feast, the sly crowd’s revels*”. While there Lemminkainen asked if he could wed one of the hag’s daughters.⁹⁷² The answer was in the affirmative if only he could accomplish certain preposterous feats. And so he resolved to do her bidding. With reins in hand Lemminkainen went to capture a mystical horse. He went “to a green acre, a holy field’s edge: there he seeks the horse”.⁹⁷² But it was a steed all fiery, and he beseeched the Old Man of the sky to bring rain upon its fires.⁹⁷² After the rains fell he tamed the demon horse, and placed the bit in its mouth. ⁹⁷² Later, after having been granted one of the hag’s daughters in marriage, Lemminkainen returned to the North astride “a black stallion, as on a ravening wolf, on a raven bearing prey, upon a flying griffin”.⁹⁷³ To once again attend the gatherings, Lemminkainen dressed for battle, and ordered his underling to “harness up the battle foal for me to go to the feast, to the Devil-crowd’s revels”.⁹⁷⁴

Murray suggested the use of hallucinatory concoction to add a mystical dimension to their rather earthly gatherings. To embark on their witch-riding the sorceresses “made use of all sorts of Instruments, or Beasts, of Men, of Spits and Posts”.⁹⁷⁵

“Before they are carried to their meetings, they anoint their Foreheads, and Hand-wrists with an Oyl the Spirit brings them and then they are carried (off) in a very short time”.⁹⁷⁶

MAGIAN FRAVASHI
ACTIVITY INCREASED AT
THE END OF WINTER, FOR
SOME TEN DAYS

A more than plausible reason for the mid-winter night battles can be found in the Magi's eighth book of *Dinkard*, for it mentions:

*"the coming of the righteous guardian spirits (white Fravashi saints) into the worldly existence occurs, in those ten days which are the end of the winter and termination of the year, because the five Gathic (intercalary) days, among them, are for that purpose; the cessation of that same, as well as its continuance. The great needfulness of the guardian spirits of the righteous in the ceremonial and obeisance of these ten days, and their abundant gratification therefrom; their vexation from want of welcome and want of obeisance; and their ascent from the worldly existences. The extreme importance of liberality and bounty at that season; and the proper duty of the priestly authority of a district in assisting and interceding for the poor, for the sake of teaching from the days devoted to the guardian spirits".*⁹⁷⁷

Accordingly, in those ten days after the solstice (or indeed Christmas) there was immense Fravashi activity. From witch-lore and trial documentation we can guess that some were obviously still mortal, while a great many others were spiritual emanations freshly arrived from heaven, to intercede for the righteous, and to participate in the ceremonies dedicated in their honour.

The religious pretext for field battles might also be discernible in Saint Augustine's *The City of God*. Allowing for the intrusive commentaries, they are still a veritable storehouse of information on the pagans.

EVERY SO OFTEN GODS
FOUGHT BATTLES IN THIS
WORLD

"They (the pagan gods) were seen joining battle among themselves, in a wide plain in (Roman) Campania, shortly before the citizen armies fought their shameful battle in that very place (during the civil war) ... before long many people reported that they had seen two armies fighting for several days ... and found ... the tracks of men and horses". During this incident the gods had displayed *"their battles before men's eyes not only in stage-plays but even by enacting them in person on the field of battle".*⁹⁷⁸

This anecdote reveals that Romans certainly believed that the gods came down to earth at certain times, to fight it out in the fields. It was a kind of spiritual drama. But Roman theatrical performances were more than just acts, they were religious offerings;

IT WAS PROBABLY A
RITUAL DRAMA ACTED
OUT, BUT PEOPLE MAY
HAVE BEEN KILLED

*"... they (the gods) did not merely desire such plays to be acted, but to be dedicated and consecrated to them, and solemnly presented in their worship".*⁹⁷⁹

Thus field battles might have been an annual re-enactment of a former battle between the gods of light and darkness, or as is more likely the case, a contribution to the ongoing theatre of operations. Call it divine drama if you like, but participants were getting killed. Ritual dramas were not just specific to the Romans, but were conducted by the Greeks, shamans, Indians, Buddhists and Magians.

In the Orient it wasn't mass entertainment, but a religious event organised by a priestly class well able to alter the course of events in this world, by the estimation of their followers. For this reason the annual wolf battles of the witches might therefore be seen as engagements profoundly connected with the final apocalyptic event, with the black and white cosmic warriors standing shoulder to shoulder against the troops of their god's enemy.

In support of this there are certain aspects shared by Siberian shamans and the shamans of the following "witch cults" found in Southern and Eastern Europe, in particular the importance of the birth caul in determining one's shamanic calling.⁹⁸⁰ Different races allotted varied names to the shape-changers.

DIFFERENT NAMES FOR
SHAPE-CHANGERS

<i>Garabancias</i>	The Slavs
<i>Benandante</i>	Wolf-men in Italy
<i>Burkudzauta</i>	Ossetia in the Caucasus
<i>Kresniki</i>	The Balkans
<i>Zduhachi</i>	The Balkans
<i>Taltos</i>	Hungary
<i>Mazzeri</i>	Corsica

One group of pagan-Christians caught in the midst of the persecutions was the *benandanti*, who the inquisitors first encountered in Italy in the year 1575.⁹⁸¹ The *benandanti* believed they could shape-change at certain times of the

year to fight the evil witches.⁹⁸¹ Considering many aspects of their cult I perceive them as dualistic animists, whose traditions were shared by shamans in Eurasia. The *benandanti* went to war versus the maelific witches four times each year. Having been called to arms by a golden "angel of heaven" by the sound of its beating drum, they mustered together on the field of battle.⁹⁸¹ They stated that the good angel "stood near our standard".⁹⁸¹ Their weapons were of sorghum, which, being a cultivated crop, would truly be harmful to witches and demons under Magian theology. Troubled by an Inquisitor's repeated and disbelieving questioning, a nervous *benandanti* detainee stated "Our angel is handsome and white, and their angel is black and and is the Devil".⁹⁸¹ Elements within the group were confused by aspects of their beliefs.⁹⁸¹ While one might think that this indicates the implausibility of *benandanti* testimonies, as to their membership of the said society, for reasons which I shall soon explain, confounded details should be seen as natural in the 16th Century. Even asking members of a typical Christian congregation what their faith requires and professes, you would still yield varied accounts. Yet this could not dismiss their very existence.

Reports of a race of shape-shifters, who could assume the shape of wolves goes back as far as 500 BC, at the very least. Herodotus explained that Neurian wolfmen inhabited the Northern parts of Scythia.⁹⁸² They had their own princes, and followed Scythian customs.⁹⁸² These tribesmen, he claimed, could change into the shape of wolves at particular times of the year.⁹⁸² Sadly he says little else that could yield further details concerning their history, or how long they had inhabited these parts. Out in woodland Scandinavia, and Baltic hinterlands this supposed fable about dog-men proved to be anything but. In Ratramnus of Corbie's letters to Rimbart the matter of the dog-headed men in Scandinavia arises.⁹⁸³ These the 9th Century AD missionaries termed *Cynocephali*. Were they fictitious Rimbart had asked, or were they men who needed to be converted?⁹⁸³ Rumour had it that the dog-men dwelt in villages, wore clothing, tilled the soil and kept livestock.⁹⁸³ That the pagans themselves knew of such persons is corroborated by a number of Germanic and Scandinavian literary references, in addition to pictorial renditions of fully clothed and shod dog/wolf men on a variety of plaques and memorial stones. In at least one case they are shown in juxtaposition with animals, signifying that the artist wanted to contrast a wolf man with an animal. It would not be out of place to suggest that the *Cynocephali* wore a canine or vulpine facial mask.

After all masks have been discovered in both Scandinavia and Russia in high states of preservation, and dating to the Middle Ages.⁹⁸⁴ In Novgorod the masks were not animal skins slipped over the head, but purposefully made strap-on leather plates with hideous countenances (complete with rows of jagged teeth, or horny stumps).⁹⁸⁴ The wearers probably terrified those unaccustomed to seeing them. Country folk entertained similar customs. The European mummers, who were much condemned by Catholic and Protestant preachers alike, have until this century gone about at Christmas-time dressed as goats, stags, bears and the like, often draped with bells.⁹⁸⁵ They made their way into the villages seeking food and alms, but wished misfortune on those stingy enough to turn them away empty handed.⁹⁸⁵ That such recent ceremonies have an historical precedent is proven by renditions of men dressed as animals in mediaeval illuminations.⁹⁸⁵

Wolf/dog men were certainly not confined to the Nordic and Teutonic sphere. Wolf or dog-headed folk lived in Slavia too. The name of the Wendish Wilzi folk meant the "wolf-people" or "the terrible-people".⁹⁸⁶

As to be expected, the Mongols met with various kinds of shape-changers during their conquest of European Russia, the Urals and Western Siberia. Much further eastward, near Tibet, they encountered wolf-people who consumed the bodies of their kin after they had died.⁹⁸⁷ West of this place the Mongols chanced upon men who lived on steam that emanated from boiling meat, and others known as the dog-heads, and yet others who were supposed to have had the hooves of oxen.⁹⁸⁷ Other seemingly ridiculous tales were recounted, but they bear features of witch shape-shifting frequently associated with European coven gatherings. Filled with anxiety over their humiliating defeat at the hand of Prester John, and fearing that they would be executed for their failures upon returning home, the fleeing Mongols came to Nochoy Kazdar (the land of dogs), where, we are told, the local menfolk assumed the guise of dogs.⁹⁸⁸ These dogs raged against the Mongols in huge packs, a veritable army of them, and inflicted a heavy toll on the ragged Western horde.⁹⁸⁸ On his mission to the Great Khan, the Franciscan monk De Bridia learned that Mongol horsemen had also chanced upon dog-headed men in the (Ural?) mountains near Russia.⁹⁸⁹

Even later, in 1557, the German ambassador to Muscovy (Sigmund Von Herberstein), noted for the disbelieving reader that he clearly saw, with his own two eyes, a group of dog-headed men standing about chatting by the side of the road.⁹⁹⁰ They otherwise dressed in peasant-style garb, that is, in the characteristic white smock of the Slavs.⁹⁹⁰

SHAPE-CHANGERS COULD
BE MALE OR FEMALE

The academics who mustered at a 1985 symposium into the conversion of the Norsemen speculated that *Cynocephali* were members of a military brotherhood once extant in pagan Scandinavia.⁹⁹¹ Certainly there is linguistic and historical/folkloric evidence for such a finding, not only there, but in Russia, Germany and the Baltic zone.

ESTONIAN TRIALS

For the Balts wolf-men were a fact of life. But in the Baltic-Scandinavian region though, werewolves were not necessarily of the male sex. Such data may reflect an additional tradition of lycanthropy, or dispel the theory that they were members of a pagan military brotherhood.⁹⁹² In the opening years of the 17th Century there were 18 recorded trials held at Meremoisa (Estonia).⁹⁹⁰ Some 31 individuals were prosecuted for shape-changing. Thirteen of them were male, and the remaining 18 female.⁹⁹⁰ During the trial defendants admitted that they donned wolf pelts when they transformed into wolves, and kept them concealed under stones when they were not being worn.⁹⁹³ As they bounded through the forests by night they hunted small game.⁹⁹³ They operated in groups, moving about after dark as a wolf pack might.⁹⁹³ The prosecutor was keen to establish whether these werewolves went hunting in a purely spiritual form, or whether they did so in the flesh. The legal implications of this are obvious; if it was a physical event, then obviously the individual had potentially perpetrated crimes in the flesh.⁹⁹³ Under examination by the prosecution they admitted undergoing a mental transformation, becoming for all intents and purposes a wolf. That is despite the fact that they had before hand dressed as wolves to complete the effect. One of the accused admitted finding a leg wound the following day, inflicted by a dog encountered during his nocturnal roaming.⁹⁹³ As to how they began their career as werewolves, two themes emerged. In one case a woman was given roots to eat, and in another a young man's shape-changing was inaugurated by receiving a pelt from a black-clad man.⁹⁹³

THE WOLF MASTER

Baltic Livonia (a region supposedly festooned with werewolves even as late as the 16th Century) has yielded some very interesting accounts of demi-Christian beliefs personally held by werewolves. Having witnessed the image of a limping child around Christmas time, the werewolves collectively mustered for war, and came out of the wilderness, driven forth by a master carrying a whip (consider the parallels here not only with the Magi, but the flagellant movement which appeared in Europe during the early Middle Ages).⁹⁹⁴ The master was so deeply loved by them that they could not envisage any greater lord in this world than him. He forced them to cross over a river, which parted at the sound of his whip.⁹⁹⁴

BELIY VOLK, LEADER OF
THE RUSSIAN
WEREWOLVES

This wolf-leader might have been a Russian for such a figure appears in Eastern Slavic folklore as *Beliy Volk* (the White Wolf), Lord of wolves, werewolves and the beasts of the forest.⁹⁹⁵ The inclusion of *Beliy* ("white") in his title is, I believe, indicative of his good, rather than malign disposition.

The act of fording the river (presumably situated in Estonia) was viewed as crossing over into the lands of the dead. From the Magian perspective this could equated with traversing of the river of molten metal which separated hell from paradise. On Judgement Day, it would cause indescribable torments to the unholy.

The Livonian werewolves however crossed the river without even getting their feet wet (something a Rus' Volkhv claimed he could do).⁹⁹⁴ They professed to be the ultimate adversaries of the witches, a point which typecasts them as holy beings and champions of the good, rather than ferocious predatory beasts.⁹⁹⁴ One Livonian werewolf, called Thiess, spoke frankly about his lycanthropy while held in detention by the Christians, and as a result was sentenced to a mere 10 strokes of the whip by the authorities.⁹⁹⁴ This is a far cry from burning at the stake, and at one time it is highly likely that werewolves were tolerated as a nuisance, and not always subjected to the severe chastisements that witches could expect.

Stories of the Estonian werewolves call to mind Gerald of Wales's tale from the border of Co. Meath and Ulster in Ireland.⁹⁹⁶ Similar reports of Wolf-people persisted there from ancient times, through to the 13th-14th centuries.⁹⁹⁶ Oral lore of this genre continues to be gathered by Irish folklorists. According to Gerald's testimony a travelling priest and his young companion were approached by a werewolf petitioning him not to be afraid.⁹⁹⁶ To allay the priest's trembling heart the werewolf entered into religious discourse.⁹⁹⁶ To his great surprise, the wolf professed Catholic ideologies, and divulged that he was from Ossory, thereby condemned by St Patrick, as his ancestors were, to transform into wolves for seven years, as a penance.⁹⁹⁶ Still he was perplexed and disturbed how a wolf might converse like an ordinary person. The werewolf hoped to receive the sacraments from him, further pleading for his help in giving the last rites to his she-wolf companion.

*"the priest, full of fear, followed him ... In the hollow of the tree the priest saw a she-wolf groaning and grieving like a human being, even though her appearance was that of a beast."*⁹⁹⁶

The wolf bitch cried out for mercy, beckoning to be consoled by *extreme unction*. She seemed pious enough, but the cleric was visibly upset by the mere suggestion he should administer the last rites to a wolf.⁹⁹⁶

*"To remove all doubt he (the man-wolf) pulled all the skin off the she-wolf from the head down to the navel, folding it back with his paw as if it were a hand. And immediately the shape of an old woman, clear to be seen, appeared"*⁹⁹⁶.

Only at that point was the priest sufficiently convinced that it wasn't sacrilegious to heal her spiritual suffering. Upon completion of the sacramental sealing, the she-wolf was once more fully clothed in her suit. Shortly thereafter, the wolf-man peeled away his costume too, allowing the priest to witness his flesh and blood humanity. As thanks for the holy man's kindness, the werewolf guided them across the unfamiliar terrain and bid them farewell on their journey.

The Brotherhood of the Green Wolf was yet another European pagan-Christian fraternity associated with lycanthropy, and perhaps distantly related to druidic traditions peculiar to their green-clad Ovates.^{996a} The Green Wolf, the head of their brotherhood carried the cross, and wore green robes, as well as a tall conical hat (like the Magi), with a green cowl or mantle draping down from the bonnet and over the back and shoulders. He performed "mass" amid bell-ringing, and led the circular fire dancing which was carried out by garland clad participants especially on 23 June. After midnight the festival developed into feast, and finally a lascivious free for all. This is an exact description of the festive rites which took place on Kupalo's Eve in Rus', a celebration of verdancy, fertility and free-love. Participants acted as if they were throwing the Green Wolf into the fire during the Christian era, but in pagan times, he might actually have been burned alive. These sorts of proceedings, which seem like tomfoolery, are commonplace at European festivals, which until recently were conducted on the 23 June. As Frazer points out, this is probably evidence that these rites were of fair antiquity, but then again they might indicate a movement of pagan-Christian religious customs from east to west, or west to east. Interestingly, the green vestments worn by the Green Wolf arise in accounts of the witch attire described in Murray's book, the *Witch Cult in Western Europe*. It is doubtful that the Green Wolf and Grets' were one and the same, but the outward similarity is intriguing.

We find mythological references to cat-headed and dog-headed men farther back in pagan Irish history, in the Irish "Finn cycle".⁹⁹⁷ It recounts tales of the Tuatha de Danann, a Northerly race that plucked Ireland from the hands of the Firbolgs.⁹⁹⁷ Fertility gods, spirits and demons featured in the religion of the legendary Tuatha de Danann.⁹⁹⁸ If, and I stress if, the two werewolf traditions are related, then we can be sure that some of them at least were Christians untainted by heresy. Yet it is more than likely that a good proportion of them were heathen priests and priestesses. Irish shape-shifters might also be cats. In ancient Celtic times an Irish revolutionary named Cairlone was supposed to have had the head of a cat. Considering the tale of the Irish-folk in wolf-suits, it is plausible that Cairlone might have been dressed as a cat, if not a lion. Whatever the case he is said to have incited the lower classes into a revolt against the kings.

Tens of centuries later, in 1662 AD, one Marie Lamont claimed she participated in a group sabbath where,

*"They, in the likeness of "Kats", and the Devil as a man with cloven feet, made a charm with "wyt sand" against Blackhall younger and Mr John Hamilton"*⁹⁹⁹

Shape-changers

As the name *oboroten'* in Russian suggests, shape-changers were the contrary ones, nature's little aberrations. But Hollywood has given us a very inaccurate view of what shape-changers were. Thankfully Ginzburg reveals a more authentic side to them, the life of pain endured by these werereatures, who were also called *Kresniki* among the Slavs (literally meaning 'Defenders of the Cross')¹⁰⁰⁰ An uncomfortable connection with Christianity it may be, but it is one repeated not only in Slavia and the Baltic, but in Ireland.

No one has ever deciphered the words of one "werewolf" burned at the stake. Turning to the Churchmen he lamented that he couldn't understand why they were killing him because *they were meant to be on the same side!* By my estimation, his final comments reveal that pagan Slavs perceived that the werewolves and the Church had one and the same duty in this life, to pit their skills and abilities against the witches and black sorcerers who were annually

blasting the fields and stock bestowed by the creator.

Although *oboroten'* were poorly understood by the masses, most people had heard enough to make them realise their importance in the confrontation between the forces of creation and destruction, and therefore the abundance of crops during the following harvest. Still, Russians wanting to protect themselves against lycanthrops kept a "snake-killing axe" ready at hand.¹⁰⁰¹

When in their shape-changed form, or in the process of transforming they were kept at arm's length, but once they had embarked upon a night's activities and returned, they were shunned like the plague, for fear of what may had came back with them. Very often, those wounded in a night battle returned tainted with infectious diseases.

Undergoing Transformation

As we know from eye witness accounts of the Sabbath, the *oboroten'* form was a *strictly spiritual emanation*. The person would fall into a heavy coma, as the other self proceeded to issue forth from the nose or open mouth. Often the witches donned masks or other regalia linked with the nature of the animal to help signify to those present that they had already undergone an inner and outer transformation into the shape of the creature whose form they took. Having entered the netherworlds of the other side, the spiritual *oboroten'* posed little risk nearby residents. In truth, their inert body was much more vulnerable to a multitude of dangers, as they ventured into the twilight lands above and beneath this world of ours.

The unusual ability to change one's form from that of a human to an animal was considered to be the direct result of a number of factors, not the least of which was a surge of lunar power during the birth of a child. And there were other causes for lycanthropy, such as;

BEING BORN MALFORMED

Some part of the person's body was corrupted or impaired.

BEING BORN WITH A BIRTH CAUL SMOTHERING THE HEAD

If a child was born in this manner they were bound to undergo transformation in later life, seeking to engage in night battles against the destroyers where possible.

BEING SUBJECTED TO SORCERY OR CURSED TO ADOPT AN ANIMAL'S FORM

Any person who remained a shape-changer on account of sorcery was doomed to suffer these quasi-human mutations at the Moon's fickle say-so until the sorcery was removed by the one who cast the spell in the first place. When Slav sorcerers invoked a spell to undergo a transformation into animal form, they performed a single backflip; and this was said to cause their altered state. Margaret Murray noted the many incidents of backflipping during the sabbaths. This was perhaps a prelude to their adoption of alternate forms, and their subsequent embarkation on voyages to the other world.

HAVING ONE PARENT WHO WAS AN ANIMAL

In their fairytales, Russians believed that some people were actually created from a union between both man and animal. The Eruli might also have held such a conviction.

In the other world, dark sorcerers habitually appeared as blackened figures with long messy hair, crazed eyes and gnarling salivating jaws lined with menacing fangs. This is a perfect Magian description of the fiends, the black (*Ashemaogha*) families. Their joints were swollen, and limbs frequently corrupted in some way. During battle with the white *oboroten'* they screamed and wailed as their prey neared. These hags and warlocks were the baleful witch invaders, who were normally of foreign extraction; the black warrior animals invading the fields of the Slavs would have been Alanic, Bulgar, Finnish, Lappish, Lithuanian, Latvian, Macedonian, Norse, Prussian, rival Rus' tribesman, Serb or Albanian.

HAGS AND WARLOCKS
FOUGHT THE WOLFMEN

NECROMANCY WAS
CONTRARY TO ALL
KNOWN LAWS

Necromancy

The mediaeval necromancers performed their arts using the rites of *Goetia*, which even Cornelius Agrippa (a Renaissance author on the occult arts) felt squeamish about describing, for he mentions *the rituals ran contrary to*

decency and were condemned by all known laws.¹⁰⁰²

In *Malleus Maleficarum*, we discover what the clergy understood to be the primary difference between European white and black magic of the 1200-1400's AD. White witches often performed magic by etching characters into pure and noble substances like gold, silver and sparkling gemstones, whereas in a precise inversion of the above rites the black witches fondled and engraved disgusting substances. And I might say that these were interesting observations made by the Inquisitors, because they indicate they were actually encountering people performing ancient dualistic rites. This is further reinforced by the fact that the Magi are repeatedly mentioned by name in Mediaeval Church texts. Unless the Inquisitors were fully conversant in Magian scripture (which I doubt) it is difficult to visualise how they so precisely recorded ritualism of the white and black Magi; unless they were actually dealing with Magi of both the white and black variety.

It is certain that prosecutors and Inquisitors were frequently confused by regional ritual variations, and learned of more specific practices as they went along. They probably asked probing questions in the first instance, trying to ascertain whether items contained in a given witch-confession conformed to known ritual frameworks hitherto documented by the inquisition locally or in other parts. These were deliberately leading questions, designed to coax a suspect into talking, at least to begin with. This gave the interrogator something to work with. The types of question then put to a suspect once the detainee had begun giving details would then depend on how experienced an inquisitor was with the sheer diversity of pagan religious expression. For example in some witch trials, we learn of rites requiring the dispersion of fire ash over water courses and pastures, or rubbing it into animal hides.¹⁰⁰³ Behind them one can discern a white magian anointing designed to promote fertility and health on the recipients. But would the inquisitors brand these as demonic rites? Only time and experience would tell.

There is no confusing the motivation behind certain other rites that emerged during the investigative process. Magian scripture tells us that the devil's (Ahriman's) powers of necromancy were invoked by the ritual handling of rotten or putrid substances quote "full of stench", and through the speaking of curses and abominable words, and the performance of filthy, as opposed to clean or holy acts. Cannibalism was another feature of black Magian necromancy, for *Dinkard VIII*, and other "white" Zoroastrian texts condemned the eating of cadaver or excrement. Moreover the Magi wrote,

"About the sin of making people eat bodily refuse, and bringing it unlawfully to their person or clothes; and of going to a menstruous woman, or wizard".¹⁰⁰⁴ Those who "muttered phrases at the time of contamination by dead matter"¹⁰⁰⁵ were similarly condemned.

The *Qur'an* is another possible source of information on the infernal rites, for it states that,

"You are forbidden (to eat) carrion, blood, and the flesh of swine; also any flesh dedicated to any other than god. You are forbidden the flesh of strangled animals and of those beaten or gored to death ... also of animals sacrificed to idols".¹⁰⁰⁶

The *Qur'an* saw fit to prohibit this fare (ie; as not *Halal*), as well as foods killed in certain ways because of their connection with pagan slaughtering methods. Swine was a popular feasting food in Mesopotamia and Iran, and forbidden under Jewish law, which Islam was partly based upon. Strangling or bludgeoning were a means of ritual killing used by the Zoroastrian and pre-Zoroastrian Persians, and therefore unsuitable within the new Muslim order. Carrion is also understandably included, for it was equally banned in the Magian texts as a feature of the devil-worship in their region. Al-Masudi related that in 10th Century AD Arabia the rebel Zanj of the Azaruqa (a type of cult) were frequently found guilty of committing atrocities against people who they had captured.¹⁰⁰⁷ Tales of cannibalism against bodies of the sick are also characteristic of this group.¹⁰⁰⁷ If someone fell seriously ill, their relatives ghoulishly congregated around them and allegedly devoured the corpse while they yet lived.¹⁰⁰⁷

The white Magi tried to convert those addicted to witchcraft where possible *"And they who are defiled by a propensity to stench are thereby welcoming the demons and fiends, and are far from good thought, through vexing it; and a distance from them is to be maintained of necessity in sitting and eating with them, except so far as it may be opportune for the giving of incitement by words for withdrawing from their sinfulness, while converting from that propensity"*.¹⁰⁰⁸

HANDLING FILTHY

CANNIBALISM

EATING EXCREMENT

CANNIBALS IN ARABIA

THE RUSSIAN WORD FOR
FAECES ALSO MEANT “TO
BEWITCH” OR “TO VEX”

Doubtless to say these Zoroastrian priests were not out to convert will-o-wisps, but real people. The culprits in this case were demon-consulters who defiled themselves with stench. Having gained an understanding of the connection between excrement, disturbance and demonolatry we can now appreciate that the notion was present in pagan Russia, and therefore attributable to black Magianism. You see *gavno* the Russian word for “shit” comes from *govno* (Bulgarian, Serbo-croat, Slovenian), *hovno* (Czech) and *gowno* (Polish) which stem from the Russo-Slavic *ogaviti* (“to vex”, “to bewitch”, “to cause distress or disturbance”) and the Slovenian *ogaven* (something “foul,” “filthy”, or “disgusting”), which in their turn originated from the Old Indian *guthas* or *gutham* (“filth” or “dirt”), and the Avestan word *gutha*, or the Armenian *ku*, which relate to “manure” or “droppings”.¹⁰⁰⁹ Here we have evidence for a linguistic connection between shit, magical vexation and disturbance in Russia, which I am willing to bet is connected with Magian scriptural references. Their writings describe a form of black Magian necromancy that required the burial of stench, filth or faeces in order to provoke disturbance in the cosmos through the agency of demons. They no doubt wore faeces as others would perfume. Consuming bodily refuse would have been even more efficacious. *Busurman*, *Basurman* and *Besermen* were words used in Old Russia when referring to “pagans”.¹⁰¹⁰ Whether they were first used before or after Rus’s conversion to Christianity has not been determined. They are related to the Kazakh and Kirghiz word *Busurman* and the Turkic *Musurman*.¹⁰¹⁰ According to one interpretation these words are connected with the Russian word *musor* which means “filth” or “refuse”.¹⁰¹⁰ This may amount to evidence of persons who were by nature filthy, or who were slanderously portrayed as filthy. Might these words also have signified the presence of necromancers (with Turkic ancestry) in both pagan and Christian Slavic society? If they did, then the suspects were necromancers related to the devil-worshipping Turks recorded in the *Book of Bundahisim* as having invaded Iran and introduced their demons to the Magian faithful.

BUSURMAN

REPORTS OF FILTHINESS
IN SLAVIA

Germans and Greeks spoke of the Pechenegs and more especially the Slavs as being disgustingly unclean races of stinking wretches. We might think that this was German slander against the Slavs, if it were not for the *Primary Chronicle*. The monk describes the various races who lived in and around Kievan Rus’. Many of these places were not Christian, and *in many cases he spoke of his pagan fellow-countrymen in constructive and even praiseworthy terms*. However some of his most scathing comments were directed against several Slav tribes (which lived in the area sometimes termed Black Russia, which seems centred in and around the area of the Pripyet marshlands). These tribes (the Vyaticians, Drevlyanians, Radimichians, and Severians) were described by the Chronicler as living like beasts, *uttering many obscenities* (especially in front of their womenfolk), and *consuming unclean substances*. Similar things were said about the witches of Western Europe during the witch trials. According to Murray, while the ritual foods of the witches Sabbaths were frequently tasty and palatable, there are accounts of witches having to eat ritual food at the banquet which was of a thoroughly unwholesome or disgusting nature. This might only be attributable to poor culinary skills, but then again it may have been the intended form of the meal. As it happens witches made their oaths swearing by rotten food, even back in Roman times. Both Ibn Fadhlán and the Germans described the pagan (Rus’) Slavs as an extremely dirty people.¹⁰¹¹ Other accounts portray them as scrupulously clean. Rather than dispense with either historical reference we might consider the implication of dualistic doctrines on the level of cleanliness observed. Whites pagans would be ultra clean, whereas blacks pagans would have been ultra-filthy.

REVOLTING FOOD

WASHING IN WATER
POLLUTED BY PHELEM
AND MUCOUS

Ibn Fadhlán observed that when the pagan Russes did wash, it was with tainted or polluted water. A fresh bowl of water was not used for each washer, and instead a slave girl was required to carry the same wash bowl around to each man to wash from, *but not before each washer had blown his nasal mucous and spat phlegm into it*.¹⁰¹² Some commentators have said that Ibn Fadhlán’s observations are untrustworthy because they believe that he was viewing and recording the behaviour of the Russes on the Upper Volga through the eyes of a Muslim who typically expected to wash using fresh running water. From this perspective you can understand his disgust at seeing so many people using a single wash bowl, but even so it is difficult to explain away his recollections of them deliberately spitting phlegm into the wash water. In Ibn Fadhlán’s full account of the Rus’ funeral we do not see him condemning the pagan observances which he saw. If he was in a mood to lambast paganism, one would expect his testimony to be riddled with caustic barbs; this however is not the case. So do Ibn Fadhlán’s observations amount to an independent confirmation of what the Christian Chronicler mentioned concerning certain Slavic tribes? Were these deliberate acts of daily defilement, such as one would expect from the black Magi and their

brigantine followers, whose lives centred around pillaging, slave-trading, drunkenness and whetting their immense sexual appetites?

This last possibility seems all the more likely when you consider that these particular Slavs appear to have had *customs which were an inversion of Orthodox Zoroastrianism*; much closer to the funeral rites of the Hindus. For example the Russes were incinerated on a funeral pyre, *and yet it was only the corpses of their lowly slaves who were left out for the ravens and hounds to consume*.¹⁰¹³ Ibn Fadhlān further stated that those who they regarded as criminals were hung by the neck from trees, and left hanging there until the corpse had rotted and fallen apart.¹⁰¹³

Other necromantic methods performed by the witches included the exhumation of mortal remains for their use in magic.¹⁰¹⁴ Witches also used “voodoo dolls” (made of cloth or clay) to inflict harm on adversaries, and brought them to life by a consecration with water.¹⁰¹⁴

On the importance of crime

The white Magi professed that from the very moment the demons crawled out of the abyss, and were thrown out of heaven, they landed in the world and set about polluting the perfect nature of everything created by Ahura Mazda. Not one area of existence would be left unscathed by their disorderly conduct, even society itself. According to the Magi, at the end of the world the lands would be filled with brigands and robbers, and the reign of crime would be found in every place, for crime was one of Ahriman’s most potent weapons against the law and order of the Good Sun, Ahura Mazda.

Though the evil spirit of Ahriman (*Angra Mainyu*) went about its own business to procure and implement his corrupting designs throughout every age, it would not act alone. Out there, scouring the world in unison with the demons were his special priests to aid the spirit of unholiness in its endeavours; where there was happiness they would bring sadness and grief, where there was health they would bring disease, where there was light they would bring darkness, where there was peace they would bring anger and nervousness, where there was stillness they would bring disquiet and disturbance, where there was cleanliness they would bring filth, where there was order they would bring chaos, and where there was law they would bring crime. For every giver there is a taker.....

Mediaeval witches were much preoccupied with harming cattle or stealing milk from the udders of their neighbour’s cows, and honey from their hives.¹⁰¹⁵ In this way they would rob the white pagan families of the substances which they used to sustain the celestial gods (of beneficence, plenty and fertility), and at the same time seize that which belonged to others, with the aim of making it their own. They could prevent the making of *Haoma* or butter to feed the holy fires by destroying milk; they could prevent the brewing of mead by destroying hives. So widespread were accounts such as these that Cohn describes them as stereotype incidents fabricated by the Church. But the contrary is in fact true, that they were elements of an organised infernal religion, which popped up in accounts with such uniformity and regularity that they reveal the spread of the black arts far and wide throughout Eastern and Western Europe.

Even in 16th Century Switzerland we find reference to the *Schurtendiehe* and the *Stopfer*. During festivals the *Schurtendiehe* dressed in masks and dresses (kilts?), and made their way into the villages to rob houses.¹⁰¹⁶ The term *Stopfer* indicates that they had the role of piercing things.¹⁰¹⁶ I believe that like the witches they jabbed themselves and other persons to draw blood, for ritual reasons. They also carried clubs.

There were two forms of robbery known among the Visigoths (of Spain/South West France), one to enhance personal wealth and *the other to invoke magical forces*.¹⁰¹⁷ This second class of crime was in effect a black-magical ritual. I am willing to speculate, that the unholy nature of the crimes unleashed maelific powers. These misdeeds appealed to the Infernal god, so much so that the devil dispensed black magic as a reward to those of thievish might. A connection between magic and crime can be found in the Old Russian words *Bedunitsa* or *Bedun'ya* (“a witch”, “a sorcerer” and “a brigand”).¹⁰¹⁸ The root words from whence they arose were *Bida* and *Beda* meaning “misfortune” or “poverty”. In Slavia notions of witchcraft, sorcery, misfortune, destitution and robbery had therefore become linguistically fused together. As you will recall *Bida* was Chernobog’s she-goat mistress. Treatises such as *Hisperica Famina* suggest a consummate fear of criminals in Britain.¹⁰¹⁹

Judging by Pliny’s attitude towards law-breakers it is likely that Romans generally believed that criminals had an adverse effect on fertility. He emphatically stated that, “*Farming carried out by criminals is abominable*”.¹⁰²⁰

DEMONS BROUGHT

THEFT UNLOCKED
MAGICAL POWERS

“FARMING CARRIED OUT
BY CRIMINALS IS
ABOMINABLE”

GRAVE-ROBBING

Wealth was not the only thing that the witches wanted to steal. Accounts of the witches Sabbaths reveal that the coven leader required the witches to break open *specific graves* to obtain body parts, which were repositories of spiritual power.¹⁰²¹ As you will have read in Part I, these body parts were probably relics of the Fravashis, the pagan white and black saints.

Some archaeological evidence suggests that grave robbing was anything but a cliché, but a fact of life during the pagan era in England.¹⁰²² It was present among the Slavs too, as is evidenced by the following Russian Mediaeval Christian homily.

A CHRISTIAN PRIEST SAID
GRAVE-ROBBERS WOULD
ROAST IN HELL

*“but since in various and sundry ways many often times destroy their own souls by committing robbery, or by killing, or by stealing, or by robbing tombs, all men for enemies and adversaries and are ambushed by all; they are rebuked as evil and are reviled and there they will be roasted in the hell of fire without end”.*¹⁰²³

Certainly the name of the pagan Slavic black Magi, the *Garabancias*, is related to *grabar* (Russian and Ukrainian), and *grabarz* (Polish), all of which mean a “gravedigger”.¹⁰²⁴ It is possible that these are related to the Old Slavonic word *grabiti*, which in the Western Slav tongues meant “to work over an area with a rake”.¹⁰²⁴ These came from Baltic words meaning “to snatch”, “to grab”, or “to steal”, which in turn arose from the Old Indian *grhmati* and the Avestan *garavnaiti*, which possessed the same meaning as in the Baltic equivalents. What is more they are related to the English word *grab*, meaning “to grab or snatch”.

Not all incidents where graves were broken open to remove goods would have been grave robbing. It was often the case that one’s relatives exposed the gravesite to retrieve goods, as occurred during the Rus’ funeral on the Volga. But even so clues are there that tomb or barrow robbing took place for religious and magical reasons.

CRIMES AGAINST THE
FAMILY

Crimes against the nuclear family and kinship bonds was another prominent characteristic of the Magian apocalypse. Black magians probably sought to play an active role in splitting kinsmen; to bring on that cruel time of foreboding, just as they would do with the many other evils intended to afflict mankind and the world of creation.

FAMILY DISUNION

As part of their wider rebellion against worldly authority, the witches attacked not only male household heads, but chieftains, elders and, best of all, kings. In this next account we find a Scandinavian pagan witch doing just this;

KIN-SLAYERS

“Then they began again with enchantments and witchcraft, to try if they could destroy their father. The sorceress Huld said that by witchcraft she could bring it about by this means, that a murderer of his own kin should never be wanting in the Yngling race; and they agreed to have it so. Thereafter they collected men, came unexpectedly in the night on Visbur, and burned him in his house.

So sings Thjodolf:—

*“Have the fire-dogs’ fierce tongues yelling Lapt Visbur’s blood on his own hearth? Have the flames consumed the dwelling Of the here’s soul on earth? Madly ye acted, who set free The forest foe, red fire, night thief, Fell brother of the raging sea, Against your father and your chief.”.*¹⁰²⁵

Huld the witch wanted to provoke the slaughter of kinsmen, and incite others to murder their temporal ruler, their father and tribal chief. Witches, the Hulda folk probably practiced rites so notorious that they had to be kept hidden from others. Consider the Old Icelandic *hulda* “a cover”, or “a veil”, “secrecy”, “hiding” and *huld* (“a giantess” or Troll-kona [a female troll])¹⁰²⁶

PIPERS AND DANCERS

The Dance

In extant first-hand accounts of the witches we are told of the ritual dances that covens participated in across Europe, even as late as the 16th Century AD.¹⁰²⁷ They were performed as hymns were sung, and frequently to the accompaniment of piped music, very likely bagpipes such as those still used in Britain and the Balkans.¹⁰²⁷

THE DEVIL’S DANCE

One was a circle dance, with Satan at the heart of the circle, sitting or standing atop a large rock in his mask and costume. As he sat or stood, the coven danced around the centre, arm in arm, in a direction that was opposite to the way the sun travels. At other times they danced back to back instead of face to face.¹⁰²⁷ Another major version of this was the “follow the leader” dance. In it the Man-god Satan, presumably the most evil member of the coven, led his devotees single-file, in a snaking manoeuvre, with him at the head of the column of devotees.¹⁰²⁷ Among the pagan Eastern Slavs they performed the *Koliada* (“wheel dance”) which was also called the *Khorovod* dance, a gyrating

circle that moved in the same direction as the Sun. I believe *Khorovod* is a word built from the Russian words *khorooshiy* (the Good one) *vodit'* ("leads"). Thus the *Khorovod* was most likely the Sun dance of the white pagans, which was in all likelihood led by the holiest or most righteous person in their group, maybe a white Magus. Based on folk superstitions it is possible to suggest that moving sunwise could procure protection against the forces of evil.

In the British Isles for example, the custom of doing things in a sunwise direction to avert misfortune has been superstitiously observed by people visiting someone's farm, women stirring cake-mixtures or teapots, setting the dinner table, or handing out drinks, sailors coiling rigging ropes, physicians performing cures, maritime navigators

THE SUN DANCE

Fig 52. Mediaeval circle dancing. Note the dark attire of the participants, the veils, the pointy black mitres. Note also that the dancers appear to be moving anticlockwise, ie; anti-sunwise, to the tune of pipers. In other words this is more likely to be a depiction of a witch sabbath than a garden party.

plotting courses, funeral processions entering a graveyard - the list is endless.¹⁰²⁸

The pagan Slav *Koliada* incorporated the piped music and drums of masked actor-musicians^{1028a}, who led the community in the dance (notice the similarities here with the witches of a much later period).¹⁰²⁹ Directly associated with this Slav rite was the presence of a horse that was golden in colour, or alternatively a black steed.¹⁰²⁹ It might also be a white or black bull. Analysing this data in the light of dualism leads one to believe that the pagan dance had two separate variants, one white the other black. One a dance of death, which took place at locations where a person had passed away, or at funerary gatherings. Serpents were profoundly linked with this dance, for not only did the dancers normally wield snakes in their hands, but the body of the deceased was often transported about on a magical sled, whose runners were regarded as snakes that slithered along the ground. Certainly *Zmeya-Volos*, the Great Serpent was the psychopomp or the Good Shepherd of the Underworld, who ferried the souls down to their new abode in the counterworld. Several taboos were associated with the *Smrtno Kolo*, namely the mentioning of the words *Smrtno Kolo*, or making any reference to the serpent.

It is of note that Slav bagpipes were called *roga*, because there is an inference here that the pipes which sprouted from the air bag were horns (as in antlers, or the horns of herd beasts). Moreover, the instrument itself was engraved with a serpent, and regarded with utmost reverence. This indicates that it was seen as much more than a musical instrument; magical at the very least, or perhaps even divine.

It might be totally unrelated to the subject, but I recently purchased a CD of traditional Gypsy music indigenous to Macedonia, Anatolia and the Balkans, which was collected during a field trip by a German musicologist by the name of Wolf Dietrich.¹⁰³⁰ The music follows the same basic raga style (pipes and drums) once practiced throughout much of pagan Europe and India. One song was of special interest, entitled *Antikrystos* (Antichrist). It is impossible to say for certain just how old this song is, but there is no reason why it could not be of considerable age, especially when you consider the supposed reputation of the Gypsies for both magic and theft. Whether these things are true or not I can't say, for like any itinerant alien culture passing through Europe, it is only natural they would be persecuted as outsiders, perhaps for little or no reason.

The opposite of this dance of darkness was the *Khorovod*, the dance of life, during which many Slav pagans, like

SUNWISE, THE GOOD DIRECTION

SLAVIC BAGPIPES WERE SEEN AS MAGICAL

the numerous Celts, immersed themselves in the joy that is life itself; merriment, happiness, the warmth of the sun's gentle glow, a festival of togetherness. Throughout Eastern Europe the masked dancers went by various names - *Ceata* (Romania), *Coledari* (Bulgaria and Serbia), *Eskari* (Macedonia), *Kolyadanti* (the Ukraine), *Regos* (Hungary), and *Surovaskari* (Bulgaria).¹⁰³¹ Besides being garbed in diverse costumery as they performed plays, these troupes carried swords and flags as they made their way along in procession.

FLAGS WERE CARRIED IN PROCESSION

That flags were produced during witch ceremonies from time to time testifies to the pagan origins of witchcraft. As you read in Part I, flags were an important feature of Aryan paganism: the Indo-Aryans used flags during war, as did the Iranians. In the case of the Iranians, battle standards were carried during spiritual warfare. The western Slavs also thought enough of their banners to place them inside the temples near their idols. Clearly their flags were holy or of great significance to the tribe.

The Luciferian Doctrine

The Papal Bull *Vox in Rama*, was issued in 1223 AD pursuant to information gleaned by (the Inquisitor) Conrad of Marburg during his work among the heretics then arising in Germany.¹⁰³² The information was apparently gathered as a result of torture, but as mentioned elsewhere, the level and frequency of torture can only be guessed at without any systematic study being conducted. By all accounts though, Conrad was thorough and ruthless when it came to weeding out, interrogating, sentencing and punishing these heretics.¹⁰³²

THE DEVIL'S FOLLOWERS PROFESSED THAT LUCIFER'S REIGN WAS SOON TO COME

Here are just some of the details in the Papal Bull. In France, Italy and Germany it became apparent that many of the dualist heretics were dedicated body and soul to the demon Lucifer (an infernal angel from whom light emanated - the so-called "false-light") and his coming reign.¹⁰³³ These devil worshippers believed their master was in truth the creator of the world and the heavens above and below. By their reckoning Lucifer had, contrary to all justice, been falsely imprisoned in the abyss by his enemy, a vindictive and unjust God, who Lucifer was destined to vanquish, allowing Lucifer to one day regain sovereignty over the world that he himself had made in the beginning.¹⁰³³ Pope Gregory IX shuddered at the very thought of what was then transpiring in Germany around 1232 AD. The Luciferians were swelling in size, and the Catholic faith suffered as a result of their pestiferous, soul destroying teachings. For they;

THE POPE SHUDDERED

LUCIFERIAN SAID THAT GOD WOULD FALL, AND THE DEVIL WOULD ATTAIN POWER

*"... blaspheme against the Lord of Heaven, and in their madness say that the Lord has done evil in casting Lucifer into the bottomless pit ... These ... people believe in Lucifer and claim that he ... will ultimately return to glory when the Lord has fallen from power. Through him and with him they hope to achieve eternal happiness. They confess that they do not believe that one should do God's will but rather what displeases him".*¹⁰³⁴

THEY SAID WE SHOULD DO THINGS CONTRARY TO GOD'S LAW

In other words, the Luciferians believed that the heavenly god was like the devil, and the devil the High God. Such a teaching appears in the Magi's *Book of Bundahishn*, in relation to the Iranian black Magi, as recounted earlier. Thus the advent of this religion is traceable to Iran, and very worrying not only for the Christian Church, but the smallish heretical cults who were being infiltrated by them too.

LUCIFER'S ARRIVAL WOULD COINCIDE WITH UNPRECEDENTED GLOBAL CALAMITIES

Lucifer was to be a resident of the underworld only for the time being. In their cosmological view, during a future time of celestial cataclysm, he was to be returned to his exalted station high in the heavens, where he belonged. This would occur only when the many orbs of the heavens had collapsed, and plummeted down through the earth and come out the other side, *as the world turned upside down, placing the underworld where heaven was*. The choirs of white angels would thus plunge into the bowels of the Abyss, amid all the chaos prompted by the apocalyptic topsy-turvy. This teaching is exemplified by the writings of Lucan, who around 200 AD made reference to the dark, overgrown and foreboding groves of Marseilles, amongst whose contorted light-starved limbs snakes slithered about, and where "unmentionable" rites were once performed. It was there that many pagans feared to tread lest they unhappily chance upon the "Lord of the Grove". On the witches Lucan wrote;

HEAVEN WOULD BE DEVASTATED

*"A people envied by the gods, have skill,
Begot by the Evil One, even at their will
The heavens for to blemish, and the things
Which are in heaven, and on Earth to bring*

THE WORLD WOULD TURN UPSIDE DOWN

*Out of order, and the poles for to force,
And the rivers for to turn the course,
The mountains level, and the sky to drive
Under the Earth”*¹⁰³⁵

Lucifer’s devotees, *his special friends*, were to wage war against this usurper god by doing everything contrary to that which he held dear (ie; indulging in gross immorality, crime, manslaughter); *they were to offend this god in every conceivable way*. In practice it meant that they should contaminate more conventional religions, effacing their professed holiness by perpetrating religious crimes. For them causing outrage was piety, and many terrible things happened at their gatherings, or shortly thereafter. Their leading devil, Lucifer was a blackened beast-like a cat, not unlike a panther; and what is more, a regular attendee at their ceremonies. And they would kiss his anus hot after participating in a group orgy, where all present copulated with whomsoever they latched onto once the lights were doused. There was supposedly no end to their enormities. In one Mediaeval witch trial, a most devilish Luciferian zealot allegedly perpetrated not less than 30 homicides, to cause maximum offense, distress and injury to his father’s enemy, the “unjust god”. Even more than that we see the many crimes of the Luciferians as a rebellion against the “unjust” legal codes which had seen their master wrongfully entombed in the Abyss in the first place.

Lucifer had freed them from the heavy burden of god’s strictness. As a reward for their allegiance and piety, the unencumbered followers of Lucifer would be raised up to heaven, and receive the reward of eternal life which he promised, as the angels fried in the underworld below. In their mind, the setbacks which their master Lucifer had suffered in this world would thankfully only be temporary, and thus it was imperative that his loyal devotees do everything in their power to ensure that the currently reigning god was overthrown, opposed and in every way cast down. Because activities performed underground were concealed from the oppressive god’s view, they sought to escape his persecution by carrying out their rites in subterranean locations, in realms where Lucifer was held bound.

If we are to believe an account in the Russian *Primary Chronicle*, many folk in the post-conversion era were prepared to believe in an imminent inversion of the earth (such as that mentioned by Lucan), prophesied to occur through the flipping of the poles in 1076 AD, thus causing a reversal to the direction in which rivers flowed, and a reversal of a given land’s position in relation to another.¹⁰³⁶ From the tone of the Chronicle, the (black) Magus who appeared in Kiev in the year 1071 AD had the people eating out of the palm of his hand, as he preached his “good news”, that the world would turn upside down some five years later.¹⁰³⁶

The heathen Slavic wizards spread a strange and possibly related doctrine in the early years of the 11th Century AD. They told all and sundry that the Devil (who they called “the antichrist”) was the creator of the material body, while god was merely the maker of men’s souls.

*“Then Satan quarrelled with God as to which of them should create man out of it (the straw stained with God’s sweat). But the devil made man, and God set a soul in him. As a result, whenever a man dies, his body goes to the earth and his soul to God”.*¹⁰³⁷

The internal dates assigned to these events by the Chronicler place these happenings 147 years earlier than the emergence of Luciferianism in Germany around 1223 AD.

The 14th Century trial of three devil-worshipping Greek monks by the Bulgar Tsar’ probably concerns similar doctrines.¹⁰³⁸ They advocated that god was ruler of this world, whereas his enemy ruled in heaven.¹⁰³⁸ This can only be an allusion to Luciferian cosmology, which held that the spiritual lord of heaven was the eternal foe of the fabricator of this world, namely the devil. It is a view identical to that posed by the black Magi. The other interpretation is still Luciferian, namely that the world’s inversion had taken place, god was caste down onto the earth, and the devil was ruling in the heavens. They were not however put to death by the Orthodox Church, but banished, but only after they had hot branding irons pressed into a prominent location, namely their face.

As with the Russians, an unknown number of Finns advocated similarly, or knew of the devil-as-the-creator myth at any rate. In the lead up to this next quotation from the *Kalevala*, an ogress (ie; a hag) spat mucous into the water, causing three nymphs to wonder what sort of creature it would turn into if the creator put life into it. And then we hear:

ONE PERPETRATED 30

*“But the Demon got to hear the vicious man to take note: he (the devil) became a creator, the Demon gave breath to it ... and it turned into a snake, it changed into a black worm ... Tuoni-hued maggot”.*¹⁰³⁹

Remembering that the Kalevala was compiled in 1835, it is impossible to assign a historically reputable date for this item. Whether they borrowed the tale from the Russians, lent it to them, or shared it with them in equal parts, owing to commonalities in their pagan ancestry, is unlikely to be answerable any time soon.

LUCIFERIANISM
RESEMBLES BLACK
MAGIANISM

The Luciferian creed was characterised by a soul-body dualism that amounts to a direct inversion of standard Manichean and Dionysian “evil-flesh” theology, comparatively speaking, *and similar to that which is formally outlined in the Magian book of Bundahishn, as being the diabolical doctrine which caused man’s fall from grace in the first place.*

The Iranian parallel sequel to Adam and Eve’s eviction from Eden, is found in Magian scripture, and recounted here briefly;

THE MAGI SAID DEMONS
FIRST TAUGHT MANKIND
TO BELIEVE THE DEVIL
WAS THE CREATOR

*“And afterwards, antagonism rushed into their minds, and their minds were thoroughly corrupted (by the demon), and they exclaimed that the evil spirit (Lord Ahriman, the father of lies) created the water and earth, plants and animals, and the other things as aforesaid. That false speech was spoken through the will of the demons, and the evil spirit possessed himself of this first enjoyment from them; through that false speech they both became wicked, and their souls are in hell until the future existence”.*¹⁰⁴⁰

THE HELLISH DOCTRINES
AND DEEDS OF THE
BLACK MAGI

Pursuant to their hellish doctrines, Ahriman’s followers *“foster villainous outrage, and they say the best work for mankind is immoderate fighting whose joyfulness is due to actions that are villainous; those too, that they exterminate their own souls, they exterminate the embodied existences of the world; and they produce lamentation for the soul, and even the religion ... and this is their praying, that whenever it is possible for them they shall cause misery to others ... they cause begging for water, they wither vegetation, and they put down all excellence which is due to the manifestation of righteousness”*.¹⁰⁴¹

From the above scriptures we can deduce that traditional black Magians believed that;

AHRIMAN HATED SOULS
SOULS CAME FROM THE
DEVIL’S ENEMY IN
HEAVEN

1. Since it was the eternal enemy of Ahriman who made souls, they felt that souls were infernal manifestations. By means of souls, Ahriman’s enemy, the spiritual god, had successfully invaded all creation, in effect stealing and polluting the soulless physical bodies which the Devil had made.
2. They most likely professed that the destruction of these same souls had a cleansing effect, detoxifying the bodies lovingly made by their master, and which still belonged to him. Succinctly souls did not belong to Ahriman, only their material bodies.

And it is from this Magian forum that Mediaeval Luciferians inherited their religion of “sacrilege”. Luciferians might also have thought that souls were permanently affixed to their host bodies, at the moment the body was taken captive by the soul, and only death would bring release from its tormenting presence.

DOING EVIL WAS
NECESSARY TO PURGE
SOULS FROM OUR BODIES,
AND HAND THEM OVER
TO THE DEVIL

In Sweden an alleged oath of fealty to the devil, made by witches, included the confession *“may my soul never return to heaven”*.¹⁰⁴² Evidently Swedish black witches believed in souls, but, I contend, hated them.

Considering the Magi’s statement that devil-worshippers wanted to destroy their own souls, black Magian Luciferians probably wished to steal off with them to the underworld. There devils would perform grand desecration rites and torture on the unwanted souls, so loved by their Father’s enemy. Thus souls were the greatest spoil taken in this war between the two gods.

Luciferian defilement rites succeeded in expelling the soul, whose detested existence they recognised, and catapulted it into hell. Thereafter the soul was to be destroyed. All the while the bodies of the devil’s own lived on through the powers of Ahriman, becoming the living dead.

AFTER DEATH THE DEVIL
WOULD RE-ANIMATE
THEIR BODIES, BY THE
POWER OF THE UNHOLY
SPIRIT

In *Dinkard IX* the white Magi recorded that the servants of Ahriman believed they had no need of souls whatsoever, for after they had fallen into death, their Lord would reanimate them by his immense power, allowing them to be eternally alive in their death. The Magian *Varstmansar Nask* links the living-dead to the concept of heresy and apostasy.

“The evil spirit who is heretical, O Zarathustra! with his own creatures, O Spitamian! becomes buried in the earth; the evil spirit (Angra Mainyu) is among those buried in the earth - who are the demons - where their bodily form is completely shattered. And

up the dead are arrayed by it; through its assistance they give life back unto the body, and the embodied life they then possess is such that they do not die".¹⁰⁴³

Here we discern the black Magian doctrine of a physical re-animation rather than the spiritual resurrection expected by the white Magians. In other words, once the bodies of devil-worshipping liars and heretics were committed to the ground, they were seized by the great fiend, broken by the corruption and stench of death, but reformed and granted the right to live for ever and ever in infernal joy, unable to die. The Roman Lucan wrote on a like topic, indicating that similar views were current in Rome.

"She (the great witch of the underworld) inhabited deserted tombs ... knowing the abodes of hell, and the mysteries of subterranean Pluto (the god of death and the underworld) ... She buries in the grave the living whose souls still direct their bodies while the years are still due to them from destiny, death comes upon them reversed, and the dead escape from death ... But when the dead are confined in stone, which drains off the moisture, absorbs the corruption of the marrow and makes the corpse rigid then the witch eagerly vents her rage on all the limbs, thrusting her fingers into the eyes, scooping out gleefully the stiffened eyeballs, and gnawing the yellow nails on the withered hand".¹⁰⁴⁴

As has already been mentioned, the black Magi of the pagan Slavs believed that Antichrist (ie; Chernobog / Ahriman) was the giver and taker of life. Stoyanov relates that the Luciferian heretics who began to appear in the Mediaeval Balkans, among the Bogomil communities, were also professors of this belief.

Russian folklore suggests that Russian and perhaps Finnish demonolators of the Northern interior regained their lives once more. We find it in a long standing tradition that the living dead (known as *Eretnik*, *Eretitsa*, *Eretnitsa*) existed, and continued to exist in many parts of Russia, especially in the North and North-East of the country, as well as along the Volga River and across the Urals in Siberia.¹⁰⁴⁵ This is an obvious reference to heretics (Old Russian: *Eretik*), who legend has it lived out in the forests, or under the earth. These *Eretniki* were Kolduny (ie; Chaldeans) also, and in the Northern port of Archangelsk there is a further tradition likening them to living demons. Perhaps the pagan Slav belief in Vampires, and *Eretniki* (meaning undying sorcerers and demons) is related to the aforementioned passage contained in the *Varstmansar Nask*. That Russian *Eretniki* came bursting forth from under the ground might just be a popular superstition, but it might also relate to Kolduny undertaking factual subterranean journeys (to hide in caverns, or fossick for gems), and later emerging onto the face of the earth come nightfall.¹⁰⁴⁵ It might also be directly related to the above-mentioned passages, which, I'm sure you'll agree were unknown to the average unlearned and unconverted forest peasant of farthest European and Asiatic Russia. Just how did they come by these strange, black Magian beliefs? I think the answer is self-evident.

As it happens very many Mediaeval heretics with Luciferian allegiances chose to die on the pyres of the Inquisition rather than confess their "crimes". Perhaps by dying unrepentant, and in this manner, they expunged the "evil soul" from their own bodies, sending it into the underworld, to the enemy of their father, for its impending suffering and execution. Their death was a martyrdom grounded in unspirituality. In other words European witches and heretics, like the black Magian Turko-Iranian devil worshippers before them, wanted to lose their souls. They perhaps pined for the moment when the light of their soul was extinguished forever, thus rendering them pure.

The Magi held common beliefs concerning life, death and the creation of the world. From the Magian creation myth I have outlined some of the basic tenets which underpinned the Luciferian doctrine which the black Magi disseminated as they ministered among the newly baptised Eastern Slavs in 1071 AD. They were teaching (or reminding) the people of the doctrines of this lord, who they affectionately called the "Antichrist", the ruler of the Abyss below. And what is more, by revealing the impending inversion of the world, they were informing the Slavs that the time for his emergence from the Abyss was near at hand - they would, by inference, soon see him fully dignified in the Heavens, enthroned where the usurper god once was. Yes, their god, who some would call the greatest criminal mastermind to have ever existed was about to spring himself from jail - the sleeper was about to arise. Unless the Russian Christian chronicler was well versed in Magian lore, it is most unlikely that the account of the Antichrist was his gloss, and in fact represented a truthful recounting of teachings espoused by some of the black pagan priests *still walking freely in the newly converted Rus'*.

Some might say St. Augustine's *City of God* provided sufficient elements of the Luciferian tradition to be an antecedent, though in his tales of Lucifer, the supposed advent had already taken place prior to his time.

MAGIAN
NECROMANCERS WERE
AMONG THOSE TO BE
RAISED BY THE DEVIL

"DEATH COMES UPON
THEM REVERSED"

ANTICHRIST, THE GIVER
AND TAKER OF LIFE

THE ERETINIKI
RETURNED TO LIFE
INSIDE THE GRAVE

NOW BURIED, THEY
BECAME UNDYING
DEMONS AND VAMPIRES

UNREPENTANT 'TIL THE
VERY END

ANTICHRIST, RULER OF
THE ABYSS

A CELESTIAL EVENT
CONNECTED WITH
LUCIFER WAS REPORTED
BY ST AUGUSTINE

*"For astrologers have their written rules according to which they compute, by calculations thought to be infallible, the past and future movements of the stars". "The star (Lucifer) actually changed its colour, its size, its shape, and its course; a thing which had never happened before ... in the reign of King Ogygus, according to the famous mathematicians Adrastus of Cyzicus and Dion of Neapolis". "... and in reliance on those rules (of astronomical computation) they (the astrologers) have been bold enough to assert that what happened then to Lucifer (who manifested himself as a celestial aberration) never happened before and has never happened afterwards".*¹⁰⁴⁶

RIVERS FLOWED
BACKWARD

What allegedly followed thereafter was a number of portents whereby rivers in a number of locations stood still, or even flowed backward. If the *Primary Chronicle's* author used Augustine as a source of inspiration for his Luciferian-style information, then of necessity he had moved the chronology of the event forward to the 11th Century. Being a mostly Roman Catholic saint it is exceedingly unlikely that Augustine's *City of God* was taught to the greater part of the Russian peasantry, particularly along the northern fringe, which had to wait until the 13th Century before it saw any sort of sustained Russian Orthodox missionary ventures. Roman Catholicism was at that time profoundly anathematised by the Orthodox authorities, further guaranteeing that the likes of St Augustine received little air play. Equally importantly the full range of details found in the Magian texts and the creed of the Luciferians is not contained in the *City of God*. Even if the Chronicler had drawn on Augustine, he still had to obtain a wealth of information from other sources, sources that, to the best of our knowledge, did not exist in Church libraries.

BLACK MAGIAN CRIME-
FATHERS

So it would appear that the teachings of the black Magian "crime-fathers" were bandied around Rus' and the Baltic thick and fast during the early Middle Ages. In fact, so prevalent was brigandage and piracy among the Slavs and Balts, that one of the main reasons why the Hanseatic League was formed was to counter their impact on East-West trade. The League stationed warships in the Baltic to escort mercantile shipping, and was forced to establish countless fortresses to protect merchants doing business in the East.

LUCIFERIAN DOCTRINES
HAVE BEEN RECORDED
OVER A VERY LONG
PERIOD

So there you have it, all the main accusations levelled against Western Luciferian heretics and the late Mediaeval witches. The only thing is they do not appear written in the supposedly stilted handwriting of a 13th-16th Century Roman Catholic Inquisitor, but in an 11th Century AD Russian Chronicle, the writings of Lucan, and, last but not least, in the Magi's *Book of Bundahishn*, amongst others. On top of this we have additional corroboration from enduring Russian folk traditions, grounded in some of the country's most secluded and least evangelised areas, areas that border Asia.

COHN BELIEVED THAT
THE CHURCH
DELIBERATELY
CONSTRUCTED THE
STEREOTYPE OF THE
WITCH FROM CLASSICAL
SOURCES

According to Cohn the widespread incidence of uniform data on the witches across many nations was not indicative of the existence of a widespread infernal cult of intriguers, but merely a debased stereotype which the Roman Catholic Church had deliberately conjured up during the 13th Century AD, as an unhappy biproduct of the Inquisitions. Norman is just one of a whole school of academics who contend that baby-eating, incest, promiscuity and abhorrent sexual behaviour that would not result in pregnancy were preposterous allegations, a bad joke, merely diabolised cliches. The Mediaeval documentation was therefore flawed, and so riddled with Church propaganda that they are unworthy of any credence whatsoever.

MANY WITCHES REFUSED
TO ABJURE THEIR CREED,
EVEN WHEN OFFERED A
REPRIEVE FOR DOING SO

You could really forgive people for thinking in this manner, but the fact is that such a doctrine was in no way a fictitious or libellous nightmare designed by the clergy, but a very ancient teaching stretching back to Iran, the heartlands of the Magi. And even there it was shunned, hunted down, persecuted and punished with a capital sentence. As you have read, the acts of pious devil worship were *virtually the same among the Magi, as they were among the Mediaeval witches*. So were the Inquisitorial reports merely a recourse to an alleged defamatory default procedure which human beings resort to whenever they want to denigrate people with different beliefs, or does the sheer prevalence of this data throughout the 11th to 18th Centuries AD reveal the sinister activities of black dualist occultists across Europe, rather than simple cliches? So precious were these acts to Mediaeval black witches, that very many of them *freely chose, in the open forum* of the town squares, to be burned or strangled at the stake rather than publicly renounce their belief in such ceremonies during the so-called "Act of Faith", where they received their last chance of a reprieve.

BULGAR INTERACTION
WITH THE MEROVINGIANS

Heretical nocturnal frivolities were already present in Western Europe some 100 years prior to the first recognised arrival of the Cathar heretics.¹⁰⁴⁷ Already the Bulgars, who the Roman and Byzantine Churches regarded as the greatest heretics of the age, were developing their ties with the Merovingian Magus-princes.¹⁰⁴⁸ This might be

one reason for the spontaneous eruption of the Luciferian doctrines in Christian France around 1022 AD,¹⁰⁴⁹ which so alarmed the papacy. Franco-Bulgar interaction might easily have permitted the seepage of this creed into Western Europe, but then again Lucan has already given us clues that this very same teaching was present even in Roman occupied Gaul. By Church reckoning as many as 80,000 inhabitants of Central-Eastern Europe were devoted to Lucifer, mainly Bohemians and Austrians.¹⁰⁵⁰ Similar figures were reported among the Basques, at their mass gatherings.
