

The Forbidden History of Europe

The Chronicles and Testament of the Aryan Nations

"John Smith"

The history of the world is littered with, and primed by, clashes between differing philosophical systems, and the civilisations intertwined with them.

The 20th Century was characterised by an unrestrained will to destroy the ancient order, coupled with a frantic need to find something suitable to replace it, amid ever-growing piles of human corpses.

What we are witnessing today, in the materialism, unspirituality, social dislocation and individualism of the 21st Century, is the aftermath of the Argan order's demise.

This, dear reader, is the sanguine tale of its epic beginnings, and closing days.

The Forbidden History of Europe

The Chronicles and
Testament of the Aryan
nations

"John Smith"

2005

DEDICATIONS

This book is dedicated to a number of individuals who played an important part in this project - Firstly, no greater thanks can go to my family who patiently waited 10 years while their dad finished this book, and to my folks for their assistance when the going was really tough.

Thanks also to the idiot who undid my wheel nuts (almost wiping out an entire family), not to mention the vile piece of filth who cut through my brake hose causing my vehicle to spin out of control.

A heartfelt thanks must go to those academics who reviewed this work, even those who didn't want to make a public declaration, the more so because many of their colleagues are bound to see it as controversial. Through them I gained a much greater insight into how I might refine its presentation, plus rectify whatever inaccuracies were present in the infant manuscript.

Above all this book is dedicated to the search for the Truth, and to the great scholars of the past, present and future.

IN MEMORIAM

W. BRO. H. C. AMBROSE (KNIGHT'S TEMPLAR), WHO WAS AXED TO DEATH IN JANUARY 2005 HELPING HEROIN ADDICTS GET THEIR LIVES BACK IN ORDER

IN MEMORIAM

CLAUDIUS CALLIDIUS, AN ENTERPRISING DUTCHMAN WHOSE LIFE WAS TURNED UPSIDE DOWN TRYING TO SAVE WHITE WIZARDS FROM INCINERATION. JAILED IN 1593 FOR DARING TO WRITE AND PUBLISH INFORMATION ABOUT THE FORBIDDEN HISTORY OF EUROPE. FORCED RECANTATION ENSUED.

Please note this book exists in two formats. One is entitled *The True History of Christianity* and the other a 'right-wing' version called *The Forbidden History of Europe - The Chronicles and Testament of the Aryan Nations*. I felt compelled to do this so as to dispel accusations the original work was "White Supremacist propaganda", an allegation I repeatedly encountered in the left wing bastions of the modern university system. Some academics point blank refused to evaluate the text upon seeing swastikas and the word Aryan, which even today is as taboo as ever. Any reader wishing to compare both copies will soon spot the difference.

All rights reserved. No part of publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording or any other information storage and retrieval system, without prior permission in writing from the author.

Part I

Beginnings

It seems wild beyond belief that humanity's earliest attempts to construct civilisation were accompanied by some of the largest monuments and edifices ever attempted by our species; yet that is precisely what happened.¹ And today, as we spy those splendid works jutting up from the sands of Egypt and Mesopotamia, or an extremely ancient Stonehenge on Salisbury Plain, who can help but wonder why ziggurat, megalith and pyramid-builders so grand should just disappear from the face of the earth, and with them, the secret age of colossae. Could it really be that these talented ancients just drifted off into a coma of intellectual amnesia, or do our eyes deceive us? Their demise closed one whole chapter, one very major chapter, in human history. With their disappearance the guarded wisdom, secret building crafts and technology of the ancients seemingly evaporated amidst the dark and primitive ignorance of the countryside, amongst the very people who marvelled over such pathetically simple things as plough shares and scythes.

General consensus is that under pressure from Christianity and Islam, all the Iranian Magi, and the pagan Gnostic philosophers of Egypt, Babylon and Greece, saw their respective religions as archaic, futile and illusory, and subsequently they abandoned their faiths without a second thought. But is it stretching the imagination too much to believe that they happily walked away from their idols, ceremonial rites and sanctuaries in droves, thereby relinquishing for all time everything that their ancestors had taught for the past one to two thousand years?

In *The Forbidden History of Europe* you will learn they did nothing of the sort. Instead the most committed adherents of the ancient order chose to migrate to lands that afforded them safe repose, and with them the old ways lived on, even into the Middle Ages. For the greater part of them the Orient was a natural destination. To explain why this was so, we must regress to the age of the "Aryans" (the twice-born) and the Magi. Until now this phase of forced and self-imposed exile remained the forgotten years.

Introduction

Pan-European folklore is rife with tales of wizards, witches and warlocks, mystical figures so intriguing that they have endured in our imagination for more than a thousand years. In legend, pointy hats, brooms, lengthy robes, veils, long hair, beards, magic, astrology, gems and wands were their trademarks. Nowadays they feature in high-profile novels, spectacular movies, popular television shows and video games. With millions of dollars riding on them, they have truly become hot property. Despite this level of public adulation few scholars felt a need to explore the past for genuine evidence of their existence. Little wonder they are but a dubious flight of fantasy. As it happens

the truth is altogether different. European wizards were, for the most part, adherents of the religion of the Magi, a faith of fire and sun-worship vigorously driven from Iran by Arab forces intent on introducing Islam to Persia, and bringing the ancient creed of the Magi to its knees. For those unfamiliar with the title, Magus is the singular and Magi the plural. The word Magians collectively relates to the Magi themselves, and their followers. Such then is the origin of the English word “magician”.

THE ARAB INVASION OF
IRAN

Retracing the footsteps of the sages takes us back to Bronze Age Iran, a realm ruled by the tribe of the Medes. There its priestly caste of Magi revelled in arcana pertaining to the divine beings. To this can be added their impressive understanding of musical theory, politics, literature, medicine, mathematics, astrology, astronomy, meteorology and alchemy. Over the years their fame grew all the more, granting them exceptional renown and privilege throughout Persia, Egypt, Greece and Rome.

THE MAGI AND THEIR
SPECIAL POWERS

Theirs was a race apart, for they and all their kindred had unique spiritual powers; powers to speak with angels and gods, to prophecy future events, to understand dreams, to converse with souls in the hereafter, to perform magic and the religious rites, to cast horoscopes, to heal and increase the fertility of nature. Their royal bloodline, passed on to their descendants, gave them these supernatural abilities, this second sight. Having beheld the remarkable gifts at their disposal, the common folk adored them as incarnate gods and goddesses.

There's one thing history amply demonstrates; things change. The march of time leaves nothing unscathed, even civilisations crumble away, crushed by the hungry wheels of that weighty juggernaut. In direct contrast to this maxim, history also confirms that some things never change. Tragic events are doomed to be relived by those unwilling to learn the lessons of prior ages. War begets war.

It took a mere 20 years for the Muslims to go on the war path after the death of their prophet Mohammed. Between 642 and the first decade of the 8th century AD Arab Islamic forces pierced the vulnerable underbelly of Magian Iran, and across the Oxus river into the lands of the nomadic Turkic tribes. Tirelessly they annihilated the pre-Islamic Persian and Turkic cultures of the region, stealing for themselves the choicest jewels of Asia's lucrative silk road ... Bokhara, Samarkand. It was political and missionary activity of a different kind.

As the Arabs entrenched themselves throughout the newly-acquired Iran, remnants of the ousted Persian royal family, and the Magi of Zoroaster (an Aryan prophet who lived during the 6th Century BC) withdrew to Tabaristan near the Caspian Sea. Determined to preserve their people and faith from Islamic domination they established well-garrisoned settlements throughout Khorosmia, in conjunction with the region's already sizeable Buddhist population. Yet even this refuge was destined to collapse in time.

THE FALL OF KHOREZM

Location: The city of Khorezm, 712 AD, due east of the Caspian Sea, in the Land of the Sun.

Khorezm, one of the last great bastions of the wizards, had fallen to Caliph Walid I. Islamic cavalry and footmen engaged the city's last remaining defenders in pitched battles, as they seized control of the streets and public buildings. Smoke hung over it like a buzzard. Jumpy vultures swooped down on the many corpses littering its forlorn, sunburnt thoroughfares. Haunting screams reverberated around the dying city ... rape, people succumbing to wounds, weeping orphans. In the aftermath of the siege, its inhabitants were detained and questioned. Some if not many were executed, others deported to make way for the ensuing waves of Arab colonists.

The Magi, the priesthood of astrologers and scientists so central to Iranian pre-Islamic culture, were not to be spared. To let them live was to invite a possible resurgence of the old faith. So they were put to death as encountered. They had governed large parts of Asia, served in the court of the Chinese Emperor, and studied alongside the priests, priestesses and philosophers of Greece, Rome, India and Egypt. Could it be that a religion so esteemed throughout antiquity should perish this ingloriously? Could it be that the Age of Wizards had ended?

Arab soldiers rushed through the halls of the *Herbadestans* (Magian colleges), where wizards once trained. Rooms that formerly came alive with the orations of wise folk and academics stood deathly silent. All that remained was to destroy or commandeer the books kept by the wizards, a wealth of wisdom and higher learning accumulated by them since the Bronze Age. But as they furtively searched these institutions, they realised their worst nightmare had come true. Few writings were found... Evidently an unknown number of Magi had escaped their clutches.

Under new suppression orders Persian writing was banned, Magian fire temples refurbished as mosques, and

non-Islamic Iranian *dhimmi*s subjected to extensive public humiliation, heavy taxation and extortion. Over the next hundred years Islam spread like wild fire across North Africa, even as far west as Spain.

Location: Spain, the flourishing Moorish Caliphate of Seville, under the governance of Abd ar-Rahman II, Anno Domini 845

If it wasn't for the massive invasion fleet mustered off shore, it would have been an otherwise normal day in Islamic Spain. The muezzin should have been standing atop the minaret, his wail calling the faithful to the mosque. Instead, fearful citizens looked seaward in horror as hundreds of serpent-prowed ships glided ashore. They had sailed far just to get there, all the way from Russia, under orders from their king.

As the longships of the Northmen beached, their angry raiders leaping overboard into shallow surf, it became obvious that Seville was about to get a call from some old friends - *Al Madjus*, the Magi. By the time the invaders had settled their grudge, much of the city lay in tatters.

You see the Magi had not vanished at all. In the shadow of the lofty Caucasus the exiles rebuilt their temples, and hundreds of kilometres of stone defensive works and towers, all designed to keep the Muslims at bay. Others went further afield into Armenia, Transcarpathia, the Balkans, Russia and Scandinavia, into the arms of an even older enemy, the Christians. It was in such places that they regrouped, reorganised and planned retributive military action. Over the next two hundred years, combined heathen Norse, Russian and Alanic forces repeatedly launched brave attacks against the Islamic, Jewish and Christian heartlands of the east, brazenly foraying into Iran, Byzantium, Anatolia and the Caucasus. They were here to stay.

THE MAGI DID NOT
DISAPPEAR

The venerable paganism of the wizards

There is an old saying "to the victor go the spoils". Our understanding of the nature and history of paganism has suffered greatly as a result of the Dark and Middle Ages, for it was during that tumultuous era that the Church sought to suppress and eradicate the 'idolatrours', 'superstitious' and 'heathen' beliefs of pre-Christian Europe in order to supplant it with the more 'enlightened' Christianity. For this reason, the Mediaeval churchmen did not seek to record the authentic traditions of the pagans at any great length. All we are left with are views of our ancestors parading about silvan woodlands, 'devilishly' dancing around bonfires, getting blind drunk, feasting, prostrating themselves before blocks of wood, venerating the sun and natural springs, sacrificing cattle, telling and retelling 'blasphemous' and 'obscene' myths, or "false histories". We also hear of their incest and the worship of men and trees.

Are we to believe that for thousands of years, Europeans had no religious sense at all, and delighted in the profane? Are we to accept that the heathen faith (or faiths) was as ridiculously baboonish as it has been portrayed; a feast of carnal longings and foolhardiness, and that it is only we who have genuine beliefs and morality? You are about to discover just how much information on the pagans has been preserved, only academics specialising in paganism and witchcraft studies have not bothered to pursue some of these very valuable clues to their ultimate conclusion, unashamedly for ideological reasons of a religious or political nature. In doing so they would have found an historical reconstruction greatly at variance with the current, almost nihilistic, interpretations of European paganism. So, what was paganism? In brief it is a Latin term first coined by the Romans; *paganus*: "villagers". It is therefore a contrived and deceptively naive term that conceals an amazingly wide range of beliefs. The term "heathen" possesses a similar quality. In Olden Rus', the word *pogan*,² which was derived from Latin, differed from other terms for "a pagan" like *yazychnik*³ or *busorman*.³ It meant "bad", "filthy", or "dirty". *Pogan* is most likely a word used by Christians during the post-conversion era when referring to devotees of the "Old Faith". Another interpretation is that it was used when speaking of certain pagans who deliberately defiled themselves with filth, or who had a different standard of hygiene. Throughout greater Europe the word "pagan" need not have applied merely to those who revered bonfires in towers or woodland clearings. Mediaeval clerics could just as easily use it when speaking of Muslims, or Jews, followers of "the Jewish superstition". In the *Hodoeporicon of St Willibald*, Huneberc of Heidenheim terms the Arabs "pagan saracens". Here formal religions, complete with their own holy texts, are derided as "paganism" and "superstition".⁴

Surviving data suggests that paganism connoted closeness with the land, fire, water and wind, and a deep

reverence for created existence. It comprehended the march of time, the cycle of life, death and destruction. Pagans, in synchronisation with nature itself, worshiped the Creator and/or the many living essences of creation, often by ritually emulating the eternally recurring drama of creation and destruction inherent in the cosmos.

Despite the fact that Celtic, Greek, Slavic, Germanic and Roman pagan observances had a certain degree of uniformity across virtually all of Europe, many authorities have not focused on their shared features, and the reasons for this inherent sameness. So what was the common source for their heathen observances? To answer this we must regress some 4,000 years to a time when white Europoids inhabited deepest Eurasia, in lands we normally associate with the Chinese. Nowadays researchers have termed the descendants of these Caucasians the Tokharians, or Saka who have in turn been equated with the Yuehzi tribes recorded in ancient Chinese historical sources. The Yuehzi were folk characterised by their white complexions and red, brunette or blonde hair. Following hostilities with the Chinese (the most catastrophic being in 140 BC), the Yuehzi were largely expelled from Eurasia. From the archeological examination of their mummified remains we know they were tattooed and wore clothing similar to tartan. While population movements between Europe and Asia took place as much as 3,000 years prior to the 2nd Century BC, the latter period witnessed an explosion of migratory dislocation.⁵

In an even more remote epoch this was definitely true of the inhabitants of Eurasia. In China's Tarim Basin approximately 100 corpses have been found in recent times, mummified by the dry sands and winds. These 3,000-4,000 year-old corpses were Caucasian and had blonde or brown hair.⁵ A number of them sported tattoos and owing to the solar nature of some pictures, it has been guessed that their bodies bore Iranian motifs connected with homage towards the later Persian sun God Mithras.⁵ So at the very least they were sun-worshippers. They pre-date the white, Buddhist, Indo-European-speaking Tokharians by some considerable amount of time, and for want of a better word these Indo-Europeans were Aryans/Scythians.⁵ From their well-preserved clothing we know that roughly 3,200 years ago these Caucasian inhabitants of Asia had practically the same tartan clothing as Europeans of the same period,⁵ a similar "*twill weave wool with a blue, white and brown plaid design*".⁵ On the basis of these finds it is difficult to conclude whether or not blondes originated in Asia or in Europe.

The Huns formed a later wave of emigres. They too possessed Caucasian and Eurasian physiology, and their constituent tribes controlled a broad expanse of land spanning from Europe to the quite distant Tarim Basin area. The period of the Hunnish excursions into Europe typified the westerly dispersions of these diverse white nations out of Asia, which, as mentioned, began in earnest from the second century BC onwards, owing to heightening levels of conflict. Many of them were Tokharian-speaking Buddhists and no doubt Magians, so their coming was synonymous with the introduction of Asiatic beliefs into Europe. Consider the word shaman, which entered English vocabulary via the Russian, which probably has as its source the New Persian word *shaman*.⁶ It may equally have come from the now-extinct asiatic Tokharian language (which was closely related to the Celtic sub-family),⁷ and in its original form denoted a wandering Buddhist monk.⁶ There you have it, white folk practicing a religion that began in India, and thrived throughout most of the Orient. They brought Asiatic linguistic affiliations with them also. Did you know that all the European languages, with the exception of Basque, Finnish, Estonian and Hungarian, are related to each other? Did you know that Sanskrit (the language used to record the Vedic holy texts of the Hindus) is significantly related to our European languages? Are you aware of recent developments in y-chromosome research, which indicate an archaic and substantial presence of white people throughout Europe and India.⁸ By implication they had interbred with the Dravidians, India's most ancient inhabitants, bequeathing their genetic legacy to the modern Indian population.⁸ The source of this genetic and linguistic inter-relationship was our Indo-European ancestors, these nations of nomadic Indo-European horsemen who saw fit to colonise not only Europe, but Asia. Amongst them were a great many Aryan tribesmen and their nomadic families.

Methodology

The Indo-European research controversy

The term Aryan is particularly applicable to the Indo-Iranians (linguistically the word Iran is related to the word Aryan). In saying Iranians, I am referring to Caucasian folk like the Alans and Tokharians, or Persian tribes such as the Germanians and Daans, or the pious Magian family of the Fryanaks who peopled Central Asia and the Caucasus in antiquity. Arab forces invaded Iran in the 7th Century AD, and deported many of the original inhabitants (many of which probably had blonde, red or brown hair). Thereafter they repopulated the region with Arabian colonists, with the result that many modern Iranians are a Semitic-Iranian hybrid, whereas they were once more Caucasian in appearance. Consider the existence of indigenous blondes and red-heads, with blue and green eyes, in places like the Balkans, the Ukraine, Afghanistan, China, Iran and Iraq, the genetic remnants of the Aryan, pre-Islamic age.

At a certain point research took a turn for the worse. Owing to the nazification and subsequent misuse of the word Aryan, the term has nowadays become taboo, synonymous with tyranny and evil. It would however be more fitting to associate it with a rigid, stable, social order and monumental civilisation-building, through which highly-evolved modes of living, complete with arts and sciences, came upon an otherwise barbarous world. In short, the term, and the people it once applied to, have a basis in fact. For this very reason the Aryan nations merit far closer scrutiny, despite the uneasy imagery the very word evokes.

I will begin by furnishing two examples from Persia, in which the word Aryan is used, in its original context. Firstly we have a monumental inscription carved into a rock face situated north of the Persian capital Persepolis. It reads *"I am Darius the Great King, King of Kings ... a Persian ... an Aryan, having Aryan lineage"*.⁹ And in the Magian prayer *Mihir Yast 1:4* we are told of the sun god Mithra's great virtues, as the Magi recited *"We offer up libations unto Mithra, the lord of the wide pastures, who gives a happy dwelling and a good dwelling to the Aryan nations"*.¹⁰

Admittance to one of the Aryan classes was by birthright only, a hereditary and unalterable inheritance bestowed by the creator. The following passages from Aryan scripture detail the fundamental precepts of Aryan lineage.

*"He who was begotten by an Aryan on a non-Aryan female, may become (like to) an Aryan by his virtues; he whom an Aryan (mother) bore to an non-Aryan father (is and remains) unlike to an Aryan."*¹¹

*"Those who have been mentioned as the base-born (offspring) of Aryans, or as produced in consequence of a violation (of the law), shall subsist by occupations reprehended by the twice-born."*¹²

In other words children with Aryan paternity were considered to be members of the Aryan nations, whereas miscegenation by Aryan females under non-Aryan males gave rise to non-Aryan offspring, all of them doomed to dwell in the lower regions of the social spectrum; namely labourers, tillers of the soil and pedlars. These criteria, and these criteria alone, served to determine whether or not an individual was Aryan. Many Aryans had brown, black, blonde and red hair, fair and ruddy complexions, green, blue, hazel and even brown eyes, even with a slight darkness of skin (in the case of far eastern Aryan pedigrees). Aryans evidently had a certain amount of genetic

AFTER THE SECOND
WORLD WAR THE TERM
ARYAN BECAME TABOO

PERSIAN KINGS WERE
ARYANS

variation, with respect to their outward physical appearance. So the image of a blonde-haired, blue eyed Norseman is not representative of all Aryan people. A father's lineage became the central issue, and it was of paramount importance.

Throughout this book you will be presented with information drawn mostly from Iran, India, the Balkans, Scandinavia and Russia (once called Scythia) which shall de-mystify and rehabilitate the seemingly leprous term Aryan, by rectifying the sort of misconceptions that most people have. Although the following information has been well known in European academic circles for some time, English-speaking researchers still approach the topic with great trepidation, perhaps understandably. Before I lead into the life and times of the magicians it behoves me to briefly outline the trail of discoveries which led to the unearthing of Europe's Asian connections, in both a religious and historical sense.

OFFSPRING LANGUAGES
OF THE INDO-EUROPEAN
TONGUE STILL CARRY
FOSSILISED SIMILARITIES

While studying Indian Sanskrit the Renaissance enquirer Scalinger chanced upon points of semblance between the Greek, Romance, Germanic, Baltic, Slavic and Sanskrit words for "God", or "a god".¹³ For example we have the Lithuanian word *Dievas* and the Latvian *Dievs* which meant "a god" or "the sky". Then there is the Old High German word for "god" *Ziu*, and the Greek *Dios* ("God"), or the Latin *Deus* ("a God") and *Divus* ("divine"). It can also be found in the Old Icelandic as *Tívar* ("the gods"). These many terms are cognate with the Old Indian *Devas* ("God").¹⁴

An apparently different Russo-Baltic tradition, which intimates that the *Daevs* are malign beings, seems to have stemmed from the Avestan Persian word *dev*, meaning "a demon". This tradition may well be embodied in the Slavic word *divii* ("something that is wild, untamed or savage"), the Latvian *diva* ("a monster") or the Greek *daimon* (derived from *daio* "to distribute fortune"). Whether celestial or subterranean, these gods had amazing powers, as is indicated by the Polish *dziv*, and the Lithuanian *dycvas*, both of which mean "a miracle".

FOR SEVERAL CENTURIES
SCHOLARS HAVE STUDIED
THE CULTURAL AND
LINGUISTIC DEBRIS OF THE
ARYANS, AND THEIR
IMPACT ON LATER
EUROPEAN CULTURES

Yet Scalinger was ill-prepared or unwilling to fathom the nature and genesis of these similarities, perhaps due to the prevailing religious climate of his era. Somewhat later, in the year 1767 AD, an English amateur linguist called Parsons, began a far deeper enquiry into the matter. His findings were tabled in what was then a ground-breaking work, the *Remains of Japhet*. Through this broad-based enquiry he deduced that the languages of Europe, India and Iran were fundamentally related to one another, in fact part of the same linguistic stock; of similar pedigree. Even so his observations failed to coax enough discerning minds to more fully examine the implications of his discovery.

It was only in the last years of the eighteenth century that someone of merit followed in his footsteps. Jones, the Chief Justice of India, and a qualified linguistic scholar in his own right, devoted much energy to paleo-linguistic research. From his labours came our first serious inklings that, at some time in ages past, the pagan Europeans shared the same linguistic and religious ancestry as many in India and Iran, not to mention northern, central and south-east Asia.¹⁵ There was a scientifically quantifiable relationship between Sanskrit and Europe's linguistic sub-families. Comparative linguistics was born.

Paleo-linguistics or comparative linguistics is the craft of "word archaeology", the valuable excavation of archaic words from diverse languages. Comparative linguists can make inferences about the cultural meanings originally associated with a given word, and the effect that these same cultural trimmings may have had on the recipient race, whose language is being dissected by them.

Amid the euphoria of Jones' revolutionary find, it probably never dawned upon anyone what a terrible scholastic burden had just descended upon academia. For now they had a duty of care to examine the many cultural and religious similarities between Europeans and Asians. If they had common linguistic ancestry, could it also be that comparable elements of their respective cultures were not a coincidence, but contextual features of a cultural inheritance shared by Europeans and Asians?

19TH CENTURY
BREAKTHROUGHS

Only in the late 1800's did the likes of Frazer, Muller, Darmesteter, and West begin to attempt the seemingly impossible, and evaluate the significance of these concurrences. Tangible results took form. But before too long their new discoveries were steered towards sinister ends, while studies in Aryanism were still in their infancy. On the looms of Nazi historians the "Aryan myth" was woven. Science had now "proven" the existence of a master-race, and surprise, surprise, it was Nordo-Germanic, to the exclusion of many other Europeans, who shared a similar cultural pedigree. With this myth a whole nation of industrious men and women were serenaded, and lured to the destruction of their families and country, as Germany prepared to do battle with all the great powers of

the time. Carnage enveloped their neighbours on every side as Germans tried to lift themselves from their problems by reliving those glorious days of old, a thousand year Reich. Jews and other condemned elements of German society died by the million. The unparalleled tragedy of these events left a stain that tarnished Indo-European studies, enshrouding it in taboos that are present to this day. For example, upon hearing the word “Aryan” most readers will think of Hitler’s “master race”. This graphically illustrates how a legitimate field of academic endeavour, like Indo-European studies (ie; Indology), can be hijacked and almost consigned to ignominy by misguided politically-inspired historical models. Nowadays researchers are loathed to use the word Aryan, because of the insurmountable level of ill will directed against a field of study they’ve devoted most of their lives to. Their solution was to engage in a little bit of PR, to coin the label ‘Indo-European’, a purely artificial and less emotionally evocative epithet than ‘Aryan’. After World War II any willingness to further explore Europe’s Aryan legacy had been exhausted by nightmare visions of a charred continent, further guaranteeing that researchers would need the resilience of hardened steel, and the skin of a hedgehog.

AFTER THE FALL OF THE
3RD REICH MOST
RESEARCHERS WERE
TOO SCARED TO RESUME
RESEARCH ON THE
ARYAN QUESTION

Still, some Orientalists persisted. In the 1950’s the “New-comparativists” (academics like Dumezil, Eliade, Mallory, and Gimbutas) emerged. They bravely stepped back into the breach and picked up where their predecessors had left off. Much toil remained. Archaeology, folklore, historical sources, mythology were all areas that needed to be explored to confirm or deny any actual or perceived connection between European and Asian cultural and religious manifestations. Thanks to them we are a whole lot closer to understanding the glorious and impressive history of the wizards.

European paganism included religious traditions that remained amid the cultural backwash left behind by the nomads who once ruled throughout Europe and Asia. Their form of Aryan paganism, though crude, concerned the worship of *Daevas* (a class of gods still worshiped by the Hindus of India), something suggested by the fact that the word for “god” in many European languages are related to the Sanskrit word for the *Daeva* gods, as mentioned. While it is true that Indo-European words for “god”, belonging to this etymology, continued to be used after the conversion to Christianity when referring to the god of the Christians, there is every reason to believe that the heathen priests of Eastern Europe and the Urals region, continued to understand the original context of the words.

ARYAN IDOLS IN
EUROPE

Idols with many arms and heads were carved by heathen Celts, Poles and Balts. These images resembled those of Vedic deities throughout India. Very often Gaulish and Celtic idols are seated in the “lotus position”, a traditional Hindu pose for divinities. Aryan *nagas* (magical, half-human, half-cobra beings from the underworld) appear throughout much of the ancient and Mediaeval world, thousands of kilometres west of India, as *naaki* (Finnish), *nakhi* (Estonian), *nocca* (Gothic), *nhangs* (Armenia), *nathr* (Old Norse for “adder”), *naia* (Egypt - “a form of poisonous asp”), *nga* (the Samoyed word for “a type of God, particularly a divinity that brings death”)¹⁶, *nix* (German),¹⁷ Other words for “snake” were *nathir* (Old Irish), *naeddre* (Old English) and *natrix* (Latin).¹⁸ The Aryans ascribed to the quasi-human, demi-serpentine naga beings, mighty powers of protection. This being the case, Aryans throughout the Orient often had them crafted into serpent amulets in the form of necklaces and arm rings. Similar items of jewellery continued to be worn by European heathens as late as the Middle Ages.

Aryan rites typically included the lighting of incense, the offering of libations and sacrificial meals, the slaughter of horses and oxen, as well as the lighting of perpetual fires which brought prosperity and protection to settlements.

For this reason many European words meaning “fire” are related to the Sanskrit. The Old Russian word was *ogon’* or *ogn’*. This is related to the Bulgar *ogn*, the Serbo-Croat *ogan*, the Slovenian *ogeni*, the Czech *ohen* or *ohne*, the Polish *ogien*, the Lithuanian *ugnis*, the Latvian *uguns*. The name of the Hindu fire god Agni is especially related to Indo-European words for “fire”, namely the Latin *ignis*, the Hittite *agnis* and the Vedic *agnis*.¹⁹

So by the 10th Century AD, after several thousand years of diversification, European pagan observances were simply a welding together of Aryan customs focussed on the performance of the old vedic sacrifices, rites still performed in India to this day.

The Book’s Design

Because this book contains a wide range of topical information, it is worthwhile saying a few words about its compilation, and address some of the problems associated with historical documentation and research in general.

For the remainder of this chapter you will be presented with some of the key pieces of evidence which support one of the book's primary themes, namely that many traditions of paganism persisted in eastern Europe as late as the Middle Ages. These are merely an appetizer, a taste of ever greater bodies of evidence that shall unfurl with each succeeding chapter. It has been included at the end of this Chapter instead of at the beginning (where it more properly belongs) simply to allow readers unfamiliar with the period to immerse themselves in the story without suffering the mental indigestion that this information would have caused them, had it been the first thing that greeted their eye upon opening the book. For those unaccustomed to unlocking the secrets of history a brief guide is hereafter supplied, which will help you to objectively assess the validity of any data you encounter. Readers familiar with the various research disciplines, and those who find this next chapter dry reading may want to skip Methodology and progress to the following chapter.

Discovering the past is a difficult proposition!

Written sources pertaining to Russia's pre-*Primary Chronicle* past are somewhat limited. It could hardly be otherwise with an empire forming in the barbarian wilds, far beyond Rome's field of view. The world's "cultured" civilisations saw Scythian Magog as one big question mark, and knew almost nothing of it. Indeed why would they want to probe such distant and hostile races when they had enough trouble fending off those much closer to home. But, all is not lost! In our modern age, detectives can walk into a crime scene and re-create what took place without actually seeing what transpired, simply by looking at the accounts of witnesses and the material evidence located there. However fantastic their methods, and precise their assumptions, the interpretations of the data, in each instance, *can only be 99.9% foolproof*, at best, because even first-hand witnesses can still give conflicting testimonies, *and they were there!*

But what is evidence?

What exactly constitutes evidence is often a matter thrashed out by lawyers across the courtroom floor. In real life, there is no wigged man at the bench who chooses what is admissible or inadmissible evidence; our minds do that job for us. When scrutinising data scholars must assess its acceptability. Does a given source contain exaggerations or stretch the truth to insane limits? Does the source material contain faults like translation and copying errors, or might it have been counterfeited by some unbalanced soul? Were the sources tampered with so as to prove cultural, political or religious superiority?

Having amassed their "evidence", they weigh its pros and cons.

Evidence should not be assessed alone, or taken out of context. When there is a pile of corroborating evidence, or information disproving a certain line of thought; it should always be pooled for analysis.

Evidence can provoke widely differing interpretations. Conclusions drawn by historians and archaeologists are still only assumptions, irrespective of how well thought out they may be. Most of the world's history has already been lost to us for good; unrecoverable. All that is left is what people have inferred. For argument's sake, paleontological artists paint dinosaur reconstructions with various shades of mottled camouflage, which they deduce from the presence of certain plants in the fossil record. This is sound guesswork, but even so we are unlikely to be able to confirm what colour they were.

Further, it is possible that information can be incorrect. Forged anthropological data, or biases in information are known to have occurred in the past, and this is another area where problems can conceivably occur without our knowing. The recent discovery of a counterfeiting scheme in Israel, involving fake archaeological artifacts, and huge sums of money, is a case in point. Historical sources are fraught with the dangers of misinformation, or what's worse, of disinformation - but they are better than nothing. The best thing we can do to minimise this, is to access diverse information from reputable academic sources, from a variety of countries.

From the evidence they compile, writers suggest theories and then set about proving or disproving them. At every stage the inferences of archaeologists and historians are modified by the author's own motives.

Firstly, some writers hope to fathom the truth as best they can. Such writers hope to provide hard and reliable evidence, and present it in an objective manner. The truth always has been a rare commodity, throughout any age. It can be forgotten, and also rewritten or undone in the future to accommodate changing social, political and

religious motives. These are all factors we must consider when analysing our information.

Other authors hope for prestige amongst their academic peers. Scholars of this calibre congratulate currently accepted theories and pander to public opinion. Even when they have privately noted facts contrary to the prevailing theories, they are likely to sacrifice these observations to maintain their already established reputation. One's peers might not like what you have to say, so it is better to not rock the boat.

The case of the Vinland map is particularly illustrative in this instance. The Vinland Map, which depicts Europe, Asia, Africa, and part of America, is the most advanced cartographical representation ever to have been devised during the Mediaeval-Renaissance era. It has been subjected to more scientific scrutiny than any other map. Even considering the substantial evidence which argues against it being a forgery, some academics refused to accept it. W. E. Washburn, the Director of American Studies at the Smithsonian Institute had this to say;

Two scholars keen to debunk the authenticity of the Vinland map, Peter Skelton and Helen Wallis “both exhibited a caution in their professional judgments that, in my opinion went beyond a judicious and rational evaluation of the evidence; it seemed related to fear of the consequence of their possibly erroneous judgment for their own reputations and that of the British Museum”.²⁰

I would be remiss in neglecting to discuss at this point the impact of gender studies on the objectivity of modern historical research. For it has become trendy among the academic elite to dabble in gender issues when compiling their varied theses. The dangers this poses to history as a purist discipline, first came to my attention at university. Guided by the post-modernist hand, history is kidnapped and cosmetically altered, only to emerge as a form of social science. What eventuates is, very often, a raft of social theory and opinion which seeks to evaluate rather than understand a certain era. History, per se, is no longer taught in many high schools; replaced by social studies, through which students are emancipated from the dark errors of the past. The past no longer has relevance to our new vision for 21st Century society. Why teach anything from the past other than those aspects of history which show this Brave New World in a glorious light?

My fears were amply vindicated once I began studying the history of the witches. Since the 1970's, when radical feminism gained impetus, the witches came to be garlanded as feminist martyrs; they were hot property. Renewed interest in their history, or should I say 'herstory', thankfully owes much to feminist fundamentalists (whether of the male or female sex). But that is about as far as the kudos should go, for many of them only succeeded in de-railing the empirical study of the witch trials, and the phenomenon as a whole. Numerous male and female writers now latched onto the witch phenomenon as proof of gendercide. Their imperious theorising converted witches into a priceless commodity that reinforces the rightness of the present-day struggle against “patriarchal society”. The zeal with which this theory has since been championed has seen veritable truckloads of uncomplimentary and unsupportive evidence thrown into the dustbin of history.

Yet if they really empathise with the hapless plight of those women (and men), they would do well to desist from dehumanising them, by stripping away the religious aspect of the witch's existence. In doing so they somehow rob the witches of what mattered most to them, their religious traditions. *The Forbidden History of Europe* provides irrefutable evidence that witches, many of whom were female, were not burned because of their gender, but because of their heartfelt religious allegiances and bloodline.

Post-modernism rightly alerts us to the fact that “racial purity” does not exist strictly speaking. Be that as it may, many in the ancient and Mediaeval world did think in these terms. Therefore “race” and racial concepts must feature in any credible historical reconstruction, however unpalatable it may be to some.

Finally some writers seek to grade the type of information they include in their history essays, hoping that the well-groomed data will promote their preferred political and religious persuasions. Others wish to slander certain races or people, whether due to ancient hatreds, feelings of supremacy, or to reinforce their country's claims on certain parcels of land. Usually, rampant nationalism is to blame for this.

The nationalistic agenda

In hindsight it is difficult to fully endorse the preachings of Communist and Nazi historians. From the very beginning they were expected to reinforce the political developments of their time. Their historical exposes were to

highlight the progress of their new orders, or the racial superiority of their citizens. Unfortunately the Nazi vision of history was based upon an imperfect understanding of the Indo-European legacy. Perhaps the happenings of the early 20th Century would have unfolded differently had they traced Aryan history beyond Germany's borders. The nationalistic agenda is therefore one of the greatest liabilities to the formation of sound historical reconstructions.

When we look at a map of the modern world, we are seeing a snapshot of current political, physical and racial boundaries. While they are an invaluable tool for the geographer, maps are grossly misleading since they oversimplify complex realities, and serve to camouflage the original ethnic composition of geographical areas by giving them new titles. Maps change over time. The more time elapses, the more the ethnographic make-up of a given region is likely to diversify. When trying to rebuild a picture of pagan Europe *we must be very careful to take this into account*. Let's see if you recognise any of the following tribes which existed in Ptolemy's day, in the 2nd Century AD. He included these on his map of the ancient world, an amazing human achievement in itself, particularly for his era.

The Reni, Romandifsi, Marini, Tongri, Monappi, Erusii, Nemech, Uagy, Raurites, Longones, Dathau, Ubanerti, Carnuthe, Parisi, and Truasii? These were the inhabitants of Celtic Gaul, lands which later came to be known as France, but was every last one of these tribes Gaulish, with the same beliefs as Gauls?

The Bamony, Caledany, Carnones, Lugi, Cornaiuj, Silires, Lobum, Belge, Rigim, Dampnones, Brigantes, Cathidu, Orduies, Danj, and Silires? These were some of the tribes of Roman dominated Britain, lands which came to be known as England and Scotland, and eventually the United Kingdom. But were did each of them have the same cultural background as the Britons?

Magnete, Hebdam, Brigates, Hibernii, Rogbodi, and Gangam? These were just some of the tribes of a land which came to be called Hibernia and later Ireland. So were they really Irish? Did all these tribes believe the same things as the Hibernians and Irish?

Carudes, Sigulones, Cimbri, Sabalmgi, Saxones, Selmge, Teutonarij, Farodim, Anarpi, Omani, Batini, Diduni, Rutirli, Eluones, Luni, Tentones, and Luriburi? These became known as Germans in the Roman era, and later Danes and Franks. But were they all Germanic, with the same customs and beliefs as the Germans, as described in Tacitus' *Germania*?

Lenoni, Duthe, Sixcsi, Chedini lived in Scandia, across the straits from the Danish Peninsula. In time these became known as Swedes. So were they Swedes? As with the other tribes mentioned on this page, if it happened that they were not the original inhabitants of the area, simply immigrants, can we be sure that they had not displaced previous inhabitants? Or did they interbreed, and to what extent? What customs and beliefs of the previous inhabitants would they choose to adopt, if any? What lifestyle and belief system did they introduce into the area from their old homelands?

If you had trouble recognizing any of these names, then I am quite sure that you will be equally hard pressed to identify their languages, customs and religious beliefs. The point is this, that to explore the history of ancient nations with a belief that they had an ethnic composition identical to what it is today is totally wrong, and highly likely to conceal the real beliefs and customs of the people who lived there. Are the many Iranian words and customs of Europe purely coincidental, or are they the jettisoned refuse left behind by transitory tribes, whose names and lifestyles are lost to eternity? If so can we pinpoint the exact tribes who spoke these Iranian words with any certainty? Perhaps only archaeology can enable us to do so, but even then, migrating tent-dwellers and their wagons seldom leave traces of permanent habitation.

The ancient world, like the modern, tirelessly mutated. Maps required modification to reflect these changes, and so antiquated maps present a picture of what once was. Ptolemy's map *Geographia*, as reproduced in *Cosmography*, is a moment frozen in time, depicting Angles and Lombards living in Central Germany. As we know, these people eventually migrated to England and Italy respectively. Therefore we might ask what Germanic or quasi-Germanic customs and beliefs they brought with them into Post-Roman Britain and Italy?

In Europe the Great Migrations were characterised by Germanic population movements on a grand scale, leading Vandals into North Africa, Visigoths into Spain, Ostrogoths into Lombardy, Angles and Saxons into Britain, Franks, Saxons, Burgundians, Bavarians and Allemanni throughout Germany and France. With the exception of the Scandinavians, it seems the Teutonic nations were on the move. Progressively Gaul became more Germanic during the 7th Century AD. Prior to this Goths controlled the Ukraine, in unison with (Iranianised) white Scythians and Indo-Iranian Sarmatians.²¹

THE GREAT GERMANIC
MIGRATIONS

The waters to the north of Ireland were once called the Hyperborean Ocean, thus indicating that Ireland (Hibernia) was somehow connected the “Hyperboreans” who inhabited the lands of Russia and Scandinavia as far back as 500 BC or even earlier, if we can rely on Herodotus’ accounts concerning them. Nowadays many would dispute the factual existence of the Hyperboreans, yet Herodotus proved to be correct in what he said concerning so many other other seemingly incredulous details.

The Book of Invasions records an earlier belief that *Conaings* (perhaps from the Gothic *kunnigs*, or the Old Norse *konungur* ie; Kings) led the Fomorians to attack the country we know as Ireland. As the invaders arrived, Ireland’s original inhabitants tried to contact the Greeks for help in ousting the Fomorians, but were unsuccessful.²²

Could this mean that the migrations of Scandinavians to Britain and Ireland in the 10th Century were only the tail end of a long standing cultural link between Ireland and the east? Some might say that Herodotus’ description of the Hyperboreans was so sufficiently poor, that they were a fictional race, or indeed that map orientations of the past which show west as north might be responsible for calling an Ocean near Ireland “Hyperborean” (the race was supposed to have lived beyond the North Wind). Nevertheless there are a significant number of Gaelic words that are connected with the Russian. Whether this came about in the Bronze Age Hyperborean era (if there was such a time and place), or a later age will need to be examined.

Another problem is that ancient geographical sources might contain significant inconsistencies. For example, various classical authors provided information on the length of a day in Thule, an old geographical term which applied to an as yet unidentified stretch of land. These divergent details created confusion for modern scholars, about the exact latitude of the country (see p. 174). In the *Gothic Wars VI:15* (an account written by Procopius dating to the mid 6th Century AD), we find reference to Germanic warriors in Thule sacrificing battle captives to their war god, who he refers to as Ares, the same god worshiped atop the Scythian ziggurats 1,000 years prior. Might this indicate that the ancestors of the Scythians had, following the disintegration of their many nations, migrated far to the west of the Steppes, even as far away as Iceland, and that they were still performing the thousand-year old Scythian war sacrifices once witnessed by Herodotus during the 5th Century AD? If it does, then we would have cause to wonder how much Scythian paganism the Germans brought wherever they settled. Yet archaeologists have found no evidence of ancient Greek or Germanic occupation in Iceland prior to the arrival of the Irish monks. Does this indicate that Procopius was misguided in his comments? Or simply that Thule has been improperly identified as Iceland, or that there might be evidence for habitation buried under piles of Mt. Heimaey or Hekla’s volcanic ash, which is as yet undiscovered? In the Philippines, housing was almost instantaneously engulfed by streams of mud generated by the eruption of Pinatubo. The locals are still digging under the mud plains trying to find their old houses, and retrieve possessions, which are essentially well preserved by their entombment. The same is true of Iceland. As it happens there have been no less than fifteen eruptions in Iceland since the early 12th Century, which have repeatedly decimated settlements in the area. The argument that there is no archaeological evidence of ancient inhabitation at this point may not be as convincing as it seems, Bronze and Iron Age stratigraphy could be trapped more than 100 metres below ground. Only archaeology and lucky core-sampling will tell us whether people lived in Iceland before the Irish monks, but unfortunately it won’t tell us that Iceland was Thule. Only in situ monumental inscriptions to this effect could ever prove that.

By and large 20th Century warfare has centred around defending arbitrary lines drawn on pieces of paper, which show one race living here and another there and so on. Times of protracted peace, and the increasing mobility of human populations led to situations where different (and sometimes mutually hostile) races ended up living not on one side of a national boundary, but on the same side of the street.

The civil war in Bosnia, the ethnic cleansing of Kosovo, and racial tensions in Khurdistan and Azerbaijan were, in many respects, caused by a blurring of cultural boundaries, in areas that have changed hands many times over during the past thousand or more years. In each case the most fitting question to ask is where the borderline is properly situated? If you posed this same question to the local inhabitants, the answer you receive would depend on who you asked. The long running Serbo-Croat hostilities, were, in part, aimed at clearly defining cultural boundaries, by displacing persons of the other ethnicity into lands defined as belonging to their own nationality. The most ironic thing about their tussle is that neither of them originally came from the Balkans.

The Byzantine work *De Administrando Imperio* mentions that Croats and Serbs were related to non-Christian kinsmen, of the same tribes, residing in the east “beyond Turkey”. In the case of the Serbs this tallies well with the

IRELAND AND THE
HYPERBOREANS

THULE

SERBS AND CROATS ON
THE MOVE

Caspian homeland depicted in Claudius Ptolemy's *Cosmography*.²³

This testifies to the tragic aftermath of hostilities in which peoples try to make others shift out of their own homes and into another man-made geographical area, behind lines that will never adequately reflect the complex realities of cultural spread.

As you will soon learn, analysing repeated waves of eastern racial diffusion into western Europe, is a vital part of our search for the foundations of European paganism and witchcraft. In the past there has been a tendency to overlook the importance of Europe's constantly-changing ethnic composition. Being skimpy with this sort of subject matter has only prevented us from clearly seeing exactly who was living in Europe, even as recently as 1,000 years ago.

The Tools of the Selectives

MACRO STUDIES PROVIDE
NEW RESEARCH AVENUES

A full and complete reconstruction of the times is continually thwarted by the way historical information is conventionally assessed nowadays. As it happens the shreds of available information only take their proper place once one conducts a macro-study. That is a study using western, eastern and Islamic historical sources. These potentially tarnished documents are assayed by facts, weighed in the balance by applying linguistic, archaeological, folkloric, religious sources. This permits us to clarify the veracity of historical accounts, or dismiss them if need be.

An historical macro-study is rather like re-assembling a jig-saw puzzle. The full pictorial representation was mostly visible only in its day, but as time passed pieces of the puzzle were lost, some were deliberately destroyed, and others scattered. Each discipline just mentioned represents a box of jig-saw pieces; archaeological pieces, linguistic pieces, religious pieces, and so on. By dispensing with even just one of these boxes, it becomes impossible to place individual components of the puzzle in their correct place, in their correct context. Entire quadrants of the puzzle remain blank. Summing up a 1985 symposium on the conversion of Scandinavia the delegates concluded;

"Anthropology, art history, archaeology, runology, nordic languages, place-name studies, literary science, and comparative religion all have much to contribute (to help build a more complete picture of the Christianisation of Scandinavia). Only effective inter-disciplinary co-operation can free us from crippling preconceptions not only about the past but also about the methods of unfamiliar disciplines".²⁴

Interaction between two or more cultures leaves behind certain "fingerprints" which are hard to remove. If those prints are well enough preserved, and frequent enough to infer an actual connection, then you can be confident that you have nailed down some hard evidence. Archaeologists, folklorists, anthropologists and historians are tasked with discovering these "fingerprints". Among their ranks, devotees of the comparative method take these fingerprints and attempt to assess not only the plausibility of contact between these two cultures, but the nature of the liaison.

The Forbidden History of Europe is very much an attempt to gauge what is achievable using a multi-disciplinary approach. Each discipline applied in the comparative process has its inherent strengths and weaknesses. For the benefit of those who are unfamiliar with them, we will now examine these fields, in a cursory way, before diving headlong into the remainder of this work.

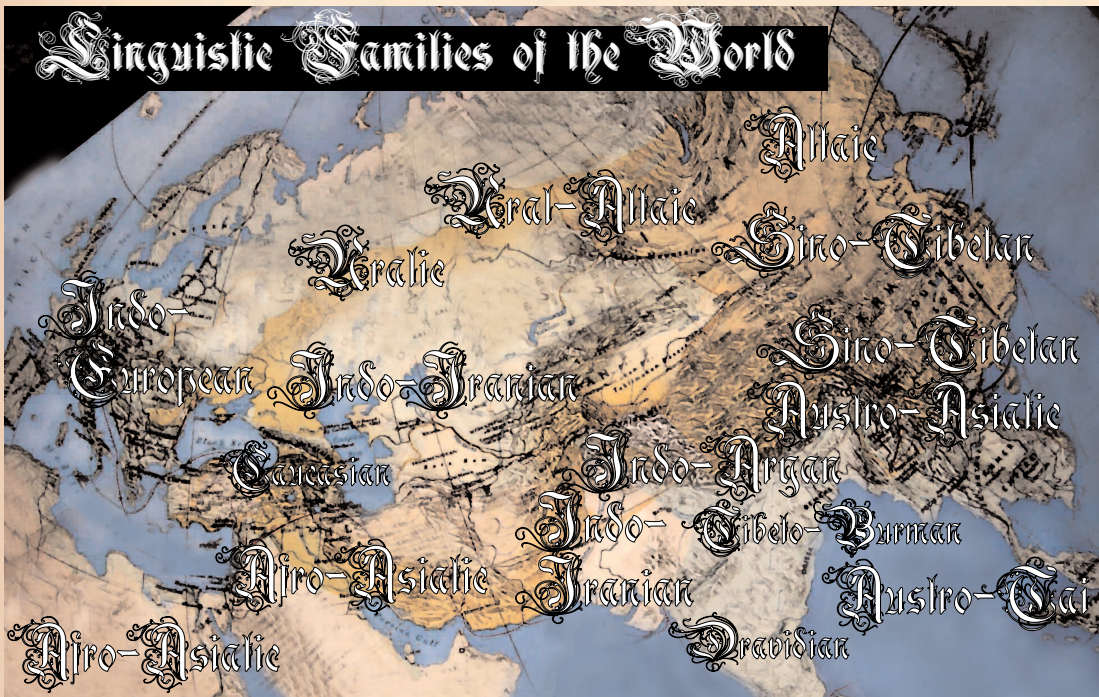

Linguistics

LINGUISTICS

Language is a means of communicating facts, concepts and feelings. Like dress, religion, cuisine, folklore and customs, language is a manifestation of culture. Linguistic information is a major pool of data from which we can expand our reconstruction of life in pagan Germany and Slavia, to include mundane concepts and technologies through to the esoteric and etherial. So it behoves us to familiarise ourselves with the linguistic inheritances of European peoples, and the wider world, so as to grasp their implications.

Throughout the following tables of languages bolded capital letters indicate the names of sub-families within a linguistic group. Underlined languages indicate those now extinct. Bolded upper and lower case entries are sub-groups within the listed sub-families. Those marked '-' are dialectal sub-groupings of a given linguistic sub-group.

Some Indo-European linguistic subfamilies are suffused with Indo-Iranian words. These are denoted by an *; but the list could be somewhat larger.

Indo-European family

Indo-European emerged as a linguistic group from Proto-Indo-European, the embryonic antedeluvian Aryan mother tongue. Proto-Indo-European existed between 5,000 and 2,500 BC.²⁵ With the exception of Basque, Hungarian, Finnish and Estonian, all European languages have an Indo-European pedigree, and due to data discovered by linguists involved in comparative studies (ie; correlations in words and places) it is believed to have originated somewhere high in the Caucasus, Russia or Siberia. Consensus is not however universal. Even today international scholars pursue the search for the geographical Aryan motherland, the womb that gave birth to European and Hindu civilisation. Until laborious attention is paid to archaeological excavation throughout Iran, Central Asia and India, the linguistic arguments are like a dog chasing its own tail, incapable of independent verification. Indo-European once resembled Sanskrit, which is still used in India.

Slavic sub-family

The Slavic group was used as a means of communication throughout the vast expanses of Rus', as in eastern Europe, and on the Balkan peninsula. All languages spoken by the multitude of Slavic tribes were a component of this language group, which were ultimately derived from the language of the Indo-Europeans. Originally Slavic was mutually intelligible to tribesmen in the Balkans, Russia, Central and eastern Europe. But this uniformity came to an end shortly after 1,000 AD, when the Slavic mother-tongue began to seriously splinter.

The intervening distances separating the tribes ought not be seen as the foremost cause for Slavic linguistic disintegration. In many cases Slavic sub-languages arose in regions geographically close to one another. It was not a loss of physical contact, but much rather the abandonment of a desire for contact with nearby Slavs. The timing for the loss of Slavic linguistic commonality is important, for it neatly coincided with the introduction of Christianity. Here politico-religious factors were the likely catalyst for linguistic disenfranchisement among the pre-Christian Slavs, who until that time could communicate with each other with little difficulty. A break in racial solidarity caused a rupture in discourse between their many far-flung tribes. Since *Slavic language (particularly the Russian), is littered with Iranian words and religious terminology,*²⁶ it is highly likely that this splintering was due to the downfall of the Magian pagan intelligentsia, and the fragmentation which Christianisation caused among the Slavic pagan nations about 1,000 AD. Much the same date has been arrived at for the division of Common Norse into East and West Norse dialects (c. 1000 AD), and thence the formation of Old Icelandic, Old Danish, Old Norwegian and Old Swedish, and perhaps for the same reasons, though later warfare may have helped accentuate these growing differences.²⁷ As further evidence for this, there appears to have been a lull in the construction of fortifications in Sweden and similar locations in the Scandinavian north during their Viking Age expansion period, though they were built anew during the Christianisation era. This may indicate what linguistic evidence already suggests, that Christianity brought warfare and disunion among the Scandinavians (witness *St Olav's Saga*), tearing apart a widespread northern social and linguistic fabric, which had existed relatively intact prior to that period. If the incidents related in *St Olav's Saga* are correct, pagan Norsemen were repulsed by the conversions of neighbouring districts and kings, and prepared themselves for war on religious grounds, whether

THE SLAVIC INDO-EUROPEAN SUB-FAMILY

SLAVIC AND NORSE LANGUAGES SPLINTER 1,000 YEARS AGO

they themselves launched retributive strikes against the Christians, or whether their domains were violated by troops loyal to newly-pious Christian monarchs and chieftains.

Indo-Iranian sub-family

Owing to the nature of the region in which it sprouted, Indo-Iranian languages resulted from a fusion of Babylonian, Mesopotamian and Aryan languages, eventually including a multitude of Persian and Indian tongues. The Indo-Iranian group was indigenous to Mesopotamia, Persia and the Caucuses, and to the south and south-east of that area. Of course, like any language, it was capable of being transported to different geographical areas. We know that *Indo-Iranian entered the languages of continental Europe from the east, especially impregnating the Teutonic, Baltic and Slavic linguistic subfamilies*. Many came into Europe with migratory Indo-Iranian populations and, at various points in Iranian history, with their expansive armies. At other times they were learned by races and merchants that came into prolonged and repeated contact with them. The proliferation of Persian/Iranian/Avestan words in the Slavic and Teutonic languages was caused *not only by ancestral linguistic correlations* traceable to Indo-European, but an overlay of Indo-Iranian atop the ancient Indo-European language pool of Europe. Therefore it came in two ways. Firstly as a legacy of their ancestral linguistic parent (Indo-European and before that Proto-Indo-European), and secondly as a bi-product of direct contact with Indo-Iranians, Avestan-speaking Persians particularly.

That Avestan Persian linguistic correlations in the Teutonic, Baltic and Slavic linguistic subfamilies resulted from an additional direct penetration is proven by the high frequency with which they are found in them, when compared with their Indo-European sister-languages in Europe. If the correlations were only ancestral, linguistically speaking, then one should expect to see a more or less equal scattering of fortuitous and low-grade, time-worn "fossil" correlations across much of Europe. Instead what we find in Germany, Scandinavia, and in the Baltic and Slavia especially, is an aberration when compared with the other Indo-European languages, a preponderance of Avestan Persian found in varying degrees of preservation.

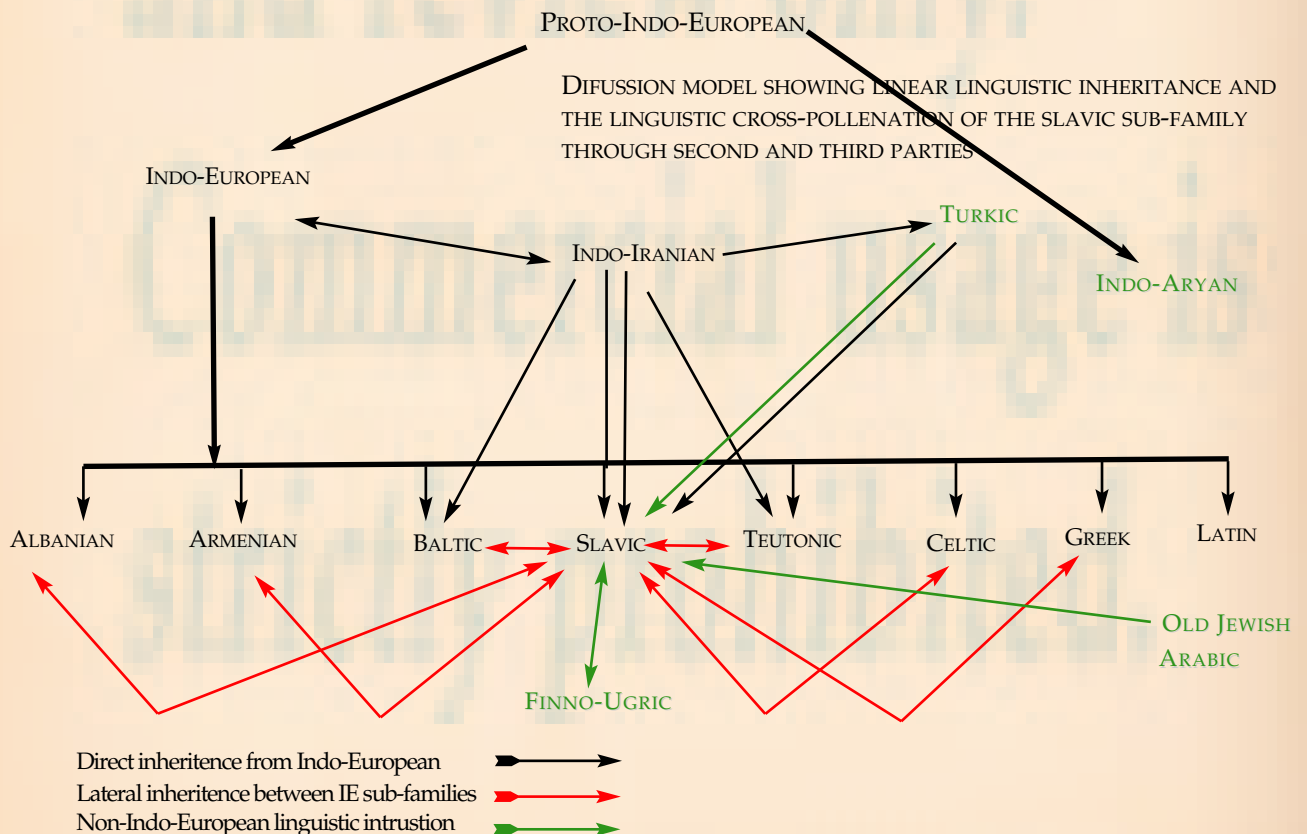

From the Slavic subfamily, for example, we know that this penetration entailed *an infusion of Persian religious terms*, thus indicating that the presence of these words is best attributed to *the importation of Persian religious beliefs and practices* with the various immigrants who came into Russia from the steppes.

The Scythians, Alans, Cimmerians and Sarmatians were all native-speakers of Indo-Iranian languages,²⁸ and it has been linguistically and archaeologically established that they had lasting contact with Assyrian and Persian civilisation.²⁸ Parthians, Soghdians and Bactrians also belong properly to this same group, though they were more urbanised than their nomadic Indo-Iranian relatives.²⁹

INDO-IRANIAN SUB-FAMILY

AVESTAN PERSIAN WORDS FIND THEIR WAY INTO EUROPE AS FOSSIL WORDS, OR VIA DIRECT CONTACT

SCYTHIANS, ALANS, CIMMERIANS AND SARMATIANS WERE INDO-IRANIAN SPEAKERS

We have even greater cause to accept the arrival of Magian Avestan-speakers in these areas during the Bronze Age and later periods, since features of Magian religion are found in the Germano-Slavic sphere, so too mediaeval pagan priests termed "Magi". This provides further mounting evidence of the Magi, who traditionally spoke many of these words, and who recorded those same words in their holy texts, in Avestan Persian. Later the Magi used Middle Persian for religious purposes, and even later, after the collapse of their religion, they employed local languages for the propagation of their faith.

Comparative linguistics still has much to teach us about the Indo-Iranian group, for in rather many cases, concrete laws have been difficult to ascertain among peoples

URAL-ALTAIC

Ural-Altaiic family

The Ural-Altaiic group represents many languages, spoken by peoples spanning from the Ural mountains, across the Russian steppe and Caucasus to Central Asia and Siberia. The Uralic portion of this linguistic group carries a number of word survivals from the old Indo-European. Comparative linguists refer to this connection as Indo-Uralic, a theoretical linguistic connection not all linguists agree upon. Much of the matching Aryan data within the Uralic tongues has a direct correlation with the most ancient Sanskrit holy texts of the Aryans, the four Vedas.³⁰ This leads one to believe in the existence of races in these areas, who were followers of Vedic tradition, such as is observed by the Aryans and the later Hindus. Since the Indo-European elements have been preserved in a relatively pristine form in many cases, it has been theorised they are unlikely to have survived over such large expanses of time without being handed down from generation to generation by persons learned in the Vedas. Perhaps traditional Brahmins, or Asiatic shamans conversant in Vedic lore were responsible. Mongolian, Japanese and Korean theoretically belong to this same linguistic family.

ASPECTS OF HUNGARIAN
LANGUAGE SEEM TO
HAVE HAD SUMERIAN
AND AKKADIAN ROOTS

In the mid-1970's Professor Badiny proposed the Magyars have been misclassified as Finno-Ugric.³¹ By his estimation the Hungarian language is unique. Though still allied to the Finno-Ugric family through past interaction with folk living near the Urals (such as the Sabirs), it more closely resembles the tongues of the Sumerians and Akkadians. How well-received this theory is nowadays I can't say, but I will speak of it again later.

Afro-Asiatic

Afro-Asiatic is divided into six linguistic sub-groups, spoken throughout Africa and the Middle East. At this point a definitive place of origin for this linguistic family has not been established. Many favour an African homeland. Equally noteworthy, constituent tongues are not related to Indo-European.

Non-Slavic word correlations

The figures provided below are based upon the precised table of word similarities contained at the end of *Etimologicheskii Slovar' Russkovo Yazyka* (Volume 4). This etymological dictionary (ie; one that traces the origins and diffusion of words) was devised from the comparative linguistic studies of varied linguists. A map is included (see right) to portray this same information pictorially.

The following table shows the number of non-Slavic word correlations found in the Slavic. It does not include Vasmer's many references to Polish, Bulgarian, Czech, Slovenian and words derived from other Slavic sources, nor do they include the Indo-European vocabulary from which many other words were derived (all of which appear in the main body of his four volumes).

LANGUAGE CORRELATIONS BETWEEN THE RUSSIAN AND THE OLD, MIDDLE AND MODERN FORMS OF OTHER LANGUAGES

OLD FORM	MIDDLE FORM	MODERN FORM
Ancient Greek 2112	Middle Greek 103	Modern Greek 81

Findings

SOME WORDS SUGGEST
ANCIENT RUSSIA
ENJOYED CONNECTIONS
WITH BRITAIN AND
IRELAND

Behind this data it is possible to perceive a number of things. The presence of Breton, Cornish (not shown on the above list) and Irish word correlations were most likely the result of Norse settlers arriving in Russia from Britain and Normandy. This says something about the types of Norsemen who were coming to live in Russia and the Baltic region. These particular Norsemen were probably Danish settlers from England. Equally so the Old English which betrays contact with England during the post-Norman invasion era. Whether they were settlers, merchants or pirates, they brought their language with them. Perhaps some of these words from the British Isles found their way into Rus' with slaves purchased off the Norsemen. But since Rus' was a primary supplier to the slave trade, it is difficult to imagine them having to get them from Cornwall, the Danelaw or Ireland.

The figures show that Russians acquired many Old and Middle High German words. Some Germanic words would have entered the Slavic during a time when both the Germans and Slavs were still pagan, others with pagan Poles that had formerly been living among the Germans, but which resettled in the pagan Slav lands following the anti-Slav Crusades, and yet others were imparted to the Slavs by the Germans themselves as they conquered and settled the Baltic and western Slav lands. In excess of 700 Old Icelandic words confirm that the majority of the Slav-

LINGUISTIC CORRELATIONS, AND IMPORTATIONS INTO THE SLAVIC INDO-EUROPEAN SUB-FAMILY - 500 BC - 1200 AD

The thickness of the lines indicate the relative magnitude of the linguistic correlations between Slavic and the other linguistic group

Norse linguistic transactions were taking place during the pagan era. But in the 11th Century AD, the acquisition of newer Scandinavian words, in the form of Old Norwegian and Old Swedish were tapering off drastically, coinciding with the departure of the Norsemen from the service of the Rus' princes in 1054.

The presence of so many ancient Greek, Latin and Avestan correlations is indicative of Roman, Ancient Greek and Magian inter-relationships in the Slavic sphere, which continued to be perpetuated (knowingly or unknowingly) into later times. Greek cultural interaction with the Slavs virtually ceased with the coming of Christianity to Byzantium, as is evidence by the diminished number of Middle Greek (dating to between 5th-15th Century AD) and modern Greek words (15th Century AD+).

The existence of Avestan words, and lack of Pahlavi, clearly attests to Magian interaction (between 500 BC and 271 AD) inside Olden (and even later) Russia, but in a form other than Orthodox Zoroastrianism, which characterised the Sassanian period. The amount of Old Indian as opposed to the newer form of that language proves there was little or no direct contact with India for the period. These word links were either part of the ambient Indo-European linguistic structure, or used by Zurvanite Magians. The possibility that they came from say Soghdiana, where there were many Buddhists is lessened by the virtual absence of Soghdian correlations.

There appears to have been an injection of Latin into the Old Slavic realms, partially including Church Latin, though this latter form was a more modernised variant of the language. These evidently came about as a result of interaction with the many Romans that manned garrisons in the Crimea, of the Dacian frontier. As you will read later, cartographic and archaeological evidence suggests that it might also be attributable to Romans who had penetrated further into the Ukraine than has hitherto been recognised.

The Chuvash and Old Jewish correlations are probably attributable to interaction between the Slavs and Khazarians. After all Hebrew is part of the semitic sub-family of the Afro-Asiatic linguistic family; and therefore not possessing a Indo-European pedigree. Their terms, as few as they may be, could only have entered via direct contact.

As for the high number of Gothic, Old High German, Middle High German, Old Prussian, Suommi (ie; Turku) Finnish, Latvian and Lithuanian, it goes without saying that they highlight extensive cultural and trade relations between the Slavs and these various peoples, during virtually unrecorded phases of the Dark Ages and Early Mediaeval era, and long, long before that. There, far from the prying eyes of the Romans, and their historians (who preserved what little we know of these races), they shared forested domains and horizonless pastures which for others were little more than fable; nebulous, unknowable.

Lastly, consider the many Turkic words which are interrelated with the Slavic, because you will find a number of them throughout this book. I say this because (as you will read in Part I and II, Chapters VIII) there is reason to believe that these words may help validate the very existence of the black Magi, which according the holy books of the Magi were devil-worshipping Turkic wizards that the white Magi had expelled from Iran. And not only them, but white Magians and Zoroastrian fire-priests who lived in exile in Asia before coming to Rus'.

Historically though these Turkic correlations permeated Rus' because of a substantial Bulgar presence in Scythia, which was spread from the Urals down to Khazaria, then westward across southern and Central Rus' into the Balkans. These many inferences, extracted from linguistic evidence, fit well with known and hypothesised historical realities.

Why did some Vedic and Avestan words survive and not others?

In his gargantuan four-tome compilation, the *Etymological Dictionary of the Russian Language*, Max Vasmer provided a detailed account of the origins of 18,000 out of 34,000 or so Russian words, together with their often multiple meanings. In other words he examined only 52.94% of the language. And of these 18,000 words some 3.87%, approximately 1 in 25 words, have a correlation, if not origin, in the Avestan once used to record the texts of the Magi, not to mention those words which sprang from the Old Indian (sic. Indo-European), plus Old, Middle and New Persian. This may not seem like a lot, but 1,500-2,000 years later it is remarkable.

Words are very fragile, susceptible to modification and eradication over long periods of time. There are substantial factors which conspire to kill off words, ignorance and feelings of cultural inferiority being the primary causes. Other factors aid the survival of words. Thus we return to the problematic question of how up to 1 in 25

Russo-slavic words are readily traceable to Magian Avestan after some 1,000 years of Christianisation. Let's examine what seemingly insurmountable hurdles the Avestan has had to cross in that time.

Factors against survival

Ignorance, a willful choosing to disregard knowledge that still exists, causes the greatest loss of knowledge, the other primary factor being loss of contact with that same knowledge, either because it has been lost, or becomes inaccessible. These things can kill off a language. For instance I don't know whether there are any young Apaches out there astute enough to save their language from extinction, but as of only a few years ago there were a mere 10 speakers of fluent Apache left out of the former Apache nation.⁴⁴ This is an extreme example of how rapidly a language can die out *in a handful of generations* when it is inundated by a numerically superior culture with feelings of cultural superiority. But "linguistic imperialism" is not why a language dies, it dies because *the young were too ignorant to learn their tongue*, a priceless and proud inheritance for their future children. Once the elders pass away there is nobody to hand down their knowledge.

ACCIDENTAL MODIFICATIONS TO RELIGIOUS TERMINOLOGY

What enabled the Aryan Vedic and Avestan creeds to reach the status of formal religions was their use of a uniform body of religious texts employing a common language, which was regulated and propagated orally by their priesthoods over several thousand years. During this period of oral transmission it is possible, if not likely, that their religious traditions underwent some changes (in meaning and manner of expression) in regions which were more remote from the key centres of religious learning. Thus the story may have changed like a "chinese whisper". Only in later times did their priests seek to write down their scriptures in Avestan or Vedic Sanskrit.

DELIBERATE ALTERATIONS TO RELIGIOUS TERMINOLOGY

Deliberate modifications to the use of pre-defined scriptural words can affect the formality and uniformity which a religious language provides. Under these circumstances foreign words supplant accepted religious words, perhaps until the point where a holy text may not be linguistically recognisable in its anticipated form.

For example, Turks do not use Arabic to transcribe the Koran, but Arabic is normally used elsewhere for this purpose. Could we then say that Turks are not Muslim because they do not use Arabic? Of course not. Similarly the Roman Catholic Church used Latin during the performance of the tridentine "high" mass and in Church documentation, but from the time of Vatican II in the 1960's, it has encouraged the use of the vernacular instead. Can we say that Catholics are no longer Catholics because they do not use Latin?

Due to the formal and systematic use of both Church Latin and Arabic, Catholicism and Islam became relatively united world religions because of the unity which the language of the religion brought to races that could not otherwise have normally conversed with each other. It is clearly the case that not every one would have understood either Church Latin or Arabic no matter how many times they heard it, and repeated their religious observances in parrot fashion, or used handbooks which showed the religious text alongside the vernacular. In Spain, Germany, Italy, England, Sweden, and later in places like America, south America, or Australia, any person with a basic understanding of Latin could walk into Church in a foreign country and listen to the same mass as back home, and yet they might not be able to understand a single word spoken in the street outside the Church. A Muslim can go to a mosque in Medina, Algiers or Indonesia and hear the same Arabic as what they would in their own Islamic homeland.

If the Aryan religious hierarchies in some areas made a conscious decision to begin using the vernacular instead of Sanskrit or Avestan at some time in the remote unrecorded past, it is highly likely that the new words used to perform the religious ceremonies and prayers no longer contained words which reflected an obvious religious connection to their faith. So when analysing foreign languages for the existence of an archaic and formal religious Lingua-Franca, like Vedic Sanskrit and Avestan Persian, evidence may be difficult to find some two-thousand years later if, at some time in the past the people stopped using the parent tongue of that religion, when performing their rites. Consequently we might only find occasional word survivals with either definite or possible connections. If it happens that a word appears connected with another language in a religious context with some frequency, this is only possible by deliberate propagation.

IF PEOPLE DO NOT
CHOOSE TO LEARN A
LANGUAGE, IT DIES

COMMON RELIGIOUS
LANGUAGES

CAN ONE RECONSTRUCT
ANCIENT SCRIPTURES
USED IN FOREIGN LANDS
BY PALEOLINGUISTICS?

What would happen if we took Latin, French, English, Chinese, German and Swahili translations of the Bible and then burned all surviving examples of the New Testament except for one Latin copy. Is it possible for a comparative linguist some two thousand years later to compare what is known of the Latin, French, German and Swahili languages with a view to reconstructing a Christian holy texts (the last copy of which exists only in the Latin) from Latin vocabulary alone? The answer to this is no, but where there are sufficient linguistic survivals which are close to, if not the same as those used in some of the last surviving examples of the New Testament, then we can conclude with certainty that elements of these races once read it

DELIBERATE ERADICATION OF THE LANGUAGE

When talking about similarities in vocabulary between different languages, we not only have to explain how they got there in the first place, but establish reasons for the absence of many other words.

DID EUROPEAN PAGANS
USE AVESTAN PERSIAN
DURING THEIR
CEREMONIES?

Regional politics can have an impact on language. A thousand years ago the Christianisation of the Slavs severed the profound linguistic unity which existed between what are now the various Slavic and Baltic linguistic sub-groups. In other words Christianisation was the catalyst for cultural and linguistic mutation, as well as the disintegration of interaction between the Slavs, and to a great extent the Balts and Norsemen. This must be taken into consideration when analysing these languages for word-survivals from the pagan era. Authentic survivals are most likely to be found in those remote areas which were not subjected to the same level of missionary activity, or those places which showed a reluctance to convert to Christianity and Islam.

Whether Avestan, Pahlavi and Vedic religious languages were once used by various pagans (across whole countries), but later began to devolve as Christian and Muslim missionaries began weeding out the “unholy words” is open to debate; words like *dron*, *bareshnum*, *dastur*, *Magupat* and *barsom*. I have no problems with the idea that Christian and Muslim religious authorities succeeded in eradicating the “old faith” by eliminating or converting the priestly pagan intelligentsia, and through the implementation of compulsory Christian and Muslim schooling. These education programmes either superimposed a new religious culture over an older one (in which case some of the more anachronistic religious terms will still be found loitering somewhere in the background), or purposefully aimed at obliterating the old faiths, by progressively uprooting any known paganisms from successive generations of youths using the education system. In this way the old culture died year by year. We have witnessed the impact that schooling and cultural absorption has had on the indigenous cultures of the north and south American Indians, Australian Aborigines, and many, many others. Only a few hundred years after colonisation, the indigenous cultures of these peoples are tottering on the brink of extinction, and what has survived is likely to have been tainted in various ways by the cultures of the colonists which took over their lands. If it has taken only several hundred years to achieve this, then what was the true extent of the cultural extermination which took place over the past one or two thousand years, in places like Russia? How many Magian religious terms should have survived? Based on what you have just read, probably a great deal less than what we find. What makes matters worse is that at the time of the attempted superimposition of Catholic/Byzantine culture over that of the Slavs and Finns some one thousand years ago, there was no willingness on the Church’s part to record for posterity the language or religious beliefs of the common people.

No doubt all of the above factors played some part in ensuring that only a reduced number of archaic cultural and religious terms once spoken by the Brahmins and Magi, have continued to be used until the present day in a form that is readily discernible as belonging to the elder religion. Yet certain factors aided their survival.

Aids to survival

MISSIONARIES WOULD
HAVE BEEN KEEN TO SEE
SOME WORDS
DISCONTINUED. THESE
WERE WORDS IMPORTANT
TO THE OLD FAITH

LACK OF SCHOOLING, LACK OF CONTACT WITH MISSIONARIES

Is it not likely that the cultural and linguistic survivals of an older religion would be barely discernible after a thousand or more years of suppression? Based on the amount of Avestan word derivations extant in Russian, we need to examine why so many Magian words survived the last 1,000 years of evangelism, as well as Church and state schooling. The Russian Orthodox Church’s ability to eradicate the old faith of pagan Russia was severely hamstrung by the enormous distances its monks and priests had to cover. While it may have succeeded in converting the cities, Russian clergy had difficulty reaching out into the forests where many people still lived, and

the few travelling monks that did make it out there were often hard pressed to make it a lengthy stay. The people the monks visited were simple and uneducated folk who are unlikely to have ever sat in school; their lives were uncluttered by unnecessary complexities such as literacy and numeracy. They simply worked hard for their livelihood. This if nothing else can account for the level of Magian and Vedic survivals among the remoter Slavic and Finnish tribes of Far-eastern Europe and Siberia.

SCHOOLS HELPED DE-PAGANISE EUROPE

COMMONALITY OF WORDS

Words are in most cases easier to learn if they are similar to ones you already know. No doubt the survivability of Indo-European words is attributable to the fact that if you want to learn German, and you are French, there is a certain pool of vocabulary which originated from the mother-tongue of the Aryans, and is just that bit easier to learn, retain and survive.

WORDS SIMILAR TO THOSE YOU ALREADY KNOW ARE EASIER TO REMEMBER

Lateral linguistic correlations

Etimologicheskij Slovar' Russkovo Yazyka identified a number of languages that have linguistic correlations which are datable to the post-Mediaeval era. In order of prevalence they are listed below, though I have not taken into account the number of Finno-Ugrian and Turkic words of similar age.

AND THE CULTURAL/LINGUISTIC CONTACT CONTINUED

1 Modern High German 884	2 Irish 359	3 Modern French 226	4 Italian 189
5 Dutch 164	6 Swedish 164	7 Modern English 151	8 Modern Norwegian 131
9 Modern Low German 104	10 Modern Greek 81	11 Modern Icelandic 16	

These 2469 modern words (minus an undetermined number) are likely to have displaced words of older usage. We are unlikely to ever know what these lost words were, nor which languages they came from. And I must qualify this by saying that this figure (2469) has not been arrived at by discounting more modern phraseology and technological innovations, nor those that were the product of mutating Mediaeval words. All in all, 2469 does not amount to such a drastic eradication of the older linguistic framework of Old Russia. For instance hardly any of the 151 modern English word correlations relate to items of technology (eg; rails, carlock), and most are words that would be normally used by everyday people. But do words like baby, fly, pap (as in a witch's mark), dogdays, marsh, mugger, hooligan, mud, spell, ail, and fallow (to name a few) show that Russian-English linguistic interaction was partially concerned with matters relating to witchcraft?

Like Mongolian, the existence of modern French and German words is easily explainable in terms of past pre-war cultural interaction and vocabulary imparted by occupation forces left behind during the Mongol, Napoleonic and Nazi invasions of Russia. But the presence of so many Irish correlations is not so easy to explain.

The reason for these word survivals can only be determined in each particular instance by examining the nature of the correlations themselves. Since connections between words can imply a connection between peoples we need to explain any correlations between the Russian and the Irish words that are linked, and this I will do by examining the more archaic Old Gaelic words, which seem to indicate Russo-Irish contact from the early Mediaeval era. The Old Irish correlations are only half as many as the Modern Irish. To aid this survey I will list two other pieces of information, the first being a possible intermediary. An intermediary word is one that shows that the word was most likely carried between Russia and Ireland via a third party (eg; the Norsemen). A progenitor word is an archaic word that most likely gave rise to a cognate in both languages during an earlier period (eg; these would most likely be Avestan, Persian, Old Indian, Latin or even Ancient Greek). Therefore we may get some idea not only of the nature of the contact between Russia and Ireland, but the means by which the linguistic transaction occurred.

RUSSIAN CORRELATIONS WITH THE OLD IRISH

RUSSIAN WORD	INTERMEDIARY	OLD IRISH	LIKELY PROGENITOR
<i>Goret'</i> (to burn)	Pruss#	<i>Gorim</i> (to warm or heat)	Old Indian*
<i>Us</i> (whisker)	Slov# (<i>Vos</i> : whisker)	<i>Fes</i> (beard)	Greek*
<i>Drug</i> (friend)	Nor#/Germ#/Bal#	<i>Drong</i> (group/contingent)	Latin*/Avestan?
<i>Sam'</i> (self)	Slav/Germ/Eng/Bal	<i>Som</i> (self)	Avestan#/Old Indian#
<i>Sol'</i> (salt)	Slav#/Lat#	<i>Salann</i> (salt)	Latin#
<i>Sneg</i> (snow)	Slav#/Balt#	<i>Snigid</i> (to snow)	Avestan#

<i>Testo</i> (bread dough)	Slav#/Germ#	<i>Tais / Tois-rem</i> (dough)	Old Indian*
<i>Tennyj</i> (dark)	Slav#	<i>Temen</i> (dark)	Slavic
<i>Mzga</i> (rot)	Bal#/Germ#/Slav#	<i>Mosach</i> (unclean)	Greek
<i>Sliz'</i> (phlegm)	Slav#/Nor**	(make s.o. unclean)	New Persian?—
<i>Osteg</i> (clothing/coat)	Germ#	<i>Teg / Tech</i> (home)	Greek (a house, to cover)
<i>Zob</i> (pron. Zop)(to swallow or devour)	Slavic-?-	<i>Gop</i> (mouth or beak)	—?—
<i>Sta</i> (make s.o. cry), <i>Seta</i> (Croat: grief)	Bal/Nor re: magic	<i>Saith/Soeth</i> (hardship)	Latin-?— (See p.212)
<i>Chara</i> (cauldron) - (See p.213)	Nor <i>Hverr</i> (cauldron)	<i>Coire</i> (cauldron)	Old Indian #? / Turkic #?
<i>Bolxan</i> (idol) - (See p.583)	Germ/Prus*/Slav#	<i>Balban</i> (a straw image)	Avestan
	Nor*/Tur#		

KEY Germ (Germanic), Prus (Prussian), Bal (Baltic), Slav (One of the Slavic tongues), Slov (Slovenian), Nor (Old Norse), Tur (Turkic), and Eng (English). If an option is marked * it means that the phonetic association is poor, and by ** that the phonetic association is sound, but the meaning differs. # signifies an almost direct correlation in both sound and meaning. ? denotes that there is disagreement about the origin of the word

From these we can safely conclude that in many cases connections between the Old Irish and Slavic tongues are attributable to Norse and Germanic settlers who came to Britain (Ireland in particular), but indirectly to an older strata which was essentially Latin, Greek, Avestan and Old Indian. Behind the sheer diversity of subject matter conveyed by the above words, it is possible to discern religious concepts concerned with paganism and witchcraft, the rites of which are fully explained in Part I, Chapters VII and VIII. Direct contact between the Slavs and Ireland is strongly indicated by a correlation between the Russian word *os'* ("axle") and the later Irish word *aiss* ("axle") both of which come directly from the Avestan *asa* ("axle"). In this instance there is a total absence of a Norse or Germanic parallel which would have hinted that they had brought the word to Ireland from the east. What is more, because the Avestan word for "axle" was not present in the Old Gaelic, the suggestion is that the Magian word for "axle" came to Ireland during or sometime after the Middle Ages, imported by people who were the recipients of Magian technical knowledge.

On this basis we might deduce that this pagan linguistic data was transferred between Russia and Ireland by the Lothbroks, a clique of Norwegians based in Viking Dublin, who some have been identified as the "*Al-Madjus*" (ie; Magi) responsible for raiding Moorish Spain and North Africa c. 845 AD, plus widespread slave trading throughout Britain. The presence of art forms belonging to the Scandinavian-Celtic milieu in places like Novgorod further suggests that physical contact had occurred between Ireland and Russia, again most likely via this Norse intermediary.

Historically, *linguistic ties are usually the most reliable gauge of social interaction between peoples*. Consider the 800 or so potential linguistic correlations between Old Russian and Suommi (Finnish). It is impossible to attribute these similitudes to an archaic pool of common Indo-European words, from which both languages emerged. After all the Suommi language is not of Indo-European origin. This large number of likenesses is due to something known historically; frequent dealings between the Russes and Finns. The "loan words" generated in this case are considerable. The same could be said of Turkic or Baltic linguistic transactions in Russia. The level and nature of contact between nations and races determines the types of words traded, and the extent of the transaction. Where a linguistic transaction was confined to a certain geographical precinct, the loan word might linger there only in a dialectal form peculiar to that area.

FREQUENCY AND TYPES OF WORDS INHERITED

THE EXTENT OF KNOWN LINGUISTIC CORRELATIONS SUGGESTS THE MANNER IN WHICH A LINGUISTIC TRANSACTION OCCURED	TYPE OF CONTACT	NO OF LINGUISTIC CORRELATIONS	NATURE OF THE CORRELATIONS
	Trade	Low	Words for transportation, commodities, and trade terms
	Military occupation	Low-High	Varied depending upon the length of occupation
	Colonisation	Very high	Religious, technological and cultural terms, social terminology
	Travellers	Rare	Occasional miscellaneous transactions
	Education	Very High	A very wide range of cultural terminology is inherited

Linguistics is not an infallible science. Even after the application of recognised linguistic rules for sound shifts and morphological mutations, a universal consensus on a given word's travellings might not always be achievable. To Max Vasmer's credit he includes etymologies proposed by other linguists in his *Etimologicheskii Slovar' Russkovo Yazyka*. Differences of opinion can be frequent.

LINGUISTICS IS NOT
ALWAYS PERFECT

Some loan words may go unrecognised by linguists where they came into a recipient language through multiple intermediaries, as in the following model, and variations of it;

Donor language ▶ Recipient culture 1 ▶ Recipient culture 2 ▶ Recipient culture 3.

Yal (Persian) ▶ *Yal* (Ossetian) ▶ *Yarl* (Old Norse) ▶ *Eorl* (Old English) ▶ *Earl* (Modern English)

Having been bombarded by a range of linguistic modifications prior to being adopted by the last recipient tongue in the chain, a donor word might no longer comfortably conform to the rules that would normally govern the movement of that word from the donor language to say recipient culture 3 directly. Had it come straight from the donor to recipient 3 its origin might have been more easily spotted. Even so hand-me-down words with a long list of intermediaries can still have their origins pinpointed, but in each given instance it depends upon the scale of metamorphosis it underwent.

WORDS TIRELESSLY
MUTATE

For arguments sake the words for silver in the Baltic, Germanic and Slavic linguistic families have as their earliest predecessor the extinct Akkadian word *sarpu*.³² Due to the frayed nature of the Akkadian linguistic survival in these three subfamilies, linguists have guessed that the *sarpu* correlation entered the European lexicons via the agency of the Scythians, who themselves had a definitive physical relationship with both regions in antiquity. In this instance the Scythians served as a bridge for the passage of this Afro-Asiatic word into Indo-European vocabularies, not only across a large time span, but across immense distances.

Sarpu (Akkadian) ▶ ? (undetermined Scythian word) ▶ *srebro* (Bulgarian) ▶ *s"rebro* (Old Russian) ▶ *sirablan* (Old Prussian) ▶ *silabar* (Old High German) ▶ *silubr* (Gothic) ▶ *Silver* (English).³³

Commonalties in word form aren't always the product of direct contact in our own day. Many words we speak are inherited without any cognisance of their cultural etymology. We teach these words to our children, and they to theirs. What we are left with is a fossil word. For example, English speakers use the word *year* without knowing that it came from the Gothic (*yer*: year). But the Gothic was not its original source. *Yer* is cognate with *yara* which in the Russian, Bulgarian, Czech meant "spring" (ie; a certain season of the year). Its origin appears to be the Avestan Persian *yara* ("year"), which gave rise to the Gothic and later English words, presumably inside the bowels of distant Slavia. These fossilised words are an extremely valuable resource, allowing us to develop an understanding of ancient cultural ties and movements. This point will be further discussed at the end of this chapter.

WORDS PASSED DOWN
THROUGH ONE'S
ANCESTORS

To illustrate the significance of Iranian words in Russia I include three data signatures, each outlining an expected spectrum of evidence, or lack thereof, for a given level of linguistic interaction between Indo-Iranians and Slavs. These tables are a yardstick against which the mass of multi-disciplinary data can be compared and evaluated, aiming to ascertain the cultural processes at work which allowed for these linguistic accruals. Put simply, the words are there. I just need to explain the mechanisms of their transmission.

Fingerprint for an Indo-Iranian colonisation of Russia

Linguistic traces of religious beliefs	Yes
Historical reference to religious beliefs	Yes
Folk customs related to religious beliefs	Yes
Burial customs	Yes
Genetic remnants	Yes
Fashion and dress	Yes
Avestan and Pahlavi Language	Yes; varied frequency depending on level of colonisation

Historical sources	No
Law	No
Governmental structures	No
Military structures	No
Science	No
Agricultural practices	No
Architecture	No
Manufactured goods	No
Money	No

Evidence collectively suggesting an Indo-Iranian colonisation of Russia

From the outset I assumed the task of dismissing a Magian presence in Rus' would be mercifully easy and brief. Little did I know this particular research phase would consume almost eight years of my life, and mutate into a 1,000-page book. It was like opening a closet, only to be greeted by an avalanche of hidden contents. The more I rummaged through the historical, linguistic, archaeological and folkloric source materials, the more I found that adequately demonstrated that the priests of the Russes were, what has been claimed all along, Magi (the blood-priests of ancient Iran). The following table assimilates data obtained via various disciplines and points to Russians acquiring their Iranian terminologies not simply through trade and casual contact, but by colonisation, something already historically known.

Linguistic traces of religious beliefs	Yes
Historical reference to religious beliefs	Yes
Folk customs related to religious beliefs	Yes
Burial customs	Yes
Genetic remnants	Yes
Fashion and dress	Yes
Avestan and Pahlavi Language	Small-moderate linguistic survivals*
Writing	Yes
Art	Yes
Historical sources	Yes
Law	Yes
Governmental structures	Yes
Military structures	Yes
Science	Yes
Agricultural practices	Yes
Manufactured goods	Yes
Architecture	Yes
Money	Yes

* This point indicates Indo-Iranian colonists and refugees dispensed with their native tongue, and adopted local vernacular for daily communication (ie; Slavic, Bulgarian). This prognosis is not without precedent. Magians are known to have swapped from Persian to local Gujarati upon arrival in India from Islamic exile. As centuries passed the old tongue lingered in the background, sometimes in a fossilised state, sometimes used in its intended context. It is also fits the profile of a language (already impregnated with Ancient Greek in Parthian times) that entered Russia already in a corrupted state, previously sojourning in Central Asia, but not before intermingling with Turkic language outside the bounds of Sassanian Persia.

EXPATRIATE INDO-IRANIAN COLONISTS BEGAN USING THE LOCAL VERNACULAR

Archaeology

Archaeology is the science of forensically analysing what has been dug from a cultural layer, a moment sealed by the dirt, stone and sedimentary rock until excavated. Using the detective analogy, it is an ancient "crime scene" if you like. Underground radar, spectrographic analysis, x-rays, radio carbon dating, paleobotany, forensic pathology, DNA testing, and computer enhanced facial reconstructions are just some of the methods used to evaluate the nature of a given find, and its depth, which can help establish a date for its interment, when taken in conjunction with other dating methods. Many conclusions are drawn from these specialised assessments.

ARCHAEOLOGY IS CONCEPTUALLY AKIN TO FORENSIC SCIENCE - ARCHAEOLOGISTS RETURN VERDICTS ABOUT A GIVEN OBJECT'S NATURE

The very act of excavation, layer by layer, actually deconstructs or destroys a site forever. Bearing this in mind it is imperative archaeologists and technicians provide a guarded, but comprehensive and informed appraisal of what they find. But their evaluations might be errant. To combat this, archaeologists with a professional and open-minded approach to their own work always carefully bag and store everything dug from a site, just in case their findings need to be challenged by future generations of archaeologists, with superior techniques and finances.

EXCAVATION DESTROYS A SITE

If only artifacts had a caption describing their intended meaning or usage; but they don't. Often the nature of an object lends itself to different interpretations, and so assessors frequently table divergent conclusions. This is

MANY THINGS DO NOT
SURVIVE, AND THEREFORE
WILL NEVER BE
EXCAVATED

particularly noticeable when it comes to appraising engravings and artwork, especially those that appear to be religious motifs.

Archaeology's fullest potential is drastically limited because most artifacts rot away without trace. However lucky your house might be to survive the next couple of hundred years it is highly unlikely that your personal documentation, effects and possessions will ever survive the new tenants, let alone decomposition. In fact it is unlikely that you, the reader, will ever be remembered by history, or archaeology; the things you thought, believed and did, the things you own and cherish - the people you knew and your families will all be gone. Just because there are no surviving shreds of physical evidence does not mean a given object never existed where are your first childhood paintings, or your first pair of shoes? Your first TV or stereo? Just because these articles have decomposed or disappeared does not mean you never had them. So, it is the unenviable job of historians and archaeologists to try and discover the evidence, make an assessment and then inform the casual reader of the simple truth, in the light of *current* evidence.

THE EARTH DOES NOT
EASILY YIELD ITS HIDDEN
SECRETS

Archaeology is further hampered by the very medium it tackles; the earth, the greedy and secretive blanket which conceals the treasures of antiquity. Just what else lies down there waiting, once again, to see the light of day? The best news is, probably a great deal. Elder settlements once built near rivers quickly became swamped by silt as time and floods consumed the landscape, leaving sites buried 10 metres below ground next to some fossilised river bed that has long since been left behind as the river has changed its course. In Russia, as in many other places, it was standard practice for the pagans to found settlements in locations of this kind. You can be sure that many ancient strongholds and settlements still await the archaeologist's trowel. This is where the art of paleohydrography comes into its own, using modern satellite technology to peer beneath the immediate surface of the earth, and plot the courses of archaic waterways. This preliminary survey technique is especially useful in the cash-strapped world of archaeology. Before squandering financial resources on potentially fruitless field searches, archaeologists can zero in on areas of interest with a greater degree of certainty than was possible even in the 1980's. In Russia, for instance, many ancient settlements were established at river confluences. If you want to dig for thousand-year-old pagan towns and cities in Russia it is to some extent pointless fossicking around present day river confluences. You need to discover where they met a millenium ago. And when you pinpoint such a place you can run over the area with ground penetrating radar to catch glimpses of subterranean features. All this before you even turn the soil with a spade. As you will later see, by superimposing this data over the grid coordinates of known burial mound sites in the vicinity of a locale, one is only a hair's breadth from discovering the location of concealed ancient settlements with high degrees of certainty.

MUCH STILL AWAITS
DISCOVERY

And while it is possible that a large amount of Irish Celtic bronzework was formerly exported from the Isle, the fact remains that only 3/4 of a tonne of bronze artifacts have been recovered from the almost 400 tonnes calculated to have been mined there by the Bronze age Celts.³⁴ With only .18% retrieved there's plenty still there! And despite so many depictions of helmeted Norsemen, only one Viking Age Norse helmet has ever been excavated. These two examples reinforce my belief that a great deal more field work still remains to be done if we are to lift the item recovery rate.

PEOPLE SCAVENGE FROM
ARCHAEOLOGICAL SITES

After having been demolished by the hand of man, some sites will never be found. Past locations of static habitation can be destroyed by natural calamities, ploughing, warfare, demolition and scavengers. Even things as immense as brick or megalithic constructions can be dismantled by landowners who want to build a new barn, or by authorities hoping to retrieve them from dilapidated ruins for use in the construction of roadways or other civil construction projects and fortifications. For instance a farmer accidentally discovered the entrance to the megalithic site at Newgrange (in the Boine valley, Co Meath, Ireland) while rummaging about the tumulus looking for suitable building stone. In Britain the Romans and later royal engineers also requisitioned stone from wherever they pleased. Dressed or quarried stone is so much more convenient than stone which must be removed, shaped, and transported from distant quarries. Pure convenience, and sometimes expediency, dictates that many stone constructions in Europe have disappeared, long since dismantled and removed to a hundred separate places.

SOME PEOPLE LIVE ON
TOP OF ARCHAEOLOGICAL
SITES

Sites are not always accessible. An unknown proportion of sites have had dwellings and parking lots built over the top of them. Not unnaturally farmers resent unwanted intrusions onto their properties. Knowing the disruption that test trenches will cause to their crops and livestock, many simply refuse to allow exploration on

their land.

Houses are rarely if ever found intact, with household utensils and furniture placed just as they were in everyday life. Consequently rubbish, broken pottery, ruins and lost, hidden or discarded objects are often all that archaeologists have to work with.

On the Persian front there is a mixture of good and bad news. In a few years time dams being constructed in Iran will open their floodgates. This will inundate some of the Persian empires finest archaeological sites rendering them inaccessible for all time. Rescue archaeology teams from France, Britain and America have taken the opportunity to race over and excavate areas that have hitherto been inaccessible for political reasons, or scantily picked over by half-interested tourists and researchers. If an intact piece of Simurgh cloth is indicative of local soil preservation conditions, there will surely be a storehouse of archaeological surprises and wonders coming our way very soon. Why only last year a team of Iranian and American archaeologists led by Karim Alizadeh found agriculturally developed city centres of Parthian and Sassanian origin in Ardebil Province on the Moghan Plateau.³⁵ They're finding entire cities!

As Dr Olmstead stated *"When their capital Ecbatana has received proper attention, we may venture to hope that the mound at Hamadan will grant us full details of Medean culture and even permit the Medes to speak for themselves in their own Iranian tongue"*.³⁶ This Ecbatana he speaks so highly of was the principal city not only of the Magus wizards, but of wise men who converted to Christianity.

This paucity of recovered metal goods from Britain bodes ill for the number of perishable commodities that will never be detected, owing to their fragility. Ancient books and documentation neatly fit into this category. Tablets from the Achaemenid Persian archives were executed in Elamite Cuneiform, and replicated in Aramaic on a duplicate parchment which was affixed to the clay original.³⁷ None of these parchments have survived, whereas the imperishable clay did. The fate of certain types of documentation remain a mystery. In the early 8th Century AD Pope Gregory II decreed that genealogical records were to be kept, showing comprehensive bloodlines of up to and including the 7th degree of consanguinity.³⁸ But today these records are for all intents and purposes non-existent. Why did they not survive where other mediaeval texts of similar age did survive? Or do these family records prove just how little documentation has made it through the last thousand years intact.

Natural attrition is savage enough on texts, but there are still worse threats. For argument's sake the earliest Irish administrative records and annals had to survive Norse attacks, and internecine conflicts between clansmen and kings. These upheavals led to the incineration of monastic settlements, and on a number of occasions libraries. Then there was the English civil war, during which Cromwellian troops ravaged the lands, besieging loyalist castles. As in England, Catholic establishments and civic records took punishing blows. How much survived precipitation into oblivion is pure guesswork. Amazingly one of the worst losses of Irish historical documentation happened as recently as 1922, during the siege of the Dublin Public Records Office. Likewise a recent library fire in Germany engulfed centuries of German history, sending it up in flames. Book conservators are still struggling to recover priceless water-damaged texts from the charred mess.

History

I have just discussed the immense dangers a given book has to endure to survive lengthy periods of time. It is therefore incumbent upon the historian to treat them with unreserved respect, if only for this reason.

In contrast to this, it seems to have become fashionable nowadays to discredit historical sources, particularly where Post-modernist adepts are concerned. Some fairly revel in this pastime, seizing the moment to ignore evidence they don't want to accept (eg; it contradicts their theories). Others do so due to their own biases, lack of interest, and just plain ignorance. On one hand there are those who will believe just about everything they read, which is not very helpful. And on the other hand there are the "ultra-sceptics", the so-called historians who scrutinise the primary texts (the priceless inheritance left to us by history) more than rashly, and what's even worse, with a view that these past authors were almost always misguided, simple-minded fools and habitual liars who just can't be believed. To this end, they evaluate history from their own viewpoint and toss out priceless information hand over fist. History is re-written to suite their taste, irrespective of what authors of the period being studied wrote at the time. While scepticism is a vital tool for any committed historian, it can also demolish whole slabs of history when applied with a certain cavalier penache. Some historians even venture to assassinate the

credibility of entire texts, based on a handful of textual inconsistencies! These become "bad books", as for instance the writings of Herodotus, who some typecaste as the father of lies rather than the father of history.

Much to their chagrin, many of Herodotus' more outlandish entries have since been vindicated by archaeological excavations. The truth is entire historical references should only ever be condemned where there is clear evidence that the entire text was the product of misinformation, disinformation, or substantially riddled with error. Even noticeably dubious texts should be evaluated in light of data obtained through other disciplines. Perhaps some points raised in them are factual, so we ought not throw the baby out with the bathwater.

Ambiguities in historical material are not infrequently encountered. Where numerous interpretations are evident, they should be listed in their entirety and fully explored.

We encounter difficulties when attempting to draw inferences from historical texts that direct negative references towards other races, religions or political visionaries. In doing so an author might be guilty of defaming or slandering some person or group. But they might also have recorded such details faithfully. We must not jump to what seems to be an obvious conclusion, and accept as fact that negative references are utterly without basis. By assuming this we not only become closed-minded towards other possibilities, but we may destroy portions of history that could well have occurred. To illustrate this, a couple of Church writers branded the Ros cruel and barbarous; they supposedly made sport of their war prisoners before killing them, exterminating the men and taking into captivity women and children. According to these sources whole generations of Greeks were wiped out during one of their attacks on Byzantium.

Political correctness dictates that the above account is a negative reference and therefore untrue, but ... *real life tells a different story*. What can we say about the believability of mass genocide, and on a scale of tens of thousands if not millions. The senseless atrocities in Kosovo, Bosnia and Rwanda, the extermination of indigenous people by colonists in America, Australia, South America, South Africa and elsewhere (natives who themselves also carried out similarly barbarous reprisals against these white attackers and settlers), Pol Pot's "killing-fields", not to mention the annihilation of a purported 6,000,000 Jews by the Nazis? These known events testify that mass killings actually happen and as unbelievable as it may be, they were carried out by ordinary people living in a different time, in a different place. What makes an "ordinary person" gun down men, women and children who they don't even know (Auschwitz, Cambodia etc), slay a thousand or so POW's in one night with a knife (Bosnia), or hack hundreds to death with axes and machettes (Rwanda). In short there are reasons why everything happens, even something as grotesque as genocide. Any historical reconstruction must take into account the cultural tapestry of their time, and be unbiased in its examination of popular feelings and sentiments. Only then can we glimpse through a window which allows us to see another age with a degree of clarity. There are lessons to be learned from history, even more so when we try and understand the cultural factors which shape "ordinary people". The objectivity of historical study must be such that we are prepared to entertain the thought that people once had beliefs quite dissimilar to our own, perhaps even what some would call "sick" or "abnormal".

Political correctness has added a dangerous slant to historical studies. Many modern historians have a bad habit of seeing negative references to certain events, races, religions and customs as totally unreliable, a sure sign that the writer was biased and had manipulated or manufactured the subject recorded matter, even more so when the source material is a religious book, produced by anyone from a religious order.

The politically correct stance is a reasonable one, yet one which we automatically accept at our peril. Is it possible that a number of incidents which appear to be slanderous, strange or outrageous are indeed factual references to what many would regard as murderous, lewd or perverse acts? I'll put it this way; in 1,000 years time will historians scouring Croatian newspapers from the early 1990's, accept the truth of reports concerning the systematic executions committed by Serbs against Bosnian Muslims and Croats; and vice versa, Serbian accounts of Bosnian and Croat atrocities. Mass graves alone provide the necessary clues, and even then dead men tell no tales. Can we be sure that future politically correct historians will not attempt to *portray as fact* the *opinion* that the events referred to in the newspapers were "non events" because the articles were "tainted" with the bias and propaganda that riddled the emotionally charged atmosphere of the Balkans at that time?

Or, in an attempt to shrug off such damning evidence as holocaust film footage, what is there to stop future Neonazis unveiling "the plot of the zionist-american cinematographers" who used a "Hollywood Auschwitz set" to drive a defeated Germany into the ground. To their followers this could be the worst frame up in history, and some

people could feel justified in believing it! This nice tidy little explanation could easily enshrine a corruption of actual history as a common truth! The likelihood of this happening in another hundred or so years has received a big helping hand from a group of academics known as the Post-Modernists, or Post-Structuralists, a faction of theorists who have worked their way into Universities and institutions to the highest level.³⁹ According to their programme of studies, history must be exterminated from the syllabus in favour of Social Studies, mainly because they believe that primary historical sources are unworthy of serious scrutiny because they only tell relative truths. For example texts are mainly written by men, and thus do not give the full story according to women. Looking at this logically though, historical sources have always been open to tampering, or the jaded views of the author. But there we find the very important task assigned to the historian, to try and cut through all of the "red-herrings" that have infected the source material. And don't say it couldn't happen; thirty million people are thought to have died during the famines following the Chinese cultural revolution and it is believed that there are no photos in existence to record the event.

IT CAN ERASE THE
TRUTHFUL EVENTS OF
HISTORY

Denying the reality of past happenings is particularly likely if later generations fail to understand past social climates. After all they were not there at the time to experience the mood and events of the day. That makes it so much more difficult to appreciate past events and attitudes.

IT CAN ENSHRINE LIES AS
THE TRUTH

As appalling as the subject may be, aborigines were once freely killed by settlers in many parts Australia during the 19th Century AD, at a time when the nation was very much like the Wild West. Not content with chance kills, a tribe here or there, troops were, according to some historians, ordered to sweep the island of Tasmania to remove every last vestige of aboriginal habitation. They were paving the way for uninhibited European settlement of the island. Their quarry had no route of escape and were allegedly shot or herded over the cliffs. Keith Windschuttle, on the other hand, sees it as a tribal relocation program that went seriously wrong, rather than an extermination protocol devised by the colonial Governor. Whatever the case, in one single operation the eradication of Tasmanian full-bloods was consummated. George Augustus Robinson made off with what few of them survived and mercifully protected them offshore. There, one by one, the last of them died of white-mans' sickness. In modern history it is difficult to find a more complete act of genocide. It might sound like a nightmare, but this actually happened. Most modern Australians have difficulty understanding how it could have ever eventuated; it rightly repulses them. Yet just a century ago, science told settlers that aborigines were less than human; the closest possible thing to the missing link in our evolutionary chain. Consignments of aboriginal skeletons were sent to London to be closely studied by the great minds of the time. The natives were further stripped of dignity by newspaper cartoons showing them as ape-like. In killing aborigines shooters may have felt as though they doing everyone a favour, ridding the land of vermin and animals, not men. The same mentality was responsible for Auschwitz. Just because there is potential for the fabrication of events to create mythologised evils, and add sway to one's cause, it does not mean that a falsification necessarily took place. Biblical references to Babylonian temple prostitutes seem like an incredulous fantasy story, a sick joke for the gullible reader. *Old Testament* passages mentioning them are all too easily written off as religious falsehoods dreamed up by the Jews to build a negative stereotype of the many idol-worshippers who inhabited the surrounding lands. But as it turns out, the existence of such practices has been confirmed by Babylonian clay tablets and carved effigies, depicting men having sex with women on an altar.

TEMPLE PROSTITUTES?

That I have gone to the trouble of illustrating these incidents, so close to our own time, yet a world away from our current thought processes, is highly relevant to a proper study of the witches who lived between 300 and 1,000 years ago. I say this because devil-worship is another of these imponderables. Based on our modern ways of thinking the majority of researchers specialising in the witchcraft phenomenon deem it preposterous that devils could ever have been worshiped, by anyone, at any time in the past. Yet demons were a component of oriental religious thought, and these concepts were coming into Europe. By paying homage to dark forces one could avert the misfortunes they caused, or take revenge on an enemy. We know this from Hindu and Iranian texts. As you will see in Chapters VIII a certain component of the mediaeval European witch population, and I want to stress a certain component, continued to observe these more ancient traditions of demonolatry, making offerings to devils out of love or fear. Even so the factual existence of black witches and devil-worship in Mediaeval Europe is largely denied by many specialising in witchcraft studies. Unable to grasp the idea of devil-worship they naturally conclude that it did not exist. Consequently any surviving witch trial documents containing reference to it can only be lies. In the blink of an eye even more priceless historical information goes under the hammer. There can be no

COULD AN UNCERTAIN
NUMBER OF WITCHES
HAVE WORSHIPED DEVILS
IN CONJUNCTION WITH
PAGAN GODS?

denying that thousands were burned to death, tortured, branded with hot irons. Yet according to Post-Modernist reconstructions of the witch trials, which is aided by the deconstruction of the primary sources, we are looking at governmental repression of epic proportions. Theirs is essentially a conspiracy theory with pan-European implications. In his appraisal of the witch trials Sidky condemns what he calls “mentalist” methodologies, which require the examination of trial documents in the belief that they might contain elements that reflect social realities. His is a tale of psycho-active drug addiction, and false evidence produced by “torture technicians” with pincers in hand. There is no need to study the accounts to attempt to understand the way the witches thought, everything is clear, conspiracy after conspiracy. If the methods he decries are mentalist, then his are, by implication, quasi-existentialist.

WERE THE WITCH
BURNINGS A
GOVERNMENT
CONSPIRACY?

True governments, nationalities and religions are old hands at giving *their* sanitised view of history. For this reason historians must scour their documentation for tell-tale clues as to the author’s agenda when pen was put to paper. So how much store can we place in the writings of Mediaeval Christian chroniclers like Helmold, Thietmar and Adam of Bremen? It’s an important question; after all they are the one’s who preserved much of what we know about the pagan Slavs, Franks, Saxons, Scandinavians, Magyars, Balts, Old Prussians and Frisians. On more than one occasion I have heard it said that you simply cannot trust what they say about the pagans *because these writers were Christian priests, with unhealthy religious motives and biases which destroy the veracity of their testimonies*. This typically post-Modernist evaluation of the Mediaeval Chronicles is based more on anti-Church bias, than an examination of the texts. If they bothered reading mediaeval texts with an open mind they would have happened across entries like;

OR WERE THEY A
BRUTAL CRACK DOWN
ON ALTERNATIVE
RELIGIOUS BELIEFS?

*“Although the Prussians do not yet know the light of the faith, (they are nevertheless) men endowed with many natural gifts. Most humane toward those in need, they even go out to meet and to help those who are in danger on the sea or who are attacked by pirates..... Many praiseworthy things could be said about this people with respect to their morals, if only they had the faith of Christ whose missionaries they cruelly persecute”.*⁴⁰

WERE MEDIAEVAL
MONKS IN THE HABIT OF
TELLING LIES?

Prussians were kind toward all guests, granting them every hospitable offering at their disposal. This same graciousness was extended even to destitute villagers, a form of pagan alms-giving no doubt.⁴¹

*“... its inhabitants (the luxuriant Slav city of Jumne) blundered about in pagan rites. Otherwise, so far as morals and hospitality were concerned, a more honourable and kindlier folk could not be found”.*⁴²

ADAM OF BREMEN HAD
MANY GOOD THINGS TO
SAY ABOUT THE PAGANS

Adam lays his cards on the table by revealing his intentions and motives (as a writer of history) up front;

*“My desire is to give a sympathetic account of the misfortunes by which the noble and wealthy cities of the diocese of Hamburg and Bremen were devastated, the one by pagans, the other by pseudo-Christians”.*⁴³

THEY HAD VERY HIGH
STANDARDS OF
MORALITY, AND WERE
KIND TO GUESTS

With comments like these, it is difficult to maintain that Helmold and Adam of Bremen purposefully prevaricated information about the pagan Slavs simply because they were pagan. Being priests it is only natural that their Christian leanings hampered the objectivity of their works. Their Christian biases *did not* however extend to attacks on heathenism with mendacious diatribe, but caused them to refrain from recording for prosperity an even greater wealth of knowledge which would have been commonly known in their day. Thus their works sought to immortalise the events of the time, but not include an A to Z of European paganism so comprehensive that later generations could resurrect the Old Faith. I steadfastly maintain that what they did preserve of the Old Faith is an extremely valuable legacy for the modern researcher.

HE WANTED TO WRITE
ABOUT THE HISTORY OF
HIS DIOCESE

But while they had these positive things to say, they also mentioned that: *“The Balto-Germanic Prussians payed homage to the two luminaries, certain constellations, toads and other creatures of the forest”.*⁴⁵

Polish warriors were said to be *“exceedingly hard-hearted in rapine and murder. They spare neither monasteries, nor churches, nor cemeteries”.*⁴⁶ By Helmold’s reckoning the Poles only undertook military campaigns on foreign soil for the promise of raiding Churches which were well stocked with bedazzling religious vessels and ornaments.⁴⁷

SOMETIMES THEY
WROTE OF THINGS THAT
CAN ONLY BE VIEWED
AS NEGATIVE

*“This whole race of men is given to idolatry, is always restless and moving about, making piratical raids upon its enemies, the Danes on one side and the Saxons on the other”.*⁴⁸

One is left with a distinct impression that the Chroniclers were noting the vacillating behaviour of their pagan neighbours, or that there were those among the good pagans who lived off plundering and mayhem as a matter of course. And by the end of this book you will come to realise that some Old Prussians probably did worship toads.

Irish documents suggest that Hibernian monks recorded few details of the local pagan beliefs, even though their writings directly concerned such matters. They simply skirted around matters, avoiding having to make more explicit references.⁴⁹ Perhaps the customs they obliquely wrote about need not have been spelt out in full, where the vast majority of contemporary readers knew full well what the writer was implying in the texts. Perhaps the local political situation was so precarious for Christians that the writer was in no position to go on the offensive against pagan practices, instead humbly alluding to the impropriety of certain observances. The overwhelming evidence is that Christian chroniclers and writers, from Russia, Ireland and Germany, did not want to record too much about paganism as it existed in their respective countries. In Part II, Chapter VIII you will come to understand why this was so. So much for the details contemporary writers refused to write about for philosophical reasons. With less rather than more at our disposal, we must content ourselves with what textual information has survived. After all it is better than nothing. Thankfully these writers were there to give us even these details. All too often factual historical events have gone unrecorded in their entirety. Just because an historical event is not documented does not mean it never happened. Who would have guessed that the remarkable story of Marco Polo's adventures in distant China were discovered by sheer accident. How many similar undocumented stories have been lost to history? How many adventurers just kept on walking, trying to reach the edge of the world, or "suicidally" sailed their boats to the place where sun rises or sets (the land of the dead)? The ancient Egyptians and Greeks, for instance, already knew the earth was round, long before Columbus. They studied mathematics, physics, optics and geography, but their knowledge was "lost", and only later rediscovered.⁵⁰

There are obvious deficiencies in the amount of classical literature on the Slavs and it is generally believed this resulted from lack of contact between Roman and Slavic culture. It is also plausible that writings formerly existed, but which were lost to perpetuity by natural causes, or in attacks on Roman posts and administrative centres.⁵¹

How then can we find a means of accessing undocumented chapters of history? The only way is to draw upon other disciplines like archaeology, mythology, linguistics, folklore and weigh this against the historical sources.

Throughout *The Forbidden History of Europe* you will discover a wealth of comparative data which tends to corroborate the sorts of things written by Mediaeval monks,⁵² especially the presence of blood Magi, witches and heretics in Europe. By augmenting what they recorded about these three European sub-cultures with other sound information, we are even able to reconstruct their lives and beliefs in an objective manner. What is more, there is zero chance these monastic chroniclers seditiously sucked these same details from contemporary European written sources to create an enduring literary myth of Mediaeval sorcery and gothic witchcraft.

Greeks knew nothing of Darius' Persian capital at Persepolis until its thorough sacking by Alexander the Great.⁵³ So when it comes to knowledge of the Persian Empire nothing could more glaringly illustrate the threadbare nature of classical Greek and Roman sources. For deeper enlightenment one must look toward Jewish, Phoenician, Lydian, Aramaic and Babylonian cuneiform texts. Here one accrues a living picture suitable for unravelling the life and times of history's most enigmatic powerhouse, the Aryan Persian Empire. I mention this because a broad spectrum of data found in this book centres on survivals of Indo-European customs and culture, in a relatively pure state, even into the Middle Ages. Some academics will be prone to ascribe this to literary tradition drawn from the writings of Herodotus. Many morsels of data, found throughout Europe, were not noted by the Father of History, or in Classical sources, therefore precluding them as the ultimate point origin for the later European cultural complex.

Pause to consider this. From the 14th Century onward barely five westerners are thought to have visited the ruins of Darius' ancient Persian capitol. So far as is known, it was not until the year 1621 that an example of Achaemenid cuneiform was brought into Europe.⁵⁴ It was at that time undecipherable, until German scholars and a Dane turned their minds to it some time later.⁵⁴ Thus the key to deciphering the script of the early Magi was finally broken in the first years of the 19th Century.⁵⁴ Only then could academics re-discover the religious teachings and history of the Magians and Zoroastrians, recorded in their ancient tongue. Prior to then all we had was a mere handful of sketchy classical Greek and Roman sources whose poor references (in terms of quality and quantity) are

MONKS PREFERRED TO OMIT REFERENCE TO PAGAN RELIGIOUS BELIEFS RATHER THAN LIE ABOUT THEM

WE ARE LUCKY THAT PAST WRITERS DID PUT PEN TO PAPER

MANY EVENTS WENT UNRECORDED, EVEN IN THEIR DAY

OVERALL, THE SORT OF INFORMATION FOUND IN WITCH TRIAL DOCUMENTATION COULD NOT HAVE BEEN FORGED

VERY FEW WESTERNERS VISITED THE ANCIENT PERSIAN CAPITOL

incapable of supplying the sorts of Magian details being recorded by monks around Mediaeval Europe. This is all the more startling because Europeans were, at that time, supposedly oblivious to their Oriental linguistic affiliations. Therefore an intellectual climate that gave cognisance to ancestral homelands in the east, simply did not exist. among churchmen, or the likes of Snorri, who recorded for posterity the stupendous *Ynglinga Saga*.

If these correlations can only be attributed to a literary tradition spawned by Monks whose inventive minds were palsied by ignorance and propaganda (as many post-Modernists would have you believe) how else can we explain the many details which suggest a factual Magian presence in Europe if not by an actual presence? Having independently noted many facets of residual Magianism in Slavia, I chose to revisit a number of mediaeval historical sources, invigorated by the knowledge that they may contain extremely valuable, virginal data.

Most importantly the contents of primary texts must always be viewed in their proper context. After all they were written in another time and another place, by people who lived in that era. The way we look at historical documents may differ from the way the original author intended them to be viewed. Archaeologists would not dream of assessing artifacts without considering the implications of their physical location in relation to other in situ finds. In doing so they come to understand a site's chronology, and perhaps the manner in which the object came to be deposited. Why then should historians examine European history without giving due consideration to its Indo-European heritage?

When confronted by information which they deem unpalatable, readers skim over these infuriating or embarrassing bits without a sigh. With our own rose-coloured spectacles, it is possible that *we* may be the very ones who dispense with the true meanings of primary historical texts, the valuable heirlooms of humanity bequeathed to us by history.

G

Genetics evaluates the nature of a chemical transaction that takes places following sexual union, hopefully quantifying the loss or acquisition of physical characteristics translated through breeding. The discipline is still in its infancy, but even so it has already yielded fascinating results, findings that will need to be statistically expanded upon through greater sampling.

GENETIC STUDIES HELP IDENTIFY PAST RACIAL AND CULTURAL INTERBREEDING

IN REALITY THERE IS NO SUCH THING AS 100% RACIAL PURITY

One major discovery is that chromosomal characteristics (whether matriarchal or patriarchal) peculiar to certain geographical regions, combine with dissimilar strains through the act of mating, thereby providing evidence for a biological transference of DNA coding that took place thousands, if not tens of thousands of years ago. Notwithstanding this today's geneticists seem stricken by the same bug as paleo-linguists; much of their evidence is assayed in the light of a common ancestor, or a proto-language, and this conceals micro-trends within the evolving gene pool.

I would like to cite the case of a certain east African tribe that is lauded as some kind of ancestral genetic super-donor, having a number of traits found in far off Asia and China. This tribe is seen as further proof for the "Out of Africa" theory. Geneticists never bothered to touch base with archaeologists before reaching this astonishing conclusion. As it turns out Chinese sailed to this very region at various points throughout the Middle Ages, and left physical traces behind for good measure. No doubt some of them stayed behind and integrated with the local negro populace. There African and Asiatic genetic trends intermingled. This had nothing to do with an ancestral super-pool. It was the product of miscegenation.

Likewise some Australian aboriginals are known to have genetic structures commonly associated with Korea and Mongolia. Here, once again, geneticists fondly harken back to the ancestral Lucys etc. What they never took into account was a massive medieval Mongol invasion fleet that attacked Indonesia in 1297 AD, but was shipwrecked by atrocious weather conditions. How many vessels sailed a short distance to the south, to Northern Australia, and there interbred with the natives? In Western Australia certain tribesmen have a weird blood disorder peculiar to Holland and the Dutch colonists dwelling in South Africa. So did aboriginals (isolated from Asia since the last Ice Age) get the blood disease from Lucy also? On the basis of archaeological remains and rock engravings in W.A. it can be demonstrated that it entered Australia's arid interior by interbreeding with shipwrecked Dutch sailors.

As to when historically unrecorded contacts took place between different peoples, other disciplines can often shed further light. Archaeology, linguistics and historical sources are all effective tools for determining whether or not a physical and cultural interaction transpired between potentially alien gene pools, providing meaningful answers from outside the chemistry lab and current theorising based on biological experimentation.

Indulge me in one further example, by applying these methods to my own country. Australians speak English, a language that progressively evolved in the British Isles as a result of its sometimes turbulent history. In its current form English is classified as part of the Germanic Indo-European linguistic sub-family, in spite of the high frequency Latin vocabulary that takes its place in our lexicon. The preponderance of Germanic terms resulted from direct contact with Teutonic invaders ... Angles, Jutes, Saxons, Scandinavians, who not only visited but colonised Britain. Their language displaced Latin words spoken in England as a result of the Roman occupation, which had the result of displacing native Gaelic language, which seems practically invisible nowadays. Gaelic, Latin and German are all derived from Indo-European and Proto-Indo-European, yet a secondary cross-seeding of vocabulary took place through direct contact, a contact fossilized in our language. Does the existence of Latin words mean Australians have Roman origins? Not necessarily. Was there a Roman colony in Australia? No. Genetically some Australians carry Roman genes even today, but their daily application of Roman terms was not the result of direct contact between Australia and Rome. It was a hand-me-down from antiquity. In this case the Roman terms are purely indirect. But what if one were to find Roman vases, texts, customs, clothing, inscriptions and evidence of social structure in the same cultural layer as modern Australians then you could conclusively say Romans were in Australia, however ludicrous such an eventuality obviously is. Taken singly each discipline is incapable of providing a complete profile for past happenings. Used collectively amazing results become possible.

Folklore and mythology

Old wive's tales, local fairs, secluded holy places with miraculous powers, angry gods, carved trees, fire wheels, bonfire celebrations, feast days, fairies, taboos, lucky charms; such is the stuff of folklore and mythology. For the avid researcher folkloric data is a windfall, allowing us to glimpse a long-dead communal psyche. Even so we are normally unable to establish the historicity of a given folk belief because they are rarely noted in writing. Except of

AS WITH ALL THE OTHER
DISCIPLINES, SCIENTIFIC
FINDINGS ARISING FROM
GENETICS ALWAYS NEED
TO BE EVALUATED
AGAINST OTHER MEANS
OF PROOF TO FINE-TUNE
THEORIES

LEGENDS AND MYTHS
ARE HARD TO PROVE

course where individuals purposefully or inadvertently preserved items of popular belief in personal memoirs, books or court trial documentation. Generally speaking it is impossible to date the origin of myths or folkloric superstitions with any certainty. The best we can hope for is to find the earliest manuscripts or documents in which a given oral epic was noted. Only then can we conclude that a particular strain of folklore was extant from at least a certain date.

The range of written folklore pertaining to 10th century Rus' is in short supply, and nowhere near as easy to find as, say, the Scandinavian sagas. In both cases they were either written or redacted during the 13th century. What additional things we do know about Russian folklore and mythology, have been diligently compiled over the past few hundred years by ethnographers and folklorists, who tapped into a thriving paganism, which prospered at a village level until the turn of this century. Foremost among these authors was the Russian version of Frazer, the mid-19th Century folklorist Sergei Maksimov. The dualistic folk beliefs of his own day are more than adequately illustrated in his work.

Regional folklore sets us all apart as distinct peoples. Without its enriching vitality, our respective cultures are all the poorer. Folklore is an oral pageant of popular culture. Well known society-wide folkloric strands came to be so, by being better disseminated, whether through books, ballads, spirituals or the theatre. Widely-held customs and superstitions require our special attention, because they may encapsulate events or attitudes so sublimely significant to a race that they are never allowed to disappear from their memory. Where analogous stories and legends are found across various cultures, it is imperative that the reasons for this are explored, not glanced over. Take the Russian legends of the Homeric exodus through their lands; the same theme also crops up among the Etruscans, Norse and Romans. Are one, none, or all of the myths credible? ...the "fable" of Troy ended up being Schliemann's archaeological reality.³⁵ And how is it that tales of King Arthur and Merlin were told and retold in as many as five different European countries? Why were fire-wheels ceremoniously used during particular festivals in Russia and Britain? Why were cattle driven between fires in both lands to avert sickness?

No better exemplars of Europe-wide beliefs can be found than witches, shape-changers and fairies. While they should more properly be viewed as a field of history, the witch trials also conveniently belong to folklore. Yet across much of the European continent men and women were executed for enacting folk beliefs then considered intrinsically criminal in nature - vexing crops and stock, making hail, spreading illness, healing with herbal remedies and so on. *The Forbidden History of Europe* allocates these powerfully alluring European folk beliefs not so much to superstition, but to a specific range of pre-existing pagan belief systems.

Folklore and mythology survive because they are elements of native culture that ordinary citizens hope to conserve. Why do you bless somebody who sneezes? Why did Russians place a deceased person near the stove? Why do you shake hands when sealing a deal? Why is Kupala's festival observed in Russia and Serbia, even in the 20th Century?

Folklore is traditionally transmitted sitting around the family dinner table or stove. Where family life deteriorates oral traditions die off. Television, cable TV, video games, computers and the internet have practically guaranteed that books like Frazer's *Golden Bough* are our last line of defence against the utter extinction of frail folk traditions.

Oral lore has one inherent weakness. From time to time grandmas and grandpas can't help supplementing a story with extra juicy details, to add extra flavour in the telling. What begins as an innocent modification could be blown out of all proportion, thereafter becoming an integral, though unoriginal facet of the tale. For instance, I know of an expatriate Latvian who told his children that Perkunas (the Latvian storm god) made thunder claps by beating his drum. I have never seen reference to such a belief in my studies of Perkunas. So was this an authentic detail attributable to him, but known only to a few, or was it an added embellishment? Thus the nature of folkloric material demands that few things be given a blanket endorsement. After all it does not kindly submit to the rigours of scientific evaluation.

Religious texts

Throughout this chapter we have embarked upon a journey from our ancient Indo-European past right up to the Middle Ages. We know that the Indo-europeans and Indo-Iranians brought their languages, wheeled vehicles, horses, iron, warfare and weaponry into Europe. Are we so naive to suggest that this cultural inheritance did not include religion also? On the balance of probabilities eastern mystical teachings must have entered Europe. Therein lies the special significance of comparative religious enquiry, where the descendants of the Indo-Europeans are concerned. It permits us to visualise and compare the sorts of religious traditions and superstitious observances

COMPARING ASPECTS
OF EUROPEAN
PAGANISM WITH THE
RELIGION OF THE INDO-
EUROPEANS

shared by a donor and recipient religion. Is it a coincidence that Slavs, Saxons, Lithuanians, Romans, Norsemen, Celts and Finns used swastika motifs, like the Indians, presumably as a sign of prosperity?

SOMA AND SIMA

Another good example is the Finnish *Sima* libation, which may be related to the Vedic term *Soma*, one of the Indo-Aryan's most important ceremonial drinks. Is it acceptable in this instance to presume *Sima* is just a loan word, adopted by the Finns like a waif devoid of any meaning, context or purpose? Or does its application in a Finnish ritual context reveal that it crossed over to the Finns with a religious meaning attached to it. If there were many such religious "loan words" fortuitously derived from the same or similar religious source, can one then infer that the medium by which it made its transition from Vedic tradition into Finnish paganism was a religious one? I believe so.

COMPARISONS WITH THE
RIG VEDA, PAHLAVI AND
AVESTAN TEXTS

Comparisons between Finnish mythology and the *Rig Veda* may seem inane, until you realise that there are ritual, linguistic, mythological and symbolic similarities (fingerprints) of a very high order, and therefore difficult to disregard as a mere coincidence.

When dealing with something as historically remote as the diffusion of Indo-European religious traditions, studies in comparative religion allows us to examine the similarities that exist between the idols, customs, ceremonies and texts of the *Vedas*, *Zend Avesta* and *Pahlavi* books on one hand, and the religious cultures of the Rus', Slavic, Germanic, Baltic, Celtic and Finnish pagans on the other.

While, it is difficult to fully prove the degree of pagan cognisance as to the origins of their religious beginnings, the fact that Mediaeval pagan priests were termed Magi allows us to develop analogies of a potentially concrete nature. The *Ynglinga Saga* assertively directs us towards a need for a comparative religious examination of eastern mystical traditions and their potential pollination of European pagan belief systems.

From the sheer weight of evidence contained in this book regarding paganism (most of which you are yet to read), it possible to make two important inferences.

DID THE EUROPEAN
PAGANS UNDERSTAND
THE ORIGIN OF THEIR
RELIGIOUS HERITAGE?

1. The pagans were fully aware of their Indo-European and Indo-Iranian religious heritage, but the names for their deities varied on a regional level as centuries passed, in just the same way as St Mary is known across the world by titles as diverse as the Star of the Sea, Our Lady, the Heavenly mother, Theotokos, Anthropokos, Mother of Christ, the Madonna, the Virgin Mary, complete with differing images and statues. In another thousand years, will anyone think they are all separate figures? Or would someone twig that Theotokos and Madonna are one and the same; just Greek and Italian variants for the Mother of Christ? What is more, will future scholars know that the Greeks and Italians knew they were both addressing one and the same saint, but each preferring to use culturally familiar terminology? Will they even know that she was a saint, or jump to conclusions and label her a goddess?

In connection with this, Christianity has developed numberless forms throughout the ages. In the earliest era the Holy Sees were fundamentally similar, but with different names, slight liturgical variations and iconography, and the material cultures associated with them. This poses the question; when does a religion become something different? If pagans of common religious ancestry had deep cultural and religious links, and yet used different names for what were essentially the same gods, does it mean they were part of a different religion of alien gods, or were they simply using varied names?

PAGANS FROM GREECE,
PARTHIA, EGYPT AND
PERSIA FREQUENTLY
WORSHIPED THE SAME
GOD, BUT UNDER
DIFFERENT NAMES

We have only to look at the historical texts of the ancient world, and such things as silver sphinxine statuettes in Central Asian Parthia⁵⁶ to discover that the beliefs of the antiquarian cultures were far from the loose and scattered fertility cults that contemporary history has purported. Bear in mind that the surviving treatises of the Greek pagan Gnostic Neo-Pythagoreans⁵⁷ (such as Iamblichus; 330 AD) disclose that the Magi, Egyptians and Neo-Pythagoreans *officially recognised* that they all had the *same* gods. Consequently they had formal exchange programmes between their respective priesthoods, particularly in the fields of mathematics, medicine, music, astrology, divination and astronomy. These writings further reveal that the manner in which their faiths differed was only in the naming of those same deities, and *religio*, the precise rituals, prayers and ordinances used by the various peoples to acquire divine pleasure and favour.⁵⁸ Take the 2nd Century AD *Oxyrhynchus papyrus*, a lengthy spiritual petition which was recited to Isis, the Egyptian goddess of magic and resurrection. It proceeds to divulge her different names at various places.

THE NAMES OF ISIS

"at Pephrenis, Isis, queen, Hestia, mistress of every country ... in Hermopolis, Aphrodite, ... at Busiris, Good Fortune; at Tanis (in the southern Ukraine), gracious in form, Hera ... in Arabia, great goddess; in Syria, Leto, in Crete, Dictynnis; at Chalcedon, Themis, in Rome, warlike ... in Asia, she of the cross roads, ... in Samos, holy; in Bythnia, Helen; in Tenedos, the eye of the Sun; in Caria, Hecate".⁵⁹

Here, written by pagan hands, is a testimony to the widespread loyalties enjoyed by the goddess Isis. Without this papyrus we would be none the wiser as to her alternative names, nor to the various locations where her cult flourished. Later researchers might have thought that each of these names represented a different god. What we find on the other hand is an inherent sameness in their religious thought, but with local terminologies.

2. Perhaps the pagans continued in their religion, but lost the true meaning of their faith over time, and still continued to perpetuate Vedic and Avestan ritualism and customs in a fairly pure form, simply by sheer force of habit and inherited tradition. For example Slavs had a god called *Zhiva*,⁶⁰ and performed the *Smrtno Kolo* (a circular death dance) which was identical to the Hindu dance of Shiva in a number of ways. But did they know it was the Dance of Shiva, or were they just copying previous generations oblivious to the nature and origin of the dance?

Did the Romans know of their Aryan ancestry,⁶¹ and that their foes in Gaul and Germany had derived their religious traditions from the same Indo-European source? Did they know that swastikas originated among the Aryans/ Indo-Europeans that colonised Europe? This emblem is believed by some to signify the sun and good fortune, or the constantly rotating wheel of life and death, but did they know that is what it represented, or did they use swastikas because they liked the look of them?

Further to this point, while Hebrew is not an Indo-European language, the Jewish race actually exhibits many traits belonging to the classic “Aryan” life-style. This includes the struggle to maintain purity, both racial and religious, inherited society roles, ablutions, food taboos and strict laws for personal conduct. However unlike the Aryans, the propagation of Jewish blood was matrilineal rather than patrilineal. So do you have to be a blond-haired, blue-eyed, muscled Nordic warrior to be an Aryan, as Hitler’s misguided teaching professed? It’s doubtful. Modern-day Indians and Balinese practice religions which are an outgrowth of the Aryan faith, and have done so for some time! The Finnish lifeway was overtly Aryan, but their language is not derived from the Indo-European mother tongue. So was Aryanism a language, a lifestyle, a breed or religion? This question is more fully explored later on.

While they might contain factual references, religious documents are not totally reliable. Studies into Egyptian and Babylonian religious documentation have shown that their priests espoused a need to observe the path of moral goodness, which in practice was at least on par with Judaic or Christian morality, and yet they had alternative forms of religious expression towards the gods (and in some cases demons) which the Christians and Jews labelled idolatrous, iniquitous and repugnant. From this perspective we know that propaganda is used in racial, political and religious contexts, as has always occurred. But to what extent? You have to objectively examine information piece by piece before you can make a matter-of-fact statement about a given analogy’s applicability.

Contrary to what the sea of politically correct moguls will tell you, religious texts can and do contain factual historical references of uncertain number, which due to their off beat nature are initially difficult to accept.

Matches noted during the comparative process should be qualitative in nature and where possible quantitative. Ethnographic analysis is very good, especially where there are historical accounts, existent holy books or pertinent eye-witness accounts to help make inferences about the likely survival of more ancient traditions and beliefs among the Russians and other European peoples. After all it is well known that eastern religions quite readily influenced each other, especially where they co-existed with other belief systems. Whether it is reasonable to fill in historically undocumented gaps in the European pagan traditions using comparative religion as a yardstick is determined by the frequency and quality of the analogous religious traditions. If some elements of the religion are there, why not others? Which elements continued to be shared is another moot point? We cannot be sure that these faiths had not mutated, even only to a minimal degree.

For instance in Chapter VIII we examine pagan war banners in both India and Slavia. In both cases they were kept inside a vaulted temple tower in company with an idol that had its own bed. But did the Slavic banners have bells and tassels on their lower edge. Was the edge of the cloth straight, triangular or jagged? We will never know until one is found, and that is exceedingly unlikely.

At the end of the day, we will never know the precise content and wording of each and every Rus’ pagan prayer and ritual unless a manual of ritual ordinances is unearthed in Russia, written by a Russian. Even if one was found, I guess there would still be dissenters suggesting that the hypothetical text was not representative of the religion in every district.

It would be reasonable to suggest this too. Apparently in excess of a million lines of Zoroastrian scripture were formerly held in the library at Alexandria. Yet these scriptures perished under uncertain circumstances. Assuming

WHAT WAS AN ARYAN?

RELIGIOUS TEXTS
SOMETIMES CONTAIN
INACCURACIES

BUT THEY CAN ALSO
HOLD IMPORTANT
HISTORICAL
INFORMATION

that the majority of these works were original, and did not represent multiple copies of a given number of volumes, the mass of texts there overshadow whatever Mazdean scripture has survived to the present day. This tallies well with Zoroastrian writings that describe the copious number of codexes lost during the war with Alexander. Even modern-day Parsees do not possess the sum total of what the Magi once taught their disciples.

Art

ARTWORK AND SYMBOLS

Shared symbolism is another important feature of cultural contact, but it doesn't always signify the true beliefs or affiliations of the people with whom the symbol is linked, although they often do. Crosses don't necessarily indicate that one is a Christian. Red pentagrams were used by the Communists, and by the magicians before them, but that doesn't mean that the Communists were magicians. Following the Inquisitions, for example, the Spanish Crypto-Jews⁶² chose to use burial plots headed by a memorial cross - and they were not Christians. Crescent moons could be a nifty decoration, or symbolise Islam, a pagan god, or a barsom twig.⁶³

You'll soon hear of the double-headed eagle and the fleur-de-lis motifs, their origin and emblematic significance in the ancient world. But one of my neighbours has metal fence railings tipped with fleur-de-lis. In this case the fleur-de-lis does not possess its original meaning. They were what the owner liked at the time, and helped stop hooligans climbing over the fence.

Yet it would be wrong to suggest that symbols cannot have their own eternally immutable meaning.

Cultural interaction

CULTURES BORROW OF EACH OTHER

Whenever two cultures collide, the memories and other vestiges of that meeting are left behind, long after they have parted ways, and which stay with them for a long time to come. Some reminders of the encounter disappear, some remain vague memories, while others are so distinct that they are as uncontroversial as "finger prints" or "DNA samples" as they say nowadays; they are a means of reconstructing pagan Rus' and its religion.

All societies possess their own valued religious beliefs, laws, customs, cuisine and language. These fields can be conveniently termed *cultural indicators*. By being militarily strong, they get to keep these things. By being weak and conquered, they lose the purity of their culture and absorb certain traits from the victor. Traditionally by being very weak, the customs and languages of the vanquished can even become extinct; recondite languages are nowadays being exterminated at an alarming rate by the "cultural genocide" of prime time television.⁶⁴ For instance, native American and Australian Aboriginal languages are in intensive care!

MEDIAEVAL PAGAN RUSSIAN CUSTOMS WERE A POTPOURRI OF DIVERSE BELIEFS, INHERITED FROM A VARIETY OF SOURCES

People are very selective in the things they want to believe, and even choosier about the things they want to do. They progressively filter out and ignore all the unwanted pieces of information, whether valid or not, even at a mere glance. In short, we all censor information daily, with our own eyes and ears, wisely or unwisely. It is we, not our institutions, who turn out to be the greatest censors of all. The Russes (a repeated theme of study in this title) were no different. The things they absorbed from others are the things the Rus' wanted to absorb. Why did they take some things from some cultures and not others? All we can say about the Rus' is based upon the things they chose to borrow from the races they encountered (not the things they chose to discard or ignore, which we are unlikely to know). Maybe they adopted some traits, but later dispensed with them because the practices were old-fashioned, or became culturally offensive due to the rise of new belief systems, such as Christianity and Islam.

The cultures which profoundly effected the formation of Rus' paganism come from a variety of sources. Whilst you would expect the Greeks, Germans, Scandinavians and Finns to have had some influence on Rus' paganism, it is perhaps surprising that we can add Scythians, Neurians, Aryans, Goths, Alexandrian pagan Gnostic scientists and Indo-Iranian Magi to the list. But really, this shouldn't come as such a shock to us. Even in our age a person can still walk from France to China if they really want to. Such a trip would not be easy, but it is still possible. Consider the Nestorian Christian missionaries who ended up in Mongolia. Not only did they get to the Mongolian capital of Cambaluc, but they ended up preaching Christianity in the court of the great Khan. But, they weren't the first to do so; Manichaeism had already brought the Chinese a very different sort of Christianity long before!

The wide range of things which built Rus' paganism were not introduced to the Slavs at one single time, but were a progressive accumulation of foreign cultural material. In time Slavic customs and beliefs appeared like a house built from many individual bricks, many of which were baked from clay quarried in diverse locations. We will now look at some of the religious, material and linguistic evidence at our disposal.

Important comparative evidence

The jumbled potpourri of data found in the tail end of this chapter provides a thumbnail sketch of details important to historical reconstruction. Again, those who find it dry reading may wish to flip to Chapter III.

For instance Slavic paganism displays many aspects of Magian (Iranian) and Aryan Vedic (Indian) religion. Some of the key similarities between aspects of these faiths are shown here, but the bulk of them can be seen throughout this book. The Russes believed there was a world above and a world below, one of light, the other of darkness. This appears to have been a manifestation of Dualism, the stark good versus evil philosophy which flourished among the Iranians and throughout much of the Orient. As you will soon see, Dualism was the foundation stone of Slav and Balt pagan religious thought. Although the belief in an underworld and heavenly realm is not distinctive enough to trace to any one single race, it is noteworthy that, like the Magi, the Slavs believed in a fiery river in the underworld which the dead had to cross.⁶⁵ Other elements of Magian eschatology appear to have parallels in Norse and Slavic folk traditions, with only the thinnest of veneers covering them.

A Christian Carolingian source confirms that Slavs, while speaking the same language “*differ greatly in habit and customs*”, possibly in their religion also.⁶⁶ In this respect they were no different from the modern multi-cultural societies of the West.

Ancestor worship was a common feature of many pagan societies, and among the Rus', Balts and Finns the practice of ancestor worship exhibited similar characteristics. One's kinsfolk were venerated at various times of the year with feasting. Even more amazingly they worshiped Magi and heroes who had passed away.⁶⁷ This veneration of the dead is, I believe, related to Magian customs concerning the *fravashis*, souls which had become deified through the power of their life's works, and who had the ability to intercede on behalf of the living.⁶⁸ For example in Latvia the spiritual guardians of village domiciles were called *Majaskungs*⁶⁹ (which seems phonetically similar to Magus Kings).

The Magi exposed their dead to carrion birds and dogs for the purpose of de-fleshing the corpse. This was followed by the burial or immolation of the bones. The Slav customs of storing the cremated bones of their kinsfolk in mounds, underground boxes or ossuaries resembles Magian funerary customs in some respects. Excarnation was performed by the Baltic Slavs, and quite possibly by the eastern Slavs. Similarly, Finnish shamans underwent spiritual defleshing. This topic is covered at length in Chapter VII.

Like the Babylonians and Egyptians, the eastern Slavs employed sleds to transport the dead into the next life, for they were seen as magical vehicles, whose runners were likened to slithering snakes. The Nordic Rus' tribe used death ships during their funerary rites which were accompanied by human sacrifice.

Hemp, which was indigenous to Central Asia and Scythia, was grown by the pagan Slavs and Norsemen. Hemp was used to provide fibre for cloth, and also played a vital role in some *Haoma* (a Persian ritual libation) recipes, plus had obvious medicinal uses. Marijuana smoke was once used by the Magi and Scythians⁷⁰ to facilitate spiritual cleansing, but according to the Scythians it also had applications in spiritism, for it excelled at summoning souls from beyond the grave, who in turn granted the gift of divination.⁷¹ An Arab saw mediaeval Russian pagans smoking, an observation potentially relating to marijuana smoking.

In antiquity, people were normally afraid of demons, which represented the destructive aspects of nature, and enlisted the aid of sorcerers to help exorcise and expel them. Contrary to this, devil-worship found popularity in Babylon and Egypt, under the Zurvanite Magi and pagan Gnostic philosophers respectively. In time it penetrated into Zoroastrianism, and gave rise to the heretical Zurvanite movement. While Zoroastrians had one ritual feast day for each day of the year, they never assigned a calendrical feast day for the formal adulation and sacrificial appeasement of demons. This degree of religious formality was absent from primitive culture, but amongst the eastern Slavs (Finns and Lapps), devil worship was a religious devotion practiced in accordance with a sacrificial calendar of dates, marked down as formal demonic feast days. On other days they worshiped the white celestial

A FEAR OF DEMONS

FEAST DAYS TO
APPEASE THE DEMONS

gods who brought fertility. This more than anything else smacks of the Magian cult of the Zurvanites, which made sacrifices to the forces of both light and darkness. Chapter IV contains a section on the Slavic demonic pantheon which existed in opposition to their celestial gods.⁷² Zoroastrian accounts concerning a large cult of Magian devil-worshippers are found in Part II, Chapter VII. Adam of Bremen, a Canon of the Bremen Cathedral Chapter stated in the mid to late 11th Century AD that the *pagan Saxons, Slavs and Swedes observed the same set of superstitious pagan traditions*.⁷³ One wonders if this statement also implies that Swedes and Saxon also had devil-worship.

Elements of Hellenic mythology existed in pagan Rus', some "Russified", others unchanged. Pan (Pan), Satyrs (Chugaister), Nymphs (Vili) Giants (Velikani), Cyclops (Viy), Harpies (Diva) are thought to have existed in many parts of Russia. Many of these beings can be traced back to the Aryans, indicating that they pre-date Classical Greek mythology, leaving open the possibility their acquisition was very archaic.

It seems likely that the Aryans left more than just their language behind in Europe. On linguistic grounds the Slav gods Moksha, Sima, Siva (Zhiva), Svyatovit, Stribog and Perun can be equated with the images and patronages of the Aryan Vedic Gods. Idols with many arms and heads are found among Poles and Balts which crudely resembled the Vedic deities of the Aryans. Some Celtic idols appear to be seated in the "lotus position".⁷⁴

Slavs customarily wore amulets crafted in the form of serpents. This custom might be linked to a passage in the Aryan text, the *Rig Veda*.⁷⁵ For the Aryan warrior, bent on waging war with his holy bow, and sacred poison-smearing arrow, the coils of the snake gave luck in battle, and fended off the misfortune of a snapped bowstring. Aspects of this vedic scripture are found in Slavia. Mediaeval pagan Slav warriors were said to have used poison-tipped arrows in battle⁷⁶, and worn snake amulets in the form of arm rings and torques. Throughout the Baltic region snakes were deemed to be holy creatures, and were kept as pets which gave protection against harm-magic. A major god of the Balts was called Zaltys, a divinity in the form of a giant snake.⁷⁷

PAGAN PRIESTS

Sacred groves were once widespread in Europe, and common amongst the Rus', Norse, Firns, Balts, western Slavs and Old Prussians. As in India, they seem associated with the worship of the Aryan gods, the Daevas.

The Magus priests of the pagan Russes⁷⁸ (the *Volkhvry*) possessed books on the topics of weather prognostication, wheels, horticulture, herbalism, astrology, dream interpretation, poisons, astronomy, crystal divination and surgery, just to name a few areas of interest. Although the Magi are known to have had similar books, the titles of these holy books set them apart from standard Magian ritual texts, or the writings of the Hindus, which existed in oral form until 400 AD. Nevertheless the Rus' pagan books might well have been connected with Magian books on science, astrology and magic. Books containing these sorts of subject matter were once kept by the pagan Gnostics and witches. The Slavs were skilled architects and built magnificent wooden structures, and the Volkhvry practitioners of classical and Magian astronomy.⁷⁹

SUN DANCING

With such rampant dualism present throughout all levels of Slavic society it is only natural that they would practice two different kinds of sacred dance. One, the *Khorovod*,⁸⁰ was a sun dance, where the participants emulated the graceful movement of the sun across the heavens.

Since Balkan Slavs believed in the existence of a god called *Zhiva*, some of their carols and circle-dancing seem to be the remains of the Aryan "dance of Siva", the ever turning wheel of life and death. A certain dance performed in the Balkans was the *Smrtno Kolo*, the dancing circle of death,⁸¹ in which the performers brandished live snakes in a manner usually associated with the dance of Shiva the Destroyer. Thus a certain number of Slavs seem to have been enacting Aryan (Hindu?) ritual dances during the early Middle Ages. In the 13th-14th Century, the length and breadth of western Europe had somehow acquired a new craze, the Dance of Death.⁸² Only this time it was performed by fleet-footed witches and the Slavic pagan dissidents who imported the practice back into Christianised Europe.

GRIFFONS

Griffons, Simurgh, Magian customs, and a white and black God are all elements of both Iranian and Slavic mythology and religion. Figs 5-7. illustrate the diffusion of griffons as an artistic phenomenon, from Mesopotamia, into Europe and Asia, into Mediaeval times.

THE SUN GOD

FIRE-WORSHIP

Dazhbog, a Slav sun god, was portrayed riding across the heavens in a sun chariot, yet chariots were never used in Rus' as far as we know. In its more archaic form, the fire worship of the European pagans stemmed from the Aryan cult of the fire god *Agni* (Fire- Vedic: *Agni*, Russian: *Ogon'*), which in turn proved to be the foundation for Zoroastrian fire worship. In Rus' they had fire shrines, fire tenders, ablution springs and sacred outdoor sites⁸³, things greatly linked not only to the faith of the Magi, but to the ancient Aryans.

In the *Hudud al Alam*, a Mediaeval Muslim source, the Slavs are described as “fire-worshippers”,⁸⁴ which was an Arab colloquialism for Zoroastrians, but the term could equally apply to Vedic or Magian devotees. The Slavs called the holy fire Svarogich (ie; son of shining god), just as the Magi also called it the son of god, son of the Radiant Ahura Mazda. Magian-style fire temples in Mesopotamia, Bulgaria and Volga Bulgaria⁸⁵ fortify Arab accounts⁸⁶ that there were Magi in the area. For the purpose of venerating the white and black gods, the Slav Magi utilised dualistic sacrificial altar stones. Such altars (one white and one black) stood on the isle of Khortitsa, upon which were sacrificed herds of cattle. Eastern Finns had similar altars in their groves.⁸⁶

FIRE, THE SON OF GOD

The Slavic pagan Magi were known as *Volkhvy*⁸⁷. Since the Russian word for “wolf” is *Volk*, it leads one to believe that they were “wolf-priests”. *Volkhv* has always had a specific dictionary meaning of Magus, and so this could make their holymen wolf-Magi. The Bug temple reliefs and the Radzivil manuscript illuminations further detail the characteristically Magian nature of *Volkhvy* ritual attire, which was depicted as a voluminous snow white robe, including the full headdress, wands and mask.⁸⁸ As with the Iranian Magi, only the *Volkhvy* could perform their religious ceremonies. Additionally the *Volkhvy* were known to have employed mirrors, gems, stick-wands, staffs and elaborate embroidery on their outer garments. It is therefore highly likely that the *Volkhvy* were either Magi or pagan Gnostics. *Volkhvy* seem to have been performing the Magian *Haoma* ceremony, rather than strictly Vedic rites normally carried out by Brahman. Moreover, the Slavs probably followed the more archaic form of the Magian *Yasna* liturgy, a form which pre-dated the rites of the Central Asian Zoroastrians from the 7th Century AD onwards. Therefore, these Magi most likely belonged to a very archaic wave of Magian immigrants from Central Asia into Europe.

VOLKHYVY PRIESTS

The existence of these many items of ritual equipment⁸⁹ are of singular importance in identifying the *Volkhvy* as a “mystery cult” rather than merely a group of Aryan Brahmans.

DRINKING HORNS

Drinking horns and glass conical cups identical to Magian/Zoroastrian ceremonial cups have been widely excavated in Rus’ and Scandinavia.⁹⁰ These drinking horns were of local manufacture. More is said of this in Chapter III. The million dollar question is, what cult or cults they represented, something given considerable attention throughout succeeding chapters.

If they were Magians then we must try and ascertain what kind of Magians they were. To resolve this, you will find many clues in this book, retrieved from widely diverse sources, including information derived from vital artifacts dug from the archaeological record. When everything is tallied up, there is every reason to suspect that the *Volkhvy* were, for the most part, the remnants of what were once major world religions, namely Mithraism and Magianism, who had withdrawn onto the wide plains of Rus’ to continue the worship of their pagan Iranian deities unmolested by Muslims and the reigning Church authorities. They probably coexisted there with other “condemned” sects such as the Sethian and pagan Gnostics, Manichaeans, exiled astronomers, elder nature cults and the remnants of the Zurvanite, Dionysian and Greek cults which once openly flourished in the backwoods of Russia and the Balkans.⁹¹ The degree to which they fused with Neo-Pythagoreans and other dualistic Magi living there is also an object of debate.

Amid the Magyars and Volga Finns, the shamans rarely performed funeral rites, being replaced by the *Tietaja* (a specialist female dirge singer). Among the Finnish Rus’ tribesmen some *Volkhvy* seem to have acquired shamanic skills and usurped the traditional role of the shaman, performing astral voyages and communal seances to help members of the community when they got into trouble. Like the Hungarian shamanistic *Taltos*, the *Volkhvy* were also shape-shifters. *Volkhva*, the female Slavic Magi, were supposed to have been the best of all spirit mediums; so too the Norse *Volva*.

Slavs and Teutons both acknowledged the existence of domestic and land spirits, a great serpent, and a dog of the underworld. The “Great Hound” of the Rus’, shackled and guarded by the auroras in the constellation of the Little Bear, is undeniably similar to the Norse Fenris wolf. One account from Thuringia, in Frankish Germany, shows that a potentially similar pagan priesthood to that of the Slavs was operating in the German groves, who were specifically mentioned as being *Magi*.⁹² Many elements of Norse mythology are identical to that of the Magi, which I will discuss shortly. Pythagorean Metempsychosis entailed the belief that the soul split into various components, one which went into the next world and others which stayed behind in the world to be reborn as trees, animals and relatives. Many (but perhaps not all) Aryans, Celts, Finns and Balts had similar beliefs. The Druids were recorded by

LIFE AFTER DEATH	classical authors as being <i>teachers of Metempsychosis</i> . ⁹³ For the Rus', life after death was beyond question, continuing on in an upper or lower kingdom following the transmigration of the soul. Belief in perpetual rebirth until liberation in its Buddhist or Hindu forms is not recorded in the Slavic lands. The Slavs, like Christians, Zoroastrians and Zurvanites, believed that an individual only lived once in this world.
MAGI DENOUNCED BY THE CHURCH	<i>The Primary Chronicle</i> contained denunciations of the Magi who were said to be responsible for the later uprisings against certain princes and the Church in Mediaeval Rus'. Mediaeval Roman Catholic sources also make reference to the blood-Magi, ⁹⁴ their activities, and their reputation as magicians and political manipulators. Indeed, a number of them had begun to infiltrate the western Church, for reasons which are discussed at length throughout this book. According to Spanish Muslims who experienced viking attacks on the Caliphate of Cordoba in the 9th Century AD, these Norsemen were <i>Al-Madjus</i> (the Magi). ⁹⁵
AL-MADJUS	The Slavs had another name for their sorcerers; <i>Kolduny</i> . There is some reason to believe that these magicians were the same as the <i>Al-Kaldani</i> mentioned by the Muslim encyclopedist Al-Nadim, ⁹⁶ who described them as Chaldean priests, astronomers and magicians who existed in fair numbers throughout the Muslim east during the 10th Century AD. These sorcerers apparently had books which contained ritualism and mysteries originating in Babylon, not the least of which were the sciences, horticulture, astronomy, horoscopy and rites concerning sorcery and devil-worship. The <i>Kolduny</i> are addressed in Part I, Chapter III.
KOLDUNY	The Slavs worshipped cattle ⁹⁷ as holy animals; the only difference is that unlike the Hindus, the Slavs sacrificed them ⁹⁸ in a manner reminiscent of the Aryans, Magi and pagan Gnostics. Slavs also had a deep respect for anything piebald ⁹⁹ (eg; magpies, cattle and horses), because in this mixture of pure black and pure white were echoes of the dualistic religiosity so common to the Zurvanite Magi and mediaeval heretics - they were an emblem of extreme sanctity and power, the marriage of the two irreconcilable opposites considered so heretical by the Orthodox Zoroastrian Magi, who had by that stage outlawed devil-worship in its many and varied forms. The Magi believed that the amount of cattle a man had was indicative of his true wealth, for they were a gift from the Creator. The old Slavic word for "money" was <i>skot</i> , which also meant "herd beasts", such as cattle. The Old Norse for "tribute" was <i>skat</i> . On the basis of these words we can infer that the Slavs and the Norsemen inherited similar views to the Magi concerning personal wealth. The black Magi, the servants of the Black God, hated the white Magi, and encouraged their followers to harm or steal the cattle of the pastoralists ¹⁰⁰ .
CATTLE-WORSHIP	The mediaeval historian Adam of Bremen referred to Norsemen, Prussians and Slavs collectively as Scythians. Its a seemingly innocuous, ill-informed comment; some would call it outright fiction. But as you have just seen in figs 13 to 16, archaeological material unearthed since the Middle Ages proves that Adam's comments nicely encapsulate cultural elements shared by these respective groups.
THE SERVANTS OF THE DEVIL HARM CATTLE	The intertwined serpents and woven zoomorphic motifs normally attributed only to the Celts and "Vikings", were also used by Bulgars, Slavs, Croats, Chinese and Ural-Altaic tribesmen. These have been discovered at Pazyrk in distant Siberia, tattooed onto proto-Caucasian bodies unearthed in Scythian-style "ice-tomb" burials, perfectly preserved in the permafrost since 500 BC. ¹⁰¹ These Scythian images seem linked to the ancient conception of the Zoroastrian or Zurvanite Yazatas and dregvants (angels and devils), spiritual warriors of good or evil, which in the Iranian view appeared as zoomorphic, demi-human winged beings often with mixed body parts, derived from different animal species. Only rarely did they appear as winged humans. Similar artwork was still being perpetuated by Slavs and Norsemen during the Middle Ages. The Siberians, Prussians, Anglo-Saxons, Scythians, Rus', and Celts all practiced body art. ¹⁰²
INTERLACED PATTERNS	Interlaced artwork normally labelled "Celtic" can be found across much of Europe (fig 10). Clearly the similarities in these designs over such geographically remote places hints that Norsemen, Slavs, Celts, Arabs and Central Asians had derived the style from a similar source, especially once historical and linguistic source material is taken into consideration
SCYTHIAN TATTOOS	On the wide expanses of the southern Russian grasslands, Scythian tradesmen of the 6th Century BC continued to manufacture ornaments bearing more ancient designs of Assyrian and Iranian provenance; ¹⁰³ images of a sacred tree being nibbled by deer and ibexes. In a number of instances these animals are seen assailed by the fantastical winged creatures and griffons, motifs that predominated in both geographical areas. This situation arose because Scythians once shared common artistic themes with the Achaemenid Persian craft workers. But previous to this,
EUROPEAN BODY ART	
ASSYRIAN AND IRANIAN MOTIFS CONTINUED TO BE USED IN SCYTHIA	

Magian metal work had itself been subjected to Sumerian cultural influence.⁶⁴ This augmented existing Medean craftsmanship, leading to a propagation of their more ancient bronzework designs and craft tools among the Medes.¹⁰⁴ Scythian artistic motifs were frequently used during the Achaemenid period, generally appearing on carved ivories and weapons. The artistic exchange seems to have been reciprocated.¹⁰⁵

Near eastern Tree-of-life motifs are found etched into, or embossed on Scythian weaponry.¹⁰⁶ Similar sword decorations were still being used in pagan Scandinavia and Russia, though sometimes these are inappropriately identified as Carolingian. Likewise it has been successfully demonstrated that the bull and horse-style jars fashioned in the Russo-Balkan region had emanated stylistically from examples originating in the Turko-Iranian milieu.¹⁰⁷ This westward movement of cultural indicators out of Siberia began aeons before the Middle Ages. Ceramics resembling early Greek and Roman pottery have been found in Siberia, *pre-dating these classical civilisations by 2,000 years*.¹⁰⁸

The Slavs built lofty towers to house idols¹⁰⁹ and temples similar to the ancient Iranian fire temples, and the Indian temples described in the *Agni Puranas*. Some structures excavated in the Baltic region resemble Iranian dakhmas (death houses). Bulgars used Sassanian building techniques in the Urals and Balkans, and coupled with Arab accounts that they were Magian, indicates that they were practicing the religion of the Magi in some form or other.¹¹⁰

Ancient Russian military arms were progressive by western standards, following eastern trends in weaponry, especially bludgeoning weapons, and armour. Rus' warriors used shields resembling those of 2nd century Roman legionaries, and their army was organised in a similar manner to Roman military formations. See Appendix IV for further details.

The pagan Slavs displayed an exceptional knowledge of the planets, constellations and other celestial phenomenon. Open air observatories were constructed in pagan Russia, as were more elaborate indoor versions in the form of multi-storey towers,¹¹¹ something the Druids are not thought to have had. Al-Masudi, an Arab geographer, described such an observatory in Rus'. Based on a two-storeyed Rus' architectural model excavated by archaeologists at Novgorod,¹¹² they were most likely 25 metre tall, spired towers with two or three levels. Much the same conclusion was drawn from wendish sites.

Balkan Slavic astronomical and astrological terminologies are the same as those used by the eastern Slavs. The heathen Slavs placed great faith in the very same zodiac (Sun-signs) once used in ancient Egypt, Babylon, Greece and Rome, and which is still with us to this very day. Al-Masudi stressed the superb astronomical, magical and divinatory skills of the Slavs,¹¹³ which were all interrelated, and inter-reliant for prognostication. Since the Serbs, Croats and Slavic Macedonians shared common astrological terminology, it is conceivable that they had observatories of the same variety as the Rus' Volkhvy. Eastern Slavs practiced astrology, and divination by mirrors and gems,¹¹⁴ arts which could have come from ancient Greece or Rome, or directly from Persia. What is more, pagan Slav magical recitations originated from *Greek and Babylonian* spell-craft.¹¹⁵ This hints that pagan Slav magicians performed magical ordinances which originated in Ancient Greece and Mesopotamia and were still being perpetuated in Russia.

In Iran only the Magi were allowed to make sacrifices, a point of potential similarity with the Druids. The sacrifices of the ancient Celts were all done through the mediation of Druids, an elite caste of astronomer-philosophers who gathered in colleges where they specially learned their rites, beliefs and other knowledge through oral tuition, rhyme and song. These druids periodically held council at their most prestigious meeting place, which was situated in Galatia, in Asia Minor (modern day Turkey). The Druids therefore had some kind of an eastern tie, if not genesis. A similar highly regulated priesthood existed amongst the Slavs, whose Volkhvy Magi gathered in colleges for the propagation of their beliefs. Like the Druids, the Volkhvy had the power to banish individuals, or refuse them entry into their rituals, which, during grave crises, also consisted of human sacrifices to the gods. It seems that the Druids and the Volkhvy Magi might have been culturally linked. Both were accomplished poets, musicians, magicians and astronomers. Both had gods with similar names, and similar feast days at certain times of the year, plus a formally structured dualistic calendar of white and black days. Like the Rus' "doctors" some Druids and Druidesses such as Mug Ruith or Tlachtga were regarded as gods and goddesses. Historical references label both the Volkhvy and Druids as Magi,¹¹⁶ something which would explain many points of similarity. In fact Pliny the Elder went so far to say that the British Druids were so taken in by the arts of magic, that you would think they taught it to the Persians. It is thought that the last of the Druids were slaughtered by the Romans on Anglesey, but

the sacrifice of a druid prince at Lindow,¹¹⁷ means that an undetermined of Druids probably survived the massacre. Might the astronomical arts of pagan Rus' be attributable to fugitive Druids? ... this unlikely possibility is discussed later in this book through a need to explain a number of compelling similarities between the religious customs of the Slavs and the Druids.

MAGIAN ZURVANISM

If we take into consideration mediaeval documentation on the Magi in Germany, we can quite reasonably infer that the priests of pagan Rus', Britain and northern Europe were the blood Magi; they could be found all over the continent! Because the Slavs had astronomy, fire temples, dualism, devil-worship and daeva idols it means that the Magus priests of Russia (and most likely Germany and the British Isles) were in all likelihood the descendants of Magian Zurvanites, expelled from Central Asia and Persia at least five to six hundred years prior, for religious practices contrary to Zoroastrianism, which at that time was the State religion of Sassania.¹¹⁸

DUALISTIC PHILOSOPHY

Greeks and Zoroastrians had ties in the field of dualist philosophy, especially the practitioners of the Neo-Pythagorean mysteries. A deliberate cross-synthesis of Zoroastrian and Greek gods was a direct result of this interaction, and occurred from the 4th Century BC during Alexander the Great's annexation of Old Persia. As with most Zoroastrian and Magian deities it is possible to equate them with ancient Greek Gods. *This fusion produced a Graeco-Iranian pantheon with many similarities to the Rus' pagan pantheon.*¹¹⁹

THE MATING OF GREEK AND IRANIAN RELIGION

Mt Olympus was sacred to Slavs, Greeks and Mithraic devotees. Legend relates how the pagan Russian gods visited the earth by descending the slopes of Mt Olympus.¹²⁰ Another tale exists about refugees from the Trojan war entering a new life to the north of the Slavic lands.

OLYMPUS, HOLY TO THE HEATHEN SLAVS

Herodotus spoke of the fortified city of the Gelonus wherein lived inhabitants of Ancient Greek stock, who spoke a hybridised Greek tongue. The city of Gelonus was square, with 6 km long log walls on each side. Besides a large amount of housing, it had countless Greek temples, all made entirely of wood. Crowds of pilgrims converged there for Dionysian Bacchic feasts every three years.¹²¹ The realm was present in the 6th century BC. One wonders who its population was, what gods they worshiped, where they went to, and precisely how much of their culture they implanted into future generations! For example, Dionysian images and even Hittite gods were carved in amber (used by the Aryans as a sacred incense) exported from the Baltic. The Bronze Age amber trade routes c. 1600 BC led from the Baltic to Minoan Crete, Siberia, Germany, England, Scandinavia, Italy and the Caucasus.¹²² In the early 1900's a Russian historian chanced across some Belorussian peasants performing what could only be described as a Greek tragedy - *Tragoidia*.¹²³ And what impact was made on later Rus' society by the neighbouring cannibalistic Androphagi, the Neurian wolf-men, the black-gowned Melanchlaeni, the curious pacifistic Argippaens, the Budini, the Royal Scythians, the Nasamonians, the Issedonians, the wise Hyperboreans, the Agathyrsi, or those of Darius' Zoroastrian/Zurvanite army that stayed behind to live in Scythia? According to Gimbutas,¹²⁴ the name of the Finnish tribe, the *Mordva*, is derived from a fused Indo-Iranian word *Mardkhar*, meaning "the man-eaters". It is believed that the term Androphagi was Herodotus' Hellenisation of the word Mordva. Thus the Mordva were once cannibals, but for how long and until what date is unknown. Adam of Bremen mentions that they were still eating people in the 10th Century Rus', though whether this was current knowledge in the Middle Ages or simply a retelling of Herodotus historical accounts of those lands is not known. Will we ever know?

DIONYSIAN CULT CENTRE IN BRONZE AGE SCYTHIA

THE AMBER ROUTES

ONE TRIBE MAY HAVE BEEN CANNIBALISTIC

ROADS MADE BY THE PAGANS

In Russia's north the people laid roads made from logs cut in half, and placed side by side in one continuous length, a method once used by Bronze Age Celts. These allowed year-round access across land softened by thawed surface permafrost. The northerners, who knew how to use the wheel, preferred to drive sleds along these roads rather than wheeled transport. These corduroy roads also tended to sink very rapidly, leaving them *in situ*, layer upon layer, many metres thick, and which were constantly having to be re-laid by work crews.

The Slavs had somehow acquired the engineering technology to make causeways which led across water to equally impressive circular villages, built in the middle of lakes. These were every bit as monumental as Caesar's bridge over the Rhine.¹²⁵ To undertake projects of this nature they would have needed pontoons and specially designed barges mounted with pile-drivers, operated by ropes and pulleys. Pagan Slavs also built enormous timber and rubble fortifications (complete with moats) to defend their major settlements.¹²⁶

There are grammatical similarities between Russian and Latin, and a substantial number of correlations between Slavic and Latin vocabulary. These ties either came from direct Roman-Slavic interaction, or are the

CAESAR'S ALTAR IN THE

fossilised remains of their common Indo-European ancestry. A Roman presence in the Ukraine is the most likely explanation, perhaps owing to settlers or the masses of Roman slaves emancipated by their Slavic captors. Roman coins and fibula (dating to the 2nd Century AD)¹²⁷ are found right across the present day Ukraine, not to mention Russia and the Baltic area. Some of it was no doubt war booty from their many penetrations of the Roman frontier, but it has become apparent to archaeologists that many Rus' cities were laid out similar to Roman town plans.

Roman artisans specialising in metalwork and lapidary appear to have shifted into the Crimea, and to the north of there as early as the 1st Century AD,¹²⁸ and from then on, the southern Ukraine became a place where quality merchandise was manufactured and exported into Europe. Roman fibulas also appear to have been used as a model for the creation of magical wards for the Russian plains dwellers. Balts also had much to do with the Romans. Since musk and amber were some of the holiest incenses to be burned on the pagan fires, such notables as Emperor Nero visited the Baltic to obtain gargantuan consignments of amber, a substance credited with great healing properties.

Ptolemy, an Alexandrian scientist-geographer, depicted Caesar's altar in the southern Ukraine during the 2nd Century AD. Since it was situated there instead of Rome, we might guess that a major pagan Roman cult site existed in southern Russia; one whose significance eclipsed anything found on the Italian mainland.

The unearthing of a Roman settlement in a down-town Moscow car park mid-1995 poses a number of riddles. Why did Romans found a settlement that according to historical records found prominence only during the Middle Ages? Why were some Mediaeval pagan Slavs worshipping the long-dead Roman Emperor Marcus Trajan? And just who were they? Were they lost legions? Dacian settlers and frontiersmen from Trajan's time? Remnants of Valerian's shattered eastern legions? Mutineers/exiles from the civil war? Members of the Mithraic warrior brotherhood who had fled Rome once the Christian authorities shut down the Mithraic temples?

Comparative linguistics has shown that almost all European languages are linked by common ancestry to the Indo-European mother-tongue¹²⁹ which is itself related to Sanskrit. Indo-European was once spoken by a race of supposedly Caucasian invaders who migrated into both Europe and Asia probably from the region of the Russian Steppes. If the language of the Mediaeval pagan Slavs showed traces of the Aryan tongue, how much more likely is it that the similarities between Vedic and pagan Russian religion might not be a coincidence, but the survival of Aryan customs in addition to their language. Traceable Indo-Iranian vocabulary is present in Russia, the Balkans and eastern Europe as it was among the Mediaeval Germans, Saxons, Norsemen and Finns, but Persian or cuneiform script is absent. Many Slavic words were derived from the Iranian, *especially religious terms*.¹³⁰ This is yet another fingerprint belonging to the blood Magi and their Iranian rites.

Norse words pertaining mainly to money, government, law and order are found in Rus'.¹³¹ A scarce number of Norse Runes have been unearthed in Russia, mainly used by Scandinavian colonists, though I am unaware of the degree of local Slav rune usage.

The languages of the Balts resemble Sanskrit in many instances, but Hindu script is absent. This illustrates the Indo-European linguistic inheritance passed onto the Balts. Latvian and Russian are said to closely resemble the Aryan language, as do the Greek, Latin, Indo-Iranian and Celtic linguistic sub-families. The archaeological record shows that the Balts were already inhabiting the Baltic hinterlands in the 6th Century BC,¹³² and therefore pre-dating Alexander the Great's campaigns. Thus any perceived ties with the Aryans belong to a fairly remote period, and not to contact with India during Alexander's eastern conquests of the 4th Century BC.

The Forbidden History of Europe is a wild journey through the lost and abandoned history of mediaeval Europe, proof indeed that history can disappear, but later reappear. In each successive chapter we will look at different aspects of pre-Christian religion in Europe and elsewhere, not to mention the time of their conversion to Christianity, and the subsequent devolution of beliefs experienced by adherents of the elder faiths as time went by.

Chapter 11

Magi - The magicians

I shall now introduce you to the next most influential pagan tradition, that of the Magi, one born among these Aryan practices, yet which took its own controversial evolutionary course.

Today the English word "magician" conjures images of cunning tricksters performing astonishing illusions. In mediaeval Europe they were seen as masters of the devil's arts. Clearly our unflattering view of the magician has undergone substantial devolution. I will now elucidate their original form and virtues during that age when they held power.

So, who were the Magi? Well for a start, the Magi are not some figment of our imagination, or a fable; they were an actual religious hierarchy every bit as evolved as the Catholic or Orthodox churches.¹³³ Plutarch and Apollonius of Tyana were just some of the authorities to inform us that a Magus was a person of royal blood, possessing magu (a special mystical power that was inherited by bloodline from generation to generation). In addition to this, they were able to induct foreign persons of royal blood into their arts.¹³⁴

The Magi formed the Iranian religious caste, performing varied functions vital to the running of society, additional to their duties as divine intercessors. So in many respects they held similar status to the Brahmin priests of the Hindus. They worked as scribes, herbalists, doctors, teachers, philosophers, musicians, astronomers, astrologers, genealogists, judges, mathematicians, administrators, smiths, architects, builders and so on. Magi were the moral watchdogs of their society, exhorting the faithful to acts of goodness, truthfulness, and observance of the law. Above all they conducted many festivals and rites in adoration of the sun (the face of god, iconographically speaking), who was the propagator of all life on earth, and the source of *Spenta Mainyu*, the Holy Spirit. We get a brief glimpse of the Magi through Greek pagan gnostics, notably by Iamblichus in his writings on the life of Pythagorus;

"(Pythagorus) was taken captive by the soldiers of Cambyses, and carried off to Babylon. Here he was overjoyed to be associated with the Magi, who instructed him in their venerable knowledge, and in the most perfect worship of the gods. Through their assistance, likewise, he studied and completed arithmetic, music and all the other sciences".¹³⁵

Pythagorus also learned the rites of the Babylonian-Chaldean priesthood (which I shall discuss a little later), in addition to those of the Magi. Porphyry tells us they had special expertise in "astronomical theorems, divine rites, and worship of the Gods",¹³⁶ but, having witnessed Chaldean witchcraft first hand, Pythagorus "was shocked at all the blood-shedding and killing".¹³⁷

A MAGUS POSSESSED
ROYAL BLOOD, AND THE
POWERS OF MAGU

THE MAGI SPECIALISED IN
VARIOUS FIELDS OF STUDY

Among their number were counted the Magus-Kings, who were not seen as ordinary monarchs, but divinities in their own right. The Achaemenid and later Parthian blue-bloods were specifically referred to as "gods" or "descended from the gods".¹³⁸ Like their predecessors, the kings of later post-Parthian, Zoroastrian Sassania, they went by the formal title of *Bagi* which meant "gods" (which resembles the Slavic word bog, also meaning "a god", the plural being *bogy*), thus indicating that Sassanian monarchs were regarded as living-god kings too.¹³⁹ Their ability to enter a state of *magu* (a preternatural experience that placed them in league with the divine beings) is what distinguished the Magi from ordinary pagan priests and sorcerers, for in doing so they heard the voices of gods and otherworldly essences directly. In effect they were mouthpieces of the celestial divinities; prophets and prophetesses.

Apparently the magical power and wisdom of the Magi was very real indeed, partly owing to their masterful knowledge of the arts and sciences. Even as staunch an enemy as the Christian clergy had no trouble admitting the marvels they performed. Yet some misinformation arises. According to the Nicæan Anastasius and St Clement of Rome, Simon Magus (the arch-enemy of St Peter) was a master of illusion, arts known throughout the Middle Ages as *legerdemain* or *juggling*. Magus is a misnomer. To be more precise he was a gnostic sorcerer said to have crafted walking statues (mechanical devices animated by wires?), was unharmed by fire (a fire-resistant salve such as that used by modern stuntmen?), could make phantasmal images appear in the air (tricks with lenses, such as the Chinese lantern?). Before a large audience he made a person appear in every window of an upper story tower simultaneously (chicanery with multiple mirrors, perhaps based on Ptolemy's 2nd C. AD experimentation with optics?), he had two faces (facial masks?) and could mutate into a goat (costumery not unlike that of the witches?).¹⁴⁰

Later European witches were certainly purveyors of ingenious contraptions. For example, in a 1425 AD illuminated manuscript, penned during the Hussite Wars in Germany (entitled the *Anonymous of the Hussite Wars*), there is a picture of a heretical commando saboteur, or underwater salvage expert, dressed in a diving suit. His apparatus consisted of flippers, a safety line to the surface, and a hood (complete with transparent eye-holes) which was connected to the surface by a breathing tube. The insurrectionist or soldier is seen to be carrying crates, which were either victuals for the besieged commune of heretics, or even gunpowder as some have suggested.¹⁴¹ We again hear of diving apparatus during the trial of John Wildman in England on charges of sedition in the last years of the 1600's. He allegedly procured the equipment from a female witch who learned how to construct the devices from the angels. Being a resourceful chap addicted to treasure hunting, Wildman used this novel gear to fossick offshore, where Spanish shipping had gone down.¹⁴²

Fig 13 shows a modern physical reconstruction of equipment drawn in the *Anonymous of the Hussite Wars*.¹⁴³ What is not however shown in the picture is the use of bellows to pump air down the tube, thereby reducing the carbon dioxide levels that build up in longer air lines. To be fully plausible such methods must have been used. The illumination is not the only one to survive from the period, also appearing in the early 14th Century Italian works *De Machinis* and *De Ingeniis*.

The mystical potency of the Magi supposedly stemmed from the supernatural blood running through their veins. This precious blood was both pure and sacred, and could only be inherited by a specific pool of descendants who were all related to one another. In practice this meant that the Magi engaged in incest (for want of a better word) within various degrees of consanguinity, even with those as closely related as their cousins, largely by arranged marriages. The Parthian era saw a major deviation from this custom arise. Traditional Magian consanguineous nuptials competed with exogamous marriage rites, under foreign, and especially Greek influence. No doubt the more orthodox Magi would have seen this as debased, and in every way contrary to Zoroaster's unequivocal support for the next-of-kin marriage. Many Parthian Magi still wedded in the required manner, even allowing for the new exogamous fad, "and these Magi, by ancestral custom, consort even with their mothers".¹⁴⁴ Greek suggestions that they bred with members of their own immediate family are hotly contested by the Parsees (the last recognised descendants of the Magian exiles who resettled in Bombay), for this is not acceptable among the Magian exiles of India, if indeed it ever was. Perhaps the Greeks had misconstrued the meaning of the "next-of-kin marriage", and wrongly concluded that it included mother and son, and father-daughter unions. Whatever the case Magians belonged to one big family, genetically, culturally and philosophically - they were so to speak brothers and sisters, the brethren and sisteren.

AND PURE” LORDS OF
THE WORLD

The Medean Magi (whose tribal homeland centred around the Iranian city of Rai) were to the pagans what the Levites were to the Jews; potent inheritors of the sacerdotal priestly bloodline granting them alone the right to intercede on man's behalf before the gods of the cosmic and infernal realms.¹⁴⁵ Even more than this the Magi were believed to be incarnate gods, angels and archangels, of noble or Aryan birth, their pedigrees signified respectively by the terms *Arizantava* and *Ariyazantava*. In fine they were not seen as wholly mortal, gifted beings preordained to be the “chosen and pure lords of the earth”.¹⁴⁶ During the medieval Inquisitions they were still alive and well, though chided as a clandestine corporation of angelic beings. To a tenuously converted Europe, and a Church attempting to promulgate the magisterium, they were an unremitting disease that hung over the parishes and countryside.

The concept of divine mortals was certainly not peculiar to the Magi, for such beings were known among the Aryan Brahmins, sages and saints, not to mention the pagan gnostic priests and priestesses. Like the Magi, the Brahmin stood at the apex of the Aryan sociological tree.¹⁴⁷ Indian texts known as the *Puranas* state that Brahmins should be worshiped by all people, even kings.¹⁴⁷ With a religion directed toward Jesus Christ, the creator made flesh, Christians should be more than familiar with the idea also.

Egyptian and Greek pagan gnostic cults allowed their rulers and philosophers to become gods worthy of worship, providing that they had reached certain levels of spiritual and ritual attainment, and had been enlightened by the fine learning imparted by the Great Spirit.

What is even more interesting is that man-worship was a component of early Mediaeval European paganism. In Spain, Martin of Braga spoke of pagans making idol houses, within which were situated images dedicated to men, who in their turn received sacrifices.¹⁴⁸ Therefore Western European pagans, like the Slavic pagans, had gods who were, or had been, in reality, beings of flesh and blood. Some were venerated posthumously, others while they yet lived. For instance in Britain, in the year 959 AD, the Christian King Edgar began moves to eradicate heathenism in all its many forms. One item stressed in his letter to the clergy was that man-worship no longer be tolerated.¹⁴⁹ This is an undeniable reference to mortal-gods (male or female). Unless this relates to a form of man-worship imported into Britain at a later date, it might be residue from the age of druids. As you are about to see, the likely religious source for the divinity of these pre-Christian living gods was Magianism and pagan gnosticism.

Monotheism in Persia and Mesopotamia

MONOTHEISM, THE
VENERATION OF A SINGLE
SUPREME BEING, IS FAR
MORE COMPLEX THAN IT
FIRST SEEMS

Monotheism entails the worship of a singular divine being, theoretically to the exclusion of all others (except, as you shall see, where an angel or divinity is an incarnation or spiritual manifestation of the same high god, and thus due the appropriate honours). The very notion of a single divinity is extremely frail, undergoing a paralysing metamorphosis the instant one contemplates life's greatest horrors. A 1 year old child dies of leukemia, a baby is born deformed, the death of grass, trees, flowers, puppies and wildlife is everywhere, so too the extinction of stars (whether exploding as supernova, swallowed in galactic collisions or drawn down into the forbidding hollows of black holes), the outbreak of pestilences, earthquakes and surprise tsunamis that claim hundreds of thousands of unwilling victims with callous regard for the age of their victims, or their personal sanctity. Such are the tragedies that hamper and ravage the world each day. The sufferering creations just cited have two things in common ... they are sinless, yet die untimely, and they are unable to make decisions within the context of good and evil, and as such are unable to transgress 'divine laws'. Their deaths need to be explained in the context of an alien force, who unlike a just god, willingly exterminates the 'good' and 'bad' alike. Too many innocent things were dying. This point seemingly disallows any suggestion that demons are god's mafiosa, the goon squad who turn out to punish everyone and everything that transgresses the divine law, as stated by Jewish and Chaldean authorities.

IT IS COMPLICATED
THROUGH THE EXISTENCE
OF DESTRUCTION, EVIL
AND NEGATIVE FORCES IN
THE COSMOS

So we might ask is the God of the monotheists running a sort of concentration camp, where on one hand it takes great care designing and fashioning our mortal selves, and then, at a time of his choosing strikes down all creation with an exquisite malevolence, laying waste with old age, disease, withering, carnage, famine and drought, even upon the blameless? The existence of such a being is abundantly clear, an alien force, or forces, antithetical to everything a loving Creator god should be, yet supremely powerful in an opposite way, diabolical in fiendish inventiveness, ready willing and able to destroy the cosmos by stages, at seasons of its choosing. Magian doctrine

IS GOD RESPONSIBLE FOR
THE PHYSICAL
DESTRUCTION OF
MATTER?

records many a tale of the evil one and his depraved hatred of creation;

In the “*Abyss full of darkness, unto the limits of darkness and confines of the luminaries; and in his terribleness and demoniacal deliberation he (the Infernal Lord) gazes at the unblemished light and creatures of the beneficent Ahura Mazda. And through abundant envy and complete maliciousness is his lying; and he mounts to seize and destroy, render unobservant, and cause to perish these same well-formed creatures of the sacred beings*”.^{149a} From the recesses of his unholy bunker the fiend tirelessly plotted and decreed “*the destruction of the living by the power of death; and one causing the manacling of souls by a course of wickedness*”.^{149b}

Since the dawn of time mankind mused over the unseemly inequity of such tragedies, and devised various explanations for their frightening occurrence. To maintain the goodness of the one god, a second force was required. For some it was a malevolent demon or dark angel acting as a stand-over man, to punish the wrongdoer, and leave the good god’s reputation unsullied by the grimy business of retribution. Others held it to be god’s own wayward son, acting independently of the divine will. In the final analysis such a being becomes God’s fall guy, who takes the blame for all the evils of the world, and the blood of the guiltless. Some held that the fall of innocents was attributable to punishments meted out in retribution for the sins of one’s ancestors (eg; Adam and Eve’s transgression against the divine majesty), yet such notions run contrary to perceptions of holiness, divinity and justice, qualities supposedly borne by the One God, who gave structure and life to the cosmos.

Throughout the orient it was postulated that since creation and destruction are seemingly eternal and daily-unfolding processes, it follows that the Creator’s unholy and vindictive adversary is, likewise, eternal, and infact so powerful as to claim the life of every created thing, consigning them to a bleak eternity in the shady kingdom of death. Throughout early civilization many felt the creator god of this transient world was of only cursory interest to the living compared with the demonic overlords, gods, wizards and spirits of the underlands, who, on an appointed day, would gain eternal power over our very being. The Creator mattered for barely five seconds in eternity. So in this world dazed and wearied folk readied themselves for the coming doom, attempting to build some sort of rapport with their future subterranean king and the many denizens of its dusty, foreboding halls.

According to the Magi Hell was a fearful place, full of “*wounders, slayers, destroyers, deadly ones, monsters, and criminals, those who are unseemly, those too, who are diseased and polluted, biters and tearers, noxious creatures, windy stenches, glooms, fiery stenches, thirsty ones, those of evil habits, disturbers of sleep, and other special cuasers of sin and kinds of perverting, with whom, in worldly semblance, are the spiritual cuasers of distress*”.^{149c}

In his work *Pythagorean*, Austophon describes the post-mortem outcome of observing Pythagorus’ Greek pagan Gnostic philosophical teachings and religious customs, based on visions of the afterlife.

“He said that when he did descend below among the shades in Hell, he there beheld all men who e’er died; and there he saw that the Pythagoreans differed much from all the rest; for that with them alone did Pluto deign to eat, much honouring their pious habits”.¹⁵⁰

In response to this fearful fate an Aryan religious doctrine gained currency, a sign or ray of hope that the underworld would not lay ahold of creation perpetually, but only for a time. In Magian lore the Creator, in his infinite wisdom, had sired a Resurrector, a spiritual being who was stronger than the devil; who could reach down into the darkest recesses of hell, reinvest the fallen with life, bringing them into a trouble-free future existence, in a heavenly place inaccessible to demon’s malicious hand.

When you mention monotheism most people think of Yaweh, the god of the Old Testament, through which we are taught that the God of Israel, is the one God, the only god, all-powerful, all-knowing. But he is also an enigma. Judaism was, to a certain extent divided over the origin of misfortune, sickness, aging and death. As compassionate and loving as Yaweh could be, the ‘*jealous God*’ would severely punish and ultimately destroy his flawed creations as repayment for their sins against him, or the deification of any spirit, person, image or object. So the Jewish godhead, as told by the Saducees, consists of a single unified force, the divinity Yaweh. The Jewish Pharisaic sect adored and feared this same deity, but professed that God created a multitude of angels and demons (angels who willfully fell from grace through disobedience) beneath him. In an administrative sense Yaweh accomplished the work of governing the world by sending angels deputised to carry out a variety of functions assigned to them. Demons, the

fallen choirs of rebel angels, were paradoxically still under his control, gaining power over mankind only with Yaweh's permission, or by direct command, bringing pestilence and harm.

As it states in Isaiah 54:16 "Behold, I have created the smith that bloweth the coals in the fire, and that bringeth forth an instrument for his work; and I have created the waster to destroy". The waster in this case is an avenging angelic creature.

REBEL ANGELS

In this variant there are no angels or ancillary spiritual and unspiritual beings. Only a single force that acts according to its own will, for good or ill.

In this variant Yaweh deliberately gives rise to fallen angels to bring punishment on the world. Alternatively he strikes a bargain with the errant angels, allowing them to destroy the world for a specified period only.

THE OLD TESTAMENT CONTAINS FOSSILISED EVIDENCE OF EVOLVING JEWISH MONOTHEISTIC MODELS

THEY WERE ON A JOURNEY TO TRY AND UNDERSTAND GOD

In this variant god and his upright angels are pure and good. Fallen angels (who act of their own accord and without reference to the supreme being) in a state of rebellion are responsible for all the evils of the world.

THE JEWS ALSO BELIEVED IN THE EXISTENCE OF DEVILS; BUT THEY WERE GOD'S SERVANTS

The dark angels of Jewish lore (eg; Satan, Samael, Beelzebub, Azazel) were specially commissioned by God to destroy whosoever fell from Yaweh's favour; "And the visitation of all who walk in this spirit (of wickedness) shall be a multitude of plagues by the hand of all the destroying angels, everlasting damnation by the avenging wrath of the fury of God, eternal torment and endless disgrace together with shameful extinction in the fire of the dark regions. The times of all their generations shall be spent in sorrowful mourning and in bitter misery and in calamities of darkness until they are destroyed without remnant or survivor".¹⁵¹

MUSLIMS BELIEVE A DEVIL EXISTS ALSO, ALONG JEWISH LINES

The Islamic godhead is practically identical to the Jewish, save only that Yaweh is renamed Allah (from the Chaldean 'elah ("the deity")). Allah is primarily good in nature. "Men bear in mind God's goodness towards you. Is there any other creator who provides for you from heaven and earth? There is no God but him ... Let not the Life of this world deceive you, nor let the Dissembler trick you".¹⁵² This portion of text particularly inveighs against an excessive fondness for the transient material world, to the exclusion of the spiritual, and worst of all, a proclivity toward atheism and wrong belief. The latter were of course the handiwork of Satan himself, the beguiling master deceiver.

ALLAH SENDS PUNISHING ANGELS

But Allah also has a dark side when it comes to dispensing torments. As in Judaism it is not he who executes such designs. Under Islam it is the Archangels and angels who inflict punishments and natural catastrophes upon the world; "So We plagued them with floods and locusts, with lice and frogs and blood".¹⁵³ They also assign contrary demonic forces to oppose the prophets; "Thus have We (the Archangels) assigned for every prophet an enemy; the devils among men and jinn".¹⁵⁴

ANGELS OF DEATH

They also appoint a particular death angel for each human being, who escorts their soul in the hereafter. "The angel of death in charge of you will reclaim your souls. Then to your Lord you shall return".¹⁵⁵

Collectively these angels act in concert with Allah to effect his plans on earth, and to harshly reprove unbelieving infidels. "They plotted, and God plotted. God is the supreme Plotter".¹⁵⁶ The plotting in this case is against unbelievers and evil-doers only.

SATAN CREATED FROM FIRE

Satan was a created being, but, as with all the jinn, made from fiery rather than material substance. The Archangels said that; "We ordain life and death. We are the Heir of all things ... We created man from dry clay, from black

moulded loam, and before him Satan from smokeless fire".¹⁵⁷ Islamic doctrines profess that Satan is the head of all the fallen angels. The moment of Satan's lapse into disobedience is described in the *Qur'an*, in Surah 15 of *Al-Hijr*, where, in a fit of jealousy, he refuses to reverence God's new-fangled creation (ie; Adam), who differs from fiery jinn.

"Your Lord said to the angels: I am creating man from dry clay, from black moulded loam. When I have fashioned him and breathed of My spirit into him, kneel down and prostrate yourselves before him. The angels, one and all, prostrated themselves, except Satan. He refused to prostrate himself with the others. 'Satan', said God, 'why do you not prostrate yourself?' He replied: 'I will not bow to a mortal whom You created of dry clay, of black moulded loam. 'Begone', said God, 'you are accursed. My curse shall be on you till Judgement-day'" Then Satan requests that God give him permission to delude mankind. God agrees, but stipulates "you shall have no power over My servants, only the sinners who follow you. They are destined for Hell."¹⁵⁸

Other species of monotheism flourished in Persia and Mesopotamia, which I shall now explain, for those unwise to such religious theories. Where applicable I include schematics to illustrate, in simplified form, the concepts involved.

Chaldean wizards saw their high God as similar to Yaweh in nature, their creed having developed in Mesopotamia, the birthplace of Abraham. Chaldeanism varied from Judaism in that the Supreme God (ie; the Most High God) created many things seen and unseen, possessing either good, evil or mixed natures. These were not simply creations but particular autonomous aspects of the deity that demanded ritual interaction to tap into their enormous powers, as bestowed upon them by the Great Power. The planets, the primary lieutenants of the Great Power, personified certain positive and negative potencies and areas of responsibility, and were lauded as gods in their own right. Due to the vagaries of their movements the planets dispensed mixed fortune and could not always be relied upon to shower everyone alike with good fortune. Under the shunned theurgic art of sorcery Agathodaemon might be ritually invoked to 'terrify' the celestial divinities into granting pleasing outcomes. In a later time these Mesopotamian heavenly gods, lords over the zodiac, were found housed in Rome's great Pantheon temple.

SATAN IS THE LORD OF DEVILS IN ISLAMIC DOCTRINE

Beneath them lay a plethora of celestial gods, devils, genii, angels and daemones.

THE CHALDEAN SUPREME GOD, THE MOST HIGH, CREATED MATERIAL EXISTENCE BUT COULDN'T BE BOTHERED OVERSEEING ITS DAY TO DAY AFFAIRS. THIS TASK HE COMMENDED TO HIS CHILDREN, THE PLANETARY GODS AND THE HIGH DEMON. THEY WERE LIKE OVERSEERS IN A QUARRY

At various points in this book you shall investigate schools of sorcery and magic. Here I expound the more evolved theological theories of the ancient philosophers as a backdrop to understanding the Christian Magi.

In the main Magi had a totally different concept of the universe. The cosmos had *two* competing forces; one a benign creator (*Ahura Mazda*, the wise lord), from whence came holiness, light and goodness, plus physical and spiritual creation, miracles and prophecies. His eternal enemy was not a God, but more properly an anti-God. It was, in form, an existent non-existence, the source of non-belief and unrestrained materialism. This demon of malice, deception, and mayhem is but is not. The destruction of the living world wasn't, strictly speaking, the product of sin alone (as expounded in the Bible). Much rather it was the machinations of this co-eternal destroyer who, owing to his twisted nature, desired to exterminate sinless birds, flowers, trees and plants as surely as any human being. The downfall of religion and faith were his key goals, by demolishing spirituality.

Here one finds an essential point of difference between Jewish, Chaldean and primeval dualistic Magian cosmology. While the Holy Spirit and angels emanated from the luminous High God *Ahura Mazda*, the Spirit of Evil actually had no relationship to the divine being beyond perpetual antagonism. Far from being created by God, the unholy spirit was utterly alien to him, of unknown origin, merely sharing the same time and space, constantly brooding, feuding and clashing with the Lord. Such then is the essential theory of dualism. This early notion of supernatural bi-polar forces can be shown in the following way, with the Holy Spirit emanating from *Ahura Mazda*, the Persian name for the God of all things good. Take note there is no connection between both forces.

THE MAGI PERCEIVED A
TWO-WAY DUALISTIC
PARTITIONING OF THE
COSMOS

IT STARTED OUT AS A
WAR BETWEEN TWO
MYSTICAL SPIRITS

AHURA MAZDA (SUPREME GOD)

SPENTA MAINYU

Also called the Holy Spirit,
begetter of *Asha* ('the Truth')

ANGRA MAINYU

Also called The Spirit of Wickedness,¹⁵⁹
begetter of *Druj* ('Lies')

TRUTH AND LIES STOOD
IN OPEN CONFLICT

The Medean Magi dispensed with the teaching of the twin spirits and, for a time, turned primitive Zoroastrianism into a religion where creation and destruction were bi-products of a war between two separate polarised, equally powerful and utterly antithetical deities.¹⁶⁰ Angra Mainyu (The Unholy Spirit) became deified, boldly personified as God's crafty opponent Ahriman, Lord of Hell.

AHURA MAZDA

The White God, the Good God, the Creator

AHRIMAN (ALSO CALLED AHARMAN)

The Black God, the Evil God, the Destroyer

THE SPIRITS WERE
CONVERTED INTO GODS

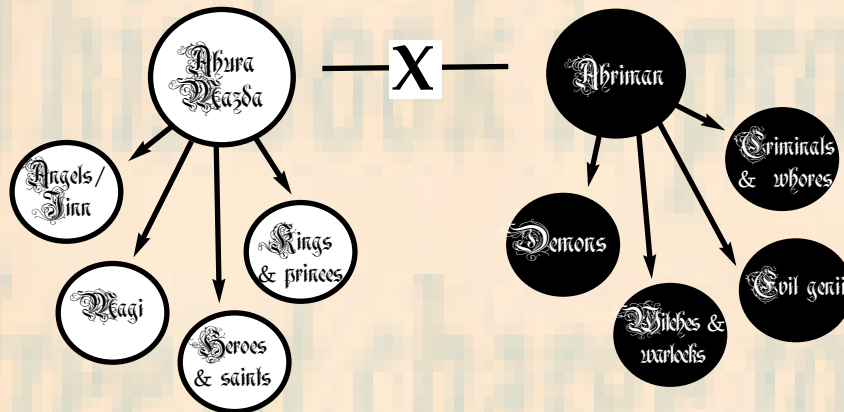

THE HEAVENLY LORD

THE INFERNAL LORD

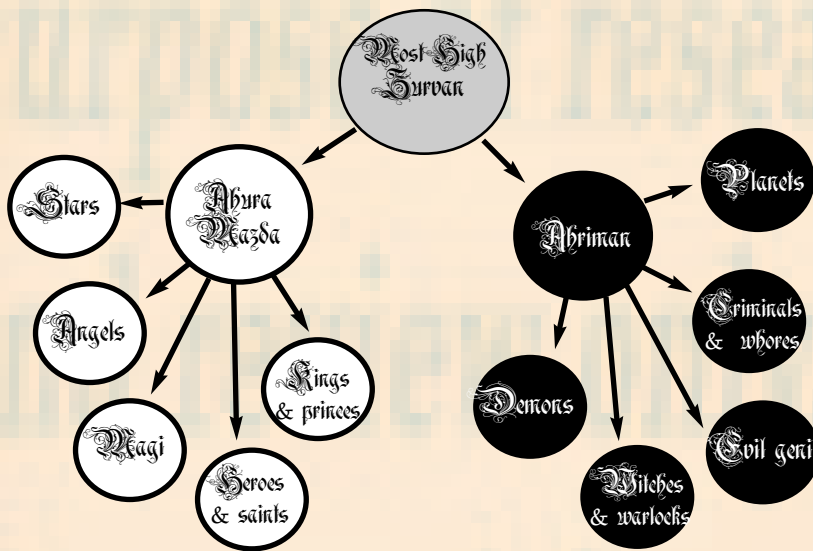

With the 'Spirit of Wickedness' elevated to the status of Prince Infernal, certain Magi gave him the rights of a God, with an entitlement to equal if not exclusive worship. Some, cleaving to both powers, felt it proper to bestow sacrifices upon both deities. They became the servants of two masters.

By the time you factor in the angels and genii born to these respective lords, not to mention the old royal cults allowing for the adoration of kings and Magi, the Mazdean godhead looks something like this.

Next came the Zurvanite doctrine¹⁶¹ which spoke of a single God above these. The sunny *Ahura Mazda* and infernal *Ahriman* were themselves created powers; fellow siblings born from an androgynous father-mother named *Zurvan*, the God of time. Zurvan's status was analogous to that of the Most High, the God above all other gods. This marks a departure from absolute dualism, but still the underlying dualistic camps are perceptible.

UNDER ZURVANISM THE GOOD AND EVIL GODS SPRANG FROM AN EVEN HIGHER SOURCE WHO WAS NEITHER TOTALLY GOOD NOR TOTALLY BAD, BUT A MIXTURE OF BOTH

This novel Magian trinity was condemned by influential wise men in its day, yet it snowballed into a popular religious mass-movement. It must have been a very ancient teaching, similar to the Chaldean godhead, and denounced by Zoroaster himself, in the following extract of Magian scripture.

ORTHODOX ZOROASTRIAN MAGI REGARDED THE ZURVANITE TEACHING AS PERNICIOUS HERESY

'And, from the statement of Zarathustra, about the shouting of the demon Aresh (a demon of lies and heresy) to mankind, thus: 'Ahura Mazda and Ahriman have been two brothers in one womb, and out of them the archangel liked that which is evil, through what occurs when the understanders of it have mentioned the worship of the demons and this, that, after it, you should present cattle to the planetary bodies and the demons'.¹⁶²

In this scheme, allegedly devised by the demon Aresh, the Supreme Being also gave birth to the dark power, allowing evil and misfortune to thrive in juxtaposition with the good. This act effectively made him the author and architect of both evil and goodness. Note well the favoured status of the evil brother in Zurvanism, epitomised by death's triumphant extinguishing of life, which though cherished is all too tenuously brief.

ZURVAN, THE MOST HIGH

AHURA MAZDA

The White God
The Good son (the Good Sun)
The Creator
King of the Heavens

AHRIMAN

The Black God
The Evil son
The Destroyer
Prince of the Underworld

THE DEVIL WAS THE
ENEMY OF EVERYTHING
THE CREATOR EVER MADE

According to Magian eschatological doctrines, we were living in the last age. Long ago Ahriman, the Evil One, made a dare to Zurvan (in some examples to Ahura Mazda) saying he could made humanity love wickedness and revere his way of life over that of the Good Son, and thus finally win favour in his Father's eyes. He claimed he could make humanity hate the White God. Zurvan readily agreed to his dare giving the Evil One free run of the creator's world, ruling the mystical planets as their Prince, thereby controlling earthly fate. The initial stages of the contest are explained thus:

"Ahriman, also, ever collected means in the gloom; and at the end of the three thousand years he came back to the boundary, blustered and exclaimed thus: "I will smite thee, I will smite the creatures which thou thinkest have produced fame for thee - thee who art the beneficent spirit - I will destroy everything about them"

Ahuramazda answered thus: "Thou art not a doer of everything, O fiend!"

And, again Ahriman retorted thus: "I will seduce all material life into disaffection to thee and affection to myself".

Ahuramazda perceived, through the spirit of wisdom thus: "Even the blustering of Ahriman is capable of performance, if I do not allow disunion during a period of struggle". And he demanded of him a period for friendship".¹⁶³

IN ZURVANISM THE
DEVIL MAKES A DEAL
WITH GOD

Ahriman was permitted to stand in Zurvan's presence whenever he felt like it, and the supreme god would give him permission to do things as he willed. But if a person sought to do good, then Zurvan would prevent Ahriman from truly hurting their choice to do so. Ahriman and evil's continued existence therefore relied on people freely choosing to sustain him through the "evil" of their words, thoughts, feelings and deeds. In the end though, the eschatological destruction of the Bull of creation in the next world by the Sayoshant (the last pagan Messiah), would obliterate the spirit of evil and the attendant wickedness for all time. In doing so, the planets, were to be destroyed in one cataclysmic moment, during the closing stages of the great cosmic battle; their mystical power to control humanity destroyed once and for all. This would cause a "meltdown" or collapse of the visible heavens. Accordingly, the planets, and in particular Gokihar, an eclipse-causing, sun-devouring beast that lived in the heavens, would be pulled from the sky and rendered useless during these last moments of good's ultimate victory. That is, just before it collided with the earth.

AT THE END OF TIME
THERE WILL BE A
FRIGHTFUL CONFLICT

"As Gokihar falls in the celestial sphere from the moon-beam on to the earth, the distress of the earth becomes such-like as that of a sheep when a wolf falls upon it. Afterwards, the fire and halo melt the metal of Shatvairo, in the hills and mountains, and it remains on this earth like a river".¹⁶⁴

Day by day, mankind played a crucial role in this war of Truth against Untruth, by choosing to do good in preference to evil, or evil in preference to good. Both the beneficent and iniquitous spirits penetrated the earth, entering our earthly bodies for the purpose of carrying out their respective duties, but it was we who empowered them to do so. Another school of thought is that the allotted destinies were predetermined from the beginning of time. Already at birth some belonged to the god of goodness, others the infernal lord.

Whatever the case the high demon was to be no pushover; although he was destined for destruction, his hold over people was exceptional, particularly through his ability to appear as something that he was not. Though still a serpent, Ahriman could seem as an innocent young lad, and what's more he could create illusory light. Such were Ahriman's powers of deception that Persians likened him to a chameleon; his potency multiplied whenever he remained hidden from sight. Humans had to be most careful in the choices they made, doubly sure that what they thought was the right choice was not in fact wrong-doing, dressed as good. These insights would only come from critical self-examination.

And so the world of the Zurvanite became a battle ground between two armies each struggling to ensure their respective Lord earned the High God's favour above the other. White Magus-princes forswore themselves to uphold the virtues of the white god, donning the dazzlingly white shirt-robe of the white Magi. Their mission was to protect the sanctity of life and marriage and continue the full scale war against the author of evil and lies, until their messiah finally arrived on earth from heaven high.

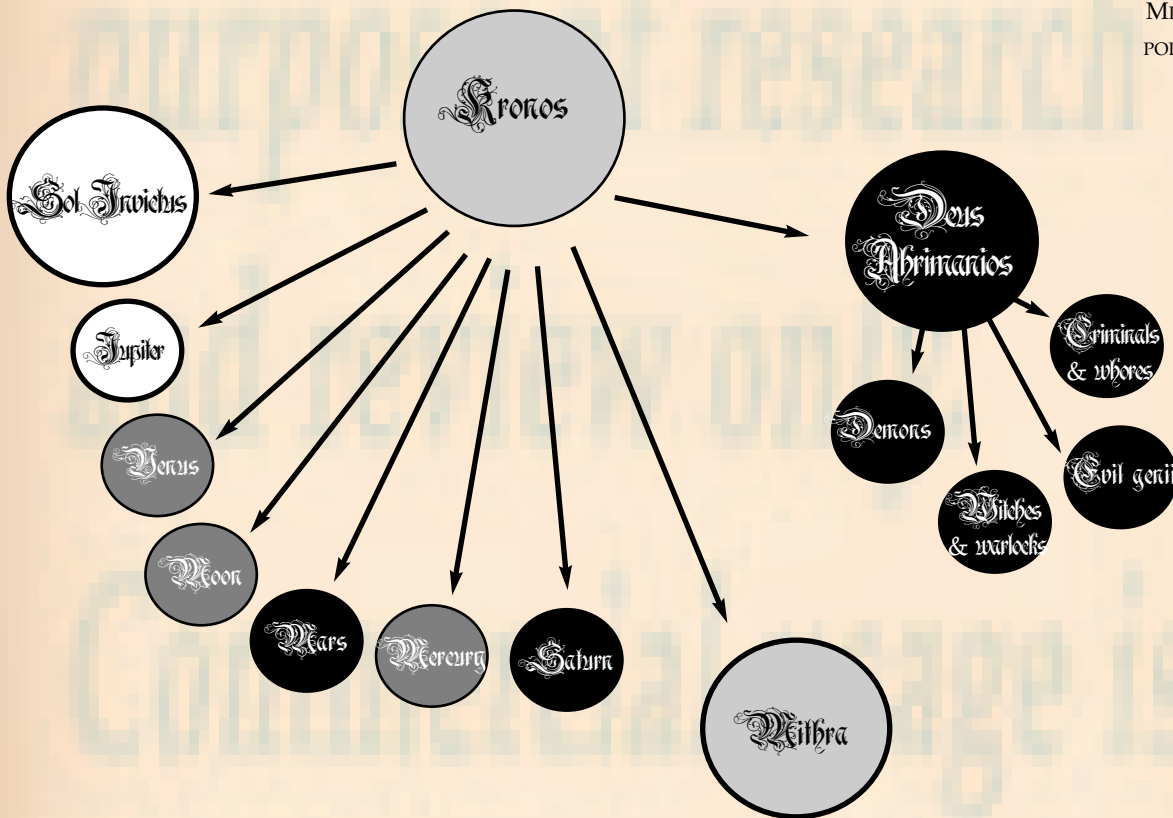

Others lent their support to the Dark Lord. These were Ahriman's unswerving black Magian priesthood and devotees, an entourage desirous of fulfilling the dare made to Zurvan by Ahriman on that fateful day. Such were the families beloved of the Evil One, obedient and eager to lay down their lives for him, in an unfair battle loaded in favour of the Good Son. To them, Ahriman gave miraculous powers, and the ability to manipulate creation through magical rituals, science, and varied acts of devotion to the seven planet gods (the warrior-brigands of Ahriman). Through the devil-angels of these luminaries, Ahriman controlled the world with a fist of fear and worry.

Zurvanism underwent a further metamorphosis, emerging as Mithraic religion, which began in Iran and later found untold adulation in Ancient Rome, but not before incorporating facets of Chaldean and Greek pagan Gnosticism. Under Mithraism *Zurvan*, the Time God of the Magian astronomers, acquired the name *Kronos*, *Sol Invictus* became the Latin name for the Sun God, while *Mithra* and *Ahriman* retained their Iranian titles intact.¹⁶⁵ Mithra the Mediator, the in-between-one, was the guardian of the Bridge of the Separator which led to heaven, and soul escorter. Sandwiched between sun and devil stood this Mithras, God's Warrior, who punished all liars, and fought as champion for the Good Sun.

THE DEVIL HAD HIS OWN PRIESTHOOD

IN ROME ZURVANISM BECAME KNOWN AS MITHRAISM

MITHRAS WAS GOD'S POLICEMAN / HITMAN

Whether in the physical or spiritual world, each of the two contending powers possessed its own kingdom, since in varied traditions, both powers had the nature of a creator. Each kingdom was born from its own respective father, each dimly reflected in the other. In the material world the two kingdoms collided *ad eternam*.

THE KINGDOMS OF LIGHT
AND DARKNESS MINGLE
IN THE MATERIAL
UNIVERSE

Kingdom of Light

- Angels
- Good Genii
- High priests
- Dogs and otters
- Horses, cattle
- Sheep
- Wheat and grain crops
- Judges and doctors
- Moist, fertile soil

Kingdom of Darkness

- Demons
- Evil Djinn
- Warlocks
- Wolves and sea serpents
- Insects, spiders, locusts
- Goats
- Weeds, briars and thistles
- Criminals and murderers
- Sterile dust

Mithraism's Zurvanite genesis becomes obvious once you compare it with the Roman Mithraic godhead:

SOL INVICTUS

- The White God
- The Good God

ARGUMENTS ABOUT THE
MORALITY OF CALLING ON
THE CELESTIAL POWERS

Some wizards, while acknowledging a zurvanite-style godhead, may have followed traditional white Magian prohibitions on planetary worship. Under this scheme the planetary powers emerge from the Evil One.

Comparing the Jewish, Chaldean, early Zoroastrian, Zurvanite, and Mithraic godheads, one model stands out as uniquely different in-so-far as monotheism is concerned. It diverges from the others once one asks the question 'Is the supreme being, the creator, my destroyer, either directly or indirectly'. The answer, in the case of early Zoroastrianism is a resounding 'No!'. Never an intended part of the cosmos, destruction and evil found their source and strength in the free-wheeling evil nemesis, who was himself a miscreator, of all things wrong, of all creatures bad, of a wretched flock. Its very existence would be terminated in an apocalyptic spiritual war, with Judgement Day its crowning glory.

There are enough Zoroastrian and classical Roman sources to help us visualise that devil worship was far from a whimsical psychosis devised by the Church for mind control, but rites aimed at appeasing or soothing a spiteful spectrum of infernal deities, well known in Babylon and the Orient, which complemented and magnified their dualistic perception of the cosmos. These spiritual cancers had been transported to many and varied geographical locations in the West by autonomous black Magi, or by those who served in the subterranean hideouts, caves and temples of the Roman Mithraic legionaries and piratical Cilicians. One Roman, the highly respected, though atheistic natural scientist Pliny the Elder, had the following to say;

'Frail, toiling men, mindful of their own weakness, have separated these deities into groups in order to worship them piecemeal - each person worshipping the deity he most needs. Thus different races have different names for the same deities, and we find innumerable gods in the same races. Even the Gods of the lower world, together with diseases and many kinds of plagues are listed in groups in our fearful anxiety to appease them. For this reason there is a Temple of Fever, on the Palatine, dedicated by the state, one of Bereavement, at the Temple of the Household Gods, and an Altar of Bad Luck, on the Esquiline. One could take this to mean that there are more heavenly beings than men, since individuals also make as many gods, by adopting Junos and Genii for themselves. Some nations have animals - even repulsive creatures - as gods, and many things more disgraceful to relate: they swear by rotten food and other such things...But the invention of adulterous acts between gods and goddesses themselves, as well as quarrels and hatred, and the invention of gods of theft and crime, surpasses all shamelessness'.... 'They wait upon gods with foreign rituals, they wear their images on their fingers (engraved magical gem rings); they pass sentence on the monsters they worship and invent food for them; they inflict dire tyrannies on themselves, resting only fitfully'.¹⁶⁶

STATE-SANCTIONED
DEVIL-WORSHIP AIMED
TO HEAD OFF EVIL BY
GIVING APPEASEMENT
OFFERINGS

In other words Mithraism conformed to the grand precepts of absolute dualism, allowing ceremonies for the appeasement of the good and evil gods.

A more detailed description of Magianism's formative stages is divulged in Chapter IV.

HOW MANY TYPES OF "MAGI" WERE THERE?

Five different species of "Magus" originated in the region of Iran, though strictly speaking not all of them were Magi in the pure sense of the word, but fire-priests.

1. PRE-ZOROASTRIAN MAGI

Before the birth of the Magian prophet Zoroaster, the religious needs of the Iranians were served by wizards immersed in arts known to the Aryan Brahman, and Mesopotamian priests, such as the Chaldeans. Wizards of this calibre ceremonially interacted with an enormous range of eastern divinities, the foremost being Mesopotamian *daemones* and heroes, as well as the *daeava* gods of the Hindus, and the opposing faction of beings called *Asuras*. For instance one Iranian priestly camp was referred to as mantra speakers,¹⁶⁷ and it may well be that this group, like the Hindus, held formal beliefs with respect to Hinduism, reincarnation and past lives. Aryans were the "twice-born", so notions of repeated births seem at variance with Aryan lore.

THE ARYAN PROPHET
ZOROASTER

Pythagorus allegedly met Zoroaster personally, for in Porphyry it states "In Babylon he associated with the other Chaldeans, especially attaching himself to Zaratus, by whom he was purified from the pollutions of his past life, and taught the

things from which a virtuous man ought to be free".¹⁶⁸ Here Zoroaster is identified as an ethnic Chaldean rather than Persian. This is an interesting aside, largely because subsequent decipherment of an Elamite text reports that Ahura Mazda, the heavenly lord lauded by Zoroaster, was the 'God of the Aryans'.¹⁶⁹ This may be what is meant when Porphyry mentioned "the other Chaldeans", which points to a group of Chaldees cognisant of Aryan rather than Semitic notions of a divine being.

2. ZOROASTER'S "MAGI"

ZOROASTER KILLED

According to Magian texts the ascension of Zoroaster brought a time of major religious reformation in Iran. Under his guidance a new philosophical movement took root in the Aryan homelands, which disallowed the worship of daemones and Hindu daevas. For his fated meddling in their affairs the wizards conspired to kill Zoroaster at his birth, failing in their quest. At first his teachings were not well received by the priestly establishment and this led to him being ostracised by many segments of society. So he took to the roads hoping to be welcomed somewhere or other.

HE SUFFERED MIXED
FORTUNES

The sage needed to plant his roots in fertile soil, in a fertile flower bed befitting his destined portion in history, not surrounded by the lowly, but with rulers of men. "To what land to flee, whither to flee shall I go? From nobles and priestly colleagues they separate me, Nor are the peasants to me pleasing".¹⁷⁰ Fate modified by time reveals all things, leading Zoroaster and his white kinsmen of the Hvogva clan to the court of King Vishtaspa, a petty king known to Darius, who would become a gracious convert and benefactor to the fugitive wizard.

A KING GAVE HIM
SANCTUARY

As Zoroaster saw it, the cosmos was essentially a battlefield in which two spirits clashed. One brought life, good fortune and virtue, the other death, grief and iniquity. At this point in Iran's religious development however, the Evil Principle was not yet personified as a god. Accordingly all worship was to be monotheistically directed towards Ahura Mazda, the mighty sun, the Good and Wise Lord, and Spenta Mainyu, the Holy Spirit. In practice Zoroastrians revered trees, water, earth, animals and mountains as aspects of this one god, plus moreover the sphinxine yazata angels that shepherded creation.

Fig 14. Wall art from Dura Europus depicting wizards depicted burning incense.

Zoroaster's religion typecast believers as participants embroiled in a war of good against evil, white versus black, of god's light clashing with the darkness of Angra Mainyu, the Unholy Spirit. Their weapons were good thoughts, good words, and good works. Zoroaster urged them to venerate and vivify the creator through the cult of fire, which was, as before, celebrated in sacred groves. In his day the Magi briefly lost their role as tenders of these holy fires, a place ceded to the *Athravan* (literally. "Fire-men").¹⁷¹ Be that as it may, the priesthood he advocated still consisted of sun-worshipping astronomers and astrologers, though idolatry, powerfully integral to the rites of the Hindus, Chaldeans and Babylonians was banned.

Life and bounty were his for many a long year until brought to an end by marauding steppe raiders issuing from Margiana. During the tumultuous uprisings against Darius power-hungry, opportunistic factions were again on the move. These unpleasant happenings signalled the beginning of the end for the settled empire. Celebrating rites about his altar, in company with priestly acolytes, the prophet Zoroaster parted this life, struck down by Frada.

3. THE MEDEAN/ZURVANITE MAGI

The teachings of Zoroaster filled the Aryan heart with consternation. Was it fitting to worship the Daevas or the Ahuras? For many Aryans the answer was the path of least resistance, one which resolved the long-standing religious conflict. It was righteous to honour and appease both classes of Aryan god. From that time the ways of the Magi and the Brahman continued to mingle in very many respects (as they had been before Zoroaster), and this gave rise to a reinvigorated tradition which outwardly bore the characteristics of Magian and Hindu religion. In addition it retained the Persian and Mesopotamian cultus of their day, thereby forming a body of religious tradition capable of appealing to most of the Near-East. That is not to say that these hybridisations occurred as a result of dogmatism. They were probably haphazard, owing to the open-mindedness of regional heathenry.

Inevitably this type of paganism was built on a foundation of dualism, with the war between light (good) and darkness (evil) ensconced as a central theme. At some point during Achaemenid times, the Unholy Spirit was transformed into the nemesis Ahriman, Lord of Demons, the face of Chaos and disorder throughout civilisation and creation. There were now two gods in the universe, both part of the natural order of things; every area of existence now fell under the jurisdiction of one or the other. Still, some postulated the existence of an even higher power, who sired these gods of good and evil, these two pillars of the opposites, the fathers of the positive and negative aspects of existence. The awesome influence of both gods throughout nature was equally real, and equally perceptible: Happiness-Sadness, Life-Death, Growth-Demise, Health-Sickness, Order-Chaos, Generosity-Greed.

The Medean Magi espoused arts known to the archetypal Magi of the Medes and Mesopotamians, being astronomer magicians devoted to a spectrum of gods, above and below - the *Ahuras*, *Daevs*, hero-gods and *daemones*. The terms *Magus* or *Mageus* (similar to the Vedic term *magha*), once signified that the Medean priests were both holy and godly. By Greek reckoning, they were mortal-gods, the "Magu-men" scorned in later Orthodox Zoroastrian texts.¹⁷² If we are to believe the Zoroastrian scriptures, one segment of their number consisted of black Magian sectarians, or, to use a mediaeval phrase, "Luciferians". Just as the omnipotent, sunny *Ahura* Mazda had his own white priesthood, so too did *Ahriman* possess cohorts of devoted wizards and witches who enacted his decrees, ostensibly via the Mesopotamian rites of demon-summoning. Like their father in the underworld, their supposed miscreator, they sought to increase the earthly reign of crime and destruction, and bring much vexation to created existence. Through the efforts of incarnate angelic and demonic ministers, the world's greyness, caused by the mixing of the two opposites, came to an end, as humanity divided two ways, each flock veering toward its own peculiar path.

4. THE POST-KARTERIAN ZOROASTRIAN FIRE-PRIESTS

The Magi were known to successive Persian dynasties - the Achaemenids, Parthians, and Sassanians. During the Sassanian era a high priest arose named Karter. His reign brought a notable remodelling of Zoroastrian Avestan and Pahlavi religious texts and practices. In the formative stages of Zoroastrian Orthodoxy many of Zoroaster's original thoughts were re-kindled and re-written to incorporate new concepts from the west, particularly from Greece. The ancient Avestan literature (once devastated by Alexander the Great) was resurrected during this reorganisation, perhaps the greatest legacy of the long-defunct Parthian and Sassanian Empires. From that time traditional Magi began to fall from grace. Their functions were usurped by a new breed of fire priest, the *Mobed* (*Magbad* or *Magupat*). The main ceremonial offerings made by these fire-priests included the sacred *Haoma* drink (an Iranian variant of the Hindu *Soma* libation), holy gruel and dron cakes. Conversions to other apostate faiths, especially to Christianity (which their clergy held in great contempt), gnawed away at their religion during the Sassanian era particularly, and had to be halted by the threat of state execution. Modern-day Parsee *Mobeds* propagate ritualism and religious ordinances codified in Karter's day. While the Parsee fire priests are not related to the original Magus wizards, a large proportion of their religious rites were inherited directly from the Medes, and so represent a continuation of the most ancient Magian observances.

Fig 15. A wall relief featuring the Orthodox Zoroastrian patriarch Karter.

5. MITHRAIC MAGI

Mithra (The Iranian God of Truth) became the patron deity of Roman Emperors from 274 AD, a century after Marcus Aurelius fostered the cult of *Sol Invictus* (the Invincible Sun). The sect's administration was overseen by a college of fire priests (called Pontiffs) who, since 300 BC, performed the state sacrifices in Rome, the heart of the empire.¹⁷³ They were mostly drawn from the noble Patrician families, and wore mitres (a tall pointed hat originating in the Near East, so named in honour of *Mithra*). Greatly nourished by the patronage of Marcus Aurelius (who the Roman Senate lauded as *Gothicus Maximus*¹⁷⁴ [the highest Goth], Mithraism saw further high level sponsorship under his successors, notably between 284-313 AD.¹⁷⁴

At first Mithraism embedded itself among the highest officials; the divine Caesars (incarnations of Jupiter), provincial governors and renowned military leaders. With such respectable figureheads captivated by its sacred occult mysteries, not to mention its militaristic nature, it was only a short while before Mithraism blossomed among the legions guarding the frontiers, only later coming to Rome. Persian Mithraism had become trendy among the "people that mattered", and to show their unfathomable support for the cult, military engineers, craftsmen, soldiers and public monies were siphoned into constructing subterranean temple vaults (*Mithraea*) in Rome, and throughout

THE PONTIFEX
MAXIMUS OF THE
MITHRAIC
BROTHERHOOD

every region of the empire, even as far away as Britain.

Mithraism was, in some respects, an outgrowth of the radical Iranian philosophy called Zurvanism, a belief that a nebulous creator/time god made two sons, one holy, the other unholy. The Mithraic godhead known to the Romans consisted of a trinity, formed by the high god Kronos (the god of time), beneath which lay Sol Invictus (the sun) and his inveterate foe Deus Ahrimanios (the devil). Mithras (god of the light) stood between the sun and devil.

MITHRAS AND SOL
INVICTUS WORSHIPPED
OUTDOORS IN GROVES

Worshippers gave their homage to *Mithras* and *Sol Invictus* at outdoor locations, whereas *Deus Ahrimanios* was venerated in underground vaults (judging by the sort of idols unearthed in some of these chambers). At Carrawburgh in England, a well has been excavated containing various heads, statuettes of a horse or dog, bells, glass and ceramic receptacles, money, and some two dozen altars.¹⁷⁵ The altars were most likely ritually deposited there over a period of time, so perhaps these constituted older altars which had been replaced with newer ones. The altars invariably came from a Roman surface *Mithraeum* situated close by, directly above a spring. Dog statues were frequently found at the Lydney temple (wherein the Celtic god Nodens was also worshipped), and so Bond guesses that they were gifts to the lord of hell.¹⁷⁵ I believe they might also represent *Ahriman* himself, in a typically Assyrian dog form. Nevertheless these dogs might only have acted as guardians for the site. In Britain an outdoor well found near a *Mithraeum* was overlooked by two altar stones and an on-site building.¹⁷⁶ Buildings of sacramental significance were associated with wells in the orient, so by my estimation this may have been a hall in which the Roman soldiers shared ritual meals, or even a permanently covered fire sanctuary.

KRONOS AND THE DEVIL
WERE PRAISED IN
UNDERGROUND VAULTS

The influence of the fire-pontiffs attached to the Mithraic brotherhood, made itself felt not only in the halls of Roman power, but on the battlefield. During an outbreak of hostilities with the Germanic Marcomanni tribe, Marcus Aurelius supposedly gathered the Roman and Germanic pagan priests together in Rome prior to the commencement of hostilities.¹⁷⁷ There the German priests and Roman fire pontiffs collaborated, concelebrating certain ritual mysteries,¹⁷⁷ which we might guess were somehow connected with Iranian Mithraism. After all, participation in the Mithraic rites required one to be a member of the brotherhood, and of a certain minimum level of initiation. It therefore seems evident that the Marcomanni had their own Mithraic *flamen* (fire-priests) who were party to the same Iranian religious and ceremonial traditions as the Roman pontiffs. By my estimation the Marcomanni tribesmen of Germania ought to be identified with a Persian tribe known as the Germanians, who, more likely than not, originated among the Scythian nations who had begun moving out of Scythia into the northern reaches of Greater Europe during the Iron Age. What is more, observing the same or similar pagan Iranian cult traditions was in no way a recipe for cordial relations.

As with Magianism, the central doctrine of Mithraism was the eternal, primordial conflict between the insidious *Deus Arimanius* (Lord of Destruction) and *Sol Invictus*, the Sun-Christ (also known as *Helios Christus*) who had descended from heaven, and come into the world, where he shared a sacred banquet with twelve men.¹⁷⁸ The strength and life of the Invincible Sun was embodied in each successive generation in the form of Sun-Kings, kings who, like the Invincible Sun, were as one with fecundity in nature and the land.

MAGIANISM AND PAGAN
GNOSTICISM COMBINE

Not all Mithraic priests were Magi; some were pagan gnostic philosophers. As a consequence Mithraic Magianism became a melange of Chaldean, Greek and Persian religious thought and ritualism, a cross-pollination probably brought about by the prolonged Greek occupation of Persia, not to mention Pythagoras' interaction with the Magi during his extended period of eastern captivity.¹⁷⁹ For example Anaxilus, a deportee from Rome, was described as both a Pythagorean and Magus.¹⁸⁰ Evidently he was a pagan gnostic philosopher, but also possessed the requisite pedigree of the Medean Magus. True, the worship of Ignis (ie; Agni) and the vestal flame existed in Rome prior to the advent of Mithraism, and perhaps had been there in a primitive form since Indo-European times. Later, under Persian Mithraic influences the number of *flamens* increased at the Roman capital, and throughout lands occupied by the imperial eagle. Hierarchically speaking their brotherhood consisted of *sacerdotes* (priests), *antistes* (high priests), pontiffs, and of course the *Summus Pontifex* (otherwise known as the *Pontifex Maximus* or *Pater Patrum* (the Father of Fathers)). There one also finds the terms *magistratus* ("magistrate") and *magister* ("teacher"), both traditional roles of the Magi. St Augustine stated;

"they (the Romans) even appointed a *flamen* for him (Romulus), a type of priest so pre-eminent in Rome's religious rites that they had only three of these, distinguished by the wearing of a special mitre, appointed for three divinities, the *Flamen Dialis* of Jupiter, the *Flamen Martialis* of Mars, and the *Flamen Quirinalis* of Romulus (a patron god of Rome, suckled by a she-wolf at his birth)".¹⁸¹

Suitably attired in sacramental garb akin to that of the Magi, the Mithraic Fathers performed baptisms, cleansings, hymns and other rites peculiar to varied gods, on behalf of the Roman people. Membership of their brethren was only open to males naturally. As with Magians, women of noble blood were authorised to perform rituals in adoration of female divinities, largely for the females of their community.¹⁸² Female priestesses did exist, and possessed sacerdotal offices of extreme importance. With the exception of the inviolate virginal Vestals, most were married to male *flamens*, and aided them in their duties, in an auxiliary role, robed in royal purple.¹⁸³ The white-clad virgins formed their own special college, one charged with the care of Rome's state fires. It was directly administered by matriarchs, and ultimately by the *Pontifex Maximus*. The supreme pontiff's finery was readily identifiable to the populace, consisting of a white toga garment, held in place by fibulae, and a distinctive mitre sporting a length of olive foliage suspended from its point, tied with a thread.¹⁸³ Interestingly, Persian scriptural sources confirm the penetration of Magianism into the Roman Empire, possibly as a result of the Sassanian period of repression against dissident Magi and a host of other religions, beginning in 226 AD. The rise of Roman Mithraism coincides with this bloody imposition of Orthodoxy in Persia, and may help explain Rome's continued offensives against the Parthians, despite the common Iranian origins of their respective religions.

PONTIFEX MAXIMUS - THE "CHIEF OF THE ROMAN MAGI", SUPREME FIRE PONTIFF

"And Kai Spendad and Zargar and other royal sons instigating the many conflicts and shedding the blood of those of the realm; accepted the religion as a yoke while they even wandered to Arum (Rome) and the Hindus (India), outside the real (ie; Persia), in propagating the religion".¹⁸⁴

LATER CATHOLIC POPES RETAINED THE TITLE

In addition to this a Persian Pahlavi etching found at *Nakch-i-Rajab* translates the term *Pontifex Maximus* (the supreme fire pontiff of Ancient Rome, and a term used by later Catholic Popes) as *Magupat u airharpat Rum*.¹⁸⁵ In this instance the term *magupat* is clearly used, the Orthodox Zoroastrians knowingly classifying the Roman *Arch-flamen* as "chief of the Roman Magi and fire priests", in their own tongue. What is even more intriguing is that pagan Roman prophets were once associated with *Vaticanus*, the name of a hill near the Tiber river, beneath which lay Mithraic catacombs. By inference the Vatican was once connected with pre-Christian, Mithraic mysticism; *vaticanator* ("prophet"), *vaticinor* ("to prophecy"), which entered the English language in Roman times, appearing as *vaticination* "prophesying".

HEATHEN PROPHETS FORMERLY LIVED AT THE VATICAN IN PRE-CHRISTIAN TIMES

After the fall of the Late Republic, and the onset of the Julio-Claudian Emperors, laws were devised in Rome to combat the growing number of sectarians belonging to mystery cults, especially where black magic, crop hexing and transfers, demonic rites, and human sacrifice were concerned. Foremost of these statutes was the *Lex of the Twelve Tables*.¹⁸⁶ In 33 BC, during the reign of Agrippa, Magi, sorcerers and many practitioners of the arts were evicted from the Roman Empire, despised not only for their religious devotions, but their natural affinity with enemy barbarian states; the greatest being Persia. Marcus Cato mentions the existence of Chaldeans in Rome too, the erstwhile lords of Mesopotamia.¹⁸⁶ Barely two hundred years later the Magi had regained the limelight. Clearly these were new times in Rome.

MAGI AND CHALDEANS EVICTED FROM ROME

Being politically-aware the Magi divided their world up into five patriarchates,¹⁸⁷ each of them ruled by a Zarathustra (in other words an extremely high ranking Magus). Four of these religious regions centred around the key central Patriarchate of Khvaniras, which housed the supreme Magus, the head of the entire Magian religion, from one end of their known world to the other.

MAGIANS DIVIDED THE WORLD INTO RELIGIOUS PATRIARCHATES

PATRIARCHATE	NAME	LOCATION
Western	Arzah (Arsa?)	West of Khvaniras
Eastern	Savah	East of Khvaniras
Central	Khvaniras	?*
Northern	Vorubarst / Vorugarst	North of Khvaniras
Southern	Fradadafsh / Vidadafsh	South of Khvaniras

* During summer the sun illuminated only one half of Khvaniras. And due to references to winter sunshine illuminating a half of Khvaniras when it goes over to "the dark side",¹⁸⁸ one might think that it lay somewhere on the Equator. The only problem is that the equator is too far south of any plausible Iranian homeland. Alternatively Khvaniras straddled a latitude somewhere around 50° north, the twilight zone bordering the more northerly perpetual darkness, that takes over once the sun goes below the equator.

WE KNOW THE NAMES
OF THE PATRIARCHATES
BUT QUESTIONS REMAIN
ABOUT THEIR PRECISE
EPICENTRES

ISLAMICISATION
DECONSTRUCTED THE
ANCIENT RELIGIOUS
BOUNDARIES

Whatever the case, by the end of the 7th Century AD it is fairly certain the Magian patriarchates of the southern, and central regions had ceased to exist, due to the Muslim and Turkish holy wars and the Islamicisation they brought with them. This must have left only the Patriarchates of the eastern, northern and western world, which probably saw large numbers of refugees. And it was to these other zones that important Magian dignitaries fled. Some ended up in Rome, the wandering beggar-Magi.¹⁸⁹

Potentially well-organised dualistic traditions look to have entered Slavia. Thietmar seems to suggest Wendish Slavs divided their region into areas of pagan religious jurisdiction when he states that “There are as many temples and as many images of demons venerated by the infidels as there are regions in this land”.¹⁹⁰ At the very least the Slavic countryside was brimming with idolatry. He further explained that “In those days a variety of idolatrous cults and superstitious aberrations grew strong again throughout all Slavia”. From the tone and ascerbity of the comment, paganism of some previously-known variety, had regained a footing and a high level of public adulation. Religious changes were manifesting.

The geographical extent of Achaemenid Persian political influence is better identified in a monumental inscription gouged into a rock face situated north of Darius’ Persepolis. Such was the lordship of this Aryan King of Kings, master of the known world.

THE ACHAEMENID
KINGS RULED THE EARTH
BY DIVINE DECREE; BY
THE WILL OF THE
CREATOR

“Darius the King says: By the favour of Ahura Mazda these are the countries which I seized outside of Persia; I ruled over them; they bore tribute to me; what was said to them by me, that they did; my law – that held them firm; Media, Elam, Parthia, Aria, Bactria, Sogdiana, Chorasmia, Drangiana, Arachosia, Sattagydia, Gandara, Sind, Amyrgian Scythians, Scythians with pointed caps, Babylonia, Assyria, Arabia, Egypt, Armenia, Cappadocia, Sardis, Ionia, Scythians who are across the sea, Skudra, petasos-wearing Ionians, Libyans, Ethiopians, men of Maka, Carians”.¹⁹¹

War amongst the Aryan gods

ZOROASTER HOPED TO
TAME DOWN THE
WARRIOR CASTE AND
THE ARYAN’S EXCESSIVE
FONDNESS FOR WAR

For so long the Aryans were devoted to the worship of the *Daevas*, yet finally it came to pass that the supremacy of this class of god was challenged. The revolt against the *Daevas* was promoted by the Magi who ritually interceded for the Indo-Iranian component of the Aryans. Their novel way of thinking gained even greater impetus with the arrival of the great prophet Zoroaster. It was nothing less than an inversion of the prevailing religion of the Aryans. Zoroaster preached long and hard against the ways of the Aryan nations to which he belonged, in particular the warrior culture philosophy which required the warrior class to make war flourish. Disappointed and repulsed by the spread of Aryan rapine and fury throughout the lands, his heart became filled with divine inspiration which came from a source that opposed the *Daevas*, namely Ahura Mazda, who shone with a brilliance as radiant as the sun. At his hand the religion of the Aryans was rent apart by a profound religious schism, drifting away from homage to *Daevas*, to the

“ways of goodness, peacefulness and piety” embodied in the Ahuras. Accordingly, many Aryans followed Zoroaster’s new creed, others remained true to the *Daevas*, and yet others, uncertain of which way to turn, gave worship to both the Ahuras and the *Daevas*. This intermediate form ever grew in size, and in time zealous Zoroastrians derided it as the faith of the ubiquitous Zurvanites; the schismatic Magian heretics.

The essential tenets of the Zoroastrian creed were embodied in the Mazdayasnian confession, which was recited during each *Haoma* ceremony, and which, for the sake of an analogy, performed the same function as the Apostle’s creed that Christians recited during the mass. The Zoroastrian profession of faith, as taught by the wizards, begins with a renunciation of Hindu ways;

*“I drive the Daevas hence; I confess as a Mazda-worshipper of the order of Zarathustra, estranged from the Daevas, devoted to the lore of the Lord, a praiser of the Bountiful Immortals, and to Ahura Mazda, the good and endowed with good possession, I attribute all things good, to the holy One, the resplendent, to the glorious, whose are all things whatsoever which are good; whose are all things whatsoever which are good; whose is the Kine, whose is Asha (the righteous order pervading all things pure), whose are the stars, in whose lights the glorious beings and objects are clothed. And I choose Piety, the bounteous and the good, mine may she be. And therefore I loudly deprecate all robbery and violence against the (sacred) Kine, and all drought to the wasting of the Mazdayasnian villages. ... Away do I abjure the shelter and headship of the Daevas, evil as they are; and, utterly bereft of good and void of virtue, deceitful in their wickedness, of (all) beings those most like the Demon-of-the-lie, the most loathsome of existing things, and the ones the most of all bereft of good. Off, off, do I abjure the Daevas and all possessed by them, the sorcerers and all that hold to their devices, and every existing being of the sort; their thoughts do I abjure, their words and actions, and their seed (that propagate their sin); away do I abjure their shelter and their headship, and the iniquitous of every kind who act as Rakhshas act!”*¹⁹²

The Greek geographer Strabo was intimately familiar with the Pontus and Persian region, and had personally witnessed Magian customs, shortly before the birth of Christ. Other things he knew of from history books he perused while studying in Alexandria, Egypt. With the exception of one or two extra details, the majority of what he recorded can be corroborated by surviving Magian texts. His writings preserve the traditions of several different groups of Magians; those who sacrificed after the manner of the Persians, and devotees of Mithraism who worshiped Mithras, nay even those who made obeisance to Ahriman (the Lord of Devils).¹⁹³

Strabo wrote, “*Persian customs are the same as those of ... the Medes ...*”¹⁹⁴ His statement is roughly correct, but not universally true. “*the Persians do not erect statues or altars (as the Medes did), but offer sacrifice on a high place, regarding the heavens as Zeus; and they also worship Helius (ie; the sun), whom they call Mithras, and Selene, and Aphrodite*”.¹⁹⁴

Many details found in Strabo’s descriptions of Magian ceremonial precincts resemble ritualism practiced by modern Parsees. “*it is especially to fire and water that they offer sacrifice*”. Fire was worshiped “*by adding dry wood without the bark and by placing fat on top of it; and then they pour oil upon it and light it below, ... fanning it*”.¹⁹⁴ In Strabo’s time the Magian process of igniting the holy fire was governed by ritual prohibitions of an extreme nature. Those who desecrated the holy fires with unclean matter, or breathed upon the flame, were liable for the death penalty (something also recounted in the surviving Magian scriptures).

“*And to water they offer sacrifice by going to a lake or river or spring, where, having dug a trench leading thereto, they slaughter a victim*”¹⁹⁵ Maintaining the purity of the water being venerated was of some importance. To this end they ensured that blood effused during the slaughter did not flow into the water. Having carved meat from the slain beast the Magi lay it upon a bed of laurel and myrtle foliage. Next came its consecration to make it pleasing to the gods. The Magus sacrificer blessed the meat with incantations, periodically touching it with a bundle of myrtle wands.¹⁹⁵

Then there was an outpouring of “*oil mixed with both milk and honey, though not into fire or water, but upon the ground; and they carry on their incantations for a long time*”.¹⁹⁵

Strabo mentions that a sizeable number of Magi congregated in Cappadocia, Turkey. Temples erected in honour of the Persian gods were situated throughout that same region also.¹⁹⁶ He went on to describe their sacrificial technique in the temples, namely bludgeoning the victim with a large wooden cudgel.¹⁹⁶ The Magian sanctuaries were;

“*noteworthy enclosures; and in the midst of these there is an altar, on which there is a large quantity of ashes and where the*

Magi keep the fire ever burning. And there, entering daily, they make incantations for about an hour, holding before the fire their bundle of rods and wearing round their heads high turbans of felt, which reach down over their cheeks far enough to cover their lips. The same customs are observed in the temples of Anaitis and Omanus; and these temples also have sacred enclosures; and the people carry in procession a wooden statue of Omanus. Now I have seen this myself".¹⁹⁶*

* "incantation" is derived from the Latin *incantare*, meaning "to chant", "to bewitch", thus corroborating what is known from the Avesta, namely that Magian 'magical' recitals took the form of religious psalmody.

The great cosmic battle

The crucial moments of the great cosmic battle between light and darkness, the *causa bellum*, the opening shots, were preserved within ancient Iranian lore, as told by the prophets of the Magi, by Zoroaster especially. Death, evil and destruction were born when Ahriman, the father of all demons, after his initial incarceration, despondency and lamentation in the abyss, was loosed from his prison;

"because Auharmazd and the region, religion and time of Ahuramazd were and are and ever will be; while Aharman in darkness, with backward understanding and desire for destruction, was in the abyss".¹⁹⁷

"The Evil Spirit, on account of backward knowledge, was not aware of the existence of Auharmazd; and, afterwards, he arose from the abyss, and came in unto the light ... desirous of destroying, and because of his malicious nature".¹⁹⁸

Ahura Mazda said to Ahriman "Evil Spirit! bring assistance unto my creatures, and offer praise! so that, in reward for it, ye (you and your creatures) may become immortal and undecaying, hungerless and thirstless".¹⁹⁹

And the evil spirit shouted thus: "I will not depart, I will not provide assistance for thy creatures, I will not offer praise among thy creatures and I am not of the same opinion with thee as to good things. I will destroy thy creatures for ever and everlasting; moreover, I will force all thy creatures into disaffection to thee and affection for myself".

And Auharmazd spoke thus: "You are not omniscient and almighty, O evil spirit! so that it is not possible for thee to destroy me, and it is not possible for thee to force my creatures so that they will not return to my possession".²⁰⁰

Here *Ahura Mazda* threatens the devil's power by promising the arrival of *Sraosha*, the virgin-born pagan Messiah, and the resurrection he was empowered to bring. Through this act the seemingly-victorious fiend would lose his death grip over the numberless creatures of the god of goodness. *Sraosha's* power to raise God's creatures from death, meant that created existence would eventually return to *Ahura Mazda* the Creator from the Kingdom of Death, full of life, as before, hungerless, thirstless, devoid of infirmity.

Having seen the light of *Ahura Mazda* the brazenly defiant *Ahriman* "*fled back to the gloomy darkness, and formed many demons and fiends" ... "creatures terrible, corrupt, and bad"*.²⁰¹ Upon escape he was cast down into the world with legions of fiends as thick as clouds, to sow conflict, mayhem and distress, such as *Ahura Mazda* and the Archangels had never seen.

The Magi's Book of *Bundahishm* recounted exactly how this conflict came about. You see, *Ahriman* absconded from his imprisonment, not long after the Great Whore incited him into making reprisals against creation. In *Bundahishm III: 3-10 Geh*, the Great Whore, deliberately comes to rouse *Ahriman* from his darkened prison in the abyss, to cheer him on to greater heights of evil, yelling "*Rise up oh Father of us*", and she proposed the desecration and pollution of all the earth, and the destruction of so many souls. The Harlot told him of her unspeakable deeds, dumfounding the father of demons. So then he kissed her, causing her to spontaneously menstruate. Magian law decreed that all menstrual women were unclean for a short time, both during and after their menses, because they had been kissed by *Ahriman*. By her black witchcraft the world fell under attack.

"And, again, the wicked Geh shouted thus: "Rise up, thou father of us! for in that conflict I will shed thus much vexation on the righteous man and the labouring ox that, through my deeds, life will not be wanted, and I will destroy their living souls; I will vex the water, I will vex the plants, I will vex the fire of Auhuramazd, I will make the whole creation of Auharmazd vexed".²⁰²

By the power of the Unholy Spirit (*Angra Mainyu*) *Ahriman* became a mighty serpent, and, once conjured from his tomb, slithered forth to the very extremities of the heavenly vault. Backed by a demonic swarm he jumped

down to earth through a hole bored in the clouds, all fiery and burning vapours. In the form of countless snakes, scorpions and poisonous toads, they pierced the surface of the earth, and entered his underworld (sometimes called Middle-Earth).²³³ Wherever he and his vicious serpent demons landed a hill or mountain grew ... *"As the evil spirit rushed in, the earth shook, and the substance of mountains was created in the earth"*.²³⁴

We are told of how the battle would eventually unfold. Towards the end of the world, all creation would enter a period of sustained spiritual and ecological defilement as a result of the prolonged, aeons-old activities of *Ahriman* and his demons, and the malignant spells of the Whore. From the time *Ahriman* set foot in the world, war broke out in heaven and on earth, as his unwholesome children, the demons, were enlisted to tirelessly pollute and destroy the lands, and all upon it. To save creation the *Yazatas* (angels and genii of creation) closed ranks, and waded into battle against the "Evil One". With great effort they succeeded in driving back the demons, and built a wall around the heavenly city (*Garodoman*) to keep them out;

"And afterwards, he (the Unholy Spirit) came to fire, and he mingled smoke and darkness with it. The planets, with many demons, dashed against the celestial sphere, and they mixed the constellations; and the whole creation was as disfigured as though fire disfigured every place and smoke arose over it. And ninety days and nights the heavenly angels were contending in the world with the confederate demons of the evil spirit, and hurled them confounded to hell; and the rampart of the sky was formed so that the adversary should not be able to mingle with it." "in their fearlessness they seek for the destruction of the demons and for the perfection of the creatures of the good beings".²³⁵

This hard-won battlefield accomplishment was by no means complete. The heroic bravery of the angels in repelling the demonic host only gave heaven a temporary reprieve, while on earth the demons thronged in still greater numbers, becoming more and more numerous as each year passed. At the end of the world their orgy of destruction, which will have left planet earth frazzled, denuded and exhausted, would be put to an end in the last great showdown between the forces of good and evil. The archangelic winged *yazatas* and holy *fravashi* saints, led by the returned *Sayoshant* (the last pagan Messiah) would enter into single combat with their own rival arch-fiend during that epic apocalyptic event, when evil would be killed off forever. To prevent the people being taken by surprise, the white Magi taught their flocks how to recognise the signs which portended the imminence of that terror-filled final moment, that "hundredth Winter" as they called it - the Devil's time.

Humans would be born very, very tiny, and destined to be *"deceitful and more given to vile practices"*. Medical marvels would have everyone living to a ripe old age, alive even when exhausted of blood.²³⁶ People would no longer care about their family, their parents, their brothers, their sisters, duty, their neighbour, or their country. Families would be torn apart as the penultimate fiend unleashed his last tyranny on the world ... brother against brother, son against father, friend against friend. There was to be much sodomy, promiscuity and unnatural behaviour. Bread and salt (ie; hospitality) would be held in little esteem. People would be much taken in by dishonest wealth and iniquity, and would go to great lengths to achieve either. The lands would be filled with crime and highwaymen.²³⁷

The deicidal fiend would war against all the gods, armed with atheism, his religion of non-belief. The love and faith of all people was to grow cold in that antithetical age, as the masses denied the very existence of the creator. It was at this time that the star bridge connecting the physical and spiritual worlds would collapse. Priests were to lose all heart, discard their robes, and wander destitute, while others were to fall prey to iniquitous activities and yet others would no longer perform the ceremonies correctly. There would be no prayers for the dead, nor lighting of holy flames, nor alms, nor gifts. Most of all, the people would no longer fear hell, and would rush there at break-neck pace, feeling self-satisfied. Everywhere, false oaths, gossip and calumny would be the order of the day. There was to be mismanagement, misgovernment, and an all pervasive lawlessness destined to throw the people into chaos and disarray. Contrary to Magian prohibitions against sowing death into mother earth, the dead of the future would be buried in the ground, fully attired in good clothing.

CHARIOTS IN BRITAIN

And woe for the misery of the impoverished world of creation in that one hundredth winter, for the earth would be torn open with great gaping holes to expose her inner wealth and riches. There would be spots on the sun, strange winds, earthquakes, droughts, little food in the lands, seasons would be out of synchronisation; nine out of ten people would die of malnourishment. The plants of the earth would diminish too, so that more than 90% of the trees and plants would had been uprooted from the soil. What few plants remained would be sickly and unsightly to behold. Beasts of burden like the ox and the horse would carry less, and the milk of the cow would have little cream.

To preserve the world from this stealthy annihilation the heavenly lord, father of all things, sent down warriors from on high, to help put a stop to the desolation. Doctors, warriors against sickness, aging and death. Judges, soldiers against untruth, upholders of Law, inflictors of punishment on the wrongdoer,

thereby guaranteeing order to society. Military and constables, warriors against disorder and chaos. Scientists, combatants embroiled in the struggle to unravel the secrets of the universe, to comprehend as best we can the nature of the laws governing the order of the physical universe. Priests, servitors of the divine being and warriors against sentient evils.

So much for the basic tenets of the religion of the wise men and women, and the forebodingly grim future they foresaw, that lawless, tormented, ungodly time. What of their comings and goings? What of their history? What of their elder and future homelands?

The Indo-Europeans

And so it was in the remotest beginnings of the world, when the mighty kings of Ur built canals and the great ziggurats, that their citizens developed the arts of astrology, metallurgy, writing, music, poetry, glazing, brewing, mathematics, medicine, pottery and the craft of making wheels.²⁰⁸ These wheels were fitted to the very chariots that made them lords of the world.²⁰⁹ Long they reigned over the lands, and prospered.

Even the gods rubbed shoulders with mankind, giving advice to rulers, and making them great. But as they gloated over the "primitive beings" of the realms beneath their domination, and revelled in the glory of their Empires, nothing could prepare them for the coming of the invaders.

Far to the north of their prosperous cities, in the region of the Steppes, lived Caucasian Indo-European speakers from the Caspian area.²¹⁰ Numerous theories about the precise location and parameters of these ancestral Indo-European homelands have been postulated.²¹¹ At present the steppes of Central Asia, in the Pontic Caspian region, are favoured above other options. What is more certain is where they ultimately came from; Inner Eurasia.²¹²

Led by chieftains appropriately endowed with metal goods and other status symbols, their roving bands of horsemen left Siberia roughly 4,000 BC.²¹³ Thus began a series of epic tribal dispersions far to the west, into the European periphery. They may have arrived even earlier than this though, for there is evidence of horsemanship in the Ukraine as early as 4,000 BC, at Srednyi Stog. There these semi-nomadic horsemen and their families lived adjacent to the pre-Indo-European Tripole peoples, and made mound-covered *kurghans* pit graves of a type found in Asia.²¹⁴

In the millennium spanning between 3,000 and 4,000 BC the new-comers somehow acquired wheeled technologies. Since the Mesopotamians and Proto-Indo-Europeans spoke of these vehicles using linguistically similar terms, they evidently borrowed the ability to make them from the Mesopotamian states. This revolutionary technology saw service not only in the Pontic-Caspian and Mesopotamian region, but in the Carpathians and northern Europe.²¹⁵ At the farthest limit of their influence, Indo-European Celts are seen as responsible for bringing both horses and chariots into Ireland, perhaps in emulation of contraptions used by their Tocharian cousins in Eurasia.²¹⁶

An Iron Age chariot has been unearthed from an aristocratic burial site not far from Edinburgh Scotland, dating to the 5th Century BC, which makes it the oldest chariot found in Britain thus far, by two centuries.²¹⁷ The location lays in close proximity to an area of religious significance and habitation throughout the preceding 1500 years. Features of interment tend to suggest funerary trends shared with Europeans of Gaul.²¹⁷ They are still significantly younger than those found throughout Mesopotamia and the Orient, but still predate the Roman invasion. It was a relatively new development.

As far back as 3,000 BC wheeled vehicles, whether chariots or wagons, began appearing on the Russian steppe. Since the technology resembled that utilised in Central Asia during the same period, one might guess that the Ukrainian pastoralists lived in much the same way as those living in Asia's Altai mountains and the Urals. Some scholars have even theorised that Eurasians living as far away as the Yenisei river, had been influenced by the inhabitants of Russia and Central Asia. They suggest an eastward repopulation or population of farthest Asia, one which brought vehicle-making skills to their ancestral lands.²¹⁸

The remarkable successes of the Indo-Europeans are attributable not only to their vehicles and mounts, but to the many bronze weapons found in their pit-graves. Suitably armed they were able to overcome whosoever they encountered along their seasonal migratory paths.²¹⁹

These Indo-Europeans, like the Sumerians, were users of the plough, of metal, chariots and the sword; but they lived in close company with horses, whom they regarded as their children and brothers. When they rode they were as one; like riders grafted on the back of their beasts. These were the Aryan nations, the masters of bloodstock which would one day be synonymous with power over others.

Archaeological expeditions to the Urals in the 1990's may shed some light on what actually happened in the obscure forested regions far to the north of Mesopotamia. Numerous examples of four-wheeled carts dating to around 2500 BC were discovered in the Novotitarovskay and Novosvobodnaya graveyards, and were connected with mobile, stock-breeding communities. Technologies employed in their construction indicated shared fabrication techniques among the Kuban culture and Pit Grave peoples between the Dniester, stretching up toward the Ural mountains, and especially to the east of Magnitogorsk.²²⁰

European nomads, possibly desirous of repairs for their vehicles, and for some reason prevented from accessing Carpathian metal reserves, learned of cuprous ores deposits suitable for smelting in the southern Ural zone, at Kargaly. So they resolved to colonise the Urals and as a consequence developed the region into a vitally important metal production centre practicing metallurgical smelting methods commonly associated with Iran.²²¹ Their use of copper-arsenic alloy bronze devoid of tin (as a consequence of scarce deposits in that part of the Urals) is Iranian, differing from the pure copper smelting of the Balkans, both techniques being altogether unknown North of the Caucasus prior to that point. As-yet-unidentified neighbouring populations appeared keen on acquiring the veins and casting workshops, so the newcomers set about constructing slightly less than 20 moated, rubble and ditchwork fortifications throughout Kargaly as a protective screen for their industrialisation.²²¹ Most were square or circular in their outlay. This of itself suggests the presence of elite figures amongst the itinerant European herders, who were knowledgeable in civilisation building, especially drawing upon smithing and architectural principles peculiar to Anatolia and Iran. All these happenings took place during the age of Gilgamesh, somewhere between 2,000-3,000 BC, at a time when Mesopotamia was graced with the fortresses and bustling cities of Sumeria and Uruk. No traces of cuneiform tablets have been found there, indicating that it was not the product of Mesopotamian colonists, much rather these nomadists. Archaeologically the valuable industrial districts are nowadays referred to as the Shintashta Culture. The initial settlers were 'Poltavka' and 'Abashevo' Europoids guessed to have emerged out of Europe proper intent on establishing a new domain for themselves, with bountiful natural resources and plenty of timber to run their hive-shaped ore smelters (flue- or bellows- fed).²²¹ Whereas their wagons were originally of the ox-drawn variety, sporting large solid-wheels, there is evidence (soil impressions and clay models) that they also produced spoked wheels for chariots. Proof of horse domestication for transport and food is found throughout the area, in addition to harness pieces and adornments of varying styles and complexities.²²¹

It is here that evidence emerges of a collective culture bearing the characteristics of folk mentioned in Vedic and/or Avestan scripture, according to K. Jones-Bley.²²² She makes them Indo-Iranian and Indo-European, and notes their adherence to horse sacrifices plus excarnation burial traditions, in conjunction with kurgan mounds, erected over log-construction death houses.²²² Dogs also earned the right to interment in their masters' cemeteries, though Jones-Bley doesn't mention whether or not they died of natural causes.²²² Close by the remains of sacrificed cattle, sheep and even humans are found, evidently destined to accompany their lords into the next world.²²²

Two types of chariot were identified, one for military and transportation usage, the other for ceremonial and display purposes (due to their ornate form, yet less sturdy construction).²²³ I myself concur with her Indo-Iranian prognosis and am willing to speculate that these chariot burials were associated with a send off for mortal gods of the sort found in Vedic and Avestan lore, since, as she points out, chariots belonged to the gods, not mortals.

THE ARYAN INVASIONS

As for their ceramic culture, it appears centuries later in Afghanistan after the fall of the Harrapans (2000-1700 BC), and in the region of what would become Samarkand (2300-1900 BC).²²³ Examples of their harness crop up there c. 2000 BC, and taken collectively they point to a movement of riders, perhaps with chariots also, from the Urals to the northern reaches of India. There can be no doubt they were skilled in the art of war, having effectively erected a network of defensive structures in their new Uralic homeland.²²³ They now appeared over a broad expanse of the steppe, reaching down into the mountains and plateaus of far western Iran, Margiana and Bactria. It was here that their native Sintashta, Potapovka and Petrovka cultures spawned the Andronovo material culture, later to become synonymous with the Russian Steppe.²²³

In toto these refined details fit the profile of pre-literate, yet highly-skilled individuals (perhaps including priests, engineers and artisans) of Iranian and Anatolian origin wandering into Eastern Europe via the Caucasus. After joining forces with European nomads they convinced them to form permanent settlements in and about the Urals. Under their influence a heavily fortified mini-civilisation grew and flourished, complete with Indo-Iranian religious traditions commonly associated with Magians. After a period of rapid development the Sintashta peoples deployed a force of horsemen and charioteers who spread down into their native Iran, Afghanistan and the Indian periphery, at least a century or two before the surmised Aryan invasion of India transpired.²²⁴ They were therefore plausibly prepositioned for an intrusion of the subcontinent. Only further archaeological investigations in India will determine whether or not these forces went on to penetrate Hindustan.

Between the 20th-23rd Centuries BC, Aryan Indo-European lords had begun to dominate a number of races then inhabiting regions to the north of the constantly feuding Akkadian and Sumerian city states (both of which were eventually absorbed into Babylonian Empire).

Evidently the Mesopotamians knew of these northern races because one of their northerly outposts lay not too far away from them. The city of Jeitun (situated in Iran near Kopat Dag) showed substantial Mesopotamian influences, thus indicating contact, if not outright Mesopotamian colonisation of the area c. 6,000 BC.²²⁵

During the Bronze Age urbanisation reached dizzying levels near Kopet Dag. Namazga (132 acres) and Altyn-depe (10.52 acres) were the foremost of these towns, with Altyn-depe serving as a major religious cult centre. These sites possessed novel features. The abodes of the priestly class surrounded a lofty brick tower; dual carriageways served the needs of pedestrian and vehicular traffic. Significant trade ties developed there, reaching out as far as Babylon, Sumeria and India.²²⁶

About 2,000 years before Christ, the oasis city-state of Margiana (near Iran) climbed to regional prominence. It took the form of a *qala*, a castle with crenellated battlements, outer defensive walls, palatial quarters, and densely packed intra-mural suburbs. The *qala* at Margiana, which bore some resemblance to the sorts of fortifications built in later Persia, was the first of its kind in Central Asia. From there the construction of *qalas* spread to even smaller provincial areas. They must have had trade and administrative functions, for they were inhabited by seal-bearing regional leaders, perhaps princes or chieftains.²²⁷

Some of the forts were built for religious purposes. In the white-washed interiors of their temples, pagan priests concocted ritual libations around fire altars using hemp and ephedra. Current thinking makes these holy drinks akin to the *Soma* and *Haoma* libations prescribed by the *Vedas* and *Avesta*, rites once performed by Brahmans and Magi respectively.²²⁸

Central Asian settlements of this design became linchpins in the network of international trade. Their ideal central geographical positioning enhanced the scope of their commercial ventures, allowing Iranian merchants to do business with Egypt, Mesopotamia, India, and China.²²⁹

In the wake of the highly successful power plays, which saw them muster formidable numbers of vassal warriors, Aryan leaders began to realise their dream of dominating the prosperous civilisations that lay to their south. In the last years of the 3rd Millennium BC their hordes dispersed east and west of the Aryan homelands, vanquishing everything that lay within the gallop of their steeds. Such was the dramatic emergence of a nation of peoples destined to topple successive Mesopotamian and Indian civilisations like a house of cards. Ethnically speaking these horsemen (the Luwians, Kassites, Hittites, Mitannians, and Hurrians) were all Indo-Aryans/Indo-Europeans, or tribes which had fallen under their suzerainty.²³⁰ This is evidenced by the Indo-European names of their various leaders, and unmistakable references to Vedic deities such as Mithra, Indra and Varuna, in their

writings of 1380 BC.²³¹

The presumably Aryan Central Asian Andronovo culture featured dwellings similar to those described in the Vedas.²³² It may well be that they were followers of Vedic religion, a pagan faith which, in time, they would bring into India and which, in a more evolved form, is nowadays known as Hinduism. With the white steppe-dwellers came y-chromosome marker M17, which began to displace M20, the foremost patriarchal gene indicator of Dravidian India.²³³

Some time around 2,000 BC they moved southward out of their tribal lands, into India and Iran. Following the death of king, Hammurabi, Babylon fell apart at the seams, rotten to the core with civil disorder, and the collapse of the agricultural sector which had been caused by the greedy overworking of the farms.²³⁴ The temptation to assail such a target was overwhelming for the Aryans. The Hittite attack on Babylon brought down the last vestiges of government there. But before long the Aryan Kassites had risen to even greater prominence than the Hittites and installed their princes on the Babylonian throne, which brought about a period of immense stability and growth in Babylon.

Some of the first Europeans to taste Aryan war doctrine were the "Old Europeans", the Balkan races and the Greeks, who crumbled under the oppressive weight of the Aryans some time around 1900 BC.²³⁵ Displaced by the Aryan attacks, these races were often forced to flee their war torn homelands into surrounding countries, where they were left with no other option but to make war against their former neighbours, or settle amongst them if they were previously on good terms. The Greek inhabitants of Doria, Iona and Aeolia, for instance, quit their lands as the Aryan raids became more intense. In their travels they battled other nations in Asia Minor and the Aegean. These itinerant Greeks have been credited with destroying Mycenae, and Troy (whose refugees in turn roved as far south as Egypt and Syria, and if the legends are correct, Rome, Russia, and Scandinavia, to name but a few places).

But for the Aryans, there was no stopping. During the intervening centuries between 2000-1600 BC Indo-Europeans made it as far west as Germany and the Danish peninsula, taking a northerly route across Russia and Poland. The slow pace of this penetration into Europe tends to suggest that the arrival of the Aryans was mainly due to migratory movements rather than swift conquest, though in many places conquest was synonymous with their coming, as was the appearance of domesticated horses (previously unknown in Pre-Indo-European Europe), metallurgy, the Aryan social matrix, language and Vedic religion.

Meanwhile the eastern Aryan migration route led through the Caucasus into Asia Minor and Iran, and there they encountered and subdued Ur and Babylon (1600 BC) before heading off into India a short while afterward. Blissfully unaware of the immense forces being arrayed against them, the Mesopotamian and Mesopotamian-like Indian civilisations were underprepared for the onslaught and fell easily. They were subjugated and humbled by a "superior race" (in reality a number of related races) made supreme by their highly structured social classes, which thrived on the power of the whole, rather than the might of the individual. The eastern and western Aryan invasion forces struck every farm and city before them; most settlements they were simply content to destroy and abandon, while others they colonised. In these instances they installed rulers or administrators from the cream of the Aryan chieftains.

Armed with some of the refined knowledge and advancement gained from the crushed Mesopotamians and Old Indians of Harrapa and Mohenjo-daro (which they hit in 1550 BC), others filtered through the Balkans into Greece, Italy and beyond, trampling under foot the villagers, agriculturalists and hunter-gatherers of these regions. Subsequently Indo-European steeds made their grand entrance into the world of the Balkans around the year 2,000 BC.²³⁶ With the dissolution of tribal unity, the great Aryan language splintered and scattered like glass dropped onto pavement, thus giving birth to the Albanian, Teutonic, Romance, Celtic, Armenian, Baltic, Greek and Slavic languages. The long distances that separated their war bands meant that the Indo-Europeans and Aryans were robbed of their ability to communicate, and therefore the right to exist as one nation. New peoples formed and grew stronger - new civilisations expanded and thrived under the rigid discipline of the Aryan lifestyle. Great thinkers later evolved and built upon the ancient sciences, making us "smarter and wiser". Examined collectively the evidence allows for two possibilities:

- 1 Populations exhibiting DNA structures indigenous to geographical Europe since the Paleolithic migrated eastward into the setting sun, over many time zones, some time before the establishment of Tripole culture in the

Ukraine. Thousands of kilometres to the east they encountered Asiatic Chinese and Indians, and a whole new world. After settling there for several millennia, in a zone where alien beliefs and new technologies freely commingled, they interbred with non-Caucasians to an as yet unknown degree, all the while maintaining contact with their relatives in Western Europe during a time frame still preceding Tripole. Eventually they lost all contact with Europe. They must have been oblivious to the new occidental developments taking place, for there is no evidence of double-storey housing complexes in central Asia during that period, which during that time frame were established at Tripole in the Ukraine. Nevertheless the culture they brought eastward continued to govern their lives, not to mention a preference for tartan garments that adorned their bodies. After a time of upheavals several centuries before the common era, they were forced to retreat back to the ancient mother countries of Europe. Under this eventuality, the returning genetic stock, that had for millennia sojourned in Asia, had accumulated a certain number of Asiatic DNA sequences and therefore bore the characteristics of prehistoric European DNA, modified to a greater or lesser degree by Asiatic liaisons.

2 That the invasion of 'Old Europe' entailed the subjugation of Europe's traditional genetic stock by Indo-Europeans possessing a similar yet different DNA sequence, desirous of expanding their domains westward. Only genetic evaluation of human remains spread from Europe to Tien Shan between x and x BC will conclusively resolve their degree of genetic divergence from the European cultures that stayed behind. The Asiatic Europoids were probably still 'white' ancestrally, though they had for sometime intermingled with the peoples of the orient, and so brought the art of war and Asiatic religious traditions to a Europe unfamiliar with fortifications, weapons and the like, being more intune with nature and its interrelationship with stock raising and agriculture.

The Aryan hordes

THE ARYAN INVASION
THEORY

I will now proceed to elaborate upon the Aryan Invasion theory which was largely pieced together by European archaeologists, but which many Hindu and Western academics do not agree with wholly or in part. Their contrary argument, which maintains that no such invasion took place, and that the religion of the vedas was indigenous to India. It has some merits, but needs to be substantially tempered by a number of arguments.

As mentioned a large component of their race rode into India. At the parting of the ways, one nation became cloven in two for all eternity, to impart a culture that would forever change the face of the earth, as far away as Indonesia and Ireland. Headlong into the thriving ancient civilisations of literate Mohenjo-daro, Harrapa and the Indus valley they came, smiting all resistance against their arms. Who could stand against such a war-like breed? There was only peaceful submission, or insolent rebellion and certain annihilation. Their warriors were like a meat grinder, drunk on a fury which caused them to relish the face of death, for in Vedic lore to die in battle was the source of their salvation. Their weapons mercilessly dispensed the carnage, so loved by their god of war, coating the sun-baked ground with gutted combatants, heads and hacked-off limbs. Archaeologists have revealed that death fell upon their victims so quickly at Mohenjo-Daro that they had no time to escape. The dead were simply left where they fell, indicating that (as strange as it may seem) a city as prosperous as Mohenjo-Daro (it had paved streets, a sewage system, dams and so on) was not reinhabited by the victors, but quite simply destroyed and looted. Behind them a trail of incendiaries painted ruined settlements, a blackened testament to the feebleness of their enemies. The cannibalistic natives²³⁷, indigenous Dravidians and what few remained of the civilised pre-Aryan Indians cowered before them.

THE HINDU CASTE
SYSTEM IS DERIVED FROM
THE ARYAN FEUDAL
SOCIAL STRUCTURE

I list here the preliminary results of two separately-conducted international studies (one specifically commissioned by the Indian Government) into the origins of the Hindu caste system. The findings of some 12 Indian researchers first begin with an appraisal of India's genetic and linguistic substrata. Modern Indians belong to one of two ancestral structures, namely the caste and tribal systems (known as Jati). While some caste-based communities speak non-Indo-European languages, tribal groups almost exclusively communicate in Dravidian, Austro-Asiatic or Tibeto-Burman terms.²³⁸ Tribal Indians are descended from Austro-Asiatics (the area's most ancient group of residents, a hybrid form of Asiatic Australian aboriginal), Dravidians, and a later group of intruders, the Tibeto-Burmans which seem to have percolated down into India from China and nearby Asiatic regions of South-East Asia. Into this eclectic mix rides a considerable number of Indo-European horsemen from

INDIA POSSESSES OTHER
NON-ARYAN LINEAGES

Central Asia and Afghanistan, apparently around 3,500 years ago. The preponderance of mtDna subhaplogroup U2i, reveals a limited number of matriarchal lineages on the Indian subcontinent.²³⁸ Collectively these varied points appear consistent with a mass arrival of male Europoids, bringing very few of their own women with them. This is suggestive of a military adventure into the region rather than colonization, which logically must have necessitated the presence of female Caucasians. In the main the higher up the sociological tree you go in Hindu realms, the closer an Indian's Y DNA will be to that of Eastern European males.²³⁸ It seems that Europoids interbred with locals either forming, or becoming part of, the aristocratic, military and skilled castes. Dravidians previously had dispersed throughout much of India, but the Indo-European penetration resulted in their dislocation and subsequent southern exodus.²³⁸

ARYANS BROUGHT VERY FEW WOMEN WITH THEM, PREDOMINANTLY INTERBREEDING WITH INDIAN WOMEN

One school of thought holds that Proto-Indo-European existed throughout much of Eurasia, and due to the technical and social advances of their mobile communities exerted a major influence even on the Chinese. The Taiwanese philologist Tsung-tung Chang managed to identify a considerable number of Old Chinese terms impregnated with Indo-European.²³⁸

SOME EVIDENCE FOR CHINESE AND INDO-EUROPEAN INTERACTION

So lasting an impression did they make on the local populace, that they began worshipping Indra after the manner of the Aryans, the mightiest divine warrior to have ever lived. All the world fell under the majesty of his sway. Loved and greatly feared by all his subjects, their epitaphs to his memory would be songs and chants sung with great feeling, until the end of time. As a divine being, he controlled the heights of heaven itself, seated in his mighty sky chariot, firing lightning down upon the earth, slaughtering demons on every side. Before him came rain, and clouds parted as he willed it. To him was the lot of rain-bringer, demon-slayer and the god of law, order, oaths and victory in war.

ARYAN RELIGION BECAME VERY POPULAR THROUGHOUT INDIA

The Indo-Aryans supposedly adopted elements of Harrapan culture around this time (the swastika for instance). Notwithstanding this, the level of cultural exchange between the winners and losers seems to have been mainly uni-directional. This Aryan legacy continues to exert an effect upon the India, which time could not sully. Devotees of their teachings enshrined their faith in the Vedic texts, which were and remain indelible marks of a truly great race. Organised society requires the tasking of people to perform vital communal functions, such as defence, health care, stock-raising and field work. Under pagan Aryanism, everyone was *born for a reason, to perform a certain role* in life, as was assigned to them by the Creator. Women attended to the household chores and children, while selected men ruled, worshiped the gods, maintained law and order, or fought and protected the people. The remainder traded or worked hard for a living. Thus the dereliction of one's duties was considered a crime against society and the Creator. What stemmed from this pragmatic view of society's most basic needs was a strictly regimented role-based tribal lifestyle. This system proved so effective and workable that it is still in use today in India, a country that has a burgeoning population and yet is one of the most peaceful and non-militaristic races on the face of the planet. Wishing to maintain their cultural purity amongst a sea of Dravidians, the Aryan occupation troops rigidly enforced their immovable caste system, that of warrior, priest, husbandman and untouchable. Merchants or traders were later added to these castes.

AN EXCHANGE OF IDEAS TOOK PLACE IN INDIA. A RELIGION WAS SPREADING

Title	Meaning	Role
Brahmana	Priests	A person born to serve the gods.
Kshatriya	Kings/Warriors/Nobles	A person "born with a sword in hand".
Vaisyas	Traders/Farmers	Those born to handle trade or farming.
Sudras	Manual labourers	The humble workers born to tend the crops and flocks, or cart water.

ARYAN SOCIETY WAS COMPOSED OF VARIOUS LAYERS, MUCH LIKE A PYRAMID, WITH KINGS AT THE TOP, WORKING ITS WAY DOWN TO THE MANUAL LABOURERS AT THE BOTTOM

Stepping outside of one's *varna* (a sanskrit word meaning both "caste" and "colour") was an extreme taboo, and threatened to destabilise their society. This association between caste and colour most likely indicates that the Aryans did not wish to interbreed with the local Indian population in that remote period, though clearly they did so as time went by. However this connection between colour and caste might just as easily be attributed to cloth worn by members each of the castes, each made distinct by differences in dress coloration.

ARYANS ORIGINALLY PROHIBITED SOCIAL MOBILITY

Yes, the Aryan occupation forces certainly made life hard for the Indian populace, as did their western brothers when suppressing the inhabitants of "Old Europe". Aryan justice was swift, brutal and often bloody. This ensured

that subjugated peoples remained blindly obedient, firmly under the domination of the high born castes.

"With whatever limb a man of a low caste does hurt to (a man of the three) highest (castes), even that limb shall be cut off; that is the teaching of Manu.....If out of arrogance he spits (on a superior), the king shall cause both his lips to be cut off; if he urinates (on him), the penis; if he breaks wind (against him), the anus".²³⁹

ARYAN PUNISHMENTS

WERE EXTREME

The culture of this mysterious people had a degree of effect on many races in later history, the Baltic, Roman, Slavic and Germanic races, but none more so than the Indians. At the dawn of this new millennium ancient Aryan feudalism is still a part of daily life throughout much of India. In fact the present-day secular Indian government still has difficulties keeping a lid on caste-killings. Not infrequently upper-caste Hindus slay insubordinate lower-caste tenants, who sometimes undertake reprisals against their masters.

ARYAN FEUDALISM STILL EXISTS IN INDIA

Wherever Aryans went they enthroned their language, their gods, their beliefs, their social structure, their knowledge, and way of life. For instance in one of Plato's works²⁴⁰, Critias recounts to Socrates how an Egyptian priest once explained that the mutually similar caste structures shared by Greek and Egyptian societies had originated from one and the same source, namely a race of conquerors which took over their respective lands by force. He further said that the Greeks were instrumental in bravely opposing the very invaders who brought this caste system of government to Greece and Egypt when governing the tribes they made captive in Europe and Asia. According to the ancient tradition noted by Plato, these invaders originally came from the fabled Atlantis (a city surrounded by water and three ring-walls), and were governed by kings who saw themselves as rulers of the world. Greek society was divided along simpler lines, with judges and philosopher priests, hoplite warriors and the working class (composed of skilled and unskilled labour). Further east the Iranians had *Magi* or *Athravans*, *Rathaestar*, and *Vastriyo fsuyant*. In the western world the Romans had *Flamines*, *Milites* and *Quirites*, and the Celts *Druides*, *Equites* and *Plebes*.²⁴¹ Egyptian society was marginally more complex, but an underlying three-fold class structure is still evident. Their culturally-defined classes were *"the priests, the warriors, the cowherds, the swineherds, the tradesmen, the interpreters, and the boatmen"*.²⁴²

EGYPTIAN AND GREEK LEGENDS MAKE REFERENCE TO THE ARYAN INVASIONS

It can be shown that periods of political stability and peace flourished in the years that followed Aryan victories. Thus through the agency of their militarism the Aryans became agents for sudden and quite drastic social change across much of the "known world", forging societies based on Aryan law and order throughout Europe and Asia. Therein lies the paradox; between three and four thousand years ago there was probably a roughly homogeneous Indo-European religious culture spread from India to Germany. Like the Aryan mother tongue (proto-Indo-European), this religious strata steadily broke down as century upon century of time passed.

The Aryans were truly history's janitors, bursting their way into prehistory by sweeping away far more cultured and venerable civilisations in India and Mesopotamia, and tidying up, the Aryan way. That is not to say that the Aryans utterly succeeded in destroying everything about this civilised layer of previous habitation. No civilisation dies without leaving something of itself behind; customs, words, legends, religious observances (which later became known as superstitions), and archaeological debris are just some of the things that have survived. Modern day Indo-European studies hope to discover features of the Indo-European arrival in Europe, but also touch upon the manner in which Europeans lived prior to their coming.

Against the Aryan Invasion Theory

At this present moment the Aryan Invasion Theory (AIT) is the subject of a long-running and somewhat heated debate, that has raged through Indian and Western academic circles for some time. At stake is a credible reconstruction of where vedic tradition first started, and by implication the locus of the early Aryan homeland. Pro's and con's are bandied thick and fast as both side vie for the coveted golden high ground of blanket academic endoresment. That such debates are occurring is a sign of immense progress in Western academia, and symptomatic of a renewed willingness to once again re-open the Aryan case file for further exploration.

NOT EVERYBODY AGREES WITH THE ARYAN INVASION THEORY

Arguments that run contrary to AIT have been fielded in India in recent years, citing a vast spectrum of linguistic data in support of their hypothesis, on points so numerous as to be the subject of large research documents, and, considering the size of this present work, too much to indulge in. They raise questions over:

- a lack of war debris at the Harrapan sites.

- The discovery of horse remains in India dating to before the time of the supposed invasions (as it happens the Dravidians had their own pre-sanskrit, and therefore pre-vedic, word for “a horse”).
- The translation of Harrapan writing has subsequently shown that their language was akin to Sanskrit

Such points, they contend, seem to indicate that the vedas belonged to an Indian homeland. Yet how do we explain the great majority of vedic correlations in Europe, a continent that did not see itself overcome by dark-skinned migrants from India? How could this have happened where prakrit “loan words” are almost entirely absent in Europe? In short there was an ancient linguistic diffusion into Europe, that can be compared with Indo-Aryan, yet religious traditions that appear vedic in nature arrived there also **without the accompaniment of Indians**. One can argue that these vedic traditions were not specifically Indian in nature.

That some horse remains have been found by archaeologists in the Indus valley, in more recent times, dating to the later stages of Harrapan culture, has been used as a basis for the theory that an Aryan invasion did not take place, and that the *Rig Veda* was devised inside India. To then take this as proof that India was the birthplace of the *Rig Veda* might not be as watertight as some have claimed. You see one should expect to find not only horse skeletons, but large deposits of horse remains, which indicate that they had been ritually butchered in accordance with the Asvamedha. Where are all these sites? Accordingly, without mounting archaeological evidence for horse sacrifices in India, one can hardly argue that India was a vedic religious centre without counterparts elsewhere in Eurasia.

There can be little doubt that India figured greatly in the Vedas, not only as the site of an epic clash of cultures, but a terminus where ideologies met, and were exchanged. After all there are geographical locations within India listed in the *Rig Veda*. Yet if the precise geographical locations within the text (such as the Sarasvati, Sindhu and Rasa rivers, and the Arjika, Saryanavat and Mujavant mountains), were supremely important, and integral to that ancient faith, we must expect to see large-scale pilgrimages of Asians and white-skinned Indo-European devotees of vedic lore to the Indian sub-continent. But we don't, as far as I am aware. The fact of the matter is that irrespective of whether one accepts the AIT, or not, there must be archaeological evidence for Caucasian remains in India, if one is to accept that these locations are indispensable places of vedic pilgrimage. There must be chariot remains pre-dating the Indo-European intrusions. To date no evidence of this has ever been found.

Considering the antiquity of the European absorption of vedic language and religious ideologies, it is plausible that Vedic religion belonged to a tradition known throughout Eurasia. Elsewhere however, local rivers and mountains alien to India were deified, yet still happily found their place within their ‘vedic’ scheme of things. For instance in England, Germany and France the rivers Thames, Rhine and Seine probably held sacred status akin to that of the Ganges in Hindu culture.

The Aryan Penetration of Europe

Aryan culture sallied forth into Europe, probably in much the same way as it did India. Their less well known victim was a literate culture that had begun in Europe only a few thousand years after the close of the last Ice Age, which in some circles is nowadays known by the convenient term “Old Europe”. Old European script²⁴³, which resembles Linear “A” was commonly used by the Old Europeans for religious purposes, long before the Indo-European invasions ever took place, in fact long before the flowering of Minoan, Cretan, Sumerian and Harrapan civilisations. *This would make it the oldest script in existence*, one which was used beginning around 5-6,000 BC and continuing for some 2,000 years thereafter. It has been found engraved into excavated statuettes and ceramic items throughout the Balkans and Transylvania, the Danube River area, present-day Hungary, Romania and Moravia, not for secular, but religious/magical purposes. Although it possessed just over 200 signs, there were 30 primary characters which are believed to have been syllabic in nature. While one might expect that such a script would forever remain undecipherable, it is interesting that they bear an almost identical similarity to the later Classical Cypriot script whose phonetic assignments are known. It was in many cases written in a continuous circle, or characters were grouped in underlined word constructions. In other instances it was inscribed in a glutinous fashion, with the characters stuck together, modified by the addition of strokes, or rotated to form a jumbled mess of insignia.²⁴⁴ Many of these signs continued in use far into the future, and can be found on a 300 AD Mesopotamian magician's bowl.²⁴⁵ This proves the survivability of extremely specialised ancient cultural indicators, like writing. The

OLD EUROPEAN

EUROPEAN ARRIVAL

Fig 19.1

Fig 19. 2

compelling similarity of the insignia used in both instances suggests a factual connection between the Old European writing system of 4-6,000 BC and the magical inscription on the Mesopotamian magical bowl. Since elements of the script are, in both cases, used in a religious context, it seems to indicate that Mesopotamian sorcerers, whether Chaldeans or Magians, were inheritors of knowledge once held by these ancient Europeans.

Artifacts associated with this Balkan/Central European culture may hold priceless clues as to the nature of the civilised inhabitants of pre-Indo-European Europe. Hairstyles and headdress (see fig 19.2) are skillfully enough engraved into images found in these areas of the Balkans (dating to 6,000 BC) for us to conclude that the local inhabitants wore turbans, tall bonnets and pointed hats.²⁴⁶ One form of skull-cap headdress was exactly the same as a type worn by Mediaeval sorcerers. "Far-eastern" headwear of this kind reappeared much later on in history used by Hittite priests, and the Magi (Fig 19.1) of nearby Mesopotamia, especially the pointed hat and turban. As you will see, these were the remotest possible ancestors of the witches.

The agrarian "civilisation", or homogeneous culture of "Old Europe", which existed throughout the Lowlands, Brittany, Germany, Britain, the Orkney Islands (but which had a focal point in the Balkans), had common methods for treating the deceased. In its initial stages they buried or immolated the corpses of their kin. But as far back as 3,200 BC *the predominant funerary rite of these Megalith builders entailed the defleshing of the bones by dogs and birds.*²⁴⁷ The cleaned skeletal material was either deposited in an ossuary, or cremated. Some of the Megalithic structures associated with these defleshing practices resemble ancient "death houses" described in the scriptures of the Magi.

Megalithic constructions are not to be found throughout every region of "Old Europe", and the absence of death houses at other locations is best explained by the absence of stone building materials suitable for these large scale construction projects, or the use of materials such as timber or mudbrick which usually do not survive lengthy periods of time. For example one struggles to find surviving megaliths in Iran, and I attribute this to the cleansing of Iranian society by Muslim polemicists, and the poor survivability of mud brick constructions due to natural weathering and decay in a harsh desert environment.

Pre-Indo-European civilisation is described by the late Professor Gimbutas as a society based on sexual equality, yet one which had clear sexual delineations. This self-segregation of male and female culture can still be found in the Balkans, in places like Albania - at a party for example, males and females will naturally withdraw to separate rooms for social interaction, males here and females there. This pre-Indo-European culture lived in relative harmony and peace throughout various parts of Europe in *unfortified village communes*, which were organised in a highly structured way, around more important cult centres. Their lives focussed upon raising stock (which until the time of the Indo-European invasions did not include domesticated horses) and agriculture, which in turn supplied their earthly needs.

Around 3,000-3,500 BC the Ukraine was inhabited by a flourishing "Old European" people, known nowadays as the Tripole culture. Their civilisation was characterised by around 200 smallish agrarian communes numbering up to 20 double-storey buildings layed out in rows of joined dwellings, much like today's townhouse complexes.²⁴⁸ They were originally unfortified, and so the noticeable emergence of Tripole defensive works around 3,000 BC help us to place Indo-European intrusions into the area during the same period.²⁴⁹ The peacefulness of their agrarian utopia came to an end as the horse-borne Aryan war culture from the far-eastern reaches of the Russian Steppe rained down upon them. From then on the antiquarian megalith building culture of Old Europe (which observed excarnation rites), was absorbed into the social matrix of the horse-sacrificing (presumably Vedic) Aryan (Kurgan-culture) invaders.

According to Gimbutas, "Old Europe" was predominantly a matriarchal society, and she inferred this because of the lavishness of female interments and the paucity of male religious effigies at the sites discovered. *If the archaeological data which she presents is representative of the overall number of finds relating to the period*, then I believe her remarkable observations are fairly sound. Nevertheless, as in the previous illustrations (fig 19.2.), male effigies do appear, so it is difficult to prove whether males or females held positions of absolute power. It is also worth adding that male deities and priests might have been depicted in female form. Male shamans had a custom of cross-dressing, and it is possible that they would seem as females when represented as a carved object.

While Gimbutas' work is for the most part sound, at some points her feminist interpretations of some religious motifs (like calling a bull's head a depiction of the uterus) are taken to the extreme, giving the overall work a

ACCORDING TO ONE
PROMINENT RESEARCHER
IT WAS RULED BY STRONG
MATRIARCHAL ELEMENTS

“politically correct” flavour. Nonetheless I am basically in agreement with many of her major reconstructions. So, despite Gimbutas’ clearly “feminist” undertones, which she allowed to intrude into her studies, it is still possible that her conclusions are sound, and this civilisation of “Old Europe” was stomped into the ground by the “patriarchal” Aryan Kurgan invaders, and so came to an abrupt end.

For a long time now studies in Indo-European history have concentrated on Vedic analogies when attempting to identify the cultural background and lifestyle of the Indo-Europeans. While there is an amazing and sizeable collection of archaeological data on the Indo-Europeans which shows such Vedic ritualism as the horse sacrifice, it also reveals funerary practices that were considered unacceptable in the Vedic texts, namely defleshing. Therefore, it is possible that the Indo-Europeans were a Magian race who had been influenced by Vedic teachings. We find evidence of such a hybridised Vedic-Avestan religion in the book *Dinkard IX*. Zoroaster was famous for his tireless, and what would have been for some controversial, preaching against the Aryan Vedic customs and rites which captivated preceding generations of Iranians and Indians. Their ethos held that Daevas were the supreme gods, whereas in Zoroaster’s words, and the words of the luminous Ahura Mazda, these deities were really demons who deceived mankind into following the way of destruction. Zoroaster might have succeeded in convincing the Iranians to pay homage to the Ahuras and renounce the Daevas, but it appears that he was not wholly successful in this venture, and Vedic Aryanism continued to remain popular within Iranian society. It is possible to conclude one of two things. Either Vedic lore maintained a strong presence within Magian society after the death of Zoroaster, thereby melding with Zoroaster’s teachings, and creating a hybridised faith. Alternatively a significant segment of the Iranian population apostasised from Zoroaster’s faith, and formed a quasi-Vedic Magian faith, which allowed for the worship of both Ahuras and Daevas. This latter form of Magianism was termed Zurvanism.

*“You rush out, astute in evil, to the extremity of that horrible gloom; so you are all from the demon, your race is really from Evil Thought, that is, your race is from there where Evil Thought, as well as Lust the destroyer and also Greed the well accumulating, resides, and where, moreover, Indar (Indra) the fighter is the spirit of the religion of apostasy and further deceives the worldly existence of mankind, as to proper living and immortal progress and first confines their thoughts”.*²⁵⁰

From the above passage which is contained in the writings of the Magi (the pagan fire-priests who governed the religious life of Iran) we learn that Indra was the chief god of this break-away Iranian religion, one which adhered to Magian customs, but also espoused key elements of the old Aryan codes, especially their continued worship of the Daevas.

One other interpretation is that Vedic Aryanism was younger than Magianism, a body of religious thought which apostasised from an older Aryan Magianism. Though it is possible to conclude that the preceding Magian text contains a Zoroastrian spin, it is also possible that it might contain a fossilised account of people apostasising away from Zoroastrianism, thus creating the original Vedic religion, or the much later demi-Vedic Magianism. This question will need to be looked at far more closely in the future. In light of the Magian-like funeral rites performed by the Kurgan people, I think it noteworthy that *Herodotus mentioned that the Medians (the tribe from which the Magi were drawn) were the original Aryan race.*²⁵¹

Returning to our theme of the Indo-Europeans, we will be exploring the many customs, words, gods and observances which they left behind as a legacy for generation after generation of Europeans. But first it behoves us to examine the history of Russia, that vast, ever-open portal bridging the Asian and European continents. In doing so we come to the swift realisation that eastern Europe was repeatedly subjected to, and saturated by, eastern and western cultural traditions.

Nowadays when we look at a map of Russia, we envisage a nation firmly under the control of one people, the Russians, and that’s easy to picture. In reality, Russians are only a fusion of many radically different cultures who came to inhabit the same geographical region. In former times unified control of the lands was definitely not the case. Prehistoric hunters, Indo-European invaders, Finns, Scythians, Sarmatians, Goths, Taurians, Geloni, Budini, Neurians, Athenians, Huns, Cimmericians, Avars, Antes, Alans, Roxolani, Persians, Jews, Ros, Slavs, Vlaxhs, Volokhi, Norsemen, Magyars, Bulgars, Khazars, and Central Asians such as the Pechenegs, Kipchaqs and Mongols have all had their day at controlling the steppes and forests of Russia and the Ukraine. Russia was and is one great genetic and ethnic jigsaw puzzle. To label the Russian people Slavs is correct only from the linguistic viewpoint - in reality

they are an admixture of many, many races united under the Slavic tongues. Some folk, even a good many, were the descendants of races that were former subjects of the Persian Empire.

The Achaemenid Persian Empire

THE ACHAEMENID
PERSIAN ROYAL DYNASTY
WAS ARYAN

Susa, Persepolis, Istakhr, Ecbatana and Pasargadae (aka Parsagada) are places few westerners have even heard of nowadays, yet they left an indelible brand mark on world events, not just for centuries, but millennia, sending shockwaves even into the 20th Century. All of them have one major thing in common, they were regional capitals of the Persian Empire, a sometimes united, and often times bickering federation of states united under an Aryan Persian king.

PERSIA AND MEDEA

Who can guess when the Empire's foremost nations of Persia (Parsua) and Medea (Mada) first arose; so much of their beginnings are obscured by mysterious legends. Compared to the monumental statures of neighbouring Assyria and Babylonia, they must hardly have figured in the overall scheme of things, being little more than tax revenue for their neighbours. Records generated in the reign of Shalmaneser III, lord of the Assyrians, provide a minimum date of 836 BC.²⁵²

PERSIAN TRIBES

Persian tribal entities of that era included the Panthialaei, Derusiaei, Maraphii, Maspaii, Dai, Mardi, Sagartii (from whose name Asagarta is derived), Dropici and the Germanii (who appear to have dwelt at Kerman shah).²⁵³ As in India, Persian social structure provides a linguistic correlation between caste and colour and evidence for an Aryan social matrix.²⁵⁴ Persian and Medean folk fell into three distinct racial classifications, namely the Airyaman (an Aryan grouping to which the rulers, warriors and husbandmen belonged) who, one might guess, saw them selves as of higher status than their other non-Aryan compatriots, the Verezena and Kkhvaetu (possibly Semitic tribal groupings).²⁵⁴

MEDEAN TRIBES

ECBATANA, CAPITAL CITY
OF THE MAGI

Besides Persians, the Medes were the other up and coming regional power. Medean tribal names have survived, appearing as Paretaceni, Struchates, Arizanti, Busae and Budii, and last but not least, the Magi.²⁵⁵ Under Deioces, a revered chieftain newly promoted from high judge to great king of the Medes, Medean tribesmen set about constructing the royal city of Ecbatana in a mountainous area roughly 6,000 feet above sea level.²⁵⁶ Ecbatana also appears as Agbatana, and is thought to have arisen from an Aryan term Hagmatan, signifying that it was an assembly point for their tribesmen, perhaps for events of political, military and religious significance. It was no small undertaking, similar in scale to the Athenian city state, with a circular layout encompassed by seven defensive walls in total, each painted a different colour.²⁵⁶

ASSYRIA

Assyria was very powerful indeed. Fledgling states like Medea and Ecbatana had little chance of beating her into submission by their own means. If they wanted to pull a military stunt it paid to network with the Elamites and Babylonians; safety in numbers.

WARS

In the year 651 BC Cyrus provided Persian and Elamite military assistance to the Babylonians (collectively recorded under the term Guti) who were at that time in a state of insurrection against the Assyrian king Ashurbanipal.²⁵⁷ Things went poorly during the rebellion allowing Assyrian forces to overrun Elam and Parsuash, and reinforce their vassalage. At the passing of Ashurbanipal an opportunity to strike reared its head once more.

VARIOUS REGIONAL
KINGS CONSPIRED
AGAINST THE ASSYRIANS

Between 610 and 615 BC the Medes again sought independence by force of arms, forcing the Assyrians into retreat. Their successful uprising sent nearby powers like the Babylonians clamouring to join in. The siege of Assyria had resumed, though this time with a combined and reinvigorated force of Medeans and Babylonian-Chaldeans, who waged a series of epic battles against them. The last remaining Assyrian strongholds were bolstered by Egyptian troops sent across to Asia Minor at the eleventh hour, but all was lost. The enemy threw their full might against the final bastions of Nineveh, Assur and Nimrud and cast them down forever. Thus died Assyria.

Their new overlords, the Babylonians, never sought to rebuild their towns and cities; few indeed were spared. Meanwhile, sensing further strikes on the Egyptian homelands from this powerful eastern enemy, the Egyptian Pharaoh sent a large body of troops to occupy Syria and vital tracts of the Euphrates. Concerned by these developments, Prince Nebuchadnezzar of Babylon was directed by his father to utterly destroy not only the Egyptians, but the Greek forces which were lending aid to them, and thus reopen the route to the Mediterranean Sea.

Leaving their co-collaborators to sort out their own affairs with the Egyptians, the Medes began seizing land in Armenia and Asia Minor. Babylonian and Medean rule was to be all too brief though, with the emergence of Cyrus at the head of a Persian host which occupied much of Iran. Cyrus' military operations against the more easterly Choresmians and Soghdians had the effect of forcing the Massagetae to escape their domains, moving westward toward the steppe and Caucuses region.²⁵⁸

Somewhere around 550 BC the Medeans were effectively conquered by Cyrus and the Persians. Low and behold the Persians (who included ethnic Persian sub-tribes such as the "Germanians" and "Daans") had thrown off the Medean yoke, then subjugated not only their former masters, but the Babylonians as well.²⁵⁹ Their prior marriage of military convenience was over.

Hints of, and even the motivation for, Cyrus' final victory over the Medes were allegedly foretold in the Babylonian prophecies of Marduk.²⁶⁰ This conquest resulted in the fateful fusion of Median and Persian societal entities. The cultural joining was reciprocal, and of such a magnitude that the name Medes frequently applied to both nations, owing to the exorbitant number of Medes running the empire.

Accordingly new Aryan powers foreclosed on semitic Babylon, relatively speaking, and with it their leaders and their gods.

Daniel, a Jewish prophet serving in the Babylonian administration also prophesied the end of Belshazzar's Babylonian reign, his words immortalised in Jewish scripture, in (OT) *Daniel 5: 25-30*;

"And this is the writing that was written MENE MENE TEKEL UPHARSHIN. This is the interpretation of the thing: MENE: God hath numbered thy kingdom and finished it. TEKEL: Thou art weighed in the balances, and art found wanting. PERES: Thy kingdom is divided and given to the Medes and Persians. In that night was Belshazzar the king of the Chaldeans slain. And Darius the Medean took the kingdom, being about three score and two years old."

Cyrus made it his business to bring the seemingly vanquished gods of Assyria back to life, by re-erecting their idols in newly built temples. Next Cambyses, the son of Cyrus, entered the holy and royal Egyptian city of Memphis, and Sais too (where many an Egyptian priest or priestess was trained), leading a multitudinous army. Like Ionian Greece, Egypt entered vassalage as a Satrapy of the Achaemenid Persian Empire, down as far as

Fig 20. Hieroglyphs on the belt of Darius, the Persian king.

Ethiopia.²⁶¹ From the inception of his rule Cambyses was termed the "offspring of Ra (ie; the sun God)", for he saw himself as ruler of the Egyptian people, one already related to their royal family, and the high gods of Egypt.²⁶¹ The Egyptian kings therefore seem to have been blood relations of the Sun-Kings of Medea and Persia.

Legends that Cambyses was in the business of habitually slaughtering Egypt's dearest earthly divine being (the Apis bull) are utterly false. In fact precisely the opposite was true. The king was a great patron of the Egyptian priestly families, and seems to have supported them in their undertakings, supplying expensive monumental masonry for the Apis' resting place in the Serapeum complex at Saqqara. As a reward for Cambyses' pious reverence one finds the names of Persian royalty recorded in customary pharaonic hieroglyphic cartouches. And so one reads "Horus, Santowi, king of Upper and Lower Egypt, Mestiu-re, Son of Re, Cambyses, may he live forever".²⁶² At the bovine cenotaph Cambyses is depicted kneeling in adoration of the Apis, dressed as an Egyptian prince, and a sure

incarnation of his father “Apis-Osiris”. Clearly Persian monarchs hobnobbed with priests and gods of every shade. No, there was more to the outward trappings than simple showmanship ... Cambyses was a fully fledged son of Osiris, which might account for the type of pharaonic crown he wore, even in his native Persia.

EGYPTIAN PRIESTS
INTERACTED WELL
WITH THE PERSIAN
DYNASTY

In the Nile lands he enjoyed the attention of countless heirophants, and this sometimes led him to become embroiled in local cult disputation. Many times the rationale for his actions are not entirely apparent. At one point Cambyses boots hellenic mercenaries from Egypt for daring to set up shop in the Temple of Neith (said to be the spiritual mother city of Darius, the son of Ra).²⁶² They had been purloining tithes due to the sanctuary, and diverted priestly serfs toward their own purposes etc. His hearty patronage of Sais, Hermopolis and Memphis was not replicated throughout many parts of the Lower Kingdom (in particular Thebes and Heliopolis) though, where local priests endured a litany of insults, relegated to marshlands with diminished livestock numbers and so forth. Clearly he didn't mind offending some divinities!

PERSIA INVADES
'GREECE'

The year 547 BC ushered in a new and unpredictable phase of Persian history, as the Iranians came to hear of Greek states far to their west, and sought to assimilate them into the king's expanding sphere of control. So came probing actions into the Aegean peninsula, where seaboard city states and peoples cleaved toward the Persians, with scant deference for the neighbouring, kingless Greek states, whose internal wars proceeded for ever and a day.²⁶³ Little could he have known that one such acquisition, Macedonia, would lead to the downfall of everything he held dear.

CYRUS THE GREAT

Somewhat later, in 539 BC, Babylonia-Chaldea was further humbled by the Indo-Iranian army of Cyrus the Great, a Medean who became King of Persia. This must in turn have caused an efflux of Chaldeans from Mesopotamia, into the lands of Scythia and remote Central Asia, or become absorbed into the warp and weave of Indo-Iranian society. These Indo-Iranians, the Persians, Medeans, Zikirtu, Haraiva, and Parthians,²⁶⁴ were the next wave of invaders, who in their turn, took over all the lands once held by the descendants of the Aryans. Upon their coming the Aryan *Daeva* gods officially became diabolised, and the *Ahuras* raised in great exultation. In practice though, the *Daevas* were worshiped by many commoners, but in a syncretic form which blended together portions of Vedic and Magian teachings. Indo-Iranian supremacy came via powerful and prosperous dynasties such as the Achaemenids, Parthians and Sassanians, who patronised the religion of the prophet Zoroaster, in various guises.

KHOREZM

Chaldeans maintained a significant presence in the Elamite capital of Susa which according to legends fondly recalled by the Greeks, was established by Trojan refugees.²⁶⁵

BABYLONIAN
SUBJECTS

Prior to their settlement East of the Caspian the Khorezmians were yet another trans-Oxanian people to wander into the Persian Empire.²⁶⁶ They lived in close proximity to the Massagetae, who, as fortune would have it, migrated even further westward with the Scythian bands, even into what would later be called Germany. The civilising influence of the Persians introduced a higher standard of living into the Scythian aggregate with the result that Scythians became progressively more cultured as years past.

Babylonians were an interesting subject people. The empire's significant and widely-spread Babylonian component maintained many of their older customs, holding their own councils (led by the 'head men') priests who acted equally as secular and religious officials, making sacrifices, divining the will of the gods by varied means.²⁶⁷ Being collectors of tithed livestock priests found their temple precincts teeming with growing herds of creatures.

PERSIA EVOLVED
INTO AN EMPIRE
COMPRISED OF 27
VASSAL STATES

Slave trading and the subsequent bounty of relatively cost-free labour enriched the profits of wily aristocrats and merchants, leaving free workmen and artisans to suffer diminishing standards of living as opportunities for full employment dwindled.²⁶⁸ We also find a reasonable number of shirku serfs, who manned the feudal fields and workshops of the Near-East.

State by state, country by country, a series of Persian kings steadily expanded the extent of their imperial jurisdiction to an Empire consisting of 27 satrapies (governmental districts) stretching from Libya to northern India. It was an empire such as the world had never seen. Each satrapy was administered by a governor answerable to the great king, ruling from within substantial fortifications. The Achaemenid state entities are listed here, placed in the context of their approximate geographical region.

Balkans/Russia/Turkey	Arabia/Mesopotamia	Central Asia	Africa	India

Jewish scripture tells us a little about Darius' administrative apparatus. "It pleased Darius to set over the kingdom an hundred and twenty princes, which should be over the whole kingdom. And over these three presidents: of whom Darius was the first: that the princes might give accounts unto them, and the king should have no damage. Then this Daniel was preferred above the presidents and princes, because an excellent spirit was in him, and the king thought to set him over the whole realm".²⁶⁹ Daniel's supposedly indispensable position as a personal adviser to Darius is not corroborated by other sources, but this might change in the near future as the Ecbatana excavations proceed.

DARIUS PLACES LESSER PRINCES ON REGIONAL THRONES

Fig 21. Darius, the Persian king at court

Persian custom attributes all forms of earthly lordship to the will of the divine being "A great god is Ahuramazda, who created this earth, who created man, who created peace for man, who made Xerxes king, one king of many, one lord of many".²⁷⁰ Every domain he ruled, every subject he gained, was a gift from the creator himself. It might seem a paradox but the king, as an angelic deputy of a divine being, who is all things good, becomes the principle inflictor of torments on the law-breaker, the advocate of military conquest against unrighteous peoples. "Good rulers let (Ahura) bring slaughter upon them and peace from them for the joyful villagers. Let him bring torment upon them, he that is Greatest, with the bonds of death, and soon let it be! To men of evil creed belongs the Place of Corruption".²⁷¹ As a consequence of this teaching rebellion was regarded as demonism to be put down without faintest mercy.

THEY RULED BY THE WILL OF GOD

THEY BROUGHT ORDER AND PEACE TO THE WORLD, BY FORCE IF NEED BE

Around 522 BC things were not going Persia's way, compelling Darius to mete out death suppressing a series of rebellions so widespread that his full inventory of satrapies looked to be falling away ... Babylon, Assyria, Media, Elam, Parsa, Parthia, Sattagydia, Egypt and the Scythians.²⁷² It seemed as though the entire empire was in open revolt, as provincial kings broke for freedom. It's not that the conspiratorial successionist uprisings were planned in unison; many were sharkishly driven by the scent of blood in the water, that of a king limping from endless conflict.

REBELLIONS MATERIALISED FROM TIME TO TIME

And then there were the intrigues of Gaumata the Magus who briefly usurped royal power, holed up in the citadel of Sikayauvatish. In true Mesopotamian style, Darius' cathartic response was to blind, impale or otherwise mutilate the turncoats; whatever it took to advertise that treason was punishable by the cruelest of means. The angels of Order were truly on the march.

Satrapies (governmental districts) of the Achaemenid Persian Empire

But in better times gifts, tithes and taxes aplenty flooded into Greater Persia from outlying satrapies. Massive shipments of expensive frankincense totalling more than 60,000 pounds arrived from the Satrapy of Arabay annually,²⁷³ destined for the use of priests and royals, as offerings to the gods, and to make the air aromatic, pure and holy.

Manpower and academics of intellect were arguably the Empire's greatest imports, allowing Persia to expand in a way that it otherwise would not have. Achaemenid monarchs greatly prized the Babylonians for their sciences especially, all the while holding them in contempt for a variety of other reasons.²⁷⁴ They had an extensive repertoire of knowledge in most subjects, and deeply specialised expertise in areas they felt held a special allure. Babylonian study institutions produced a plethora of linguistic prodigies versed in present and past tongues, together with astronomers, natural scientists, mathematicians, doctors, inventors, mechanics, builders, planners and the like.²⁷⁴ They had knowledge of many lands, and of agriculture, they knew physics and tricks of light, and of weather.

Persia could learn a great many novelties from their subjects. Eastern mathematicians utilised two formal modes of calculation, an admixture of sexagesimal and decimal figures, popular in Babylon and Egypt respectively. Geometry was a little off by today's standards since Pi was reckoned to equal 3.16 rather than 3.14.²⁷⁵

Persians developed their own native innovations too, and they didn't mind telling you about it. In keeping with royal protocol many congratulatory inscriptions were made immortalizing the king's efforts, which in the case of Darius included the invention of Persian writing "*I made inscriptions in other ways, in Aryan, which was not done before*".²⁷⁶

At that point in their intellectual history Persian scribes apparently adapted Assyrian and Elamite cuneiform scripts for their own purposes, which developed into a twofold stream of characters consisting of ideograms and rudimentary alphabetic symbols.²⁷⁷ This Persian script was used for royal purposes only (as was also the case in Egypt with hieroglyphics), leaving the greater part of the king's subjects to notate their correspondence in Aramaic, and in earlier times, Akkadian and (the mostly indecipherable) Elamite cuneiform.²⁷⁷ Prior to this the Persians were illiterate.

Countless aspects of Persian law were hand-me-downs from Hammurabi's ground-breaking Babylonian law codes, which by order of Darius were rendered fit for Aryan usage. It was termed the "*Ordinance of Good Regulations*"²⁷⁸. Its major tenets sought to ensure that '*justice and righteousness*' prevailed, that '*the strong should not injure the weak*';²⁷⁸ that truth shall illumine the heart of earthly matters. In a society that prized truth above all else it comes as no surprise that perjury was the basest of crimes, whether of a defendant, an accuser, or some other witness. They were made visible to the general public in the form of carved standing stones which stood in all regional centres. Scribes versed in Aramaic compiled them into text books for the benefit of society's literate bureaucrats.

Darius' laws, the pillars of the Persian Empire, crumbled under Alexander's hooves, but were later revived by Parthian monarchs, appearing in the revamped *Videvat* codex. Such was the "*Antidemonic Law*" administered by princes and Magi. No man callous of the truth was fit to sit on the seat of judgement in Persia, especially not those amenable to bribery to pervert the course of justice (a crime for which they were debared from officiating cases and crucified).²⁷⁹

Scythians

No discussion of Persia would be complete without an examination of Eurasian Scythians who for so long were an integral part of Persia, yet a worrisome burden on the king, a fly in the Imperial ointment on account of their marauding ways. They were Persia's "loose canons", rude, boorish, tattooed, long-haired subjects you always needed to be wary of.

The earliest Indo-Iranian migrants to settle in Slavia, are associated with the so-called Andronovo culture, a people who once dwelt to the east of the Caspian in Central Asia. Their presence was signified by nomadic pastoralism, horse domestication and kurgan mound burials, which, as in the Afanasievo culture, were erected over square excavated sites, in which the body of the deceased was covered in ochre. The material culture of these various tribes was linked with the Caspian. Similar ceramic ritual braziers were found in both places.²⁸⁰

Next came one of the most important "races" to ever inhabit Russia. As early as 1,000 BC the widely-travelled nomadic Scythian cattle-herders moved westwards out of Central Asia and Siberia. Generally speaking the Scythians were white Europoids, yet some bore Asiatic genes to a greater or lesser degree, stemming from ancestral unions with Asiatic folk in Eurasia. When the Hunnish hordes eventually left Asia to its own destiny, mixed race

children had the option of staying behind in Asia, others rode with their fathers back into Europe. Upon reaching the prosperous grazing areas of Russia, many were inspired to settle down for at least part of the year, striking more or less permanent camps for these periods.²⁸¹ Commonalties in the construction of slab-grave funerary monuments in Scythia and Mongolia point to common mortuary rites spread from Scythia to Siberia during the Bronze Age. Massive burial mounds were also raised, containing sacrificed reindeers and livestock. Bronzes and other artifacts found in them prove that the Mongoloids and Europoids interred in them had traded extensively between Europe and Asia.²⁸²

SCYTHIAN TRIBAL
GROUPINGS

During the 7th-4th Centuries BC, the Scythian nations played a major role in the construction of the Khorezmian and Samarkandian city-states.²⁸³ These sites were admirably endowed with towers, irrigation and even luscious, well-stocked game parks for recreational hunting. There were holy sites too, perhaps cult centres around which the nomads congregated for religious feasts of calendrical significance. Cauldrons, iron-working, horses and religious depictions of deer were just some of the things that Scythians habitually carried with them on their travels.

SOMETIMES THEY
FOUGHT EACH OTHER

The Indo-Iranian-speaking Saka ("stag") nations had three main divisions. In the heart of Central Asia lived the Saka Haumavarga (future European inhabitants whose ancestral realms lay east of Tashkent), also known as the Amyrgaeon Sacae. Further west were the Tigraxauda, amongst whom were the Massagetae. The westernmost of the Saka were the Scythians of the Russian steppe.²⁸⁴

In the 7th Century BC Scythians fled from an internal conflict with the Massagetae. Consequently, the Scythians erupted onto the Russian Steppe where the castle-building Cimmerians dwelt. According to Herodotus a prolonged time of friction ensued, during which the Scythians sought to chase the Cimmerians from their pastures. At one point they harried a large band of fleeing Cimmerians, but took a wrong turn, headed down past the Caucasus and violated the Iranian borders of the Medes. For this reason throngs of Scythian horsemen ended up in Medea. A more likely reason for the Scythian invasion was some form of Scythian-Assyrian alliance with the Assyrian king, Ashurbanipal, built from the much flimsier military arrangements of prior times. What followed was a 28-year Scythian occupation of Medea.

SCYTHIANS VISITED
BLOODY RETRIBUTION
DURING RAIDING

Archaeological remnants at Damghan revealed evidence of bloody happenings there, resulting from this initial collision between Scythian Eurasian steppe raiders and the area's early Persian inhabitants.²⁸⁵

Playing their military gambit to the fullest, Indo-Iranian tribesmen swept into Elamite Susa, taking control of Semitic Chaldea, whose foremost city was Harran. Weapons spoke louder than words.²⁸⁶

At length the Scythians and their Saka allies governed Medea, sufficiently long enough to allow an intermingling of cultural traditions, and more importantly the integration of the Scythian and Magian aristocracies.²⁸⁷ Judging by one Scythian site in Russia, their religious architecture conformed to designs once employed in the construction of Iranian temples. Beasts were ritually slain in them too.²⁸⁸

Politics in Central Asia was eternally mutable though; fortunes changed quickly, drastically, unexpectedly. Because the Scythians had been draconian in their treatment of the Medes, the most prominent Scythian chiefs were assassinated while attending a Medean banquet in 624 BC, possibly at the command of the Magi. The ensuing confusion promoted by the loss of their leaders permitted the Medes to re-gain their sovereignty. Even after this act of treachery, Scythians lent their support to the Medes (ie; the Magi).

With Assyria in a severe state of decay and a resurgent Medean state strutting about, the Scythians decided to concern themselves with pillaging other locations. They were now ideally placed to raid prosperous southerly regions unopposed. Scythian horsemen of the Russian Steppe successfully conquered Syria, the Caucasus and as far south as Egypt, but diverted their attack on the Nile countries only when the Pharaoh made a sufficiently large offer of money and goods.

During Darius' period of sovereignty (522-486 BC), Persian troops marched into Scythian Russia with the aim of exacting a very great vengeance upon the Scythians. This was in retribution for the past warring of the Scythians against the Medeans, whose forces they defeated and whose lands they occupied for more than 20 years.²⁸⁹ The business of subjugating the Scythians was a necessary part of Persian empire building, though it turned out a very drawn out affair. All that remained was to bring the Sakas, especially the Massagetae, to a state of obedient submission. Cyrus attempted the same assassination ploy once used by the Medes on the Scythians, but it backfired and he lost his life. Though their leader perished, the Persians overcame the Saka and subsequently brought Central Asia into Persia's growing sphere of influence. At the end of it all the Persians emerged powerfully victorious, but were propped up by the very nations they had sequentially vanquished.

As a result of these Persian victories, the Scythians, Medeans and Massagetae became loyal to the dynastic visions of the Achaemenid state, and were an indispensable part of the Persian power base.²⁹⁰ Through them the Persians extended their trade influences far into Asia. Many Scythians served the needs of the Achaemenids, and, based on wall murals at Persepolis, took part in consular processions before Darius in their trademark tall pointed hats. Scythian resources were also highly prized. Scythian miners and gold prospectors became the largest single source of gold for the Iranians and Persians.²⁹¹ And for this reason, the relationship between Scythian Russia and Persia was sure to be a long one. One Bronze Age Scythian interment in the Urals contained a seal and bowls of Achaemenid manufacture, some of which were even engraved using Aramaic script. It is therefore likely that some of the Ural's Scythian inhabitants knew how to read and write Aramaic.²⁹² During the construction of the Achaemenid palace at Susa, Egyptian and Medean craft-masters were charged with all goldsmithing projects, owing to their special prowess in this art. They turned Scythian Ural gold into exquisite works of art.

THOSE UNKNOWN YEARS...

There had always been strange stories of these places in the north, in lands the Semites called Gog and Magog.²⁹³ Forgotten by time, a veil of blackness and ignorance seemed to hang along the Russian frontier like a pall of impenetrable smoke; who could hint what was there? Even the finest ancient minds knew scarcely anything of it. Strange, perhaps fictional stories emerged. Much later, according to Mediaeval Arabs, if you went trading there you took your life in your hands because the pagans there slaughtered all strangers; these were people who wished to live their lives free of uninvited, "unclean" guests.²⁹⁴ In truth the history of those lands is more amazing than fiction itself. Just how much of it was true, and how much is attributable to demonic cliches promoted by the Muslims, Jews and Christians is something I hope to explore throughout the remainder of this work.

For a very long time Russia was ruled by the very same Scythians who became embroiled in the Assyrian conflict. Further westward on the Russian steppe, Scythians lay claim to a great deal of territory, and built at least a hundred walled towns.²⁹⁵ Though fortified, many of these lesser settlements were merely seasonal places of residence, in which the nomadic Scythians pitched their tents.²⁹⁶ At other times of the year, Scythians followed their herds about in four or six-wheeled tent-covered wagons.²⁹⁷

To the north of the Scythians lived the Neurian wolf-men. In close proximity to them were the Melanchlaeni, a Gothic race who lived near the Pripyet swamplands, and who garbed themselves in black robes. To the east were the peaceful Argippaeans, who housed themselves in tented groves and were drinkers of the Aschy libation, a mixture of milk and the strained juices of squashed cherries which grew on their holy trees.²⁹⁸ Other locals, the Androphagi, were cannibals who probably dwelt somewhere near the Urals. They practiced a different form of cannibalism from the nearby Issedonians (who consumed the flesh of deceased kinsmen during a funeral banquet).

To the south lived colonists from Ancient Greece. Athenians sank their roots into the Crimea, establishing not only colonies but commercially viable agricultural districts.²⁹⁹ From these extensive wine-growing regions came taxes aplenty, and trade further afield. In adjacent territories the Scythians reaped copious amounts of grain, and sold it to the ancient Greeks.³⁰⁰ They became rich accordingly. Consequently an enviable range of exquisite gold ornamentation was manufactured by Greek craftsmen for the Scythians, for they prized that metal greatly, and even worshiped it.

MUMMIFICATION TRADITIONS

Scythians were keen to maintain the purity of their customs, and for this reason given to murdering fellow tribesmen infected by Greek teachings, Dionysianism in particular. The gods of the Scythians were peculiar to themselves, but owing to Herodotus's writings, confusingly equated with classical Greek divinities. Bearing in mind their xenophobic hatred of foreign ways the following correlations are unlikely to have been factually analogous. Thus the Scythians worshipped Tabiti (a fire goddess like Hestia was the greatest), Papoeus (a thunder god like Zeus), Apia (an earth goddess like Ge), Oetosyrus (a messenger of the gods like Apollo), Arimaspa (a heavenly goddess like Aphrodite), Hercules (none other than Hercules himself), Ares (a war god), and Thamimasadas (a sea god like Poseidon).³⁰⁰

After living so long among the Medes, it appears that the Scythian religion had inherited a number of Magian customs. The best evidence for them being Magian comes from Herodotus. They are likely to have been avid fire-worshippers, and drank their libations from golden cups. Like the Magi, the Scythians achieved bodily cleanliness by means of a paste made from pulverised cypress, frankincense (from Ethiopia) and cedar woods, which was plastered all over their body, and peeled off the following day. The Magi used this same custom because they deemed water so holy that they would not contaminate it for the sake of washing in it.³⁰¹ Embalming corpses in wax was another Magian funeral rite, one which was also incidentally practiced throughout Bronze Age Scythia.³⁰² The name of one of the Scythian leaders, Octomasadas, seems derived from the Zoroastrian word for God - *Ahura Mazda*. Their highest god was most likely the same as that of the Persians (ie; *Ahura Mazda*), as evinced by the following account. When the Persians lunged upon their Scythian quarry, the defenders appealed to neighbours for military aid ...

SCYTHIAN WAR COUNCIL

"The assembled princes of the nations, after hearing all that the Scythians had to say, deliberated. At the end opinion was divided - the Kings of the Geloni, Budini and Sauromatae were of accord, and pledged themselves to give assistance to the Scythians; but the Agathyrsian and Neurian princes, together with the sovereigns of the Androphagi, the Melanchaeni, and the Tauri, replied to their request as follows:

"If you had not been the first to wrong the Persians, and begin the war, we should have thought the request you make just; we should then have complied with your wishes, and joined our arms with yours. Now, however, the case stands thus - you, independently of us, invaded the land of the Persians, and so long as God gave you the power, lorded it over them; raised up now by the same God they are come to do to you the like".³⁰³

Several pieces of interesting information arise from this passage. Firstly there is an admission that the god of the Scythians and the Persians is one and the same. Secondly, there is evidence of social cohesion among the various northern races, many of which were ruled by princes. Despite being portrayed as pitiless man-slayers (and in one case cannibals) the likes of the Androphagi, and Tauri were well able to meet in council with all of their nearby neighbours, and reject the Scythian call to war against the Persians out of fairness and honour, and a desire to not commit the first wrong.

SCYTHIAN SOOTHSAYERS

Scythian priests, the Enares, were akin to the Magi in very many ways. Like the Magi, their soothsaying magician-priests sacrificed horses and cattle, and performed ceremonies using bound faggots of willow wands. Herodotus also tells us that Scythia was certainly not under-manned when it came to prophets, for there were already many different occult societies there, especially haruspex (anthropomancers).

According to Ptolemy's map, a presumably Indo-Iranian people known as the Anares lived east of Margiana, in Bactria around 150 AD.³⁰⁴ Bearing in mind that the Massagetae lived not far due west of them, and are known to have migrated toward Europe, it's plausible that the Anares did likewise. Accordingly the Scythian Enares may have been Anares. Recalling the Scythian fortune-tellers Herodotus recounted;

"Scythia has an abundance of soothsayers, who foretell the future by means of a number of willow wands. A large bundle of these wands is brought and laid on the ground. The soothsayer unties the bundle, and places each wand by itself, at the same time uttering his prophecy; then, while he is still speaking, he gathers the rods together again, and makes them up once more into a bundle".³⁰⁵

LOT CASTERS

Herodotus then wrongly asserted that this method of divining originated in Scythia, when in fact it was of Magian provenance, though not unknown in some Hindu vedic rituals. That the Persians had such a rite is confirmed by Magian scripture and a Persian relief depicting a Scythian magician with a pointed "scythian hat" and wand bundle.

Scythian war customs were exceptionally brutal. In my opinion the graphic barbarity described by Herodotus (which I shall now examine) might only normally have been unleashed when their kinsfolk were threatened, or when challenged by oath-breakers. As the text suggests, those who refused to side with the Scythians would have been compelled to aid their war effort if only the Scythian cause had been just. In war they took heads (for each head they presented to their leaders they gained a given portion of the war booty). Battlefield scalping was virtually a Scythian trademark, and proven by scalp marks found on a frozen corpse found at Pazyrk, Siberia. After cleaning a scalp, a warrior traditionally used the grim trophy as a placemat, or, if he had enough of them, sewed them together to make a prestigious cloak. They knew no limits when it came to grotesque ornamentation. Occasionally they dangled the amputated limbs and body parts of their enemies from the saddle or reins, or stretched the skin of a flayed adversary over a frame, which was in turn mounted on a pole and carried as a battle standard. Arrow quivers were made from skin flayed intact from a defeated enemy's arm. All in all they must have presented a terrifying and macabre sight to the 'more civilised' inhabitants of Greece and Persia.³⁰⁶

It is unfortunate that the passing of the Scythians went unrecorded, for they vanish from classical sources some time during the 4th Century BC. But of course they didn't disappear. Scythians nomads migrated further westward into what we now call Poland and Germany,³⁰⁷ while others no doubt stayed behind on the Steppe.

Other marvels existed there. In his 5th Century BC travel log the ancient Greek historian Herodotus spoke of Scythian ramped 'pyramids' made from kindling. They had 600-metre wide bases and enormous swords stabbed into their peaks. In comparison, their bases were two and a half times bigger than that of Egypt's "Great Pyramid of Khufu", or the Aztec "Pyramid of the Sun". While it is tempting to believe that Herodotus had over-inflated the true scale of these temples, it should be remembered that he actually visited Scythia at the time of the Persian invasion, and so saw these things first hand. The cyclopean dimensions described by him are probably credible considering the exactitude of his notations on the pyramid of Cheops.

Scythian megastructures had three almost perpendicular sides and a fourth consisted of a steep rampway which led to the top of the building.³⁰⁸ In some ways the design was akin to the sacrificial dais' of the Medean Magi, but built on a similar scale to ziggurats. These "ziggurats" were so heavy, that they sunk under their own weight, and each required 150 cart-loads of brushwood annually to help them maintain an appropriate height. The temples were raised in honour of the Scythian War God. Consequently herds of cattle and 1% of all war prisoners were slaughtered atop the temples to appease him. After pouring consecrated wine over their heads, priests slit the throats of captured enemies, allowing their lifeblood to flow out into a bowl, which was then ceremoniously tipped upon the sword,³⁰⁹ perhaps to give it life. In an almost Meso-American display of butchery, the sacrificers hacked off the sword arm of captives and tossed them into the air as an offering, after which the body was flung from the heights of the "ziggurat" to the land far below.

One sign of strong government on the steppes is that each Scythian district possessed one of these mountainous temples dedicated to Ares. Obviously they required a large labour force to construct. Equally so the canal which allegedly spanned from the Sea of Azov to the Taurus mountains. Why they stopped making these temples seems problematic, and today, no trace can be found of them. It is my guess they were burned down.

The Persian colonisation of Scythia provided a further powerful infusion of Iranian dualism amongst the various inhabitants of the region. The tattooed Scythian nations who built these "ziggurats" were perhaps related to the Tauri, a later people much given to human sacrifice and war, and who also immersed themselves in the construction of gargantuan building projects. One such location, Charax, has been excavated, providing firm proof of the epic proportions of their efforts. The Taurian fort called Charax³¹⁰ (named after the Chaldean for "fort"), at the foot of the Crimean Mountains, on the Black Sea coast, was eventually stormed by Roman troops who had gained a foothold in the area. Thereafter Rome used Charax as a permanent garrison.

As you will later see in this book, the fullest range of horrors is yet to be revealed, for in this land, among the pagan Slavs and their predecessors, lay a bizarre sect of devil-worshippers that lived by ethics too terrifying to contemplate....

Meanwhile, east of Scythia

We now look eastward to the monumental developments taking place in Iran and Central Asia from the 3rd Century BC onwards.³¹¹ Alexander the Great assumed power over the Greek and Balkan peninsula in 336 BC, and followed in his father's footsteps not only by consolidating his hold on the area, but by pushing Macedonian influence into Asia.³¹²

Fig 26. Coin bearing an image of Alexander the Great.

Alexander, son of Philip II, king of Macedonia was, from the first, preened for great things. He studied the natural world, and learned the craft of governorship, under the famed Greek pagan philosopher Aristotle. And from his father he acquired an excellent grasp of the art of war, in addition to a war council of highly seasoned and decorated generals, all of them loyal to the memory of his father. Until roughly this time the Greek peninsula was in a sorry state in terms of pan-hellenism. It would be true to say that Greece only existed in linguistic terms, since the lands were divided amongst various city states, whether Greek or otherwise, and governed by no less than 158 different rules of law, not to mention oligarchal mercantile interest groups.

The Persian invasions of Darius and Xerxes were greeted with mixed emotion on their side of the Bosphorus strait. Some feuding hellenic states (eg: Ionia, Caria) gained new prestige and protection from local enemies by integration with Persia. With this new eastern player on the scene, Athens, Corinth, Sparta and the like were unable to exert their will over nearby states with the same ease as before. The Persian conflict had the effect of galvanising hellenic states hemming the borders of the Greek satrapies. Mutual solidarity as a means of curtailing further Persian incursions into the peninsula appeared to be the only solution. The Greek philosophers, through their political orations, prepared the groundwork for more formal alliances against the barbarians. This in turn led to the establishment of the Greek Corinthian league, which Alexander used as a secondary power base upon the death of Philip. He had everything going for him as a potential ruler. The vigorous and athletic twenty year old personally knew the main movers and shakers of Macedonia and Greek, whether military or academic figures. He came from a good family, his father was well regarded, and more importantly he was imbued with the fighting spirit imbued within Homeric epic. Here was a man desirous of flattening 'Troy' all over again, of piercing the lands of the King of Kings, to a depth and extent never conceived, even by the most optimistic Greek. With so much of Persia unknown to the Greek mind, and largely unmapped, many Greek leaders were understandably doubtful about a proper level of military commitment to his as-yet- sketchy plans for taking over the Persian empire. They granted him only a token number of forces, if only in the spirit of cooperation.

ALEXANDER'S ARMY SETS
OFF

So Alexander set off from home with a predominantly Macedonian expeditionary force augmented by small contingents of Greek auxiliaries and mercenaries looking for adventure. His unusually modest army initially consisted of no more than 35,000 combatants, mostly heavy infantrymen arranged in phalanxes, supplemented by cavalry. They were exceptionally well-trained and stalwart fighters, determined to live off the land by sacking cities along their invasion route, thereby obviating the need for excessively long supply routes. As he went he installed rulers favourable to his new territorial designs, but sought to retain the intactness of the Persian satrapy system, thereby minimising disruption to his planned colonisation.

EGYPT AND JUDAEA
CAPTURED

Alexander's troops began their march into glory with an initial military engagement against the Persians. This was to be only a preliminary engagement, for the time being. Alexander was more interested in Egypt at this point. So he ordered his forces to wander down through Judaea and into Egypt, annexing land and subject peoples all along the way. Only after this was he ready to begin a full-scale invasion of greater Persia.

DARIUS' POWER CRIPPLED
BY ALEXANDER'S
CONQUESTS

Alexander's timing was impeccable. As Alexander crossed the Persian frontier Darius III, the Great King of Persia, was already in hot water, being largely unable to muster the allegiance of uppety regional governors to put up a united front. Regular reports of a depressing nature must have flooded into the royal city with increasing frequency as Alexander's campaign snaffled some of Persia's finest city states, some of which were thought militarily impregnable (eg: Tyre). Darius' dreaded moment came at the Battle of Issus, a mere three years after the young Macedonian became helmsmen of the hellenic, anti-Persian resistance. Despite the superior number of heavy Persian cavalry deployed (the main battle tanks of the ancient world), the defection of Greek mercenary cavalry on the royal payroll had the effect of demoralising the Persian ranks. An air of despondency and defeatism settled over Darius' forces, as Alexander exploited his enemy's weakness. The Persians whose fighting spirit was sapped by high living, took to their heels, leaving the region open to exploitation, and the king's realm in tatters. Darius was subsequently assassinated by one of his petty kings, leaving the Empire without a head. To top it all off Alexander razed the Achaemenid capital city of Persepolis to the ground, and whether intentionally or

THE PERSIAN CAPITAL
RAZED

unintentionally, destroyed the master copies of the Magian holy texts, then housed in the royal treasury.

ALEXANDER, KING OF
ASIA

By chasing Darius afar, and subjugating Persia, Babylon, Afghanistan, and many other nations between Greece and the Hindu Kush mountains, the gutsy opportunist Alexander stole the mantle of King of Asia. From there he ventured into India, but found his warriors unwilling to over-extend themselves. By 330 BC the Greeks, now satiated by their opulent booty, were eager to return home with the spoils, and so left Alexander's service. The loss of so many veterans, while troubling, did not lead Alexander to curtail his long-term territorial ambitions, only limit its extent. He then returned to Persia from India, where he set about mating his forces with local women, with the aim of creating a superior breed of human. It was there that Alexander promoted the idea that he was a divine being, perhaps in emulation of the region's former rulers.³¹³ As a new place of rule Alexander chose Ecbatana, the capital city of the Aryan Magi.

ALEXANDER HELLENISES
PERSIA

Now that he had gained control over the area, he devoted much time to the finer points of how he would hold such possessions, especially with so many feudal kings loitering about the countryside in their petty kingdoms. Alexander the Great hoped to integrate Greek and Persian culture in a secular, religious and intellectual sense and this led to a situation where his royal court was frequented by Magi and Greek philosophers alike, each performing their oblations for his success. A certain amount of enmity arose in the Greek camp when Alexander was seen to fall under the influence of the Magi. The situation was bound to become even more inflammable as a disgruntled Alexander ordered the execution of Aristotle's relative, the philosopher Callisthenes, for snubbing his deification.

AFTER ALEXANDER'S
DEATH HIS GENERALS
CARVED UP THE
ACQUISITIONS

With the unforseen death of Alexander in 323 BC, the already serious fractures among his generals, became even worse as they hankered for control of the world Alexander had carved. The so-called "Wars of the Successors" erupted as the king's possessions were divided up the hard way; by force. Ptolemy held the western part of Alexander's empire, establishing a dynasty in Egypt that would one day end upon the death of Cleopatra. Being more powerful, Seleucius, and later Antiochus I, took control of Graeco-Macedonian Bactria, and strived to requisition lands in Khorezm and beyond the Oxus river.³¹⁴

GREEK COLONISTS

Greeks of every description came to live there, bringing customs, lifestyles, and Hellenic religious sensibilities and traditions that would linger for century after century.³¹⁴ As time went by the Greeks became more Persian in their outlook.³¹⁴ What emanated from this cultural marriage was the Iranian civilisation of Parthia, which lasted from 238 BC until 226 AD, when they lost power to Ardashir and an entirely new dynasty of Sassanian monarchs. The Parthian Empire was based for the most part on Achaemenid governmental structure, but with substantial Greek influence.³¹⁴

GREEK 'WHITE COLLAR'
WORKERS THROUGHOUT
THE EAST

Greeks formed the nucleus of their administrative engine, to the exclusion of Persian scribes and academics.³¹⁵ A shrewder means to alienate the Magi from the halls of power could not be found. Democratic processes were instituted in many places, where previously there had been absolute feudal monarchies with clear class distinctions.³¹⁵

GREEK ARCHITECTURE

From the reign of Seleucius through to the 4th Antiochus, Greek military outposts, villages, towns and cities flourished throughout much of Seleucia. Their farmers were at one and the same time warriors. This enabled the new regional overlords to cultivate a thriving agricultural sector capable of being defended at a moments notice. Larger cities were modelled on the autonomous Greek states, and very often possessed their own assembly.³¹⁶ Local religious heads, sacred prostitutes and their many holdings and temples were now required to submit to Greek rule.³¹⁷

Hellenic builders turned their hand to planning and constructing Central Asian cities using methods popular back in Greece, and, not surprisingly, their works include stepped theatrical auditoria, temples, not to mention classical Greek sculpting techniques for rendering regional gods in stone.³¹⁸

JEWES BESOTTED BY GREEK
CUSTOMS AND
TRADITIONS DURING THE
OCCUPATION

Under the leadership of the Soghdian aristocracy Saka, Scythians, Khorezmians and Hyrcanians pounced on the decaying remnants of Alexander's Persians acquisitions, and before too long had wrestled control of Hyrcania and Parthia.³¹⁹ From this opportunistic federation arose the dynasty of the Arasids, precursors to the Persian Sassanian empire.

THE JERUSALEM TEMPLE
REDEDICATED FROM
YAWEH TO ZEUS

Greek rule left its mark on Judah too, just as it did elsewhere. During their occupation of Jerusalem many Jews developed a fondness for Greek ways, attending theatres, sporting facilities ... *"They placed no value on their hereditary dignities, but cared above everything for Hellenic honours"*.³²⁰ Owing to the lure of these Graecophilic fads the Jewish temple High priests found it difficult maintaining religious order year by year. Undoubtedly the priests were perceived as rebellious against Seleucid governorship, and this led to the outlawing of Judaism. Crunch time came in 169 BC with Antiochus IV Epiphanes refurbishing Solomon's temple as a place of worship for Zeus (the so-called 'abomination of desolation'), and the profanation of the altar by swine sacrifice. In response a general Jewish

uprising occurred under Judas Maccabaeus, which saw the temple recaptured and rededicated, and the Seleucid rulers evicted from Judah.

JEWES REBEL AGAINST
THE GREEKS

As the power of Macedonia unravelled owing to successive failures on the field of battle, even as far away as Egypt, the eastern Greeks were cut off and forgotten.³²¹ The homogeneous Hellenic presence there entered a period of decline, and finally suffered its *coup de grace* at the hand of the Scythians, and allied Indo-Iranian tribes, like the Parthian Persians and the Saka.³²¹ The spark of Greek influence never fully died out though, for its virility had already inseminated the diverse cultures and religions of Central Asia and Iran.

MACEDONIA
COLLAPSES

Like a phoenix rising from the ashes, the Persian Parthian tribe rebelled against the waning power of the Greeks, under the Arascid dynasty, thereafter gaining a position of sovereignty. Parthian royals were notable for their attempts to resurrect the Zoroastrian teachings, which, during Alexander's reign, had lost the supremacy they had previously enjoyed under the Achaemenids.³²² And so the faith of Zoroaster, not to mention fire and sun-worship experienced heightened popularity. We have them to thank for the reconstructed Avestan texts which had been mutilated by Iskander.

PERSIAN REVIVAL

Aramaic became the script of the era, applied in both domestic and commercial documentation, whereas Ancient Greek saw service only among the Parthian administration. Its use had long been abandoned by ordinary people.³²³ The guiding hand of the Parthian kings prepared the way for the revivification of Zoroastrianism (which was suppressed by the Greeks), which in time led to the foundation of the Zoroastrian Sassanian state in 226 AD.

ZOROASTRIANISM
POPULAR ONCE MORE

The halls in which Achaemenid dignitaries once lived and dined, before the Greeks came, had their lofty roofs supported by equally impressive Greek-style columns.³²⁴ Later, between the 3rd Century BC and the 3rd Century AD, Parthians arranged their massive, oblong, high-roofed feast halls (*iwans*) in groups of four, each hall forming the side of square inner communal courtyard.³²⁴ Clusters of these square iwan arrangements were encircled by a surrounding wall. Parthians had a practice of buttressing their walls, and we also find lasting vestiges of Greek sculpturing and architecture.³²⁴ Thus Parthian monumental masonry was stuck in a time-warp, displaying ancient Mesopotamian beasts, griffons, and Greek iconography such as centaurs.³²⁵

Greek gods, religious traditions and philosophies were never far from the horizon in Parthia either. Parthian kings and their Armenian royal allies are known to have enjoyed the extravagances of Bacchic theatre,³²⁶ and this is something which ensured that they would be erased from Sassanian Orthodox Zoroastrian psyche from the 2nd Century onwards. So favourable an impression did the drunken revelry of Pan and Bacchus leave on the region, that his rites were still being celebrated in Central Asia as late as Islamic times.³²⁷ Though the Dionysian mysteries had by that stage incorporated the extremely ancient worship of Anahita, a goddess also found in Zoroastrian scripture.³²⁷

DIONYSIAN MYSTERIES

Meanwhile Babylonian temples nestled safely into their venerable niches, and were still substantially operative in Parthian times.³²⁸ They had resisted the absorption of religious hybridisations born to this Parthian menagerie of faiths, and would live on into the Islamic era, when they met their doom. Undeniable confirmation of a Babylonian presence within the Persian empire is provided by Darius, since one of his monumental inscriptions was rendered in Babylonian. It was obviously intended for the eyes of his Babylonian subjects. Temple prostitutes such as those once found in Babylon were still to be found in Armenia and Pontus in that day.³²⁹

BABYLONIAN RELIGIOUS
TRADITIONS LIVED ON
IN A RELATIVELY PURE
STATE

Military coordination and cooperation proved difficult to achieve in Parthia.³³⁰ Instead the land was studded with petty kings and princes who fielded their own forces, multi-national armies which may or may not have lent support to the Parthian kings.³³⁰ Such untamed arrangements left social unity vulnerable to the lobbying of kingmakers, or nobles intent on feathering their own nest.³³⁰ Some Parthian rulers were better able to muster support from lesser kings, with the result that they, and Parthia, fared better at those times.³³¹ But a house divided is one that is destined to fall, and for this reason Parthia fell victim to its own internal bickering.³³² It caused them to lose control over the silk routes which sustained them, and made them an easy target for Pompey and Trajan's legions. Only the Roman Empire and the prosperous Kushan empire to their east could profit from this.

PARTHIAN EMPIRE
STUDDER WITH PETTY
KINGS

Parthia's successors, the Sassanians, governed Persia from 226 AD through to the year 651 AD. I will omit further discussion on the Orthodox Zoroastrian Sassanian State at this point purely because they are discussed elsewhere in this book.

To the east of Iran lay the Kushan empire (50-250 AD), which was led by the Great Kings, the Sons of Heaven.³³³ They dominated a large part of northern India, Central Asia and Afghanistan, and many arterial trade routes along the silk road. But Kushan was itself subservient to Zoroastrian Sassania, with whom they presumably had strong contacts.³³³ An unprecedented spectrum of religions intermingled in Kushan lands.³³⁴ One could just as easily find Zoroastrian fire priests, preachers of ancient Greek philosophies, Chaldeans, Hindu Brahmins, Manichees,

KUSHAN EMPIRE

MANY DIFFERENT
RELIGIOUS TRADITIONS
INTERMINGLED
THROUGHOUT EURASIA

Buddhists, Chinese Taoists, Confucians and Christian priests.³³⁴ In this climate of coexistence, doctrinal purity was difficult to maintain. Antiochus' funerary rites were jointly performed in a Greek and Persian manner. As conservative as it may have been, Magianism readily accrued Oriental asceticism in certain areas.³³⁵ Greek and Buddhist philosophers likewise shared whatever they saw fit.³³⁶ Owing to a predominance of Buddhists, Kushan became a staging point for the intensive Buddhist missionary bombardment of distant China.³³⁷ With the wandering monks came countless Chinese monasteries, which sprouted from the mountains, hills and arid plains like wild-flowers after a desert shower.³³⁷

Kushan's extensive trade contacts are highlighted by their material culture, which showed evidence of Chinese, Indian, Greek, and even Egyptian craftsmanship.³³⁸ Its pre-eminence in Central Asia diminished after 250 AD, leaving the region open for later Kidarite and Hephthalite control.³³⁹ Much of the countryside was governed by wealthy regional lords known as the *Dihqans*.³⁴⁰ The affluence of these nobles was measured by the extent of their trade and agricultural holdings, and the size of their castles, manor houses and private armies.³⁴⁰

Khorezm, one of the most lavish and important cities in the entire region, fell into decline. After a lull in progress spanning the 300-400's AD, the Khorezmian city-state once again emerged as an illustrious promoter of advancement under the Iranians.³⁴¹ Extensive irrigation projects, astronomical observatories, educational, and profitable craft centres were built.³⁴²

TURKIC EMPIRES

The next major regional development was the formation of two Central Asian Turkic empires between 552-734 AD, the first of which collapsed around 630 AD.³⁴³ The Turkic ethno-cultural complex was diverse, for they inhabited lands ranging from Mongolia through to Scythia.³⁴⁴ Ancestral legends depict them as having originated in the Altai mountains in distant Siberia, where they were led by demi-gods. These same rulers continued to govern them throughout their history.³⁴⁵ From the 6th Century AD Turks displayed a strong desire to usurp mastery of the trade routes throughout the various regions in which they lived. Turkic mounted war bands earned their notoriety and power by sacking the immense wealth of the Chinese Empire, at every opportunity. This prosperity coaxed many of them to revel in the luxuriance of their spoils. Turkic nobles became enamoured with Chinese ways, and this resulted in their Sinisation, and subsequent pacification. The raiding which brought them their pilfered riches became less, and their status as a regional power waned accordingly. The Khagans were further lulled into a false sense of security by arranged marriages between the Chinese and Turkic highborn. Now inside the Turkic elite the Chinese were better placed to exploit inherent inter-tribal animosity. Imperial forces were then able to pounce on the squabbling khaganates and through a series of battles, picked them off one by one.

TURKISH CONVERSIONS
TO TAOISM AND
BUDDHISM BROUGHT
PACIFICATION

In the 7th and 8th Centuries the Turks attempted to regain their grip on Central Asia, but this came to nought with the assassination of Bilga Khan in the year 734 AD.³⁴⁶ Grandiose plans for the establishment of urban centres and monasteries to house their Taoist and Buddhist adepts were abandoned, since it was thought that becoming sedentary, and adopting pacifistic lifestyles would rob them of the warrior spirit that made them great. Nevertheless some favoured urbanisation.³⁴⁶ After an illustrious career the second Empire came to a violent end, causing many Turks to disperse throughout Asia in every direction. It was succeeded by the Uighur Empire, which, within a short space of time, became the foremost champion of Manichaeism, a nominally Christian heresy. Eventually they turned Muslim.

The last days of the Magi

MANY DIFFERENT RACES
HAVE INHABITED RUSSIA
THROUGHOUT ANTIQUITY

For many, many hundreds of years leading up to the 10th Century AD, successive waves of invaders poured through Russia and the Balkans, as they trampled through the steppes and entered eastern and western Europe from Central Asia. From that time the Balkans lost its old Latin title *Haemus*, earning the new Central Asian name *Balkan* (from the Kalmyk language).³⁴⁷ These intruders were the numberless Scythians, Sarmatians, Goths, Taurians, Huns, Cimmerians, Avars, Antes, Alans, Roxolani, Slavs, Serbs, Croats, Vlaxhs, Volokhi, Magyars, Bulgars, Khazars, Pechenegs, and Kipchaqs, many of whom were adherents of Zoroastrianism, Manichaeism, Buddhism, shamanism and other such oriental faiths. Rarely do scholars ever attempt to explain the reasons for such mammoth population dislocations. It is hard to believe that entire nations just wandered into Europe without some apparent cause. Considering the large numbers involved, it is far more likely they were the victims of catastrophes capable of afflicting entire communities, things such as plagues, water shortages, failed seasons and malnutrition, or religious, ethnic or military persecution.

As fugitives they exited regions in which elaborate formal religions thrived. Most if not all were party to such creeds. Since the pagan priests of the eastern Europeans, and the religious figureheads of these many

invaders/immigrants were very often Magi (or at the very least inheritors of Magian beliefs), we have just cause to ask why Magi chose to emigrate from their Iranian holy lands in the first place. The solution to this perplexing question comes from an obvious source, namely the holy texts of the Magi.

The *Avesta* and the *Pahlavi* writings of the Zoroastrians recount in graphic detail the last days of Magian rule in Iranian Sassania, and provide blow by blow accounts of “the desolation of localities and settlements”. According to the Magian holy texts, Iran’s demise did not happen in a single moment, but was the culmination of three separate holy wars directed against their homeland, the first by Turkic “devil-worshippers”, the second by Byzantine military forces, and the last by Muslim Arabs. The last and most disastrous of these invasions saw the collapse of their social unity, logistical infrastructure, and communication network (a “pony express” system with a delivery motto like that of the US Mail Service).³⁴⁸ This demolished whatever cohesion existed between the isolated pockets of Iranian princes still offering resistance to the invaders. In addition to that, their elaborate irrigation systems fell into disrepair, guaranteeing the withering of their lush desert gardens and crops, which they needed to sustain their people. Much, but by no means all, of Iran is a parched desert wasteland. Through their ingenuity the Persians developed the so-called foggara technique for tapping into subterranean water sources and basins. This entailed the sinking of periodic shafts down to water level, along the length of the water course, and then joining these shafts with lateral connector shafts. Once completed these shafts constituted a water delivery system relatively impervious to evaporation in the unforgiving desert sun. Spent portions of the grid could be requisitioned for use as sewer system. One of the oldest tricks in siege warfare is cutting off a city’s water supply. You’d be surprised how quickly a city of 100-500,000 folds once its water supply is interrupted by military or ecological intervention. In the arid environment everything begins to die, whereas in the presence of water the sun brings life and abundant growth.

Most importantly, the extinguishing of the Millennium-old holy fires (*Farbag*, *Gushnasp*, and *Burzen-Milhr*), plus the eradication and expulsion of the Magi who could re-light the holy flames, which were the focus of their spiritual life, utterly demoralised the Iranians, and amplified the hopelessness of their plight.

We shall now explore the downfall of their religion and their society, because in many ways the story has a direct bearing on the nature and consolidation of pagan Slav dualistic religion in eastern Europe during the 7th-10th Century AD. In sadness the white Magi recounted thus;

ENEMIES CONVERGE ON
PERSIA, AIMING TO
FINISH IT OFF ONCE
AND FOR ALL

WATER IS LIFE. WATER
ALLOWS MASSIVE
POPULATIONS TO
INHABIT OTHERWISE
INHOSPITABLE DESERTS

Fig 27. King Chosroes II wears a winged dynastic helmet. It also has horns and a sun disk between them. Similar headress were worn by Egyptian princes in pharaonic times.

“And that which was of steel is the reign of King Chosroes son of Kexad, when he keeps away from this religion the accursed Mazdak, son of Bamdad, who remains opposed to the religion along with the heterodox. And that which was mixed with iron is the reign of the demons with dishevelled hair of the race of Wrath, when it is the end of the tenth hundredth winter of thy millennium, O Zarathustra the Spitaman (Spitama meaning ‘the white’).....”³⁴⁹

Ahura Mazda spoke thus: “Righteous Zarathustra! I will make it clear: The token that it is the end of thy millennium (somewhere near the year 10,000 of the Zoroastrian calendar), and the most evil period is coming is that a hundred

THE RACE OF WRATH

ENEMIES CONVERGE ON
AN AILING PERSIA

kinds, a thousand kinds, a myriad of kinds of demons with dishevelled hair, of the race of Wrath, rush into the country of Iran from the direction of the east, which has an inferior race and race of Wrath. They have uplifted banners, they slay those living in the world, they have their hair dishevelled on the back, and they are mostly a small and inferior race, forward in destroying the strong doer....the race of Wrath is miscreated and its origin is not manifest. Through witchcraft they rush into these countries of Iran, which I, Ahura Mazda, created, since they burn and damage many things; and the house of the house-owner, the land of the land-digger, prosperity, nobility, sovereignty, religion, truth, agreement, security, enjoyment, and every characteristic which I, Ahura Mazda, created, this pure religion of the Mazdayasnians, and the fire of Vahram, which is set in the appointed place, encounter annihilation, and the direst destruction and trouble will come into notice. And that which is a great district will become a town; and that which is a great town, a village; and that which is a great village, a family; and that which is a great family, a single threshold.

RAIDERS WALK ABOUT
PERSIA AS IF THEY WERE
SOVEREIGN LORDS

"...the reign of Wrath with infuriate spear and the demon with dishevelled hair, of the race of Wrath, the meanest slaves walk forth with the authority of nobles of the land..."³⁵⁰

CHRISTIAN FORCES

"...after the ill-omened sovereignty of those of the race of Wrath there is a fiend, Shedaspah of the Kilisyakih (the ecclesiastics/ Christian priests - and bearing in mind the supposed time frame of the account, they could be either Byzantine or Nestorian Christian Priests), from the countries of Salman (near the Tigris River); Mhaxan-dad said that these people are Ruman, and Roshan said that they have red weapons, red banners and red hats. It is when a symptom of them appears, as they advance, O Zarathustra, the Spitamam the sun and the dark show signs, and the moon becomes manifest of various colours; earthquakes, too, become numerous, and the wind comes more violently; in the world want, distress, and discomfort advance the sovereignty for the vile, and they are in hundreds and thousands and myriads. They have the red banner of Shedaspah of Kilisyakih, and they hasten much their progress to these countries of Iran which I, Ahura Mazda, created, up to the bank of the Arvan, some have said the Frat river, "unto the Greeks dwelling in Asuristan; they (the Rumans) are Greeks by strict reckoning, and their Assyrian dwelling (Anatolia) is this, that they slay the Assyrian people therein, and thus they will destroy their abode, some have said the lurking holes of the demons".³⁵¹

And as the dualistic, animistic, demon-worshipping Turks went about their destruction of Iran, further misfortune was to come to the Iranians via the Christian Romans (who were really Greeks, ie; the Byzantines) and Arabs. According to the Magi the Byzantines apparently had another objective there, namely to destroy the subterranean Assyrian temples then found in Iran.

THE FINAL BATTLES

"miscreated by wrath, were, through the war of the religion, in the combat of Sped-razur (the Hoary Forest) some have said it was in Pars: and the third when it is the end of thy millennium, O Zarathustra the Spitamam! when all three, Turk, Arab and Ruman come to this place, some have said the plain of Nisanak."³⁵²

The rapid decline which they inflicted upon Sassanian civilisation, and the tragic dispersion of the Aryan Iranian Magian race was recorded in the following way;

CHRISTIANITY SAID TO BE
RELATED TO
ZOROASTRIANISM

"There is this marvellousness, really overthrowing the blessedness of the knowledge of former government, revealed by the Avesta about the ninth and tenth centuries (of the Zoroastrian calendar), that which is an indicator of circumstances now visible such as the dispersion of the sovereignty of Iran from the country of Iran, the disturbance of just law and custom, the predominance of those with dishevelled hair, and (at roughly that same time the prevalence of) the haughty profession of ecclesiastics."³⁵³
Also the collection and even connection of all their four systems of belief (which the late Prof west noted as Zoroastrianism, Mohammedanism, Christianity, Judaism or Idolatry) together for the upper rank; the coming of one working with the sacred beings to the inferior (a defiler of the worship of the sacred beings), the transient, and the captive of the period; and the dispersion and downfall of dependent and public men in their time.

MASS APOSTASY

The disappearance of a disposition for wisdom from the foreigners in the countries of Iran, which is an indication of shame at the truth of the religion, and at the praise, peace, liberality, and other goodness whose provision has lodgement in a disposition for wisdom. Also the abundance of the decisions of apostasy, the falsehood, deceit, slander, quarrelsomeness, fraudulence, ingratitude, discord, stinginess, and other vileness whose real connection is a disposition to devour, neglecting heedfulness for the archangels of fire, water, and worldly existence. The oppressiveness of infidelity and idol-worship, the scarcity of freedom, the extreme predominance of avarice in the individuals of mankind, the plentitude of different opinions about witchcraft, and the much inclination

*of many for paralysing the religion of the sacred beings.*³⁵³

*The annihilation of the sovereignty of mankind one over the other, the desolation of localities and settlements by severe actual distress, and the evil foreign potentates who are, one after the other, scattering the valiant; the destruction among cattle and the defilement of the spirit of enjoyment, owing to the lodgement of lamentation and weeping in the countries of Iran, the clamour of the demon-worshipper in the country, and the unobtainable stature, non-existent strength, blighted destiny, and short life of mankind. Also the abundance of ordinances of various descriptions, the approval of the apostate among tyrants (it was an anathema for the white Magi to countenance the reign of an unjust ruler, especially one who was an apostate) and the non-approval of the Zoti (Zoroastrian High Priests) who is well-disposed and wise, the coming of the Zoti (high priests) to want, and all the other adversity, disruption, and running astray which are overpowering even in districts and localities of the countries of Iran.*³⁵³

*The maintenance of no ritual of the religion of the sacred beings; the weakness, suffering, and evil habits of those of the good religion; the lamentation and recantation of the upholders of the religion; and the wickedness and extermination of good works in most of the countries of Iran. Also much other misery in these two centuries is recounted in the Avesta, which passed away with them (the Avesta slid into oblivion with the very people who observed its teachings) and is also now so visible therein, and manifestly occurs in them.*³⁵³

The religious hierarchy of the Magi disintegrated at that time, so that the white Magus priests of Zoroaster wandered aimlessly and forlorn in that unforgiving time, and came swiftly to destitution. Shunned by the masses who abjured their faith in the face of such unflinching adversity, the white Magi faded from sight. Yet other Magi became corrupted by the lifestyles of the invaders, and crossed over into their ways.

*This, too, is a statement as to them, which revelation mentions thus: "That is the age mingled with iron (that is, from every side they perceive it is of iron) in which they bring forth into life him who is a sturdy praying apostate. This is their sturdiness, that their approval is unobservant of both doctrines; and this is their praying, that whenever it is possible for them they shall cause misery to others; also when an old man publicly advances into a crowd of youths, owing to the evil times in which that man who is learned is born they are unfriendly to him that is, they are no friends of the high-priests of the priestly assembly. They are freely speaking (that is, they utter phrases smoothly), they are wicked and are fully maliciously talking, so that they shall make the statements of priests and high-priests useless; they also tear asunder the spiritual lordship and priestly authority, and shall bring the ruler and priestly authority in to evil behaviour as vicious, but they bring together those who are singular (ie; individualists more interested in their personal welfare than that of the state).*³⁵³

Anything they say is always mischief, and that district which had a judge they cast into the smiting precinct, into hell; it is misery without intermission they shall inflict therein, till they attain unto damnation through the recitation they persevere in, both he who is the evil progeny disseminated by the apostate and he who is the villainous wolf full of disaster and full of depravity. ...

Then, when character and wisdom recede from the countries of Iran (that is, they depart), so that destitution and also winter, produced by demons who are worshipping the demon, rush together from the vicinity of disaster on to the countries of Iran, where even rain becomes scanty and pestilence is secretly advancing and deceiving, so that deaths become numerous; thus even he of perverted wisdom, who is wicked, and the apostate also, who is unrighteous, rush together in companionship. As what one says they all exclaim thus: "Consume and destroy, O ruler! for it is to be consumed and destroyed by thee; destroy even the fire, consume even as food those who are the protection of the association enforcing religious obedience, and those leading on the poor man of the righteous dispensation for guidance". So that they shall make him thoroughly detached and smite him;... And about the ninth and tenth centuries this also it says, that, as that age proceeds, this is what occurs, O Zarathust of the Spitamas! when many apostates utter the righteousness of priestly instruction and authority, which is wickedness towards me, they cause begging for water, they wither vegetation, and they put down all excellence which is due to the manifestation of righteousness". ... This, too, he says, namely: "Of those, O Zarathust of the Spitamas! who come in the 9th and 10th Centuries, I tell thee that they are of the fiend of Greed (Azi); it is in her womb that they are to be fashioned, they who assist those who would be vicious, through pre-eminence in leadership, or through excellence in subserviency".³⁵³

And this, too, it say about them: "Those men are much to be destroyed." so it is said by Ahura Mazda that "these who are righteous, who carry away a corpse in this world, distress their fire, according to every high-priest, and even long-flowing water; their

bodies, which are really cesspools of a terrible character, become very assisting for the tormentors whose corpses are grievously wicked. Concerning them I tell thee, O Zarathustra of the Spitamas! that, in the 9th and 10th Centuries, there come those who are the brood of the fiend and the wound-producer of the evil spirit; even one of them is more to be destroyed than ten demon-worshippers; they also produce extermination for these who are mine, for these of my religion, whom they call a provision for destruction (that is, when it is possible to live in our way, and ours are wicked, they diminish in superiority).³⁵³

THOSE WHO
EXTERMINATE

Even the iniquity that they shall commit in leadership and subserviency, the sin which is smiting thee, they call a trifle, O pure one of the Spitamas! and the smiter, they say, is he whom these of thy religion of Mazda-worshippers smite" They foster villainous outrage, and they say the best work for mankind is immoderate fighting whose joyfulness is due to actions that are villainous; those too, that they exterminate their own souls, they exterminate the embodied existences of the world, and they produce lamentation for the soul, and even the religion, as regards what is the mode of controlling orthodox people together with the iniquitous of the same period"³⁵³

THOSE WHO ENTER
COMBAT FOR FUN

EVIL WIZARDS

This, too, it says, that Zarathustra enquired thus: "Is he, O Ahura Mazda! who is a Kai or a Karap (Prof west: two forms of wizards), or he who is a most evil ruler in authority, mingled again with the good?" And Ahura Mazda spoke thus "Even he". Zarathustra also enquired thus: "Is he, too, O Ahura Mazda! who is one of those of the good sovereignty, mingled again with the good; or these such as the Kaisar and Khagan? (Prof west: the rulers of the devil-worshipping Turkic invaders) And Ahura Mazda spoke thus "Even that former, O Zarathustra!" ... those three manifest branches, that worship the fiend with simultaneous worship, are really these who march for eminent service on horses, even the Turkish demons with dishevelled hair, the Arab, and also Shedaspo the ecclesiastical Aruman (Prof west: the Roman (Byzantine) Emperor ie; Caesar).³⁵³

BYZANTINE-PERSIAN
WARS

These passages from the Magian texts reflect what we already know historically. The end of their civilisation came as a result of the three-fold foe - the Turkic devil-worshippers, Byzantines and Arabs.³⁵⁴

The shutdown of Sassania was well and truly underway following the bitterly contested Byzantine Crusade against the Zoroastrians in 622-628 AD. This war was merely the culmination of centuries-long warfare between the Roman and Persian states.

HOLY CROSS CAPTURED
BY THE PERSIAN KING

The 7th Century AD Roman counter-offensives against the Magians were heavy handed and vengeful to say the least. After all, the Zoroastrians had previously taken Edessa, Jerusalem, and what's worse the greatest relic of Christianity, the Holy Cross upon which Jesus was supposed to have been crucified. Such was the inflamed ideological arena in which Magians and Christians fought it out to sever the ancient connection between their two faiths, since mass conversions of the former had given rise to most of the latter throughout much of the east. The reason why Magians so readily mutated into Christians is a story in itself, and one I shall not indulge in at this point.

GUSHNASP FIRE TEMPLE
DESTROYED

Anyhow, steamrolling Byzantine forces crippled them to the point where political and religious disunion, coupled with a fractured organisational and logistical structure, made them incapable of adequately repelling the massive Arab Muslim incursions, which began shortly after the cessation of hostilities with the Byzantines. Notable in this Byzantine campaign was the use of marines to penetrate deep inside Iran, whereby they ransacked Gushnasp,³⁵⁵ one of the three greatest Magian fire-temples to have ever existed, and made their way to just outside Ctesiphon, the heart of Sassanian royal power. The death blow was not far off.

MAJOR MILITARY LOSS IN
637 AD

For the Magi, the year 637 AD marked one of unparalleled tragedy. Mohammedan forces routed whatever troops the Sassanians had mustered, during a battle on the plains of Harran.³⁵⁶ From there the Muslims grabbed much of Iran and the Caucuses on the western shores of the Caspian.

THE FARR

If the Arab general Qutayaba was to instal Islam in any meaningful way, and gain prestige for Allah and the prophet Mohammed, he desperately needed military victories of ideological importance. And so it became imperative that he subjugate the Farr which was at that time under the control of the pagan Iranian Sassanian monarchy and the Orthodox Zoroastrian religion. The Farr is a geographical term scattered throughout early Iranian literature, and especially noteworthy in the early medieval Persian epic of the kings 'Shah-Nameh' first noted by the Muslim writer Hakim al-Qasim Firdowsi.³⁵⁷ In essence the romanticised word applied to Central Asia and Iran stretching back into antiquity when the divine ancestors of the Magians held sway. It was a land with an almost supernatural aura hanging over it; overseen by god, ruled by kings whose authority to govern the said zone

was by divine right.³⁵⁷ By defeating the last of the Zoroastrian kings in open combat, against the backdrop of this mythical landscape, Islam would snap the soul of ancient Iran. Certainly from the Magian perspective the military collapse was as haunting as it was catastrophic in a military and governmental sense, for it sounded the death knell for their belief system, and the beginning of a new.

In disarray, the Sassanid leader Yazdegird retreated to the city of Merv, situated south-west of Gurganj in Khorezm flying an apron from a battle standard.³⁵⁶ Yazdegird was assassinated some 14 years after the debacle at Hamadan (Ecbatana), thus prompting his hereditary successor Peroz to take flight into China.³⁵⁸ Into this vacuum fed tens of thousands of Muslim settlers from Arabia, lured by the promise of land grants.

In this initial phase of Islamicisation, Qutayba was installed as the most influential of the Umayyad Islamic governors.³⁵⁹ To realise the resettlement program of his masters required the depopulation of Merv and Khorezm, either by genocide or selling the Magians into slavery.³⁵⁹ Muslim documentation tells us that Magian archives, educational institutions and books were destroyed, and the intelligentsia liquidated, at Khorezm.³⁵⁹ In one stroke a thousand years of Persian and Babylonian civilisation evaporated. By Al-Biruni's recollections Qutayba further eliminated opposition to the conquests by re-opening wounds in Iranian society, and turning the protagonists on each other. Whether the Persians liked it or not, Arabs were there to stay.³⁵⁹

Early Arab leaders were open to the possibility of negotiations with Iranian infidels but only if they remained humbly obedient and submissive to their new overlords. This is how Qumis and Rai escaped the typical predations, and gained concessions for the continuation of their faith, by handing over the princely sum of half a million dirhems (Iranian variants of the Greek drachmas introduced after Alexander's time).³⁶⁰

In spite of the terrors inflicted on the white Zoroastrian Magi and their flock, they still found some way of surviving. As the irrigation channels which turned their desert cities into livable oases capable of supporting phenomenally-sized populations dried up, many of the wizards, and fellow Iranians faithful to the creed of Zoroaster, withdrew to more secluded locations. According to Al-Masudi, the magicians still possessed well-fortified enclaves during the Middle Ages, which harboured practitioners of the old faith, even as late as the 10th Century AD. While they had lost substantial geographical regions to the Muslims, they were regrouping in strength, and well able to maintain sovereign Magian rule over certain areas. For instance in 913 AD Abbasid Islamic forces were forced to retire from Tabaristan (on the Western Caspian seaboard) at the hand of a Magian army. Many of their forces garrisoned massively-walled cantonment valleys on the Caucasian seaboard, pre-positioned there to fight off Islamic amphibious intrusions. Further inland others manned formidable mountain fortifications once built there by the Arasid kings of olden Iran.³⁶¹

The city of Istakhr, the location of the wizards' greatest library, remained psychologically significant to the Magi in Islamic times, and for this reason a spirited resistance took root there in the 10th Century AD, which the Muslims spared nothing to suppress. The uprising ended with *"fierce fighting ... siege engines and killing therewith 40,000 of the (Magian) Persians and wiping out most of the noble houses together with the chiefs of chivalry"*.³⁶²

As years went by the ferocity of the Islamicisation push died down somewhat. Judging by Al-Nadim's mention of Muslim religious texts dedicated to refuting Magianism and other diverse pagan faiths,³⁶³ Islamic preachers no doubt hoped to convert the remaining pagans rather than kill them. After all, forced conversions are technically forbidden by the *Qur'an* (*"There shall be no compulsion in religion"*),³⁶⁴ but that never stopped some people in the past Liquidating Magians might not have been the right thing either. On Judgement Day, Muslims expect to see themselves standing in a great company of many and varied faiths, each awaiting their trial before God and his angels. *"As for the true believers, the Jews, the Sabaeans, the Christians, the Magians, and the pagans, God will judge them on the Day of Resurrection"*.³⁶⁵ Magians would be there too.

Once Islam was firmly entrenched in both religious and governmental terms, alien creeds posed minimal threat to the new order, and a spirit of tolerance flourished. Fugitive Magians lived an existence quite separate from that of Muslims, yet a certain number chose to remain behind and slotted into Islamic society fairly well. As a result of this, most of the Abbasid Caliphate's administrative apparatus was still being run by Magian civil servants during the Mediaeval era, still wearing the tell-tale white linen shirts and *kustik* belts, the traditional dress of the Magians.³⁶⁶ Yet others served as court astrologers to the Caliphs. In the end, Muslim authorities became so tolerant, that the Yezidis, the surmised devil-worshippers of Iraq's Basra marshes continued to live there unmolested, and still do, to this very day. After all the *Qur'an* maintains that those who maintain an exterior appearance of Islamic piety gain social rights not enjoyed by non-believers.

But as a rule, the fate of the blood-Magi was vastly different to that of their followers, the Magians. The Magi, together with their books of ancient lore and fire temples, were destined to be systematically exterminated by Muslim devastators, particularly during the harsh rule of Umar II.³⁶⁷ Paradoxically many of their treatises on the ancient sciences found their way into Islamic academic institutions, to be fully investigated. Al-Nadim reported how one group of Magians fared after having surrendered themselves to Islamic authorities, to convert to the faith of the *Qur'an*.³⁶⁸ These Magian turn-coats who apostasised to Islam the Magi called *Mutazalik*. So heinous was apostasy in their eyes, that the Magi professed that it was better to suicide than abjure the religion of Zoroaster. In a scene that was probably repeated many, many times over since the advent of the 7th Century Islamic conquest of Central Asia, the Muslims were only too happy to accept the prospective recruits whole heartedly. Not so the white Magus, who was just as eager as his followers to become a Muslim. They slaughtered him on the spot. Al-Nadim explained that they did this simply because he was a Magus priest. He had the blood, the blood that others once wished for but could never have; once a Magus, always a Magus. By killing him they were helping to eliminate once and for all the powerful lineage that was the backbone of Magianism. To kill a Magus was to kill everything that he held so dearly in his heart, his impressive command of the sciences, and the prayers and rites committed to memory during at least a decade of rote learning and tuition. Most of all they were killing the only folk able to pass the blood and faith on to their offspring, and the only figures permitted to conduct their foremost ceremonies. With the death of each magician the chances of the Magian faith ever resurrecting itself from the ashes of what once was grew less and less. Accordingly Islam waxed stronger.

Some Magus-priests stood firm in an overwhelmingly Islamic world, unsuccessfully attempting to re-muster support for the faith. Prince Mazyar's failed rebellion was beaten down in 854 AD.³⁶⁹ The *Muslimiyah* was a Magian-Muslim sect of uncertain size, begun by one Abu Muslim, a self-styled prophet of Zoroaster.³⁷⁰ According to his followers Abu Muslim would make a dramatic return in the distant future to reinstall the faith of the Magi, and this is probably connected with Iranian teachings concerning the Mahdi, a religious teacher who will one day return to put an end to the Jihads, ushering in an unprecedented period of peace and prosperity for the region.

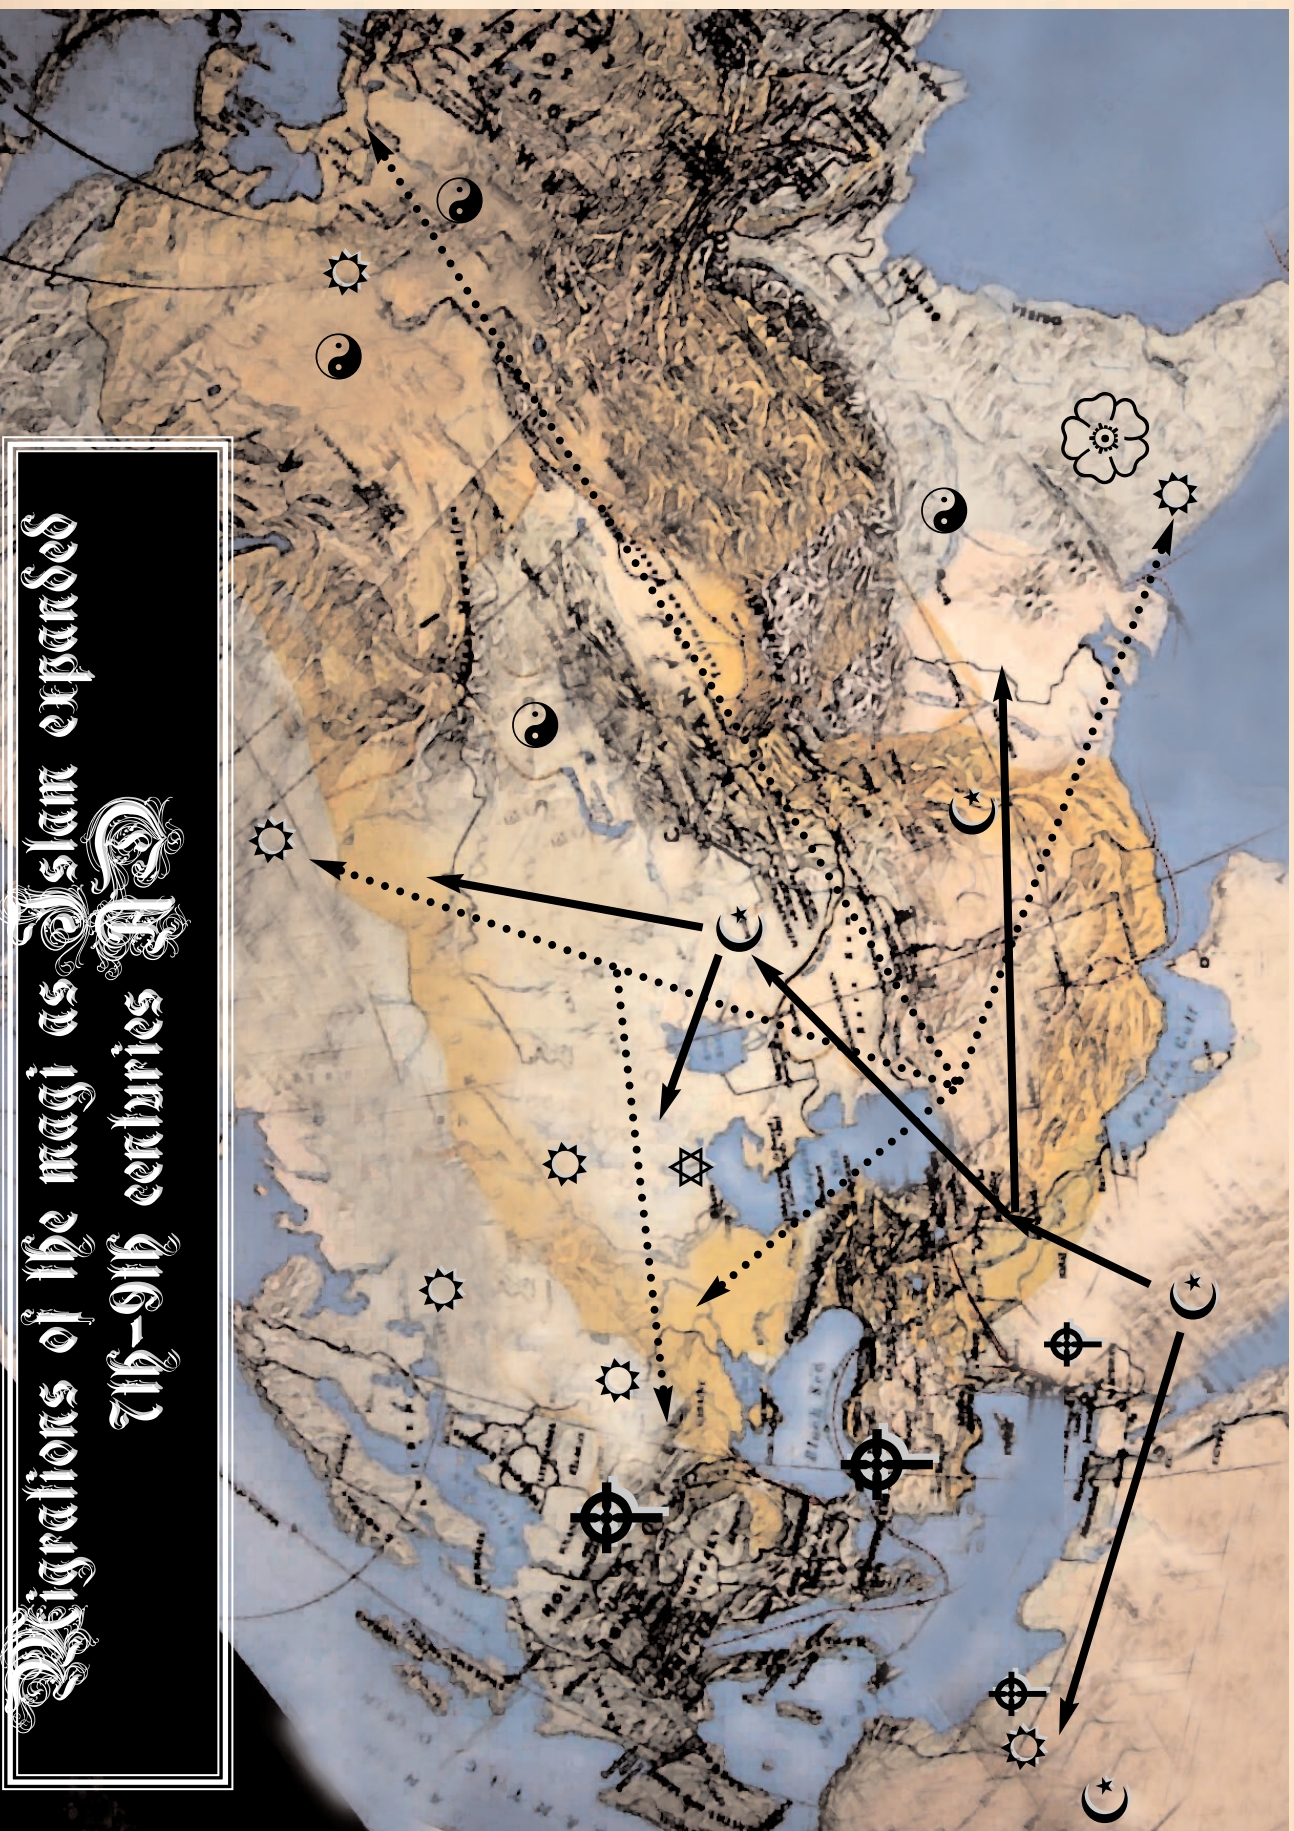

The exodus

With death constantly staring them in the face as the Islamic crescent overshadowed Central Asia, and Iran, many Magi logically chose one of the last courses of action available to them; to migrate eastward into India or China, north into the Siberian forests, or westward onto the great Russian steppe (the mouth of the Volga is only 800 km's from Khorezm), and thence into the Balkans, the Baltic and other little-known locations.

Chinese annals and substantial Iranian archeological remains in China tell us that thousands of Magians sought refuge in the Far-East too.³⁷¹ Most probably reached there after a 5,000 kilometre journey across the 3-7,000 metre-high Tien Shan range. They arrived there firstly as small cogs in a large oriental trade machine, and the last wave of them rolled in contemporaneously with the collapse of the Sassanian empire during the reign of King Chosroes II. The final Sassanian King of Iran was amongst those who preferred a life of exile in China, and in 651 AD he packed up his royal heirs and went to live under the protection of the Tang dynasty.³⁷¹ As a destination for the dispossessed, China was probably highly favoured, especially when one considers the extensive diplomatic and trade connections which they enjoyed with successive Chinese emperors, particularly during the 5th-6th Centuries AD. The number and types of books spirited away to their oriental havens by the Magians went unrecorded, but it is difficult to accept that the Muslims succeeded in destroying or acquiring everything they possessed on the sciences.

The better documented refugees sailed to India in the 10th Century AD, or trekked a taxing 2,250 kilometre route across the 5,000+ metre-high Hindu Kush Mountains. There they were called Parsees, which meant Persians. In the 20th Century the Parsees are all that officially remains of the Magian religion besides small pockets living in Iran and the West.

Other Magian colonists continued their religion in the vicinity of the Ural mountains, and beyond its ridges, out in the forests of Siberia. There the inhabitants were largely animists, or the inheritors of Aryan pagan religious customs, particularly in the form of Buddhism. Others made a brief expedition over much kinder terrain into once-Scythian districts, into pagan eastern Europe and the Balkans (barely 800-2,000 kilometres away, depending on how far they wanted to penetrate into the area). The really smart ones probably boarded ships which took them across the Caspian, and straight up the Volga into new lands, and a new life. The only thing they did not count on

Migrations of the magi as Islam expanded
7th-9th centuries AD

THOSE WHO SETTLED IN EASTERN EUROPE WERE LEFT HIGH AND DRY FOLLOWING THE CONVERSIONS TO CHRISTIANITY

though, was the Christianisation of these heathen nations in the 9th and 10th Centuries AD, roughly 300 years later. After the loss of these final western Magian refuges to Orthodox and Catholic Christianity the Magi knew no safety. Without a home or land to call their own, many wizards and witches took their chances at surviving in a Christian environment, while the even more committed of their adherents took to the roads, moving into the Baltic, where paganism still flowered until suppressed by the Teutonic knights during the especially violent Northern Crusades of the 13th Century AD.

Owing to many similarities between the beliefs of the Magi and those of the Christians, Magian and Christian religious themes intermingled. Subsequently, heterodox forms of dualistic Christianity began popping up in Eastern Europe as Magians and Christians interacted inside the parishes. Over time these new demi-pagan Christian teachings gained momentum, drawing more and more Church vitriol, as apostolic Christianity, a more Jewish vision, became stronger and sought to purify the faith from the influence of Magianism.

Later in this book you will explore the life and times of the heretical Christian witches and wizards, a remarkable story beginning with the journey of the Magi at the birth of Jesus Christ.

The extent of the Magian diaspora is perceptible in the following words, found in locations many thousands of kilometres apart.

TERMINOLOGIES PERTAINING TO THE MAGI ARE FOUND OVER A HUGE GEOGRAPHICAL AREA

LANGUAGE	WORD	MEANING
Old Persian	<i>Magus</i>	"a Magus" ³⁷²
Greek	<i>Magos</i>	"a Magus" ³⁷²
Latin	<i>Magus</i>	"a Magus" ³⁷²
Latin	<i>magicus</i>	"magical"
Arabic	<i>Al-Madjus</i>	"a Magus" ³⁷³
German	<i>magishch</i>	"a Magus" ³⁷²
Spanish	<i>Magoa</i>	"a magician"
Hungarian	<i>Magoch Magus</i>	"a pagan priest who keeps the bonfire"
Sassanian Pahlavi	<i>Mog</i>	"a Magus" ³⁷⁴
Lithuanian	<i>Mag</i>	"a magician, or wizard" ³⁷⁵
Old Russian	<i>Mag</i>	"a magician, or wizard" ³⁷⁵
Old Russian	<i>magiya</i>	"magic" ³⁷⁵
Estonian	<i>Maag</i>	"a magician" ³⁷⁵
Old Chinese	<i>Myag²</i>	"a magician" ³⁷⁶
Babylonian	<i>Rab-Mag</i>	"Chief Magian" ³⁷⁷

Other interesting terminologies exist in Eastern Europe, words once related to the Magi and the specialised roles they undertook.

Slovak	<i>Bieloknyazi</i>	<i>Bieloknyazi</i> were heathen white priests known to the Slovaks. ³⁷⁸ It translates as "The White Princes".
Magyar	<i>Arbis</i>	A doctor or herbalist.
Old Russian	<i>Arbui</i>	"A priestly sacrificer versed in the old pagan rites" ³⁷⁹ The Old Russian verbs <i>arbovati</i> or <i>arbuyu</i> meant "to perform the pagan religious ordinances" ³⁷⁹
Finnish	<i>Arpoja</i>	"A pagan priest who foretells the future" ³⁷⁹ Among the Finnish Mari tribe they were called <i>Arbuj</i> , which is derived from the words <i>ar</i> ("intellectual") and <i>-buj</i> ("head"). ³⁷⁹ Finnish pagan priests were therefore part of an intellectual class.
Magyar	<i>Baksa</i>	A pagan priest knowledgeable in the sciences.
Kirghiz	<i>Baksy</i>	A sorcerer skilled at healing, and fighting off the demons responsible for illness.
Tibetan	<i>Bhikshu</i>	A Tibetan Buddhist monk.

From historical and folkloric sources we know that certain pagan musicians performed a religious role, which continued well into the Christian era. For this reason I include the following words;

Old Russian	<i>Skomorokh</i>	A minstrel-poet
Magyar	<i>Harsany</i>	A minstrel-poet

And then there were the witches dedicated to evil.

Magyar	<i>Garabancias</i>	A warlock.
Serbo-Croat	<i>Garabancias</i>	A warlock. The <i>Garabancias</i> ³⁷⁸ priests of Slavia and the Balkans seem to have been dedicated to crime, brigandage and every kind of lawlessness; “crime-fathers” if you like. The Old Prussians had priests of evil also. In ceremonies reminiscent of the witch Sabbaths of the later Middle Ages, Renaissance and Early Modern era, a 13th Century AD Prussian “black priest” was recorded as congratulating attendees for their crimes, pilfering, extortions and bloodshed, and anything else “iniquitous”. ³⁸⁰
Polish	<i>Planetnik</i> ³⁷⁸	An astronomer in some way akin to the <i>Garabancias</i> .
Russian	<i>Ved'ma</i>	Witches who interacted with demons. ³⁸¹

The wizards come to Europe

To adequately probe the question of wizards as historical entities one must put certain regions of Europe under the microscope, places like Russia, Scandinavia, Germany, Hungary, the Balkan, Britain and Ireland. For it is in such lands that we find a point of origin for the European wizards and witches. Vital clues exist suggesting the existence of a shared regime of religious traditions throughout these vast tracts of Europe, and with them comes proof of cultural interaction between the pre-Christian inhabitants of these localities.

The likely truth underpinning the close inter-relationship between the Mediaeval pagan Norse, Hungarians, Goths, Finns and Slavs is a shared religious heritage, traceable to nations of eastern magicians who had emigrated from Persia and Central Asia over a wide span of centuries. From the Bronze Age onwards they came into Scandinavia and Eastern Europe via Scythian Russia, especially so between the 1st-3rd Centuries AD, when the Huns and Goths proceeded into Europe from places as far away as China. From that time Europe became home to “witches”.

For much of their formative history the Magi passed on their erudite teachings, histories, sciences and ritualism orally, varied colleges of brethren being the mode of transmission. Only later, during the persecutions of Alexander the Great, the Christians and Muslims, did they commit them to parchment. By the Dark and Early Middle Ages, as Christianisation gained ground, the histories, as told by the Magi, fell under the assault of polemicists, who detested the public recitals of this knowledge taking place in royal courts. Then came the inquisitorial censors, who extirpated or requisitioned many volumes kept by the wizards. Small wonder we only have Jewish Old Testament records of the monumental migratory period.

Writing in 1531 the German Christian wizard Cornelius Agrippa Von Nettesheim divulged what he knew of this ancient connection between Goths, Hunns and the geographical region of Iran and Central Asia. He states;

*“it is delivered in histories, that certain women of the Goths (which they call Alrumna or Halirunae) eminent both for beauty and ingenuity, long since at Filimire or (as other say) at Idanthresie, going forth out of the tents of the king of the Goths, wandered in the deserts of Scythia in Asia (Central Asia and Iran) beyond the marshes of Meotis (Russia), and there being impregnated by fauni and satyrs, brought forth the first Huns”.*³⁸²

The following portion of text was drawn from a 10th Century Hebrew document (the *Book of Jossipon*) penned in Kiev by Jews who had been driven out of the crumbling Khazarian Jewish empire, then situated by the Caspian Sea. It drew upon the *Old Testament* when explaining the ancient waves of migrants who shifted into Europe from the vicinity of Mesopotamia and the Steppes, but goes on to specify the various family groups that migrated elsewhere after the dissolution of Babylon. Considering that Moses can be seen as the founder of Judaism, the many figures preceding him (Noah etc) need not necessarily be seen as Jews in the pure sense of the word, but much rather the earliest ancestors of later generations of humanity, some of whom were Jews.

CONCERNING THE
MIGRATIONS

EUROPE'S RACES SAID TO
HAVE EVOLVED FROM
NOAH'S SONS

"Noy (Noah) sired Sima (Shem), Khama (Ham) and Iafet (Japheth). The sons of Iafet were Gomer (Homer), Magog, Madai, Yaxan, Tuval, Meshekh and Tiras. The sons of Gomer were Ashkenaz, Ripat and Togarma. The sons of Yaxan were Elisha and Tarshish, Kittim and Dodanim. And all the lands had one language and one dialect. And having moved out of the east, they settled the plains. And they said to each other, let's make ourselves a city. And the Lord God came down to see the city and the tower, and the Lord said "This one people, I will descend upon their language and jumble it up. And the Lord scattered them from there throughout all the lands, from that place he calls Babylon. These are the races of the sons of Iafet, and the lands which they settled in, recorded in the tongue which they use in their own homelands.

The sons of Gomer are the Frankos (the Franks) who live in France on the river Seine. The sons of Ripat are the Bretons, who lived in Brittany, on the River Lera. The Lera and the Seine flow into the Great Ocean. The line of Tograma consists of 10 races, of which there are Khazars, Pechenegs, Alans, Bulgars, Kanbina (unidentified), Turks, Buz (or Kuz, perhaps Oghuzz), Zakhuk (unidentified), the Ugrians and Tolmach (a Pecheneg tribe). All of them live in the north, and their countries are named after them, and they live along the Itil' River (the lower Volga).

Only the Ugrians, Bulgars and Pechenegs live along the Great Danube River, that is the Dunai River. The sons of Yaxan, the Greeks, live in the countries of Ionia and Macedonia. The sons of Madai, the Al'dailash, live in Khorezm. The sons of Tuval are the Tuscans, who live in Tuscany on the River Piza. The sons of Meshekh are the Saxons and the sons of Tiras are the Russes.

The Saxons and the Angles live on the Great Sea, the Russes live on the Kiev River, which flows into the Gurgan Sea (the Caspian). The sons of Alisha, the Alemani, live between the Iod and Sabtino mountains (the Alps). They conquered Italy and settled there until this very day, along the River Pao and Tichno, and from them are the Burgundians who live on the River Rodno (Rhone), and from them come the Baioriya, who live on the River Renus (the Rhine) which flows into the Great Sea. The Tichno and Pao Rivers flow into the Venetian Sea (Venetian Gulf).

The sons of Dodanim are the Danes, who live in the gulf of the sea, of the Ocean, in the countries of Denmark and Indri'ya, on the Great Sea. They swore never to submit to the Romans and lay concealed out on the high seas and the Ocean, but they could not do so (for long) because the power of Rome stretched unto the farthest islands in the Sea.

And the Moravians, the Croats, the Serbs, and the Luchanians and the Lyakhs (Poles), and the Krakars, and the Boimin (Bohemians), consider themselves to stem from the sons of Dodanim, and they inhabit the coastline between the Bulgar border and the Venetian, and from there they stretch up towards the Saxon frontier, to the Great Sea, and they are called Sclavi (Slavs).

Some say that they are from the sons of Khanaan (Canaan?), but they elevate themselves to the pedigree of Dodanim".³⁸³

THE MYTHS PRESERVE
FACTUAL RACIAL
MOVEMENTS

For so many years now, educated westerners remained convinced that such records are little more than fairy tales, bankrupt of any truth whatsoever. Genetics, archaeology, linguistics, history and folklore tell a vastly different story, one largely supportive of events similar to those portrayed in the above-mentioned Jewish text.

GENETICS IS BEGINNING
TO FURNISH INTERESTING
DATA ABOUT OUR
ANCIENT ANCESTORS

For instance, Dr Ornella Semino, an Italian genetic researcher, has determined that almost all European males emerged from ten different patriarchal gene pools, that originated in the Middle-East and Ural regions. Of them, four-fifths are thought to have dwelt in Europe since the stone age (25-40,000 years ago), while another one-fifth arrived intermittently between 10,000 years ago and the present. The point of origin for a Y chromosome characteristic possessed by one in 20 European men is yet to be identified. At this point I feel these researchers need to work hand in glove with archaeologists, to see if the timing of these population movements can be more precisely mapped out, by comparing modern samples with DNA extracted from excavated skeletal material.

JEWISH PRIESTS HAVE
GENETIC FEATURES
PECULIAR TO THEIR
GROUP

A genetic appraisal of modern Levitical Ashkenazi Jewry has established that some 50% of the men folk carry y chromosomes inherited from Slavs as the result of interbreeding about 1,000 years ago.³⁸⁴ Some of them will no doubt be descendants of Jewesses inevitably raped by members of Svyatoslav's Russian invasion force during the 965 AD invasion of Khazaria, 1,000 years back. Whereas others will be related to Slavic converts to Judaism. Since Levitical origins are dependant on patriarchal inheritance this data conclusively proves that some were fraudulently trying to pass themselves off as members of the elite group, or is evidence of extra-marital hanky panky. Rather than assume Slavs were eager to infiltrate the Levite fraternity, the rape theory might account for past attempts to cover up a dodgy non-Levitical paternity. The results seem straightforward and logical yet it

doesn't sit well with historical sources which point to the Jewish converts being of Khazarian Turkic ancestry rather than Slavic.

This points to a potential flaw in the Jewish text cited above for here, a millenia ago, the Jewish author makes Ashkenazi Jewry paternally associated with the Bretons, Khazars, Pechenegs, Alans, Bulgars, Kanbina (unidentified), Turks, Buz, Zakhuk, Ugrians and Tolmach, whereas lab results show Slavic paternity, said to be descended from the patriarch Dodanim. Unless of course the gene marker chosen in the study was itself inherited by the Slavs through interbreeding with the prior-mentioned steppe races, in which case the accuracy of the Book of Jossipon remains intact in this respect.

The Jewish author of *The Book of Jossipon* lists Yavan as one of Japhet's sons, not Younan (as Abu Muslim states). The Kievan Jewish text identified the sons of Yavan as Romans, Greeks, Tarshish, the Alemanni (ie; Germans), the Burgundians and Baioriya, Danes, Moravians, Croats, Serbs, Poles, Czechs, Slavs and Bohemians. Thus Abu Muslim classified the Bulgars as belonging to the same racial pool as the above nations, whereas according to *The Book of Jossipon* Bulgars belonged to the descendants of Tograma, son of Gomer, son of Japhet. Whether this represents an additional tradition, or whether Abu Muslim or the author of the *Book of Jossipon* is mistaken is not easily resolved.

Considerably older is the 2,000-year old *Genesis Apocryphon* of the Jewish Essene brotherhood.³⁸⁵ In it we personally hear from Noah, writing in the first person, describing his descent from Mt Ararat in Armenia, and how he started off the human race all over again, immensely thankful for the Most High's intervention. In it he names his grandchildren by his son Japhet, namely "Gomer and Magog and Madai and Yavan and Tubal and Mashok and Tiras, and four daughters".³⁸⁵ As time passed by the lands were divided amongst Noah's descendants "He gave the first lot to Gomer in the north as far as the river Tina, and afterwards to Magog, and afterwards to Media, and afterwards to Yavan, all the islands that are by Lydia".³⁸⁶

Using the Dead Sea scrolls as a measuring rod, as recorded traditions sealed for 2,000 years, the Kievan Jewish text unquestionably preserved teachings of extreme antiquity, but what is even more useful and important, is that it went on to describe the early medieval racial descendants of these post-deluvian patriarchs. From a Jewish perspective Ashkenazi Jewry had more in common with Europeans genetically speaking, while their religious observances were inherited from semitic Jewry.

Archaeological debris indicates the importation of artifacts and manufacturing techniques from the Near East into Europe. Linguistics confirms that European languages branched out from a source common to Hindus and Central Asians. Genetics proves the reality of a past migration of peoples from the east into Europe. Put simply, in the millennia following the retreat of the Ice Age glaciers, the northern world was peopled by hunter gatherers, owing to the agriculturally marginal nature of the climate and soil. Whereas more southerly latitudes particularly lent themselves to exploitation by farmers skilled in sowing and harvesting crops, and domesticating livestock; the very things which allowed for the establishment of permanent settlements. Using an undreamed of range of data on genetic distances, mitochondrial DNA and craniometric measurements, geneticists have illustrated that much of Russia and Central Europe was settled by eastern farmers, with segments of the modern population still exhibiting genetic traits characteristic of these ancient folk from Asia Minor.

Linguistics not only clarifies a time frame for this genetic intrusion, but provides clues as to the ethnicity of the immigrants. Fossilised words tell us that European farming was heavily steeped in Persian agricultural practices, and that many of these same techniques were shared by Slavs, Balts, Germans, Scandinavians and Saxons.

Russian folkloric tradition has it that many of their vegetables once came from Asia in remote antiquity: buck wheat from Turkestan, peas from China.³⁸⁷ Their oats, barley, rye and wheat first arrived in the Dunai region from the Indian sub-continent, via the Caucasus.³⁸⁷ Linguistics in part confirms this, for some Russian words concerning agriculture and agricultural produce come from the Avestan and later Persian. Consider the following examples;

The Russian word for a garden *bashan* came from the Turkic/Persian *bostan*.³⁸⁸ *Ovoshchi* (meaning "vegetables") came from *ovosh* which was derived from *vagsaiti* (Avestan: "to grow") or the Old Indian *vaksayati*, a connection more faithfully preserved phonetically in the Gothic/Germanic languages.³⁸⁹

The Russian word for "wheat" (*pshenitsa*) is traceable to the Old Indian word *pistam* (meaning "flour") through intermediate words. The Russian word for barley (*yachmen*) is part of many Eastern European languages and is believed to be related to the Greek word for "barley".³⁹⁰ The Russian word for "rye" (*roz*) is not traceable to Indo-

A VAST RANGE OF DATA CORROBORATES THE FACTUALITY OF EASTERN MIGRATIONS INTO EUROPE

PERSIA IS A LIKELY PLACE OF ORIGIN

RUSSIAN AGRICULTURE SHOWS EASTERN INFLUENCES

European or Avestan roots, but is in common use (in various forms) by the Finns, Scandinavians, Germans, Balts, Saxons and Slavs.³⁹¹ The Russian word for “porridge”, *kasha* (which is found in a number of Eastern European countries), is only barely traceable to the Indo-European.³⁹²

Perhaps Russians might also have grown egg plants (aubergine). The Russian term *baklazhan*,³⁹³ otherwise known as the *Solanum esculentum* (egg plant) began somewhere near Astrakhan, and came into Russia via the Eastern Turkic and Arab-Persian. Their other crops³⁹⁴ were;

CROPS

Northern crops:	Flax, hemp, and millet
Southern crops:	Millet, oats, wheat, barley, rye, and hemp
Fruit crops:	Pears, apples, grapes, plums, and cherries
Nuts:	Almonds and walnuts
Vegetable crops:	Onions, garlic, pumpkins, cucumbers, radishes, cabbages, beetroots, lentils, mushrooms, peas, and turnips

Apricots were unknown in Mediaeval Russia if we consider historical sources alone. Linguistically however, the Russian *zherdela* came from the Turkic, and indirectly from the Avestan and New Persian.³⁹⁵ This suggests that apricots initially entered Russia with Turkic-speakers, perhaps Bulgars, as early as the 7th-8th Centuries AD.

Archaeological excavations at Novgorod show that agriculture was rudimentary during the 10th Century, because of problems with seed stock. Many different crop types were brought northward from the steppes by Slavic colonists during the 9th and 10th Centuries AD, but not being suited to such harsh climes they had trouble growing,³⁹⁶ with the result that famines were a regular occurrence. It took a few hundred years of sustained cultivation to produce seed capable of producing acceptable crop yields in northern regions.

In Mediaeval Rus' peasant plot farmers were called *ryadovichy*, which implies that they worked in fields laid out in furrowed rows or lines. This is fairly natural considering that they extensively used ploughing as a means of soil preparation, and practiced crop rotation. The plough was therefore an implement vital to progressive agriculture.

PLOUGHS

By examining Russian words for “plough” we gain some understanding of where Russian agricultural technologies originated. Two Russian words for “plough” (*omezht'* and *omezha*), and Bulgarian and Croat words with similar forms, come from the Persian *amazh*,³⁹⁷ thus indicating Persian influences in the field of Slavic agriculture, among the Russians, Bulgars and Serbo-Croatians. Then there was a scratch plough known as the *sokha*, which proved so remarkable an innovation that it opened up much of the northern forests to plot farming.³⁹⁸ *Sokha* is related to Old Indian and New Persian words meaning “a branch” or “a bough”, or “a horn” (which were arguably plough components), but originated from the Gothic *hoha* (“plough”).³⁹⁹ It is also related to the Old High German *sahs* (“a knife”).³⁹⁹ In this instance the Slavs and Goths probably utilised *sokha* scratch ploughs, which scarified the surface of the ground, rather than digging under it. They were therefore ideally suited to cultivating the stump-riddled, agriculturally marginal northern soils of Russia. The Russian word *plug* (“plough”),⁴⁰⁰ which often has pagan religious connotations, is a pan-Slavic linguistic form related to the Old High German *pflug*, the Old Icelandic *plogr* and the Anglo-Saxon *plog*.⁴⁰⁰ In this instance we find neither Baltic nor Gothic correlations, thus indicating that it was something shared within a Slavic and Nordo-Teutonic forum. It was either present from very early times, when both races freely shared cultural traits, or it was exchanged between all three cultural groups, taking root as far away as the Balkans and England.

LIVESTOCK

And now for livestock. The massive, long-horned aurochs once found on the Russian steppe were without question descended from stock once raised and herded into the region by Magian pastoralists. The Russian word *tur* (“an auroch”) is related to the Avestan Persian *staora* (“huge, horned cattle”).⁴⁰¹ From this we get the English word “steer”, which came via the Gothic *stiur*.⁴⁰¹ Likewise the English word *cow* is closely related to the Avestan *gao* (“a cow”).

AGRICULTURE

The Russian words for “a sow”, *svinoi* or *svina*, are related to the Gothic *svain*, the Anglo-Saxon *su*, the Latin *sus*, the Greek *us*, Middle Latin *suin*, the Avestan Persian *hu*, the Old Prussian *swintian*, and the Old Indian *sukaris*. Similarly related is the Latvian *sivens* or *svēns* (“a suckling pig”).⁴⁰² *Kaban*, the Russian word for “a boar”, comes via the Turkic.⁴⁰³

Etymologies concerning domesticated pigs are unlikely to have arisen from the Indo-European since observers of Hindu vedic lore did not eat swine meat, deeming it unclean. Therefore European terms for pork are likely to have come from the next most likely source, Avestan. Consider one Finnish term for "a pig", *porkus*. It evidently came from the Avestan Persian word for "a pig". The English word *pork* has the same origin.

Many Old Russian words used to describe housing seem to be of Magian origin. For example the Slavic word for "a village", *derevnya*, is predated by the older word *ves'* (meaning "village" in Old Russian and Old Slavonic). This word can also be found in use in other languages. For example *vas* (Slovenian), and *vies* (Polish) meant "a village", but were also connected with *viespatis* (Lithuanian meaning "a Lord"). These are all derived from the Old Indian *vic* ("a settlement"), or more especially the Avestan and Old Persian *vis* (meaning "a house").⁴⁰⁴ One Russian word for "home", *khata*, comes directly from the Avestan Persian word *kata*.⁴⁰⁵ The other commonly used word *dom* (Old Russian for "home") is traceable partly to the Old Indian *damus*, but more specifically to the Avestan *dam* all of which meant "a house".⁴⁰⁶ The Latin *domus* and the Greek *domos* no doubt originated from the Old Indian or rather Indo-European, instead of the Avestan (which gave rise to the Russian). As correctly pointed out by the late Professor Margaret Murray, *khata*-style housing existed not only on the steppes of Russia, but in Britain also, where they came to be associated with the huts of the mystical fairy folk⁴⁰⁷ (which by her reckoning was another name for the witches).

Khata were made by heaping thatching over a skeleton framework of timbers, which radiated outward from a vertical pylon. The Russian word "to build" *stroit'* comes from the Russian *stroj* or *stroya*. These originated in the Lithuanian word *straja* ("to cover with thatching"), with its true origin residing in the Avestan *urvaro-straya* ("the cutting of plants").⁴⁰⁸ Obviously the construction of Magian *khata* in Slavia and the Baltic took place at harvest time, when bundles of cut grass and hay were gathered up and piled on their roofing. Again, an Avestan connection.

Where there's smoke there's fire. Where one finds the activity of pre-Islamic Persians and Iranians, one will, no doubt, also detect the presence of Magi, the priests and priestesses who tended to the religious needs of that same culture. And that is exactly what one finds.

Nordic Magi

On our voyage of discovery, ancient Russia and Scandinavia excite our every interest. Perhaps the greatest single confirmation of a Magian (or at the very least Chaldean) presence in Scandinavia, Germany and Russia can be found in none other than the Nordic *Ynglinga Saga*, as recorded in Mediaeval times by Snorri of Iceland, based on epics narrated at Scandinavian royal feasts. This particular saga is notable for its worldliness, since much of the interaction between the vikings and mortal gods like Odin takes place in known geographical locations such as Turkland (Central Asia), the Ukraine, Saxony and Denmark. In essence the *Ynglinga Saga* traces the ancestry of Odin (one of the principal gods of the Norsemen), his people and his gods to an ancient homeland in the east. According to the surviving pagan, non-Jewish tradition, he was the leader of a mass migration into Europe from Eurasia during the era of Roman conquest in Persia and other such places. It was from his bloodline that so many European royals claimed ancestry. The Norse *Ynglinga Saga* evidently recalls the arrival of the Magi in Europe, and their leader, a man-god called Odin;

"The country east of the Tanaquisl (the Dnieper River) in Asia was called Asaland, or Asaheim, and the chief city in that land was called Asgaard. In that city was a chief called Odin, and it was a great place for sacrifice ..."⁴⁰⁹

"There goes a great mountain barrier from north-east to south-west (the Urals), which divides the Greater Swithiod (Greater Scythia) from other kingdoms..

South of this mountain ridge it is not far to Turkland (the Caspian, Iranian and Central Asian region), where Odin had great possessions. In those times the Roman chiefs went wide around in the world, subduing to themselves all people; and on this account many chiefs fled from their domains. But Odin having foreknowledge, and magic-sight, knew that his posterity would come to settle and dwell in the northern half of the world".⁴¹⁰

"He therefore set his brothers Ve and Vilje over Asgaard (in Asia); and he himself, with all the gods and a great many other people, wandered out, first westward to Gardarike (Russia), and then south to Saxland (Poland/ Saxony). He had many

sons; and after having subdued an extensive kingdom in Saxland, he set his sons to rule the country. He himself went northwards to the sea (Denmark), and took up his abode in an island which is called Odins in Fyen".⁴¹¹

ASGAARD WAS PROBABLY
A FACTUAL PLACE

From these arts (of magic) he (Odin) became very celebrated. ... He taught the most of his arts to his priests of the sacrifices, and they came nearest to himself in all wisdom and witch-knowledge. Many others, however, occupied themselves much with it; and from that time witchcraft spread far and wide, and continued long".⁴¹²

SOME DISCREDIT THE
SAGAS AS UNHISTORICAL

This was how the Norsemen inherited their religion, or so Snorri Sturluson tells us in the 12th Century, some 200 years after their conversion to Christianity. So how reliable is this Saga? After all it was written down some 200 years after the Norsemen had converted. The average person today has precious little idea of historical events and details dating back to Ivan the Terrible, Abraham Lincoln or Napoleon's time. One might guess that they are fairly unreliable as an historical source. This widely accepted stance presupposes that ancient teachings and myths cannot be carried across centuries in a pure or even partly pure form by oral means. It also assumes that myths were unimportant both to the reciter and the audience, that they were treated flippantly and contemptuously. This is most untrue. Before the age when they were first recorded in writing, the teachings of the Magian religion were propagated orally from generation to generation, as was the religion of the Vedas which formed the basis of Hinduism. These faiths were, if you apply this same yardstick "oral traditions". But they were "oral traditions" with a difference. Magian scholars charged with propagating their respective creeds had a serious attitude towards learning. Students spent 20 years learning both general and specific doctrines, rituals, and the stanzas, which were memorised by rote-learning. They had to pass the tests of their peers, and be able to repeat the ancient teachings and prayers word for word before they were ready to begin their careers as priests. Innovation and embellishing the teachings was positively frowned upon; it amounted to a corruption of what once was, and this was "unholy". While the organisation of their priesthoods remained intact, the chance their vital oral lore could slide into degeneracy was minimal

HISTORY FORMERLY
TRANSFERRED VIA ORAL
FOLK TRADITION

Myth and legend were important facets of pagan and mediaeval culture, much more than during the 20th Century. It is this change in attitude which has seen the disappearance of oral traditions throughout western society. It is not evidence that it is impossible to remember the epics of the past, but much rather that we want to forget them. To say that we have the same attitude towards ancient oral traditions as the pagans of yesteryear is laughable, for we are no fitting yardstick for the potential survivability of ancient traditions.

THE HOMELAND OF ODIN, AND HIS MIGRATIONS

In the "mythologised" *Ynglinga Saga* I perceive several phases in the migrations of Odin and his people.

ODIN COLONISES EUROPE

1. Odin's ancient homeland lay to the east of the Dnieper River, in Asia
2. Odin came to Asaland, perhaps in the Caucasus, in the domains of the Alans (Asaland). The capital city of the Asalanders was the ancient Asgaard, and it is recorded in the *Ynglinga Saga* as being a major religious centre. Odin, the other gods, and his people departed for the west.

ODIN POSSESSED LANDS
THROUGHOUT TURKLAND

According to an old Ossetian (Alanic) legend, the great and wise hero Udan went north to Scandinavia in ancient times to find a suitable fair haired wife. He was of the race of the Asii (Alans), and is said to have been buried in a mound on the Tarma-don river following his death.⁴¹³ Russia's Don river, the rumoured site of Odin's mound, was originally called the Tanais. Later, under Alano-Iranian influence it was renamed the mighty Don (so named after the Alanic *don* "river", which comes from the Avestan Persian *danu* "river").⁴¹⁴

It is difficult to see how this parallel myth eventuated in far off Ossetia (the land of the Asii in the Caucasus) if Snorri's epic was a phoney tradition. Scandinavian tales of Odin, make him not of the Asii, but the Aesir, who were a specific group of gods. If there is a connection, then it is just possible that Odin might have been an Asii, who was revered in the far-north as a God; a man-god. As you will read later, this in itself might be sufficient proof that not only the Asii, but Odin himself ("the long-haired friend of the altar fire")⁴¹⁵, might have been of the race of the Magi, priestly wizards, who were both man and divine beings. Clues for the timing of this migration might be contained in the *Ynglinga Saga*, which states;

*“There goes a great mountain barrier from north-east to south-west (the Urals), which divides the Greater Swithiod from other kingdoms ... South of this mountain ridge it is not far to Turkland (the Caspian, Iranian and Central Asian region), where Odin had great possessions. In those times the Roman chiefs went wide around in the world, subduing to themselves all people; and on this account many chiefs fled from their domains. But Odin having foreknowledge, and magic-sight, knew that his posterity would come to settle and dwell in the northern half of the world”.*⁴¹⁶

Accordingly we might place Odin’s exodus from ‘Turkland’ as early as the 2nd Century AD, during the time of Emperor Trajan, or the battles between Mithridates and Pompey. Roman expansionism in the east was most characteristic of this period. Archaeologically speaking these wanderers ought to be equated with the Late Sarmatian period.

Some tribes affiliated with the Huns spoke Germanic, Iranian and Turkic languages,⁴¹⁷ and it may have been at this point that eastern beliefs came to Germania, though I still favour a period many, many centuries earlier.

Though small in number the Alans were truly rulers amongst men. Just before the mid-14th Century AD John of Marignolli wrote of a lordly Alanic presence in the land of the Tatars. “... the chief princes of his whole empire, more than 30,000 in number, who are called Alans, and govern the whole Orient, are Christians either in fact or in name, calling themselves “the Pope’s slaves”, and ready to die for the “Franks”.”⁴¹⁸ Obviously this is a post conversion account depicting the Asii as militant Roman Catholics, but in ancient times they were devotees of Persian Mithraism.

3. Odin took Russia, whose inhabitants espoused the religion of the Vanalanders. After a period of prolonged conflict Odin made peace with the Vanir and an exchange of religious ideas (including magic) took place.
4. Odin carved out a massive kingdom in Saxony.
5. Thereafter he chose Denmark as the centre of his realm, and saw to it that Sweden was also incorporated.

Prior to these folk movements Odin had sovereignty over many eastern realms, which he had conquered by force. Then Odin’s eyes spied lands in the west, in Europe, and he knew that it was his destiny to conquer them ...

*“He therefore set his brothers Ve and Vilje over Asgaard; and he himself, with all the gods and a great many other people, wandered out, first westward to Gardarike (Russia), and then south to Saxland (Poland / Saxony). He had many sons; and after having subdued an extensive kingdom in Saxland, he set his sons to rule the country. He himself went northwards to the sea (Denmark), and took up his abode in an island which is called Odins in Fyen”.*⁴¹⁹

In this particular passage one gets the impression that Odin and the other immigrants established a settlement, or gained power at Asgaard, which is in all likelihood a Norse folk recollection of the Persian governmental satrapy of Asagarta; also transliterated as Sagartia. By some quirk of fate the state of Sagartia vanishes from the thriving heart of the Persian empire in an as yet undetermined year,⁴²⁰ leaving one to conclude that it was somehow destroyed, assimilated into Medea, or even relocated elsewhere.

Having set forth from the homelands he and his peoples left westward and moved into Russia, then Saxony, then into Denmark. After arriving on the Danish peninsula he founded a Kingdom on a particular island, perhaps the very one which Al-Ghazali referred to as the island of the King of the Magi, in 845 AD. If it happened that the Magus-king lived in Scandinavia rather than Ireland or Russia, then Odinese may be a likely location for this ancient settlement, however such a site has eluded archaeologist there for some time. Either it wasn’t there, or they still haven’t found it yet.

THE ALANS WERE A ROYAL NATION

ODIN GRABS LAND IN SAXONY, RUSSIA AND SCANDINAVIA

Fig 10. A section of the Oseburg tapestry, which was crafted by pagan weavers. It depicts a tribal migration, or a religious procession. Note the robed figures, often with baggy trousers, as well as the swastikas, and the horned man who leads the band.

Based on linguistic similarities, the names of the Persian and Iranian tribes involved in the migration into Russia, Germany and Scandinavia might have been the *Germanians*, *Guti*, *Dannis* and *Perse*. In their new homeland they probably became Germans, Goths, Danes and Prusi (Prussians) respectively.

"The country east of the Tanaquisl (the Dnieper River) in Asia was called Asaland, or Asaheim, and the chief city in that land was called Asgaard. In that city was a chief called Odin, and it was a great place for sacrifice. It was the custom there that twelve temple priests should both direct the sacrifices, and also judge the people. They were called Diar, or Drotner, and all the people served and obeyed them. Odin was a great and very far-travelled warrior, who conquered many kingdoms, and so successful was he that in every battle the victory was on his side. It was the belief of his people that victory belonged to him in every battle. It was his custom when he sent his men into battle, or on any expedition, that he first laid his hand upon their heads, and called down a blessing upon them; and then they believed their undertaking would be successful. His people also were accustomed, whenever they fell into danger by land or sea, to call upon his name; and they thought that always they got comfort and aid by it, for where he was they thought help was near. Often he went away so far that he passed many seasons on his journeys".⁴²¹

ODIN FREQUENTLY TRAVELLED TO THE EASTERN HOMELANDS

ODIN BLESSED HIS WARRIORS

The religion of the Norse was probably linked with distant regions of the Far-East, for in the *Ynglinga Saga* it appears that they ventured there rather frequently, and for prolonged periods. Not only Odin, but his many underlings made such treks. This contact probably belongs to an era subsequent to their colonisation of eastern, central and northern Europe. When Odin sent his warriors off, he called down a benediction upon them by a touch

of his hand. Like the Magi and pagan Slav priests, Odin and his priests were both sacrificers and judges. Moreover an excellent parallel is found here between Odin’s religious functions (judge, ruler, divine intercession), and those of the Magi. There, in Asaland;

*“Odin placed Njord and Frey (who were Vanir) as priests of the sacrifices, and they became Diar (gods) of the Asaland people. Njord’s daughter Freya was priestess of the sacrifices, and first taught the Asaland people the magic art, as it was in use and fashion among the Vanaland people.. While Njord was with the Vanaland people he had taken his own sister in marriage, for that was allowed by their law; and their children were Frey and Freya. But among the Asaland people it was forbidden to intermarry with such near relations”.*⁴²²

SOME OF THE MORTAL
GODS WERE
ENDOGAMOUS, OTHERS
EXOAMOUS
MAGICIANS

Like the Magi, the Vanir of southern Russia were incestuous and practitioners of magic. More specifically Vanaland was probably the *Vaino land* spoken of in the Finnish Kalevala, and perhaps therefore a Finnish homeland in European Russia. Alternatively it might have been derived from *Vununund*, a proto-Bulgar word used to describe southern Russia. After the truce between the Aesir and the Vanir, Odin installed several of the Vanir priests (Njord, Frey, and Njord’s daughter) as gods of the Aesir. In subsequent generations, despite the passage of centuries, these Vanir inherited an important place in the Norse “pantheon”. After marrying his own sister Njord had two children, namely Frey and Freya. Again, these two became gods of the Aesir and the later Norsemen.

Odin was, according to legend, deposed by the other gods for his wrong doings. In his place they installed a magician named Oller to rule over the Swedes, who was not only royal, but a god.⁴²³ After being ousted Oller died somewhere in Sweden, by unrecorded means. Here Odin and Oller very much seem to have been living men and divine beings.

ODIN DEPOSED BY THE
OTHER GODS

Around the year 550AD a Gothic Christian Bishop by the name of Jordannes made reference to the Getae (Goths who lived in Thessaly in the Balkans). With the arrival of the Goths on the Scythian steppe under King Filimer (*Filimir?*), a large number of witches⁴²⁴ (many of whom were Goths) who had been living in Scythia since the 500’s BC⁴²⁵ were banished to remote deserts (Central Asia?, Persia?, Arabia?). There, according to the tales recounted by Cornelius Agrippa, they interbred with demons and begat the race of the Huns. Thus European witches were somehow related to Gothic and Scythian witches (Gothic: *Alrumna*) that formerly lived among the Huns, a race frequently associated with the Turks and Magyar of Central Asian provenance.

JORDANNES CONNECTS
WITCHCRAFT WITH THE
GOTHS AND HUNNS

Linguistics and historical reports suggest a factual connection between the vikings, the witches and the Magi. Any suggestion that this amounts to a factual Magian presence in Scandinavia has never been given a second thought by the vast majority of researchers, and for this reason much of what you will read here concerning the Norse *Al-Madjus* is controversial, but by no means unsupported. As it happens nobody has bothered to examine the possibility or impossibility of the connection, they just simply ignore some very significant clues. On the other hand I spent a considerable amount of time examining the Magian aspects of Russian pagan religiosity, only to discover that many Magian-style features were present in Scandinavia also. For this reason we ought to wonder about the significance of a temple site found near Oslo, Norway, which contained objects from Europe, India and Persia. It dates to the time of the Islamic penetration of Iran.

AN UNUSUAL
NORWEGIAN TEMPLE

With the Magi came power politics. Many Scandinavians were peaceful farmers, highly accomplished artisans, explorers and merchants. Even so we cannot ignore evidence that a fair number of Norsemen were eager to blood their swords, some as part of a king’s territorial and political designs, others as a matter of lawlessness and piracy, others just trying to find a new home.

MAGI WERE POLITICAL
DYNAMOS

Academics are still theorising about reasons for the viking attacks on Europe and Church property. Was this conflict something which predictably accompanied their migrations into Scotland and Ireland, a result of population pressures, attempts by banished Norsemen and their kin to settle down in new regions, a looting spree, or an anti-missionary response prompted by their staunch adherence to paganism, or a combination of the above theories?⁴²⁶ I personally believe these were all factors.

THE RUSSES ATTACKED
MANY OF THEIR
NEIGHBOURS

In the pagan Rus’ attacks on Byzantium, the Caucasus, Khazaria and Islamic Volga Bulgaria, immense wealth must have been sacked. Therefore the acquisition of booty and new territory is widely viewed as being the only motive for Rus’ hostilities against their neighbours. But if this was their only inspiration for warfare, how do we explain the relative absence of foreign booty hordes in the archaeological record. Admittedly some, or even a lot, of

SOME BELIEVE THEY DID
SO TO ACQUIRE LOOT

OTHER POSSIBLE REASONS
FOR THEIR BELLIGERENCE

their loot would have been in the form of perishable commodities; grain, cloth, slaves and so forth, but that still doesn't account for the paucity of Byzantine wealth which they appropriated during extensive raiding against Constantinople, and the length and breadth of their northern Anatolian provinces. How do we explain their reluctance to hold territories which they had attacked? Obviously we are looking at piracy and brigandage of the magnitude employed by the Turkic hordes of Central Asia, which extracted wealth from China like milk from a docile cow.

Perhaps the Russes went to war for other reasons besides monetary gain. One plausible reason for the collaboration of the Bulgars, Finns, Slavs and Norsemen might have been the formation of a pagan army, and preparations for what was initially a defensive pagan holy war across several fronts. By my reckoning the military operations which helped create the pagan Rus' state in the first instance, and later assailed regional powers (like Christian Bulgaria and Byzantium, Muslim Volga Bulgaria and Jewish Khazaria) were at least partially designed to surround the last major pockets of eastern European Magians with a protective shell.

THE MAGI SERVED AS
ADVISORS TO THE KINGS.
THEIR COUNSEL
FREQUENTLY INFLUENCED
MONARCHIES

Grasp the idea that Magi were an organised religious hierarchy of royal intellectuals, who were literate, and who headed a formal religion with many and varied customs. Are we to believe that only the Christian, Muslim and Jewish states which surrounded Russia on its southern and eastern flanks were able to formulate a creditable retaliatory response against external pressures? Are we to believe that Oleg, the (possibly Magian) Sage, had only money and power on his mind when he tore down the Christian Churches in Kiev, newly founded after the 860 AD attack on Constantinople? Are we to believe that a Magus thought only of looting, and had no designs on protecting the last of his faith, some of the last of a religion viciously driven from Iran and Central Asia? One missionary could be more damaging to their civilisation than any army; for apostatising threatened the most cherished ideals of their society. Are we to believe that Magi (who were seen as living gods) had little or no influence over the pagans and their royal houses? It's like saying bishops had no influence over kings, nor rabbis over the Khazar Khagans, nor Islamic Jurists over the Caliphs? Of course they must have had some influence, it's only logical.

A LARGE PROPORTION OF
THEIR RAIDING
CONCERNED GATHERING
THE SPOILS OF WAR

We are thus presented with another plausible reason for the acquisition of wealth by force; religion. Pagan Slav temples often contained large amounts of war booty as offerings to their gods. Profitable raiding could enhance the relationship between rulers and their gods. Trading was also profitable for their temples; merchants could neither buy nor sell in heathen Slav settlements without giving a portion of their most profitable commodities to the gods.⁴²⁷ For Magians silver, and more especially gold, were amazingly holy, they were the body of Gayomard, and it was not proper for non-believers to possess these things. They professed; *"One should not give gold or silver to the vile"*.⁴²⁸

Once coins like Arab dinars and dihrens were gathered in as a result of trading in commodities like slaves and amber, or by raiding if need be, these noble metals were probably ritually purified and smelted down. The holy metals might be used by the royals to pay their loyal retainers, chieftains and boyars, or paid to the Magi so their sins were forgiven. Magi could have used it to increase their standing within the religion, since they paid good money for the choicest ranks within the priesthood. Gold and silver might also be deposited in the temples, where the Slavs are known to have kept stocks of precious goods and bullion. As a result the monies were not used for internal trade within Slavia, at least not between non-believers anyway. Even so, theory is one thing, and practice another. We know that Sassanians traded gold and silver objects with the Chinese,⁴²⁹ so they can't have been as scrupulously protective of gold and silver as their scriptures would suggest.

THEY PROVIDED A
SECURITY BLANKET
AROUND THEIR PAGAN
EMPIRE

This multi-national collaboration between Scandinavians, Slavs and Finns allowed them to become an important regional power, but it would also have permitted the formation of a state in which they could practice the Magian religion free from molestation by Muslims and Jews, and the Byzantine or Roman Catholic missionaries, who were beginning to feed across the border into what was essentially pagan country. By pooling their forces and resources they could push back the many Jews and Christians living in and around the pagan Rus' border areas. They would thus have created a buffer zone against the encroachment of unwanted religious influences that threatened a Magian faith then living in exile in eastern Europe.

Do we see them attacking other pagan areas like Poland, Scandinavia, Old Prussia, Latvia, Estonia and Lithuania with the same formidable array of forces? No, what few inter-pagan hostilities there were appear to have been politically inspired (against the Galinda near Moscow, the Yatvagi and against Slav tribes that would not surrender their allegiance to the Rus' State), rather than prompted by racial or religious factors. Why didn't Rus'

forces over run the ice-free “ports” of pagan Latvia? Either they were not a political objective, or these “ports” and waterways were already accessible to the pagan Slavs. Rus’ conflict with the Magyars and Pechenegs represents a noticeable deviation from their normally pagan-friendly activities. The *causa bellum* in these instances was the encroaching presence of these mobile populations, combined with political and religious considerations.

As you will read later in this book, foreign wares and pagan pilgrims arrived into Russia without too much trouble during pagan times. This shows pagans had a certain spirit of cooperation among themselves, regardless of their ethnicity, be they Finnish, Balt, Scandinavian or Slav. Even so, some will say that these pagan locations were not attacked by the Rus’ because they were not as rich as Khazaria, Bolgar or Constantinople.

The main problem we encounter in attempting to reconstruct the political-religious events then occurring in pagan Russia is that the Magi are no longer with us, and their internal political-religious history was never preserved by the Christian authorities which later assumed power. Whatever events were recorded by the pagan Sages of Rus’, in their own hand, are likely to have gone up in smoke in the same bonfires which swept away many of “the forbidden books”, the lion’s share of the Magi’s tomes of learning and other documentation.

The other complicating factor is the veil of secrecy that commonly surrounds the planning and execution of major military operations. This is often hard to break through. From the very remotest periods of history until the modern day, kings and emperors, presidents and prime ministers, popes and patriarchs have gathered large cabinets of retainers and advisors to discuss pressing issues which effect their period of rule, and the fate and prosperity of their nations and subjects. Often the topics which underpin these cabinet room meetings are of an extremely sensitive nature, in fact so sensitive that the matters must be kept secret at all costs. Subject matter of this kind might never ever be written about, either then, or at any time in the future where there are parties still interested in maintaining the wall of silence. These secrets remain forbidden items of discussion outside of the inner sanctum of trusted advisors, retainers and committee members.

What actually takes place and has always taken place behind closed doors varies with the phase of history in which the events are set, and so we can only speculate on the finer details. Fortunately items of information do slip from under the veil of darkness, which enable us to piece together some aspects of closed-session, media-free politics and decision making. I mention this because a great deal of mediaeval history, especially the many concealed happenings and liaisons which fuelled the battle between the papacy and the royal houses of Europe inevitably falls into this category. Besides popes and kings there were other powerful forces at work during those times, namely the pagan intelligentsia (sages), who, for all intents and purposes, have been painted out of the historical record, so that they remain enigmatic, faceless non-entities. But in their day these Magian priests and priestesses might have been household names in many areas. It is their activities which are of immense interest to us, because behind them lays what I believe is one of the more amazing aspects of mediaeval politics, an attempt by the pre-Christian rulers and priests to recover their lost or waning status, power and prestige. The story goes something like this.

In the west, vikings undertook repeated raids against major European targets the very same century as the Nordic Rus’ tribe and its princes helped amalgamate the numerous Slavic nations. These included Ireland (830-840 AD), Francia (834 AD), Paris (845, 885 AD), Spain (859-862 AD), Constantinople (860 AD), York (866 AD), Cologne (882 AD).⁴³⁰ And let’s not kid ourselves some of these were major fortified targets (though defensive works are thought to have become dilapidated by the 9th Century) being attacked by predominantly sea-borne forces, advancing down inland waterways.

In essence many viking operations were little more than elaborate extortion attempts, where highly mobile bands of Scandinavian warriors arrived by sea to besiege rich trading cities as large as Paris. As in Russia a common ploy used by vikings was to control major arterial waterways, rivers such as the Seine, Rhone, Rhine, and the Elbe to name but a few places, and thereby choke commercial traffic entering and leaving major cities. Their *modus operandi* becomes blatantly obvious in the case of the heathen Russian attack on Constantinople, because clearly they had little chance of taking a city that big with the number of forces they reportedly fielded in 860 AD. No, these troops planned on cutting off Constantinople from its agricultural provinces, outer suburbs (which they looted and destroyed) and trading partners. More importantly they could prevent the passage of trade goods in and out of the city by either land or sea. Therefore their aim was to besiege prosperous world trade centres, and keep them blockaded until they have paid you a sufficiently large sum of money to leave. Either they pay the money or stay entrapped within their own walls, slowly watching their economy and international trade status fall apart at the seams. Either way their victims were likely to pay them everything they wanted.

VIKING ATTACKS ON
THE CHURCH

EXTORTION

VIKING ATTACKS
AGAINST THE CHURCH
PROCEEDED WITH SOME
INTENSITY DURING THE
9TH CENTURY AD

Viking attacks on Church property in the west, the earliest recorded being that of the 8th Century raids on Lindisfarne, have long been portrayed as having been prompted by purely financial concerns.⁴³¹ Naturally monasteries were a soft target for vikings, and their lavish trappings and ornamentation presented an irresistible temptation; maximum gain for minimal losses. It is logical that the strong often can and do attack the weak. In many cases raids on monasteries were a get-rich-quick scheme. And vikings were not the only ones to arrive at this realisation; Irish kings and monks became wealthy by plundering neighbouring monastic communes, and they were Christian. Monasteries were not always utterly destroyed either. Vikings often only removed their more valuable ornamentation and furnishings, leaving the building intact⁴³² so that the faithful could restock their place of worship with valuables at some time in the near future. This provided the Norsemen with yet another opportunity to come back and raid them. Thus looting was clearly a major, if not the major objective of their raids.

SOME OF THESE ATTACKS
WERE PROMPTED BY
RELIGIOUS MOTIVES

There is no mistaking a religious component to viking raids in Ireland however. The adventurous Norse raider Turgesius (whose supposed agenda was to eradicate Christianity in Ireland) led his longships up the Shannon river into central Ireland, and there besieged the O'Moore keep.⁴³³ Other targets awaited him. The monasteries at Terryglass and Glonenagh were utterly devastated by his swift assaults, their abbots put to the sword.⁴³³ At Clonmacnois, one can only guess the terror felt by the monks as they saw the Norsemen beaching their ships on the reedy river banks, a mere stone's throw from the Church. After eradicating the resident clergy, he placed his sibylline wife Ota on the altar, and there she issued prophesies that went unrecorded. Turgesius' rash of plundering came to an unhappy end once he has taken captive and executed by the King of Midhe in the year 845 AD.

MAGI HAD A TRACK
RECORD OF PURSUING
HOLY WAR

The direct byproduct of these assaults (intentionally or unintentionally) was the disruption of the Church in many parts. Whether this was in some cases the aim of the viking attackers (or an added bonus), or whether it was just a booty adventure is hard to say in each given incidence, but it was almost always a matter of becoming rich through plunder. And yet there are factors which strongly point toward a clandestine religious agenda among some of the pagan priests of the Norse, Bulgars and Slavs, which aimed to head off Christian expansionism by deliberately "knee-capping" Christian learning and mediaeval missionary outposts, and, to this I will add, attacks against the Muslim populations of 9th Century AD Spain, Persia and North Africa.

An historical precedent for Magian religious conquests can be found in the writings of Procopius, who, amongst other things, recorded the events of earlier wars between the Persians and the eastern Romans of Christian Byzantium. In his day the Magian doctrines were degenerating. Too many of the faithful had converted to the faith of the Christians. Edessa, being only a short distance from Persia, must have seemed a real thorn in the side of Zoroaster's religion, a vexing source of missionaries and a Roman post perched on the edge of his Empire.

PERSIAN ATTACKS ON
CONSTANTINOPLE

It is the 6th Century AD, and the Zoroastrian King Chosroes is engaging in a series of epic wars against the Roman Empire, which had intruded, in a most unwelcome way, into the ancestral domains of his subjects. But it was not only a desperate conflict over land, it was a punitive holy war against a religion that the Magi deemed most poisonous to their faith, namely Christianity. To rid themselves of Constantinople's damaging military and religious influence in the east, Chosroes decided to eradicate Roman influence at the source, by destroying Constantinople.⁴³⁴ The task was not easy. Already Chosroes had suffered excruciating humiliations on the battlefield in Anatolia, far from the Byzantine capitol. How could he traverse the length of modern Turkey and be able enough to take such a well guarded city? It was then that he seized upon his master plan, after hearing how successful pagans had been on the other side of the Black Sea, when attacking Constantinople. Accordingly he would barge his way through Armenia, en-route across the Caucasuses, and join forces with the Asii (the Alans) on the other side of the range.⁴³⁴

SLAVIC PAGANS ASSIST
THE PERSIAN KING

"He (Chosroes) kept saying that it would be possible for the Persians (and Medes), if they held Lazica (Chechnya), to go, whenever they wished, straight to Byzantium with no trouble and without crossing the sea at all, just as the other barbarian nations (a Slavic-Bulgar coalition, led by a Frankish king) who are settled in that region are constantly doing. For this reason then, the Persians (and Medes) are trying to gain Lazica".⁴³⁵

THE MAGIAN CAMPAIGN
FLOUDERS

Just before 562 AD, as a Slavic host pierced down into the Balkans, on Byzantium's western flanks, King Chosroes set forth against the Byzantine city of Edessa.

*“Now this invasion was made by this Chosroes not against Justinian, the Emperor of the Romans, nor indeed against any other man, but only against the God whom the Christians reverence. For when in the first invasion he retired, after failing to capture Edessa, both he and the Magi, since they had been worsted by the God of the Christians, fell into a great dejection”.*⁴³⁶

PERSIA ALREADY HAD A
FOOTHOLD IN
BYZANTIUM

These designs reached fruition under his successors, with Sassanian and Avar invasions of Constantinople and Anatolia around 620 AD, in the time of Heraclius.⁴³⁷ The Sassanians already controlled most Byzantine territory in Anatolia by 626 AD, even the strategically vital Bosphorus strait.⁴³⁷ On the other side of the strait a swollen besieging force of Gepids, Slavs and Bulgars was supposed to link arms with the armies of the Persian lord to effect an attack on the city from many sides.⁴³⁷

THE SLAVS AGREED TO
LAND PERSIAN
MARINES

Somewhere along the way the Slavs agreed to supply water transport for a portion of the Sassanian army,⁴³⁸ adding amphibious capability to the Constantinople seige ... pagan marines! In the absence of written sources surrounding the use of Slavic vessels by the Persian expeditionary force, one can still make important inferences about the logistics involved. The gathering of such a maritime force cannot take place by accident. A lot of organisation was involved, not only to accumulate a fleet of sufficient strength for a Persian naval infantry task force of a specific size, but to ensure the vessels reached the Persian encampments at an agreed time. They evidently had a formal alliance with the Persians, if not for the long haul, then certainly for the duration of this campaign. The Slavic Khagan may have convened meetings with Orthodox Zoroastrian Persian generals in the lead up to the event, if not with Chosroes himself. And, as the Magi were the architects of Chosroes holy war against Christianity, one can only guess what role his wizards played in the organisational dilemmas faced by military planners.

THE FLOTILLA

Thus Slavic boatmen gathered a largish flotilla of small dugout craft to help ferry Persian infantry across the sea to Constantinople. *“On that Sunday the accursed (Slavic) khagan went to Bebek and put in the sea boats which were to cross to the other side of the Bosphorus and bring him the Persians in accordance with their promise”.*⁴³⁸ Unluckily for the Slavs and Persians, the Emperor’s vessels made short work of the barbarian fleet.

THE BYZANTINE
FOREIGN OFFICE
RECRUITED PAGANS TO
CAUSE TROUBLE BEHIND
ENEMY LINES

Christian Byzantium lived on its toes, prepared to try anything for its defence. Emperor Heraclius also mentions something I have difficulty believing, namely that he enlisted the help of Ugrians (part of the Northern Russian Finnish cultural complex) to attack the Persian king from the North, during this military collision.⁴³⁹ It all sounds rather far-fetched, but if it did turn out to be factual, the Finns could well have been recruited by the Byzantine “Office of Barbarians”, the eastern Roman equivalent of MI6 or the CIA, specialising in gaining intelligence on the hordes that hemmed their empire in on every side. An envoy of some sort must have ventured to the far north of Russia to make contact with the Finns, working his way through hundreds and hundreds of kilometres of hostile Slavic and Bulgar territory.

Chosroes campaigns were not tailored for pillage, power, or land acquisition, but a Magian holy war against Christianity, against one of the biggest Christian cities in the region.

KING CHOSROES
COULD NOT CAPTURE
EDESSA

His army did not prove sufficiently capable of taking Edessa; the city was not to be the easy pushover he first envisaged. So the king arranged for a troop withdrawal that would save face. He stipulated that he would only call his troops off once the Romans had purchased peace *“for a great sum of money”*.⁴⁴⁰ By this, the Persian king went on to say, he meant *every article of wealth in the city*.⁴⁴⁰ So great was his hate for Christianity that his original plan entailed capturing Christian Edessa and transporting all its inhabitants back to Persia, but not before wrecking the city, and turning it into a pasture for sheep.⁴⁴⁰ Chosroes didn’t want to add Edessa to his empire, he wanted it gone forever. The Romans were not forthcoming with the peace price he demanded, so he renewed the siege but found the going tough, with much of his army devastated by wounds, or lost. Saddened by the inauspicious events, Chosroes returned to Sassanian Persia with his tail between his legs, and somewhat less money than he had hoped.

But his bigger plan was to demolish Constantinople, and to bring about this achievement he, in unison with the Alans, took control of land north of the Caucuses, as far away as Tmutorokan. And it was from here that he wished to pummel the Byzantine capitol, reaching there by sending an invasion fleet across the Black Sea. Without foreknowledge of a sea attack, his arrival outside Constantinople’s walls would therefore come as an unpleasant surprise to the Romans.

HE WANTED TO
DEMOLISH THE EASTERN
ROMAN CAPITAL

We are left with a need to determine precisely how it was that a substantial contingent of Russo-Alanic troops were already stationed at Tmutorokan, before Rurik (the first recorded king of the Russes) had even made his way that far south into eastern Slavia.⁴⁴¹ Vernadsky speculates that the larger vessels (100-man crews) which participated

THE RUS' GARRISON AT
TMUTOROKAN

DIR AND ASKOLD

in the 860 AD attack on Constantinople were stationed in Tmutorokan, whereas river vessels, roughly half that size, were designed to operate along the Russian waterways, and later rendezvoused with the Tmutorokan ocean-going ships, thereby forming up as an invasion fleet. Either Rurik's henchmen Dir and Askold didn't know the Tmutorokan force was there, and made a chance alliance with them upon coming across them (very unlikely), or the army had already been prepositioned there in readiness for the attack. Accordingly the Norsemen may have shipped large numbers of troops along the politically unstable eastern Slav waterways, over a period of time, to pave the way for the 860 AD campaign on Constantinople. According to Vernadsky, the Tmutorokan forces were, at other times, responsible for military activities in the Crimean region, parts of which were at that time manned by Byzantine garrisons.⁴⁴¹

THE OLD RUSSIAN
ATTACK PLAN RESEMBLED
THAT OF THE PERSIANS
UNDER CHOSROES

Another possibility is that, for the most part, the Tmutorokan garrison had always been there. The 860 AD scenario bears a startling resemblance to Chosroes' Constantinople invasion plan some 300 years earlier, the only difference being that the Russo-Alanic force was operating several hundred kilometres north of Chosroes preferred staging point. If the Russo-Alanic operation was a continuation of the earlier Magian Persian campaign, which also included significant Alanic participation, the centre of operations had moved further north, perhaps owing to a growing Muslim presence in nearby areas. Alternatively the Russo-Alanic campaigns might have been a masterful attempt to replicate Chosroes intended invasions, but in no wise related.

MAGI ATTACKED ISLAMIC
SPAIN IN THE 9TH
CENTURY AD

Some 280 years later the Magi were still like yelping war dogs. Iberia (ie; Spain) saw the arrival of viking raiders shortly before 844 AD. Not too many years later (between 859 and 862 AD) other vikings were going about their business of sacking various places around the Mediterranean, including Moorish Spain. These vikings made repeated highly successful sorties against significant Moorish strongholds (like Seville) and settlements within the Cordoban Caliphate, during which they plundered much and took many captives. Cordoban Muslim commentators, specifically referred to these sea-borne viking assailants as pagan sorcerers, and termed them *Al-Madjus*, which in Arabic meant "the Magi".⁴⁴²

A MUSLIM FLEET
COUNTER-ATTACKED,
DRIVING THE NORSE
MAGI FROM THE AREA

The luck of the vikings had had run out though. Having recovered from the shock of the surprise attack, the Moors prepared the sort of retaliatory response that the Norsemen would not have wanted. Hemmed in on their island base by the warships of Caliph Abd Ar Rahman II, the vikings found themselves with little or no opportunity to escape the encircling Muslim fleet. Far from home, with dwindling food supplies and many of their raiding vessels falling to the Moors on an ever increasing basis, all that was left was to try and negotiate their way out of the blockade. The bargaining chips used to gain their freedom were the non-combatants kidnapped during the initial raids. Not so fortunate were the vikings captured by the Muslims, almost all of which were strung up from the city's gallows and date palms, or decapitated.⁴⁴³

NORSE AL-MADJUS
ATTACKED ITALY

These particular vikings also tried attacking Pisa in Italy, which they originally thought was Rome, their intended target. For a time they also moored their ships at the mouth of the Rhone, which one might guess turned the river into a viking checkpoint where they could board at whim, the unsuspecting Frankish merchant vessels en-route to the Mediterranean, and fleece them of their valuable monies and cargoes.⁴⁴⁴ Pisa and the Cordoban caliphate were also very prosperous locations, something which, based on present historical interpretations, would provide the single motive for these raids. And yet, during the 9th Century Al-Nadim was just one of a number of eastern Muslim authors who recorded the existence of isolated well guarded enclaves of Magian devotees throughout the Orient, who maintained their resistance to Islamic conversion. It is unlikely that Arab writers who very likely knew of the Magi could mistakenly refer to the Norseman as *Al-Madjus* ("the Magi") without there being some creditable basis for their comments. And bear this in mind. There were various types of sorcerer present in the Muslim east which were known to the Muslims by the non-specific term *Al-Kaldaniyun*. *Al-Madjus* however was a very specific term, it related to one group of sorcerers only, namely the Magi.⁴⁴⁵ Magi weren't just wizards, they were the priests and priestesses of an organised Iranian mystery religion.

AN ISLAMIC DELEGATION
TO THE KING OF THE
SCANDINAVIAN MAGI

Viking Magi? But could there be some mistake? Surely? Apparently the Cordoban Caliph didn't think so. He had no illusions as to who these Norsemen were. Some time during the year 845 AD he bothered to send Al-Ghazali, and a gift-laden peace delegation, to meet with the reigning monarch of the Magi, whose stronghold lay somewhere in the northern seas, on a large island amid even larger clusters of islands which were themselves inhabited by the Magi. Several days journey from this verdant Magian paradise lay the mainland, where his rule and authority were equally well recognised.⁴⁴⁶

Significant elaboration is provided by Al-Jacub, who records in his annals;

*“In the year 844, the heathen men we call Rus attacked Seville, plundered, laid waste, burned and murdered”.*⁴⁴⁷

What allegedly ensued was a six-week-long looting spree that ravished all of Seville except the keep.⁴⁴⁸

It becomes important to establish whether or not Seville was attacked by one or more Magian invasion fleets. Unless there were two separate and unrelated attacks on Seville in the same year, the Russes should be identified as the *Al-Madjus* Norsemen described in the caliphate’s record of the incident. Unmistakable evidence for Magianism in pagan Rus’ gives added poignancy to this assessment.

While reports of the Russian invasion force seem credible enough, there are other factors which create confusion as to the nationality of Seville’s troublesome attackers. Unaware of Al-Jacub’s tale of the Russian attack, some believe the *Al-Madjus* came from early mediaeval Ireland!⁴⁴⁹ On the strength of a Hibernian manuscript, they maintain that the Norsemen responsible for these assaults can be tentatively identified as sons of King Ragnar Lothbrok and their attendant bands of sea fighters. These particular Norsemen ran a lucrative slave-trading operation out of Dublin, which had been founded by viking settlers from Norway.⁴⁴⁹ As it happens they had previously taken in excess of 1,000 slaves during hard-hearted raiding along the British coastline, and northern Scotland in particular. It was after their return to Dublin, laden with human chattels, that they decided to plunder the Islamic lands of Moorish Spain and North Africa. What happened there has already been told. But, according to the Irish Annals, once back in Dublin, fresh from the Mediterranean, they brought ashore their consignment of Bluemen (Old Norse: “Blackmen” ie; Africans and Moors).⁴⁴⁹ I think they were Moors rather than negroes (termed *heljar-skinn* {Old Icelandic “dark skinned”, lit. ‘hell-skin’, or ‘skin of the damned’}).⁴⁵⁰ This terminology must have come from white Magianism, since in the old faith negroes were born through the mating of a demon and a black witch (be sure to see note 450).

That the life and death of Ragnar Lothbrok was recorded by Snorri, will cause some to disbelieve the factual existence of this Norseman and his kin. That is because a fair number of researchers cannot muster enough courage to admit that these folk memories are at the very least quasi-historical. Be that as it may references to his sons in the Irish Annals provide sufficient corroboration for him as an historical personage. That is unless one cynically requires 2, 3, 4, or even 10 independent sources before considering him a living being.

Clearly Seville was invaded by both parties. Considering the level of Magianism found among the Slavs and Scandinavians, it is my personal belief that there was a propensity for collaboration between the Dublin vikings and Russlanders; something suggested by linguistic correlations between the Old Irish and Slavic tongues.

There is little chance that the Moors mistook the Norsemen as Magi; this is, if anything, a highly believable facet of the account. Cordoba knew the Magi well enough, because between the 6th and 12th Centuries they were experiencing a revival of the faith of the Magi in their own back yard. There the Islamic universities of this Caliphate and Madrasas were riddled with subversives attempting to revive the ancient beliefs of the Manichees and Magi, many of whom were executed for their activities.⁴⁵¹ Is it not possible that these secretive Spanish Muslim Magi were somehow connected with the Norse Magi then attacking Cordoba, and seditiously aided them in their attacks on various Islamic centres in Spain, by providing intelligence reports in the lead up to the planned invasions?

If an undetermined number of vikings were Magi, as the Spanish Muslims stated, is there any other evidence to corroborate this from Christian sources? Mediaeval Church sources do indeed discuss the presence of European Magi, and refer to them by name, though not in connection with the vikings. Sadly, most writers have seen European references to the Magi as merely another word for a sorcerer. But there is a body of evidence which strongly points to them being actual Magi. It is noteworthy that Church writers understood the differences between the various kinds of Magi, and some were less acceptable than others.⁴⁵²

Without question the most exotic account of pagan military activity comes from Russia, with anecdotal evidence of a land armada organised and led by a great heathen sage named Oleg the Wise. Under his leadership the poly-ethnic Rus’ State made its prestigious medieval debut by attacking Europe’s largest city in 2,000 ships mounted on wheels!⁴⁵³ The chronicled event apparently cost Byzantium very dearly indeed in money terms, and forced their city into instant capitulation, and a humiliating trade deal with the Rus’, in which the northern upstarts held all the trump cards.⁴⁵⁴

Any suggestion that this curtain raiser actually took place is avoided by scholars specialising in ancient Russian history. After all, these military tactics lack any historical precedent. Nor does it fit neatly with the barbarian image fallaciously bestowed upon the Russes. Equally great are doubts about the Russes’ ability to built such contraptions,

and indeed their drivability. So it was perhaps inevitable that academics would disregard the entire episode as a monkish fantasy, given the sensational nature of the Chronicle entry. However an illumination of the event contained within the *Radziwil Codex* (an illuminated copy of the *Primary Chronicle*) convincingly suggests that the accompanying Chronicle article was anything but an impish inclusion by the monastic scribe.

You see the Rus' vehicles depicted outside the walls of Constantinople (fig 30.1), bear an uncanny resemblance to Central Asian wind-cars (fig 30.2),⁴⁵⁵ and their prows are identical to ship graffiti depicted on the wall of a Scandinavian stave Church at Bryggen (perhaps carved somewhere between the 9th-14th Centuries AD).⁴⁵⁶

Fig 30. 2. A drawing of a 16th Century AD Central-Asian wind-car, rendered by a portugese explorer (the design of which is similar to those built from the 6th Century AD onwards). Note the forward positioning of the sail and the awning to keep the sun off passengers - these unusual features can also be found on the pagan Slav wheeled-ships depicted in the Russian codex.

Fig 30.3. The prows on the above examples of Scandinavian ship graffiti seem similar to those of the wind-cars shown in the Russian manuscript

Fig 30.4

SPEEDS APPROACHING 60
KM/H

The technology to build operable vehicles comparable to those shown in the Russian Church illumination existed much earlier than the 10th Century AD. As early as 552 AD, the Central Asian Chinese were making wind-cars, which they used to speedily traverse the dusty wind-swept desert plains of that region.⁴⁵⁷ They were capable of transporting up to 30 passengers at speeds approaching 60 k/ph. When there was insufficient wind to fill their sails the vessels were drawn by oxen.

It is perhaps coincidental that Al Masudi claims Rus' warships had a complement of 100 men, whereas during the 907 AD attack, Oleg's vessels carried 40.⁴⁵⁸ The passenger load of the latter vessels was thus on par with that of a wind car.

The 907 AD assault was apparently conducted in unison with cavalry. All the while Russlanders flew war-kites with disturbingly bizarre faces over the battlefield,⁴⁵⁹ to further spook Constantinople's defenders. In so far as war-kites are concerned, we find yet another link with Central Asia. No nation at that time is thought to have used

them in warfare besides the Chinese, who employed them for propaganda purposes (ie; psychological warfare).⁴⁶⁰ The Chinese also fielded manned variants as observation platforms, into which battlefield observers were strapped.⁴⁶⁰ The Russian term for a kite is *Bumazhnyy Zmei*, literally "paper serpent" or "paper dragon". Having said that, Russian flying paper serpent kites may have resembled the serpentine windsock-style standards of the French Merovingian Magus-kings.

WAR KITES SHAPED
LIKE DRAGONS

These devices, while novel, may have entered Russian service through technologies obtained from the Hunns a few centuries earlier, inventions unknown even to the Merovingians.

MEROVINGIANS

As of the 6th Century the Hunnish Ordos crossed the Danube, intent on invading Merovingian lands, at that time ruled by King Sigibert. "The Huns once more attempted to invade Gaul, and Sigibert led his army against them, having with him a great host of valiant men. But when they were about to engage, the Huns, who were versed in magic arts, caused fantastic shapes to appear before the Franks, and thus had great advantage over them. The army of Sigibert fled".⁴⁶¹

HUNNS USED

As fanciful as it may seem, the Huns seemingly employed a 'magical' Chinese lantern to achieve this effect, a technique they themselves probably witnessed in their wars with the Chinese along the great wall. In the far orient Chinese lanterns were normally used for entertainment purposes, but they had remarkable and decisive applications in military psyops. In essence it was a form of boxed projector consisting of a translucent silk screen image (eg; painted with the image of a dragon or demon), behind which was a strong light. A lens was positioned in front of the screen and this had the effect of casting an image onto walls, clouds and so forth. Just seeing something like that could literally snap the minds of superstitious warriors and levies. Over the preceding century or two the Huns may have captured one as booty in their Chinese raids, perhaps even purchased one.

REMARKABLE ASIATIC
SCIENTIFIC INVENTIONS

CHINESE LANTERNS

How terrifying and demoralising the advent of this heathen invasion force must have seemed to the Byzantine soldiers manning the battlements. As they looked down over the pagan army arrayed against them many would have thought "Just who are they?" or "If they can do these marvels, what else are they capable of?". Thus, on the balance of probabilities, Rus' pagan sages (like Oleg) learned to make land-ships and war-kites in Iran and Central Asia (the old heartlands of Magianism).

CHRISTIAN BYZANTIUM

A wheeled-ship (lacking a canopy and sail) is portrayed some 420 years later in the Danish Sjøland Church of Kirkerup c. 1325 AD, carrying a man with horns who is holding a pitchfork and waving about some kind of bill or writ.⁴⁶² Birgitte Munch Thye interprets this as Moses (whose name can equally be translated as meaning either "a halo of light around the head" or "horns at the front of the head" (a reference to the horns worn by many Egyptian princes of his calibre, between which often sat a luminous solar globe)) sitting in the Ark of the Covenant. The (obvious) pitchfork she regards as Moses' snake staff, and the boat she explains is a mistranslation of Ark (the ornate box which held the tablets of the ten commandments), and Noah's Ark (the boat). While it is possible to suggest that the uneducated rural clergy of the age might have been sufficiently in the dark about scripture to allow such a misperception to have occurred (as it happens Mediaeval western and eastern clergy quoted more often from Old Testament than the New), I am doubtful of her interpretation. Western Church iconography during the Middle Ages allowed for the depiction of the "enemies of the Church" in the eastern wing of the building. Therefore parishioners would emerge from mass into an essentially pagan world through a portal (at the opposite end of the altar) above which were the "devil's agents". This might account for why they chose to depict a wheeled ship in Denmark.

WAS TERRIFIED BY THE
HEATHEN ARMY

A WHEELED SHIP
DEPICTED IN DENMARK

Let us see what comparative linguistics can tell us about the (pagan) Russian wheeled vehicles. The Russian word for "wheel" *kolo* is the same in the Old Russian, Old Slavonic, Serbo-Croat, Czech, Polish and Slovenian, and virtually identical to *kola* (Bulgarian). These words are apparently connected with the Old Indian, Latin, Avestan and Tokharian.⁴⁶³ The origins of the Old Russian word for "an axle" are more certain. *Os'* is derived from the Avestan *asa*, and less likely from the Old Indian word for "axle" *aksas* (from which came the Latin word *axis* meaning "a chariot" or "an axle").⁴⁶⁴ Little could I have known what other secrets this word held. The Russo-Slavic word *os'* seems rather close to the Middle Irish word *aiss* (which does not belong to the Old Irish) meaning 'a carriage', 'a cart' or 'a wagon'.⁴⁶⁴

TERMS APPLICABLE TO
ITEMS OF TECHNOLOGY

WERE RATHER OLD,
AND TRACEABLE TO

EURASIA

On linguistic grounds one might presume that the vehicle-making capabilities of the Slavs and later Irish were derived from those of the Magi, whereas the Romans were custodians of technologies known to the Aryan mechanics (who are repeatedly mentioned in the Vedas and other Hindu texts). What is even more curious is that there do not appear to be any Norse intermediary word between Russian and Irish. This probably means the Irish obtained this word from pagan Slavs during the Middle Ages, and what is more, these words may have come

from a Persian source. In other words they may have been exposed to Magian vehicle-making technologies. While some may regard the linguistic connection between *os'* and *niss* as a freakish coincidence, I intend to show, in the remainder of this book, that there was contact between Russia and Ireland during the Middle Ages, contact attributable to pagans, pagans cognisant of Eastern religious ideologies.

HISTORICAL SOURCES
HAVE GONE MISSING

HISTORICAL REPORTS
CONCERNING THE
INCIDENT ARE EITHER
SKETCHY OR NON
EXISTENT

J. J. Norwich⁴⁶⁵ states that the entire account of the wheeled-ship attack is suspect owing to the fact that any mention of the Rus' assault does not appear in surviving Byzantine documentation dating to 905-907 AD. However, several hundred years later, when the Mongols had begun attacking Byzantium's easternmost settlements, we find that any mention of such an important series of invasions did not begin to appear in Byzantine annals until 20 years after the event. So Norwich's observation may not be as significant as one might otherwise think. Moreover, it seems strange that the large scale 860 AD attack on Constantinople only appeared in the writings of Patriarch Photius,⁴⁶⁶ the source from which the Russian monks took excerpts when compiling the *Primary Chronicle* accounts. As it turns out the 907 AD Rus' attack was noted by Marvazi in the 12th Century, a retelling of an account written by the Arab writer Al Jayhani between 892 and 907 AD,⁴⁶⁷ who mentioned that the Rus' could get around the chains which spanned the entire mouth of Constantinople's harbour (though the mounting of wheels was not mentioned). In 1453 AD the Turks only succeeded in negating the harbour chains during their attack on Constantinople, by taking their ships overland on log rollers, perhaps in emulation of the earlier Rus' attack. Moreover a treatise on Arab and Rus' naval vessels was written in 905 AD by one Byzantine author, indicating that like the Arab armada of 904 AD, a fleet of Russian warships had freshly appeared some time around 904-905 AD (any mention of wheels is lacking in this account also). Lastly we have Al Masudi's *Meadows of Gold* which state that Oleg made war on the Greeks. This can only be a reference to Oleg's 907 AD attack on Constantinople.

It is to my mind plausible that local Christian authorities formulated their own names for the various types of Magi they encountered, just as the Muslims had their own Arabic term for them. If we are to admit that some vikings were Magi, then the next most important task before us is to identify what kind of Magi there were; black Magi, white Zoroastrian Magi, grey Zurvanite Magi, or Mithraic Magi?

DIFFERENT SCHOOLS OF
MAGI

It is possible that some vikings were dualistic. In Ireland, as in Scandinavia, Central and Eastern Europe, names and titles denoting families, clans or races were often preceded by the words "black" or "white". For instance in Ireland Danes were considered blacks, whereas the Norwegian vikings were seen as white.⁴⁶⁸ From Adam of Bremen we know that in some cases the title "the white", "the black", or "the red" related to a person's hair colour.⁴⁶⁹ But they are found in alternative contexts too. In Magianism white or black signified which of God's two sons a person followed; whites, the radiant sun, and blacks a horned winged goat or serpent called *Ahriman*.

If some vikings were Magi, then, considering the viking predilection for sporadic and unprovoked sprees of violence and brigandage, it is to my mind beyond question that a certain proportion were black or grey (Zurvanite) Magus wizards. Adam of Bremen terms some of the Norse raiders *wichingi*,⁴⁷⁰ which seems to be a reference to witches and warlocks, (but more succinctly meant a sage, wiseman or wisewoman). Perhaps these *wichingi* were dualistic Zurvanite wizards, some of whom saw crime and robbery as acts of devotion to the lord of the underworld.

TEUTONIC MAGI -
ASCOMANNI

The other option is that many of the *wichingi* were white wizards. The Germans called some viking raiders *Ascomanni* (perhaps meaning "Ashmen"),⁴⁷¹ which I perceive as a reference to the Golden Ash or Mountain Ash trees (the *Haoma* trees of the white Magi, see p. 440, 485). Strange too that *As* was a Russian colloquialism for "a wizard", so evidently Adam of Bremen was not the only person to make such a connection. By the same token *Askr* meant not only "the ash tree", but "an ash spear", or "a small boat".⁴⁷² I am disinclined to equate *Ascomanni* with "men in small boats", mainly because longships were much bigger vessels. That would leave "men with ash spears" which, based upon Norse legend, could also have a religious connotation.

ASKALA, THE LAND OF
THE WIZARDS

Not far to the north of Kurland was a region of Estonia known as Askala, on account of the many wizards who inhabited the area. Though translated as "Land of the Wizards", I believe Askala came from a combination of Nordic words *Askr land*, or in other words Ash land, the home of Ash, which, on linguistic grounds, can be associated with the *Haoma* tree of the white wise Magi, ie; wizards, or *Ascomanni* ("Ashmen") as Adam of Bremen called them.

The reasons for overseas forays by sea-borne white Magian troops assume an entirely different dimension beyond the mere sacking of settlements. Firstly the white Magi were peaceable in every respect, that is unless you

throw concepts like despotism, oath-breaking, Magian heresy or apostasy from the Magian faith into the equation. In such instances they were duty bound to gather arms and confront enemies which they perceived as elements of *Ahriman's* black forces. They mobilised to hunt down lawlessness, and fought for matters of principle, law and honour, especially hoping to destroy tyrants wherever they may be found ruling in the material world. Therefore some of the viking warriors who raged against the Moors of Spain and Africa might have been exacting vengeance on the Muslims for past injustices against their kin back in Iran and the Caucasus, or the persecution of fellow Magi in Spain. Many of the latter were Slavs, many of whom had been captured during a series of Arab incursions in the Caucasus and southern Russia in the 8th Century AD, emasculated, and shipped to various parts of the Islamic world. Those Vikings who attacked Pisa thinking it was Rome might have been signalling their intention to up the stakes in their intellectual and moral war with the Roman Catholic Church. In either case we are provided with an undreamed of range of possibilities for the military and piratical exploits of the Norsemen and Vikings, beyond that of the obvious looting which took place.

In the Norse *Ragnarsdrapa*, Ragnar was immortalised as pursuing conflict with the evil viking king Jormunrekk (possibly a transliteration of Ermanaric, the famous Ostrogothic overlord).⁴⁷³ And if this was the case, and the Magian presence in Dublin was attributable to his kinsmen, then the line of Ragnar might have been white Magian.

These particular Scandinavian Magians reportedly had unconventional Magian marital customs, for their Queen and womenfolk were free to sleep with whosoever they wished.⁴⁷⁴ This makes them Magians of the heretical Mazdakite sect by my reckoning. Al Nadim described how Mazdakites lived: *“The master, the former Mazdak, ordered them to partake of pleasures and to pursue carnal desires, food and drinks, social intercourse and mixing together”* and *“they shared their women ... as no one of them was excluded from the women of another, nor did he himself withhold his own women”*.⁴⁷⁵ Ibn Fadlan, the trusted emissary of Caliph Muqtadir, witnessed this same level of hospitality on the Upper Volga, during a 9th Century AD mission to the King of the Russes.

Whatever the case, this Magian monarch considered himself sufficiently powerful to wage war on Cordoba, something land forces would have been hard pressed to achieve, and which Charlemagne failed to do with his mighty land army. We might think that he had designs on other places also. Some of the most devastating attacks on the English mainland occurred at the dawn of the 9th Century AD, at a time when Charlemagne began directing the Irish and Anglo-Saxon clergy to begin educating the people about the papacy's version of Christianity, through homilies in the vernacular, and by producing books which would help parishioners understand the mass. Tuition of the clergy and parishioners became standardised, or at least directed towards a greater missionary effectiveness.⁴⁷⁶ We might think that such new developments seriously galled the Magi once these teachings began penetrating into the largely uneducated demi-pagans of Britain and the Holy Roman Empire. During raids directed against monastic communes, vikings obliterated the very libraries which were the fountain of all Christian learning in those parts.⁴⁷⁷ Thus many relics and items of secular and religious writing penned by the Churchmen were probably destroyed forever during these attacks, and with them many detailed references to the pagan world they tried so hard to convert.

If in some cases the real aim of these viking (*Al-Madjus*) raids was to cause havoc in Catholic missionary outposts and schools in Britain, then of necessity they would need to attack Ireland's many monasteries, which for so long had shone like a beacon of the Christian faith across Europe. And what should we find during the 9th Century AD but Norsemen descending on the emerald Isle like a swarm of enraged bees. Obviously libraries were not the only reason they came there, but it's food for thought. Once Norsemen had gained a foothold in places like Scotland and Ireland, some chose to be baptised, but in the main their coming was synonymous with a returned pagan presence. There they were called *“heathens”*, which is a non-descript term.

Back in Scandinavia we hear tell of a unified and lightning-swift anti-Christian response where proselytisers were concerned. The very moment King Olaf issued a proclamation for the baptism of his subjects, a general revolt originated at the Thing place (ie; the council assembly point) where they were required to assemble. A pagan advocate said;

“A man is come to Loar who is called Olaf (the King), and will force upon us another faith than what we had before, and will break in pieces all our gods. ... if we carry Thor, who has always stood by us, out of our temple that is standing upon this farm, Olaf's god will melt away, and he and his men be made nothing so soon as Thor looks upon them. Then the bondes all shouted as one person that Olaf should never get away

THE NORSEMEN HELD CHRISTIANITY IN CONTEMPT

THE KING'S PROPOSAL TO CONVERT THEM LED TO A BLOODY WAR

A LARGE BAND OF
RELIGIOUS REBELS
CHALLENGED KING OLAF

*with life if he came to them ... They chose out 700 men to go northwards to Breida, to watch his (ie; the King's) movements".*⁴⁷⁸

"Another faith than what we had before" is a particularly significant admission in this account, for in it we find clues that the Norsemen were part of an organised set of religious traditions and beliefs, sufficient to be called a "faith". But the king braved the moment and approached them, hoping to gain their ear, and entice them into converting. "They replied, "We shall give thee something else to do today than to be mocking us;" "⁴⁷⁸ and at that a furious melee broke out. The fight went in the king's favour, the insurrectionists (largely farmers) hurriedly disbanded in fright.

The father of one of the ringleaders sought the council of an important chieftain in that valley, by the name of Thord Istermage. Istermage ordered that a group of 13 delegates should meet the king and entice him into facing the people at the Thing-place, so that they could find out "if there was any truth in it (Christianity)".⁴⁷⁸ The king came and gave them news that Norsemen in Lesjar, Loaf and Vagar had already made the transition to Christianity, and had "broken down their houses of sacrifice". Visibly unimpressed a spokesman for the pagans called Gudbrand quizzed the king "Dost thou call him God, whom neither thou nor any one else can see?"⁴⁷⁸ Gudbrand made a challenge for their respective gods, to change the weather; but Thor was to go first. And on the following day Thor made the skies overcast as asked. Now it was the king's turn. His bishop gave the pagans a long sermon about the virtues of God and the Christian faith, after which Thord Istermage responded.

THE BATTLE WAS
MYSTICAL IN NATURE.
ONLY TRUE GODS COULD
ALTER THE WEATHER

*"Many things we are told of by this horned man with the staff in his hand crooked at the top like a ram's horn; but since ye say, comrades (ie; fellow countrymen), that your god is so powerful, and can do so many wonders, tell him to make it clear sunshine tomorrow forenoon, and then we shall meet here again, and do one of two things - either agree with you about this business, or fight you".*⁴⁷⁹

Here Istermage was referring to the bishop and his crozier. That he calls him a "horned man" is problematic. Perhaps the bishop was wearing the typical double-pointed mitre, perhaps it was an allegorical phrase for a holyman current in Scandinavia at the time, and if so it probably meant that Norse pagan priests wore horned headdress (something suggested by a heathen tapestry found in Scandinavia). Perhaps he was really saying that the bishop was evil. The name Istermage, the bishop's protagonist, is alluring in the light of other seemingly Magian information emanating from Scandinavia and Slavia. One of the proscribed pagan names in Rus' was Ister, leading to the possibility that Istermage is a compound name meaning "a Magus called Ister". I cannot confirm this without seeing how faithful Istermage is to the original translation, but on face value this appears to be the case.

This showdown between the might of gods could end up a bloody affair, with kinsmen and countrymen smiting each other. The way the pagans thought, if the Christian god could not manifest his powers before their eyes, and make the sun shine, then there was no truth in the new faith, and thenceforth they would raise their arms to strike down proponents of Christianity. Based on this and other Sagas it is irrefutable that religious dissension was a cause for social fractures and internecine warfare in Scandinavia. Money was not the only thing the Norsemen were willing to fight and die for, and to suggest this is to degrade their former religious sensibilities. It was dear enough for them to rise up en-masse, hundreds at a time, not just to protect their religion from proselytisers, but to eliminate the unwanted doctrinal intrusion. Norse religion can hardly be seen as a conglomeration of superstitions, for the assembled pagans were so incensed that they "shouted as one person that Olaf (the Christian king) should never get away with life". If all they believed was personal family superstitions, unimportant to anyone outside their immediate family or district, how do we explain this community response, if not by a common religious system, that was worth living and dying for. A breaker of treaties in Norway was to be forever condemned and "driven off" for as long as "Christians go to Church, heathens hallow temples, ground grows, ... mother bears son, ... sun shines ... He shall shun ... every home save hell".⁴⁸⁰ All that such a person owned was confiscated and the offender placed under a life-long censure against ever setting foot in that land. Inherent in this passage is an admission that Mediaeval European heathens (most likely Norsemen) were building their own temples after the Christianisation of Iceland, though their precise form is not hinted at. Such was the remarkable tenacity of the varied pagan faiths.

THEY THREATENED TO
KILL THE KING

WHEN OTTO SENT
MISSIONARIES TO
DENMARK A WAR
ERUPTED

So much for internal proselytisers. What happened when outsiders wanted them to convert? When Otto, the Holy Roman Emperor, requested the conversion of the Danish king, Harald, and his subjects (in 975 AD), war broke out. And it was no small affair. *The Saga of King Harald Grafeld and of Earl Haakon Son of Sigurd* tells us that

forces mustered together from all over Denmark. The request for military back-up which he sent to the Norwegian Yarl Hakon saw an enormous army gather in Norway, and sail to Denmark to meet this Frankish Emperor head on. The combined Dano-Norwegian force was recorded as “*very numerous*”. The issue at stake was the abandonment of paganism, the result was a war. Not a war over lucky rabbits’ feet, or which way you stir your porridge, but over highly emotive articles of pagan faith.

The word viking was coined by the Danes to denote “a pirate”. Even so, the precise origins of this Danish term have never been satisfactorily resolved. Some scholars say it comes from the word *vig* (“combat”), others *vik* (“a water inlet of various kinds”), and yet others maintain that it comes from a much older word *wic* (Anglo-Saxon), meaning “an encampment”.⁴⁸¹ I would like to postulate an additional genesis for “viking” by drawing attention to similarities between the word “viking”, and the names Adam of Bremen used when referring to the vikings who did untold damage throughout the Lowlands in the years leading up to the turn of the millennium (these he called *wichingi* or *Ascomanni*).⁴⁸² After factoring in Arab accounts of the viking *Al-Madjus* it becomes eminently plausible that the term *wichingi* (“a viking”) was connected with the origin of the word English word “witch”. Consider the following terms,⁴⁸³

wita (Old English): “a sage” or “an advisor”: *wiccian* (Old English): “to perform witchcraft”: *wig* (Old English): “an idol”: *wiglian* (Old English): “to divine the future”: *wicche* (Middle English): “a wizard”: *wicken* (Middle High German): “to divine the future” or “to bewitch”: *wizzo* / *wizzi* (Albanian): “a wizard” or “a sage”: *wizzo* (Old High German): “a sage”. Obviously the English word ‘wizard’ is related to the Old High German, and (if the connections which I have provided are valid) infers that the pagan priests of the Norsemen (and most likely those of the British Isles) were not only wizards but sages of some intellect.⁴⁸⁴ Old Icelandic has conceptually similar terminologies; *visdoms-madr* (literally “a wise man”, meaning “a sage”, “a soothsayer” or “a prophet”), *visdoms-kona* (“a wise-woman”),⁴⁸⁵ *visinda-madr* (“a soothsayer”): *visinda-kona* (“a wise woman or sybil”): *visinda-tree* (“the tree of knowledge”),⁴⁸⁶ and *visi* (“a poet”, “a chieftain” or “a leader”). *Visi* was simply another word for a *gothar*.⁴⁸⁷ Collectively I see these words as related to the Near Eastern term *wasir* (“a high chieftain”). The Norse wizards probably had books too. The Old Icelandic word *visinda bok* meant “a learned book”.⁴⁸⁸

Drifting momentarily from this geographical area, we also hear of the rune-using Magyar (Hungarian: pronounced Modjer) *Vezer*, or *Nagyvezer* ... their chieftains, of the line of Arpad, which hailed from the Central Asian city state of Khorezm (which in the Iranian meant “the Land of the Sun”). By some strange coincidence this Hungarian dynastic name phonetically resembles the title proudly flaunted by the Magian priestly bloodline ... Ehrpat. This once-nomadic folk dressed in typically asiatic and near eastern dress styles, had their own learned heathen culture, and were remnants of the old Hunnish hordes.

Another style of Nordic magic related to singing and smithing is perceptible in *gala* and *galdr*, but they might only be different words. *Gala* “to sing or chant” is conceptually related to *galdr* “a magical song or charm”, and in the plural it meant “witchcraft”. This form of magic, if it varied from the rites of the wizards, was an evolved type of religiosity, using sung incantations. Witness *galdr-ligr* (“magical”), *galdra-mathr* (“a wizard”), *galdra-raumr* (“a great sorcerer”) or *galdra smithr* (“a sorcerer {smith}”), *galdra-kind* (“a foul witch”), *galdra-kona* (“a witch”), and *galdra-bok* (“a book of sorcery”).⁴⁸⁹

The Old Icelandic words *vita* (“to know”), *vitki* (“a wizard”) and *vizka* (“wisdom” or “sagacity”)⁴⁹⁰ were related to the aforementioned words denoting a wizard or sage. Based on this word set, we can infer that the Scandinavian wizards in question were the recipients of vedic knowledge, for the words seem derived from *vita* and *veda*, Old Indian words relating to vedic knowledge, but specifically meaning “I know”.

Perhaps the Norsemen had chieftains who were at the same time sages, soothsayers and mortal divinities. If so these Norse wizards may well have inherited the godliness, wisdom and sciences of the Hindu Brahmans or Iranian Magi, and continued to perpetuate them during the pagan era.

On the odd occasion Indians might have made their way into Europe, as seems to be the case in an account supplied by Pliny the Elder, which states that several Indians (probably Hindus) were handed over to a Roman proconsul in Gaul. Apparently they had embarked upon a voyage but became lost along the way, ending up in Germany and thence Gaul. If this journey did factually occur it is more than likely they travelled from India along labyrinthine estuarine routes that permeate the landscape in between rather than by open sea. Expatriate Hindu Brahmans may have been an additional source for the spread of vedic knowledge in Europe too.

The End Days

DOOMSDAY

Besides written accounts of the viking *Al-Madjus* attacks on Moorish Spain, Norse eschatology provides powerful evidence for Magian religion in pagan Scandinavia. That is because the viking doomsday of *Ragnarok* resembles the "apocalypse" portended by the Magi not only in the nature of the predicted events, but in the internal event sequence of both armageddons. This uncanny resemblance far exceeds whatever "end times" similitudes can be found in the Christian *Book of Revelations* and the *Qur'an*, though in substance there are certain features common to all four, owing to the common origins of the doomsday mythos. But for now you will read precised accounts of doomsday as told by the Magi and the Vikings.

THE TERRIBLE WINTER

THE MAGI During the three-year-long "Terrible winter", an era of unprecedented ecological catastrophe, lawlessness, deforestation, rapine, promiscuity, family and civil disorder, the heavens collapse (including the star-bridge). *Gokihar* (literally the "wolf-progeny" in the form of flaming meteors) and the demon-serpent, plus perhaps "the thievish *Muspar*" (a fiery comet that loiters around the sun),⁴⁹¹ lunge down upon the world, thereby melting the mountains and they sink down, making a great plain, upon which the war will be fought.

THE COMET

"this earth becomes an iceless, slopeless plain; even the mountain, whose summit is the support of the Kinzar bridge, they keep down, and it will not exist".⁴⁹²

THE MOLTEN EARTH

A river of molten metal thus springs up and all mankind must pass through it at this point, having been raised up from death, in a preliminary sense, by the Magian messiah (whose body shone like the sun) so that they could undergo the ordeal. This assembly of resurrected souls is called the Assembly of *Sadvastaran*, and during it the Archangel *Rashnu* weighs the souls of each and every one. As this progresses, the "archangelic" hero-gods of many virtues ride into the fray, mounted on white horses and carrying spears. They enjoy a one-on-one battle to the death with a particular demon (responsible for making devastating fires, frosts and many other baneful experiences) who was their personal arch-enemy throughout their long existence. After this war the wolf-progeny

THE SAVIOUR

WAR WITH THE SAINTS

are killed, but *Ahriman* (the dog/goat who is lord of the devils) and *Az* (the serpent of greed) escape the scene. To bring about the utter cleansing of evil, *Ahura Mazda* (God of the Light) and *Saoshans/Sraosha* (the messianic judge and resurrector) chased them down, and the fleeing pair were utterly consumed in the broad fiery river. Long preceding this, *Yima*, the benevolent lord of the dead would gather together selected men, women, plants and beasts, and secrete them under the earth, in a hall-shelter of mammoth size. And there they would live out their days until the "apocalypse" had passed, and thence emerge from hiding to re-people an earth victimised and inundated with horrific fires and engulfing waters. From the moment the battle was over, a newly-renovated universe would be created for eternity. This renewal was called "The Renovation", and decrepitude or misfortune would no longer exist once it was consummated.

Fig 31. An Assyrian fresco illustrating a battle between the ancient Sumerian Thunder/war god Ninurta and a demon, perhaps Assaku, dating to Nimrud, 883 BC. Such a battle might have been a precursor to Zurvanite and subsequent Slavic beliefs concerning warfare between the thunder god and demons.

SCANDINAVIANS AND GERMANS During the three-year-long "Fimbul Winter", during a period of immense warfare, discord and moral decay, whoredom, winds, disunion and the collapse of the family unit, the *Fenris* wolf escapes its bonds. The heavens then break asunder, and the *Bifrost* bridge leading to heaven collapses. In company with *Loki*, the *Midgard* serpent and various *Muspilli* (fire giants) plummet out of the sky (demons of desolation in fiery raiment) to array themselves against the gods and all that existed. A boat-load of giants sails to fight the *Aesir*. Upon their arrival flooding and fires will bury the land, so that the earth appears to sink down, creating a vast plain that stretches in every direction.⁴⁹³

The word *Muspilli* is inexorably connected with *Ragnarok*, though the term is derived from the Old German (meaning "Judgement day", or "the end of the world").⁴⁹⁴ Portions of the 8th Century AD German myth, the *Muspilli* read;

"This is what the wise men have told: The Antichrist shall fight with Elijah. The Evil One is well-armed, they will fight it out. The warriors so mighty, the stakes so great ... The mountains catch fire, No tree is left standing, ... The moon will fall ... On the Day of judgement ... In the face of the Muspilli. ... A red hot rain burns up everything".⁴⁹⁵

FIERY MUSPILLI FALL FROM THE SKY

THE FIRE GIANTS BRING CHASTISEMENT

If we compare these pagan myths with biblical references,⁴⁹⁶ we have cause to ask whether or not Christianity had fused aspects of Magian lore into its eschatology, if not adopted that same myth as the true basis for the

Armageddon of Revelation.

Old Norse prophecies relating to Ragnarok (the battle between the gods at the end of time) displayed many of the features found in Magian apocalyptic prophecy too. There was to be “*struggle and slaughter*” amongst brothers, ruined kinship ties, “*great whoredom (promiscuity); axe-age (warfare) ... wind-age (perverted seasons), wolf-age (crime) ... before the world crumbles: no man shall spare another*”. Saxo Grammaticus also adds “*The sky seemed to fall suddenly to the earth, and fields and forests to sink to the ground, all things were disturbed, and the ancient chaos came again ... the world rushing to universal destruction*”.⁴⁹⁷ Many features of Norse myth relating to the creation and subsequent periods seem laced with further Magian elements. In both Magian and Norse lore, the pestiferous serpent chews to death the roots of the world tree, the Sacred Ash. After the conversion of the Norsemen, we still find depictions of Ragnarok on the reverse side of High crosses, perhaps conclusively proving that both Christians and pagan Norsemen had similar beliefs to the Magi about the apocalypse; the Scandinavians more so.

Clearly Christian taints have found their way into the once-pagan German prophecy, but there seems to have been pagan cognisance as to the interrelatedness of the events. It was on account of this that believers felt little disquiet when intermingling the pagan and Christian eschatological traditions, when mixing their metaphors.

Then came Judgement Day according to the *Muspilli* text,⁴⁹⁸ when rewards and punishments were parceled out to the good and the wicked respectively. Considering that Judgement Day is a feature absent from the Norse *Voluspa*, it seems that this aspect of the myth was a Christian nuance added to their recollections of the Germanic apocalypse.

For the Norsemen it is on that flame-ravaged plain that the last great battle of all the ages is to be fought. The crafty and insidious Loki, the Serpent, the Wolf and the many enemies of the gods enter single combat with their own ancient foes like Thor, Odin and many others. The forces of good were bolstered by battalions of fallen warriors who lived in Valholl with Odin. The fight is fierce and unforgiving, most contenders fighting until death. The shining Baldar the Beautiful, and some sons of Odin, are the only ones to survive. Baldar rises from *Hel*, into the newly resurrected world, and a golden age.

Similar notions of a catastrophic collapse of the heavenly vault were present among the Goths and Celts too, probably arising from one and the same source.⁴⁹⁹

CHRISTIANITY At the end of the world when people have lost their faith in Jesus, abandoned the saints, and fallen away from the Church, when families are disintegrating, when heavenly cataclysms paint signs in the sky, and famine, earthquakes and war ravage the lands, the king of kings (Jesus Christ) and an army of angels leave heaven to fight with the kings of the world, and their armies. The kings lose and suffer punishment, together with the great beast and prophet who aided them in their exploits against the King of Kings. They are bathed forever more in hellfire. The Devil, in the guise of a great serpent, is bound by a chain, and thrown down into an abyss to languish for a thousand years. Then comes Judgement Day, as Christ passes sentence on the damned, and rewards the faithful. Those who were pleasing to Christ earn the first resurrection, and are raised from death for a Millennium, while the wrongdoers remain in a state of death for that same period. Through the agency of Gog and Magog, the kings come back to life for a little season, including kings who had previously not had their own kingdom. They burst out into a persecution against the Church and spread their deceptions to the ends of the earth. They will inflict terrible sufferings on the Church, persecuting the city of god and the saints. But the fire of god falls from the heavens and destroys them, following which Satan and the great beast are consumed by the lake of fire together with those who believed the devil’s lies, and did not experience the first resurrection. From this carnage a new and delightful existence is bestowed on those who were enrolled in the book of life. All that was bad about the past fades away, and these blessed ones gain eternal life in the heavenly city which contains life-giving waters, trees and many mansions.⁵⁰⁰

ISLAM At a time when most no longer believe in Jesus Christ and families are rent by schisms, there will be an eclipse. The heavens will split apart, obscuring the stars. Down plummet the stars, cascading from the heavens. Amid devastating earthquakes the mountains will pass away and a trumpet will sound. Soul escorts come to earth to bring every soul to learn god’s verdict. Allah will pass judgement on all those he has resurrected. Such is Judgement Day, or “*the Overwhelming Event*” as the Muslims call it. The *Book of life* is opened, whereafter there will be the weighing of souls, and the division of them into the blessed, most blessed and the damned. Sinners will be subjected to a range of punishments (ie; bad food for the wicked and hot water to drink) then burned in an inferno,

as the holy receive substantial luxurious rewards throughout their opulent eternal life.⁵⁰¹

Of the above four apocalyptic myths, I believe the first two are so similar to each other as to constitute the same eschatological myth. That some Norsemen were described using the very specific Arabic word *Al-Madjus* gives us added cause to accept the plausibility of their interrelatedness. I am not the only person to have noted this. Olrik wrote a well-received paper some time ago explaining the elaborate similarities, though he guesses that the Norsemen had somehow borrowed the myth. Borrowed the myth? Clearly any suggestion that this was just a casual assimilation of Magian eschatology with the Norse *Voluspa* epic, is formulated oblivious to the sizeable Magian presence in Slavia, and with a blatant disregard to Norse sagas which expressly state that their wizard-gods, magic and religion came from beyond the Dnieper in the far-East. Based on what Norse mythology has survived we know that it was a fundamentally important belief for them. I suspect the real reason why this line of thought has not been taken further by academics is not so much due to their ignorance, or sloth, but a fear of what they might find. In doing so they would be drifting into controversy, soiling their hands with esoteric matters better left alone by any serious academic keen on keeping their job. Reputations could be in tatters by even suggesting a Magian presence in Scandinavia. Fears of this kind are not without foundation. One only has to look at the vicious treatment dealt out to Margaret Murray for examination of witch trial documentation, and her conclusion that, based on surviving data, shape-changing witches were the survivors of a pagan cult wearing animal skins to undergo a metamorphoses into an altered state. This sorry episode is more fully discussed on p. 400.

MOST SAY IT IS A PAGAN
MYTH GIVEN
CHRISTIANISED ELEMENTS
BY SNORRI

At present most academics specialising in Norse mythology believe Ragnarok was a pagan myth which Snorri had contaminated with Christian imagery either through ineptitude, misinformation, or through some religious agenda which hitherto eludes me.

Accordingly the sibylline prophecy the *Voluspa* (which contains the epic of Ragnarok) was tentatively dated to the 11th Century, the transition period when Christianity slid in over the back of paganism. Yet *using Ragnarok's similarities with the Christian Revelation to deduce an early Mediaeval date*,⁵⁰² is probably wrong considering that it more greatly resembles Magian eschatology than the Christian. Thus the *Voluspa* (attributed to Snorri) is more likely to have been drawn from Magian eschatology, and would therefore be far older than we have supposed thus far.

HOW DO WE ACCOUNT
FOR SOME OF THE
DIFFERENCES?

Be that as it may, how do we account for any variations in Nordo-Germanic myth and religion, and the faith of the Magi? In successive chapters we probe this question. For the most part it seems attributable to:

1. A variation in the European Magian oral tradition, owing to a loss of contact between European Magians and the old homelands. Recollections began regressing during the ensuing period of prolonged isolation. This led to home-grown embellishments of the myth in Scandinavia.
2. The European Magians preserved additional eschatological details which were once contained in Magian texts destroyed by a variety of invaders, the most notorious being Alexander the Ruman (see p. 505). The amount of extant Magian scripture does not even come close to the 1,000,000 lines of Zoroastrian literature destroyed at Alexandria on Egypt's northern coastline.
3. There was far more that Snorri and other early Norse writers could have preserved, but they felt it unwise to delve into further explicit details, for fear of the consequences of upsetting too many of the clergy and Christian rulers.
4. Considering that 200 or so years had passed since the close of the pagan era, Snorri and other early Norse writers had a rudimentary knowledge of the myths, and were unable to record them more fully, or with a greater degree of accuracy.
5. The Norsemen might have imperfectly learned the beliefs of the Magi, from wandering Magus priests and priestesses, whose ancestors had made their way into Scandinavia, the Baltic and nearby Russia. This is less likely considering that the *Ynglinga Saga*, specifically preserves evidence of large-scale contact between Central Asia and Scandinavia. The Scandinavians had accepted a new religion from foreign magicians and gods, who once lived in the East, far beyond the Dnieper River, beyond what we now call Russia.

Evidently elements of the *Voluspa* had not come from Christianity, but in time newly converted Scandinavians were beginning to confuse the myth of Ragnarok with Armageddon. This was, I believe, a secondary assimilation of Christian epos attributable to Magian Christian heretics, and persons not sufficiently well schooled in Christian ideology.

If Catholicism assumed a level of prominence in the religious lives of the Norsemen, how is it then that individuals in several different locations had formally blended the pagan apocalypse of Ragnarok with *Revelations*, and immortalised this by engraving the epic onto high crosses and other works of masonry (eg; the Gosforth Cross, situated in Cumbria, England). What could be gained from doing so? The closing passages of *Revelations* warned against adding or taking away from the contents of the prophesied biblical “end times”, the penalty being plagues on those guilty of doing so. Mixing themes of this kind in such an open fashion would have had immense spiritual dangers for the faithful, bordering on heresy no less. Any priest would have been well aware of it.

An additional secondary assimilation was due to poor missionary work during Christianity’s infancy in Scandinavia. Nevertheless parishioners of Snorri’s day were not so dim-witted as to be incapable of comprehending recitals from *Revelations* during Church readings and subsequent homilies. That is unless Christian clergy did not have copies of this particular text available to them, from which they could properly educate their congregations. Some evidence for this is found in the *Correspondence of St Boniface*. In it the saint requests copies of certain New Testament books. Even allowing for this it remains difficult to pin-point which dioceses lacked given books, or at what times.

Ragnarok was perhaps then an oral tradition, recording a more antiquated pagan apocalyptic scenario, which as of the 13th Century had still to come to pass.

One convincing explanation for the likenesses is supplied by an examination of Alanic legend. The pre-eminent champion of the Mediaeval Ossetians was none other than the biblical prophet Elijah, who according to the *Old Testament* had been taken up into heaven, thereafter to fly through the heavens in his fiery sky-chariot.⁵⁰³ His expected return portended the much-anticipated second coming of Christ. A hazy blend of eastern dualist Christianity is perceptible behind these Alanic beliefs, with Elijah representing god’s champion, and the sacrificial goat the equivalent of Ahriman. Perhaps the Alans were responsible for integrating Elijah’s participation in Armageddon with the Germanic Muspel tradition. After the conversion of Rus’, the Russians equated Perun with Elijah, so the main god of the Alans might really have been the Thunder god Perun (or the many other variants of his name). Moreover, I can only speculate how similar this Alanic Christian creed was to the Paulician heresy (a Christian heresy discussed in Part II). Although the Asii espoused traditional forms of Christianity (Byzantine or Georgian Church traditions), they are likely to have harboured primordial Zurvanite sympathies (especially Mithraism). The mediaeval descendants of the previously great Roxolani and Caucasian Alans (who were probably connected with the Asii of the *Ynglinga Saga*) not only spoke an Iranian language, but had strange religious customs which blended Christianity and pagan “superstition”.⁵⁰³ Asii sacred rites included the sacrifice and consumption of a goat in an underground place, whose flayed skin had protective qualities where matters of misfortune and fertility were concerned.

The tree and deer imagery depicted on the Bug temple wall (in Southern Russia) may embody aspects of Norse creation myth. If so, the presence of related religious themes in Russia indicates that Snorri had supplied creditworthy strands of pristine Norse mythology, with regard to the cultural affiliations shared by the Russians and Scandinavians. The only problem is that the officiating priest was probably a Slav, and the temple inscription in Russian, not Old Norse. No runes were carved inside. Besides the Yggdrasil-like relief, a further tangible connection with the Norsemen was Oleg himself, for whom the priest performed the rites before the tree (Oleg being a variant of the Norse name Helgi {meaning “the Holy”}).

The mighty Yggdrasil, the world tree, was an Ash tree spread over several terrestrial regions. Four deer (Dain, Durathror, Duneyr and Dvalin) wandered amid its shady branches, while far above, in its boughs, sat an eagle, hawk and a squirrel.⁵⁰⁴

But deep underground, the serpent *Nithhogg* (which translates as “vicious blow”) and his seething serpentine accomplices savaged the roots which nourished that Ash.⁵⁰⁵ The snakes who aided him (Svafnir, Ofnir, Grabak, Grafvollud, Moin and Goin) had once been living men, if Snorri’s accounts can be relied upon.⁵⁰⁵ White Magians too believed that the basest of wrongdoers became serpents, though it is not expressly stated whether or not these joined with the many other reptiles which attacked the wondrous *Haoma* tree of Ahura Mazda (a sacred Ash tree).

One archaeological site in Russia known as Chernaya Mogila, has petroglyphic images which portray serpents surrounding trees.⁵⁰⁶ Although Y. Shilov likens this to themes contained in the Epic of Gilgamesh, I would also like to add that there is a Magian parallel, which is as follows;

CHRISTIANS WERE

RAGNAROK

ALANIC LEGEND

ELIJAH

THE SACRED TREE AND
DEER

THE WORLD TREE

THE WICKED SERPENT
AIMED TO KILL THE
TREE

THE GUARDIAN SPIRITS
AND SAINTS

At the monumental moment when Zoroaster's Fravashi (pre-existing soul) came down from heaven, his guardian angel Vohumano fought to protect the *Haoma* tree (which brings life) from the flock of serpents and demons that hovered above and below its branches.

"Then that guardian spirit of Zarathustra started up, and the serpents on the tree rushed also from them away towards the demons; but that guardian spirit of Zarathustra smote them on the jaws, and the serpents fell down and expired".⁵⁰⁷

HELL

In that horrendous Scandinavian underworld which ingloriously claimed its victims by old age, and infirmity, dwelt the dog Garm, and of course Hel, the Queen of the Underworld. There was also a river there in the northern parts, frigid, not burning, as is the case in the Magi's version. If some Norsemen were Magian, then it is likely Garm might represented Ahriman in his dog form, and Hel, Geh, the Great Whore. Unfortunately, owing to a paucity of more specific details about these two figures, I am unable to explore other possible points of similarity or difference. Certainly the Lapps held that the Devil was a dog, and this belief might have been related to Norse cosmology.⁵⁰⁸

How similar this all seems to Magian tales of the world tree, Gokard, beneath which the many-horned three-legged Ass grazed. Far below ground the bestial demon Azi-Dahaka and the serpents tried to kill it off, by gnawing at that which sustained it, its root system. Likewise from the beginning, the Golden Ash had been vampirically attacked by reptiles of many forms. Come the "end times" little foliage would remain on the ash, and what did stay would be imperiled by disease. So the Magi foresaw.

NORWEGIAN WIZARDS
WERE TRAPPED IN A
FEAST HALL AND BURNED
ALIVE

If there was a link between the Norse, Russian and Magian eschatology, it evidently dispersed into Northern Europe out of Iran and Mesopotamia, via Scythia.

Unfortunately the Norwegian age of wizards came to a fiery end, or was greatly diminished once a great many of the wise men and women were deliberately entrapped within a feast hall and burned to death by the Christian King Olaf. Such was the common fate of Europe's many wizards and witches.

*The European Magi consolidate power*GERMANIC
ADVENTURERS SETTLE
DOWN IN VARIOUS PARTS
OF RUSSIA.

Norsemen, and the Goths in particular, had long been using the southerly arterial rivers to travel to the lucrative markets and bazaars of Byzantium and Asia Minor. An undetermined number of them were already living along Rus's main rivers, in supply depots or the cabins of fur traders. They included Danes, Russes and Swedes. But for reasons unknown, the Finns and Slavs pooled forces and militarily ejected the Nordic Russes from the area, sending them back to Sweden. In the ensuing power vacuum created by their absence, inter-tribal conflicts erupted. At some point during those turbulent years the more northerly Slav and Finnish tribes sent word abroad to the Rus' princes, beckoning them to return and install some sense of order among them. Thus the ascendancy of Norse royals, under Prince Rurik, to a position of dynastic honour, took place not at sword point, but for political reasons mutually agreeable to both the Rus' royals, and those who invited them. In this land of Rus' it took only a sword and an axe to carve out a kingdom for yourself from the forest wilderness. With a reputation for big drinking and an almost feral hardiness, the Slavs and Finns were a people after the Norsemen's hearts. As you might expect, Norse assimilation with the local tribesmen was fairly rapid, though it was often the case that Norse colonists preferred to congregate in their own enclaves.

In the early to mid-9th Century AD the Swedes, and more particularly Russes, systematically penetrated the northerly Finnish and Slavic lands, heading east towards Silver Bulgaria, where they often went to trade. With their Slavicised Ros partners (from Rostov), the Slavic Krivichians and Finns from the Ladoga and Beloozero districts (such as the Chud and Ves) at their side, they began making moves towards tribal solidarity between Finn, Estonian, Scandinavian and Slav. This became enshrined in history as the pivotal "Call to the Varangians",⁵⁰⁹ the birth of Russia.

To be sure the Norsemen were beginning to look far beyond their frost-bound northern peninsula. Today's historians simply attribute their adventurous eastern forays and racial politics to trade and a trail-blazing spirit. Commerce was, no doubt, a significant reason for them colonising Russia, and even trekking to regions as distant as Azerbaijan, Iran and Iraq, often in company with Slavs or Alans. I however see religion as the primary catalyst for their extensive interaction with other heathens in Greater Scythia and beyond.

According to *Ynglinga Saga*, many hundreds of years after the *Aesir* had settled among the Vanir, Norse nobles continued to remember their venerable eastern ancestry, which was traceable to *Godheim* and the *Great Swithiod*. It

is probably for this reason that the Old Norse term *Yarl* (an Earl, a member of the provincial Scandinavian nobility, often a warlord with royal lineage) looks to be derived from the Persian *Yal*, meaning a “brave warrior”.⁵¹⁰ Not surprisingly this appears in the Old English as *Eorl* (with precisely the same meaning as the Old Norse *Yarl*), and probably imported with Scandinavian settlers.

These eastern lands were legendary and still held an aura of mystique and wonderment for later Norsemen, many centuries after they had migrated westward.

*“To Saeming Earl Hakon the Great reckoned back his pedigree. This Swithiod they called Mannheim (literally: The home of men), but the Great Swithiod (Greater Scythia) they called Godheim (literally “the home of the gods”); and of Godheim great wonders and novelties were related”.*⁵¹¹

It would appear that the descendants of Odin and the initial wave of immigrants lost contact with *Godheim* in the ancestral fatherland, and after having lived a long time in Europe set out in search of it, having previously sworn that they would succeed in this mission. It was in Turkland (ie; Central Asia) that the Norseman Swegde chanced upon the very people he had been searching for. Having rediscovered *Godheim* and the *Great Swithiod* he apparently established lasting contact with the inhabitants of the region.

*“Swegde took the kingdom after his father, and he made a solemn vow to seek Godheim and Odin. He went with twelve men through the world, and came to Turkland, and the Great Swithiod, where he found many of his connections”.*⁵¹²

Earl Hakon the Great was not the only high-born one to look eastward. In the Old Norse tale *Gylfaginning*,⁵¹³ the Swedish king Gylfi is said to have undertaken an arduous journey to Asgard (an Icelandic folk remembrance of the Persian regional governmental centre of Asagarta {sandwiched between Parthia and Medea}), where he met in consultation with the wizard-gods, who, the Christian Snorri tells us, “deceived him” with their tales of the world’s origins and its coming end. There the king learned many other things that proved to be the basis for Norse pagan beliefs. As you have already seen, the epic of Ragnarok was probably one such teaching. Here Snorri’s pen appears to have faithfully recorded Gylfi’s unforgettable adventure, preserving for us profound Norse remembrances of the divine wizards of Asia Minor.

Additional relevant details are found noted in a 13th Century Icelandic tract, which allow us to specifically identify the wizards as *Magi*, for it was said that - “*Magon reigned over parts of the Great Swithiod, but Madia over Kyllfingaland, which we call Gardariki (Rus)*”.⁵¹⁴ This account intimates that the *Swithiod* was ruled by a *Magus*, with the best part of the Medes, the original tribe to which the *Magi* belonged, serving as temporal lords over ancient Russia, having left Persia at some point in ages past.

Besides being a wonder-filled realm of incestuous wizards, what else does *Ynglinga Saga* tell us about the legendary Great *Swithiod*?

*“northward of the Black Sea lies Swithiod the Great, or the Cold. The Great Swithiod is reckoned by some as not less than the Great Serkland (Africa); others compare it to the Great Blueland (Libya). The northern part of Swithiod lies uninhabited on account of frost and cold, as likewise the southern parts of Blueland are waste from the burning of the sun. In Swithiod are many great domains, and many races of men, and many kinds of languages. There are giants, and there are dwarfs, and there are also blue men, and there are many kinds of stranger creatures. There are huge wild beasts, and dreadful dragons. On the south side of the mountains which lie outside of all inhabited lands runs a river through Swithiod, which is properly called by the name of Tanais, but was formerly called Tanaquisl, or Vanaquisl, and which falls into the Black Sea. The country of the people on the Vanaquisl was called Vanaland, or Vanaheim”.*⁵¹⁵

Here *Vanaland* is identified geographically with European Russia, where Slavs, Finns and many other cultures dwelt, such as the descendents of the Scythians, Indo-Iranians and Hunns. Therefore the legendary era of renewed contact between Sweden and the Great *Swithiod* is perhaps historically attributable to the 9th and 10th Centuries AD in particular, for it is during that period that Norsemen once again began interacting with the region’s inhabitants (ie; Finns, Slavs and Swedish colonists) to a far greater degree.

The subsequent analysis of thousands of birch scrolls unearthed at Novgorod has conclusively proven that Novgorod was founded by Slavic-speakers who had previously inhabited a region just south of the Baltic, perhaps near Poland or Prussia.⁵¹⁶ Yet their language was different from that of every other Slavic linguistic group, displaying

VANALAND

at least twenty points of difference, and lacking the “second palatisation of the back palate consonants” (a standard feature of Slavic language).⁵¹⁶ In short, the language of these highly-educated Slavs had formed in isolation from the others. Perhaps they had lived on an island, just as the Russes were supposed to have, perhaps the mysteriously-deserted island of Gotland. Maybe the Russes weren’t really ethnic Slavs at all, but Balts or Scandinavians who came to speak Slavic as their preferred language. Nevertheless these scrolls are likely to reveal a great deal about the linguistic affiliations of the tribe in question. Unhappily I have been unable to obtain copies of Professor Zaliznyak’s more specific findings in relation to this, though based on what I’ve read on the internet he attributes these changes to orthographic corruption

The Varangians of which the *Primary Chronicle* speaks were commonly described as Swedes or Norwegians. For Russians it meant a person of Scandinavian heritage, either a settler, a trader or mercenary. The word technically refers to those who served in the bodyguard of the Byzantine Emperor, and it is from this term that the Russians adopted their wide usage of the label Varangian. Despite the relatively late origins of the term Varangian, Persian texts as early as the 10th Century make mention of these marauding men of fury, the *Asiu o Varag* (Alanic-Varangian) alliance which conducted plundering expeditions throughout the Caucasus.⁵¹⁷ Vernadsky believed there may be a relationship between the two terms. I concur. The Baltic was formerly called the Varangian Sea (owing to the quantity of Scandinavian sea traffic), but before that it was the Sarmatian Sea (so named after the Indo-Iranian Sarmatians).

Such then is the traditionally accepted Normannist view of Russia’s birth. Put simply the vikings are invited by the region’s ethnically-diverse inhabitants to come and rule them, to cement them into a single nation. It’s nice and tidy, free of any anomalies. That is until one asks some simple and very obvious questions, that blow its naive simplicity apart forever. Why did the Finns and Slavs place so much store in the ability of the Russes to restore order there? Why on earth would the region’s ethnically-diverse inhabitants invite the very people they had militarily vanquished back to rule over them? It just doesn’t make sense. No doubt these tribes ascribed to the Gothic Norse royals a power of some kind, well able to bring order and law from the warmongering of their various chieftains. What ever led them to place so much trust and hope in these Norse royals from over the sea? After all they were not under threat from foreign aggressors, and could just as easily have chosen a Latvian lord to act as an independent mediator, if that’s all they sought. As you will see later, their unquestioning recognition of Norse royal power, and their obedience to these same royals was rooted not just in politics, but in their common paganism.

Normannists also fail to address a number of other salient details. For instance why did Vladimir oversee the erection of stone Iranian idols in Kiev, not far from the prince’s tower, after assuming power there?

NORMANNISTS

IRANIAN GODS
WORSHIPPED IN ANCIENT
RUSSIA

Simargl’ The fertility deity Simurg, as recorded in the scriptures of the Magi.⁵¹⁷

Khors The Good Sun, and ruler of the twelve signs of the zodiac. Khors was originally an Alanic deity from Khorezm in Central Asia and/or Khorsabad in Mesopotamia which, in one form, and under Mithraic influence, is almost certainly equated with Jesus, the Good Son.⁵¹⁷

Dazhbog A sun God with an Iranian title.⁵¹⁷

Stribog A high-ranking Iranian deity.⁵¹⁷

Perun Cognate with the Vedic war god Indra.⁵¹⁷

Let’s take a closer look at the deities involved.

SIMARGEL

Simargel Owing to the writings of the Persian Muslim Khaqani,⁵¹⁸ we can deduce that *Simargl* was the Slavic name for *Simurg*, a white celestial fertility god recorded by the white Magi in the *Book of Bundahishn*.⁵¹⁹ In fact he goes so far as to call the Russians Simurghs. According to both the *Magian and pagan Rus’ traditions* Simurg or Simargel was the semen of the gods, who controlled the growth of crops and medicinal herbs, plus family and tribal fecundity. In Zoroastrian iconography Simurg is depicted as a dog-headed beast with bat’s wings, which is a little like the Persian depiction of *Ahriman*, but closer to that of the Griffon-bird (the bat) which itself brought much fertility to the land. To the Zoroastrians Simurg was the “radiant bird”, the *Haoma*-bringer, and the spreader of life across barren earth. This notion was encapsulated in the Russian myth of the *Zhar Ptitsa* (the Fire Bird). When Simargel⁵²⁰ was strong every one would prosper; when depleted of potency, life remained barren or died. Further

evidence of profound Magian influence on Rus' paganism (and the foundation of the pagan Kievan Rus' State) is found by the mere existence of this God among those stone *kumiry* (idols) raised by Vladimir atop bald hill in Kiev, in the year 980 AD.

ICONOGRAPHY FOR
SIMURGH

Back in Persia Simurg was often shown with leonine features, bat's wings, a spread of resplendent peacock tail feathers and the body parts of a dog. To Zoroastrians the dog was one of the holiest of animals, a sign of vitality, a ward against the dead, and an indispensable part of their everyday life. Despite this unusual appearance Simurg should not to be confused with *Ahriman* the devil, in typically Assyrian goat or dog form. Alternative spellings for Simargel were Semar'gl', or Simargl. In Rus' it acted as a guardian for the average pagan household, and gave aid to those in trouble.⁵²¹

IN IRELAND SIMORG WAS
HELD TO BE A DEVIL

Overseas in Ireland it appears they had a very different conception of him, for there *Simorg* was regarded as a demon. That Simurg was known in pagan Ireland is self-evident, perhaps owing to Norse influences. Calling him a demon has wider implications though. Unless this meaning arose during Christian times to diabolise the old heathen god, then the Irish saw Simargl' with Vedic eyes, equating him with what the Indo-European Aryans saw as demonic Asuras.⁵²²

SIMARGL POSSIBLY
CONFUSED WITH
SAMAEL, DEMONIC LORD
OF THE 'LEFT-HAND
PATH'

A similar situation exists in Rus'. The Medieval Russian text *Slovo o Polku Igoreve* (written in the Christian era) classifies Simargl as a *Div* (derived from a Persian word relating to *Daevias*), which in both Persian and Russian meant "a demon". In this particular instance the old word was used in Christian times to diabolise one of the holiest spiritual beings known to the good Magi.

Alternatively medieval commentators confused Simargl with Samael, a high infernal prince found in Jewish apocrypha (identified as the serpent in the *Book of Genesis*, the true father of Cain by Eve, and a celestial power associated with fire, Mars the planet of war, and ruler of the northern wastes). The Hebrew terms *sama'l* ([pronounced sawmal] meaning "to use the left hand path", "to turn left") and *semo'l* ([pronounced semole] meaning "wrapping up", "enveloped in darkness", "the north", "the left hand") point to a connection between Samael and the high demon of the Chaldees (formerly called Agathodaemon, or amongst the Yezidis Melek Ta-us).

THE INFERNAL GOD OF
THE NORTH

Chaldean sorcerers lauded the God of the desolate North, Lord of Demons, captain of countless legions of devils and crafty djinn. He was also the master of the left-hand path that leads away from heaven, the route of crime, perversion and decadence. If this correlation is factual, the Russian Simargl/Smoagel worshippers were plausibly Magians familiar with the Chaldean "Mysteries of the North". In effect this made them somewhat similar to Zurvanites; absolute dualists. It probably seems paradoxical to modern readers, but Chaldean rituals obtained luck and blessings from the devil, for the benefit of their families. Only Russian folklore prevents us from formally attributing a demonic nature to Simurgh, or his identification with the Chaldean high demon, since the Russian Simargl's festivals do not coincide with ceremonial dates formerly observed in Chaldean Harran. Moreover orthodox Magian tradition assures us that Ahriman and Simurgh were two totally different deities, one bad, one good. Only chaldeanised Magians are likely to have conflated the two.

Despite the clear association between the words Simargl and Simurg, a later church source, the 11th Century *Slovo nikoevo Khristolyubitsya*⁵²³ mentions "*The peasants live a double faith (ie; a form Christianity steeped in paganism) and believe in Perun, and Khors, and Mokosh', and Sima, and R'gla and Vili ... they bring them sacrifices ... and they pray to fire*".⁵²³

SIMARGL APPEARS AS
SMOAGEL IN A
BAVARIAN SPELL

On account of this some have guessed that Simargl was simply a joining together of *Sima, and R'gla*.⁵²⁴ Be that as it may we still find reference to Simargl in a *fifteenth century* Bavarian magical text. In a Medieval spell designed to divine the identity of thieves, a portion of the wording is prefaced "*Jaspar, Balthasar, Melchior, Smoagel, Emanuel (ie; Jesus)*".⁵²⁵ Here I believe the Bavarian reciter is summoning Jesus, the Three Wise Kings, and of course Simurgh, but

THE THREE WISE KINGS

under his Slavic name Simargl. As with the zodiacal reliquary found at the royal nunnery of Quedlinburg, it proves the penetration of Slavic Christian witchcraft into Germany.

Khors 25 May - 16 June Khors, also known as Khoros, Khoroshko, Khres, Khurz, Korsun' or Kherson, was worshiped by the Slavs, Croats, Czechs and Bulgars. The name Khors, which some believe gave rise to the Russian word *khorošiy* ("good") is drawn from the Alanic *khur* ("the sun"), and *khurz* ("good").⁵²⁵ Ultimately it is traceable to the Avestan *haur* ("the sun"). From Russian mythology we know that Khors was the god of peace and goodness. He was offered mead, consecrated rolls, wild flowers and green twigs in sacrifice, and represented the Good Sun in the sphere of fate, where he served as the ruler of the benign 12 zodiacs (the sun-signs). Khors was the embodiment of all goodness, and, based upon the above etymologies, originally a Khorezmian, Magian deity dear to the Alans, through whom the word entered the Russian. Thus the worship of Khors can most likely be traced back to Khorezm and the Mesopotamian city of Khorsabad. Khors' idols varied regionally in pagan Rus'. Based on the wide range of divergent information that Mikhail Krishchuk and G. Lozko have managed to discover concerning the images of Khors, I believe he was perceived by people in different ways, or that Khors was several different but very similar gods, which in Russian folklore became known by the one name.

KHORS

ZODIAC

PROBABLY A PAGAN
VARIANT OF JESUS
CHRIST

1. In the first variant, Khres or Khors' benevolent image closely resembles that of Christ, a man holding a young lamb in his arms;⁵²⁶ amazing when you consider that the Avestan word *Keresa* is believed to mean Jesus! However such an effigy need not necessarily depict Christ, Hermes might be represented in this fashion too.

Khors, the Good Sun, was seen to own the 12 portions of the (good) zodiac, whereas the black Chernobog most likely adopted *Ahriman's* function as lord of all planets. This last point is only an inference based on traditional Magian thought on the matter, and was never recorded as such in Rus'. In Russia the 12 zodiacs were originally personified as young princesses who were often rendered as idols. Interestingly, in Manichaeism (a heretical form of Magian-Gnostic Christianity), the signs of the zodiac were also depicted as young maidens. Dolya, another Rus' deity was also connected with the planetary motions.

On the strength of evidence it would appear that the reverencing of Khres did not contain itself to Russia alone. Imagery found on the 10th Century AD Quedlinberg reliquary⁵²⁷ shows the rapid infusion of Magianism into Germany, in fact, into Otto's royal court. This "Christian" reliquary had Christ "the sun" at its centre, and the 12 apostles revolving around him. Moreover, *each apostle portrayed on the reliquary was astrally linked to a gemstone and sign of the zodiac!* The advent of such novel though condemned imagery is, I believe, linked with Otto's Russian royal bride and other Russians who no doubt started to mix in with the Ottonian elite.⁵²⁸

SLAVIC IMAGE FOUND
ON A CHRISTIAN
RELIQUARY ASSOCIATED
WITH AN IMPERIAL
GERMAN NUNNERY

If Khres or Khors was in reality the pagan conception of Christ, then this creed most likely began among the very great masses of Persian Christians⁵²⁹ who were cut off from the rest of Christendom following the 3rd Century AD. During the reign of Shapur, at the time of the Zoroastrian reformation, many of them had been rounded up and shipped to the very centre of the Persian empire and there underwent sustained persecution⁵³⁰ and ultimately liquidation. Others may have fled westward. But Christianity may have been present in Russia for some considerable time. Just as St Thomas made his way to India, Eusebius mentions that St Andrew went to evangelise the lands at the northern end of the world. And he was perhaps very successful. According to the *Life of Constantine*, a sizeable delegation of Scythian bishops attended the great council of Nicaea in the early 4th Century AD, much to the surprise of those present.⁵³¹ If there were bishops in Scythia (Russia) then there were dioceses, and where there were dioceses there were parishes of practising Christians. However, this fledgling Church in Rus' died out for some reason or other, perhaps put to the sword by the many Huns and Avars who made their way across the steppes and into Europe and the Balkans. These dead would have been included among the swelled ranks of the hitherto unknown eastern martyrs that eluded the hagiographer's pen. Those that survived the so-called "barbarian" incursions may well have adopted other pagan customs while living there.

POSSIBLY A REMNANT
OF VERY EARLY
CHRISTIAN SYMBOLISM

Dazhbog Dazhbog, the grandfather of the Russes was also called Daibog ('the giving God'), Belobog or Byelun (Slav: the White God). The name Dazhbog is most likely derived from the Iranian words *Dag baga*, meaning "the fiery god". Dazhbog was the deity of Heavenly Fire, day, sunlight, warmth, life on earth, work, prosperity and germination. He is also recorded being called Helios (a Greek and Chaldean term) in Rus'. Dazhbog might also have personified *Ahura Mazda*, the burning love and goodness of god's spirit, who reigned over the earth from the heavens. In their day these varied epithets may have applied to different deities (Chaldean, Greek or Iranian) which

AN IRANIAN SUN GOD

shared the same conceptual patronages, and on account of this their details conflated under the name Dazhbog.

SOLAR BATTLE LORD

Dazhbog was born and grew old every day, reaching maximum potency around midday. At dawn he pushed back the night, but after sunset he made a perilous journey down into the counter world (the underworld) where he tussled with the Lord of Darkness. As the sun waxed and waned in potency throughout the year, so too did the powers of Dazhbog. During Summer he was an armoured warrior of middle age brandishing either a sword or a hammer, riding a blazing red horse across the heavens. Yet during Winter, his fires were less potent and his steed became black in colour. Dazhbog governed forges, and was known as lord of all fire, the sons of God. His penchant for healing and purifying his devotees served to multiply the numbers of worshippers faithful to him.

HIGH GOD

Stribog Stribog was also called *Shtiribog* or *Strzyboga* (Polish), God of the Winds from the four corners of the earth. His name comes from the Olden Iranian *Sribaga*, "the high god", or "god of the heights", or "God of the High Places" (a reference to the mountain-top shrines and places of sacrifice).⁵³³ Based on the Old Iranian meaning we might suspect that *Stribog* was the Eastern Slav name for *Svyatovit*. In support of this, one tradition makes his idol similar to that of the four-faced *Svyatovit*.

Stribog supposedly had another form, portrayed as a round fat man with a big head and long straight nose, but only one face.⁵³⁴ It sounds suspiciously like an elephant, so perhaps such an effigy has been wrongly attributed to Stribog and instead should represent the Hindu deities Ganesh or Indra's wind steed, Airavata. That this idol might have been a rendition of an elephant is not as implausible as it may sound. *Yngvar's Saga* records an encounter between 11th Century Norse adventurers and a group of Slavs seated in a tower, mounted on the back of a massive creature. This was, doubtless to say, an elephant, possibly of the sort depicted on the Gundestrup cauldron.

Stribog sired all the winds, and helped Perun (a Slavic name for Indra) go about his business. He was tasked with controlling the winds in an almost undiscernable pattern handed down to him by his father Svarog. When he exhaled via his nose, winds were born, when he inhaled, the skies were calm.

It is also possible that Stribog was a personification of *Spenta Mainyu* (the Holy Spirit), the vital spiritual emanation of the creator, which the Magi termed the "Holy Wind". This is a valid analogy since the first form of Stribog's idol mentioned was said to be one and the same as that of the four faced Polish Creator-god called *Svyatovit*. If Stribog was *Spenta Mainyu*, then it is only natural that he would have the same sort of idol as *Svyatovit*, for in essence they were the same god. If this was the case, then Stribog's idol could have come to Rus' from Poland, which had converted to Christianity c.960 AD.

PERUN - A RUSSIAN WAR
GOD

Perun In the Baltic region and the Balkans the god Perun was variously known as *Perkuons* (Latvian: "God of the Oak"), *Perkunas* (Lithuania), *Perunja Ves* or *Perunji Vrh* (Bosnia), *Perendi* (in Albania his name meant "God") and *Percunis* (Old Prussian: "Thunder").⁵³⁵

ORIGINATED IN INDRA,
THE ARYAN WAR GOD

Perun's name is believed to be derived from titles that described Indra, the Aryan *Daeva* war god enshrined in the *Rig Veda*; *Purandara* ("the destroyer of cities"), *Parjanya* ("rain-bringer"), or *Purana* ("the triple lawbreaker"), or *Perunas* (a god known to the Aryan Hittites); to my mind this explanation is more than convincing. As for the names *Perkuons* and *Perkunas*, which have a "Perkunish" rather than "Perunish" root they may have come from the Sanskrit word *Peykkuravai*, which translates as the "devil dance", a dance that Aryan warriors performed to the tune of pipes and drums, after annihilating their foes.

Therefore Perun is one of the oldest European gods, a divinity probably imported onto the continent along with Indo-European words and the domesticated riding horse, as the ancient Indo-European migrations and invasions pressed westward. He also entered into India with the invaders who destroyed much of the pre-Aryan civilisation that existed there, and until the present day, continues to be one of the most important gods of India. The Vedic Aryans had the following to say about their esteemed war god;

"He who killed the serpent and loosed the seven rivers who drove out the cows that had been pent up by Vala, who gave birth to fire between two stones, the winner of booty in combats - he, my people, is Indra.

He who is invoked by both of two armies, enemies locked in combat, on this side and that side, he who is even

*invoked separately by each of two men standing on the very same chariot, he, my people, is Indra.
He who killed with his weapon all those who had committed a great sin, even when they did not know it, he who does not pardon the arrogant man for his arrogance, who is the slayer of the Dasyus, he, my people, is Indra.
Even the sky and the earth bow low before him, and the mountains are terrified of his hot breath; he who is known as the Soma-drinker, with the thunderbolt in his hand, with the thunderbolt in his palm, he, my people, is Indra”⁵³⁶*

INDRA BATTLED THE
PRIMEVAL SERPENT

Perun, the Slavic thunder god was also lord of the heavenly verses, the winds which kissed the earth and lower heavens, and the god of war, desolation, rain, justice and liberation from both man and demons; he was the mighty liberator. Perun was breathtakingly similar to Indra in nature, lying the skies in his chariot looking for foes to defeat and grind under his feet, the *ultimate conquistador* of men, gods and demons;⁵³⁷ the whole world was his domain.

The Slavic folk zodiac associates him with the planet Mars (one of the “Great Judges” of fate), though he was himself linked with two signs of the zodiac, namely Taurus (Slavic: *Telets’*, *Bik*), and Sagittarius (*Strilyets’*). The insignia of these two zodiacal signs, the bull and the archer, aptly describe both Indra and Perun as heavenly archers for whom the bow was a sacred weapon, and the bull which both of these gods received in sacrifice.

Perun was the god of war declaration and overall victory; the god of sacred oaths, and sudden attacks. Since he looked upon battles as though men were merely pawns, whole cities and *princes had to make offerings to him in times of war* if they wished for his aid in vanquishing their foes, or simply survive battle. Prussian pagan priests burned 1/3 of a warrior’s war booty to their gods as an offering for their victory. *Proven* (Perun’s cognate in the Prussian world) would have been prominent among those gods who received sacrificed war goods from their hand. These same intercessory priests ritually slew horses for the community and were lot-casters.⁵³⁸ The notion that princes and sacrificers made offerings to Perun on behalf of the Rus’ people may be somehow linked to *Yasna* 46 : 11, where diabolising Iranian invective spews forth against a certain college of priests and princes. In that passage, Zarathustra spoke of the sacrificers and Magus-princes who practiced blood sacrifice by cattle killing, who treated life with contempt, and who sought to destroy creation wherever possible (war mongers of Indra, who plausibly took a heavy toll on the old Iranian motherland). Bloody cattle sacrifices were practiced in Medea and related localities long before the arrival of the Zurvanite Magi, in places like Scythia.

GRANTED VICTORY,
OVERSAW OATHS

WAR BOOTY LAVISHED
UPON HIM IN
THANKSGIVING

In his role as administrator of justice, Perun seems to have adopted the functions of “Mithra of the Wide Pastures”, the neutral mediator, soul-weigher, judge and executioner all rolled up in one. Though of normal human appearance, both Mithra and Indra could open 1,000 eyes to scrutinise humanity’s actions; who could hide from their awesome gaze?

LORD OF JUSTICE

In the elemental sphere, Perun controlled the weather. When he was angry the entire sky became enshrouded in violent storm clouds, as lightning and thunder erupted, and his anger blotted out the sun.

Perun’s statue had a silver head and a golden moustache, and in at least one case, iron legs. He was venerated in sacred groves under the branches of his favorite tree, the holy oak. It was presumably to him that the *Volkhov* hanged their sacrificial victims, dangling them from the boughs of these trees.

Although Perun served the mighty Dazhbog, as his prized champion in the ongoing cosmic battle against Chernobog, the father of demons, who daily attempted to transform the world into a bier of chaos and disunity, he was a freelance deity. For if we more closely equate him with Indra, he was more greatly concerned with his own thirst for the shattered remnants of battle, of splintered wood, dented armour and the blood of the slain, which, besides *Soma* and mead, were his true loves.

CHAMPION OF THE SUN

During war, Perun, the *prashchur* (guardian deity) of the Rus’ people, arrogantly thundered across the skies in his great sky chariot, brandishing spear, axe, war hammer or cudgel, resolutely peering over the battle, seeking those whom he wished to pluck from life. As the dispatcher of souls to the starry bridge, he nocked arrows of lightning which he fired into the thick of flailing swords and axes, ready to cut down his victory fee, to reap the bread of battle. The Indo-European god of thunder was no ordinary god, not even the gods dared anger him. Via the hands of the Brahman and Zurvanite Magus priests it remained the lot of warriors to feed him his dues; the spoils of war, the lamentation of widows, war booty and the blood of the slain, whether they fell in battle or were captured on the “field of justice” and later ritually sacrificed.

RODE A SKY CHARIOT

PERUN BROUGHT RAIN,
THUNDER AND
LIGHTNING

Perun served good as the agent of law, order and imparter of rain, but served evil as the author of war, man's ultimate act of predation on himself. The Russian word for lightning, *molniya*, is phonetically similar to the word *Mjollnir*, the hammer of Thor, the Norse thunder God. This may be indicative of a link between Perun and Thor, where Thor is merely a Scandinavian term for the god who throws lightning. For this reason pagan ecumenists could easily equate him with both Zeus and Jupiter, who were both lightning wielders. In fact a Russian manuscript of 1202, refers to him as the classical Roman god Jupiter.⁵³⁹ The pagan priests of the Slavs divined the future by interpreting the lightning which arced down from the heavens, bearing tidings from their lord who raced about the heavens.

RUSSIAN MONARCHS
USED ROYAL TITLES
PECULIAR TO EURASIA,
IRAN AND CENTRAL
ASIA

Why were Rus' rulers (allegedly of Swedish ancestry) using the royal title *Khagan*, which is exclusive to the Russian steppes and Central Asia, and acting as patrons for gods once worshiped by the Magi of Iran and Persia? Just a little un-Scandinavian wouldn't you say? Why did Vladimir' require the Slavic masses to worship demons, plus pagan Alanic, Finnish, Iranian and Greek gods? What was the purpose of this move? Where did the *Volkhvy* (the Rus' Magus priests) get their classic astronomical and astrological expertise, not to mention the skills to build the observatories that Arabs knew of? Why were the Rus' pagan priests, the *Volkhvy* (Old Russian: "Magi") revered as living gods, just as the Magi once were? Could they be actual Magi? How could it be that the pagan Russes had occupied Rus' since the mid-9th Century, and yet it was only in 981 AD, a mere eight years before their conversion to Christianity, that they finally brought their chief Iranian and Indo-European idols to Kiev and later Novgorod? The *Primary Chronicle* entry relating to this event made it almost seem as though Vladimir was introducing less than familiar gods and temples to the Slavic locals. Was he? ... or were the Iranian gods always there but went unrecorded in the earlier Chronicle entries of that same text? And if the *Volkhvy*, and the idols that they served, weren't indigenous to Kiev, why did it take up to 100 years for them to arrive in Kiev?

Why, when Oleg "the Sage" had taken Kiev as early as 878 AD, did a century have to pass before the Russes immersed themselves in temple construction projects, in the southern Ukraine region at least? Obviously, the Ukraine's Slavic inhabitants were already pagan, and paganism was not being introduced to the eastern Slavs for the first time. Was this a taste of a different style of eastern or northern paganism, with trimmings that they were not fully accustomed to? And I deliberately use the term unaccustomed to, rather than unknown, because most likely the religious practices were not completely unknown to them, judging by the ease with which they began worshipping the newly-arrived idols.

A MAGUS KING TOOK
CONTROL OF KIEVAN
RUS' IN 981 AD

The inevitable conclusion is that somehow a new Magian faith had established itself in Kiev (the capital of Rus') in year 981 AD, almost a thousand years after the birth of Christ. It may be that Magianism already existed in northern Rus', or near the Urals, but for political reasons the pagan hierarchy chose to relocate their most important cult centre to the Ukrainian frontier. In support of this hypothesis, the word *ukraina* (Ukrainian) or *oukraina* (Old Russian), meant "the border" or "the frontier".⁵⁴⁰ This indicates that Kievan territories were a peripheral location in relation to the pagan political-military nerve centre. If this was the case, then the Kievan idols may have been brought there from a former administrative capitol. But where was it? ... Rostov? ... Novgorod? ... Tmutorokan? ... Bolgar? ... elsewhere in the Urals? My guess is Tmutorokan, but the question is almost impossible to answer with any conviction.

HE INSTALLED PERSIAN
IDOLS

The presence of Magians in Rus' is clearly demonstrated by this material, priest-judges who by Ibn Rusta's word were regarded as even higher than kings, and capable of ordering anything they deemed necessary for the advancement of their religion.⁵⁴¹ Considering this level of adulation and respect granted them, these divine pagan figureheads must have exerted a considerable controlling interest over the kings, as events ever unfolded.

SOME RESEARCHERS
DON'T WANT TO TALK
ABOUT THIS MATERIAL.
THEY RUN FROM IT LIKE
THE PLAGUE

The implications of this are enormous. There was another religion on Europe's doorstep, and it was neither Christian, Muslim or Jewish, but pagan, Magian pagan. So, whose Magi were they; Norse, Slavic or Finnish? Never had I seen a single scholar specializing in Ancient Russian studies, present the topic for open discussion. This unwanted and embarrassing data was like a deformed child locked away in a box by disturbed parents, hoping to hide it from the world. I too felt sheepish about it. So I was faced with two options. I either had to tackle this cryptic data head on, by prying open that box to see what lay within it, or coyly escape the magnitude of the task with a

houdini-like shrug of the shoulders. On principle alone I felt it improper to disregard the evidence without further appraisal, irrespective of its wild and seemingly inscrutable nature. If the data was unsustainable then this would easily become apparent once it was subjected to meticulous analysis. If the existence of Magi in Rus' was mere fable, then the set of tests I proposed to lay down would surely disprove it.

By my estimation the only way of assessing whether or not Magians were an integral part of the Rus' state was by comparing information relating to the Magi and the Russes. Of necessity this comparative study would need to include an assessment of the similarities and differences between their respective languages, funerary rites, magical traditions, superstitions, rituals, customs, mythology, social structure, architecture, art, music, literature, Persian chess boards, clothing, military structure, politics, law, and religion. A Magian presence could only be confirmed if, and only if, each of these areas showed Magian influences.

Surviving Mediaeval Arab and Christian historical sources conjure images of a southerly or south-westward religious/military migration across Russia, that progressively gobbled up tribes along the way, gradually assimilating them into the new pagan Rus' state. The original protagonists are already known from the *Primary Chronicle* - the Nordic Rus', the Finnish Ves', the Estonian Chud, and the Slavic Krivichian nations.

Returning to the apparently answerless questions just posed, only one alluring solution seems to cover every base. The Rus' royals were really Scandinavian Goths, and their process of forging the Rus' state was no venture into the unknown, simply a return to a more ancient political model for the region. Germanic Gothic kingship worked before during Ermanaric's reign, it could work again. This saw the poly-ethnic easterners rally behind the ancestors of the semi-divine Gothic Magus-kings who formerly governed their respective peoples many hundreds of years previously as Ostrogotha.

Russian Goths probably had Magian practices and affiliations, at least on par with those of their ancestral kings. Gothic ancestry might be traceable to one of the Medes' greatest tribes, the *Guti*. One of the most illustrious surviving Magian fire temples, the *Goti*, is presently sited in Surat, India. Like all Medean, the *Guti* were deeply influenced by Indo-Aryan culture and religion.⁵⁴² Gotic priests were predominantly magician-smiths.⁵⁴³ Considering that the Scythian *Getae* and *Massagetae* originally inhabited a region geographically neighboring Medea, the analogy has distinct possibilities. Even more so when one learns that the dignified attire of the famed semi-divine Gothic Amali dynasty was Sassanian.⁵⁴⁴ That is, similar to the manner of dress of the Magian kings.

That they were demi-gods is sign-posted by surviving linguistic data. The words *Gothr* (sing), *Gothar* (pl) (Old Norse : a pagan priest or chieftain of the Norse), *Got* (Germanic: "God") are in all likelihood linguistically related to each other. So it is eminently plausible that these linguistic similarities reveal the Goths as a race of priestly mortal gods. The closest parallel for them are the Magi, or the pagan gnostic philosophers. In Gothic the words "God" and "priest" are from the same root, but *Guth* also held an older meaning; "idol".⁵⁴⁵ This Russo-Germanic custom may be related to an old Persian practice whereby devotees carved idols of their heathen priests, royals and heroes after they had died. These words are also related to *gothr*, *goth* and *gott* ("good", "morally commendable", "honest", "kind", "friendly"),⁵⁴⁶ and *goth-mogn*, *guth-magn*, *gothmagn* ("divine powers", "the gods").⁵⁴⁶

First names used by the Gothic royals were in some instances Persian. One such name was Gaatha, and it applied to a 4th Century AD Gothic princess.⁵⁴⁷ White and black magic were acknowledged influences in Gothic society.⁵⁴⁷ So too the influence of demonic possession known as *daimonareis*.⁵⁴⁸ Collectively these are indicative of dualistic wizardry in Ostrogotha, the eastern Gothic marches of Scythia. Such dualistic beliefs were a standard feature of Indo-Europeanised Magianism, of a sort known to the Zurvanites.

The Slavs

Our first encounters with recorded Russian history occur in the 9th-10th Centuries AD, in the works of early Russian monks, Norse travellers and Arab geographers. Prior to that we had sketchy Greek and Roman reports. At times some of them mention what outwardly seems to be exaggerated, contradictory or dubious statements. Rus' cultural genesis is most fully elaborated upon in the 11th Century *Primary Chronicle*, the one indispensable source for any serious *Rusist*, and yet an enigmatic treatise of uncertain historical value, since it seems to have served equally as

MY EVALUATION OF
EUROPE'S OCCULT
ORIGINS AROSE FROM A
NEED TO EXPLAIN DATA
WHICH OTHERS BURY

THE GOTHIC PRESENCE
IN ANCIENT RUSSIA

MORTAL GODS

THE SLAVIC NATIONS

a politico-religious tool and a polemic against the Magi and heathenism.

The *Primary Chronicle* is of uncertain value because the fine line which separates fact from the chronicler's own biases is unclear. However that doesn't mean the chronicle is worthless! Obviously authors have their own opinions about various issues, it just depends on whether they allow them to cloud the objectivity of their work. Hopefully the chronicler's apparent inaccuracies can be weeded out by meticulously comparing them with the works of authors less likely to gloss over important information.

THE RUSSIAN CHRISTIAN
MONK WHO WROTE THE
PRIMARY CHRONICLE
LEFT OUT A GREAT DEAL
OF INFORMATION

The slanted and colourful writing styles of most Mediaeval monastic authors seems to militate against a trouble free assessment of their works. For example, were the chronicler's repeated references to pagan priests serving the "Antichrist" simply Church propaganda, or was there another elusive meaning behind it? As you will soon see, and will already have read, these comments may well hold a meaning that has been distorted and obscured by the passing of dusty ages.

SCYTHIA, AN OLD NAME
FOR RUSSIA

But, by and large, it seems that Christian author of the *Primary Chronicle* tended to play down, or omit references to events, rather than lie about them, and, as was usual at that time, preferred to "see, hear and speak no evil". Hence very few precise details are recorded concerning the pagan empire which Vladimir inherited upon ascending the Rus' throne. But there may well have been other reasons for him doing this. These will become apparent later.

The mediaeval masters of the heavily populated eastern lands of "Scythia" were the Slavs, a race largely forgotten by history. They first came to be known to the Romans as the *Sclavini*, and much later to the Arabs as the *Saqlab*. They were related to the Avars, and with them shared the ancestral name of the *Spori*. The Slavs were however just one of the many tribes then inhabiting Greater Scythia, albeit the very one which gave its language to whatever nations or tribal complexes came to live there on a more permanent basis. As more foreigners spoke Slavic the Slavic nations swelled in size, far exceeding their original dimensions.

ANCIENT RUSSIA
PRACTICED DEMOCRACY,
PROBABLY AFTER THE
GREEK POLITICAL SYSTEM

To the Romans, their lands were the barbarian, sub-human realms of Greater Scythia and the ends of the earth, a "Scythian wilderness" to which sorcerers, rebels and other "undesirables" were presumably banished, and a bottomless pit that swallowed thousands of Roman troops at a time,⁵⁴⁹ the Russian Front, ancient style.

As there are only a mere handful of historical references to the ancient Slavs, virtually everything else we know about them has been the result of archaeological, philological and folkloric endeavour; and the picture is very, very interesting indeed. For a start the word barbarian is a misnomer.

SLAVS MADE WAR ON
ROME'S DACIAN
PROVINCES

*"For these nations, the Sclaveni and the Antae, are not ruled by one man, but they have lived from of old under a democracy, and consequently everything which involves their welfare, whether for good or for ill, is referred to the people."*⁵⁵⁰

They were thus fairly well organised and governed, but probably kingless. It was perhaps because of their social cohesion that Roman attempts to break into Slavia failed miserably, and had to be aborted. Then came retaliatory incursions by the Slavs, cascading into the Roman Balkans, and ravishing everything. To halt the frequent violations of the frontier, the best the Romans could hope for was to contain them. Accordingly they shielded the vulnerable Dacian provinces with extensive defensive structures along much of the Danube river,⁵⁵¹ the isolated eastern flank of the Empire. Manning the sentry towers along that wall was very risky business indeed, because the Slavs were not only adept at standing warfare, but specialised in ambushes. Their 'commando teams' of brave and lightly armed warriors stealthfully swam or rowed across the river, scaled the walls, and eliminated the not-so-vigilant guards.⁵⁵¹ Their methods for neutralising whole sections of Roman defensive works continued until the Romans eventually figured out their strategies. Having captured a single sentry post, the Slavs signalled troops to make their way toward the wall out of the line-of-sight of the nearby towers. These too came over the walls, then moved swiftly along the battlements in large numbers, knocking out tower after tower.

THEY WERE FIERCE
WARRIORS

Procopius paints a picture of 6th Century Slavs, that differs little from Ibn Rusta's description of the Russes 400 years later. The Slavs were "exceptionally tall and stalwart men, while their bodies and hair are neither very fair or blonde, nor indeed do they incline entirely to the dark type, but they are all slightly ruddy in colour".⁵⁵² They ventured into battle with only a buckler and javelins, wore no armour; simply a cloak or shirt. Others had nothing bar their trousers, which they rolled up to the groin area. So evidently they resembled men depicted on the Gunestrup cauldron.

Like the Massagetae, "they are continually and at all times covered with filth; however, they are in no respect base or evil-doers, but they preserve the Hunnic character in all its simplicity".⁵⁵³ As you will read later in Chapter VIII, Procopius' qualification that "they are in no respect base or evil-doers" following his description of their standards of hygiene has a special significance, for evidently Procopius knew of others who were caked in filth, and who were evil-doers.

Roman perceptions of the world 2nd-3rd Century AD

In the 6th Century AD, and perhaps as early as 1,000 BC, the ancient Slavic tribal heartland stretched from the central Oder-Elbe region of Germany, to the Dnieper in the east, the Dniester in the south, and as far north as the Pripyet Marshes. There they mixed with the Celts and Germanic tribes which harassed the Roman frontiers.⁵⁵⁴

As the German nations moved west and south, pouncing on the decaying remains of the once-invincible Roman dominions, the Slavs took over much of what we now call Germany. Ethnically the inhabitants were an admixture of Slavic and Germanic tribesmen, perhaps living together, or in racially homogeneous enclaves.⁵⁵⁵

Even today scholars are still haggling over the ethnic ownership of many artifacts, graves and settlements unearthed across Germany, Poland and Russia. The overall uniformity of the material is such that their identification with a particular race has been of some importance in determining the cultural tapestry of these three regions. Nationalism has not proved helpful, since naturally scholars are keen on proving that it was their race who was responsible for the artifacts, especially those displaying superb artistry and craftsmanship. Archaeology and linguistics have highlighted the commonality of the cultural framework once present among the pagan Slavs, Celts and Germans of northern and eastern Europe. So widespread were the many similarities between these races that

GERMANS AND SLAVS
INTERMINGLED. THEIR
CULTURES BLURRED IN
PARTICULAR AREAS

CELTS WERE PART OF
THIS SYSTEM TOO

some have begun to see them as having the same cultural roots, or as inheritors of the same or similar cultural traditions.⁵⁵⁶ This feudalistic culture was headed by dynasties of nobles and royals who, for the most part, were related to each other owing to the prevalence of intermarriage within their own wealthy tier of society.

The 6th Century AD witnessed large-scale movements of Slavs into the Balkans and Central Europe, where Slav settlers displaced many Germanic tribesmen and gave Saxons, Danes and Thuringians cause for concern. As the number of Slavs in the area swelled, the nervous Danes prepared defensive positions such as the Danevirke.⁵⁵⁷

Anyhow, the enhanced agricultural practices of the period (and perhaps other factors) led to a swelling of western European populations in that area, forcing the Slavs to shift back eastwards. For example, the eastern Slav Volynian tribe is linked to the Isle of Wollin (now in Germany). From these progenitor Slavs came the Russians, Poles, Slovenes, and Macedonians.⁵⁵⁸ The Slavs thrust further eastward and northward, into the steppes and Finnish lands, and became three distinct cultural groups, known nowadays as the Belorusskiye (White Russians), Velikorusskiye (Greater Russians) and Malorusskiye (Lesser Russians), all with their own cultural peculiarities. They began absorbing and subjugating the traditional inhabitants in earnest. Finnish customs became closely intertwined with Slavic practices; cultural evolution at work.⁵⁵⁹

Over the next few centuries Scythia witnessed the arrival of traditionally nomadic Turkic pastoralists from Central Asia and Iran. During this time span Bulgars (a Turkic race), Croats (from the once Magian city state of Khorezm), and Serbs (from Iran) simply rode onto the European continent, in their many hundreds of thousands. The Bulgars, like the Scythians before them, abandoned their upwardly mobile lifestyle upon reaching the promised land of the Balkans. Tents disappeared in favour of fixed abodes. These newcomers freely mingled with the southern and eastern Slavs, and settled among them. Before long they all spoke the mutually agreeable Slavic tongue, and were thenceforth regarded as Slavs,⁵⁶⁰ though this only served to camouflage the fact that some Slavs had widely differing cultural origins

The spectacle of these new-comers and their *gulai-gorody* (walking cities) must have been overawing. Thousands upon thousands of mounted men, women and children, tent-cities, trains of “scythian” wagons, a myriad, myriad head of cattle, sheep, goats and surplus mounts, all kicking up dust clouds above the Russian prairie, as far as the eye can see. With them came mobile smithies, craft workshops, cartwrights, and of course foreign gods, gods worshiped by the many animists, Nestorians, Manichees, Buddhists, Hindus and Magians of Central Asia and Siberia. Such then was the religious composition of those places in pre-Islamic times.

Living in eastern Europe was not without its problems though. Marginal soil in the north and poor rainfall in the south were the plague of every farmer (even to this day), making them fight for every grain they grew and reaped by resorting to back-breaking irrigation practices, and slash and burn horticulture. The perpetual famines that struck at the very lifeblood of Scythia were so severe, that at times cannibalism of the dead and dying were probably the last resort of the emaciated living. This even occurred during the famine caused by Stalin’s collectivisation program. Yet despite all this, little could dampen their love of life and fun, or their feelings of hope which always carried them from the depths of their despair. It was in this climate of bare subsistence farming that a thriving and most intriguing dualistic nature cult grew and thrived. Man had always needed supernatural help to survive life’s ordeals, for who besides the gods, could heal sick cows, or make a harvest lush with grain. These were their beloved celestial fertility gods who warred against a raucous army of malicious and rapacious subterranean deities. These were the demons responsible for causing waning harvests, deathly frosts, diminished herds, rotting food stocks, plague, infestations of crop-swallowing rodents and insect pests, and all manner of destruction in their daily lives.⁵⁶¹

Progressing onto the 10th Century, we discover that the Rus’ had once again come to the attention of the Greeks; however by this stage they were somehow profoundly linked to the Swedes, perhaps those that had colonised isolated pockets in northern Russia, or perhaps those from back in Scandinavia itself. The Rus’ signatories of the 907 AD treaty with Byzantium were, to the last man, of Swedish extraction, if their names and personal confessions are anything to go by.⁵⁶² On the basis of this information Pro-Normannist scholars have felt inclined to speculate that the word Rus’ comes from a Finnish word *Ruotsi*,⁵⁶³ which Finns used to denote Swedish oarsmen. Yet even in the face of such compelling and straight forward accounts, there are other more complex factors which indicate that the Rus’-Slav-Swedish connection was far more complex than it first seems.

THE RUSSES AND SWEDES
WORKED IN TOGETHER

At this point it should be stated that the Nordic customs and lifestyle of the Rus' tribe had been severely eroded during a mere 200 years of life among the Slavs. Nostalgic Norse names are perceptible throughout succeeding generations of Russian Royalty, but they are heavily slavified. For instance back in Scandinavia the name Valdemar (perhaps a Nordic version of Vladimir) occurs among repeated generations of Mediaeval Norse royalty, dating to the period in which Russian princesses were wedded to Scandinavian royals, and not before. You could go on asking other questions. Why did the Norse have no knowledge of this other mysterious and allegedly ethnic Scandinavian tribe called the Rus', a tribe known to the Arabs? Why were Norse religious beliefs (gods especially) under-represented in a land that they had colonised barely 100-200 years prior? One should expect to find widespread rune usage in Rus', or the formal worship of some Scandinavian deities in Kiev, evidence of which appears to be lacking. Why did Oleg's Swedish emissaries unanimously swear their oaths by the Russian gods, Perun and Volos? Was this simply a case of total assimilation?

Normannist Rusists remain convinced that the Russes were Swedes. Especially so since the Rus' delegates sent to Byzantium in the year 838 AD (and subsequently interrogated by the Carolingian Emperor) admitted that their place of birth was Sweden. Yet there was another detail supplied by these Swedes which, I believe, greatly complicates the position of Normannist purists. They were, in their own words, ruled by a Khagan, and Khagans were normally associated with the royal families of Central Asia, especially the Turkic hordes. This is not to say that the Russes were not of Nordic stock, simply that they had elaborate eastern connections. No surviving Swedish documentation records the presence of Khagans in Sweden, which is hardly surprising since, as far as we know, they did not keep historical records. Further clarification is provided by the Russian *Primary Chronicle* which states that the Swedes were a separate race to the Russes.⁵⁶⁴ This is an extremely significant admission and, as you will see, a component of a lost element of Scandinavian history, a history which will be progressively divulged throughout the course of this book, a history traceable not to Europe, but the Asian continent.

Consequently, a certain amount of bickering has been attached to these divergent testimonies, with pro and anti-Normannists swaying toward those arguments which best suite their position. In their zeal to champion their respective opinions most scholars have failed to consider a third alternative, one that takes into account both sources. It may well be that the Russes originated in a Central Asian homeland, but came to be living in Sweden during the pagan era.

Placing aside these assessments it is also plausible that the Swedish consuls sent to Byzantium in 838 AD, were not Russes at all, but Swedes acting as "frontmen" for their good friends, a virtually unknown Nordic tribe known as the Rus' (or Ros), whose monarchs came from Central Asia.

Still, nobody could have foreseen what was to follow as a result of the important political developments then taking place north of Byzantium, in heathendom. The prestigious medieval debut of the poly-ethnic Rus' State included them attacking Europe's largest city in 2,000 ships mounted on wheels!⁵⁶⁵ The chronicled event apparently cost Byzantium very dearly indeed in money terms, and forced their city into instant capitulation, and a humiliating trade deal with the Rus', in which the northern upstarts held all the trump cards.⁵⁶⁶

So we will now turn our minds to the birth of Rus' (Russia) and its namesake tribe, the Rus' (or Ros as the Byzantines called them), and look at what we do know about them. Our earliest glimpses of the Russes come from the Greeks and Arabs, both of which prompt even more enigmatic questions. Only a hearty commitment to extensive archaeological excavations in the area will successfully answer them.

Despite the many unanswered riddles, the question of vital Norse interaction with the Rus' hierarchy is simply not open to dispute. There had been Swedish colonies at Staraya Ladoga and a couple of other places for about 200 years. Following the arrival of the Rus' tribe in Slavic and Finnish lands, these Norsemen trekked eastward looking for trade in the Caspian area via Bolgar. They probably knew some of the Slavs there, like the Krivichi, but were far more friendly with the Finns, in particular the Ves and Chud tribes. Because the Volga was once called the Rhos River, as is evidenced by the 5th Century Greek map *Hypotyposis Geographiae*, these liaisons might have gone back some considerable time, to an era when the Ros lived on the Volga.⁵⁶⁷ These Ros were once party to the Roxolani (Ros-Alanic) hordes which Strabo said moved into the Danube region c. 62 AD, and the Baltic region (where there is another Ros River), north of the Dnieper, and somewhere to the south of the Scandinavian high countries.⁵⁶⁸

WHAT IS NOT ALWAYS
CLEAR IS MOTIVE IN AN
UNFOLDING TEMPORAL
CONTEXT

The only thing open to dispute is the nature, degree and motivation for the Norse influence that followed. Norsemen practiced both cremation (which left little evidence of their ethnicity), and inhumation. Few Norse inhumations have been found outside their colonial settlements in Russia,⁵⁶⁹ despite extensive barrow excavations (20,000 sites), though this might only indicate that they were not practicing burial on any wide scale. This might also be evidence that, for whatever reason, only a smallish number of Norsemen were intermixing with the Slavs.

ISLAMIC SOURCES
ALLUDE TO HAPPENINGS
IN THIS PART OF THE
WORLD

The Muslim College of Arab Geographers had some crucially important sources pertaining to the Rus' which appear to be free of bias, including the writings of Ibn Al-Istakhri, Ibn Fadlan, Ibn Al-Jayhani, Ibn Khurdadhib, Ibn Hawkal, Ibn Al-Balkhi, Ibn Al-Masudi and Ibn-Rustah.⁵⁷⁰ Of all these geographers, only Ibn Istakhri and Ibn Hawkal described a third, obscure race of the Rus' called the Arsa (Artha) or Utanie from a place called Arsanian, situated somewhere north of the Ilmen Slavs, and who sold only the finest possible furs, slaves and processed tin.⁵⁷¹ In talking of their northerly abode, it should be remembered that the Arab geographer Ibn Istakhri, who wrote about the Arsa, drew his maps with west as north.⁵⁷² Therefore this would place the Arsa somewhere to the west of the Ilmen Slavs, perhaps in Latvia, Estonia, Lithuania, Prussia or Poland, depending on how far north the Ilmen Slavs (Slovene) were living at the time of these accounts, for they were in the midst of their northern migration towards Lake Ilmen from the south.⁵⁷³ The Arsa were a highly secretive tribe known to kill anyone who came into their lands, either announced or unannounced, and to go there was tantamount to signing one's own death warrant.⁵⁷⁴ Though outside of this presumed geographic area, one could suggest on linguistic grounds that the Arsa were in reality the Finnish *Erza* clan, the sister of the *Moksha* clan; both of which were tribal members of the (cannibalistic) Mordva tribe, and known in antiquity as the man-eating *Androphagi*.⁵⁷⁵ Ibn Hawkal went on to say that the Arsa came from the lands of Gog and Magog, or in old geographical terms, the roof, or northernmost lands of the entire world. In their time the north was considered to be "Shaitan's" kingdom by many peoples.....a land of devils. This raises some interesting questions. If the Arsa were a Rus' tribe, why were they keen to go trading in distant lands, but extremely bashful about traders coming to see them on their own turf, so shy that they became homicidal? Was Arsa a corruption of Asii or Rus'? If Arsa is derived from Asii, which is possible when you consider that the Norse *Ynglinga Saga* calls Asaland *Arsaniya*, then the Rus' might have been Asii (ethnic Alans). But then again *Arsa* might have come from *Arza* or *Urza*, which mean "rye" in the Cheremisian tongue of the Finnish Mari tribe.⁵⁷⁶ Other inhabitants of the north, referred to as Finns, had been seen using magical *Rumot* staffs, which the Finns are not thought to have used; were they Arsa? Perhaps not, they might easily have been Ves tribesmen.

WIZARDS FREQUENTED
THE REGION

There is also a reference that states that in Rus' there were Alans and Albanians who in their own tongue called themselves *Wizzi*. Finnish names for the Ves' tribe such as *Vepsy* and *Vepsa* are believed cognate with *Wizzi*.⁵⁷⁷ The eastern word *Vizier*, a royal advisor to the Persian monarchs most likely has the same provenance. These were the wise "white" sages.

ARABS HAD DIFFICULTY
VISUALLY
DIFFERENTIATING
BETWEEN SLAVS, TURKS,
GOTHS AND NORSEMEN

A clear perception of the ethnic mixes then present among the Norsemen is difficult to achieve. If there was one thing Arabian geographers had trouble with, it was figuring out the precise ethnicity of northern dwellers at a glance. From their descriptions, there appears to have been little physical difference between the Rus', Slavs, Goths, Turks, Bulgars and Norseman. Due to their red or blonde hair, blue eyes, fancy quasi-Asiatic dress, appearance and customs, the Bulgars, Norseman and Slavs looked pretty much the same.⁵⁷⁸ Residents of Bohemia were a little different. Al Bakri noted that native Bohemians were swarthy, with dark hair.⁵⁷⁹

THE SWORD OATH
SWORN OVER NEWLY
BORN CHILDREN

The idol-worshipping Russes (the actual tribe) were regarded as being of exquisite human stock, finely dressed, of considerable height, highly muscled, blonde and blue-eyed; one can even say the epitome of Hitler's perception of the pure Aryan breed which in ancient times invaded Europe and Asia. These tribesmen were not in the business of working the fields or tending stock; they took or extorted whatever they needed from anyone living nearby.

As babes, a sword oath was recited over them, which stated that *they would have nothing except for what they took by means of the sword*.⁵⁸⁰ When the Rus' came to Russia, they preyed on all the surrounding Slav tribes using bully-boy tactics, and in time won many Slavs over to their way of thinking. From this time the spirit of war gained ascendancy among the Finns and Slavs. As a result of this, sizeable and diverse bands of warriors came into being, which over the course of the following 100 years devastated or ransomed the wealth of Jewish Khazaria, Christian Byzantium and the Caucasus.

The Arabs and the Jews never did feel comfortable about letting the heathen Slavs, Finns and the Rus' newcomers downriver from Bulgar to do business near the Caspian (the once-great centre of Magian rule), amongst other places. In truth they were fearful of what they would do once they got there. Instead, these races were forced to buy and sell in Bulgar (the capitol of Silver Bulgaria), which acted as a sort of half way point, or buffer zone between the heathen hosts, and the Islamic lands of Persia and the east.⁵⁸¹ Muslim traders came there to acquire furs, then headed back home to Arabia and Central Asia with their caravans. This became known as the Imperial trade route which stretched from Bolgar to Khorezm. The Rus' /Ros and the Slavs, for a time got around this blockade (perhaps through diplomacy) and were forging their own flourishing trade networks in the east, such as the one from Baghdad to Gurganj (formerly a Magian city-state in pre-Islamic times). Ibn Hurdadbeh speaks of a Russo-Slavic trade route into the Caspian area and even Baghdad.⁵⁸² This trans-Caucasian trade highway was interconnected with the Arab spice and silk routes, and so led to Baghdad, Bokhara, Khorezm, Central Asia and right across north Africa to Spain.

The path from Persia and Baghdad to Cordoba in Moorish Spain is said to have been well travelled by the Jews during the 9th through to the 12th Century AD, but was probably used by Muslim travellers and other easterners as well. The road between these two destinations wound its way through Narbonne, Lyons, Mainz, Krakow and Kiev.⁵⁸³ As you will read later, there are convincing reasons why we should regard this as a "superhighway" via which far-eastern dualistic heresies, Magianism and devil-worship passed from the Oriental Arab world into western Europe, only to be met with the tough hand of the western Church, in the form of its Inquisitors.

Most assuredly the Russes knew people abroad, they knew about the world. Large colonies of Russes are known to have existed at Tmutorokan and Khazarian Itil', both strategic river choke-points (the Volga and Kuban) for trade with the Caucasus and the Orient. Their commerce was sometimes conducted during trade missions at more southerly latitudes, in Volga Bulgaria, Khazaria and Baghdad, with whom they enjoyed constant trade until the Russo-Byzantine wars. The Russes never formed joint ventures with merchants of other nationalities and always did business with the rich Arabs personally; never through intermediaries. Why? Why were they received in Islamic Baghdad and not Christian Tsargrad? What was the link with Baghdad? Could the fact that a half-Arab, half-Slav Muslim by the name of Ahmad Ibn Muhammad ibn Al-Mu'tasim became Caliph around 862 AD⁵⁸⁴ be the Slav-Arab connection that we have been seeking? Presumably from that time Slavs gained steadily more elaborate ties with the court of the Abassid Caliphate. Some may even have journeyed to Baghdad to meet in council with co-religionists under the noses of the Islamic authorities.

Following Svyatoslav's campaigns against the Khazar Empire, the Khazar Khagan prohibited the Russes' /Slavs from ever navigating the southern reaches of the Volga, and deployed Khazar vessels laden with boarding parties to enforce the ban. As the Turkic Pechenegs overran the steppes in this part of the Ukraine, the chances of using the Volga in safety would have become fairly tenuous. This "sealing of the Volga" prevented the pagans from having contact with the Far east, and heralded the sudden drying up of silver coinage from Central Asia.⁵⁸⁵

Thereafter Ibn Hawkal stated that quality Russian furs were transported directly from the Baltic to Spain, via Danes and Franks.⁵⁸⁶

Mute-trading⁵⁸⁷ was also practiced in the northern reaches of Russia, a unique phenomenon not thought to have been practiced anywhere else in the world. In a typical transaction, the buyer or trader never set eyes on each other, nor exchanged words, but left their goods and monies in a well known drop off point. Was this the behaviour of the highly secretive Arsa, or simply Finns who were so petrified of who they might come across that they wanted to avoid of all contact with outsiders? Anyone who has read of the frightening level of taxes levied on the Finns by the Norsemen will probably be inclined to go with the latter option - I would have hidden too!

Ibn's al-Fakih and Kurradadhbih testified that the Rus' traded *directly* with Rai, the Iranian city alleged to have been the birthplace of Zoroaster) and Baghdad, selling only the finest quality merchandise.⁵⁸⁸ Yet Rus' trade with Byzantium took place only at a respectable distance, in the Crimea, particularly in Cherson. Why? Whatever the Slavs sold there was subjected to a hefty 10% levy by the Byzantine authorities in the Crimea. Trade with the Norseman supposedly became more frequent in pagan Rus' during the 10th Century AD, allowing the Slavs to purchase goods from the Rhine, the isle of Volyn, England, and Flanders, especially via Novgorod.⁵⁸⁹

Lastly, the degree to which the Nordic Rus' tribe was absorbed into the surrounding Slav cultures is fairly

significant. In *The Primary Chronicle* it states that the first group of Rus' to migrate to Russia returned back to their homeland and compelled the remainder of their clansmen to come and live in Russia. Perhaps this is the real reason why the Norse had no knowledge of the Nordic Rus' tribe; the Rus' had all moved east.

A culture as dominant as that of the Scandinavians would never have become totally absorbed into a foreign culture (without leaving behind any notable linguistic traces) unless it considered Slav culture to be equal or superior to their own. Whoever the Rus' were, by 880 AD they were so Slavicised that the word Rus' can no longer be used to denote a Nordic Rus' tribesman, but a member of the new multi-cultural federation of Rus', Finn and Slavs, known as Rus'. *The Scandinavians and Slavs must have had a great deal in common for this to have occurred.*

The Rus' tribe - a summary of evidence

THE RUSSES LIVED NEAR
THE BALTIC SEA

1. The Russes originally lived along the shores of the Varangian Sea (ie; the Baltic Sea).⁵⁹⁰ This leaves the following possibilities - Poles, Saxons, Germans, Goths, Prussians, Danes, Ests, and Swedes. The much romanticised, and some might say fictitious, *Jomsvingligr* (a brotherhood of Norse and western Slav pirates and mercenaries which had their raiding base on Wollin) are also likely candidates; that's if they existed. Norwegians can probably be ruled out mainly because they do not live on the Varangian Sea.

100,000 LIVED ON AN
ISLAND

2. The Rus' originally inhabited a *swampy reed island* and had a population approaching 100,000.⁵⁹¹ A population of this size would suggest that the settlement was historically known. Rugen might fit this description.

Coincidentally a large number of western Slavs lived in settlements which were built in the middle of lakes. Therefore the Arab reference to their island home could simply be a recollection of a western Slav lake cities/towns/villages.

Apparently there was another strategic trade settlement that might fit this description. The once important town of Summerkent was situated on a reed island in the southern reaches of the Volga, not far from the lands of the Khazars and Silver Bulgars.⁵⁹² Its folk were the ancestrally connected with the Ostrogothic tribesmen who had penetrated into Europe (Spain, Italy and France) during Roman times, and who continued to live at Summerkent until the island fell to the Mongols after an eight-year siege. The inhabitants were supposedly Christians (though some commentators have grave doubts about this), and are guessed to have had blood kin among both the Crimean Goths and the Old Saxons (who lived in Germany and Poland). The author of *The Tartar Relation* saw fit to clear up any misconceptions about their ethnicity. He specifically referred to these so-called Goths as Saksins. If true, this would place a sizeable colony of Saxons at the lower reaches of the Volga.

3. Only one Arab geographer mentioned that the Russes inhabited a frigid location, a point that is unlikely to have escaped the comment of most Muslim scholars.⁵⁹³ Being so far north, Lake Ilmen is therefore an unlikely location for the island home of the Russes.

RUSSES WERE
SUPPOSEDLY RELATED TO
THE TAURI

4. The Russes were described by two Byzantine writers (John Zonaras and Cedrenus) as living in the Crimea around 860 AD, in the lands of the Tauri. *According to the Greeks, the Ros were of Taurian stock.*⁵⁹⁴ Not only were the Ros (Rus') said to live in the Taurian homeland of the Crimean Mountains, but they grabbed strangers to sacrifice, drove nails into their heads,⁵⁹⁵ and otherwise put them to death in Taurian fashion.⁵⁹⁶ The Rhos, like the Tauri were supposed to have been ferocious robbers, ever swayed by their war-lust.

THE CHRONICLE
MENTIONS THAT THE
RUSSES ARE A RACE
SEPARATE TO THE SWEDES

5. Gotlanders, like the Swedes, are noted in *The Primary Chronicle* as being different from the Russes. Therefore Gotlanders and Swedes are not an option for the Rus' tribe's ethnicity (though they were integrally linked).

6. Rus' leaders used the term Khagan for their rulers, a title belonging *exclusively* to the peoples of the steppes.⁵⁹⁷

7. There is a reference in *The Primary Chronicle* to Slavs evicting the Varangian Russes from their shores. Danes are known to have been repulsed by the Slavs following their attacks on Novgorod at around that same time.⁵⁹⁸ Is this a reference to one and the same event? If it is, then the Rus' tribesmen could have been Danes.

GOTHS INHABITED THE
CRIMEA

8. In the 5th Century AD the Rus' were already living on the Volga, and in the vicinity of the Crimea, but under the name Ros.⁵⁹⁹ It should be remembered that the vast majority of the Goths had left the Ukraine and went

back up north to live among the Scandinavians and Balts, during the period of the Gothic migrations. Scattered remnants of the once great Roxolanian (Ros-Alan) nation (which included many Goths) stayed behind in Asia Minor, the Crimea, the Caucasus and Khazaria.

9. The Russes were known as exceptionally fierce and bloodthirsty warriors.

10. Russes made their living by extorting money and goods from other people rather than working in the fields, tending cattle or crops. They were also knowledgeable ship builders.

11. The Jewish Khazars who dwelt to the north of the Caspian already knew the Rus' and were mighty fearful of what they were capable of doing.

12. Russes were reported as blond, muscular and Nordic looking. According to Arabs like Al Masudi and Miskawaih, they were "as tall as date palms", intimating that they towered above people of ordinary size. A Syrian mentioned that they were so tall, and their appendages so long, that they were said to be incapable of riding horses. Even allowing for the fact that the horses of the Mediaeval Steppe were smaller than today's breeds, it is possible to say that (if this account is true) the Rus' race was unusually tall, perhaps in the order of 6.5-7.5 feet tall. Such individuals do exist. For instance the Erulian Goths, of which I shall soon speak, were exceptionally tall men, and due to the length of their stride, were very swift in battle, never riding, but always accompanying horsemen into combat on foot.

13. The Rus' rulers had a tamga like that of the Bosphorans, Khorezmians, and Alans, and it resembled one character from a magical script devised by the pharaohs, but which came to be used by Mediaeval sorcerers and alchemists. Thus they may have had some Iranian/Mesopotamian or Egyptian connection. The other variant of this device resembled a trident, which was similar to the trident-like *fleur-de-lis* of old Babylon.

14. The Rus' were well known in the Far-East. Although Scandinavians were known in Central Asia, it is doubtful whether they were well known, far and wide throughout the east; certainly there is no mention of it in the sagas. The Goths on the other hand are a different story.

15. The Rus' were also described as Franks. If this is not a reference to them being of French or German stock, then it is evidence that Rus' tribesmen were living amid the French and Germans. Thus they were either Goths, or the ancestors of Norsemen who had settled in France, and became known as Normans, probably Danes. This fits nicely with Vernadsky's identification of Riorik as leader of the Rus'

16. Since the Rus' were said to be Tauro-Scythian, it is also possible to make this inference ... they were also skilled building engineers, capable of constructing not only big projects, but megastructures. I say this because Taurian architecture was built to massive proportions. In pagan Rus' and Poland it is possible that the "Taurians" and "Goths" were responsible for building the towered pagan temples and island fortresses.

Around 985 AD, Khagan Vladimir, the leader of the pagan Russes, ordered the construction of a protective wall to shield the eastern reaches of his empire from Khazars, Muslim Volga Bulgars and Steppe hordes. The project was ambitious to say the least, a 500-kilometre long stretch of palisading and forts called the Snake Ramparts.⁶⁰⁰ Even more amazingly, the task was completed barely a few years later.

To give you some idea of how massive these works were, it took the great Sassanian Empire some 200 years between the 3rd and 5th Centuries AD to construct a 200-kilometre stretch of frontier defenses.⁶⁰¹ These included walls and towers. Whereas in pagan Rus', we find some 500 kilometres of defensive works.

That is not to say that the Slavs were incapable of such undertakings, but that the Goths or Taurians supported the Rus' state by lending their expertise.

17. In the early 9th Century Ibn Khurdadhbeh recorded that a group of Rus' merchants trading in Baghdad claimed to be Christians.⁶⁰² Since a vast number of Oriental sources attest that the Rus' were pagans, Petrukhiin theorises that these traders were only feigning Christianity in order to attract the more advantageous tax concessions which Christians were then entitled to. However Ibn Khurdadhbeh's account may prove to be of exceptional worth. Coupled with the fact that the Rus' worshiped among their Iranian-named pantheon, an idol of the Good Sun, *Khior*s (in Russia also called *Khresa*, which is like *Keresu*, a Magian word for Jesus Christ), we might also think that at least

THE RUSSES WERE WELL KNOWN TO THE KHAZARS

RUSSES HAD EXCEPTIONAL PHYSIQUES

SOME RUSSES WERE CALLED FRANKS

IF THEY WERE LIKE THE TAURO-SCYTHIANS, THEY WERE PROBABLY SKILLED ENGINEERS

THE RUSSES CONSTRUCTED A 500-KILOMETRE LONG CHAIN OF FRONTIER DEFENSES

A NUMBER OF RUSSES SEEM TO HAVE FOLLOWED RELIGIOUS TRADITIONS THAT BLENDED MAGIANISM AND CHRISTIANITY

some of the Rus' Magi were pagan-Christians. In other words they were adherents of an heretical form of Christianity which I will proceed to discuss at length in Part II. As you will later see, evidence for the existence of such a cult is very compelling, and even overpowering.

MANY RUSSES WERE
FORCED TO CONVERT TO
ISLAM

18. In the *Risala*, Ibn Fadhlān mentions that the Rus' really loved their pork and alcohol (a point reinforced by *The Primary Chronicle*), and that since many Rus' had converted to Islam, they found Muslim prohibitions of these things very difficult to endure. This reference to mass conversions to Islam among the Rus', seems more applicable to the Bulgars, Slavs, Goths, Alans and other easterners rather than it does to the Scandinavian Norsemen, who did not become Muslims *en-masse*. For instance 20,000 Slavs entered Arab bondage in 790 AD, having been kidnapped from the Russian steppe by their invasion force. These were sold in the bazaars of Baghdad and other Islamic regional centres. Quite frequently they served their new masters as soldiers or interpreters.

THE ORIGINAL RUS'
HOMELAND WAS
SUPPOSEDLY SITUATED
NEAR THE CASPIAN SEA

19. *Rus'* was used by 9th Century AD Arabs when describing northmen living among the Franks and Spaniards.

20. Bearing in mind the large amount of Magian data that can be found in Slavic society, it is interesting that Ibn Miskawih recorded that the Rus' originally came from the Caspian area. Mediaeval Islamic writers called the Russes "Simurgs" and fire-worshippers (ie; Magians).⁶³ The existence of Rus' idols with Iranian titles further indicates a Magian presence among them.

The formation of the Rus' state

Academia always has been hotly divided into the pro and anti Normannist schools of thought concerning the origins of mediaeval pagan Rus' statehood. Normannists are those who think the political stabilisation and formation of the early Rus' state can only be attributed to the intervention of Norseman, as spoken of in the *Primary Chronicle*.⁶⁴ The prevailing notion in the 19th century was the now scandalous "supremacist" assertion that the Slavs were a culturally illiterate nomadic race who just aimlessly meandered in off the steppes and began farming. On the other hand, Slavophiles entered into the debate, bristling with cultural pride, suggesting that the Slavs had forged their own destiny, with little or no foreign interference from the Norsemen. However this is not the full story either. The truth, as usual, is at a premium, highly elusive, fairly sketchy, and will *never fully be known*. As time goes by, the reality of Norse political intervention remains clear, though to an unknown degree. In *Before the Burning Times* these simplistic pro- and anti-Normannist arguments are examined in the light of other substantial influences, which are often conveniently ignored to maintain the purity of either theory.

THE NAME RUS'

The origins of the word Rus' have long been the subject of intense debate. Ultimately we will probably never know its origins with any certainty. I provide the following possibilities, some of which are by my own admission spurious, but which I objectively include here for the sake of completeness.

1. Currently *Rootsi* and *Ruotsi*, which were local Estonian and Finnish colloquialisms for Swedes (meaning "oarsmen or rowers"), are the words most commonly favoured by the Normannists⁶⁵ as the source of the name Rus'. Some would add the Old Icelandic *Rothskalar* or *Rothsmenn* (meaning "a sailor" or "oarsmen") to this list.

On the basis of *Primary Chronicle* references, and the confessions made by Russes held in detention by the Carolingians, it seems that the Russes were of Swedish ethnicity. This is in perfect accordance with the Normannist stance. On phonetic grounds though, I remain far from convinced about this *Ruotsi/Rootsi* interpretation when there are other possibilities available which are much closer in form phonetically, and which are supported by a range of other supporting information.

ASHAB AL RA'S

2. Al-Nadim (a Mediaeval Islamic scholar) recorded the existence of the Ashab Al Ra's (literally the Ra's, pronounced Rus), a group of Chaldean magicians (who worshiped *daemones*; spiritual essences which lived in the lower atmosphere, in addition to other gods). These sorcerers once resided in parts of Mediaeval Anatolia (Turkey) in regions under both Muslim and Byzantine Christian rule.⁶⁶ As you will read there is some reason to link the

Russian sorcerers called Kolduny with these Chaldean wizards which the Arabs also called Al-Kaldani. Might the existence of Kolduny sorcerers (and Chaldean rites) in Rus' be a basis to link the Rus' with the Al Ra's? I have never seen any scholar make this comparison but I mention it simply because other data is directly explainable by such a link.

3. Vernadsky believes the name Rus' was derived from the name Rosh, a reference to the Prince of Rosh mentioned in the prophecy of Ezekiel as leading the army of Gog.⁶⁰⁷ Moreover the name Rus' might be related to the Rurikid trident tamga, which looked like the letter "Resh" of the clandestine magical script known as "the Alphabet of the Kings". For some they are embodied antichristian forces due to be unleashed in the end times.

4. The name of the Rus' tribe appeared in several variants between the 4th-10th Centuries AD. In one Syrian text they were termed *Hros*, in the Greek *Ros* and *Rhos* and eventually *Rus'*.

Were the Russes Alano-Goths?

The most plausible theory regarding the ethnicity of the Russes is the one that dispenses with the least amount of primary source material. With this in mind, the only "race" to meet all of the above mentioned requirements are the Goths, particularly the Erulian Goths. Firstly the Arabs had difficulties identifying the ethnicity of the Russes; were they Scandinavian, or "sort of Slavic"? Despite their unalluring and nebulous nature, these Arab comments are not left wanting. Goths admirably fit their descriptions, since extensive interbreeding once took place between the Goths and other tribes throughout the northern and eastern region. Western Slavs, Alans, Balts and Norsemen had interbred with the Goths, ethnicity became blurred.⁶⁰⁸ They were all Ostrogothic, loosely speaking. Affiliations between Scandinavia, and what later came to be called Slavia went beyond ancient ethnic sympathies. These nations, despite their varied *gens*, accepted the common rule of Gothic monarchs.⁶⁰⁸ Gothic kings excelled at forming poly-ethnic federations similar to the Mediaeval pagan Rus' federation.⁶⁰⁸ In the *Origo Gothica* we are informed that the Gothic kingship of Ermanaric oversaw Finns, Balts and all the Scythians as subject peoples.⁶⁰⁹ Gothic monarchs had a hand in ruling eastern and Central European inhabitants, as well as Rugians and other Pomeranians, not to mention the Prussian Galinda tribe.⁶¹⁰

In the remotest past, Scandinavia was more properly known as Gothiscandza,⁶¹¹ which suggests that Goths once lived there, but that was certainly not the only place they settled.

Later classical geographers addressed wide-ranging Goths by the venerable names *Gauti* or *Gapt*.⁶¹² *Gutae* was an even older designation, supplied by Ptolemy in his *Geographia*.⁶¹² By far the oldest reference to the Goths comes from Strabo; he terms them *Gutones*. In Ptolemy's time the *Gutones* were located in the vicinity of the Vistula River (in present-day Poland).⁶¹² Gothic habitation of Scythia had therefore existed even before 150 AD. We can perhaps trace their eastern presence even as far back as the Bronze Age, for the Baltic *Malenclaei* tribesmen and princes (first mentioned by Herodotus), are seen as Gothic.⁶¹³

Further east the Gothic Black Sea homeland in the Ukraine was termed Ostrogotha.⁶¹⁴ Later, as a result of the high antiquity of their eastern settlements, "Scythian" became synonymous with "Gothic".⁶¹⁵ For instance the Gothic and allied troops (of Germano-Sarmatian ethnicity) who burst forth across the borders of the Roman Empire in the early 3rd Century AD, were seen as a Scythian force.⁶¹⁶ Such were the beginnings of the Gothic "Scythian wars" as the Romans called them.⁶¹⁶ The Goths paid homage to Mars/Ares, their war-god forefather in the same manner as the ancient Scythians, by praising the image of a sword.⁶¹⁷ Consequently they were a people whose religion greatly incited them towards armed conflict.⁶¹⁷

Since the Goths and Eruli (also known as Heruli) had returned to Denmark and Scandinavia after a prolonged stay not only in the Ukraine, but the far east, this means that they would have had close (perhaps brotherly) ties not only with the pagan Slavs, but the Norsemen. Is this what is meant when an Arab called the Russes "sort of Slavic"? Thus Goths were a Slavified Germanic breed who were exceedingly fierce, who once inhabited Tauro-Scythia and the Far-East, and who had been there since the earliest years of the 1st-4th Centuries AD (first arriving in the Crimea c. 180 AD). Goths had extensive colonies in the east and once constituted part of the Roxolani (Ros-Alan) alliance which penetrated as far east as India.

Goths undertook construction projects of gargantuan proportions. In 376 AD Athanaric's subjects left the troubled Dacian region en-masse, arriving shortly thereafter in the southern Ukraine. Upon arrival they founded a large city based on Roman town planning.⁶¹⁸

The letter Resh, from the "Alphabet of the Kings"

(Left) One version of the Rus' royal tamga, also used by the Alans. (Right) The Rus' royal tridents resembled ancient variants of the fleur-de-lis.

IT IS PLAUSIBLE, IF NOT LIKELY, THAT THE RUSSSES WERE GOTHS

THE GOTHS FORMED POLY-ETHNIC FEDERATIONS IN THE BALTIC AND SLAVIC REGIONS

THE GOTHS HAD ANCIENT CONNECTION WITH SCYTHIA

THE UKRAINE FORMED PART OF OSTROGOTHA

GOTHS FOUGHT ALONGSIDE GERMAN AND INDO-IRANIAN ALLIES

The towering temples of the pagan Slavs and Balts fit the general description of the steeped towers integral to European Gothic cathedral architecture. As with the Magian temple that was situated at Bulgar, near the Urals, these royally sponsored European cathedrals carried architectural features originating in the pagan Far-East. The spires and arches of some mediaeval Christian shrines (as built by the Franks) seem to carry Asiatic architectural features discussed extensively in Part II. Since the Goths (who are more commonly associated with the Crimea, Scandinavia, and Tmutorokan) also had colonies in the far east, it is not implausible they acquired Asian architectural techniques and styles, and brought these into Europe. The craftsmen who built the pagan Silver Bulgar temple in the Ural mountains turned out constructions obviously influenced by Indian architectural trends.⁶¹⁹

THE GOTHS WERE WIDELY KNOWN TO MANY PEOPLES

Like the Russes, the Goths were known equally to Swedes, Muslims, Franks, Khazars, Finns, Bulgars and Slavs. Like the Alans, many eastern Goths probably became Muslim, while others remained pagan or Arian Christian.

A NUMBER OF GOTHS ENGAGED IN ACTS OF PIRACY, AS A MEANS OF MAKING A LIVING

The Goths were used by many and varied people as mercenaries. This was due to their reputation as skilled looters.⁶²⁰ They were also capable of organising formidable piratical expeditions. As with most acts of piracy, atrocities and pillage were an inevitable result. In the 3rd Century, flotillas of Gothic sea-brigands made headway from their Black Sea bases in the estuaries of the southern Ukraine, raiding Byzantine coastal settlements at will.⁶²¹ In 268 AD Herulian Gothic shipping emerged from the Sea of Azov, whereas the larger body of the Gothic fleet filed out of the Dniester.⁶²² These were for all intents and purposes massive pirate flotillas whose tentacles reached out into the Aegean. At once they fell upon the Byzantine provinces of Galatia and penetrated Cappadocia (once the heartland of Mediterranean piracy).⁶²² Even before this Cappadocia was well known to the Goths.⁶²³ An undetermined number of Goths had birth-ties to Cappadocia, the most famous of which was Ulfilas (Little-wolf), the Gothic bishop who converted them to Christianity.⁶²⁴ Therefore this particular intrusion may have been an attempt to re-establish ties with the area. But that was not the only apparent connection between the Goths and Cappadocians - Gothic piracy bore a strong resemblance to Cappadocian buccanering.⁶²⁵ In both cases pirates used dug-out canoes and shallow draught vessels to evade pursuers. Pirates could lift their canoe-vessels over portages, or conceal them in riverside reed beds when assailing choice targets. Cappadocian pirates used estuarine islands as bases for their inland operations,⁶²⁵ a strategy integral to the successes of Norse piracy also. In both the Baltic and Mediterranean, endemic piracy caused the depopulation of whole coastal areas.⁶²⁵ As in the warmer southern oceans, the Baltic inland settlements probably had more to do with protecting themselves against sea-brigands rather than regional monarchs, though they would have served a dual purpose. In both Scandinavia and Cilicia, elaborate artificial harbour traps and channel obstructions were constructed, whose secret entrance routes were remembered by their pilots alone.⁶²⁵ Attempting to enter these booby-trapped anchorages entailed a considerable risk of shipwreck. Swedish and Danish offshore sea defenses were built predominantly between the 11th and 13th Centuries AD, but the earliest examples date to about 370 AD, when the Goths lived in Scandinavia.⁶²⁶

WHILE CAMPAIGNING GOTHIC TROOPS WERE NOT ABLE TO TAKE PRISONERS, BECAUSE OF THE LOGISTICAL NIGHTMARE THEY POSED

Besides their frequent acts of piracy, many if not all reports of Gothic brutality can be attributed to the practically non-existent logistical infrastructure of Gothic military formations. Few if any provisions were carried with them while campaigning, and what supplies they consumed were requisitioned from peoples whose lands they advanced through.⁶²⁷ Captives were generally slain because the rapidly deploying Gothic troops had limited ability to take prisoners with them.⁶²⁷ Their untimely and often horrendous deaths served as a plain warning to others, and cleared their lines of communications from future interference by conquered peoples left to their rear. Roman captives were not unknown however, and so the likelihood of taking prisoners was no doubt dictated by the prevailing military circumstances, or the relative financial worth of a captive.

ATHANARIC WAS A VISIGOTHIC KING

The history of the later Visigothic tribal federation began with Athanaric, a king whose claim to fame was his Scythian royal blood and the right to judge.⁶²⁸ Far from being a petty Gothic tribal representative, Athanaric was observed to be a representative for a great many other Gothic Kings.⁶²⁸ Perhaps he was the Gothic High King.

The Old Icelandic word *Lygi-Konungr* ("a false king")⁶²⁹ intimates the existence of false-kings among the Norsemen. This either relates to the falsity of their word, or the absence of the royal blood in their veins. In other words false-kings might have been imposters, unfit for kingship.

THE GOTHS DISLIKED CHRISTIANITY BECAUSE OF THE CHANGES IT BROUGHT

The Goths, like the Russes had a history of persecuting Christians. Take Athanaric; he was most interested in ensuring pagan hegemony among the Goths. Christian Goths did exist, but they were burned to death if unwilling to participate in the tests of faith he instituted. This required them to haul a vehicle about, bearing a divine effigy of

some kind, or to eat meat from beasts sacrificed to the pagan Gods.⁶³⁰ Refusal meant a rebuttal of the “divine laws” over which Athanaric presided. His motive for doing so was to preserve the faith which he had inherited from their divine ancestors.⁶³⁰ Christianity threatened it to its very core, a danger not only to Athanaric’s religion, but to the social order, which we might guess was elaborately connected with such a faith. For this reason Gothic society experienced fractures due to the very presence of Christianity.

If the Russes were of Gothic extraction, it is feasible that a certain proportion of the Ostrogothic nation was nominally Christian. But the extent of their Christianisation, or their orthodoxy hang under a very grey cloud indeed. In Byzantium, Bishop Gregory expressed the gravest possible concerns about readmitting to the Church whatever Roman prisoners had been emancipated from Gothic captivity.⁶³¹ Doubtless to say he must have been rather disturbed about the matter, so much so that he felt that the issue needed to be addressed resolutely.

Wolfram believes the Bishop’s worrisome remarks could not have been so much directed towards the Goths, who, on the strength of surviving accounts, are not guessed to have been preoccupied with idolatry at that time.⁶³²

He professes that Gregory’s nervousness was due to the existence of Christian apostates and heretics among the masses of captives held by the Goths, rather than the Goths themselves. The ritual slaughter of livestock to idols appears to have been a feature of this cult, based on the Bishop’s commentary in the surviving letter from the mid-3rd Century AD.⁶³² Further, these other Christians hoped to be rejoined with the Church militant, something the Bishop was not keen to countenance lightly. These might have been a dangerous source of spiritual contamination likely to poison whatever parish they joined.

Wolfram’s is a respectable analysis of the data, but one further explanation is possible. The heretics might have been Gothic, and the dangerous heresy found there was that of the Magian Christians (fully explained in Part II). Historically Cappadocia and Cilicia were seedbeds of dualist Christian heresy owing to their close proximity with the Iranian nations. Goths may have observed ancestral Christian heresies of some antiquity.⁶³³

We might also trace Gothic ancestry to one of the Medes’ greatest tribes, the *Guti*. Like all Medeans, the *Guti* were deeply influenced by Indo-Aryan culture and religion.⁶³⁴ Gotic priests were predominantly magician-smiths.⁶³⁴ Considering that the *Getae* and *Massagetae* originally inhabited a region geographically neighbouring Medea, the analogy has distinct possibilities. Even more so when one learns that the dignified attire of the famed semi-divine Gothic Amali dynasty was Sassanian.⁶³⁵ That is, similar to the manner of dress of the Magian kings. Whether they had always dressed in this manner is unrecorded.

That they were demi-gods is sign-posted by surviving linguistic data. The words *Gothr* (sing), *Gothar* (pl) (Old Norse : a pagan Priest or chieftain of the Norse), *Got* (Germanic: “God”) are in all likelihood linguistically related to each other. So it is eminently plausible that these linguistic similarities reveal the Goths as a race of priestly man-gods. The closest parallel for them are the Magi (which the Arabs called *Al-Madjus*), or the pagan Gnostic philosophers. In Gothic the word “God” and “priest” are from the same root, but *Guth* also held an older meaning; “idol”.⁶³⁶ In Chapter VIII we learn of a pagan Russian tradition whereby devotees carved idols of their heathen priests and heroes after they had died. These are related to *gothr*, *goth* and *gott* (“good”, “morally commendable”, “honest”, “kind”, “friendly”),⁶³⁷ and *goth-mogn*, *guth-magn*, *gothmagn* (“divine powers”, “gods”).⁶³⁸

Gothar existed in Scandinavia, that much we know. Nonetheless we cannot ascertain whether a *Gothar* was a Swede, Norwegian or Dane by blood, or merely a dignitary who held a particular pagan religious office. Considering a range of other data, one can infer that a *Gothar* belonged to an ethnic Gothic priesthood operating in Scandinavia.

Goths were Nordic, they lived among the Balts, the Scandinavians and the Slavs, and had settled throughout eastern and western Europe. In Spain they founded the Kingdom of the Visigoths (which meant “the Good Goths”). Presumably if they felt inclined to call themselves the Good Goths, they may have wanted to differentiate themselves from other Goths who were bad - in short looters, brigands and mercenaries who inflicted terrible sufferings for the promise of war booty and live kills. Roman recollections of the Goths also fall into the latter category.

If the words *Gothar* (a Norse pagan priest), *Goth* (Goth), *Got* (a God) are related to each other, it is highly possible that they reveal the Goths as being a race of priestly man-gods; in other words, reminiscent of the Magi!

Some Goths were good - Like the Magi, the Goths were great venerators of the (fraxinus) Ash tree, who used it to effect many cures.⁶³⁹ They had a custom of splitting the tree down the trunk, stretching it open, and passing sick

children through the hole. Thereafter the tree was bound together, and as it healed, so did the child.⁶³⁹ Ash trees were treated with utmost reverence and care, and it was considered highly inauspicious to neglect them in any way. Customs like these were still very common in England during the early 1800's AD.⁶³⁹

First names used by the Gothic royals were in some instances Persian.⁶⁴⁰ One such name was Gaatha; it applied to a 4th Century AD Gothic princess.⁶⁴⁰ White and black magic were acknowledged influences in Gothic society.⁶⁴¹ So too the influence of demonic possession known as *Daimonareis*.⁶⁴¹ This suggests the presence of dualistic wizardry in Ostrogotha. Such beliefs were a standard feature of the Indo-Europeanised Magianism practiced by the Zurvanites.

THE TITLE OF THEIR
KINGS ORIGINATED FROM
INDO-EUROPEAN

Unlike the Rus' princes, the ruling Gothic chiefs were called *Reiks*,⁶⁴² which I see as related to the venerable Vedic term *Rig*, which in eastern tradition meant not only "a king", but "the sun". Gothic *Reiks* might have been similar to Irish Kings, the *Riogh*, judging by the extensive ties once shared by the Goths and Celts of old. The Latin *Rex* ("king") was also cognate with them,⁶⁴³ and clearly derived from the same Indo-European heritage. If they were Magians, they had acquired a certain Indo-European aspect, especially where their kings were concerned. Perhaps the Gothic royals had always displayed Magian features, but they might also have absorbed these tastes from the many Turks and Indo-Iranians of the Russian Steppe.

PAGAN GOTHs BELIEVED
IN AN AFTERLIFE

Another of the Gothic dynasties was the *Balthi*. Though of lesser magnificence the *Balthi* were equally recognised for a well-famed and noble ancestry.⁶⁴⁴ In the 6th Century AD, many hundreds of years after the Christianisation of the Goths, the *Amali* dynasties still actively engaged in the deposition of grave goods.⁶⁴⁵ This practice was naturally contrary to the Roman Catholic Church's thoughts on the matter. After all, this was a Gothic pagan practice designed to supply the deceased with sufficient enough goods for their afterlife.⁶⁴⁶ Whether this future life was to be in a reincarnated form, or in a heaven of some kind is not stated. As with Mediaeval pagan Slavs, Gothic heathens lived in kinship communities bound together in peace by means of their banqueting.⁶⁴⁷ There they respectfully paraded and glorified their ancestral genetrix idols, much to the disgust of the Christians among them.⁶⁴⁷

THEY HAD AN
ORGANISED PRIESTHOOD

As you will see the Goths had an highly evolved pagan priesthood, manned by individuals from the highest rungs of the aristocracy. Jordannes' work may lend respectability to their possibly Magian origins, but it could also reveal a Neo-Pythagorean influence. This is the sort of thing you would expect to see in Parthia:

THEY WERE
KNOWLEDGEABLE IN
MATTERS OF PHILOSOPHY

"Now the Gothic race gained great fame in the region where they were then dwelling, that is in the Scythian land on the shore of Pontus, holding undisputed sway over great stretches of country, many arms of the sea and many river courses".⁶⁴⁸

"In their second home, that is in the countries of Dacia, Thrace and Moesia (ie; the Balkans), Zalmoxes (a name once used by a legendary Neo-Pythagorean philosopher-scientist, born a Slave, but regarded as an incarnation of Kronos, and so the equivalent of Zurvan) reigned, whom many writers of annals mention as a man of remarkable learning in philosophy. Yet even before this they had a learned man Zeuta, and after him Dicineus; and the third was Zalmoxes of whom I have made mention above. Nor did they lack teachers of wisdom. Wherefore the Goths have ever been wiser than other barbarians and were nearly like the Greeks, as Dio relates ... He says that those of noble birth among them, from whom their kings and priests were appointed, were called first Tarabosteei and then Pilleati. ... "And they had more than all other races a deep spirit of religion, since worship of this god (Mars, otherwise known as the God of War) seemed to be really bestowed upon their ancestor".⁶⁴⁹

THE GOTHs DID
WHATEVER DICINEUS
COMMANDED OF THEM

*"... when Buriusta was king of the Goths, Dicineus (the philosopher sage) came to Gothia at the time when Sulla ruled the Romans (c. 80 BC). Buriusta received Dicineus and gave him almost royal power. It was by his advice the Goths ravaged the lands of the Germans, which the Franks now possess ... Their safety, their advantage, their one hope lay in this, that whatever their counsellor Dicineus advised should by all means be done; and they judged it expedient that they should labour for its accomplishment. And when he saw that their minds were obedient to him in all things and that they had natural ability, he taught them almost the whole of philosophy, for he was a skilled master of this subject. Thus by teaching them ethics he restrained their barbarous customs; by imparting a knowledge of physics he made them live naturally under laws of their own, which they possess in written form to this day and call *belagines*. He taught them logic and made them skilled in reasoning beyond all other races; he showed them practical knowledge and so persuaded them to abound in good works. By demonstrating theoretical knowledge he urged them to contemplate the 12 signs (of the zodiac) and the courses of the planets passing through them, and the whole of*

IN RETURN HE TAUGHT
THEM PHYSICS,
ASTRONOMY AND
ASTROLOGY

astronomy. He told them how the disc of the moon gains increase or suffers loss, and showed them how much the fiery globe of the sun exceeds in size our earthly planet. He explained the names of the three hundred and forty-six stars and told through what signs in the arching vault of the heavens they glide swiftly from their rising to their setting. Think, I pray you, what pleasure it was for these brave men, when for a little space they had leisure from warfare, to be instructed in the teachings of philosophy! You might have seen one scanning the position of the heavens and another investigating the nature of plants and bushes. Here stood one who studied the waxing and waning of the moon, while still another regarded the labours of the sun and observed how those bodies which were hastening to go toward the east are whirled around and borne back to the west by the rotation of the heavens.

... These and various other matters Dicineus taught the Goths in his wisdom and gained marvellous repute among them, so that he ruled not only the common men, but their kings. He chose from among them those that were at that time of noblest birth and superior wisdom and taught them theology, bidding them worship certain divinities and holy places. He gave the name Pilleati to the priests he ordained, I suppose because the offered sacrifice having their heads covered with tiaras, which we otherwise call Pillei. But he bade them call the rest of their race Capillati" ... "After the death of Dicineus, they held Comosicus in almost equal honour, because he was not inferior in knowledge. By reason of his wisdom he was accounted their priest and king, and he judged the people with the greatest uprightness".⁶⁵⁰

THEIR RELIGION
POSSESSED PAGAN
GNOSTIC TRAITS

The presence of Neo-Pythagoreanism among the Goths is indicated by Jordannes' mention of Zalmoxes, and Ancient Greek writings.⁶⁵¹ Diogenes tells us that Pythagoras had several brothers, one of whom was "as slave named Zalmoxis, to whom the Getae sacrifice, believing him to be the same as Kronos, according to the account of Herodotus".⁶⁵¹

A surviving piece of engraved Gothic jewellery confirms their actual worship of Jupiter, as Roman writers previously noted.⁶⁵² This might be a feature of pagan Gnosticism or Chaldeanism. Zalmoxis tutored the Getae in the lofty philosophies and sciences of Pythagorus and for this reason "Zalmoxis was by them considered as the greatest of the Gods".⁶⁵³ Since, according to Jordannes, Zalmoxes was only the third great Gothic mentor, we might guess that other religious teachers were present among the Getae before the arrival of Zalmoxes. Whether they were of the same religious persuasion as Zalmoxes is indeterminable at this stage.

On this basis we can presume that the Goths had been subjected to Pythagorean teachings at some stage, but other eastern traditions probably also had currency there.

"these priests of the Goths that are called the Holy men suddenly opened the gates of Osessus and came forth to meet them. They bore harps and were clad in snowy robes, and chanted in suppliant strains to the gods of their fathers that they might be propitious and repel the Macedonians".⁶⁵⁴

THE GOTHS HAD A
HOLY PRIESTHOOD,
WHO WORE WHITE
ROBES

In Chapter VI you'll discover that Mediaeval pagan priests in Rus' also had musician magicians known as "Storm chasers", astronomers, and books devoted to a wide range of ancient teachings and natural sciences. From this perspective alone it is enticing enough to equate the Goths with the Rus' magician priests. But a more specific sub-component of the Goths are the most likely contenders, namely the Eruli.

THEY CHASED AWAY
STORMS WITH HARPS

Were the Russes more specifically Erulian Goths?

"They (the Eruli) used to dwell beyond the Ister (Danube) River from of old (ie; in Slavia, or even more eastward than that), worshipping a great host of gods, whom it seemed to them holy to appease even by human sacrifices. And they observed many customs which were not in accord with those of other men".⁶⁵⁵

THE ERULIAN GOTHS

The Eruli (also known as the Heruli) were habitual raiders. Their piratical corporations looted their surrounding neighbours with great frequency. So powerful were they that the Eruli fought and conquered the Lombards and several other Germanic tribes in their area. They did this on account of their "love of money and a lawless spirit".

ERULIANS LIVED BY
RAIDING, SUPPOSEDLY
OUT OF GREED RATHER
THAN NECESSITY

After three years of peace the men of the Eruli couldn't stand it any more. They mocked their king Rodolphus for the peace they were living through, and attempted to start a war, just to liven things up. And so it came to pass that Rodolphus was goaded into mobilising the Erulian nation, and marching them headlong toward the Lombards, a people already tributary and totally submissive to Rodolphus. Unable to fathom why they were about to be attacked with the full might of the Eruli, the petrified Lombards sent envoys pleading to be left alone. They begged to pay Rodolphus extra tribute, interest on prior tribute, whatever it took. But no, he wanted war, for the sake of war, both

THEY ATTACKED THE
LOMBARDS BECAUSE
PEACE WAS NOT TO THEIR
LIKING

to redeem his prestige, and to sate the belligerent spirit of his tribesmen. The tables however, were about to turn on the Eruli, the erstwhile rulers of the area. Heedless of inauspicious battlefield portents (ie; black clouds hovering over the Lombard army), and unmindful that they were waging an unjust war on the Lombards, they entered the fray. Despite having a force of superior size, the grim omens had successfully foreshadowed the Eruli's surprise defeat. Rodolphus had been killed, countless casualties littered the field, and the remainder of the army had fled. In haste the survivors returned home, and hurriedly migrated northward, coming to stay in the lands of the western Slavs, especially the Rugii of redoubtable Rugen.

DEFEATED BY THE
LOMBARDS

Erulians were, by Procopius' testimony, the most knavish of men. They possessed a level of avarice so insatiable that they were forever driven to attack their neighbours. As further evidence of their baseness, Procopius reckoned that they practiced bestiality and were also regicidal.

Although Goths recognised the power, inviolability and holiness of oaths, there were instances when they had conspired to violate their treaty oaths in a cold and calculating fashion.⁶⁵⁶ Knowingly they had falsely foresworn the most damning of oaths, ones which would precipitate them into horrendous sufferings.

ERULIANS WERE
ALLEGEDLY REGICIDES

Unlike other nations which honoured their kings, the Eruli bastardised and maltreated their monarch in whatever way they wished. After putting King Ochus to death, they sent word to Thule that they needed a new king, for in that land dwelt all the Eruli with royal blood. The precise location of Thule has not been established, but, based on the fact that it was accessibly only by sea, and considering the length of the days experienced by those who travelled there, it could have been Sweden or Norway, or much less likely Iceland. The story of how their many kings came to be living in Thule is as follows:

THE ERULI HAD MANY
KINGS

*"... these men, led by many of the royal blood, traversed all the nations of the Sclaveni (the Slavs) one after the other, and after next crossing a large tract of barren country, they came to the Varni (perhaps the Germanic tribe of the Varini), as they are called. After these they passed by the nations of the Dani (the Danes), without suffering violence at the hands of the barbarians there. Coming thence to the ocean, they took to the sea, and putting in at Thule, remained there on the island ... where thirteen very numerous nations are settled; and there are kings over each nation"*⁶⁵⁷

THE MOST PART OF THEIR
KINGS INHABITED THULE

There is, as you will see, a remarkable similarity between this historical account, and the *Ynglinga saga*. Procopius continues his narrative on the Heruli.

THEY WORSHIPED PAGAN
GODS, HEROES AND
DEMONS

*"But all the other inhabitants of Thule, practically speaking, do not differ very much from the rest of men, but they reverence in great numbers gods and demons both of the heavens and of the air, of the earth and of the sea, and sundry other demons which are said to be in the waters of springs and rivers. And they incessantly offer up all kinds of sacrifices, and make oblations to the dead, but the noblest of sacrifices, in their eyes, is the first human being whom they have taken captive in war; for they sacrifice him to Ares (their war god), who they regard as the greatest god. And the manner in which they offer up the captive is not by sacrificing him on an altar only, but also by hanging him to a tree, or throwing him among thorns, or killing him by some of the other most cruel forms of death. Thus, then, do the inhabitants of Thule live. And one of their most numerous nations is the Gauti, and it was next to them that the incoming Eruli settled at the time in question"*⁶⁵⁸

THEY PERFORMED
HUMAN SACRIFICE

By comparing the accounts of Jordannes and Diogenes we can infer that the Eruli had pagan beliefs similar to those of the Pythagoreans. For instance;

A NUMBER OF THEIR
BELIEFS ARE SUGGESTIVE
OF PAGAN GNOSTIC
INFLUENCES

*"The Pythagoreans also assert that the whole air is full of souls, and that these are those that are accounted daimons or heroes. They are the ones that send down among men dreams, and tokens of disease and health ... They are concerned with purifications, expiations, and all kinds of divinations, oracular predictions, and the like"*⁶⁵⁹

Pythagorus also decreed that humanity "should honour the gods above the daimons and heroes above men, and that of all men, parents are those entitled to more honour"⁶⁶⁰ Yet even if the Erulians had incorporated Neo-Pythagoreanism into their pagan religious scheme, it could not have been in a pure form, or had perhaps undergone modification over the centuries before Jordannes' time. This is because Pythagoreans prohibited the sacrifice of animal victims to the gods, much less human beings.⁶⁶¹ Under the Pythagorean philosophical system, only grain and cakes were offered.⁶⁶¹

In a number of respects Erulian Goths seem perfect aspirants for the title of the Russes.
 Their dualistic religion was like that of the Slavs
 They had lived in Slavia and Sweden at one stage, and had particularly close contacts with the Goths, Danes and Wends
 They settled in Scandinavia
 They had fought the Lombards, and most likely the Franks
 They must have been known throughout Russia and the Far-east
 They had their own magicians who specialised in rune-cutting
 What Procopius records of their funeral customs is remarkably close to that of the Russes
 The Eruli and the Goths were supposed to have been from the same ethno-cultural complex.

ERULIANS
 PHYSIOLOGICALLY
 RESEMBLED THE RUSSES
 BASED UPON WHAT WE
 KNOW OF BOTH GROUPS

In the mid-6th Century AD the last of the Herulian warriors surrendered their arms near Verona, and this is practically the last major historical reference we find to these particular Goths.⁶⁶² Be that as it may, *The Forbidden History of Europe* examines what could well be the continued history of the Heruli, a history soundly rooted in an even earlier historical phase of the Gothic nations; in Slavia.

WE LOSE TRACK OF THE
 ERULI HISTORICALLY,
 AROUND THE 6TH
 CENTURY AD

The reason why I, like Vernadsky, feel most inclined to favour a Gothic heritage for the Rus' tribe is because they originally lived in Sweden and came to live in the Crimea. Though they themselves were not Swedes ethnically, it would have been impossible to tell the two apart physically, and moreover since they had lived in Sweden for so long, they were as Swedish as a Swede. We witness the same phenomenon nowadays, as migrants from far flung regions of the globe migrate elsewhere, and settle permanently in a new location. But their new cultural identity covers over their lengthy history, their ancient customs and beliefs. Whether these live on in the new homeland depends on the migrants themselves. Some might say the Goths were Swedes who later became known as Goths as they wandered far from home, but a complete knowledge of the earliest Gothic generations has been lost in obscurity. Archaeology tells us that they came from Sweden originally (though some scholars dispute this), but went awandering to the south, and settled in many different lands.

IT IS HIGHLY PROBABLE
 THE RUSSES WERE
 GOTHIS

Whether they came from somewhere else before that is uncertain; Gothic names can be found across in Poona, India (c. 150 AD), inside an underground Buddhist temple.⁶⁶³ This means we ought to rethink Gothic chronologies, since news that the Teutonic-speaking Goths were in India at such an early date proves that they had contact with the Far-East shortly after the birth of Christ. Perhaps they might have been traders, or served in the armies of the Roxolani or Alexander the Great, who knows. No doubt, it was in India and South-East Asia that their masons first became acquainted with Indian architectural styles (which themselves exhibited the influence of Iranian craftsmanship), styles which would later be employed in the building of the Bulgar temple near the Ural Mountains,⁶⁶⁴ and techniques used to flavour the architectural designs of mediaeval Cathedrals. We cannot however attribute the construction of the Ural temples to Goths with any certainty. As you will see, it was the Proto-Bulgars themselves, whose construction crews built Persian-style buildings in the Crimea, and the Kuban region of Russia.

GOTHIC NAMES HAVE
 BEEN FOUND IN INDIA,
 DATING TO THE 2ND
 CENTURY AD

I think most scholars have understandably fallen for a red herring, namely that some *Primary Chronicle* references to Swedes should really read Alano-Gothic Herulians who lived in Sweden and/or Rus', and who were for all intents and purposes Gothic Swedes who decided to become Slavic-speaking Russians.

Eliminating opposition within the Rus' state

Although the Slavs, Norsemen and Finns were no strangers to each other, the events of the 9th Century saw a more elaborate and formalised relationship begin to appear, resulting in the formation of the Rus' state, which was ruled from Kiev. The sudden emergence of Kievan control represented a totally new development in all of their relationships and came about as a result of intense inter-tribal diplomacy, brinkmanship, and, if necessary, by military conquest against non-compliant tribes.

The most likely consequence of this was the emergence or re-emergence of a pagan governmental system, which independent tribal entities were required by treaty to submit themselves to, if the task of bringing law out of lawlessness was to be achieved. This being the case one would presume that Rurik employed a Norse governmental model, one destined to control a country as big as Russia, by ingenious means. The 10th Century AD saw the widespread establishment of palisaded administrative

PAGAN GOVERNMENT
 IN OLD RUSSIA

TAXATION

settlements known as *pogosti*. These were outposts that housed military personnel loyal to the Grand Prince, plus groups of tradespeople and their families.⁶⁶⁵ Through the agency of archaeology it is only now coming to light just how many of these settlements were established during the Mediaeval era of pagan Rus'. Their prevalence signifies a flourishing centralised pagan government in Kiev, which succeeded in extending its control over the length and breadth of the countryside, with these outposts serving as regional outposts of royal military and administrative power. Nobody knows how quickly the *pogosti* spread, though by the time Princess Ol'ga had introduced the *polyudie* tax (literally "going around to the people") the need for governmental stockades in even the remotest places was greater than ever. Accordingly *pogosti* appear to have been flourishing by the mid 900's AD, and this *pogost* network proved so workable that it crossed over into Christian hands following the conversion.

RUSSIAN GOVERNMENTAL DISTRICTS POSSIBLY BASED ON THE PERSIAN SATRAPIES

Since *pogosti* were constructed in the vicinity of the larger and better fortified cities it seems that they were intended to be autonomous enclaves, independent of any nearby tribal grad and its princely ruler. They had a psychological effect also, reminding the Russes of exactly who was in control of their Empire; *pogosti* were visual proof. *Pogosti* might have been an added insurance policy against treasonous rebellions, a marvellous ploy by Kiev. Should an uprising occur, in which a prince tried to break away from the Rus' tribal federation, then the existence of a *pogost* in close proximity would have been timely and crucial. Through affiliations made with city folk within the *grad*, local *druzhinna pogost* troops might have been better able to plot a breach in the errant city's defenses, or remain on standby pending the arrival of reinforcements from the Grand Prince, all the while reconnoitering the situation as it unfolded. What is more they would serve as the eyes and ears of the Kievan throne.

POGOSTI WERE ROYAL MANOR HOUSES

The name *pogost* infers they served as royal guest houses too, manors where traders, travellers and dignitaries stopped over on their journeys. *Pogosti* probably afforded protection for merchant caravans against bandits, and allowing traders and artisans the opportunity to undertake commerce in an otherwise little known area, or simply shelter from inhospitable weather conditions. In all they sound very much like the Persian governmental satrapies, regional administrative centres with their own settlements and fortifications, such as Asagarta.

REGIONAL INSPECTORS

At the height of Persian power satraps were annually visited by regional inspectors, who wandered the empire, dropping in on provincial royal courts in order to ascertain what was really happening in remote places. Bureaucratic entourages of this sort became the 'king's eye'.⁶⁶⁶

Another Norse name for pagan Russia was *Gardariki*, the "land of enclosures", the "land of forts". This mention of enclosures is a reference to the ubiquitous walled fortifications that studded the landscape, and perhaps even the boundary fences encircling their groves. Norsemen used a similar term for their settlements *gard* (which means "a city"). Russian cities were known as *gorod*, or *grad*. Considering the level of Magianism in Russia, Slavic fortress walls might have had a sacral meaning, I believe, intended to emulate the Magi's heavily fortified heavenly city *garodoman*, which was patrolled by the holy warrior-saints. In a Magian context a typical Russian or Norse *gard*, *grad* or *gorod* may have been an earthly fortresses of the righteous, just as *garodoman* encircled heaven, to keep the demons away.

PUBLIC WORKS PROGRAMMES

The *Ynglinga Saga* alludes to public works programmes back in Scandinavia;

"Onund had roads made through all Sweden, both through forests and morasses, and also over mountains; and he was therefore called Onund Roadmaker. He had a house built for himself in every district of Sweden, and went over the whole country in guest-quarters".⁶⁶⁷

ROAD BUILDING

Considering such measures saw service in Rus' during pagan times, instituted after the "Calling of the Varangians" it is possible the Norsemen were responsible for bringing these same skills into Russia, though they may have been there since Greek or Scythian times.

That is not to say that the Slavs were ignorant of public works. Far from it. Western Slav cities were very elaborate, well established and protected. Adam of Bremen flatters one heathen Polish city with the following kind words;

THE SLAVS ALREADY BUILD ELABORATE CITIES

"The city itself has nine gates and is surrounded on all sides by a deep lake. A wooden bridge, over which approach is allowed only to those who would make sacrifices or seek oracular advice, affords a means of crossing".⁶⁶⁸

*“At its mouth (the Oder river), where it feeds the Scythian marshes, Jumne, a most noble city, affords a very widely known trading centre for the barbarians and Greeks who live round about. Because great and scarcely credible things are said in praise of this city, I think it of interest to introduce a few facts that are worth relating. It is truly the largest of all the cities in Europe, and there live in it Slavs and many other peoples, Greeks and barbarians. For even alien Saxons also have the right to reside there on equal terms with others, provided only that while they sojourn there they do not openly profess Christianity. In fact all its inhabitants still blunder about in pagan rites. Otherwise, so far as morals and hospitality are concerned, a more honourable or kindlier folk cannot be found”.*⁶⁶⁹

PAGAN PRIESTS
CONTROLLED BRIDGE
ACCESS TO THE CITY

From what Adam reported, we know that Rugen (where Svyatovit’s idol was situated) was supposed to have been a very dangerous place, and tales of it are reminiscent of those concerning the Rus’ Arsa tribe;

*“So much are they (the Slav kings of Rugen) feared on account of their familiarity with the gods, or rather demons, whom this people holds in greater veneration than do the others. Both these islands, too, are infested by pirates and by very bloodthirsty robbers who spare no one who passes that way. For they kill all those whom others are accustomed to sell”.*⁶⁷⁰

PEOPLE FEARED THE
SLAVIC KINGS OF
RUGEN

So what else do we know about major urban centres in other parts of heathen Slavia? In the Slavic world of the 9th and 10th Centuries AD the royals and nobles built their own keeps surrounded by timber palisades and mottes. Tribes also had their own specific fortifications, which granted them safety during inter-tribal warfare. Some sites, such as the Slavic island-fortress of Biskupin (see below) had been continuously inhabited since the earliest years of the 8th Century BC.⁶⁷¹ Such complicated engineering evidently required the use of floating pile drivers.

THE BUILT CITIES IN
THE MIDST OF LAKES

Slavs had a love of hill forts, many of which have since been excavated by Russian archaeologists. To the west, fortifications were commonplace in Bohemia, the Baltic, and among the Eastern and Western Slavs. In Central Europe Bohemian fortifications conformed to four main styles:⁶⁷²

SLAVIC HILL FORTS

1. Those built in the middle of swamps.
2. Those raised atop hills.
3. Large-scale fortifications established on level ground.
4. Those built on stretches of land between two rivers.

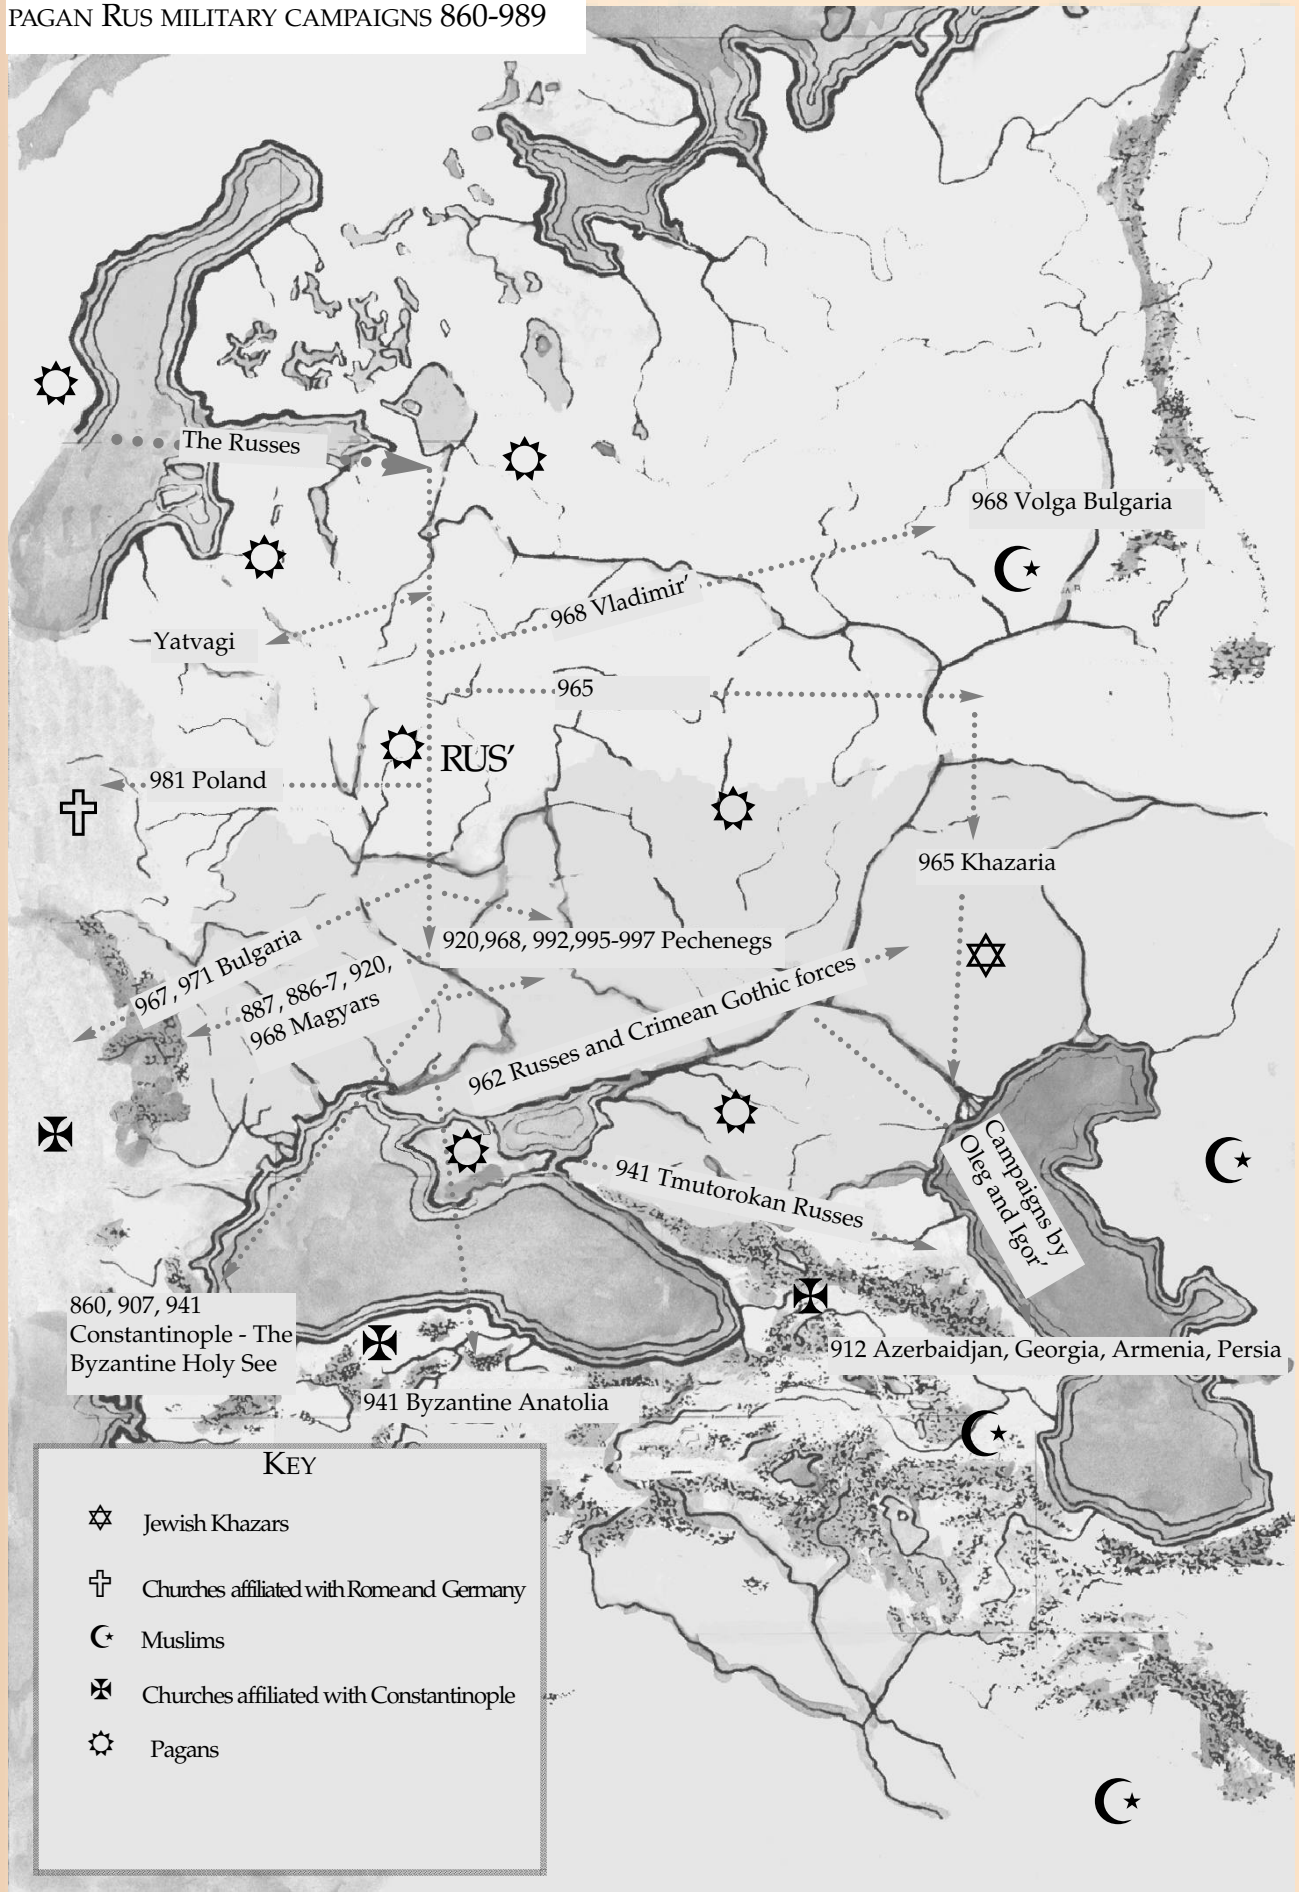

The Western Slavs, being close to the Catholic Holy Roman Empire, felt a need to build defenses that could only be assailed with difficulty. One Polish hill fort, at Gniezno, had 50-metre-thick walls made from log lattice work with rubble filling sandwiched in between. That’s half a running field thick! The scale of this gargantuan fortification is in some ways reminiscent of the old Tauro-Scythian fort at Charax, and eclipses the wall thicknesses of the mediaeval world’s major cities. This reveals several things;

WALLS OF MASSIVE
DIMENSIONS

EMPIRE BUILDING - INTERNAL
WARFARE IN PAGAN RUS' 840-989 AD

PAGAN RUS MILITARY CAMPAIGNS 860-989

1. There was immense social cohesion, sufficient to undertake projects of this size.
2. The herculean nature of the undertaking suggests that the rampart was erected to guard the inhabitants against Christian German or pagan siege engines. The thickness of the wall would have been rather pointless if it was only designed as defense against attacking infantry, since once they had scaled the top of the wall, its thickness would have been irrelevant. In so far as Bulgar siegecraft is concerned, linguistic evidence suggests that their military engineers used equipment and techniques that originated in Central Asia.⁶⁷³
3. Who or what was so valuable or important that it needed a 50 metre thick wall for protection? Constantinople didn't, so why should some place in Poland require it? My guess is that Gniezno was a major pagan centre, charged with protecting high-ranking heathen dignitaries, royals and pagan priests.

Archeological examinations of Sassanian Persian sites are pitifully insufficient in modern Iran owing to a lack of funding for such projects, and to prohibitions against archeological excavations put in place by the Islamic government of modern Iran (which have thankfully been lifted during the past year). We do know that circular city plans predominated in Sassania, a point of difference with Roman square town grids.⁶⁷⁴ In this respect they may have provided the blueprint for the circular Slavic residential enclosures, which differed from the squarish settlements also known in Russia.

The major cities and towns of pagan Rus' were normally built on large flattened mounds, or preferably on the spur of a hill, presenting attackers with their first formidable obstacle. Frequently they were also situated in the midst of a marsh or at places where tributary and arterial rivers joined. This allowed chieftains and other rulers the right to tactically restrict river access if they so wished. Fortified places of refuge had always been a necessity in a land so prone to invaders, and poisoned by the chaos of internal wrangling. Here power meant having more swords and warriors than your neighbours. So Russian cities and towns were formed around a central lofty citadel or keep made of thick oak logging, known as a *detinyets*. The *detinyets* was in turn surrounded by a small partitioning wall and then on the other side of that, houses and workshops were arranged into different quarters. The whole settlement was often surrounded by a sturdy log palisade and ringed by defensive ditchwork or a moat. In the later Middle Ages they made their fortifications from stone and bricks; these became known as Kremlins. Secret underground passages (souterrains) and rooms are known to have been dug beneath the stockades. The tunnels linked houses and key buildings, allowing speedy escapes during surprise raids and sieges, or freedom of movement down covered passageways during the terrifyingly-cold winter weather. The underground hiding pits like those dug by pagan Germans, Slavs and Celts continued to see service in Rus' after the conversion, largely owing to their functionality.

The *Volkhvy* Magian advisors who worked closely with the Slavic and Nordo-Gothic royals seem to have been masters of government diplomacy, and the gathering of information through contacts abroad. They soon gained the upper hand over the farmers and herders of the forests helped by their force of hardened Rus', Slav, Norse and Finnish warriors. By military conquest, and displays of their superior technology, they so profoundly inspired those who witnessed them that, in the north anyway, they were regarded as living-gods. They gave the inhabitants a re-organised Magian pantheon to bow down to, new *ahuras* and *daevas* (gods of the Aryans and Magians) of heaven, the earth and the underworld, and achieved a unified magical theocracy with stout warrior backing. This was the birth of what could even be called the last great pagan Empire.

The northerners did not have it all their own way though. To the south and east of the eastern Slav lands there were a few dissenting voices. The Rurikids aimed to bring them to heel by mustering forces for an all out offensive against the rebellious Malorussians and Belorussians. These two Slavic sub-groups asked for Magyar aid against the northern Ros/Silver Bulgar invaders, a request which saw pre-Rurikid Kiev receive a permanent Magyar garrison, under Amos.⁶⁷⁵ Their attacks on the south might have been influenced by religious developments taking place there at the time. The growing influence of Christianity in Kiev became a cause for concern to pagan leaders, even more so when it was discovered that catastrophic chinks were starting to appear in the pagan camp: Dir and Askold (the *boyar* nobles who allied themselves to Rurik, and commanded the Constantinople attack of 860 AD) converted to Christianity under German Catholic missionaries. Pagan schisms among such major political and military figures probably posed a threat to the divine *Volkhvy* priesthood, and the pagan state they were attempting to establish. As the pagan northern forces moved ever southward, Dir and Askold subsequently steeled their people for heavy battle. After protracted warfare and siege, in which they fought so bravely, the Kievan-Magyar alliance was utterly destroyed.⁶⁷⁶ Dir, Askold, and all the Christian priests and elders found in pagan Kiev were rounded up and executed. Parish churches and chapels were razed to the ground. With the unwanted Christian

presence now suppressed, the *Volkroy* were free to exert their influence over the people of the south, though deep down there was still the seed of rebellion in the southerners. This resulted in the bloody warfare of 983, 1015-1019AD, and cost many lives. After the conversion of Rus' in 989 AD, the *Volkroy* and their sympathisers, who were always more numerous in the north of the nation, promoted uprisings against the Russian Church, especially in Suzdal and Yaroslavl, Novgorod, Rostov and Kiev, in 1024 AD and again in 1071 AD. These were the pagan "hot-spots".⁶⁷⁷

Having achieved their goal of forming a pagan nation, the Rus' (like the Vikings) then seemed hell-bent on controlling some of the region's major trade routes, and no doubt had very considerable diplomatic skills, which must surely classify them as more than just a gang of wily beer-swigging forest trappers. Oleg began by destroying Byzantine maritime control and supremacy of the western Black Sea.⁶⁷⁸ This level of strategic brinkmanship calls to mind the foreign policies of the Magian Sassanians, who sought to maintain a tight grip on sea and land passages, to consummate their monopoly on oriental trade.⁶⁷⁹

The Jewish Khazars, one of the few nations to actually know the Russes, became quite afraid once their tribal amalgamations began. They had no doubts about their ability to scorch the eastern empires, including their own, as in fact they later did.

With the arrival of the Magi and the Rurikid dynasty, the newly formed nation of Rus' acquired a new regime of command and control, the spontaneous formation of a centralised government and military apparatus, which sought to guide and limit the overseas movements of its people by issuing passport seals,⁶⁸⁰ and which gathered around itself a large standing army, known literally as "the Children". Seal-bearing officials had lived in Russia for tens of centuries previously, for several examples of Scythian seals are extant.⁶⁸¹ It was at that point that the tribe known as the Rus'/Ros disappeared almost as mysteriously as they came, most likely absorbed into the society they helped create, perhaps forming the upper religious caste. According to Galina Lozko there were so many Magi in Rus' that there was a minimum of one Magus for every settlement in the lands, however small. Such was also the case in pre-Islamic Iran.⁶⁸²

Ties with the Silver Bulgars

Even so there was one other major participant in the "Calling of the Varangians", whose activities are normally quarantined from our understanding of these gargantuan events; the Silver Bulgars. I say this because Al-Nadim and Abu Muslim divulged that the Bulgars were Magians.

Nearby in the Urals, where Norsemen often came, and close to the domains of the eastern Finnish and Slavic tribes, the idolatrous Silver Bulgar nation was progressively succumbing to the overtures of Islam. Those who had converted to Islam had begun building mosques.⁶⁸³ As a result of this, the pagan militants of the Silver Bulgars, presumably with some of their more important idols, probably decided to emigrate to the Balkans, to amalgamate with their southern Bulgar brethren (who also once had Sassanian ties). But evidently they changed their minds, linked arms with the Norse princes and sought power amid the bickering tribes of the eastern Slavs (some of which were still under Jewish Khazar suzerainty).

By 922 AD the Silver Bulgar homeland had officially converted to Islam. This necessitated a rapid and complete exodus, of whatever Magians remained, though understandably they would have been moving south-west prior to this year, having already seen the warning signs of Islamicisation. This emigration amounted to the almost total dislocation of a race possessing extremely advanced blast furnaces,⁶⁸⁴ hot water baths, complete with plumbing,⁶⁸⁴ and highly-skilled architectural and magical practices. This is certainly true of those Bulgars who moved into the Balkans, the Crimea and southern Ukraine.

Their entanglement in the tribal amalgamations that formed the backbone of the pagan Rus' multi-racial alliance readily explains not only a Magian presence in Rus', but the intense paganisation that characterised the years of the 10th Century rather than the 9th Century. There are a few potential reasons why they may have adopted this stance:

1. The Silver Bulgar Magi decided to stay on among the eastern Slavs, Alano-Bulgars, Finns and Norsemen because they liked the lifestyle, and because of population pressures in Bulgaria. The Alano-Bulgar enclaves once found in Central Russia and the lower reaches of the eastern Ukraine, must have swelled to even greater proportions, under the weight of the Silver Bulgar arrivals.
2. Having been summoned to the region by the Ros, Finns, Slavs and Alano-Bulgars, the Norsemen arrived in northern Russia, near Novgorod, hoping to build upon the successes of earlier Danish attacks on the Slavs and Kurlanders. They sensed easy pickings, if only they could build a pagan army from scratch. Once armed to the teeth

they could invade Tsargrad (Constantinople) and other wealthy locations around the region, and get very rich in the meantime. According to this scenario, the Bulgar Magi would have sensed that they too could become far more powerful by staying in Rus' and cooperating with the Russes and their planned formation of the Rus' State.

3. The Silver Bulgars might have been part of a combined Ros-Finnish-Norse force that was to enter the Balkans following the 9th Century AD Norse-Slav military assaults on Byzantine possessions. Accordingly the Bulgars were to act as reinforcements if the Norse-Slav flotillas came to grief, or even to secure the area if Constantinople fell into pagan hands.

4. Following the Islamicisation of their homeland the Silver Bulgars had nowhere else to go. After all, their southern kin, the Balkan Bulgars, had converted to Christianity in 864 AD. For these northern Bulgar Magians, Rus' may have been the only viable alternative.

5. Silver Bulgar Magians may have agreed to enter eastern Slavia in company with Finns, Ros, Varangians, and other pagans brought in from Scandinavia, to deliberately unify all the eastern Slavs, in readiness for a pagan holy war against Byzantium. This very topic is covered not only in this book, but *Christianity's Greatest Controversy - Prelude to Genocide*.

MANY MAGI LIVED IN
RUS'

A fair number of Magi were already living in Russia on the eve of the Bulgar arrival; but just how many, no one knows. They had inhabited Scythia at least from the time of Mithridates IV (reigned 128-147 AD) and even before that, during the age of Darius, and the Indo-Iranian intrusions of the preceding 1,000 years. There, in Scythia, they nurtured their olden mystery cults. One thing is certain though, this fresh infusion of Bulgar Magians probably meant the importation of potentially new ideas from Asia; new technologies, magic systems, temple designs, political agendas, not to mention chaotic internal migrations and warfare. From this came the assimilation and/or centralisation of diverse local cults, some of great antiquity, under a combination of Norse and Bulgar guidance and control.

THEY HAD BEEN IN
SCYTHIA SINCE
ACHAEMENID TIMES

This hypothesised religious re-organisation evidently enjoyed the support of the reigning Nordic Gothic royals, but might not have been wholeheartedly embraced by everyone. While the Magi were part of a greater college which perpetuated centralised Gathic or Zurvanite teachings, it should be remembered that they were attached to their people at a tribal level, and as a result of this, the Magi frequently became embroiled in the nationalistic or racial intrigues of the warrior lords who protected and funded them. According to authentic Magian teachings, the love of one's country and king was holy, and treason against them the fruit of *Ahriman* (the Devil). The Zurvanite Magi in particular belonged to various colleges, each of which was dedicated to the service of a particular idol. We know that this custom of divine service was observed among the *Volkhrvy*. All this led to full-blown nationalism, and cults of individual localised gods, fully endorsed by the indigenous Magi, and perhaps gathered into a "pantheon" during the political consolidation phase brought about by the Bulgar presence. Consequently disputes between the many Magus priests accompanied politico-religious developments of this magnitude.

GOD, KING AND
COUNTRY

The closest parallel to this factionalism can be found in the Orthodox and Catholic priesthoods of the post-conversion period. Although Catholic priests are part of a greater college, which espouses the *magisterium* under the leadership of the Pope, it should be remembered that there are German, English, French, Italian bishops, and so on, each of them serving the needs of their race, while still being part of a bigger institution. Similarly Orthodoxy has Russian, Bulgarian, Georgian and Greek priests, etc. During the Middle Ages especially, nationalism amongst clerics was a standard feature, and something that disassembled Church unity. The tribal consolidations that allowed the formation of the Rus' State may have occurred under circumstances less than agreeable to Magians throughout the various tribes. And from this much conflict arose, even among pagans of like faith.

DISPUTES BETWEEN
MAGIAN FACTIONS

With superior powers of organisation, and the help of friends among the Finns, Rus' and Norse to their west, the Bulgarian Magi may have provided a fresh perspective for the scattered heathens. Bulgar leaders probably exploited inter-tribal disunity among the many camps of magicians on the steppes, by installing their pagan Khans (and Rus princes') as regional rulers; a dynasty of warrior-mages.⁶⁸⁵

CHRISTIAN CLERGY
EXPERIENCED A SIMILAR
LEVEL OF FACTIONALISM
WITHIN THEIR OWN
RANKS

Bulgar-Slav relations were at best complex during pagan times. Even so, some scholars have likened the role of the Bulgars among the Slavs, as analogous to the Norman overlordship of the Anglo-Saxons post-1066 AD.⁶⁸⁶ If the Bulgars had a position of prominence over the other pagan Slavs, this influence could only be attributable to their greater military might, or, as I believe, the presence of extremely high-ranking Magian religious dignitaries, if not the supreme head of all the Magi, or a combination of both.

SPHINXINE EFFIGIES

The grandiose art (including engraved sphinxes), masonry and architecture which the Silver Bulgars left behind

on the Upper Volga not only reveal the skills once used in constructing the royal buildings of Zoroastrian Sassania, or Persia, but carry the influences of Indian and Alanic craftsmen,⁶⁸⁷ and all of this in the shadow of the Ural Mountains. A similar set of circumstances probably existed in Bulgaria prior to its Christianisation. The Danubian brothers of the Silver Bulgars had Sassanian-style temples also.

Accordingly the numbers of idle Magian-Bulgar, stone-craftsmen already present in Rus', or in transit through Russian territory, must have been huge. This if nothing else can explain the lateness of the 9th Century AD temple-construction phase in pagan Rus'. There the buildings were erected using finely cut and dressed ashlar, the blocks so deftly hewn and interlaced that only the slightest gaps separated the mortarless stonework. These increasingly Slavic-speaking Silver Bulgar immigrants had deep ties with Balkan Bulgaria, Khazaria, Central Asia and Baghdad, to which the Russes and Bulgars were clandestinely commuting in the 9th and 10th Centuries AD.

The architectural structure of Persian fire temples was chiefly based on Medean fortress designs,⁶⁸⁸ no doubt owing to a need to protect holy flames from the ravages of wild steppe dwellers and sundry other enemies.

Magi of the Achaemenid era usually kept their holy fires in their lofty towers, normally equipped with a belfry, rather than Sassanian domed pavilions. There, in the high places, they performed their most impressive ceremonies in honour of the sun. Throughout Slavia, such towers, mostly of ashlar or timber and shingle construction, appear to have been the prevalent form of pagan temple. A meticulous examination of architectural terms in the region reveals that Eastern European heathens knew building arts that originated in Persia. Looking eastward we detect the point of entry for their craft; the Caucasus.

At the higher reaches of the Kuban river, in the old Caucasian motherland, one finds Humarin Gorodishte, a city practically 900 x 500 meters in area, guarded by a keep and some twenty watch towers.⁶⁸⁹ A square-set building was situated there, somewhat similar to a Magian fire temple.⁶⁸⁹ Much the same could be said for a kindred construction found at Pliska, Bulgaria, near the royal palace.⁶⁸⁹ Nowadays a considerable number of stone towers can still be seen in the Caucasus, the more ancient of them built by the Persians. Unfortunately the recent Chechen conflict has taken a severe toll on the remaining towers, which had otherwise stood the test of time, and centuries of conventional warfare. Many fell victim to Russian shells as they combated Muslim separatists who for the past 1,000 years have been trying to take over the area. It used to be a pagan stronghold.

Another plausibly religious site in Olden Russia would be Majackoe Gorodishte, a towered structure raised atop a fortified 80-metre-high hill, constructed from well-crafted ashlar blocks.⁶⁹⁰ It was situated on the northern Russian plains, not far from where the Tikaya Sosna and Don rivers meet. Its very name gives reason to suspect the presence of *Al-Madjus*. There one finds a large number of Bulgar runic insignia comparable to what one would find inside the Khazarian realm, but including pentacles and swastikas (an ancient Indian and Iranian solar motif), plus a variety of animals, particularly deer and steeds.⁶⁹⁰ These, I believe, were tribal standards. Similar images were found in relief on ceramic shingles at a handful of sites, situated in the Crimea.⁶⁹¹ Bident and trident signs are often encountered too, signs readily linked with the Alanic and Russian royals who struck similar diagrams onto their coinage. They only began to appear during the 8th-9th Centuries and lacked any historical precedent in that area, nor was the practice known to the Byzantines. The constructions are associated with the 8th-9th Century Saltovo-Majack culture. Necropolises accompanying such ruins resembled those of Zlivka; in other words, they were excavated grave pits, sometimes accessible by steps, or indeed lidded.⁶⁹² Therein lay the skeletal remains of Caucasians devoid of any Asiatic physical traits.

These archeologically significant tower constructions appear to have been mentioned in Mediaeval Islamic sources. Based on what Al-Masudi had learned in the writings of the philosophers (presumably of those who worked in the Arab academic institutions in Baghdad) he stated,

*"There are stories about this (Slav) temple (on a very high mountain), about its fine construction, about the arrangement of the various types and colours of gemstones (found there), and about the holes made in its upper story, and how they deposit precious stones into the holes in order to observe the ascension of the sun (sunrise)".*⁶⁹³

Remembering that the study and application of optical theory was on the frontiers of science during the 10th-15th Centuries, one wonders what pioneering techniques were employed in this heathen observatory, which specific gemstones were set in various portions of the building,⁶⁹³ allowing the gaze of the gods and heavenly lights to move about the tower's upper story. Drawing upon accounts of other pagan temples in the region they were probably emeralds, sapphires, carnelians, chrysolite and crystal.⁶⁹⁴ Depending on the number, colour and shape of the gems used, and the manner in which they were mounted in relation to each other, you can visualise it being something

NECROPOLISES

THEIR WIZARDS BUILT TOWERS

THEY MOUNTED GEMS IN THE WALLS OF THEIR TOWERS

like a 'laser-light' spectacle, with multi-coloured beams of light piercing through the "eyes" of the tower, dancing across each other as the sun laboriously lurched over the horizon. The priests then foretold the will of the supreme god by interpreting insignia carved into the temple (as signs were struck by the incoming sunlight). Apparently they were also used to spy and plausibly magnify distant celestial objects.⁶⁹⁵

Masudi did not go on to compare it with anything in Baghdad. It would have been an obvious comment, yet one not found. This indicates that Arabs did not possess techniques even vaguely similar to those used in Slavia. As the pagan observatory was sited on the top of a lofty mountain, their heathen astronomers plausibly understood the affect of altitude on starlight, as Ptolemy had explained.

That the Russes knew of glass or gem "eyes" is greatly supported by the Old Russian word *glaz* ("glass spheres"), which appeared in the Russian Hypation (Ipat'ev) manuscript under an entry for 1114 AD.⁶⁹⁶ If it were not for Masudi's testimony, we could be forgiven for thinking that they learned of such things under the new education system initiated by the Russian Church. *Glaz* is related to the Polish *glaz* ("a stone", or "rock") and *glazny* ("smooth", "sleek", "dextrous"). It also meant "a stone", "a sphere", or "an eye", whereas the Slavic *glaz* meant "a ball" or "a globule".⁶⁹⁶ Glass blowing technologies are suggested by these words. And since they have no connection with Gothic, Greek, Latin or Arabic words for "glass", we can deduce that their art of glass-making had been present in Germany and Slavia for some time. Unless a Western or Eastern etymology can be found for these many terms, the words evidently originated in a Slavo-Germanic linguistic context to describe processes imported into the area, or independently invented within that same region. What is even more astonishing is that archaeological artifacts corroborate the linguistic and historical evidence, with a hoard of excavated lenses taking these fabulous anecdotes of yesteryear from the land of fable, and converting them into fact.

These cabochoned lenses are part of small collection unearthed on the Scandinavian island of Gotland. Previously it was assumed they were highly polished, lathe-turned crystals, fashioned by a jeweller for aesthetic purposes alone.⁶⁹⁷ That was until Dr Olaf Schmidt and his team discovered, using raytracing, that they are aespheric lenses of a complexity not reached until the 1950's (a computer rendering of the lens curvature is on the right).⁶⁹⁷ Equally scary is that they were excavated from thousand-year old soil in that same location.⁶⁹⁷ Obviously a medieval craftsman in Gotland was an optician, well versed in precision lens grinding, not to mention the optical equations required to achieve satisfactory curvature and magnification. While it is tempting to advocate they were the product of strict trial and error experimentation, as some currently believe, it should be remembered that such methods were postulated as early as the 2nd century AD, in Ptolemy's work *Optika*.

One might easily leap to conclusions, and label them the handywork of monastic artisans captured during viking raids and brought home to Scandinavia to serve as cultured slaves. The only problem is varied sources tend to associate conceptually similar objects with aspects of wizardry. Could it be that Norse wizards were turning out

items of sound scientific significance? Some theorise they formed part of a crude telescope, but more mundane earthly uses also include cauterization of wounds to stem blood loss, plus fire starting. Magnification, which was certainly required for some fabulous examples of Norse goldsmithing, where 1/10th mm beads of gold were applied to objects. Lenses must have been used to achieve such splendid technical and artistic results.

A pagan origin for the "eyes" is found not only in the Old-High-German *glas* ("amber" or "glass"), the Norwegian *glosa* "to sparkle", or "to flash", the Old-Low-German *glaren* ("to flame", "to glow"), and the Middle-High-German ("resin").⁶⁹⁶ These are evidently cognate with the English word *glass*.

From this we might guess that the special gem-eyes Al-Masudi described in connection with the pagan observatory were gemstones, pieces of amber or resin, globules of molten glass, or even hollow glass-blown spheres filled with liquid.

In *Chips from a German Workshop (Vol III)* the once-famous German sanskritist Max Muller reproduced the following oral lore from the region of Pomerania and Rugen, the former seat of the high fanes of Wendish paganism. In places throughout the following poetry, Christian glosses have been superimposed over the original fairy traditions:

From "What the People Tell - Old Busum"

*Old Busen sank into the waves;
The sea has made full many graves;
The flood came near and washed around,
Until rock to dust was ground.
No stone remained, no belfry steep; All sank into the waters deep.*

*... At times, when low the water falls,
The sailor sees the broken walls;
The church tow'r peeps from out the sand ...
Then hears one low the church bells ringing,
Then hears one low the sexton singing;*

And from the poem *Vineta*;

*"Lights are gleaming, fairy bells are ringing,
And long to plunge and wander free,
Where I hear the angel-voices singing,
In those ancient towers below the sea."*

Part of this oral lore preserves ancient traditions concerning the heathen bell towers, and cities built over the waters, accessible only by boats and bridges built far out into the water. Towers had, in times past, belonged to the old faith.

There is certainly archeological and historical evidence for such constructions, most of which I provide toward the end of this book. In various parts of Scandinavia for instance, maritime archaeologists have found the remains of tower structures built offshore. In the fore-Caucuses the stone and ashlar towers of the pagans can still be seen there, so too linguistic, historical and archeological evidence of towers in Slavia.

Throughout antiquity astronomy and astrology were allied sciences. The Russian words *gadat'* ("to tell someone's fortune") and *gadaniye* ("fortune-telling") preserve the Magian ancestry of pagan Russian horoscopy, for they are built from the root word *gad*, which probably comes from the Pahlavi word *gadman*⁶⁹⁸ (meaning "the allotted destiny"). Russian zodiacal divination therefore had a historical connection with Magian prognostication, perhaps as early as the third century AD, and continued long after the conversion until comparatively recent times. Even in the 20th Century, the Zoroastrian Parsees still require the construction of a natal horoscope after the birth of a child.⁶⁹⁹

THEY WERE PROBABLY
HANDMADE BY PAGANS

FOLKLORE PRESERVES
REGIONAL MEMORIES OF
THESE TOWERS

HOROSCOPY

Considering post-conversion attempts to eradicate heathenism, it comes as no shock that there are no existing historical accounts of Russian sorcerers formulating horoscopes, though other data, mostly folkloric, allows for such an assessment. When a child was born in heathen Rus’ few parents avoided a hurried visit to the local Magus or *koldun*, to have their child’s natal chart drafted using the arts of natal horoscopy. Thus could they learn which cosmic influences governed the whole of their child’s life. Planets poised on the ascendant (a planet’s “dawn”) or descendant (a planet’s “sunset”) at the exact time of the severing of the umbilicus, at the latitude of the child’s birth place, were thought to have a lasting and definite affect on the child’s future behavior and innate abilities. These were to be particularly watched for, and where their influence was baleful, guarded against through the use of amulets designed to counteract their harm.

MAGIAN ASTROLOGERS

After viewing the heavens and consulting their personal archive of birch bark scrolls (containing notes about prevailing celestial positionings), the typical pagan Slav astrologer probably sought information in the *Rozhdenik* almanac (an expurgated Russian heathen text on astrological nativities, no longer extant). After cross-indexing the necessary information from *Rozhdenik*⁷⁰⁰ with entries found in the extinct pagan treatise *Ostrologiya*,⁷⁰⁰ the astrologer proceeded to determine the new-born’s future lot in life, their destiny.

Surviving folklore about the Slavic zodiac places Khors (the Good Sun) at the centre of a massive zodiacal kingdom. His rule extended as far as the eye could see, but was subtended by the twelve conventional zodiac signs, forming twelve separate domains, each ruled by a princess. Coincidentally there was a parallel tradition in Greek pagan gnosticism and Manichaeism portraying the sun signs as princess or maidens. This may or may not have been the origin of the Russian myth regarding the governance of princesses over the sun-signs. To the best of my knowledge princesses were not attributed to the zodiac by the Zoroastrians, however the celestial vault was inhabited by many masculine and feminine angels of varied patronages. Some were affiliated with particular constellations. Since Vladimir raised an idol of Khors in pagan Kiev, such folkloric beliefs have conceivably existed there from that time.

The following table compares the Russian zodiac names with the Roman, and includes their period of influence.

	ROMAN	SLAVIC ³⁰⁴	PERIOD OF TRANSIT
THE SUN SIGNS	Aries	Oven, Baran, Ares, Skop	18/4 - 14/5
	Taurus	Telets', Bik, Tyr, Volos, Kvochka, Perun	14/5 - 21/6
	Gemini	Bliznyuki, Bliznyata	21/6 - 20/7
	Cancer	Rak	20/7 - 11/8
	Leo	Lev	11/8 - 17/9
	Virgo	Diva, Krilata Diva, Panna, Diva-lileya	17/9 - 31/10
	Libra	Terezi, Vagi, Volopas, Divka	31/10 - 22/11
	Scorpio	Skorpion, Vyedmid', Vedmedyuk	22/11 - 30/11
	Ophiucus	Zmeinosyets	18/11 - 18/12
	Sagittarius	Strilyets', Stribog, Perun	18/12 - 19/1
	Capricorn	Kozerog, Koza, Pan, Khrest	19/1 - 16/2
	Aquarius	Vodoliy, Mokosh, Mokosha, Vodnik	16/2 - 12/3
Pisces	Riba	12/3 - 18/4	

Those readers familiar with the horoscopes that regularly appear in our newspapers and magazines may notice that the dates assigned to these signs differ from what they would normally expect. This is because over time a shift occurs in the signs. The transit periods listed here reflect the original dates for the star signs some 1,000 years ago.

When compared with the other zodiacs of antiquity, the Slavic zodiac was quite unique. Clearly this variant was born in isolation, though it had incorporated teachings from various schools of astrology, and subsequently underwent its own evolutionary path. Unlike the Indian fixed sphere of the zodiacs, the Slavic zodiac was a movable sphere, its format akin to that of the Greeks, Magi, Egyptians, and Romans, and in no way related to the Chinese zodiac (also known to the Bulgars).

Through a survey of Latin, Greek, Indian and Zoroastrian astronomical terms we find little evidence of the Persian astronomical and astrological names formerly used by the Zoroastrian astronomer-astrologers. Clearly the Magi of Slavia were beginning to use vernacular terminologies favoured by the Romans, and conceivably by the cult of Mithras in particular.

For example the Slavic word for Venus, *venyera*, comes from the Latin *venerius*. Likewise *jupiter* comes from the Latin *jupiter*. One Russian word for the moon, *luna*, comes from the Latin. If the Greeks were in closer contact with the Slavs than the Romans then it stands to reason that their word for “the moon” would be of Greek origin. How is it then attributable to the Latin word for “moon” (*luna*), unless it was a word imparted to the Slavs during pagan times, when there was a Roman presence on the steppe?

The Russian word for the sun (*solntse*), is related to *slntse* (Bulgarian), *suntse* (Serbo-Croat), *solnce* (Slovenian), *slunce* (Czech), and *slonce* (Polish). These are connected with the Lithuanian, Old Prussian and Latvian words *saule*, the Gothic *sauil* (or *sumna*), which appear closer to the Latin *sol*, than they do to the Old Indian *svar* or the Avestan *hvara*.⁷⁰¹ This might indicate that the pagan Slavs and Balts derived their name for the sun from Roman, or perhaps even Mithraic sources which termed it *Sol Inuictus*.

The Russian word for “a star”, *zvezda* (which is roughly the same throughout all the Slavic nations) is believed to have been taken from the Old Ossetian (ie; Alanic) *zvestae*, meaning “silver”.⁷⁰² However I have also noted a crude similarity with the Avestan Persian *star*, from which we get the English word *star*, and perhaps even the Old Norse *stara* (“to stare”, or “to gaze”); a relic of the age of star-gazers.

The Russian word for astronomy, *astronomiya*, comes from the Latin and Greek.⁷⁰³ *Planeta*, meaning “a planet” is derived from the Latin and Greek.⁷⁰⁴ The Russian word for a comet was *kometa*, and has Graeco-Roman origins.

The Russian word for “astrology”, *ostrologiya* most likely indicates that their art entered Russia and the Balkans with Hellenised Persians and Parthians, or via Greek and/or Roman pagan gnostic philosophers (such as the Neo-Pythagoreans and Mithraic priests), most likely drawn from earlier Greek-, Roman-, Magian-, Babylonian- or Egyptian-based treatises.

So the heathen intelligentsia of ancient Russia certainly seems to have included skilled astrologers and astronomers with a remarkable understanding of the heavens, achieved through their celestial observatories, gemcraft, books and inherited knowledge.⁷⁰⁵ The prior-mentioned observatories were apparently of Bulgar provenance, possibly built and operated in collaboration with the Goths (the most obvious source for the Gotland lenses). Inscriptions found at the site were predominantly carved in Bulgar runes, though Gothic runes were located there also, indicating the joint nature of the project. Etymologically, the inscribed wording found in these Bulgar buildings, contained terms of Iranian, Sumero-Akkadian, Assyrian and Sanskrit origin, thereby confirming the strong oriental roots of their astronomical and astrological craft.⁷⁰⁶ Moreover, they tell us that these Magians held traditional Iranian cosmological views, with the sun as lord of the heavenly bodies, and Jupiter the Time God (perhaps with a similar nature to the Iranian deity Zurvan).⁷⁰⁶ Amazingly many words had distinct Celtic parallels,⁷⁰⁶ which may have been due to Central Asian Tokharian influence, or, indeed, to words left behind by the Celts prior to their westerly migrations further into Europe and the British Isles from Central Europe. It was there that Slavic, Germanic, Roman and Celtic populations overlapped.

The following account of the Scythian Goths supplied by the Gothic Bishop Jordannes, if true, remains a written testimony to the former presence of other skilled pagan astronomers on Russian soil. In his version of events the Goths learn physics astronomy and astrology via the tutelage of a pagan wise man and scientist who agreed to teach them much of what he knew, if only the Goths would obey his every command and perform to the letter every task he assigned them;

“Thus by teaching them ethics he (the heathen sage Dicineus) restrained their barbarous customs; by imparting a knowledge of physics he made them (the Goths) live naturally under laws of their own, which they possess in written form to this day and call belagines. He taught them logic and made them skilled in reasoning beyond all other races; he showed them practical knowledge and so persuaded them to abound in good works. By demonstrating theoretical knowledge he urged them to contemplate the 12 signs (of the zodiac) and the courses of the planets passing through them, and the whole of astronomy. He told them how the disc of the moon gains increase or suffers loss, and showed them how much the fiery globe of the sun exceeds in size our earthly planet. He explained the names of the three hundred and forty-six stars and told through what signs in the arching vault of the heavens they glide swiftly from their rising to their setting. ... You might have seen one scanning the position of the heavens and another investigating the nature of

GOthic PAGAN GNOSTIC
ASTRONOMERS AND
PHILOSOPHERS PROBABLY
COLLABORATED WITH
THE MAGI

Besides Magians some of the Gothic wise men may have been exiled Neo-Pythagorean philosophers, banned from the pagan Athenian academy, which was outlawed in the 6th Century AD. Historical sources tell us almost nothing about the Bulgar priests who administered these religious centres in Rus’ and Silver Bulgaria. Centuries earlier (towards the close of the 7th Century AD) the Bulgar city of Varachan, situated north of Derbend (a former city of the Magyar Huns), was visited by an Albanian Christian bishop, on a mission of conversion.⁷⁰⁸ There he saw a special priestly class who sacrificed steeds before a holy oak (draping the horse hides and skulls from the tree boughs), though for the best part of the time they conducted their rites in timber buildings situated on the city’s outskirts.⁷⁰⁸ Their religious observances appeared to have been a synthesis of Persian and Turkic traditions,⁷⁰⁸ with the shamanic god Tengri considered the cognate of the Persian deity Aspandiat. Not a few shamans, physicians and diviners resided in Varachan.⁷⁰⁸ Most wore serpent charms of precious silver and gold.

A POWERFUL ALLIANCE
FORMED

Anyhow, the descendants of these eastern and Volga Bulgar Magi, in unison with the Nordo-Gothic princes, Finns and Slavs managed to militarily usurp control over the remaining pagan Slavs, who fell like dominoes. This allowed the sudden appearance of a single centralised Kievan Rus’ religious pantheon possessing Iranian idols, one of which was an Iranian depiction of Jesus Christ. Yet for all this, it still encouraged older patterns of regional worship. In other words, the Nordic Russes and Bulgars collectively formulated, in stages, a binding matrix of Magian/Aryan gods and ritualism, from that which was extant in the lands of the Ros, or the Silver Bulgars near the Urals, complete with their indigenous Iranian idols. This “pantheon” was then imposed over the whole length of geographical Rus’, culminating in Vladimir’s temple construction phase (begun c. 955 AD) and the raising of the main idols (kapishche) at Kiev (and Novgorod) c. 981 AD.

For a number of years I remained convinced that the idols and Magianism in Kiev were simply Bulgar imports. But as time passed, and the scope of my research deepened, I was astonished to discover the presence of additional Magian participants, who were not specifically attached to the Bulgars. In all likelihood these Magi advocated rallying the Slavic and Finnish tribes under the Nordic Rus’ royals, who were themselves magicians of the royal blood. These pagan agitators were present to a greater or lesser degree among the Finns, Norsemen, Goths, Hungarians, Slavs and Bulgars. Small wonder the Muslim writer Zakariya al-Qazwini reported that the Burdjan followed the religion of the “*Magi(cians) and pagans*”.⁷⁰⁹ The term Burdjan is believed to have applied to both Bulgars and Norsemen in his text.⁷⁰⁹

The ends to which their brand new pagan Rus’ army was directed bore some resemblance to the 9th Century AD viking conquests then taking place against the Christian Franks, Irish, Moors and Anglo-Saxons. During the 9th and 10th Centuries AD the nearby nations held their breath as the Slavs and Finns changed from stay-at-home agriculturalists, and herders concerned with inter-tribal bickering, into a formidable alliance that engaged in intensive military campaigns directed mainly against Christian Byzantium, the Eastern Roman Empire. Later they turned on even more of their neighbours and boldly projected their forces into the Balkans, the Urals, the Far-east and the Caucasus. These were expansive and extremely adventurous military operations against other regional adversaries, such as Islamic Iran, the Khazarian Jews and the Bulgar Muslims of the old Silver Bulgar homeland.

Something gargantuan was afoot in eastern Europe, a new nation was being born. Its spontaneous creation was not a matter of indifference, rather concern. Jews, Muslims and Christians looked worriedly northward, toward the vast steppe and forested interior of Rus’, as the heathens they had hounded to death regrouped. What would they do next?

The Danubian Bulgars

THE CHURCH HATED THE
MAGI

THE BULGARS WERE
MAGIAN

Having visited the Danubian Bulgars personally, Abu Muslim testified that they were Magians; in effect followers of an ancient Iranian religion, which was at all stages headed by a hierarchy of Magus wizards. Here one finds even more Muslim evidence for European Magi. On account of this Catholic and Orthodox authorities saw the Bulgars as the greatest heretics of the age, deeming Bulgaria a major threat to the faith, “the mouth of Hades”. Abu Muslim’s report was subsequently reproduced by Al-Gaihani;⁷¹⁰

“The Bordjans (Danubian Bulgars and Norsemen) are the descendants of Younan, son of Japhet. Their kingdom is of importance and spread over a large area. They combat the Roumis (ie; the Byzantines), the Slavs, the Khazars and Turks, but their greatest, most redoubtable enemies, are the Roumis. It is 15 days march from Constantinople to the land of the Bordjan; their kingdom itself spans some twenty to thirty days march.

Each Borjan fortress is skirted by a hedge-like border that covers a sort of wooden net, creating a defensive wall built on raised ditchwork. The Bordjans are of the Magian religion, and possess no books at all. ... The Bordjans do not use denarius or dirhem; all their transactions, including contracts of marriage, use cattle and sheep as currency”.

As you read, Bulgars are predominantly held to be Hunno-Turkic, yet Abu Muslim’s remark indicates they were Magians, perhaps meaning proto-Bulgars who were at variance with the local Slavs, Khazars and Turkic hordes. Every aspect of this account can be carved and diced, measured and weighed by the fruits of other academic disciplines. The last point raised by Abu Muslim and Al Gaihani is only partly correct. Archaeologists regularly find Islamic and pre-Islamic dirhems at most Bulgar sites (and throughout Russia and Scandinavia for that matter), therefore confirming their usage. Having said that, based on what is known of Mediaeval Slavic commerce, they may have used this coinage only to pay taxes and in formal trade deals. Wrongly archaeologists only ever attribute the presence of these coins to eastern trade; never to funds brought into Europe with post-exilic communities from the steppe.

During the same period, in Tadjikistan and Uzbekistan (the same distance from the Caspian as Moscow) the dirhems bore inscriptions naming the local Islamic governor, the name of the Khalif, plus Islamic phrases (eg. Al Makhdi (760-761 AD), al-Ash’asb. Iach’ya (761-762 AD), Nasr (868 AD), Mukhammed (918-919 AD). Sassanian coins were absent, suggesting they weren’t even in circulation in Islamic districts. This really can’t come as a shock, for Sassanian dirhems always had a Magian fire altar, and the name of a Zoroastrian king stamped on the obverse. Muslims reactionaries were intent on replacing the old order, and consequently eradicated coins bearing images central to the Magian faith, replacing them shortly thereafter with images of the Caliph. Whereas for the same period, Eastern Europeans and Scandinavians often had Sassanian dirhems in their possession. These coins were frequently mounted on items of jewelry such as necklaces, and considering the fire altars thereon, their function was probably talismanic rather than financial, drawing down the protection of god’s fire, and the supernatural might of long-dead kings.

Cattle were traditionally used as currency throughout Slavia. The Old Slavic *skot’* (“cattle”) existed with slight variation in Bulgarian, Ossetian, Old Saxon, Gothic, Old Czech, Old Norse and Old Frisian and collectively denoted a person’s wealth or means, though among the Slavs it particularly infers that large, horned cattle were their primary unit of currency.⁷¹ A similar situation is found in the Avestan Persian *gaonem* meaning “riches” or “benefits” which has the root word *gao* “a cow”, from which we get the English word *cow*.

We shall now delve deeper into this priceless record of the Bulgars. Firstly, the fortifications described by Al-Gaihani should be identified with a range of massive fortified settlements and cities (some more than 50 hectares in area), the foremost being Majackoe and Cimljanskoe Gorodishte, excavated by Russian archaeologists near the Don River.⁷² The Bulgars built urban centres of like nature throughout the Balkans and Southern Ukraine from the mid-700’s. Cities of this magnitude allowed them to house a burgeoning populace who dwelt in surface and dug-out tentwork, as they once did on the plains of the steppe. Most were encircled by ditches and wooden-lattice palisading, of the sort detailed by these Muslim writers, others by 15-foot-thick, rubble-filled walls of ashlar, white in colour.⁷² The stonework was quarried some distance away and, more likely than not, ferried down the Don on barges. Masonry of this nature tells us that Bulgar engineers were more advanced than most other Europeans, who were still constructing fortifications from logging at that time. Perhaps for this very reason their services were highly sought after.. Two of their better-known clients were the Merovingian Magus-Kings of France, and the Khazarian Jews. Such Jewry was, by and large, party to unorthodox, often non-rabbinical teachings.

Necropolises and Zoroastrian Sassanian coinage associated with the Bulgar forts point to them having been driven from Northern Daghestan and the Caucasus during open warfare with the Arab Muslims in the 7th Century AD.⁷² Caucasian Alano-Goths represented a certain portion of the Bulgar population throughout that region, folk also shunted from the eastern homelands. Bulgars situated at the Cimljanskoe Gorodishte settlement are believed to have maintained relations with the Jewish Khazars. Perhaps for this reason the Magian Bulgars besieged its ruler,

and destroyed the entire city. Cimljanskoe Gorodishte was gutted and most of its citizens relocated throughout Greater Bulgaria. While some Khazarian Jewish royals had plausibly been inducted into the rites of the Magi by virtue of their royal blood, as was the old custom, there were still philosophical clashes over the nature of the supreme god. This must inevitably have led to dissension with those Magian brethren who were party to the Jewish traditions. Surviving texts of the Magi certainly point toward the inevitability of a heated theological rift of this magnitude.

The absence of Bulgarian Magian written texts in Abu Muslim's original account is perplexing, since the Magi also preserved their religious and scientific teachings in writing. As it happens the Magi were extremely sensitive about the security of their holy books, for in the past they had seen many copies destroyed by their oppressors. Bulgar Magians may have been reluctant to compromise their existence by showing them to a Muslim for this very reason. To have done so may have been seen as an undeniably evil act. The only other alternative is these Magians were inheritors of the most ancient form of Magianism, perpetuated by oral teachings only. But in opposition to what Abu Muslim recorded, Al-Nadim said:

*"The Turks, the Bulgar, the Blagha (Vlachs ie; Wallachians of the Carpathians), the Burghaz (a Bulgarian tribe), the Khazar, the Llan (Alans), and the types with small eyes and extreme blondness (perhaps meaning the Goths or Scandinavians) have no script, except that the Bulgarians and the Tibetans write in Chinese and Manichaeian (a form of Middle Persian script largely used by the Manichees), whereas the Khazar write Hebrew...."*⁷¹³

Here Al-Nadim only seems to contradict himself. On one hand he says the Bulgars were illiterate, and then he says they knew Manichaeian and Chinese script. His comments suggest the restricted usage of two oriental scripts among the Bulgars, by a select class, possibly the Bulgar viziers; the wizards.

One range of characters these Arabs failed to mention with respect to the Russes and Bulgars is Avestan script, an antiquated form of writing once used by pre-Sassanian Magi, that flowed from right to left. Confirmation of its royal usage in Olden Russia unwittingly comes from Al-Nadim who, in the 10th Century AD, before the conversion of the Russes, states that he had personally seen copies of Russian script etched into white wood (perhaps meaning bark, with a wooden backing; the very same medium upon which the Magi recorded texts and documents).⁷¹³ He first learned of the Rus' script from an Armenian emissary who was returning home to the Caucasus after a mission to the King of the Russes. This Armenian even showed Al-Nadim an example of Rus' writing, which Al-Nadim subsequently reproduced in the Fihrist.  (See fig 71.1, p. 1087). Al-Nadim was not the first Arab to note their use of writing. Ibn Fadlan ends his report on the heathen Rus' funeral on the Volga (c. 922 AD) by saying: *"In the middle of it (the burial mound) they raised a large post of birch. Then they wrote the name of the man and the name of the king of the Russes on it and so went on their way"*.⁷¹⁴

Fossilised words throughout Slavia further support the existence of eastern intellectualism in the region. The Russian word for "a book" is *kniga*, which they share with the Bulgarians and Serbo-Croats. Then there is *knjiga* (Slovenian), and *kniha* (Czech). These words are connected with *kuinig* (Old Turkic), *kuiniv* (Eastern Bulgar dialects), *koniov* (Mordva meaning "paper"), *konyo* (Hungarian), *kiunugæ* (Western Ossetian ie; Alanic), and *knik* (Armenian). Ultimately these can be traced back to the word *kunnuku* (Assyrian meaning "to print {cuneiform}, seal or stamp").⁷¹⁵

The implications of this are obscenely obvious. What these words show is that higher Slavic learning during the pagan era most likely came via the Old Turkic (ie; the Bulgars), but the trail also led way back to Armenia and Ossetia (land of the Alans), and lastly Assyria. This seems in accord with the Caucasian ancestry of these folk. It was in no way attributable to Christian Greek or Roman missionaries. Without overly speculating, on the strength of these word correlations one might suspect that Assyrian knowledge had somehow filtered into Central Asia and Eastern Europe following the collapse of their state; the legacy of a dying civilisation. Apparently Mediaeval Arabs had a book on this very topic. As with so many other shunned titles it somehow disappeared into oblivion.

As it happens Assyrian writers were important figures in early Magian scriptoria,⁷¹⁶ no doubt imparting some of their own terminologies into educated Magian speech. This might account for why Russian Magian texts were labeled by terms traceable to the Assyrian *kunnuku*. The Persian term *dibiristan* ("a scriptorium") is derived from *dibir*, the Persian word for a Magian scribe.⁷¹⁶ As with the Slavic word for 'a book', it too has an Assyrian etymology. Assyrians plausibly had much to do with the formation of Magian written culture, and therefore the Slavic.

As you will already have read, there are more than enough hints that the Slavs and Norsemen were exposed to Brahminic and Avestan scholarship. Consider the following linguistic correlations. One Russian word for "to

ABU MUSLIM DIDN'T BELIEVE THEY HAD TEXTS

IT'S POSSIBLE THE MAGI NEVER SHOWED THEM TO HIM

AVESTAN PERSIAN SCRIPT WAS USED BY THE RUS' KINGS

THE RUSSES SENT DIPLOMATIC ENVOYS TO THE ARMENIANS

ASSYRIAN SCRIBES WERE INSTRUMENTAL IN SHAPING MAGIAN WRITTEN CULTURE

AVESTAN AND VEDIC INFLUENCES

know" is *znat'*, which comes from the Avestan Persian *zan(a)*.⁷¹⁷ The Old Russian, Slovenian and Old Slavonic word for "knowledge" was *vest'*, which is like the Czech *vest* and the Polish *wiesc*. Another Slav word *vedat'* meant "to know something", but it differed slightly in form from *vest'*.⁷¹⁸ Considering that *vedat'* is related to the Old Indian *veda* (which is the same word used to describe the Vedic textual corpus of the Indo-Aryans) and *vida*, *vedat'* might have meant "to know the Vedas",⁷¹⁸ the religion of the Aryan forefathers. For this reason it might not be a coincidence that the Slavic word for "knowledge" *vest'* sounds phonetically similar to "Avesta" (the holy writ of the Magi). So perhaps *vest'* and *vedat'* represented two different traditions of knowledge; one Avestan the other Vedic.

A slightly similar set of words is found in the Old Icelandic for that matter;

Old Russian	<i>vest'</i> ("knowledge") ⁷¹⁹	<i>vedat'</i> ("to know") ⁷¹⁹
Old Norse	<i>visa</i> ("a verse", "a stanza") ⁷²⁰	<i>vita</i> ("to know") ⁷²⁰

Consider the Scandinavian meaning of *visa* in connection with the following related words;

OLD ICELANDIC		LATIN
<i>visan</i>	"a direction", or "an instruction" ⁷²¹	<i>administratio, doctrina</i>
<i>visir</i>	"a king" or "a leader" ⁷²¹	<i>rex</i>
<i>visinda-bok</i>	"a learned book" ⁷²¹	<i>liber, volumen, codex</i>
<i>visinda-kona</i>	"a prophetess" ⁷²¹	<i>vates, fastidicus</i>
<i>visinda-mathr</i>	"a soothsayer" ⁷²¹	<i>hariolus</i>
<i>visindi</i>	"knowledge", "prophetic revelation", "magic" ⁷²¹	<i>scientia, vaticinari, magicus</i>
<i>vis-bending</i>	"knowledge", "intellect", "wisdom", "wise talk" ⁷²¹	<i>scientia, doctrina, ingenium</i>

What we see here is an elaborate inter-relatedness for words meaning wizards, sybils, kings, the utterance of stanzas, knowledge, wise sayings, prophecies, soothsaying, books and magic. Such a correlation is readily explainable by equating *visa* with Avesta, the Persian name for the Magian books of religious instruction, prayer stanzas, knowledge and wisdom. That the concept of kings was included in this word set under the name *visir* attests to the Persian and Asiatic ancestry of these many concepts.

Even if one were to suggest that these words and concepts entered the Old Icelandic lexicon with translations of the *Old Testament* (that incorporated a pitifully inadequate amount of knowledge on old Babylon and the Chaldeans), we would still need to explain why they crossed over into Old Icelandic in a form other than Latin or Greek, in forms with a perceptibly Indian and Persian origin.

If you have books, then you must be able to write, and to write you need an implement. In the ancient world, feathers were sometimes used for this purpose. The word for "a feather pen" *pero*⁷²² is the same in the Old Russian, Bulgarian, Serbo-Croat, Slovenian, Czech and Polish. These are related to the Latvian *sparns* ("wing") and Lithuanian *sparnas* ("wing"), which were in turn derived from the Old Indian word *parnam* ("wing" or "pen") and the Avestan *parena* ("pen"). If they used what is ultimately an Avestan or Old Indian word for "pen", does it then follow that the diverse Slavic tribes had been subjected to Magian and Brahminic tuition?

Let's take a look at the word meaning "to write" which in modern Russian is *pisat'* or *napisat'*. *Pisati* (Old Russian, Serbo-Croat), *psati* (Czech), *pisac* (Polish), *pisha* (Bulgarian) are related to the Lithuanian *piesiu* ("to draw") or *peisai* (Old Prussian meaning "to write"). The most convincing genesis for this word is *ni-pista* (Old Persian meaning "something which has been noted down"), or the Avestan *paesa* ("a decoration" or "an embellishment", and in the context of a manuscript "an illumination").⁷²³

Based on our present understanding, mediaeval European writing systems came from three main sources; Greek, Latin, and the Nordo-Germanic and Hungarian runic traditions. However this certainly does not seem to be the case in Russia. The Russian for "a word", *slovo* (pron. Slova), comes from the Avestan Persian *sraoah* ("a word", "a prayer", "the sacred text {the Avesta}").⁷²⁴ It therefore differs from the Old-High-German and Old English *wort* "word", the Old Norse *orth* "word", the Gothic *waurd*, not to mention the Latin *verbum*, or the Greek *eirren*, or *rhemnae*. Based on these examples, no linguistic connections between scholarship and the Avestan or Old Indian languages appear evident in the Germanic languages (apart from the Old Norse). No it was the Balts, Scandinavians, Bulgars and the numberless Slavs that appear to have had a common Magian/Brahminic intellectual infrastructure,

employing Vedic and Avestan terms, and which seems to have been confined to their respective regions.

Having said that, the Hindu text *Agni Purana* mentions the existence of Hindu *sargas*, that is Aryan books (or oral compositions) containing creation myths, the genealogies of both gods and kings, and the general happenings of their times.⁷²⁵ In remote ages they were propagated by priests well versed in the time-worn oral traditions, but later they were written down by scribes. These may have been precursors of the Norse *Sagas*, which had precisely the same function in pre-Christian Scandinavia as Indian *Sargas*. The potential correlation between *Saga* and *Sarga* is given added credence by the existence of Old Norse words denoting sages, sagacity, knowledge, wisdom, witchcraft and sorcery, derived from eastern etymologies. These were related to the Old Indian *vita* and therefore connected with the word *veda*. So it would seem that Aryan sagas and vedas were known in Scandinavia, long before their conversion to Christianity in the early Middle Ages. Some of this knowledge may have been Magian; consider the existence of the *Magus Saga*. The Hindu *Sargas* belonged to a greater body of teachings which included information on the astrological sciences, the *Puranas* themselves, plus law codes, and works related to Indian linguistics and vocabulary, not to mention religious doctrines on penances and ritualism.⁷²⁵ Accordingly the Hindus and Buddhists, like the Magi, husbanded an extensive catalogue of inherited learning, which was maintained by successive waves of wise Brahmins and used to educate their societies generation by generation.

The connection between valuable texts and bark scrolls or tablets was perhaps not exclusive to the Magi. In the following examples we strike a linguistic mother-load indicating the presence of an additional learned book culture among the Slavic and Teutonic nations. The persons involved seem to have adopted the custom of writing on strips of beech bark, and assembled them into books.

The Old Ukrainian, Russian and Bulgarian word for “a letter” or “a character of an alphabet” is *bukva*. It is related to the word *buk* (Ukrainian, Bulgarian, Polish, and Serbo-croat for “a book” or “a written letter”), *bukve* (Slovenian for “a book”), Old High German *buoh* (“a book”), Middle Gothic *boka* (“a letter of an alphabet”), and the Old Icelandic *bok* or *bokr* (“a book”).⁷²⁶ The interesting thing is that in most of the above cases the word for “a book” or “a written character” is similar to, if not the same as their words for “a beech tree”, a tree which I suspect was once debarked in pagan times to provide something to write on. The common Slavic word for “a beech tree” (and slight variants of it) is *buk* (pron. book), which is connected with *bok* (Old Icelandic), *boka* (Middle Gothic and Old Saxon), *buohha* (Old High German) and *boc* (Anglo-Saxon), all of which mean “beech tree”.⁷²⁷

OTHER EVIDENCE OF
WRITING

It would be a logical enough to presume that the word “book” (and this attendant connection with the beech tree) came into the English language via Latin, especially when you consider how long the pagan Britons were exposed to Classical Roman civilisation. However the Latin for “a book” is *liber*, and “the beech” *fagus*. Nor are there any apparent connections with the Greek. Therefore the English word “book” was connected with the Teutonic and Slavic linguistic sub-families, and likely to have been a pre-Christian, and even Pre-Roman/pre-Catholic word connected not only with the beech tree, but with the written word. Equally important is the absence of Nordo-Germanic correlations with the Latin *littera* “a letter (of the alphabet)”, which is only found in the Middle and Old English *lettre*. With the coming of Christianity Latin did make its presence felt in Scandinavia, though it amounted to an additional Northern writing system. Accordingly the northerners drew a distinction between their own form of writing and that imported by the Church, by using the Old Icelandic verb *dikta* (“to write or compose in Latin”).⁷²⁸

THE HUNNO-GERMANIC
RUNIC TRADITION

Historically we know that the Germanic, and for that matter Bulgar, cultures used runic script. As a general rule they were carved into monuments, wood or other objects. Both the Bulgar and Pan-Germanic writing tradition differed from that of the Romans, and for this reason, their words for “to write” differed from the Latin *scribere*. Obviously the Latin term was originally used in Roman Britain, but was later displaced by words spoken by the rune-using Nordo-Germano-Saxon settlers, who seized power there following the collapse of the Roman state. The scratching of written characters is undeniably suggested in the following etymologies;

Old Norse *rita* “to write on parchment”, Gothic *writs* “a stroke or letter”, Middle English *writen* (“to scratch, draw or engrave”), the Old English *writan* (“to scratch, draw or engrave”), and the Old High German *rizan* (“to tear”). Their Old Indian cognate was *vrana* “to wound or to tear” or *vrnati* “he tears, plucks or incises”.⁷²⁹

So the Nordo-Germanic words cited here applied more to characters etched into hard substances like stone or wood, rather than delicately written on parchment, as you would see in a typical Mediaeval Church scriptorium. Archaeologically speaking they applied to Germanic runic engravings.

Note well that this commonality (between the words “beech” and “book”) does not appear to be linguistically

rooted in either the Avestan or Sanskrit. For there to be such uniformity there must have been a common thread in each of these cases, and this I believe was the Goths. Not only did they live in each of these geographical locations, but, according to Jordannes, were schooled in the ancient sciences of philosophy, physics, astrology and astronomy. In other words they were the recipients of classical teachings and sciences, perhaps of the sort once propagated by the pagan Gnostic philosophers who operated out of Athens until their school's closure in the 6th Century AD. This could also help explain the high incidence of Ancient Greek linguistic survivals in the Russian language, a whopping 11.73%, or just over 1 in 10 words. Since the timespan between the close of ancient Greek civilisation and the Middle Ages was lengthy, it seems fairly clear that certain persons were teaching Ancient Greek to the masses, helping it to survive in everyday speech, particularly in Russia, where many of the Eastern Goths lived. It might also be attributable to pagan Gnostic philosophers and Magian Neo-Pythagoreans of a sort found in Central Asia during and after Alexander's reign. As Parthia and Sassania assumed control of geographical Iran and Central Asia, Ancient Greek continued to be used by the intelligentsia; even a good many Magi probably used this language for secular correspondence, but not religious usage.

Elsewhere, in Scandinavia, England and Germany I am unsure of the survival rates of ancient Greek linguistic connections. These would be worth determining, because they might help pinpoint centres of pagan Gnostic teaching in other regions besides Russia. The Goths, prior to adopting a latinised script as a result of the mission of bishop Ulfilas in the mid-4th Century AD, used a form of Hellenic writing, predominantly derived from Greek uncials. This older Hellenic Gothic script confirms they were the best educated of barbarians, as Jordannes so aptly stated. In support of this the Goths also had a more specialised term *bokareis* ("a bookworm"),⁷³⁰ presenting us with an image of Gothic scholars straining their eyes in lamp-lit rooms as they thumbed their way through ancient writings. You see the Goths would not have had a word for "bookworm" unless they were well endowed with them.

But having said that, the Old Russian word for "bark" *kora* is related to the Avestan word *caraman* which means "a skin or hide".⁷³¹ Here we have a possible Avestan connection between words denoting hides and bark, a connection possibly relating to their usefulness as a writing surface.

The pagans might have written on even more durable substances. Gregory of Tours reported unfavourable omens in and around 6th Century Chartres, not the least of which were the "*vessels ... inscribed with unknown characters which could not be erased or scraped off*". "*This phenomenon began in the neighbourhood of Chartres, spread to Orleans and then reached the Bordeaux area, leaving out no township on the way*".⁷³² In all likelihood there was nothing mystical about this "phenomenon". Instead, it is probably evidence of an additional writing system re-emerging in 6th Century Gaul, contemporaneously with the so-called "false-christs" (pagan mortal-gods) then growing in number throughout that region.

One further oddity is the modern English word *chapter*, which apparently came by way of the Middle English *chapitre* "a division of a book" or "a meeting of a body of canons".⁷³³ It is also allegedly related to the Old French and Old Latin *capitulum* "divisions of a book" or "a meeting place of canons". In both instances the Latin *caput* ("a head") is seen as the progenitor word. But if this were so why isn't *chapter* also found in the Old-High-German, Spanish, Italian, Portugese, Dutch, Austrian and so forth.⁷³³ These were also Catholic countries, ostensibly governed by the same religious institutions that supposedly gave the French and English the word.

A far more likely proposition, I believe, is that the English word *chapter* entered Europe from Asia from the Uighur *taptar* ("a book"), which also meant "a book", or "a record", or "an entry" in the Turkic.⁷³³ Since *taptar* is absent from the Arabic, and powerfully connected with the Turkic races, especially the Uighurs, one might guess that it was once used by Magian and more particularly Manichee scribes rather than Muslims.

In the Bashkir region the related Russian words *tepteri* or *teptyari* applied to immigrant islamicised Finnish Udmurts, Mordva, and Mari.⁷³³ Now it should be noted that prior to their conversion to Islam, these particular races lived in the Volga Bulgar region, where Manichaean script was used.

Despite this mass of reliable linguistic and historical evidence, the general feeling among many scholars specialising in Ancient Russian studies and linguistics, is that the pagan Russes were illiterate. This stance I find absolutely astounding, with them dismissing out of hand the testimonies of Arabs who one thousand years ago:

THERE MAY BE EVIDENCE FOR THE PERPETUATION OF ANCIENT GREEK IN HEATHEN AREAS

THE SUDDEN APPEARANCE OF WIERD CHARACTERS IN 6TH CENTURY GAUL WAS THROUGHT TO BE ALLIED WITH SERVANTS OF THE ANTICHRIST

THE ENGLISH WORD 'CHAPTER' PROBABLY COMES FROM CENTRAL ASIA

SOME ACADEMICS INSIST THE SLAVS AND RUSSES WERE ILLITERATE. EVIDENCE CLEARLY POINTS TO THE CONTRARY

- a. Saw the Russes carving their writing into a birch post first hand, and
- b. Saw and supplied examples of the script used by the King of the Russes, carved into white wood.

In essence, the main validation for their theory is that nobody has ever excavated a single example of pagan Rus' writing. The elusiveness of pagan texts is quite understandable though, when one considers the privations they had to endure in order to survive the past one thousand years. The threats to their survivability are four-fold:

1. Parchment, bark and vellum are susceptible to deterioration, to a greater or lesser degree, depending on the conditions under which they have been stored.
2. Archaeologists may not have excavated the most suitable locations. Most of Novgorod remains untouched by the excavators tools, and few other Russian Pre-Christian cities and settlements have been as meticulously scrutinised by archaeologists. Therefore many other settlements are as yet undiscovered, whether slumbering peacefully out on the steppe, concealed by the furrows of agriculturalists, or deeply buried under the hungry river silt of ancient river beds.
3. If the attitude of the pagan Russes toward their own texts was in any way similar to those of the Brahmin and Magi, they would have avoided handing them to the Christians at all costs. To this end the pagan scribes and priests/priestesses probably made off with them as they evaded detection.
4. Pagan documents chanced upon by Christian authorities were very often burned, (whether at the time of the conversion, or over the centuries that followed) .

THE *BOOK OF VELES* HAS
BE CONDEMNED AS A
FORGERY

In the future we can only ever hope to recover pagan Rus' texts in two ways. The first is by archaeological discovery. The second is to find a text in someone's library, an heirloom handed down with each successive generation. The highly controversial *Book of Veles* may be such a discovery. Its enscribed boards relate that the princess Anna, daughter of Yaroslav, took Volkhvy texts from Novgorod, and spirited them away with her when she married into the Frankish royal court. It was condemned outright as a forgery by the former Soviet Academy of Sciences, though supporters of the text believe it is far too ingenious to ever be the product of somebody's fertile imagination.⁷³⁴ Nazi researchers were very interested in its contents.

MAGI HAD THEIR OWN
EDUCATION SYSTEM

Leaving the *Book of Veles* aside however, we still have compelling evidence for the existence of three common pre-Christian intellectual cultures, which possessed their own writing and books. The first was Magian, and it appears to have been confined to the Baltic and Slavia, and to a certain extent Scandinavia. The second was Brahminic, which was found in these same regions. The third might well have been pagan Gnostic, which served the needs of unknown numbers of Goths, Germans, Saxons, Anglo-Saxons and Slavs.

CLASSES CONSISTED OF
FIFTY PUPILS AT A TIME

Strabo tells us some amazing things about the Magian education system, which we might guess was present in Russia too, due to the Magian presence there. Here was their curriculum;

PRINCES SERVED AS
CLASS PREFECTS

From five years of age to twenty-four they are trained to use the bow, to throw the javelin, to ride horseback, and to speak the truth; and they use as teachers of science their wisest men, who also interweave their teachings with the mythical element, thus reducing that element to a useful purpose, and rehearse both with song and without song the deeds both of the gods and of the noblest men. And these teachers wake the boys up before dawn by the sound of a brazen instruments, and assemble them in one place, as though for arming themselves or for a hunt; and then they divide the boys into companies of fifty, appoint one of the sons of the king or of a satrap as a leader of each company, and order them to follow their leader in a race, having marked off a distance of thirty or forty stadia. They require them also to give an account of each lesson, at the same time training them in loud speaking and in breathing, and in the use of their lungs, and also training them to endure heat and cold and rains, and to cross torrential streams in such a way as to keep both armour and clothing dry, and also to tend flocks and live outdoors all night and eat wild fruits, such as pistachio nuts (the origin of the Russian word for the pistachio is unclear, but appears to come from the French or Italian, but more likely the Persian or Turkic), acorns, and wild pears. These are called Cardaces, since they live on thievery for Carda means the manly and warlike spirit. Their daily food after their gymnastic exercises consists of bread, barley cake, cardamum, grains of salt, and roasted or boiled meat; but their drink is water.

THEIR YOUTH
UNDERWENT PHYSICAL
AND MILITARY TRAINING
AS AN ADJUNCT TO THEIR
ACADEMIC SYLLABUS

*They hunt by throwing spears from horseback, and with bows and slings; and late in the afternoon they are trained in the planting of trees (to counteract the devil's deforestation of the world, they planted at least one sapling for each tree they logged) and in the cutting and gathering of roots and in making weapons and in the art of making linen cloths and hunters' nets. The boys do not touch the meat of wild animal, though it is the custom to bring them home. Prizes are offered by the king for victory in running and in the four other contests of the pentathlon (ie; jumping, running, discus-throwing, wrestling and javelin throwing or boxing). The boys are adorned with gold, since the people hold in honour the fiery appearance of that metal; and on this account, in honour of its fiery appearance, they do not apply gold, just as they do not apply fire, to a dead body.*⁷³⁵

THE KING PATRONISED
NATIONAL SPORTING
EVENTS

THE HEATHEN IRISH
WENT TO SCHOOL
UNDER THE DRUIDS

We don't know how dissimilar the Persian model was from that of the pagan Irish, or even if they were ever connected. Nonetheless Druids had their own scholastic system;⁷³⁶ hedge schools for want of a better term. There students (who were mentally apt for study, or drawn from the ranks of the high born) entered under the patronage of a mentor.⁷³⁶ Druidic students did not have to pay taxes to their king, nor were they required to serve in any military sense.⁷³⁶

You may ask how it was that these alternative intellectual cultures disappeared from the face of Europe. This is what happened in Hungary on October the 9th, 1001 AD. The now-Christian King Stephen I ordained the following for his Magyar subjects:

KING STEVEN BANNED
PAGAN WRITING
SYSTEMS IN HUNGARY

*"Upon the council of Pope Sylvester II we have decided that the ancient (Hungarian)runic characters, and that (additional) pagan method of writing which proceeds from right to left, used in Hungary by people and clergy (Magian-Christian priests, as found in Christianity's Greatest Controversy) of the Szekler and Kun provinces, shall henceforth be forbidden and will be suppressed throughout the country, and superseded by Latin writing".*⁷³⁷

The remainder of the edict defined how Stephen's plan was to be implemented. Clergymen who persisted in using heathen writing, or disseminating pagan texts or sundry inscriptions were to be defrocked and excommunicated, plus fined. Rewards were given for surrendered texts, to induce priests and the laity alike to abandon the pre-existing learned culture of the pagan Hungarians. All contraband documentation was thenceforth to be immolated, and chopped apart by the sword. In concluding, the document trumpets *"with their destruction all longing for past traditions and all memory of paganism shall cease"*.⁷³⁷ And so a new age surpassed the old. On those incandescent piles of timber, past realities entered the realm fable, becoming bed-time stories for credulous children, and a bunch of old wives' tales. And this is one of the scripts consigned to oblivion during the suppression; Europe's other great runic tradition, a Hunnish, non-Scandinavian variant used by the Magyars.

ANYBODY FOUND
USING THE OLD
WRITING SYSTEMS
WOULD BE SEVERELY
PUNISHED, ESPECIALLY
WHERE THEY WERE
FOUND TO BE
CHRISTIAN PRIESTS

Fig 37. The Hungarian runic alphabet.

Current historical interpretations are clear on one point. Pagan Russians did not know how to write until the arrival of Byzantine Christian clergy, who in a relatively short space of time taught them cyrillics. As with the misinformation or disinformation being spread by various academics in relation to the early Magian texts, not a few Rusists zealously champion a proposition that the pagan Slavs were an illiterate "Slave race". As you have already seen, it is fundamentally wrong to endorse their conclusion once balanced academic considerations are applied to the question.

Al-Nadim attributed Turkic literacy to the viziers who served their respective kings. In seeking to communicate with other regional monarchs, the great kings of Turkland (therefore including the Turkic Bulgarian royals) summoned viziers into their presence to scribe the necessary communiques. These were often carved into a war arrow.

CHAMBERLAIN'S

ARYAN MAN,
PUBLISHED LAST
CENTURY, PORTRAYED
SLAVS AS ILLITERATE
SAVAGES

*"if he (the Great Turkish King) desired to write to a lesser king, he summoned his vizier (from which comes the Albanian and Alanic word Wizzi and the Old High German Wizzo, all of which meant "a sage" or "wizard") and ordered the splitting of an arrow. Then the vizier traced on it characters understood by the Turkish nobility ..."*⁷³⁸

In speaking of the Turkish nobility he might be referring to the Hunnish sub-races such as the Goths, Hungarians and Bulgars. Carving and splitting the war arrow was known in Scandinavia too; its origins may be eastern, Turkic in fact. The Norse *Ynglinga Saga* itself admits that Odin and his people formerly inhabited Turkland, but later migrated to Scandinavia via Germany and Scythia:

KINGS FREQUENTLY
EMPLOYED THE
SERVICES OF VIZIERS

WAR ARROWS

“south of this mountain ridge (the Urals) it is not far to Turkland (the Caspian, Iranian and Central Asian region), where Odin had great possessions”.⁷³⁹

SOME OF THE TURKIC
HORDES HAD BLONDE
AND RED HAIR

In a quote from several pages ago, Al-Nadim includes blondes in his list of races whose ethnicity was predominantly Turkic, or at least culturally affiliated with them. These olden Turks were nothing like today's Turks, having red hair and blue eyes; that much is known from coloured Buddhist tapestries, found at Turfan. Some of these Turks were probably blonde.

HUNNO-TURKIC
HORSEMENT RETURNED
TO EUROPE AFTER
CENTURIES OF EURASIAN
HABITATION

Millennia later, having ridden into the Balkans from the Central Asian and Iranian region around 680 AD, with hordes numbering several hundred thousand strong, the Bulgars chose the Danube area as a suitable homeland. Troubles naturally erupted between them and the Slavs as a consequence of this. Using their superlative organisational skills, the Bulgars successfully harnessed the loyalties of the local Slavic inhabitants, thus giving rise to a formidable Bulgar state on Constantinople's western extremities. The Danubian Bulgars and their Silver Bulgar brothers originally spoke Turkic, which is somewhat different to the Slavic languages. The burgeoning number of Slavs inhabiting the very same stretch of the Balkans demanded that Danubian Bulgars speak both Turkic and Slavic when conducting their daily affairs. Between 680 and the mid-850's they were bi-lingual, but at the end of that period,⁷⁴⁰ Turkic fell from official usage, though it may well have been spoken by the average citizen of Bulgar extraction. In this same era, Silver Bulgars of the Urals persisted with the use of Turkic only.

FINNS SUPPORTED THE
SCANDINAVIANS AND
SLAVS IN THE
FORMATION RUSSIA

The Silver Bulgars' had contacts with the Finnic Chud and Ves tribes, tribes that by some coincidence were also involving themselves in the business of forming this new and powerful Rus' state. Whether it was in Bolgar (the capital of Silver Bulgaria) that Rurik and the Norsemen first met up with the Silver Bulgar Magi, or whether they already had extensive ties with them is uncertain. I tend to believe they already knew each other fairly well, and am willing to speculate that based on later events, that the enhanced contacts of the period were attributable not only to trade, but more importantly to politico-religious developments organised by the Magi of the various tribes. Prince Oleg the Sage's name appears on the wall of an underground stone temple at Bushiv's'kiy, so there appears to be a concrete link with some Norsemen and Magians who used a quasi-runic, quasi-glagolitic script.⁷⁴¹

For a start, the mere fact that there were Slav temples at all indicates they were influenced by unusual religious practices, since many European pagans predominantly used open air groves. As this temple inscription bears Oleg's name, it signifies that it must have been constructed during his period of rule, which came to an end in 910 AD. The Magus depicted on its wall is shown offering up a libation before a (sacred) tree, declaring himself to be Oleg's sacrificer, named Mirobog⁷⁴¹ In the Slavic his name means “God of the world”, “God of Peace”, or perhaps even “God of the Mihr fire”, a divine priest who acted as the tender of god's son, Svarozhich, the fire of peace.

OLEG THE SAGE

A few years earlier Oleg “the Sage”, as he was known, is said to have overseen the construction of the wheeled ships allegedly used in the 907 AD attack on Constantinople. Whether he used his own knowledge to achieve this feat, or whether he used the ingenuity of his advisors is uncertain. Certainly the name Oleg is cognate with the Old Norse Helgi, which means “the Holy (one?)”, though some say it is derived from *ulug*, a Turkic word for “great”. If Oleg was a ‘great sage’, even a ‘holy sage’, then what was the origin of his sagacity? We repeatedly read of sages throughout the *Rig Veda*, Pahlavi texts and the Avesta, and in these sources the sages were holy men, the Magian and Brahmana scholar-priests. The modern Russian word for “a sage” is *mudrets*, which comes from the Old Russian *mudr'* and the Old Slavonic word *madr'*. These words ultimately come from the Old Indian word *medha* (meaning “thought”, “wisdom” and “understanding”) and the Avestan words *mazdra* or *maz-da* (meaning “to retain something in your memory”). Similarly linked are the Slavic words *m'd'r* (Bulgarian), *mudar* (Serbo-Croat), *madry* (Polish), *modar* (Slovenian) and *moudry* (Czech).⁷⁴² To this list of linguistic similitudes we might add the Old Norse terms *visdoms-madr* (literally “a wise man”, meaning “a sage”, “a soothsayer” or “a prophet”), and *visinda-madr*, “a soothsayer”.⁷⁴³ Behind these many word correlations it is possible to speculate that the pagan sages of heathen Russia were the recipients of Vedic and Avestan knowledge during a yet to be determined era, and not only them, but the sages of many other races throughout the region. Since the Central Asian technology which Oleg might have used to design and construct the wheeled ships most likely came from Iranian sources, it probably follows that he was more likely to have been a Magian sage rather than a Brahmin.

THE WISE MEN

So, we have an Oleg, who could well have been a Magus intellectual himself (or even a Brahmin), we have his retinue which contained camps of attendant *Volkhvy* Magi and soothsayers, and we have a glagolitic-style temple inscription. These runes were not used by the Norse, but are thought to have been used by the *Volkhvy*, and are

only known to have been utilised by the Bulgars, Magyars, Vlaxhs and Moravians. Thus, the *Volkhvy* architects and masons who built this temple pre-910 AD were either Bulgars, or Rus' *Volkhvy* who were Bulgar affiliates, or other non-aligned *Volkhvy* from Bohemia and Moravia. Again I have not read information on the temple's precise design, so I can't compare it with what Stoyanov mentions on the constructions of the Silver Bulgar Magi near the Urals. I know at least one of them looks every bit similar to the dome-topped fire temples of Zoroastrian Sassania.

So, as legend has it, the Slavs, Finns and Varangians were amalgamated into "one people" by a Dane, Riorik, and his two brothers Sineus and Truvor plus, as you have seen, Magi in need of reliable warriors. Henceforth came into being the mightiest race of eastern Europe, a nation which would forever determine the destiny of those peoples who lay in close proximity to it; they would be the Russkie, the men of Rus'. The northmen had scored a great coup. In one swoop, they were party to the mustering of the last great pagan army in existence, but ultimately they were sorely needed to hold Rus' together. Now that they had permanent safe passage downriver to Constantinople, the mother city of all riches, they could lay prolonged siege to her and reap substantial rewards.⁷⁴⁴

If Rurik (the first prince of the Russes) was actually the Danish expatriate Riorik (formerly of Jutland) as Vernadsky speculated, then it is likely that he and his kin fought the Franks. Though initially allied to the Franks, Riorik ended up raiding some of their territory once the Frankish Emperor evicted him and his kinfolk from their Frisian land holdings.⁷⁴⁵ Masudi's account helps validate Vernadsky's identification of the Rurikids with a group of Jutes who had been living in exile among the Frisians and Franks, and why Ibn Fadhlán commented that the Rus' used Frankish swords.

The Rus' princes and Khagans continued to have repeated dealings with the Norsemen in those few years prior to the conversion period, though not always to their benefit. Most of Vladimir's contact with the Varangians concerned a large group of Huscarls, perhaps the very ones whose aid he had enlisted in Scandinavia to help him out during the bouts of bloody warfare between him and his brothers.⁷⁴⁶ Upplanders are mentioned in the *Primary Chronicle*, so they were most likely Swedes from Uppsala, the province in which the main Swedish pagan temple was located. It would be nice to know if these Varangians had intended to go Byzantium before they left Scandinavia, looking for imperial service, or whether they deliberately came to Rus' to meet up with the Rus' princes, and only headed off to Byzantium once they had outdone their welcome among the Slavs. The question is very difficult to answer, but could help us understand Norse motives in the area. Anyhow, when the Huscarls and Vladimir parted ways, the Huscarls headed on to Tsargrad seeking the employ of the Emperor, and high adventure. But hot on their trail was a communique imploring him to officially snub the trouble-making Huscarls, warning them never to return home via Rus' territory. After all, their interference had sparked a wave of warfare and royal fratricide.

Following the departure of the official Norse party, Vladimir then went on to raise up Perun and a range of Iranian and Aryan idols in Kiev,⁷⁴⁷ but strangely not a single Norse god (such as Odin) would stand atop that hill.⁷⁴⁸ Vladimir's uncle Dobrynia then went north to Novgorod and brought an idol of Perun there at his nephew's command.⁷⁴⁹ The level of cultural-religious cooperation between the Norse and the Rus' is curious; appearing almost transitory in some ways. In many respects the Norse involved in this whole Russian episode, were probably only reluctantly there, or "trying their luck" on the Russian stage, sensing "big opportunities" for power and silver. And yet there are some concurrences in Norse and Rus' administrative terms and religious beliefs.

In their capacity as advisors to the Rus' royal bloodline the Norsemen truly left their mark on Russian history. Their contributions to Rus' culture were more qualitative than quantitative, namely a neutral army to provide order, and a legal system. The word *veche*, a city council which empowered all free citizens to democratically vote is phonetically similar to the Russian *veshch'*, which means "thing", perhaps even "the thing". In Old Norse the word for such a legal council is *Thing*, which in their case is also the word for "a thing" or "the thing". In both Rus' and Norse versions, the *thing* and the *veche*, the free citizens had the right and the power to refuse the ascendancy of princes, or kings if they considered them unworthy, or unjust leaders. This calls to mind the philosophies of the white Magi who believed that wrong-doers had no place on the throne; despite being stalwart royalists, the act of dethroning an unjust ruler was seen as a holy duty; to let them reign meant abetting their despotism and evil. The fact that Saxons had institutions similar to the *Thing* adds further weight to the sort of common cultural ancestry spoken of in the *Ynglinga Saga*. This might not sound like such a big deal, but the Norse presence truly aided regional pagan unity. Yet paradoxically it gave rise to the greatest single Russian dilemma, the problem of royal ascendancy. It helped set the stage for the gut-wrenching civil wars of the 11th Century AD, as princes jostled for a chance to be

the *Velikiy Knyaz'* (the Grand Prince). Whatever Scandinavians did stay behind in Rus' still played a vital role strengthening Kiev's grip over the countryside. Without the order that they brought to this land of lawlessness, it is difficult to assess what the political fortunes of the Rus' and Bulgars may have been. My guess is they would have fared very poorly.

KHAZARIAN
CIVILISATION

The nearby Jewish Khazarian state (*Khuzarim* being the Hebrew word for "Khazar"), situated on Rus's eastern and south-eastern borderlands, was formed by sedentary Turks (including some of the Bulgars) who had intermingled with the Finns, Iranians, Sabir tribesmen and Caucasians.⁷⁵⁰ A common Turkic ancestry best explains Khazaria's close and ongoing links with the Bulgars, who aided the Khagans in forming government in Khazaria. This may account for certain Jewish names found among the Bulgar nobility. In antiquity though, they were regarded as being Huns and Scythians.

Khazarian power centred around several major urban centres, though by far the majority of Khazars continued to tend their crops and herds on the Steppe. Khazarian customs were undeniably Turkic, especially where their habitual inebriation is concerned, for they were frequently seen quaffing fermented milk from drinking horns. Being fellow Turks did not stop the Khazars turning on the Greater Bulgar state (Magna Bulgaria) in 670 AD, thereby causing the Bulgars to head off in varying directions, to the Balkans and Urals especially.⁷⁵¹

The Khazar was a physically powerful breed, famous for their skilled use of the horseman's lance. With some of the finest warriors and heavy cavalry around, they carved out an empire of considerable prestige. The Khazarian khanate's premier city, Itil, was based on the shores of the Caspian sea, with many of its villages reaching into the foothills of the Caucasus, northward into the forests that conceal the base of the Urals, and westward into the steppes. Its main strategic citadel was a white castle, sited at Sarkel.

Their once great empire stretched out in all directions, allowing them mastery over adjoining lands, and many of the most important south-flowing waterways that emptied into the Caspian and Sea of Azov. The Khazars were a fairly militaristic race by all accounts, and controlled the lucrative Caspian region, where the "silk road" from the far-east inched its way into a Europe greedy for the goods of the Orient. But in the 10th Century AD, their civilisation was on the eve of its destruction, soon to be razed to the ground by Arabs and pagan Russian troops angered by their overlordship over certain Slavic tribes. Heradius states that the Danubian Bulgars were, at least according to his understanding, related to, or descended from, the Khazars (hence at least a small proportion of them must have been Jewish converts).⁷⁵² Despite these Turkic origins, Khazaria's adopted Jewish heritage is beyond question. Their conversion to an unorthodox dualistic version of Judaism took place, as some believe, in the year 740 AD, but this faith was later supplanted by traditional rabbinical teachings introduced by Jewish immigrants arriving from Khorezm. Byzantine sources lend further information, perhaps illuminating the nature of their pre-Judaic faith. When it was heard abroad that the Khazar Khagan wished to receive religious delegations from Islam, Christianity and Judaism, with a view to adopting one of these faiths Emperor Michael III ordered that a group of learned Byzantine clergymen be sent in due order.⁷⁵³ Not wanting to be ill-prepared for the encounter, the priests stopped over in Chersones in the year 860, and there undertook preparatory studies in Hebrew and Samaritan religious texts.⁷⁵³ Whether the writings related to the Samaritans in Judaea, or Zoroastrian scriptures, so-named, in typical medieval style, after Simon Magus the Samaritan, is unclear. Additionally they brushed up on Hebrew so as to give the Jewish delegates a run for their money. By the end of the fateful spiritual council in Samander, Judaism was selected and embraced by the Khazar lord. This raises the possibility that an unknown number of Khazars were Jewish Magi, born through the mating of an Aryan Magus on a Jewess, and whose faith was a free and easy admixture of Magianism and Jewish teachings.

THEIR FORM OF JUDAISM
WAS UNORTHODOX BY
RABBINICAL STANDARDS

JEWISH MAGI

Diplomatic and trade ties were at once forged between the Khazars and the Jews of Moorish Spain once news of the existence of a Khazarian Jewish state first reached western ears. This consolidation of Jewish unity further strengthened the scattered Jewish race in its many times of adversity. For the Jews of the diaspora Khazaria gave them rest and protection amidst a sea of Muslims, Zoroastrians and Christians. Being one of the only Jewish nations to have ever existed, its collapse would see the Jews again robbed of a homeland; its citizens and Jewry taken into bondage, booty for the Russian. Many Jews fled to Spain and other parts of eastern Europe; a transitory population which often did not receive a kind welcome.

The original pagan religion of the Khazars was one that was officially born to die out. Subsequently its followers were required to adopt one of the three main faiths, namely, Judaism, Islam or Christianity (of any kind). Their venerable pagan faith was outlawed, and their people no longer permitted to speak of it. Many species of heresy

existed in Khazaria (particularly Manichaeism), but, as in China and Babylon, they suffered constant social repression. Although Judaism was the state religion, other faiths were permitted equal worshipping rights. Khazar cities were divided into religious quarters, each of which was governed on a street level by the laws of the religion that held the reins of power there. Since the upper class and royalty were of the Jewish faith, many Jews came to Khazaria knowing that they would receive the khagan’s protection. The story of the Khazar polemic no doubt means that an undetermined number of the European Jewry were in fact only proselytes, and not of the semitic Jewish tribe by blood, an embarrassing and ugly thought to many Jews, and not one to be readily admitted. Yet we would do well to believe that there was already a considerable number of full-blood Jews living over that way. Post-exilic accounts allude to healthy numbers in Anatolia.

The Celtic and Gaulish Magi

Contention arises nowadays on the issue of Druidic origins, and more especially whether they belonged to the traditional inhabitants of the British Isles or entered Britain with the Celtic migrations somewhere between 500-600 BC.⁷⁵⁴

The Celts who formerly lived in the Balkans and Central Europe, and whose linguistic cousins, the Tokharians, lived in Asia, as far east as the Tien Shan mountains, had an organised pagan religion. Their druidic religious customs seem very much like those of the Magi. This is hardly surprising when you consider that the Celtic word *draoi* (ie; “a druid”) translates as “a Magus”. Druids studied in special pagan colleges, they had similar gods, and most importantly a formal dualistic religious calendar (which is nowadays termed the Coligny Calendar, after the place where the bronze plates were found). Pliny the Elder appears to associate Druids with the Magi, in more than just a linguistic sense, when he states:

*“Magic flourished in the Gallic provinces, too, even down to a period within our memory, for it was in the time of the Emperor Tiberius that a decree was issued against their Druids and the whole tribe of diviners and physicians. But why mention all of this about a practice that has even crossed the oceans and penetrated to the utmost parts of the earth? At the present day, Britannia is still fascinated by magic, and performs its rites with so much ceremony that it almost seems as though it was she who had imparted the cult to the Persians”.*⁷⁵⁵

Firstly Druids, diviners and doctors were held to be part of a certain tribe that only inducted nobles, as was the case with the Magi also.⁷⁵⁶ Not only does Pliny divulge they were practitioners of magical rites akin to those of the Persians, and equally engrossed in it, but that the art itself had migrated into places quite distant to Persia, Britain and Gaul foremost.⁷⁵⁶

About 50 BC Caesar relates that Druidry was, according to indigenous legends lost in misty antiquity, native to the British Isles but spread to continental Europe,⁷⁵⁶ and it is perhaps because of this that Pliny adds “it almost seems as though it was she who had imparted the cult to the Persians”.

One might guess Caesar’s sources were impeccable, in all probability the Arch-Druidic king of the Gaulish Aedui tribe, Divitiacus.⁷⁵⁶ Despite his supposedly close friendship with the latter it is exceedingly unlikely that Divitiacus broke druidic protocols on secrecy to curry favour with his new Imperial overlord. What I do find curious is a lack of primary sources detailing the Celtic wanderings from central Europe as far West as Ireland. Whether this means the Druids accompanied them the whole way, or were chanced upon in the British Isles by the newly arriving tribes has never been adequately resolved.

Druidic initiations consisted of vestiture, oaths of loyalty and reticence, and finally tonsuring that shaved away hair on the front part of the head, leaving the back long⁷⁵⁷ (precisely the same tonsure found among the Medes of Persia⁷⁵⁸). Augustinian missionaries sent from Rome to the Celtic Church described the haircut as “the tonsure of Simon Magus”. The Celtic name for this tonsure was the *berrad mog*,⁷⁵⁹ perhaps stemming from the Iranian priestly title *Aberad*, that is the Magus, or indeed *Mog* who brought the sacred water and milk to the altar when *Haoma* (the white Magian drink of eternal life) was mixed.

So began their long indenture to the druidic novitiate, which saw them head to unmentioned locations throughout the countryside for training in their arts, rites and sciences. Luckily the Book of Ollambs has survived, for

DRUIDS LEARNED NATHS
BY HEART, IE; POETIC
CYCLES

it describes in elaborate detail the druidic curriculum, year by year. It began with studies in Ogham script, grammar, philosophy, epic prose, law, ancestral tales.

In the 6th year of their study, in addition to secret poetic devices, they learned 24 greater and 24 lesser Naths, a poetic cycle imparting knowledge. The 8th Magian book of Dinkard describes the Magi's academic syllabus. It mentions "21 parts of its divisions, which are called Nasks". That is 21 Nasks, 3 less than the 24 druidic Naths. If Naths were a Celtic rendering of the Persian Nasks one can account for this shortfall by taking into account the loss of 180 chapters of Magian philosophical teachings under Greek rule, purged from the Persian Rivyats, and so reducing their number from 1085 to 905. In short, if Druids were Magi, they perpetuated a form of Magianism practiced before Alexander's destruction of the Persian Empire (ie; very ancient, very primitive, and no doubt contained a variety of Achaemenid and even pre-Achaemenid traditions and observances). The first seven were gathic in nature (ie; rites and prayers), while legal matters filled the final seven. Each nask was filled with its own peculiar information, all arranged in grammatically precise metrical lines, as an aid to mnemonic acquisition. In this respect they must have conceptually resembled Naths in more than just cursory ways.

PERSIAN MAGI LEARNED
NASKS BY HEART

IN PERSIA THESE ORAL
CODES WERE PRESERVED
IN WRITING

For example the Persian *Pagag Nask* contained regulations for ritual slaughter, particularly of sheep, the nature of work and ceremonies.⁷⁶⁰ It set down who sacrificial meat was to be shared out to, which portions belonged to fire and which to water.

"And whatever is about a season festival; where the appointed place is, when one celebrates it, and when it has fully elapsed; the assembly of the season festival, and the donation for the feast; where and when the celebration is possible, in what proportion the provisions are to be given out, and when to be prepared and divided; where its advantage is (ie; in whose honour the sacrifice is made), and what benefit there is from it to the good creations both spiritually and materially".⁷⁶⁰

Pagag Nask set guidelines for the selection of fitting ritual officers, as well as purification rituals.

"As to the selection of the president of the feast there is this, namely, what ability is requisite for that presidentship. The allotment of the portions, and giving them sooner to those who are sooner in need of them (ie; to feed the poor first). Scoffing before priestly authorities, who are great and good, and when they do not give a portion to the authorities are cases when the season festivals are not to be considered as celebrated".⁷⁶⁰ It speaks of "the control of sin and computation of the portions, and more on the same subject. About the rotation of the day watches, days, months and seasons of the year - which are when it is summer and winter and the appearances therein which are owing to the motion of the constellations. Where the coming of the righteous guardian spirits (ie; the Fravashis) into the worldly existence occurs, in those ten days which are the end of the winter and termination of the year, because the five intercalary gathic days among them are for that purpose".⁷⁶⁰ A good many of these observances might have had a local format, all the while adhering to the wider fundamentals of Magian ritual craft.

The Druidic Hierarchy

DRUIDS HAD SPECIAL
COLLEGES

Druids formed their own colleges and of itself this, I believe, conclusively proves they perpetuated a variety of teachings or customs, probably imparted by sages and spiritual mentors well known in their day; hence the distinctions between Druidic sects.

KINGS KEPT DRUIDS BY
THEIR SIDE

A typical Celtic king maintained an elite retinue some ten in number including a druid, bard, stewards, a prince, doctor, musician and seancha.⁷⁶¹ The Irish situation seems replicated in Scotland. Adomnan wrote of the Pictish heathen priests in Scotland, calling them Magi.⁷⁶² They in particular served as advisors under their king Broichan.⁷⁶² We could be forgiven for thinking that these concurrences are just a coincidence or a mis-translation, if it were not for the fact that there were substantial elements of Magian religion present in Slavia and other parts of Europe in ages past. The Celts seem to have formulated their own words for Magi - *draoi* ("a druid", "a Magus") and *ban-draoi* ("a druidess", "a witch"). Druidic white magic (*pireog* or *piroige*) was dedicated to protecting man and beast, and aiding the production of dairy produce like milk, butter, cheese and cream. *Draordeact* (*maleficia*) was baleful sorcery utterly contrary to *pireog*.

ARCH-DRUIDS

Arch-Druids, the highest rung of Celtic society, were the indefatigable companions of high kings, the principal high priest, prophet, sacrificer and lawman of a given Celtic nation.⁷⁶³ This makes the Arch-Druid similar in stature to a Persian *magupatan magupat*. “One presides over all these Druids, who possesses the supreme authority among them”.⁷⁶⁴ Once he passed away he was replaced by a successor of accomplishment and renown, a situation that might give rise to bloodshed should there be multiple candidates with a claim to the high favour.

Coloured robes delineated the remaining Celtic social classes, making it illegal to wear clothing dipped in dyes reserved for other social groups.⁷⁶⁵ Druidic robes were the colour of white, signifying the colour of purity and wisdom. The main garment consisted of a white shirt or jacket, over which was worn an additional robe slung sideways across the shoulder, draping down the front of the body.⁷⁶⁵ They might also wear a cape with a pointed hood. Around their neck was a necklace or chaplet of clear beads, possibly crystal (termed “glain”). Bards dressed in much the same fashion, though in blue.⁷⁶⁵

Ovates or vates formed the next hierarchical layer beneath druid and bard dressed like both the latter, excepting for green fabric and beads, and a high staff.⁷⁶⁶ In daily matters vates served as scribes and were trained in, and utilized the arts of, astronomy and medicine.⁷⁶⁶

As can be shown in the *Book of Leinster*, internecine warfare drew out into the open the tribal associations and aristocratic patronages permeating druidry. Druids were found amongst the ranks on either side during a conflict.⁷⁶⁸ For sake of an analogy Catholic padres gave the last rites to mortally wounded soldiers on both sides of Omaha beach on D-Day.

The popular druidic name Taliesin is thought to be built from the root words *tal* (the front or forehead) and *lesin* (radiant, glorious and fair).⁷⁶⁹ In Russian the latter word has exactly the same meaning, but is, in other forms, associated with species of ash tree, amongst which is the Rowan tree (a tree greatly prized by the Druidic elite, perhaps even more so than the oak).

Taliesin provides his own slick oral autobiography in epic prose: “It is I who am a diviner and a leading bard, who know every passage of the cave of silence; I shall liberate Elphin from the belly of the stony tower; I am Taliesin, chief of the bards of the west, who will loosen Elphin out of the golden fetter”.⁷⁷⁰ “If you be primary bards to the master of sciences, declare ye mysteries that relate to the inhabitants of the world.”⁷⁷¹

Druidic education

Caesar tells us that “Druids preside over sacred things, have the charge of public and private sacrifices, and explain their religion. To them a great number of youths have recourse for the sake of acquiring instruction, and they are in great honour among them. ... They ... settle all their disputes ... appoint rewards and penalties; and if any private or public person abides not by their decree, they restrain him from the sacrifices. Whoever are so interdicted, are ranked in the number of the impious and wicked; all forsake them”.⁷⁷²

Irish jurisprudence, known as Tara law (after the place of that name) frequently employed 12-person juries. Apostates and criminals were often subjected to excommunication proceedings and, as in medieval Christian times, the banishment was associated with the power of a drawn sword, the power to cleave away the good from the bad, forcing transgressors to live a fugitive lifestyle, where all were duty bound to kill them on sight.⁷⁷³

“Instigated by such advantages, many resort to their school even of their own accord, whilst others are sent by their parents and relations. There they are said to learn thoroughly a great number of verses. On that account, some continue at their education for twenty years. Nor do they deem it lawful to commit those things to writing”.⁷⁷⁴

Not that they lacked a means of writing, for from early times they noted domestic and commercial correspondence using the Ancient Greek alphabet. It was their teachings that they refused to commit to paper, yet another point of concurrence with the Magi who, in Parthian times, wrote most secular tasks in Greek lettering.

They were said to be versed in the sciences. The herbad-like Celtic Vates, who were subordinate to the Druids, allegedly excelled in the craft of the stars, not to mention Geography and mathematics. These subjects, this hidden lore, permitted them an understanding of the “size and shape of the world”.⁷⁷⁵ Another of their specialties was learned scientific astronomy akin to that known throughout Greece, Egypt and the Orient. The Gaulish mercenary Caius Sulpicius calculated a lunar eclipse, and warned the Romans in advance.⁷⁷⁵ Only one wise to mathematics and

planetary orbits could perform such a feat, and let it be sufficient proof of their expertise in performing the requisite computations. As time went by the prohibition against written records seems to have been lifted, thereafter resulting in a flourishing of Druidic literature that was entirely burned to ashes by the general populace at the instigation of St Patrick.⁷⁷⁶

Druidic ritualism

DRUIDS ARE KNOWN TO HAVE WORSHIPPED THE PLANETS

Caesar reveals the names of their gods ... Mercury, Apollo, Mars, Jupiter and Minerva. As an historian it would be difficult to declare with absolute certainty that these divinities were the very same gods worshipped by Romans and Greeks. Caesar might only have been approximating the status and function by using Roman terminologies for the benefit of his readership. Subsequent excavations in Gaulish *Argentomagus* validate his testimony as beyond reproach however, and add oriental divinities into the equation. Some will see these eastern heathen gods as arising from devotions imported into Europe with Roman military converts or foreign auxiliaries brought west to do service for the Empire. Then again they may have been deities peculiar to this Gaulish druidic enclave, and/or certain colleges of Druids from the first.

THE GAULISH GRAND SHRINE OF ARGENTOMAGUS

Druids wielded spiritual powers denied to ordinary mortals.⁷⁷⁷ They were very often recipients of the second sight (known in their tongue as *an dha shealladh*)⁷⁷⁷ which, as was the case with Magian magu power, was inherited through a long line of ancestors. Druids possessed *geasa*, that is compelling words of power that repelled demons and even bound them into service.⁷⁷⁸

DRUIDS HAD SPECIAL POWERS

Druidic ceremonies demanded the participation of three primary officers, namely the head man or *Cadeiriaith*, the lunar representative *Goronwy* who was stationed in the west, and lastly the *Fleidwr Flam* who marked the sun at its meridian strength.⁷⁷⁹ Other lesser initiates assisted them in the performance of ritual acts, including an assistant who sat next to the Principal officiating druid and one who took an active part in the initiation process (the *Ys yw wedydd*).⁷⁷⁹ At other times they performed purificatory baptisms, funeral rites and marriages.

DRUIDS USED INCENSE

In *The Throne of Taliesin* the bard tells us of incense, and myrrh, and aloes, from beyond the sea.⁷⁸⁰ Such a detail might have been Christian except for the variety of incenses which look to be allied to pagan druidic rites.

THEY CELEBRATED SPECIAL CONTESTS IN THE BOYNE VALLEY EACH YEAR

Druidic games and celebrations normally began on August 1 in the region of Tara, characterised by fires and assemblies in the Boyne valley.⁷⁸¹ At such events oral epics recounted tales of the festival's origins in those parts, and the folk's part in honouring the memory of Tailte, a Spanish blue blood married to a Firlbog king that fell at the battle of Magh Tuireadh. That war saw the end of the Firlbolg colony in Ireland. So the Celts saw fit to honour the woman who raised Lug, one of the greatest heroes of Ireland's Tuatha De Danann people.⁷⁸¹

Druidic celebrations persisted after the Christianisation, for a very long time:

THE OLD GATHERINGS CONTINUED WELL INTO CHRISTIAN TIMES

"According to presbytery records of Applecross, dated September 5, 1656, an inquiry was made into a bitter complaint by the parish minister, of certain superstitious practices prevalent on the island of St Mhaolrubh. The worthy cleric reported that the people were accustomed to sacrifice bulls on the 25th day of August, the day dedicated to the Saint. After the sacrifice of the animal there were frequent approaches to the chapel ruins and circulating round them ... those desirous of knowing their future or good fortune in travels, after depositing an offering in the holy well tried to force their head into a hole in a round stone. If successful all was well, but misfortune was sure to follow if the attempt failed. This well was allied to a saint".⁷⁸²

Over preceding centuries wells were connected with druids who had crossed over to the other side, beyond the land of the living, especially those who passed away in close proximity to the water source.⁷⁸³

DRUIDIC ALTARS

Druids had special altars called *cromleac* or *fanleac*, and many were no doubt dedicated to good forces. Yet some of them were capable of procuring curses. This was achieved by walking anti-clockwise around the altar stone (ie; in the opposite direction to the sun) uttering the desired malediction, while holding a fragment of the stone.⁷⁸⁴ It is probably no coincidence that in Gaul, where the druids once brandished enormous power, that the most important pre-Christian temple was the Grand Shrine of *Argentomagus*⁷⁸⁵ (which means "Silver Magus"). The site was used for the ritual slaughter of herd beasts over a very long period, and ultimately destroyed by the Christians. And then there was *Rouen* (formerly called *Rotomagus* ie; "a wheeled Magus"), *Durnomagus* and *Nijmegen* (*Noviomagus* ie; new Magus), all of which were situated in lands populated by the Franks.⁷⁸⁶

Here again many have fallen for a "red herring". Through 20th Century eyes they applied our currently poor

understanding of the term Magus, and perceived that Magus really only ever meant "a sorcerer", when it actually meant just that, a Magus, a priest or priestess of a religion once centred about Iran, but by no means confined to that area.

Then again, druids had a very great deal in common with the Greek pagan gnostic Pythagorean philosophers,⁷⁸⁷ and many similarities to the Hindu Brahmins; that much is known. So perhaps Magian druids were only one segment of the overall druidic population, even more so if the term druid related to the "religious caste" of Celtic society.

In typically Eastern style, the Celts had four main castes, headed by the druids, and the royal warriors named *Riogh*, which stems from the Sanskrit *Rig* ("sun"). In India, where very little changes, Muslim and Christian clergy are loosely considered as part of the Brahmin caste. Although they are not Hindus, such a classification simply serves to signify that they are holy men.

Nevertheless the druidic philosophical outlook may have been formed in the bowels of Parthia, with the result that they espoused an accumulation of Magian, Hindu, Buddhist and pagan gnostic thought. It should be recalled that in the late 3rd Century AD, the Celts (and presumably their druids) invaded the Balkans, especially Greece, where they sacked the Temple of Apollo and the Delphic Oracles (where the power of the Pythonian genius dwelled strongly).⁷⁸⁸ Pagan gnostics are unlikely to have demolished holy sites of this significance, and so we have cause to equate aspects of Celtic paganism with a conglomeration of oriental faiths, probably Magianism. Their race migrated westward into Europe, eventually ending up in Gaul and Ireland - new lands for an old people. It is perhaps on account of this that the Celts knew philosophies similar to those of the ancient Greeks. Perhaps the Celts first learned of the existence of Ireland from the Greeks (whose astronomer scientists were allegedly visiting there perhaps as early as 400 BC) and decided to settle there. Other Celts peopled the east, serving as mercenaries in Syria, Asia Minor and Alexandrian Egypt.

The druidic religion was connected with the Far-East from earliest times. There was a holy oak situated in Galatia (Turkey) where Celtic leaders met every year, a pivotal gathering attended by a council of 12 leaders and several hundred figures delegated to participate.⁷⁸⁹ Yes, they came to Turkey from as far away as Ireland. Two locations in Olden Rus' carry the title Galicia, perhaps indicating that they were locales linked with Galatia, and hence with druids. Druids wielded ultimate power over the masses in Ireland, and at the same time their unquestionable authority was recognised as far away as Carthage and Asia Minor.⁷⁹⁰ Druids voyaged across many warring Irish counties free of molestation, healed disputation between foreign kings, and could journey to regions as remote as the Ukraine with little trouble.⁷⁹¹

On the other hand there are only two recorded instances in which druids were mentioned as living gods. This does not necessarily mean that druids weren't seen as living gods by their underlings. Only a few surviving historical references made it through from that period.

With the passage of years I am even more convinced that Druidry was a religious caste. There are so many divergent testimonies about the names of their gods that it is impossible to assign them a single orthodox tradition that remains universal for druidry as a whole.

Omophagia was probably known to certain druids, for anecdotes portray them eating raw flesh. We hear of a peculiar rite in the *Banquet of Dun n n-Gedh* "The poet chews a piece of flesh of a red pig, or of a dog or cat, and brings it afterwards on a flag behind the door and chants an incantation upon it, and offers it to idol gods; and his idol gods are brought to him".⁷⁹² Other races masticated raw horse meat, such the Hippophagi 'horse eaters' of Hyperborea.

The *Lugnassadh Eured Lug* introduces a supreme being hardly similar to Zeus, and more akin to Ahura Mazda or Horus. Perhaps it indicates yet another substrata of Celtic worship, different from the equally archaic Greek and Indo-European elements.

*"The Eye of the Great God ...
The eye of the King of the living
Pouring upon us at each time and season
Pouring upon us gently and generously
Glory to thee, Thou glorious sun
Glory to thee, thou Sun, Face of the God of Life".⁷⁹³*

Such a being is a far cry from the subterranean Pluto sometimes mentioned in relation to druidic devotions, or to the Bacchic *omophagia* and Pan-worship of Dionysianism.

As a rule Roman Christian writers do not launch into invective when discussing Druids, as their intercourse appears to have been rather cosy and congenial, leading to an inherited culture of druidical teaching inside the Christianity espoused by Gaels of the British Isles, whether Scotsmen, Welsh or Irish.⁷³⁴ This if nothing else highlights the relative closeness of the two religious streams which, for a time, shared the same breathing space. In Ireland the term *Caillach* seems to have applied to by *Ban-Draoi* and Christian nuns without diffidence.⁷³⁵

Siberian and Asiatic Magi

MAGIANS INTERACTED WITH THE BUDDHISTS THROUGHOUT EURASIA

Magianism and shamanism (esp. Bon and Buddhism) share a number of common features, and these allow one to make inferences of vital significance, not the least of which is an admission that the two were somehow factually related to each other.

Clear evidence of this synthesis is found in *Qormusta* (ie, *Ahura Mazda*), the lord of the Tengri celestial divinities known to the Mongols, and the originator of heavenly fire.⁷³⁶ It is said that he threw his eternal foe, *Erlik Khan*, from heaven, imprisoning him in the underworld. During the end times, *Erlik Khan* would bring the onset of chaos and calamity, by emerging from this prison in company with iron hell-riders to lay waste to the world. Neither *Qormusta* nor the Buddhists will be able to defeat him. As you will see in the following schematic, the form of Mazdaism known in Eurasia seems drawn from Zurvanism. Alternatively *Qormusta* was simply plugged into their pantheon,^{736a} becoming for all intents and purposes a Persian module subsumed into a growing accumulation of Bon and Buddhist traditions.

It is difficult to date, with any certainty, the time frame for shamanism's assimilation of dualistic Iranian beliefs and practices, or indeed whether they had always been present since prehistoric times. What we do know is where it happened: Eurasia and Central Asia, and to this I will add European Russia. For this reason Magi came to be known by less-Persian terminologies in Central Asia and the European fringes;

Fig 38.1.

Estonian	<i>Volu</i>	"a witch" ⁷³⁷
Slovenian	<i>Vollva</i>	"a fortune-teller" ⁷³⁷
Old Norse	<i>Volva</i>	"a sibyl, witch, prophetess"
Old Irish	<i>Draoi</i>	"a Magus", "a druid"
Turkic	<i>Buyu</i>	"spell, magic"
Turkic	<i>Buyucu</i>	"magician, sorcerer"
<i>Rasdi</i>	Rasdis were asiatic shamanic white Priests. If Rasdi was derived from Raspi (a white Zoroastrian priest.) then this kind of shaman was an ancestor of Magi who had fled Iran into shamanic territories to escape persecution at the hands of Muslims.	

The intermarriage of dualism and shamanism might have originated in that blurred epoch when prehistoric animism evolved into formal pagan religion. *Magu* (the Magian spiritual power) might thus have been a form of shamanic ecstasy. However, dualistic animism is not universal to shamanism, and mainly confined to the Urals and Siberia.⁷⁹⁸ Because of the close geographical proximity of this area to Iran, the Iranians are the obvious source of their dualism, especially when one considers the substantial level of Iranian linguistic material found among not only the Finno-Ugrians, but the Mongols⁷⁹⁹ (which of itself intimates Indo-Iranian cultural ties with the Mongol shamans).

The most archaic Buddhist temples paradoxically prove to be the most exquisitely executed of all, hewn from immortal substances like granite. Outwardly they replicated the forms of local Indian temples (of wooden construction), but strangely show the influence of Iranian stoneworkmen.⁸⁰⁰ These particular masons probably built the temples for the Buddhists in the first place, or, at the very least, were responsible for introducing their construction techniques into the Buddhist religious community.

In spite of this it is still possible to assert that Indo-Iranian religion originally had shamanic roots. Perhaps *Magu*, the magical ecstasy of the Magi, was derived from the shamanic ecstasies of antiquity, but differed from primordial shamanism in that it had accumulated around it a formally codified religion complete with its own holy texts and mystical regime.

Darker aspects of the craft radiated out from Mesopotamia. Based on a whole host of Neo-Assyrian wall inscriptions, and the discovery of goat skulls, and the wings of noble birds and buzzards at Zawi Chemi Shanidar (which are datable to 10-9,000 BC), archaeologists have inferred that certain Babylonians and Assyrians were dressing in ritual costumes which allowed the wearer to appear as an anthropomorphic winged-goat entity.⁸⁰¹ Such imagery might have represented a demi-human deity or spirit, or may even have been a very early Assyrian-style portrayal of *Ahriman*, and a range of other very powerful demons. This might lead one to suspect that mankind's earliest organised religion (that of the Babylonians) was a direct outgrowth of prehistoric shamanism, a form of (radical dualistic) animism which they would later implant into their progenitor over millennia, as cultural ties between adherents to shamanism and Iranian religiosity were upheld.

But then again, *Magu* may have constituted a separate form of ecstasy, closely related to that of the shamans, and which came to have an influence on shamanism, owing to a vigorous insemination of Magian beliefs. This seems all the more certain considering shamanism was modified by a range of southern customs and beliefs, especially from Iran.⁸⁰² The birth of dualistic animism might be traceable to the centuries following the Islamic conquests of Central Asia, which obliterated Magian culture and presumably smashed into oblivion the Central Patriarchate of Khvaniras, the Northern Patriarchate of Vorobarst, the Eastern Patriarchate of Savah, and the southern one of Fradadafsh. Large bands of roving Magian inhabitants inevitably cascaded into the surrounding countries, where Muslims had not ventured at that point in time.

Bon and Buddhism are subjects so vast that I could not possibly hope to fully incorporate them into this work. We will begin by examining the Tibetan experience in a search for clues to Iranian influences. Tibet was repeatedly immersed in foreign religious and sacramental traditions. In its earliest transformation Tibetan tribesmen drifted from prehistoric animism into the welcoming arms of Bon shamanism, under the influence of the Bonpos (Bon shamans).⁸⁰³ The new religious trend was not of Indian or Chinese origin. According to legend it was imported from Tazig (possibly Tadhikistan in Central Asia, a region geographically close to Iran) by an ascetical high priest called Tonpa Shenrap who was seen as a god in this world and the next.⁸⁰³ He didn't come to convert the area, simply recover his horses from a greedy, thieving demon. This could be a potential and significant point of entry for the Mazdean traditions, but by no means the only point of exposure. After all the Eurasian Scythians (who were members of the Achaemenid Persian federation almost a thousand years previously), and their eastern descendants the Hunns, were long exposed to Magianism. These barbarians practically owned large tracts of inner and outer Eurasia.

Bon shamanism included a range of nominally shamanistic observances, but also required the worship of kings as divine beings presently ruling in the material world; the sons of heaven.⁸⁰⁴ Unlike typical steppe shamans, the Bonpos formed the nucleus of a royal priesthood, charged with tending the kings needs in this life and the next.⁸⁰⁴

Bon was a major deviation from Hinduism and Buddhism (and their cyclic reincarnations) in that they perceived a post-mortem judgement of souls who lived on in a spiritual world beyond ours.⁸⁰⁵ Death was an event horizon, a crossing over. Once there souls continued to watch over earthly relatives.

The next major development was the conversion of Tibetan King Songsten Gampo, who adopted Buddhism in the 7th Century AD, in preference to Bon. Abandoning Bon caused a spectacular rift with local Tibetan tribesmen

Fig 39.1 and 39.2 Mesopotamian reliefs often show men dressed as animals.

and aristocracy.⁸⁰⁶ Buddhist monks of Nepalese and Chinese extraction were finding their way into the royal court at Lhasa from 763 AD onwards, no doubt upsetting regional power-sharing arrangements in secular and religious matters.⁸⁰⁶ Culture shock set in as Bon shamanic priests were shunted from society, forced to migrate west.⁸⁰⁶ The new priesthood began re-organising Tibetan society more along the lines of technologically superior China and India. The land now acquired a thriving Buddhist intellectual culture. With it came all the trappings one associates with civilised advancement, in particular a new written script, novel juridical precepts, nifty scientific arts, crafts and the like. Buddhism radically changed the nature of the Tibetan kingship and its allegiance to Bon.⁸⁰⁶ Now the king was an incarnation of Tibet' patron spirit Avalokitesvara.⁸⁰⁶

Buddhism is a heavily gnosticised and highly evolved form of shamanism, where through meditation and spiritual enlightenment adepts and laity alike hope to escape earthly reincarnation and its many woes, by spiritually merging with the divine.⁸⁰⁷ In Tibet, under the new order, it took the form of diamond-path Buddhism.⁸⁰⁷ The greatest exponents of this path to enlightenment were the Bodhisattva, or saints. The most venerated of all these was the Buddha, who in earthly form appeared as the Nepalese Shakyas king Suddhodana famed for renouncing many aspects of the material world in favour of the spiritual.⁸⁰⁷ Escaping reincarnation was only possible by attaining Nirvana, the previously-mentioned mystical state desired by all Buddhists, divorced from all the cares of material existence.

The crucial showdown between Buddhism and Bon took place in the year 762 AD, during the reign of King Trisong Detsen (reigned 755-815).⁸⁰⁸ While Buddhism had introduced many novel improvements to the Tibetan gentry, things were not going well for Buddhism in the mind of common folk. Ill omens gripped the land, inauspicious happenings many attributed to the denigration of Bon shamanism.⁸⁰⁸ Curses. By some coincidence the grim signs coincided with the arrival of a new Indian priest at Lhasa. The very moment he entered the king's court to organise Buddhist affairs, the demons of the land became wrath.⁸⁰⁸ Within a short time he was driven from Tibet, widely regarded as the cause of the calamities. So to reverse the failed season the wizard Padmasambhava, one knowledgeable in necromancy (a known practioner of child sacrifice), was called in from India, to fight the demons laying waste to the earth.⁸⁰⁸ He was very powerful, so mighty that even the king bowed before him. In effect he was there to exorcise Tibet, not only of its demons, but Bon shamanism. The old faith was just about to be demonised.

Samye was chosen as the site for the first monastery and temple.⁸⁰⁹ The project was plagued by difficulties; structural damage and shortages of building materials predominantly. Once Padmasambhava had expelled or enslaved the region's resident demons (the klu) and spirits by exorcisms and peace offerings (valuables tossed into the nearby lake) things died down marginally.⁸⁰⁹ He could now commence constructing the new holy place, which he dedicated to the Aryan vedic gods Indra (the demon-fighting champion and war god) and Brahma (the creator), both of whom were traditionally venerated by Hindus.⁸⁰⁹ According to lore the super-exorcist press-ganged the entire area's unspiritual denizens into his service for the purpose of using them to build the monastery during the hours of darkness.⁸⁰⁹

Simmering animosity between Bon and Buddhism resulted in 150 years of internecine conflict and tit for tat killings of royalty and other notables.⁸¹⁰ Repression of the former culminated in the slaying of a reigning monarch Ralpacan, the son and successor of King Tritsug Detsen.⁸¹⁰ Owing to strong grass roots support for Bon, devotees of the new school of Tibetan Buddhism were left with no other option but to retain many Bon traditions and rituals.⁸¹⁰ The new way was merely superimposed on the old in a number of respects.

Indo-Iranians and the people of Mesopotamia are regarded as having played an immense role in the formulation of the more formalised shamanic beliefs, not only in Siberia, but Central Asia.⁸¹¹ For instance, Pre-Buddhist Tunguskans believed in Buga as their supreme god, a deity whose very name is certainly derived from the Iranian Baga (god), and thus similar to the Slavic word Bog (god).⁸¹² These tribes had their own shamanistic sacrificial priests who performed rites for the appeasement of Buga, but interestingly their prehistoric shamanistic counterparts did not pay homage to Buga.⁸¹² Therefore, two strains of shamanism existed side by side in the Tunguska region. The shamans of the heavily dualistic Iranianised variant were probably hereditary, as was the tradition among the Magi.⁸¹²

As with the Magus-Kings, the great khans were sons of heaven; gods no less. In the pastoralist communities of Central Asia, Magian holy sites took the form of tents.⁸¹³ In the case of the asiatic shamanic traditions, the domed yurt tents represented cosmological features. The roof was the vault of heaven, the central support post, the pillar-axis that supports heaven.⁸¹³ In the middle of the tent stood a nine-step birch ladder that reached up through the

smoke-hole, the heavenly aperture. By ascending the ladder the shaman exited the aperture, his soul flying skyward into the celestial region.⁸¹³ Shamans made their spiritual journeys to the underworld in like manner.⁸¹⁴

These customs inevitably seeped over the Urals into Russia, with the Finno-Ugrians. One curious facet of Finnish shamanism is that it was, by and large, hereditary, which is a substantial deviation from the normal means by which shamanic power was acquired.⁸¹⁵ Lapps, Votyak Finns and the Ostyaks held that shamanism could only be inherited by birthright, however the shamanic vocation only became active at the behest of the Greatest Supreme God.⁸¹⁵ In other words if you did not come from specific bloodlines, you could never enter states of shamanic ecstasy. However full blown mystical shamanism would not develop in every member of that family line, but only in those whose calling had been signalled and actuated by omens from the omnipotent god.⁸¹⁵

Considering druids allegedly originated in the east, and met frequently in Galatia, Turkey, it is no small coincidence that Eurasian shamans and the druids possessed a dualistic cosmological view. Both believed in the existence of an inverted tree of life (eg; Seahenge), which in both cases grew upside down, with its roots planted in the heavens and whose trunk and foliage worked their way down into the underworld.⁸¹⁶ This is, to my mind, fairly conclusive evidence for a “Tree of Death” which belonged to the counterworld, and which was the topsy-turvy opposite of the “Tree of Life”. This mystical teaching is also reminiscent of the Kabbalistic Jewish tree of death, so it must have been of some antiquity. Bear in mind also that the Celts marked the progress of time, not by the passing of days, but the passing of nights. Thus to them, sunset was the beginning of each new day, not sunrise.⁸¹⁶

The Buryat tribes of the Urals, like the dualistic Magi, also professed that the cosmos was a war zone between two groups of opposing factions of gods, one white and the other black, one good the other evil.⁸¹⁷ These deities resided in three respective cosmic zones; the celestial realm, the underworld, and this world (the place where a mixing of the two forces occurs).⁸¹⁷

Magian similarities exist even further eastward, among the Mongols. The supreme god of the Mongols was not given direct worship by the masses; instead, idols subordinate to him received homage.⁸¹⁸ These were not made of wood, but from felt, silk or stuffed hides.⁸¹⁸ Mongols bowed to the south in adoration of these idols, and offered them the hearts of beasts sacrificed to them, which were later eaten.⁸¹⁸ Any form of disrespect to the idols was punishable by death. A captured Russian Christian prince was threatened with martyrdom for refusing to prostrate himself in front of the Mongol idols. For this transgression the outraged Mongols wished to execute him by kicking him in the heart, but thought it better to slit open his throat from ear to ear.⁸¹⁸

The *Tatar Relation* states that the Mongols believed that their armies and their religion would be destroyed by the Christians, and that whosoever remained after that battle, would convert to the faith of the area in which they settled.⁸¹⁹ A variety of other superstitions were recollected by the friars, including the importance of killing those who had touched the wagon in which their idols rested, or spat food on the ground, or spilled milk deliberately, or defiled their hut.⁸¹⁹ The pollution of one’s living quarters could only be alleviated through employing a magician who understood the way to cleanse the location.⁸¹⁹ Such a magician might have been a Magian cleanser, or similar.

Mongols advocated that a man should take the wife of his brother, if he had been killed.⁸¹⁹ This custom was of course similar to that of the Magi, and forbidden by the Church. Mongols were not however endogamous. Crime, adultery and rebellion were punishable by execution.⁸²⁰ Such beliefs closely resemble facets of Magian scripture.

Despite this the Magi might also have been a powerful Iranian off-shoot of the Aryan/Indo-European brahmanic priestly caste, that resulted from a past religious schism concerning the *daevas*. Like the Brahmin priestly caste the Magi were supposed to have considered themselves Aryans⁸²¹ as is stated in the Pahlavi texts and the notes of Herodotus.

The Magian priesthood, which claimed direct descendancy from King Mingoichir and the Kayan kings,⁸²² attained full religious hegemony in Persia (Iran) through successful power-plays under Cyrus the Great, and brought about the transformation of traditional Zoroastrianism, by incorporating the lofty philosophical beliefs and ritual customs of the Medean Magi.⁸²³ It should be stated at this point that the Medean Magi were not linked to the bloodline of Zoroaster’s Zoroastrian priesthood. As I have mentioned so far, these Magus priests penetrated Zoroaster’s white priesthood and in time turned infant Zoroastrianism into a religion based on the Zurvanite trinity, which held as its main deity the etherically unknowable time god of the Medean astronomers (who ruled over a white son, a black son, and all creation), plus an aggregate of Aryan gods, including the *daeua* Indra.

Finns living near the Volga and the Urals seem to have had some knowledge of the Rus’ and Bulgar Magi also. These Finns of the Mordva tribe (who were known to have partaken of raw flesh feasts) were noticeably different

from some other revered inhabitants of the area, who roasted their meat. These folk the Finns called *Mos-chum*; the men who were as gods,⁸²⁴ a race of wizards who lived under ground. References to the *Mos-chum* might be allusions to Magian interaction in an intrinsically shamanistic environment, leaving behind the seeds of their venerable culture, in the form of dualistic animism.

Perhaps these wizards were the same as those encountered by Mongols somewhere near northern Russia, who went beneath the earth to escape the light and sound of the sun. There they supposedly played music and made merry until after sunset.⁸²⁵ Strange behaviour for people living in an Arctic wasteland where nothing grows, wouldn't you say? You'd think they'd be only too happy to feel the warm glow of the sun, but they weren't; they hid from it. Drawing on Magian scripture, these northern wizards may have been the so-called apostles of evil.

Volkhov - The Russian Magi

The Mediaeval Persian poet Khaqani (a Muslim) admits that the pagan Russians were Magians, by calling the Russian people Simurgs, that is, worshippers of Simurg,⁸²⁶ the fertility-bringing, bird-like god of the Magi - the Griffon-bird, otherwise known as the bat, or indeed vulture. While some have been tempted to attribute Russian Simurg-worship to an informal absorption of Sarmatian Iranian customs by the Slavs, this avenue is blocked by the fact that the Russes had a coherent pagan priesthood in Mediaeval Russia, which may have resembled that of the Wendish *Flamens* (fire-priests).

RUSSIANS WERE TERMED
SIMURGS, AFTER SIMURG,
THE MAGI'S FERTILITY
GOD

In the Russian language the word *Volkhv* (a Russian pagan priest) is directly translatable as "a Magus" rather than "a sorcerer".⁸²⁷ Sorcerers were only petty magicians when compared with the awesome supernatural might of the Magi. The female form of *Volkhv* was *Volkhva*, a Magian priestess. I personally believe it comes from the Pahlavi Persian *uaxw* ('a Lord').

RUSSIAN MAGI WERE
CALLED VOLKHYVY

Volkhv is also found in Russian translations of the New Testament, when referring to the Three Wise Kings, the Magi enunciated in the *Book of Matthew*.⁸²⁸ The oldest of the original Ancient Greek Gospel manuscripts uses the term *Magos*.

MAGI VISITED BABY JESUS
IN THE NEW TESTAMENT

Variants of the term *Volkhv* are also found in the Bulgarian, Slovenian, Finnish and Estonian tongues, meaning "a magician", "a fortune-teller", "a Magus" and "a witch" respectively.⁸²⁹ This suggests that *Volkhv* were known in the Balkans, Central Europe, the Baltic and Finland also. There were among the *Volkhv*, magicians of varied special ranks,⁸³⁰ sorcerers and sacrificers who performed the ordinances of the pagan ritual order. In this we find hints that they belonged to an organised form of paganism, a religion. It was probably very elaborate, for they were literate, and possessed their own learned culture. In olden folklore the *Volkhv* were astronomer-astrologers, wise men, sorcerers, and custodians for the "black books".⁸³¹ These tomes contained legal procedures and text, spells, and ancient written lore, including ancestral epic legends.⁸³² Succinctly, the Russian heathen priesthood acted as guardians for ancient pagan knowledge and wisdom, and were possessors of special powers; just as the Magi were.

Since the Russian *Volkhv* were supposed to have been Magi, they were by inference a unique brahminic-style priesthood, one born from the Aryan traditions, but which came to differ from the brahmanic priestly lines because their blood was of royal Magian extraction (and consequently traceable to King Mingochir or Manuskihar). So, like the Magi, the *Volkhv* priesthood could only be entered by selected individuals possessing the blood inheritance of the Magi, which had been perpetuated by next-of-kin marriage throughout that same line of ancestors. It was they who performed a different range of arcane ordinances and magic born long ago in Medea. They owned amazing knowledge which, like the Brahmins, they held as their domain alone, by birthright. To "know and rule" was their niche in life, just as others came into the world to push a plough, or to fight. With esteemed learning, they became masters of warriors and serfs. Under them, the pagan Rus' had as their "state-religion" the rites of the Magi, those who wielded planets and nations.

The Mediaeval Muslim chronicler Al-Nadim stated that in pagan times learning was the preserved domain of the sages. The right of an individual to be accepted for training as a sage was determined by the nature of their natal horoscope, which had to display celestial portends of their future intelligence.⁸³³ This is of course a reference to the selection of pagan Gnostic priests. Although Magi were required to have the requisite bloodline before they could undertake priestly training, it is nonetheless plausible that an auspicious horoscope would have aided one's chances of acceptance.

An uncertain number of *Volkhv* were connected with the Russian princes.⁸³⁴ As a matter of fact some Rus'

royals were themselves recorded as having a *Volkhvry* bloodline, as for instance the mother of Vseslav of Polotsk.⁸³⁴

Magu, the spiritual power possessed by the Magian line was probably known in Olden Rus'. In Russia, a land once ruled by the *Volkhvry* Magi, the word for "powerful" and "mighty" is *moguchiy* (pronounced maguchiy). Predictably *Magu* forms part of the root word, phonetically speaking. Together with the Finnish *Volkhvry* shamans, the Rus' *Volkhvry* were renowned for their ability to enter an ecstatic trance that allowed them to gain supernatural knowledge of things to come, of matters that concerned their followers.⁸³⁵ So tried and true were their mystical abilities that the people placed every faith in their prophetic utterances and spiritual guidance.⁸³⁵

A similar connection with power and divinity is found in the Old Icelandic *megn* (noun. "strength") and *megn* (adj. "strong" or "mighty"), as well as *megin-hyggja* ("wisdom").⁸³⁶ This power was manifest magically in certain runes, the *megin-runar* ("the mighty or powerful runes").⁸³⁶ Then there was *magnast* ("to increase in power"), *magn* ("strength" or "power") and *magna* ("to charm", "to make strong by magic").⁸³⁷ We also find the terms *as-megin* "the strength of the gods",⁸³⁸ *as-megir* "the sons of the gods",⁸³⁸ and *goth-borinn* ("born of the gods").⁸³⁹ Such terms may once have applied to the Magus-priests of the Norse *Al-Madjus*.

Some experts on European witchcraft believe there are significant similarities between European and African witchcraft.⁸⁴⁰ North African warlocks gained their powers from a mystical ability known as *mangu*. It is tempting to perceive any likeness between *magu* and *mangu* as purely coincidental. Yet the Magi frequented certain parts of northern and north-east Africa looking for balsams, frankincense and other vital aromas required by their ritual ordinances. Perhaps through their agency native Africans came to inherit *Magu*, by interbreeding with them. That is not to say that such a union was holy in Orthodox Zoroastrian opinion. In fact Magian scripture speaks of negroids as belonging to the dark side. Not only was their skin black, but they were skilled in black magic, owing to their alleged origin in the sexual union of a demon and a wicked witch (a priestess skilled in black magic). Hence the origin of the Old Icelandic term *heljar-skinn* ("negroid" or "dark-skinned", literally "hell-skin" or the "skin of the damned"). See endnote 450 for a more in depth discussion on this racial epithet.

Entourages of Russian *Volkhvry* served their respective lieges in a variety of governmental and administrative roles.⁸⁴¹ An excellent parallel is found in the Magi, for they aided the Persian kings by scrupulously attending to matters of law. They versed the people in it, and passed sentence on oath-breakers, criminals and the like. As judge, jury and executioner it was their duty to consummate the dictates of law by carrying out the floggings and executions in person. Being sagacious, Magi formed the nucleus of a king's advisory committee. Thousands of kilometres away, and in an earlier period, we hear of many "round-eyed" *Myag* at the Chinese Imperial court.⁸⁴²

Following his journey through Rus' Ibn Rusta (an Arab geographers travelling in pagan Rus') commented that the pagan Rus' Slavs were ruled by priests (Doctors) who the Slavs deemed to be living gods and judges, whose decrees were simply not to be questioned.⁸⁴³ If a *Volkhvry* requested that such and such a sacrificial offering be made, it had to be given; irrespective of a person's wishes. These living gifts were then sacrificed on a hanging tree. In ancient Persia, it was the Magi who performed such hanging sacrifices.⁸⁴⁴ Looking for the closest possible historical precursor for pagan Rus' religion it is difficult to go past the Magi, or even the pagan gnostic philosophers and Chaldean sorcerers, in some respects.

From *Volkhvry*, the words *volshbstvo* ("magic"), *volshbenik* ("a wizard" or "a sorcerer"), *volshbenitsa* ("a sorceress"), and *volos* ("hair") are derived.⁸⁴⁵

The Estonians used another word when denoting "a magician" (*maag*). The Russian equivalent to the Estonian *maag* was *mag*, which also meant "a magician or wizard". The Russian terms *ved'ma* ("witch"), *koldun* ("sorcerer") and *volkhvry* ("Magus") illustrate three specific classes of magician in Russia,⁸⁴⁶ but an improper usage of these words can sometimes make it difficult to distinguish between the three within a given text. This is something that a researcher must be mindful of at all times. The same can be said for the Estonians. The Estonian term *noiakunst* meant "magic", or literally the arts of the *Noid* ("sorcerers"). Once again a distinction is made between magic and sorcery, a distinction found not only in Russia, but across most of Europe. More specifically *noikumst* is derived from *Noid*, which in Estonian means "a sorcerer" rather than *maag* (an Estonian term for "a magician"). *Noid* is cognate with *noai'di*, meaning "a Lappish shaman".⁸⁴⁷ Thus *noidkunst* was related to Lappish sorcery and shamanism, not the arts of the Magi.

Mag and *Maag* undeniably emanated from the Old Persian word *Magus*, which applied to the priestly class of the Magi, and more specifically the Sassanian term *Mog*, used from the 3rd Century AD onwards to describe their Orthodox Zoroastrian Magi. Magus penetrated into Greek (*Magos*), Latin (*Magus*), Arabic (*Al-Madjus*) and German

NOID

SHAMANISM

MOG (*magishch*).⁸⁴⁸ In some cases the term was no doubt deemed applicable to any given sorcerer. And yet there are a great many instances where it is used in what could conceivably be, its proper context. For instance in mediaeval Western Europe, blood Magi are spoken of by name, often in connection with the royal houses, especially those of the Franks.⁸⁴⁹ In other words Magi of a certain bloodline were frequently found in royal company.

Considering that the Hungarians were known as Magyar (pronounced Major), their word *magerka* (a white felt hat) might be related to Magianism, given that the white Magi wore tall white mitres. This is more than reasonable considering the Khorezmian ancestry of the Hungarian Arpad dynasty and their heathen Magyar bonfire priests, who went by the name *Magoch Magus*, an unswerving reference to Hungarian Magian fire-priests.

In the mediaeval Russian *Primary Chronicle* it mentions that the pagan priests which Oleg “the Sage” consulted were of two varieties; *volkhvy* and *kudesniki*.⁸⁵⁰ The words *Volkhv* (masculine singular), *Volkhva* (feminine singular) and *Volkhvy* (plural) translate directly as “Magus”. Now if they were Magi then theoretically they must have been one of the historically known classes of Magi. So we must look for further evidence of the Magi who worshiped the Iranian deities if we are to validate the picture so far emerging. We will now examine a variety of information which enables us to make this identification.

VOLHVY AND WOLVES

Despite the fact that *Volkhv* cannot be derived from the Russian word *volk* (“wolf”), based on our current understanding of morphological change in the Russian language, there was more than likely a connection between the two words, for the *Volkhvy* could reputedly turn into wolves. Consider the following terms, all of which mean “a wolf” - *vl'k* (Old Russian and Bulgarian), *volk* (Slovenian), *vik* (Serbo-Croat), *vlk* (Czech), *vilk* (Polish), *vilkas* (Lithuanian), *vilks* (Latvian), *wulfs* (Gothic), *varkas* (Old Indian), *vargr* (Old Norse) and *varga* (Avestan).⁸⁵¹ *Volkhv* might also be linked with the Hittite (*ualhi*) and the Etruscan (*velkh*), words meaning “to hit or strike someone or something”.⁸⁵¹ This last analogy might have some substance when you consider that Magi often bludgeoned their sacrificial offerings with a cudgel, and inflicted penitential scourgings on the unworthy.

And then we have a broad selection of common pan-Slavic words meaning “a werewolf” (*volkolaka* (Russian), *voolak* (Ukrainian), *v'rkolak* (Bulgarian), *vikodlak* (Serbo-Croat), *volkodla* (Slovenian), and *wilkolak* (Polish)).⁸⁵¹

These terms applied to men who could adopt the shape and mannerisms of a wolf. According to Professor Ginzburg many European werewolves fought against demons, on behalf of creation and the fertility of the fields. The wolf-folk repeatedly featured in Russian folklore from the Middle Ages right through to the 19th Century, and the *Volkhvy* were widely implicated as wolfmen.⁸⁵² *Volkhvy* sometimes gathered in their own small societal groups, leaving homes and families, and heading out into the forests in wolf form, to run with the pack.⁸⁵³ In the Tul' region, one tradition has it that they transformed into wolves for a full seven year period. But they could also change shape at certain crucial moments in their lifetime.⁸⁵³ At other times it was for the duration of a curse placed upon them by enemy sorcerers.⁸⁵³ Generally speaking though, Rus' *Volkhvy* inherited their shape-changing ability from ancestors past, who were themselves sorcerers.⁸⁵³ The notion of hereditary lycanthropy (Russian: *oborotnichestvo*) was so integral to Russian lore about werewolves that they were seen as a specific breed of humanity.⁸⁵⁴ Wearing wolf-skins was a known feature of Russian shape-changing,⁸⁵⁵ and this, doubtless to say, facilitated the *Volkhv*'s transformation, taking them beyond the realms of a simply spiritual state. Appropriately attired, they had become physically transformed into wolves, in real life. The factual existence of such garments is confirmed by the Polish word *vil'chura* (“a wolf-skin coat”).⁸⁵⁶

LYCANTHROPY

The word *Volkhv* also appears to be connected with the Russian term *volshbstvo* (meaning “magic”). This interrelationship between the word for “wolf” and the word for “magic” might even signify that the *Volkhvy* Magi were practitioners of the dreaded wolf sacrifice first detailed by Plutarch; the ultimate ceremonial invocation of the infernal, which was recorded in antiquity as having been performed by the Zurvanite Magi. If this was the case then the word *volshbstvo* might indicate that the *Volkhvy* practiced “wolf magic”.⁸⁵⁷

So we have Magus sorcerers who were connected with both wolves and magic. In an attempt to unravel the true nature of the Slav pagan priests we must then turn to Magian scripture, for it is here in *Bundahishn* that we hear of demon-creatures akin to *khrafstras*, the “wolf-species”, which incorporated every breed of cat, including the lion, and certain men.⁸⁵⁸ In the *Zend-Avesta* and the Pahlavi texts there are a number of references to two-legged wolves, princes, idolators and sacrificers, long situated near the Zoroastrian heartlands; “demons with dishevelled hair”, the “men of iron”, “servants of the infuriate spear”. Later in this book we will examine the contents of *Bahman Yast III*, a Zoroastrian text which gives us a very clear description of a nation of people who practiced the ancient art of devil-worship. In these references we find compelling evidence that a certain proportion of the Rus' *Volkhvy* may in fact have been the same two-legged wolves and sacrificers mentioned in the Persian texts. If this is so then we might

BUNDAHISHN SPEAKS OF THE WOLF-SPECIES, INCLUDING WOLFISH MEN

associate the *Volkhv* with the Medean/Zurvanite Magi found in classical texts. On the strength of evidence certain *Volkhv* were black magicians, evil by name and by nature.

The dark arts certainly seem to have found their way into Eastern Europe. What Helmold mentioned about Wendish (Western Slav) paganism hints at dualistic doctrines and the accompanying ceremonies. They offered a libation to the god of goodness, and the demon responsible for misfortune;

THE DARK ART

*"The Slavs, too, have a strange delusion. At their feasts and carousals they pass about a bowl over which they utter words, I should say of consecration but of execration, in the name of the gods - of the good one, as well as of the bad one - professing that all propitious fortune is arranged by the good god, adverse, by the bad god. Hence, also, in their language they call the bad god Diabol, or Zcerneboch, that is, the black god."*⁸⁵⁹

The black Magianism of the devil-worshippers might have penetrated rather deeply into Europe. The white Magi spoke of the "vexation owing to various degrees of promise-breaking".⁸⁶⁰ By breaking solemn oaths, one could perform unhallowed witchcraft; evil, maelific magic. And it is here that we discover the nature and psychology of the European warlock. The English word "warlock" originated from the Old High German words *wærloga* or *wærlogan* during the Middle Ages. These words meant "to lie", "to betray", or "one given to performing black magic". In England this became *wærloga* (Old English), and *warloghe* or *warlach* (Middle English), meaning "one that breaks faith", "a scoundrel", or "a devil".⁸⁶¹ Thus we might suspect that quite apart from their use of harm magic, that warlocks were also involved in crime, covenant breaking and most likely devil worship. Once again we find a major parallel between the doctrines of the Magi and the beliefs of European witches. The warlocks probably emulated the impropriety of *Ahriman* and *Chernobog*, the 'Father of Evil and Lies'.

RITUAL LIBATIONS
EQUALLY FOR GOD AND
THE DEVIL

WARLOCKS

The Old High German words *wærloga* or *wærlogan* might be in turn be related to the Slavic word *volokh*.⁸⁶² *Volokh* denoted a Rumanian of the *Volokhi* tribe that resided near Transylvania, in a region which later came to be known as Wallachia (just near Bohemia). This tribal name is perhaps linked with the term *volokha* which means "a shirt" or "an animal hide".⁸⁶³ Could it be that the Slav *Volkhv* were *volokhi* warlocks that dressed in animal hides, perhaps a wolf (volk) pelt?

Some linguists doubt a relationship between the Old Icelandic term *Volthva* (later *Volva*) and the Russian words *Volkhv* or *Volkhva*. I, on the other hand, believe the phonetic similarity is of a sufficiently high order to consider a connection between the pagan Russian prophetesses and the Norse *Volva* who were portrayed as sybilline prophetesses and witches in the Sagas.

The heathen Norsemen associated wolves with murderers. Their *hel* was home to such miscreants, a "sunless" place where wolves gnawed at the bodies of the damned;

*"I saw a sunless hall, North-facing on a dead man's strand,
A poison-dripping roof above, a wall of worming snakes all round;
There waded through its marshy wastes wolf-like and murdering men;
There Nithogg suckled on damned flesh, the wolf gnawed human flesh: need you know more?"*⁸⁶⁴

In the Old Icelandic a *vargr* is both "a wolf", "evil-doer" "a fugitive criminal", which is cognate with the Slavic word *vrag*, meaning "enemy" or "a devil".⁸⁶⁵ These ultimately came from the Iranian *varga* ("wolf"), as did the following Old Norse kenning (a saying) "*Varga i Veum*", which meant "a wolf in a Holy place". The latter saying, which is of some antiquity, most likely refers to defiled persons entering holy sites. And it was not a term of endearment.

NORSEMEN ASSOCIATED
WOLVES WITH CRIME
AND THE THE
UNDERWORLD

From the testimony of the Arabs who saw these pagan Russian priests, one recorded function of the *Volkhv* was to sacrifice animals and human beings.⁸⁶⁶ In Rus' the *Volkhv* priests strung people up by the neck on a hanging tree. We know they frequently chose their victims by sortilege (the casting of lots), and yet at other times the victim was a criminal, which calls to mind the same druidic practice. In any case the Old Icelandic word *vargtre* (literally wolf-tree) reveals the significance of the wolf-tree, the hanging tree upon which criminals (ie; "wolves") were strung up until their life was extinguished. Apprehended criminals and black magicians were themselves summarily hanged by the authorities in the post-conversion era, as is evidenced in the *Primary Chronicle*.

Iranian Magus priests executed non-royal criminals in a roughly similar way, draping the flayed remains of executed criminals from a tree top. During a dispute between the Persian king Pacurius and the Armenian leader Arasces, the Magi intervened to determine whether or not the vassal had violated his solemn treaty oath with the Persians.⁸⁶⁷ It was a concealed matter, and the Armenian was unlikely to compromise himself willingly, so until he

CRIMINALS WERE
HANGED ON A WOLF
TREE

confessed the Magi could not punish him. To effect a complete admission of his guilt “the Magi, after putting the whole tent under a spell by means of some magic rites, bade the king” to try and elicit the truth from Arasces.⁸⁶⁷ The spells worked, and the hidden lies which were made under damning oaths leapt forth.⁸⁶⁷ “Then at length the Magi passed judgment against him as having violated the treaty and the oaths”. Arasces was incarcerated for his part in the conspiracy in the Prison of Oblivion (an eternal dungeon from whence there was no return), whereas Bassicius, not being of the royal blood, was flayed and had his straw-packed skin hung in a tree.⁸⁶⁷

Thus we have two contradictory views of the wolf-priests; one as agents of creation, the other servants of evil. It is my contention that *Volkhv* of uncertain number cleaved to the white or black side, while others might have performed both white and black rites. In Russian folklore the *Volkhv* did not incline entirely toward white magic, for at least some of them toyed with the black arts, and this made them dark witches.⁸⁶⁸ Helmold tells us as much.

A clue as to whether the *Volkhv* knew black magic may reside in a form of magic which the Norsemen (and perhaps even their *Volva*) practiced, which was called *seithr* magic, which normally required the the recital of a song, but it might also include the incision of runic characters into a variety of objects, be they stone, a wooden pole, or a piece of bone. The power of the *seithr* rites stemmed from *ergi*, that is ritual inversion, or indeed perversion. In Scandinavia *seithr* was considered unmanly, often because the magicians dressed as women while performing the spells. Though Vasmer claims such correlations are untrustworthy, I suspect that *seithr* might be related to the Slavic word *setovat'* which meant “to complain of something” or “to lament something”. *Setovat'* is derived from the Old Russian noun *seta*, meaning “grief or sorrow”.⁸⁶⁹ The Serbo-Croat word *sjetovati* (“to wail or mourn over the loss of something”) is related to *sjeta* (which like the Russian meant “grief” or “sorrow”). These are also connected to the Gothic *sair* (“an ache” or “pain”), the Old Irish *sair* or *soeth* (meaning “suffering” or “hard labour”), and the Old Irish *saiithar* or *saethar*. Moreover we find in the Lithuanian *saisti* and *saichiu*, meaning “to tell the future” or “to prophecy”, in addition to *saitas* (“an amulet”).⁸⁶⁹ Coincidentally the Italian word for Saturn (that maelific planet) is *seta*. Based on this wide range of terms, it's difficult to believe that *seithr* was specifically Scandinavian in origin. As you will read, the rites of the black Magi were directed towards causing not only defilement throughout the biosphere, but grief, lamentation and suffering to those who served the lord of creation. Only in the Lithuanian and Old Norse languages can we linguistically link the concepts of suffering and mourning with ritual magic with any certainty, though I believe *seithr* was originally known as far south as the Balkans. If for arguments sake the *Volkhv* were wolf-priests and practiced *seithr* grief-magic through ritual inversion and perversion, it is likely that they ritually interacted with the evil principle, either occasionally or as a rule.

Naturally there are certain problems associated with dating the origin of the *Volkhv* priesthood, but the writings of Herodotus mention a civilisation of Scythian Ziggurat-building magicians on the steppes (c. 500 BC), whose customs and magical practices bore all the hallmarks of a Babylonian or Assyrian society, that had been liberally immersed in Persian secular and religious customs. If they were Magi, then they were living in Bronze Age Russia.

The words *zhrets'* (Ukrainian) and *zhrets* (Russian), although translated as “priest”, unequivocally signify the person as a “sacrificer”.⁸⁷⁰ When all is said and done the word *zhrets'* (Old Slavonic: *zh'r'ts'*) had an Indo-European genesis, so perhaps the nature of their sacrificial duties belonged to an Indo-European forum too. Interestingly, Lenormant delineated between a *Magus* and an *Arthravan*, on the basis of one being a sacrificer (whether by clubbing or strangling the victim), and the other a fire priest.

The two primary Slav gods were polarised enemies, a black and a white deity, one a lord of heaven, the other the ruler of the Underworld, both of which were subordinate to the four-faced father of the Gods Svarog, the shining god.⁸⁷¹ This resembles Zurvanite dualistic doctrine, a pagan trinity which formed during the Persian Achaemenid era, and allowed for the performance of white and black magic throughout their society.

If there was a factual inter-relationship between Rus' paganism and Zurvanism, that would make the Russes descendants of Magian Zurvanite heretics evicted from Central Asia and Iran during or before the 3rd Century AD, for worshipping demons and Aryan idols, and who constructed elaborately decorated temples to house the *daeva* idols and the holy fires. Such a migration would coincide with the one described in the *Ynglinga Saga*. At the very least the Russes were inheritors of Magian Zurvanite teachings.

Under the Zurvanite variant of Magian cosmology the spiritual war going on between the two brothers *Ahriman* and the Good Sun, came about as a result of a dare.⁸⁷² On that fateful day when *Ahriman* lay down the challenge to his father and brother, the supreme god granted both sons vestments of power, which conferred upon

them miraculous abilities. To the black son was given the black and fiendish robe of *Az*, the power of evil, the planets and harlotry.⁸⁷³ And to the white son he granted a dazzlingly white garment of perfect goodness and truth.⁸⁷³ As the ages progressed these two gods mustered their own specialised priesthoods and granted them the right to wear the robes of their respective master. And so it came to pass that the priests of the Black God earned the right to wear ritual clothing the colour of ash, or the black garment of *Ahriman*, while the white priests donned the snowy white robe of *Ahura Mazda*. From this arose an enduring spiritual duel between the rites of white and black magic.

The Magian Rus' *Volkhvy* probably absorbed most of the Brahmans, sages and bards of the much older Indo-European order, those who served the cults of *Agni* and *Soma* (which were worshiped by the Slavs as *ogon'* and *Sima*) on a regional basis. At the very least they exerted a far greater influence over the pagan Russes than the Brahmans did. That much can be guessed since the Rus' heads of state patronised Magian idols such as *Simurgh*. The ready absorption of Slavic Vedic devotees by the Magian Rus' royals was probably attributable to the fact that *Zurvanites* allowed for the worship of both *Ahura's* and *Daevas*, and hence assumed the appearance of an Avestan religious movement, which had an accumulated wealth of Vedic ritualism and terminology, such as *Indra* worship.

Without Magi no Persian could offer sacrifices; who but them was empowered by the gods to do so? This is another major point concerning the *Volkhvy* Magi ... the pagan Russes believed the *Volkhvy* were the only ones capable of making offerings to the supreme gods on behalf of the people.⁸⁷⁴ Without the Magi, mankind was cut off from the creator, his servant gods, and any hope of mystical aid in the struggle for survival epitomised by the *Khorovod* (a sunwise dance of life) and the *Smrtno Kolo* (a counter-clockwise dance of death), an anti-perambulation.

The rituals that the white and black Magi performed were inexorably linked to the drinking and pouring of libations; the life-sustaining milky *Haoma* in the case of the white Magi, and the corrupted *Haoma* libation of *Ahriman's* black Magi called *Az*. Linguistic evidence suggests that the Russian Magus sorcerers mixed drinks of a similar nature, draughts which unleashed magical powers that caused events of their choosing to transpire in this world.

Only a handful of Russian words begin with the root *char-*; *charodyeika* ("a female sorcerer") and *charodyei* ("a male sorcerer"), *chary* ("magic" or "spells") and *charka* ("a cup" or "a goblet"). And in the Ukraine we find *chary* ("spells", "magic" or "witchcraft"), *charivnik* ("a sorcerer" or "a magician"), *charivnitsya* ("a witch" or "an enchantress"), *charuvati* ("to bewitch" or "to charm someone"), *charivnist'* ("charm"), and *charka* ("a cup" or "a goblet").⁸⁷⁵ From both the Russian and Ukrainian one can discern that white sorcery and black witchcraft were intrinsically linked with cups or goblets.

Using Greek, Persian and Hindu religious texts we can infer that these word survivals are a reference to the pouring of libations to invoke the aid of gods, perhaps by the Magi or Neo-Pythagoreans. These libations took the form of mead, but they could be beer or wine, or, as I contend, *Soma* and *Haoma* (the holy drinks of the Hindu Brahmans and Iranian Magi respectively).

The fact that the above mentioned terms are virtually identical in Northern Russia and the Ukraine means that the libations may have represented a uniform body of religious rites performed in the north and south of the country. Thus the *charivniki* were white magicians or evil warlocks who wielded cups, and with those same cups, they performed libations, dances and songs, which gave rise to sorceries and enchantments. The Old Russian word *chara* ("a cauldron") was derived from the Old Indian *carus*, but is also cognate with the Old Irish *coire*, and the Old Icelandic *hverr*, all of which meant "a cauldron". Presumably all these terms shared a common genesis, one rooted in magical ritual. Another opinion is that *chara* stemmed from the Eastern Turkic word *chara* ("a large bowl or cup").⁸⁷⁶ Considering that the Rus' cauldrons bore a Vedic name it is plausible that they might also have been employed in rites of adoration to the *Daevas*. The Russian word for "spells" (*chary*) seems phonetically linked with the cauldron (*chara*). The same could be said for the words *char* (Old Slavonic, Serbo-Croat, Czech) meaning "sorcery", and *chara* (Slovenian) "magic".⁴⁵⁶ Since both the Brahmans and Magi used cauldrons in their magical rites, linguistic evidence for the custom might be equally found in the Vedic or Avestan. But as it happens these words are best equated with the Avestan *chara* (meaning "the means" {by which something is accomplished}), and the New Persian *char* or *chara* ("the means {by which something is accomplished}", "to help or aid", "craftiness or slyness").⁸⁷⁷ We are thus presented with a root word like *char-* that was linked to cauldrons, large cups and bowls, utensils which, on the strength of linguistic evidence, were undeniably used to perform magical ordinances, that were, one might guess, conceptually connected with acts of goodness, as well as ruses and deception. The existence of the Russian word *charusa* ("an impenetrable bog or swamp") might also indicate that chalices and cauldrons were used to carry out

RITUAL LIBATIONS
ASSOCIATED WITH
RUSSIAN WITCHCRAFT

CAULDRONS

black sorcery in the vicinity of bogs. In a number of places around Europe cauldrons have been excavated from bogs by archaeologists. Slavic linguistic correlations between demons and bogs intimates that there was a connection.

SPITTING

Perhaps these words are also related to the Russian verb *charandat'* which meant "to spit (phlegm or mucous)". According to Vasmer the word *charandat'* was obscene, that is one with profane or malign connotations. On this basis we might suspect a connection between black magic and the act of spitting mucous into wash water. Ibn Fadhlān saw a band of Russes do this very thing in the upper Volga region.

Slavic vocabulary connected with the performance of magic is derived from a Magian rather than brahmanic milieu, but shows evidence of a vedic influence. This provides us with further evidence of an ancient Zurvanite Magian presence among the Slavs. And due to the survival of these ancient arts, cauldrons continued to be integral to the performance of European witchcraft beyond the Middle Ages if witch trial records are anything to go by.

The Polish *Czar* (pron Char, meaning "a sorcerer") cannot be linguistically equated with the later Russian word *Czar* (pron Tsar) meaning "a ruler".⁸⁷ Despite this variation in the initial letter of both words, there may have been a factual connection between magicians and the Russian royals. Consider the Czars and *Bieloknyazi*⁸⁸ (the white sorcerers of the pagan Slavs, which in literal terms meant "the white princes"). Even during the Russian revolution the Czars army was called "the White Guard".

Koldun - The Sorcerers

KOLDUNY WERE
BASICALLY
PRACTITIONERS OF
CHALDEAN SORCERY
LIVING IN RUSSIA

In the Russian language we have another series of related words concerning sorcery - *Koldun*⁸⁹ (masculine), *Koldunitsa* (feminine) and *Kolduny* (plural). *Koldovat'* is the verb stemming from this, meaning - "to perform a spell or act of sorcery." Other words in nearby regions seem allied with the Russian word *Koldun* - *kaldune* (Middle High German): "entrails"; *calduna* (Latin): "the warm entrails of a slaughtered animal"; *kaldoun* (Czech): "goose entrails"; *koldun* (Polish): "a type of pie made from a mixture of meat and cheese"; *koldibai* (Russian): "to be limp or lame". *Koldyga* (Belorussian), *koldygats'*, *kal* (Armenian), *halts* (Gothic) all carry the same meaning of "limp" or "lame". Accordingly one might suspect that the rites of the *Kolduny* included the ritual slaughter and disembowelment of an animal (or human) victim, from whose entrails the sorcerer or sorceress proceeded to make predictions about the future, or unleash magic.

A solution for the problematic question of the Russian *Kolduny* sorcerers may well exist in the voluminous works of the Muslim encyclopedist Al-Nadim. In the impressive *Fihristi of Al-Nadim*, he wrote of the *Al-Kaldani*,⁸⁰ a 10th Century Arabic word relating to the dualistic Chaldean astrologers living in Iraq at that time, and throughout preceding centuries. In that part of the world, two different terms were applicable to them. The Chaldean sorcerers of Harran were specifically known as *Al-Kaldaniyin*, whereas the Chaldean "Sabeans" of Southern Iraq were called *Al-Kaldani* (Arabic: *Al* - "the", *Kaldani* - "Chaldeans"). Another Arabic form of the same word *Al-Kaldaniyun* was much more general in nature, and referred to the many dualistic cults operating throughout the Eastern Islamic world (such as Magi, Manichees, Marcionites and so on).⁸¹ As you will recall, one would have expected 9th Century Cordoban sources to employ this last term relating to the Norse *Al-Madjus* attacks on Moorish Spain, but instead they veered from this fuzziest label and repeatedly wrote the aforementioned *Al-Madjus* in connection with both the attacks and al-Ghazali's subsequent diplomatic mission to the king of the Magi in European waters.

The similarity between the words *kaldani* and *kolduny* is certainly compelling. Moreover, the mid-19th Century Russian folklorist Maksimov used one further word, *koldun'ya* (nominative plural), which varied from *kolduny* (nominative plural).⁸² We do not know whether the difference between the two words concealed divergent meanings known only in their day. If for instance *al-kaldani* was to *kolduny*, as *al-kaldaniyin* may be to *koldun'ya*, they may have denoted Chaldean Sabeans and Harranian Chaldeans respectively. Coincidentally Aramaic-speaking Chaldeans still exist in Iraq and Iran nowadays, but they are Apostolic Christians, and in no way practitioners of the ancient heathen Chaldeanism described over the next few pages.

CALIPH AL MA'MUN
WANTED TO
EXTERMINATE THE
ASHAB AL RA'S

Anyhow, during a campaign against the Byzantines, Caliph Al Ma'mun encountered a very large group of *Al-Kaldani* as his invasion force made its way westward.⁸³ Upon interrogating them to determine the nature of their religion, the Caliph was greeted with a certain degree of indecisiveness, and no straight answers. He asked them whether they were Christians, Jews, Muslims, or Magi, to which the answer was no in each case. Al-Ma'mun arrived at the realisation that they were members of a race of Chaldean idol-worshippers, who a generation previously, in the time of his father, were known as the *Ashab al-Ra's*.⁸³ At that the Caliph threatened to liquidate

every last one of them unless they became *dhimmis* by conversion to either Judaism, Islam or Christianity by the time he had returned from his war on the Greeks.⁸⁸³

In the Islamic world *dhimmis* were classified as non-Islamic infidels bound for heavy taxes, devoid of all legal rights. Christians and Jews fall into this category. All others not possessing a holy book could be killed, and it was entirely lawful to do so. The *Al-Kaldani's* lack of response to the questions posed by the Caliph is telling. Either they felt threatened by the prospect of having to reveal to the Caliph exactly who they were, or their priests prohibited them from revealing the core teachings of the Chaldeans to the non-initiated, or it was philosophically difficult to explain the nature of their faith to the Caliph in a few words or less with an army standing all around them.

Sensing the imminent peril they were in, a large number of these idol-worshipping Chaldeans converted to Christianity, a somewhat lesser number became Muslim.⁸⁸⁴ They were required to dispense with their smocks and long hair (including a lock of hair from each side of the head, similar to the peots worn by Jews), though paradoxically they still continued to wear their holy belts.⁸⁸⁴ This type of hairstyle was not unknown in Rus'.

Al-Nadim went on to say that a Sheikh (who was somehow linked in with the many Magians serving in the Caliphate's governmental apparatus) formulated a solution for the *Al-Kaldani's* predicament by suggesting that they tell Al-Ma'mun that they were Sabeans, just to save their necks. That is because Sabeans were one of the few religions deemed acceptable in the Koran, on account of their ancestry to Abraham (Ibrahim) and "people of the book".

"Believers, Jews, Christians, and Sabeans - whoever believes in God and the Last Day and does what is right - shall be rewarded by their Lord; they have nothing to fear or to regret".⁸⁸⁵

But fate intervened. With the strange death of Al Ma'mun on his way home from the Byzantine campaigns, the newly Christianised pagan Chaldeans automatically reverted to their old faith in droves, while those who adopted the Islamic faith were unable to abandon it for fear of the drastic reprisals that would certainly have ensued.

"Moreover those among their number who had become Muslims were unable to recant, as they feared they might be killed. They continued, therefore, to be masked by Islam".⁸⁸⁴

Al-Nadim further stated that these particular Muslims (and we might guess Christians) resolved to continue observing the ancient rites of Chaldean magic and ritual enshrouded in secrecy, despite the risk that this entailed. To facilitate this they formulated their own peculiar marital codes, designed to conceal and protect Chaldeans living in Muslim countries. The *Al-Kaldani* wed womenfolk who were still adherents of the old faith, but in the east anyway, the menfolk of the *Al-Kaldani* were to outwardly adopt the faith of the area in which they lived (these Chaldean converts they called *Banu Ablut* or *Banu Qaytaran*).⁸⁸⁶ Thus it was predominantly the women who worshiped the gods of the old faith in the manner of the Chaldeans. If a significant proportion of the mediaeval and renaissance witches practiced the Chaldean rites, this last point might explain the disproportionate number of European female witches indicted compared with male wizards and warlocks in varied geographical regions.

The situation was remarkably similar in Russia. According to popular folk tradition there, the arts of the *Kolduny* were passed on in a matrilineal fashion, mother to daughter and so on.⁸⁸⁷ Where the mother gave birth to a son and a daughter, the son was raised as a sorcerer, whereas the girl became a witch. If for some reason these witch-wives could not hand down their knowledge they suffered immense torment.⁸⁸⁷ The early mediaeval Russian *Primary Chronicle* states; "even down to the present day women perform magic by black arts, poison, and other devilish deceits".⁸⁸⁸

Despite the fact that witch-wives or spae-wives feature in certain Norse Sagas relating to pagan times, it is difficult to establish any firm connection between the *Al-Kaldani*, the Russian *kolduny*, and the following Old Icelandic *spae-maeli* ("a prophecy"), *spa-dis* "prophetess" or "a spae sister", *spa-mathr* ("a prophet"), *spaeiks-andi* ("a prophetic spirit").⁸⁸⁹

In Rus' those with *Kolduny* ancestry who were unwilling participants in the craft, and wished to avoid their family duty to continue with the arts, frequently turned themselves in at the monasteries.⁸⁸⁷ There they lived on as remorseful penitents together with anyone found performing miracles throughout the wider community.⁸⁸⁷ This probably explains the means by which Chaldean arts entered the 'Orthodox' Christian monasteries, something known to have occurred in Christian times. Where a penitent relapsed, there was every opportunity to teach what they knew of these rites to fellow brethren, since Chaldeanism was a form of pagan gnosticism. It was no doubt on account of this that Orthodox Christian commentators reported an upsurge of shunned Chaldean magic and devil-worship within the Byzantine monastic system.⁸⁹⁰

MEDIAEVAL CHALDEANS PRACTICED AN ANCIENT ART OF RITUAL SORcery

MUSLIMS WERE NOT ALLOWED TO MARRY CHALDEANS

KOLDUNY TURN THEMSELVES IN AT CHRISTIAN MONASTARIES

Anyhow Abu Zurarah and another sheikh stamped out the practice of marrying Chaldean women in Islamic countries. These were prohibited liaisons, forbidden wives. Despite their intense opposition to these sorts of mixed marriages, the Hurrarian Islamic jurists continued to witness sizeable groups of these Chaldean Sabeans locally.⁸⁹¹ According to Al-Nadim, those Chaldean Sabeans who had converted to Christianity or Islam, still continued with the old rites (including dualistic magic) right down to the 10th Century AD at least, when his *Fihrist* was written. But were the *Al-Kaldani* really Chaldeans or Sabeans? Although Al-Nadim's account of the naming of the *Al-Kaldani* as Sabeans is about as straightforward as you can get, I remain intrigued that Ptolemy situated an Are Sabea (Latin: The Sabean Altar) in Mesopotamia in his 2nd Century AD atlas, *Geographia*. Nor is it easy to understand why the "Alphabet of the Kings" (which resembles Sabean characters) is the script most frequently used by mediaeval alchemists and magicians.

One Nestorian Christian eschatological text records the presence of Chaldeans alongside the Buddhists, Christians and Zoroastrians of Central Asia.⁸⁹² Thus they confirm what Al-Nadim adequately explains; that Chaldeans were alive and well during Islamic times, and what is more they were expecting the arrival of a saviour named Bel.⁸⁹²

It is equally plausible that the religion/philosophy of the *Al-Kaldani* was not a survival of the old Chaldean rites, but a cross-pollination of Magianism and the philosophies and sciences of ancient Greece which had taken place as early as 400 BC, but centred on the period 300 BC-200 AD. Linkages of this kind probably became a whole lot more formalised following the arrival of the exiled Greek Philosophers at Harran in the 6th Century AD after the closure of their Athenian school of philosophy. By that time there would already have been centuries of interaction between the Magi and the philosophers inside Mesopotamia.

What may well have developed in Iraq is a dualistic philosophical religion which carried features of Greek pagan gnosticism and Magianism. Unlike Magianism, the creed of the Chaldeans was a proselytising faith, meaning that the cult possessed apostle priests who were tasked with spreading the sect's doctrines throughout mankind.

Their principle temple complex, once located at Harran, was destroyed during the 13th Century Mongol conquests, though the Chaldeans had already been thrown out of their temples centuries before that.⁸⁹³ Their main holy site was converted into a shrine dedicated to Ibrahim, and the remainder of the Chaldean shrines swapped over to Islamic usage.⁸⁹³ It is plausible that the *Al-Kaldani* (ie; the *Ashab al-Ra's*) migrated elsewhere between 7th and 10th Centuries AD, and rebuilt some, if not all of these temples, at other locations. Since *Al-Kaldani* and *Kolduny* are so similar in both name and nature, I theorise that the Rus' *Kolduny* sorcerers were the descendants of heathen *Al-Kaldani* banished from the Abassid Caliphate, or who eluded the Mongol decimation. Just a quick look at any map confirms that a journey from Harran or Chaldea (in provincial Byzantium) to the vast expanses of Russia is relatively short.

In the *Sumerian Wonder* Professor Francisco Jos Badiny provides intriguing research on the Magyars (Hungarians), providing evidence that their language contains important Sumerian and Akkadian elements. Yet a century before him, Lenormant was busy highlighting the apparent similarity between these ancient tongues, and a variety of words found in a broad spectrum of Finnish languages, to which the Hungarian is linguistically relegated. These words are likely to have been preserved from very ancient times, but might have been bolstered by additional arrivals of magicians from the Near East during the Islamic age. Considering this, it is possible that Mesopotamian/Chaldean magical traditions were used by segments of the Slavic, Magyar and Finnish community. Indeed Orthodox Christian clergy were livid about the Chaldean rites they frequently encountered in their part of the mediaeval world, practiced by wayward parishioners and by monks in particular..

As discussed later in this book Prester John, an eastern Magian Christian superhero, waged war against a federation of princes, whose ethnicity was Persian, Medean and Assyrian.⁸⁹⁴ The latter alliance was traceable across centuries, at least from the time of Cyrus the Great. Under this gracious Medean patron Assyrian culture was not only tolerated, but resurrected from the dead with his blessing, following its demise at the hand of the Babylonians. Old allegiances survived. Assyrian royals still had a certain degree of autonomy in the 7th Century AD, and were still on friendly terms with their former liberators, the Magi and Persian nobility. If a large portion of the Bulgars and Magyars were Magians, it necessarily follows that some of their monarchs might have had a very ancient Assyrian pedigree. This appears to be the case.

The age-old adage if at first you don't succeed try, try, and try again was very much on their minds. At the turn

EXILED GREEK PAGAN

PRESTER JOHN

SOME BULGAR KHANS
WERE ENEMIES OF
CHRISTIANITY

of the 8th Century AD, Byzantium was twice crippled by the weight of Muslim besiegers, with the second stranglehold broken only with the aid of Tervel, the Bulgar Khan. If the Byzantine Emperor thought he had found a new friend in the Bulgars, he was sadly mistaken. Barely one hundred years later, in around 811 AD, Constantinople recoiled in horror as the unstoppable Bulgar army of Khan Krum went on the rampage throughout Byzantium's Balkan provinces,⁸⁹⁵ defeated successive Emperors, and inflicted upon them the ultimate indignity; they slew Emperor Nicephoros, and made a golden cup from his skull, from which Krum guzzled his libations.⁸⁹⁶ Krum's act of fashioning Nicephoros' cranium into an item of feast-time table talk may indicate that he adhered to customs once commonplace during Scythian times (1,300 years earlier), as is evidenced by Herodotus' comments;

"The skulls of their enemies, not indeed of all, but of those whom they most detest, they treat as follows. Having sawn off the portion below the eyebrows, and cleaned out the inside, they cover the outside with leather ... if he is rich, he also lines the inside with gold; in either case the skull is used as a drinking cup".⁸⁹⁶

SKULL CUPS

The widely reported use of decorated skulls as drinking vessels, in a region spread from Europe to Asia, seems historically untrustworthy once the dubious standards of post-modernist scholarship are applied to the accounts. Despite the fact that Herodotus saw this first hand, they, some 2,500 years later, maintain that he was a liar, who defamed the Scythians, to portray them as sub-human. However, the unearthing of a craft house dedicated to the production of skull chalices at Bel'sk, Russia has proven beyond doubt that the Scythians were making them for that purpose. They were very popular.⁸⁹⁷

Livy, a Roman from around the time of Christ recorded that the Celts drank libations from skull-cups, many of which had been decorated with gold.⁸⁹⁸ This custom may or may not have been an independent invention. Skull cups were apparently used by the Indo-European Tocharians too, which might indicate the existence of the same Scythian custom among Asia's Celtic cousins. Coupled with the fact that they also spoke a form of Iranian (that resembled Celtic in some respects), one can guess that the Tocharians had factual connections with the Scythian nations.⁸⁹⁹

SCYTHIANS AND CELTS
USED SKULL CUPS TOO

The name Krum (a name also used by Franks and Celts) is, I believe, cognate with the Slavic root word Grom-, which I think aptly describes the personal qualities of any man named Krum. Consider the following Russian words - *grom* (thunder), *grom-it'* (to annihilate, to smash asunder, to ransack, to rout or defeat an enemy, to flay), *grom-ko* (loud), *grom-ada* (something massive or enormous), *grom-ykhat'* (to rumble), *grom-ila* (a robber, house-breaker, or stand-over man), and *grom-ozdit'* (to tower above). Little wonder then that Krum the Bulgar was regarded by some in the eastern Church as an embodiment or revisitation of the terrifying Assyrian conquistador Sennacherib (of the House of Sargon), whose name originally meant *"the God Sin (the Moon God) has compensated the brothers"*.⁹⁰⁰

KRUM, THE BULGAR
KHAN, WAS WIDELY
REGARDED AS A
VIRTUAL
REINCARNATION OF THE
ASSYRIAN RULER
SENNACHERIB

Sennacherib's self-congratulatory commemorative stone columns have survived. They show him slaying prostrate war prisoners. These were just some of a number of Assyrian Royal stellae (engraved memorial stones) which still bear victory inscriptions boasting of; stone victory columns draped in flayed human skins, of cairns of decapitated enemy heads, of prisoners being burnt alive, of the sacking and razing of cities with fire, of the flaying or impaling of victims. Such comments are in no way a mischievous diabolisation of their war activities; *these were victories written in stone by their own royal decree*, and we might guess indicative of the terror which the Assyrian rulers wanted to live in the hearts of their enemies.⁹⁰⁰

So serious were the setbacks experienced by the Byzantine military in their encounters with this new menace, that Byzantine citizens felt inclined to call on supernatural aid. During a mass held by the Patriarch with the aim of lifting the Bulgar siege on Mesembria, soldiers disrupted the service by encircling the tomb of the deceased Emperor Constantine V with the hope of conjuring him forth from his sleep in the sepulchre, to once again lead their forces into battle.⁹⁰¹

At the Battle of Adrianople the Emperor's forces greatly outnumbered those of the Bulgars, since he had mustered troops from even the most far flung eastern provinces, in the hope that he could thus crush Krum once and for all. Spearheaded by Macedonian troops the initial engagement went well for Byzantium, in fact beyond all expectations. However at the very moment Emperor Michael was poised for the kill, he had to watch in shock as the sizeable Anatolian contingents, commanded by an Armenian relative, ran off the battlefield, for no reason whatsoever, leaving the Macedonians to be slaughtered. It has been theorised that these troops, the Emperor's most battle hardened, merely pretended to panic, when in reality they were part of an elaborate plot which at its height saw the abdication of Emperor Michael I Ragabe in favour of Leo V, the very commander of the forces who quit on

him! Krum was no ordinary ruler, but a priest-king of vigour and martial achievement. The well encamped pagan forces of Krum, this "New Sennacherib",⁹⁰² choked Christian Constantinople for many long months. As the heathen war bands stood waiting outside the battlements of the Holy city, Krum performed very elaborate human and animal sacrifices outside the gates of the city (giving benedictions to his troops in Assyrian style by sprinkling them with river water using bound foliage), which we might think greatly demoralised the incarcerated Byzantine populace. If news that Krum was laying waste to all Constantinople's surrounding extra-mural suburbs, setting them ablaze and slaughtering almost every living thing was causing concerns inside the city, then reports that he was preparing siege weapons and gantries to breach the city's elaborate defenses were even more worrying.

You may ask where they obtained their siege technology; the know-how to build engines capable of breaching Constantinople's walls? A proto-Bulgarian inscription found at Preslav confirms they had siege towers, and canopies⁹⁰³ suitable for protecting sappers and ramming crews. Proto-Bulgarian terms for fortified defenses, especially ditchwork allow one to conclude an Iranian origin⁹⁰³ for their military engineering. Bulgar camps built during the 7th Century AD were admirably protected with palisading mounted on raised mounds some *40 meters thick*. The most notable of them can be found at Nikulicel, Dobrudzhan, the Danube and Bessarabia. Since these words are flavoured by Central Asian Turkic language,⁹⁰³ we know that they developed these engineering skills in and around the Caucasus, and Tajikistan. Even more amazingly their word for "a helmet" has a Sumero-Accadian etymology.⁹⁰³ So what you may say; but the Bulgar helmets were stylistically similar to those worn in Mesopotamia some 3,150 years prior to Krum's time, during the reign of Sargon himself.

From modern Parsee practices, we might guess that those families eligible for the Magus priesthood had to submit a family member for training in the arts at least every three generations. During the early conversion years this was probably publicly noticeable, though the further the Christian era progresses, those still loyal to the old ways would have done so secretly, behind the veil of Christianity, in secret meetings no doubt. If on the other hand European Magians didn't observe the same Parsee regulations on entry into the priesthood, then this observation would be either partly or fully invalid. In any case we are unlikely to ever know.

Political alliances between the Frankish and Bulgar royals existed earlier than 893 AD. In 862 AD the Frankish Monarch Louis the Pious had struck a treaty with the Bulgars, a nation which Rome and Byzantium considered riddled with heretics.⁹⁰⁴ It was the formalisation of a connection that had existed at least since the time of the Merovingian Magus-King Dagobert (reigned 629-638 AD).⁹⁰⁵ For it was during his reign that some 9,000 Bulgars came to live under the Merovingian kings. Though Magus-kings, the history of Merovingian rulers between 481-751 AD is generally one of cooperation with the Catholic Church, gifts of money, land, monasteries and the hereditary ecclesiastical dynasties which Rome outlawed from the 11th Century AD onwards.

You see Merovingians were part of what was then known as the *Adelskirche*, the Church of the nobility.⁹⁰⁶ It was financed by the high-born, administrated by aristocratic prince-bishops and arch-bishops. In short, it was their property. Most of their clashes with the Roman Catholic prelates centred around custodianship of royal monastic benefices, and differences of opinion between Church doctrinologists and the dynasty about the nature, virtues and entitlements of the magical blood which ran through these royals.⁹⁰⁷

The royal blood of both the Bulgarian and Merovingian Magus kings and princes appears to have had a common source, and this may prove to be the very reason for their interaction with the Bulgars in matters relating to politics and religion. The Merovingian Magus kings were supposed to have been ancestors of a union between a female forebear and a massive serpent which dwelt in the depths of the sea.⁹⁰⁸

Nothing of the mystical origins of Merovech and his dynasty are however alluded to in the writings of Gregory of Tours, perhaps signifying that he thought better not to record their royal-myth for posterity.⁹⁰⁹

The Mediaeval Bulgarian Magus prince Boyan was the grandchild of the Great Serpent Volos, and presumably many other Bulgar royals were also. But was the Merovingian sea serpent and Volos one and the same?⁹¹⁰

According to the testimony of Pope Gregory, the Magus royals of western Europe had genuine powers which the Christian priests were hard pressed to match. Demons shuddered as their royal names were called upon by those in need, and the sick were healed simply by coming into contact with items owned or touched by them. Their blood was magical in nature and capable of bringing life and plenty to the soil.⁹¹¹

The battle of wills between Rome and the royal families (which had the preternatural powers, rights and authority of Magus blood) was the essential cause of the early rift which caused the princes to go on the counter offensive against Rome, hoping to maintain the autonomy and integrity of their bloodline against Rome's attempts

to reform them. With Charlemagne’s coronation in 800 AD came the fall of the Merovingian dynasty. Even so I have long wondered what lingering influence the blood-descendants of the long-haired former Magus-Kings still exerted among the Franks of Carolingian times. It appears that during the time of Bulgaria’s relapsed prince Vladimir-Rasate that certain important Franks with royal blood (such as Arnulf) and Bulgars like Vladimir had a common agenda; they were planning a formal offensive against Rome and Byzantium, hoping against hope to re-install paganism!

If there really was such a plan, what other pagan troops could have been added to this planned revival, to improve its chances of success? What about the Norseman? What about the Rus? What about Finns? What about the eastern and western Slavs? What about the Alans? What about the (Black and Silver) Bulgars? What about the Crimean Goths and Saxons? What about the military reactionaries attached to two hundred thousand dualist Paulician Magian-Christian heretics foolishly relocated to the Balkans by the Byzantine authorities?⁹¹²

Would anyone be in it? Well it would depend on the strength of their leaders, and their willingness to cooperate with each other toward that common goal, if indeed it was common to all of them. If there was such a plan then they would need all hands on deck to topple the big boys of Christendom. Vladimir Rasate and his pagan colleagues among the 9th-10th Century AD Franks must have considered eastern Slav participation in this war to be absolutely vital to the success of any such campaign.

Is this information fact or fantasy? Many of these peoples did participate in sustained military operations against Byzantium and Rome at one time or other during the 9th and 10th Centuries, and not only against them, but the Muslims also. The only problem is there is not a great deal of information on the actual reasons for the widespread warfare.

Although the siege lifted with Krum’s mysterious death, the Bulgar threat persisted, and repeatedly came back to haunt successive Byzantine Emperors until this people was eventually baptised into the Christian fold by a mixture of swordsmanship, diplomacy and missionary zeal. As with much of eastern and western Europe, the Church’s attempts to convert the pagans began with the conversion of the king to Christianity, at least nominally, and following this it was hoped that paganism would die as subjects followed suit. Bloodletting was sure to follow where a Bulgar royal drifted into the arms of Christian preachers. Malamir, son of Khan Omurtag murdered his brother Enravotas for daring to convert to the alien Christian faith.⁹¹³ Around 893 AD, Khan Boris tried to introduce Christianity to his subjects. His attempts to eradicate idolatry, temples and pagan sacrifices met with only limited success, and he endured increasingly militant opposition for his troubles.⁹¹⁴ It would seem that despite his adoption of Christianity, paganism was particularly well enshrined within the upper strata of Bulgar society, and well supported by the community. Eventually he ended up having to exterminate most of his boyars (nobles), who rose up against him to the last, but not until after they had worked the entire country-side into a lather of civil disobedience. Khan Boris even had to put out the eye of his own son, Vladimir-Rasate, after he was discovered trying to re-ignite and trigger a full-scale pagan resurgence, by forming a formal military-pact with the Carolingian King, Arnulf.⁹¹⁵ We know that Arnulf and Vladimir had plans for booting the Greeks out of Bulgaria, but whether he was party to the young Khan’s plans to resurrect “the rites of paganism”⁹¹⁶ is hard to pin-point. If European royals were in any way Magianised, we might easily understand the recurring phenomenon of royals relapsing into the pagan faith, something which occurred in England, Bulgaria, Russia and similar places. Vladimir-Rasate of the Bulgars, Vladimir I of Kiev and Eric the Victorious were just some of the factual and rumoured backsliders. And in Essex, King Sigeheere “began to restore the derelict temples and to worship images”.⁹¹⁷

Chaldean customs and traditions

The key teachings of these Chaldeans, equally descendants of Abraham, were conveyed to Al-Nadim and a number of other Muslim authors, and committed to paper. By the *Al-Kaldani’s* reckoning the created cosmos was the product of a single deity who was boundless, omnipotent, unfathomable and practically unknowable.⁹¹⁸ This high god, who they referred to as the “Great Power”, had sent forth a range of apostles (namely the Chaldean philosophers).⁹¹⁸ These apostles were charged with taking his message to the rest of the world, and acted as custodians for a whole range of pagan gnostic magical, philosophical, scientific and religious doctrines.

The Great Power created all things yet soon lost all interest in directly controlling the the daily affairs and activities of his creations. This right and role he bestowed upon subordinate angels and gods, who in effect were left in control of the physical universe. Besides the Great Power, the other principle deities of the cult were Agathodaemon, Hermes Trismegistus, and Arani (Heron).⁹¹⁸ Hermes Trismegistus was a tutelary god possessing

unparalleled wisdom, philosophy, intelligence and knowledge of the sciences. Hermes' discourses were taught to those seeking philosophical enlightenment and can be found in a variety of Hermetic texts, such as were found among the Nag Hammadi treatises unearthed in Egypt in the mid to late 1940's.⁹¹⁹

Like the priests of old Babylon the *Al-Kaldani* pursued wisdom, revered goodness and abhorred any form of wrongdoing. They were prohibited from engaging in sexual immorality or crime.⁹²⁰

THIS DUTY HE LEAVES TO
THE PLANETARY
ARCHANGELS

The *Al-Kaldani's* eschatological views were similar to those of the Magi. Like the Zurvanite Magi, they believed that the suffering of the departed souls of wrongdoers was only to be temporary; some 9,000 years in duration. Unlike the Magi (who believed *Ahura Mazda* didn't want to kill his children, simply chastise those enamoured by evil-doing, by the power of kings, their soldiers and officers) Chaldeans believed the "Great Power" was prone to fits of anger and mercy at the same time, but would transform into a god of mercy alone, at the end of the 9,000 year period. The latter point was a fundamental belief of the Zurvanite Magi.⁹¹⁸

ORIGINALLY THE
SUPREME BEING WAS
CAPABLE OF MERCY AND
ANGER

Maintaining personal purity was of some importance to the *Al-Kaldani*. They practiced purificatory ablutions, and were required to undergo a gruelling 30-day regime of fasting, in addition to further fasts. Like the Magi, they believed that contact with menstruating women brought defilement. So there were periods when they couldn't enjoy conjugal relations.

ONE DAY HE WOULD
CHANGE, BECOMING
MERCIFUL ALONE

The *Al-Kaldani* had their own peculiar range of food taboos, which appear to have drawn upon Jewish, Muslim, Magian and Neo-Pythagorean teachings. For instance pigeons, swine, asses, taloned birds and dogs were not to be eaten, nor were beans, lentils and several other plants.⁹²¹ Beans, lentils and pigs were widely cultivated in Russia as early as Scythian times, and were probably eaten by most Russians. However this is not to say that there were others in pagan Rus' who did not eat these things, folk such as the *kolduny*.

SPECIAL FOOD TABOOS

Unlike the Magi, the *Al-Kaldani* did not believe it necessary to marry one's kin,⁹²² and were required to observe strict morality within marriage, for example confining their sexual activity to procreation alone. Therefore the cult was not Magian in nature, though in truth it carried many outward similarities. Even those Arabs who had some understanding of Magian lore may have found it difficult to distinguish between Magi and Chaldean Sabaeans. Though they were not specifically incestuous or given to marrying their own kind, it was often the case that they did so. The Chaldean mode of dress at first glance seemed Magian. They wore lengthy hair, with a lock on each side of the head, and a specific kind of robe or tunic (perhaps one could even call it a type smock).⁹²³ Their characteristic hairstyle may have led onlookers to guess that they were Jewish magicians, descended from Abraham (as the Sabaeans were). Accordingly Chaldean temple sites in Europe might have earned the title of synagogues. Witch trials in which Jews were convicted of sorcery need to be looked at fairly closely, for the defendant might have been a Kabbalist, or a Judaised Chaldean.

Chaldean ceremonies

CERTAIN CHALDEANS
PRACTICED THE
NORTHERN MYSTERIES,
RITES OF ADORATION
DIRECTED TOWARDS THE
CHIEF DEVIL

The most powerful ceremony of the Chaldeans was termed "the Mystery of the North".⁹²⁴ One had to face toward the north, and in particular towards the pole star, while performing an elaborate daily schedule of prayers, which included stretching prostrate on the ground a prescribed number of times, at morning, noon and night.⁹²⁵ This was done in adoration of the God of the North who was both prince of demons, and father of the many genii and devils which he dispersed across the face of the earth in a prior epoch.⁹²⁵

CHALDEANS WORSHIPPED
DAEMONES

The Chaldean devils (*daemones*) brought a wealth of good fortune to those who worshiped them by invoking the name of the supreme god. Having recited the divine name the *daemones* were compelled to come and render service to the summoner. The belief that devils were luck-bringers is fully in accordance with the Neo-Pythagorean and Chaldean ritualism detailed by Iamblichus in *On the Mysteries of the Egyptians, Chaldeans and Assyrians*, and a feature of Russian folk belief concerning devils. Chaldean theory required that *daemones* be conjured to live inside stone and wooden idols, in order to bring divine power to the effigy.⁹²⁶ And what should we find in the *Primary Chronicle*, but magicians stating that their demon gods were "black of visage, winged and tailed ... mount up under heaven",⁹²⁷ obedient to the supreme god of the Christians. This could be interpreted as a childish attempt by the chronicler to ridicule their religion, but it could be a reference to Chaldean *daemone* worship, explained in a very abstract or relative fashion. Nestor also tells us that the Rus' pagan idols were beaten with rods to punish the demons living inside them. Again this may provide clues for the perpetuation of the telestic art of idol crafting in pagan Rus'. In *Europe's Inner Demons* Norman Cohn claims that any talk of factual, organised devil worship is pure nonsense, because in a number of cases witches sought to control demons, not by doing evil, but by doing good.

On account of their purity they were able to call upon the divine name for help when summoning up and bossing about *daemones*. It is a very good point that he raises; but unlike Norman I see Chaldean philosophy as the basis for these particular trends in witchcraft and devil-worship. This avenue is something that Cohn had never even considered. As stated, Chaldeanism was but one form of witchcraft.

Sabeian Chaldeans paid some attention to planetary worship, to whom they offered ostentatious animal, and even human sacrifices. Normally prayers were given as offerings. For example, prayers were recited on behalf of the sun as it entered the ascendant, descendant, midheaven and *imūm coeli*.⁹²⁸ Specific Chaldean beliefs about the planets were noted by Plutarch;

“The Chaldeans declare that of the planets, which they call tutelary gods, two are beneficent, two maleficent, and the other three are median and partake of both qualities”.⁹²⁹

EACH OF THE PLANETS
HAD ITS OWN NATURE
AND DUTIES

Al-Nadim said one of their less savoury rites included the killing of a young baby during Ab (August), though attendance and participation in the ceremony was optional. Only certain Chaldeans celebrated the northern mysteries. During the proceedings a child was reduced to powder by grinding up its body and bones, then mixing the powdery remains with a specially concocted libation.⁹³⁰ The desire to commit evil acts might not necessarily have been the motive for the sacrifice. It could just as easily have been a display of love and piety toward their god, at least equivalent to that of Abraham, who was prepared to sacrifice his own son to the Most High God. This is what Nadim preserved in relation to a Chaldean August rite;

CHALDEANS
SACRIFICED A BABY IN
AUGUST

“They slaughter the boy and then boil him until he disintegrates. Then the flesh is taken and kneaded with fine flour, saffron, spikenard, cloves, and oil and made into cakes as small as figs ... This takes place every year for those who observe the mystery of the north. No woman, slave, son of a slave girl, or lunatic eats it (the cake) or watches the slaughter of this child ... The priests burn whatever remains of the bones, the organs, the cartilages, the veins, and the jugular veins as an offering to the gods”.⁹³⁰

The similarities between the rites performed by these pagan Chaldean practitioners, and the ceremonies of the “People of the Little Keg”⁹³¹ (a western Mediaeval group of Christian heretics) are quite amazing, and probably no coincidence.

THIS RITE HAD SOME
SIMILARITIES WITH A
CEREMONY CARRIED
OUT BY CERTAIN
EUROPEAN WITCHES

At no stage were Chaldean sacrifices to be made in the name of the supreme god. Instead everything was to be delegated and apportioned to the subordinate deities which the Great Power had created to implement his will throughout the future.⁹³² This is another point of similarity with the pagan Rus’ rites, for they did not make offerings to Svarog directly.⁹³³

ANIMALS WERE
USUALLY SACRIFICED;
BURNED ALIVE

Animals were ritually slaughtered in batches of 7, 8 or 9 (depending on the month of the sacrifice) for each of these lieutenant gods, most of them burned alive.⁹³⁴ Herd beasts were the main creatures sacrificed, as well as birds of various kinds, especially the cock.⁹³⁵ Having cut the throat of the victim the dead or still-twitching offering was incinerated; in no case was the sacrifice eaten. The effusion of blood from the open neck wound was the crucial moment of the ritual, and accordingly the name of the god being invoked or worshiped was recited as the blood began to flow.⁹³⁵ Whether blood geysered forth from severed arteries, or simply trickled gently from a puncture wound, the effect was the same, an outpouring of life-giving power. In Chaldean ritualism, bloodletting provided energy for magical rites. The Greek philosopher Pythagorus wrote of such details long before the Arabs. After studying Chaldeanism he *“was shocked at all the blood-shedding and killing”* required by their art.⁹³⁶

BLOOD FLOW BROUGHT
MAGICAL FORCES TO
FRUITION

It came to the attention of authorities during mediaeval witch trials, that certain rites of black witchery demanded the slaughter of chickens, dogs and cats, and blood effusions were a feature of these ritual killings.⁹³⁷ However, the witches could just as easily achieve the same or similar results by pricking themselves.⁹³⁷ Lancashire witches pierced their bodies to get bloodflow; *“witches as have sharp bones given them by the devill to pricke them ... their devill receiveth blood from the place, pricked with the bone”*.⁹³⁸

ALL SACRIFICES WERE
ANNOINTED WITH WINE

The Chaldean ritual for killing bulls and other such creatures was to liberally pour wine over the head of the victim.⁹³⁹ The reaction of the victim to this outpouring served as an augury as to the acceptability of the sacrifice.⁹³⁹ The severed head was scrutinised for portentous signs, which were gleaned from the way the head, tongue and eyes moved.⁹³⁹ Following this the sacrifice was incinerated, and the rapidity and completeness with which the offering was consumed by the flames served to indicate the attitude of the god towards the offering, or served as a reply to

THE DECAPITATED
HEAD OF THE SACRIFICE
WAS CAREFULLY
OBSERVED FOR SIGNS

the person's request for divine aid.⁹³⁹ During the Rus' funeral on the Upper Volga, Ibn Fadhlān noticed that the pagan onlookers were extremely pleased with the manner in which the death ship, the sacrificed concubine, dog, cock, horses and cattle were consumed by the flames; the conflagration quickly devoured the ship leaving only a small wispy vortex of smoke rising up into the heavens.⁹⁴⁰

THEIR RELIGION HAD A
TALKING HEAD

The other Arab name for the *Al-Kaldani* (*Ashab Al-Ra's*⁹⁴¹ which shares a phonetic similarity with Rus' or Ros) was derived from the fact that their religion possessed a talking head, severed from a man whose countenance resembled that of the god Mercury. If such a person was found among members of the cult during their travels, they captured and slew the individual, but not before subjecting them to various planetary rites. The snatched victim was manipulated in such a way as to prompt Mercury to enter into the person's head. This was achieved by skillfully stretching the victim's neck as long as they could before the act of beheading. Following the completion of this ritual the head was able to prophecy.⁹⁴²

EACH PLANET HAD ITS
OWN TEMPLE

THEY HAD A HOLY
MOUNTAIN, FROM WHICH
THEY OBSERVED THE
STARS, THEIR GODS

The *Al-Kaldani* had a major temple constructed for each of the planets, each with a specific geometric design; some were circular temples, others oblong, others square, pentacle-shaped or triangular.⁹⁴³ At Harran these temples existed in a clustered group, situated just near a holy mountain, from which celestial phenomena was observed by the Chaldean astronomers.⁹⁴³ According to Al-Masudi every temple had its own basement area which contained a number of idols through which the priests spoke to assembled devotees by means of tubing.⁹⁴³ One site in Harran served as a centre of initiation for Chaldean boys who were making their rite of passage into manhood.⁹⁴³

THEY HAD A DUALISTIC
CALENDAR

IN CHALDEANISM MAY
DAY WAS THE FEAST DAY
OF HELIOS, THE SUN

Their feasts, especially those dedicated to the God of the North, followed a specific calendar of observances, which Al-Nadim went on to detail at some length. This sacrificial regime was dualistic in nature, and conceptually similar to the pagan Rus' dualistic ceremonial calendar, with white and black days.⁹⁴⁴ At specific times of the year demonolatry was practiced in addition to the worship of idols consecrated to celestial deities. On the 27th and 28th of August "they have mysteries, offerings, slaughters and burnt sacrifices to the north, who is the greatest god, as well as to the devils and the jinn whom he has controlled and scattered, giving them good luck".⁹⁴⁵ On May 1st the *Al-Kaldani* adored the sun, whereas on the 2nd they made offerings to a Lord of Devils, under the name Salugha. Another feast was held in honour of a time god, who is best equated with Zurvan or Kronos.

Every weekday was dedicated to one of the five planets and two luminaries, each a divinity. For example Sunday was the sacrificial day of the sun god Helios. According to one Russian Chronicle, Helios was another name used by the Russes (or at least a certain proportion of them) when referring to Dazhbog, the sun God.

Monday was the day of the Moon god Sin.

Tuesday was dedicated to the planet Mars under the name Ares.

Wednesday was the day of sacrifice to Mercury under the name Nebo.

Thursday was the day of sacrifice to Jupiter, who was also called Bal.

Friday was the day of the planet Venus under the name Belit.

Saturday was the day of the planet Saturn under the name Cronus.⁹⁴⁵

CRONUS WAS PROBABLY
WORSHIPPED IN BRITAIN
UNDER THE NAME
CERNUNNOS

Fossilised remnants of the Chaldean weekly calendrical observances survived into the modern era, coming by way of the Germanic nations. Sunday (the day of the sun), Monday (the moon's day), Tuesday (the day of *Tiwaz* (the Germanic war god), probably derived from the Chaldean divinity *Ta-uz*), Wednesday (Odin's day), Thursday (Thor's day, Thor being the Scandinavian thunder god), Friday (the day of Frey. However I believe it comes from his sister's name, Freya, the goddess of sex and love, who can otherwise be equated with Venus), and finally Saturday (the day of Saturnus, the Great Maelific, who can also be equated with Satan). The same assignation of days can also be found in French and Italian.

THE DEATH OF TA-UZ

In the Chaldean list you may have noted a number of deities worshiped not only on the steppes of Russia during Scythian times, but also in ancient Britain. These gods also appear in the Jewish apocryphal *Book of the Secrets of Enoch*.⁹⁴⁶

ELABORATE FEASTS WERE
CONDUCTED IN HONOUR
OF VENUS

The Chaldean god *Ta-uz*, was worshiped by women alone, who lamented that he had been killed and his body ground to powder beneath a mill stone. Such was their love for him that an emulation of this tragic event may have been the basis for their annual baby sacrifice, which took place less than a month later, in August. Accordingly the infant sacrifice might have been akin to that which Abraham was prepared to make for love of his god, only in their case the priest followed through, and *Ta-uz* was the recipient.

One of their most spectacular and lavish feast days was dedicated to the Goddess of Beauty and Love, Venus, who they addressed by the name Belit.⁹⁴⁷ An elaborate floral-clad shrine or grotto was erected during the festival to house the idol, and in front of which many different kinds of animals were slaughtered.⁹⁴⁷ She was not the only

female god of importance. Another goddess that received adoration was a certain mistress who ruled over the herds. She was associated with goats, and possessed her own herd. On the last (30th) day of every passing month, a special gathering was held, at which the presiding priest ascended a 9-stepped raised rostrum. Members of the congregation filed past the raised priest and were repeatedly whipped with a switch of tamarisk,⁹⁴⁸ a plant traditionally used by Magi for their barsom twig wands. All present were implored to go forth and multiply in great numbers with a view to regaining the prestige their religion once enjoyed.⁹⁴⁸ The faithful were urged to go out into the world to gain sovereign authority and rule over peoples of every nation, and were tasked with destroying Churches and Mosques in their area.⁹⁴⁸

*“Then he preaches a sermon to them, in which he calls (prays) for all of them to live, to increase the number of their offspring, and to gain power and superiority over all nations, that their sovereignty and days of rule may return to them and that the congregational mosque of Harran may be destroyed, as well as the Greek Orthodox Church and the market street known as the Women’s market. Before the Byzantine kings uprooted them when they conquered (Harran), it was in these places that their idols used to be”.*⁹⁴⁸

After the priest alighted from the raised dais, he collected a small quantity of silver coinage from every person present (to bolster the temple coffers) and then proceeded to share out the ritual feast. Splinters of pine wood were burned at this time.⁹⁴⁸

The rites of February particularly concerned the adoration of demons and the God of the North.⁹⁴⁹ Priests indulged in theurgic rites evidently cajoling the planets into action.

Al-Nadim stated that some devout Muslim translators who worked on recording the Chaldean mysteries did so in a biased and lacklustre fashion, with the result that the *Al-Kaldani* were misrepresented on a number of points. He went on to say that a primary Chaldean text in common usage among the *Al-Kaldani* was a much more faithful account of their mysteries, and the basis for his Fihrist entries concerning their faith. For example Al-Nadim stated that the *Al-Kaldani* held Aristotelean views on the nature of physical existence, and beliefs close to those contained in the book *Meteorologica*.⁹⁵⁰ One of their primary religious texts was *Discourses of Hermes on Unity*,⁹⁵⁰ which means that it was similar to certain items within the Coptic Nag-Hammadi cache of pagan gnostic texts.

The *Al-Kaldani* had a treatise which detailed the rites, incantations and operations used to create magical knots, as well as talismanic images and devices, incised gemstones, or amulets from the body parts of various animals (eg: the wing bones of certain birds worn slung around the neck).⁹⁵¹ Al-Nadim further claimed to have seen the specially incised signets and gemstone seals which they carried, and had explained to him some of the basic premises of such devices.⁹⁵¹ In *On the Mysteries of the Egyptians, Chaldeans and Assyrians*, the pagan gnostic philosopher Iamblichus made mention of rites not dissimilar to those specified by Al-Nadim. Whether or not Iamblichus’ work was similarly twisted by Mediaeval Islamic copyists and translators who translated it into the Arabic is open to debate, but I personally doubt it.

The Old Russian word *Edukar’* (“a doctor of teaching”, or “a knowledgeable person”) has hazy origins, but is thought to have stemmed from the Iranian word *Yadu-kama* (“sorcerer”), the Middle Avestan *Yadu* (“a sorcerer” or “a magician”), which still continued to be perpetuated in the New Persian as *Jadugar*.⁹⁵² In all probability the *Yadu-kar* were the sorcerers portrayed in the *Avesta* as performing the infernal mysteries of *Yatukih*, magical rites directed towards *Ahriman*. Therefore we might guess the presence of Iranian devil-worshipping sorcerers in pagan Russia who practiced telestic idolatry, and Chaldean intellectual culture, and who were enemies of the Orthodox Zoroastrians, but friends to the Zurvanite.

Since the *Edukar’* can be identified with the *Yatukih* on phonetic grounds, I incline towards the view that in a number of instances the black Magi were actually Chaldean academics, and that the Chaldean “Mysteries of the North” was simply another name for *Yatukih*. So we have a Russian “Kolduny connection” with the *Al-Kaldani*, and a Russian “*Edukar’* connection” with the *Yatukih* sorcerers condemned as evil wizards in Orthodox Zoroastrian texts. This suggests that dark wizards were chased off by the Byzantines and white Magi, and were probably living in rural Russia. Perhaps for this reason the Russian *kolduny* and the black Magi were widely reported to have worn lengthy dishevelled hair and ragged beards.⁹⁵³ One type of Russian *Koldun* was the *Baal’nik*, who made special consecrations using incantations.⁹⁵⁴ We might therefore make a connection between the Russian *Baal’nik Koldun* and the headman of the *Al-Kaldani*’s temple of Baal (perhaps the Chaldean Jupiter). It may well be that these Russian Chaldeans were descendants of the “Assyrian” devil-worshippers who the Magi claimed were “uprooted” from Asia Minor by the Byzantine Emperors. There they lived alongside the Magians and many other types of pagan living in exile. The *Fihrist* of *Al-Nadim* corroborates the Magian texts with regard to the displacement of the

CHALDEANS WERE PERSECUTED BY BOTH THE MAGI AND THE BYZANTINES

IN GENERAL, MEDIAEVAL RUSSIAN ORTHODOX DOCUMENTATION YIELDS LITTLE INFORMATION ABOUT THE PRACTICING PAGANS IN RUS’

Chaldeans, perhaps confirming the historicity of Zoroastrian reports of anti-Chaldean Byzantine military campaigns conducted inside Anatolia.

Whereas in bygone years the Chaldean priests, priestesses and head men had practiced their magical rites free of harm, their extremely ancient faith had to slide from public influence and view after Babylon and Assyria fell to Medean and Persian troops. If it was to have any chance of maintaining its autonomy, anonymity would be their foremost asset in the struggle to preserve the religion. They were survivors. So, as white Magian, Byzantine Christian and Islamic religions sequentially inherited governorship of the Chaldean homeland, each had to contend with the pagan resilience of the locals. Amid repeated waves of failed conversions (which saw Chaldeans feign membership of these newer religions, all the while “unrepentently” and vehemently clinging to Chaldean sorcery and philosophy), waves of repression were unleashed against them to rid Anatolia of their worrisome presence. Despite Islam’s ascendancy to ever newer heights of popularity, the Arabs still had them loitering about Harran in the 10th Century AD, but in diminished numbers. Obviously many had genuinely converted. Yet one cannot help feeling that the reason why late Mediaeval Islam did not suffer from the same frenzied outbursts of witch trials as the Roman Catholic Church, is because the *Al-Kaldany* had been forced to leave the area or abandon their religion, and those who did remain had no rights under Muslim law anyway. The later destruction of Baghdad and Harran by the Mongols may have caused further emigration of Chaldean and Muslim refugees from the war-ravaged zone.

In other words Chaldean religion was still largely intact as late as the 10th Century, clandestinely practicing their arts throughout Muslim Egypt and Arabia⁹⁵⁵ on some scale. Al-Nadim’s testimony corroborates, if not verifies, what Iamblichus, the Greek pagan gnostic said of them. In accordance with Chaldean pagan philosophy, devils and spirits could be summoned and commanded by invoking the name of the supreme god. Exactly who this high god was, and what name he should be summoned by, depended of course on the prevailing notion of the supreme godhead in the area in which they lived. Throughout the Muslim world Chaldeanism had a distinctly Islamic flavour, while in Christendom Western European witches tailored their arts to reflect the Christianisation of their society. There they drew down the power of the holy Trinity - Father, Son and Holy Spirit. Al-Nadim had the following things to say about the Chaldeans found among the Muslim flock. Witness the Islamicised face of Chaldeanism!

CHALDEANISM STILL
PRESENT IN THE 10TH
CENTURY AD

ARAB CHALDEANS USED
THE NAME OF ALLAH TO
CONTROL DEMONS AND
JINN

MEDIAEVAL EGYPT

“The exorcists and magicians assert that the devils, jinn, and spirits obey and serve them, being directed by their command and their prohibition. The exorcists, who pretend to observe the sacred laws (of Islam), claim that this is because of obedience to Allah ... Thus invocation is addressed to Him, and oaths by the spirits and devils are by His help, with the abandoning of lusts and by consequence of religious practices. Moreover, (they claim) that the jinn and the devils obey them, either because of obedience to Allah ...

*The (other) magicians assert that they enslave the devils by offerings and prohibitive acts. They (claim) that the devils are pleased by the committing of acts which are forbidden and which Allah ... has prohibited. Thus the perpetrating of things such as abandoning prayer and fasting, permitting blood, marrying forbidden women, and other kinds of evil actions is also pleasing. This is common practice in Egypt and the nearby regions: the books which are written there are many and extant ... A person who has seen this (state of affairs) has told me that there still remain men and women magicians and that all of the exorcists and magicians assert that they have seals, charms of paper, sandal, jazah, smoke and other things used for their arts”.*⁹⁵⁵

Thanks to archaeologists we have a series of ancient pre-Zoroastrian Chaldean tablets, entitled the *Wicked Spirits*. They contained expulsions and shielding formulae designed to protect the practitioner, some of which took the form of imprecations. In this respect Al Nadim’s exposition of Mediaeval Chaldean magic and demonolatriy can be vindicated. Foremost among the offending spirits were three species of demon known to the Chaldeans as *Ultuq*, *Gigim* and *Maskim* (from lowest to highest potency).⁹⁵⁶ Of the *Maskim* it was said:

SOME DAEMONES LIVED
IN THE UNDERWORLD

MAGICAL OBJECTS
CRAFTED BY THE
CHALDEANS COULD ALSO
BE FOUND IN ARABIA

*“On high they bring trouble, and below they bring confusion. Falling in rain from the sky, issuing from the earth, they penetrate the strong timbers, the thick timbers; they pass from house to house. Doors do not stop them, bolts do not stop them, they glide in at the doors like serpents, they enter by the windows like the wind, they hinder the wife from conceiving by her husband; they take the child from the knees of the man; they make the free woman leave the house, where she has borne a child. They, they are the voices which cry and which pursue mankind”.*⁹⁵⁷

Many of these beings lived beneath the earth, under water especially, and far beneath the sea in particular. Another fragmented tablet describes this underworld known to the Chaldees. It called it the “*foundation of Chaos*”,⁹⁵⁸ a jail from which there is no escape, where there is no food to speak of save the dust, where no light comes, where dirt-speckled aerial demons, in their multitudes, fly thickly, even so far as licking the ceiling of the underworld’s vault.

Al-Nadim went on to describe Chaldean engraved gems, plus stone and bead talismans throughout much of the Middle-East, although he adds that they had been “*rendered vain*”. Iamblichus already told us of these things long prior, but Al-Nadim knew of their mediaeval presence first-hand. Additionally, as a result of these arts, many specialist treatises dedicated to the Jinn and demonology could be found in their keeping throughout much of Arabia, often quite detailed.

In so far as the Jinn are concerned the *Qur’an* describes their primordial creation, and how, along with man, they would be judged by Allah on Judgement Day; “*He created man from potter’s clay, and the jinn from smokeless fire*”.⁹⁵⁹

As this section draws fast to a close, I must draw your attention to comments made by some writers on the topic of European witchcraft. They say that witchery was largely a fictitious phenomenon scraped together by a number of mediaeval Catholic clergy, built on older stories and plenty of imagination. As further proof of this they proclaim that witchcraft did not exist in the Middle East, or in Orthodox Christian countries. This is simply untrue. Sadly, whatever Russian Orthodox Church texts concern contemporary paganism are hardly explicit, adding hardly anything to our search for what actually took place in pagan Russia. Their pens were far more busy recording the glorious ascension of Christianity, the magnificence of their rulers, the conversion of their race, and the path towards inward moral reform. Be that as it may, the Chaldeans are mentioned in the sermons of Klim Smolyatich, but only in terms of their weakness when compared with god. Klim’s homily is more likely to have been a moral lesson for his parishioners rather than a direct reference to local Chaldeans.

On the other hand, Russian folklore greatly supports my contention that Chaldeans were present in Slavia. In the folk tale *Prince Vladimir’s Quest* (which rivals the official account of the conversion polemic contained within the *Primary Chronicle*), Vladimir sends three observers Mladan, Oleg and Vachtan to discover a new faith for the Russian people.⁹⁶⁰ This faith was to replace their homage of the many gods which inhabited their environs, and their excessive reliance on the stars and astrology for guidance.⁹⁶⁰ They visited many places and were unsatisfied with what they saw until they ran into a dwarf.⁹⁶⁰ He advised them to go far to the east into Mesopotamia, to the city of Babylon, the city of the seven hills.⁹⁶⁰ Upon arrival they discovered black-clad worshippers prostrating themselves before metallic or stone idols, as females garbed in black danced around a censer emitting a plume of thick billowing smoke.⁹⁶⁰ All the while a choir uttered unnerving discordant chants as an accompaniment to the proceedings.⁹⁶⁰ Their primary god was a female, who I associate with the black mother, Geh, the great whore, mother of dark witchcraft (as described in the Magian texts). Having felt themselves deceived by the dwarf the three Russians made off. Eventually, they had a dream of a holy maiden (the Virgin Mary) who guided them to the City of the Sun, which surprisingly turns out to be Constantinople, the city where they would find the light, truth and joy which Vladimir sent them in search of. Behind this tale we find the story of their unrequited search for a new faith in Babylonian religion. Their City of the Sun was not Khorezm (a former homeland of the Croats, and the Hungarian Arpad dynasty. Iranian: literally “The Land of the Sun”) as one would suspect, but Constantinople. Whether the real version of the myth lay at Khorezm, but was later shifted to Constantinople the further they entered the Christian era is debatable. The search for the City of the Sun reveals an underlying strata of heliolatry superimposed over Christianity - such were the beliefs of the *doeoveriye*, the pagan Christians.

A 13th Century Chaldean-style spell scroll unearthed by archaeologists in Novgorod confirms the existence of the dark craft in Russia beyond all doubt. The spells were written backwards in the form of prayers to the Virgin Mary, making them “*anti-prayers*”.⁹⁶¹ These were the sort of pagan observances so frequently condemned by the Russian Church as unholy.⁹⁶¹ But their relative absence in relation to the 150,000 other scrolls unearthed there show that, in the cities at least, it was not widespread. Having said that, only 10% of the old city has been excavated so far.

On top of that we have a number of *zmeiovik* medallions (designed to be worn!) featuring the cross of Jesus on one side and the head of a medusa-like fiend on the other.⁹⁶² The latter is quite plausibly a depiction of Ahriman, since a similar relief of the arch-fiend is found in Persia, in the form of the Evil One being crushed under the hooves of Ahura Mazda’s steed.⁹⁶³

Likewise there can be no mistaking the intended symbolism of a deliberately manufactured inverted cross found in Scandinavia. The principles behind the object in question seem related to *ergi*, an art of ritual inversion

MAN WAS MADE FROM CLAY, THE JINN FROM SMOKELESS FIRE

SOME HAVE SAID THAT WITCHCRAFT WAS AN EXCLUSIVELY WESTERN PHENOMENON

THIS IS INCORRECT

CHALDEAN-STYLE SCROLLS IN RUSSIA

RITUAL INVERSION

BLACK MAGIC IN RUSSIA

DEVILS IN THE LOWER ATMOSPHERE	<p>theoretically connected with infernal wizardry.</p> <p>The situation was far different in the countryside. For example in the Russian district of Penzen, <i>kolduny</i> supposedly used candles, aspen and wands of witch-hazel during their devotions. As with the <i>Al-Kaldani</i>, Russian <i>kolduny</i> were allegedly practitioners of ritual inversion.⁹⁶⁴ They were notorious for attending Church services and then disrespectfully turning their back on the priest and iconostasis where Jesus, Mary and the Saints are portrayed in religious art. Profanities were supposedly the order of the day at Easter time.⁹⁶⁴ They recited the Easter resurrection prayer backward then began yelling obscenities.⁹⁶⁴ The unholy consecrations of the Russian <i>kolduny</i> (termed <i>porchi</i>) involved necromancy, devil-worship, desecration, and even performing the dance of St Vitus.⁹⁶⁵ For this reason I am inclined to identify Rus' black Magians as heathen Chaldean <i>kolduny</i>. The Mediaeval anti-witch treatise <i>Malleus Maleficarum</i> states "it can be said that the devils deputed to work are not in Hell, but in the lower mists".⁹⁶⁶ Clearly a Chaldean explanation was posited by Kramer and Sprenger for the abilities and activities of devils, as professed by the witches.</p>
PERVERTING PAGAN RITUALISM	<p>It would seem that they were blasphemously mocking not only Christian rites, but Magian pagan ceremonies still extant in Russia. On <i>Velikiy Chetverg</i> (ie; Holy Thursday) <i>kolduny</i> held their own fire ceremonies during which aspen was burned. Fellow sorcerers and sorceresses soon converged on the scene of the fire requesting to receive portions of this ash from the ringleader.⁹⁶⁷ The Old Russian word for <i>aspen</i> (a species of poplar tree) was <i>osin</i>, which bears a superficial resemblance to <i>yasen'</i> ("the ash tree"), and therefore <i>yasna</i> (the name of the Magian <i>Haoma</i> ritual). Even though Russian <i>kolduny</i> used the ashes of burned poplar for magical purposes, there is no reason to include it as a candidate for the mantle of <i>Haoma</i> on the strength of this linguistic correlation, ostensibly because it does not resemble the plant described in the Magian texts.</p>
DESECRATING BREAD AND SALT	<p>In Rus' bread, salt and water were desecrated at other times and strategically flung in certain locations, especially near cross-roads. Eggs or a knotted bundle made from a shirt, belt, cross, chain and coal, were put there too.⁹⁶⁸ Whosoever retrieved these things (which are especially identifiable with Magianism) would be afflicted by disease generally speaking, and through them, the <i>kolduny</i> brought diseases and plagues into the villages.⁹⁶⁸ The depositing of bread at cross-roads is probably indicative that Magians left consecrated loaves at cross-road shrines by their priests and priestesses. Hence the desire to pick them up, and eat of them.</p>
BRINGING DISEASE	
KOLDUNY ACTIVE AFTER NIGHTFALL	<p><i>Kolduny</i> slept during the day, and come night time they set off to be about their business, carrying a staff with an iron crook at the end.⁹⁶⁹ They mostly dressed the same, with a sheep-skin jacket girthed by a belt-sash (<i>kushak</i>).⁹⁶⁹ Their countenance was terrible, their grin that of a wolf, their eyes vulpine.⁹⁶⁹ To have them look at you was all the worse owing to the powers of witchcraft that flowed from those eyes. This the peasantry called "the wolf gaze".⁹⁶⁹</p>
CHALDEANS IDENTIFIABLE AS BLACK MAGIANS	<p>Russian sorcerers could astral travel, or in other words, make their soul leave their body and send it on journeys. At other times they mutated into animal form.⁹⁷⁰ <i>Kolduny</i> used iron blades, cats, frogs and snakes as aids to performing sorcery, in addition to poplar ash.⁹⁷⁰ These were classic features of black Magianism, if we are to believe the Zoroastrian texts. <i>Kolduny</i> displayed further black Magian features described in the Avestan and Pahlavi texts. <i>Kolduny</i> rendered cattle lame by rubbing their hand along the beast's back.⁹⁷¹ Moreover they destroyed the crops raised by the peasantry out of hatred for bread and cereal grains, and to make their austere lives even more troubled.⁹⁷¹</p>
FIELD BLASTING	<p>They performed another rite eminently feared by the peasantry. According to it bread was broken on its right and left side, then twisted into a knot.⁹⁷² The ripped and knotted loaf was not sprinkled with salt (as would normally be the case in any white Magian or Russian household), but was instead intentionally despoiled with ashes, dirt from a grave plot, egg-shell, and old grain.⁹⁷² The ash used in the ritual was to be taken from the hearth of the intended victim, who was to be attacked by the black magic of the unholy loaf.⁹⁷² This bread caused poverty and fires on the person's property, and made their cattle drop due to sickness. It could even lead to death. It was widely believed throughout Belorussia that such a rite would prevent a harvest across many fields.⁹⁷² A conceptually similar ritual was known in Western Europe, and featured in an undetermined number of European witch trials.</p>
POTIONS	<p>In the Sarapyl' district, in the Vyatka region of Eastern Russia, <i>kolduny</i> apparently laced wine and beer with a specially prepared incense. The tainted draught caused mental disorientation, rendering whomsoever had imbibed the drink unable to find doors. Where <i>kolduny</i> managed to make a person drink wash-up water, the victim was supposedly drained of their strength.⁹⁷²</p> <p><i>Kolduny</i> had a good side as well; for a price. Russians who believed themselves vexed sought the services of</p>
KOLDUNY PROVIDED COUNTER-MAGIC	

another *koldun*, who performed counter-magical rituals, to relieve the burden imposed on them by the enemy sorcerer.⁹⁷³ Wedded couples often had them protect the family home using diverse rituals.⁹⁷³

As stated earlier, evil witches were notoriously present in the far north of Russia, particularly near the exceedingly frigid White Sea. Folklore remembers them as black of visage, perhaps negroid or Indian, or perhaps simply allegorically black in heart and body.⁹⁷⁴ Their infernal powers came to them in a reversed version of confirmation, when the spirit of evil entered their body, in the form of demons, traditionally embodied as toads, frogs and serpents.⁹⁷⁴

Evidence for European Chaldeanism appears in Western sources too, mainly in the form of spell scrolls written in Chaldean and Hebrew.⁹⁷⁵ The 1376 text *Directorium Inquisitorium* provided unmistakably Chaldean details about certain witch-rites. After laying face down on the ground many times, and with songs, “they lacerate their own flesh (to draw blood). Out of reverence for the demon or by his instructions they wear white or black vestments. They worship him by signs ... burn candles or incense, they sacrifice animals and birds, catching their blood”⁹⁷⁶ The famous protestant theologian Calvin, did however think to brand Western witches as Chaldeans, drawing, in places, from *Old Testament* passages.⁹⁷⁷

“He (God) hands the Chaldeans over to be impelled by Satan, having chosen them as His ministers for this task. Satan with his poison darts arouses the wicked minds of the Chaldeans to execute that evil deed ... and befoul them by the crime”⁹⁷⁷

Consider also the details recorded in 1376 (by the Inquisitor Nicholas Eymeric) concerning the arts of the witch-heretics at Aragon, France.⁹⁷⁸ He mentioned ; Bloodletting, animal sacrifices (by burning), collecting the blood of the sacrifices, invoking demons, paying homage to demons through their chastity; Wearing robes either black or white in colour, as a given demon required; Using propitiatory hymns, incenses and aromas for unholy purposes; Kneeling before demons; Using sigils and unidentifiable words to worship particular demons; Burning candles; Conducting rituals similar to Baal worship.

CHALDEANS ARE MENTIONED IN MEDIAEVAL WESTERN SOURCES BY NAME

MEDIAEVAL EUROPEAN WITCHES ENACTED RITES SIMILAR TO THOSE OF THE CHALDEANS AND BLACK MAGI

The Yezidis

From this point on the reader will not fail to notice a perceptible relationship between aspects of this heathen Chaldeanism and the faith of the Yezidis. Much of what you are about to read is written in the present tense, largely because the cult is still largely functional in Iraq and Khurdistan to this very day, though, I must add, chastened by the relentless cycle of Islamic persecution and murder.

One of their prayers dedicated to Melek Ta’us, whose metallic image is that of a peacock, includes the following stanzas of adoration; “Thou art lord of grace and good luck. Thou art king of jinns and human beings, King of the holy saints, Lord of Terror and praise ... god of the sun and of the fire ... thou has created Jesus and Mary”⁹⁷⁹ which end in a supplication for the removal of sins. How remarkably well these beliefs seem to resemble Chaldean devotions to the God of the North, King of all the Jinn and spirits, dispenser of luck.

Structure

The organisational infrastructure of their faith is seven-fold, as follows, in descending order;

1. Sheik The Yezidis sheik is their faith’s supreme office holder. He presides over a conclave of regional sheiks, from whom he was selected based on merit, and who biannually visits Yezidis everywhere in a grand tour of their scattered villages.⁹⁸⁰ All Sheiks are said to possess miraculous powers, including the banishment of noxious creatures, healing, and the dispensing of health-giving benedictions upon agriculture and herds.⁹⁸⁰

Yezidis sheiks dress in flowing white robes, and encase their hair in a black turban. The primary Sheik inherits his post only by a linear descent to Yazad, administering the affairs of their people, and caring for Sheik Adi’s tomb (Yazad and Sheik Adi being the alleged originators of the sect).

To facilitate the tomb’s upkeep the Sheik levies monetary tithes from all the Yezidis, collected personally or via groups of tithe-gathering Cawwals (priests) dispatched throughout every region (including Russia! according to the *Mashaf Resh*).⁹⁸¹ Members of the sect are free to decide whether they shall give or not, but in practice those who refuse to hand over donations are ostracised at the Sheik’s command. On their travels Cawwals deliver Adi’s tomb dust squeezed into small, nut-sized balls resembling clay nodules.⁹⁸¹

Another Sheik, with an entirely different office, follows in their footsteps, venturing around the countryside to obtain live chickens (often slaughtered as sacrificial offerings during Summer festivals).⁹⁸¹

The Sheik presides over an earthly spiritual court, deliberating upon the alleged misdeeds of Yezidis brought

A SHEIK RULES THE YEZIDIS

before him.⁹⁸² By far the worst sentence he can hand down is excommunication, which sees the guilty stricken from their communities and their faith.⁹⁸²

A reigning sheik's fiery hearth attracts special reverence from believers, for it is the seat of his spiritual power.⁹⁸³ One might guess that in times past it attracted a retinue of hearth keepers whose primary task was to ensure its proper upkeep and regular endowment with kindling.⁹⁸³ Even the simple act of gathering kindling attracts certain pageantry in Yezidism.⁹⁸³ Believers fossick for pieces of timber on a mountain near Sheik Adi's shrine, ascending its slopes with a rope noose about their throat. Along the way they collect up wood, bind them into a faggot with the rope and later return to share it out amongst sectarians.

THE EMIRS

2. Emir The Emirs or princes.

3. Cawwal Cawwals are wandering musicians that play an integral role in their festivals and devotional ceremonies.

PIR, PRIEST

4. Pir Pirs are roughly equivalent to Yezidis parish priests, who don black robes and gird their head with red turbans.⁹⁸⁴ Although Pir means "old man" or "elder" in Persian, I believe it related to the word *Pyraethi*, which Strabo used as the title of Magian fire priests who tended fire altars within outdoor enclosures. In Sassania *Pyraethi* probably fell from use, replaced by the title *Arthravan*. I also mention in passing that Strabo mentions *Pyraethi* participated in ceremonial processions associated with Omanus (ie; Ahriman - the spirit of evil according to Zoroastrian scripture). These references are at least a thousand years older than the earliest recorded mention of Yezidis (here referring to the originators of the modern Yezidis).

KOCHAK, SEER AND PROPHET

5. Kochak Seers and prophets are relegated to the category of Kochaks, who are forbidden to inter-breed with anybody outside the priesthood. They receive visions of Melek Ta'us and other angels dignified in their writings. At other times they make contact with souls hovering in the ether. Yezidis go to Kochaks to have their dreams interpreted, or to hear from loved ones on the other side. Kochaks might also ascertain whether transmigration has taken place, and what form the person's soul has assumed in the rebirth.

6. Fakir

7. Mulla

The faithful bow low in the presence of officers from *pir* upwards, kissing their hand upon meeting.

To some extent Yezidis heirarchical classifications are roughly similar to Mazdean officers.

Head Sheik	<i>Magupatan Magupat</i>
Regional sheik	<i>Magupat</i>
<i>Emir</i>	<i>Dastur</i>
<i>Cawwal</i>	-
<i>Pir</i>	<i>Arthravan</i>
<i>Kochak</i>	<i>Herbad</i>

<i>Mulla</i>	<i>Herbad</i>

Yezidis ritualism

WORSHIPPING MELEK TA'US IS A PIVOTAL ACT IN YEZIDISM

The essential articles of Yezidis faith were recorded in a secular document of more modern provenance requesting their menfolk be excused from Ottoman military service, drafted by Emir Hussein and witnessed by no less than 17 chieftains and high-ranking religious figures.⁹⁸⁵ On this basis we may assume the mentioned points, which were enough to have them rendered unfit for the Sultan's military service, are a proper account of their fundamental traditions, and clearly do not represent their full range of observances.⁹⁸⁵

SOME RITES TAKE PLACE AT SUNRISE

Their creed demands that believers perform an annual six-day pilgrimage to meet the high sheik each September. Additionally they are required to enter the presence of Melek Ta'us image (otherwise known as the Sanjaq) twice annually any time throughout April and the end of November.⁹⁸⁵ They must make visible acts of piety and submission to the sun, at sunrise, as the solar corona first breaks through the darkness, as the ascending heliacal sphere first emerges from below the horizon.⁹⁸⁵ Though they must be careful to do so in the absence of non-believers, which one might think contaminated the purity of the ceremony and secured privacy of worship for a creed avidly pursued by its enemies.⁹⁸⁵

*“When they notice the sun rise, they kiss the place where the rays first fall; they do the same at sunset, where its rays fall last. Likewise the kiss the spot where the moon first casts its rays and where it last casts them. They think, moreover, that by the multiplication of gifts to sheiks and idols they keep troubles and afflictions away.”*⁹⁸⁶

THEY EAT SHEIK ADI’S
TOMB DUST EVERY DAY

Under no circumstances are they to attend morning prayers at the Mosque, for they are duly bound to slay those who recite Islamic devotional prayers, then commit suicide. Believers must check in at the residence of their local Pir to inform them that their fasting has commenced, and must hold firm until they return to him later in the day, at which point the fast concludes, and is sealed with consecrated wine. Very often when they do eat during fasting seasons, but it is a single meal consumed after sundown.

Animals are slaughtered for the April solemnities in keeping with one’s financial status; Cattle or sheep by the rich, and poultry the poor.⁹⁸⁷

A three-day fast dedicated to the venerable ancient patriarch Yezid is also observed in December.⁹⁸⁸ During Spring another fast of one month and ten days duration takes place, roughly synchronised with the Orthodox Christian Easter fast.⁹⁸⁸ Forty days on diminished sustenance is fairly gruelling, and so they have a custom analogous to those found in medieval Catholic Europe, allowing individuals to fast on behalf of another, especially the old and frail. Those who feel so inclined can exculpate their misdeeds by furnishing the Cawwals with sin payments.

Prayer is not one of their scheduled religious obligations, aside from the passage they enunciate each morning at sunrise, since their priests, as intercessors for the Yezidis, pray on behalf of all, and in particular those who pay them handsomely. It would be true to say they see in prayer a certain inefficacy, as was explained in Sheik Adi’s discourse on the matter *“God commanded me to tell you that there is no need of prayer; believe in the power of Melek Ta’us and you shall be saved”*.⁹⁸⁹

Yezidis holy sites vary in form. On one hand there are the flute-spined, white-washed temples found on Mt Lalish.⁹⁹⁰ Their interiors are illumined by countless lamps fueled by olive oil.⁹⁹⁰ Elsewhere they might be an uncomplicated building erected near a spring, and where stand the mulberry trees so often affiliated with their sect. Infirm Yezidis make pilgrimages to the latter, hoping to be cured by tying pieces of cloth in the trees, the fabric possessed by disease causing spirits. And nobody dares untie one of their rags for fear of contracting a malady.⁹⁹⁰

Acts of Idolatry are considered far superior to fasting, as an act of devotion. This much cannot be doubted, for in the *Mashaf Resh* it clearly states *“They worship of any idol, such as Seyed-ad-Din or Sheik Sams is better than fasting”*,⁹⁹¹ and also stipulates that *“Every Friday a load of gifts is to be brought as an offering to an idol”*.⁹⁹¹ Idol sanctuaries are also integral to matters of law and commerce, for in such locations oaths were foresworn, as the person stood within a magical circle.⁹⁹¹

Whensoever wandering Cawwals chance upon one of their sect’s idols on their lengthy journeys, they light oil lamps before them in adoration.

Each sect member must, under pain of being branded an infidel, carry tomb dust from Sheik Adi’s sepulchre, and eat a pinch for breakfast every day.⁹⁹² Should any member depart this world without swallowing the said dust, he is automatically heretical, and therefore a non-believer.

Kawwals and Pirs perform a ‘last rite’ over dying Yezidis, urging them to not lose faith in their beliefs, even as they draw their final breath.⁹⁹³ To seal the rite they slip Sheik Adi’s sepulchral dust into the person’s mouth.⁹⁹⁴ Thereafter Kochaks help in burying the deceased, powdering their face with Adi’s powder, heaping sheep droppings over the plot, and offering up a funeral feast which mouners attend.⁹⁹⁴

The white linen shirts they wear are not to be worn without being hallowed in consecrated water.

Yezidis purity laws disallow the utilization of eating utensils and items of personal heigene where the objects are also shared by Muslims, Jews and Christians.

As for their food taboos, beans, lettuce, cabbages, seafood and meat may not be consumed by the faithful.

Fig 41.1. The entrance to Sheik Adi’s shrine.

Fig 41.2. Yezidis shrines on Mt Lalish.

Festivals

They have a jealously-guarded text called 'The Revelation', or *Kitab Al-Jilwah* in their tongue, which contains important teachings on Melek Ta'us.⁹⁹⁵ It states their art was propagated; "by means of oral tradition, and afterward by means of this book, *Al-Jilwah*, which the outsiders may neither read nor behold".⁹⁹⁵ Evidently they, like the Magi, had a culture of concealment when it came to their primary treatises and teachings, and these writings happily co-existed alongside those same teachings left fully-intact by oral transmission.

Al-Jilwah, Chapter II mentions their belief in the transmigration of souls via metempsychosis; "my own shall not die like the sons of Adam that are without. None shall live in this world longer than the time set by me; and if I so desire, I send a person a second or a third time into this world or into some other by the transmigration of souls".⁹⁹⁶

According to their teachings wealth, secrets and miracles are three things bestowed on mortals by their lord. "All treasures and hidden things are known to me; and as I desire, I take them from one and bestow them upon another. I reveal my wonders to those who seek them, and, in due time, miracles to those who receive them from me".⁹⁹⁷ Chapter III of *Al-Jilwah* also informs us that earthly power and material wealth are considered a distinctive mark of Melek Ta'us' favour.

Yezidis profess that Islamic, Hebrew and Christian writings contain diluted remnants of the Yezidis creed, adding that any of their teachings that run contrary to the essential tenets of Yezidism (which are kept strictly secret), are to be utterly disregarded.⁹⁹⁸

They sacrifice white cattle to the sun, and at the New Year festival also.⁹⁹⁹ Believers call the sacrificial beast the *Kabdus*, which is butchered and boiled in a cauldron, from which pilgrims devour the hallowed meat.⁹⁹⁹ Prior to attending the sacrificial ceremony, pilgrims take ritual baths in the water of *Zamzam*, the miraculous spring waters that well up from

Fig 42. Yezidis devotees gather for festivities.

beneath the Sheik Adi shrine.¹⁰⁰⁰

Upon their passing the Yezedis sheiks are deified, and to each is dedicated a tomb, the earliest surviving sepulchre belonging to one who came into the world in 1078 AD.¹⁰⁰⁰ In the afterlife a massive council of sheiks sits in the presence of Sheik Adi, still wielding supernatural power from beyond the grave, and it is for this reason that Yezidis gain intercessions by visiting these tombs in times of need.¹⁰⁰⁰ One such holy place bears a plaque dedicated to "Sheik *Shams Ali Beg and Faris*". In this instance *shams* might be derived from *Shamash*, a former name for the sun god, thus supplying a meaning of Sun King Ali Beg.

Yezidis pilgrims expand upon their devotional pilgrimage to Sheik Adi's shrine by visiting the mausolea of regional importance where they burn incense and lamps.¹⁰⁰⁰ Pilgrimage sites of greater retutation, such as the tomb of Sheik Mohammed, attract festivals where visitors enjoy the tunes of religious piping and tambourine playing amid dancing.¹⁰⁰⁰ The sacred image of Melek Ta'us is paraded on just such events, led by candle-bearing pirs throughout the throngs, until finally ending up at the household of the Yezidis who paid the greatest sum of money for the privilege of hosting his emblem.¹⁰⁰⁰

The grave of the saintly Sheik Adi Ben Musafir, in Ba'adri, becomes the scene of a yearly procession of flagellants on the 10th day of August. Trains of penitents make their way down smokey, bitumen-lit streets, flogging themselves with scourges.¹⁰⁰¹

Yezidis miracle workers intermingled with Islamic Sufi mystics from time to time, and it appears that one such saint was executed in early 10th Century Baghdad.¹⁰⁰²

According to the Yezedis ritual calendar, New Years day (*Sarsal*) falls on the initial wednesday each April. *Sarsal* always elicits fearful solemnity from believers, for it is on that day that the Supreme Deity convenes a council of angels, at which he reveals what events will transpire throughout the coming year.¹⁰⁰³ This may well be a continuation of earlier Babylonian beliefs that affix precisely the same significance to New Years day.¹⁰⁰³ Accordingly their conduct is demure as they seek atonement for their spiritual transgressions. Religious music is effectively banned during this event as a mark of respect, though the people decorate their portals with floral garlands made from red wildflowers and lillies.¹⁰⁰³ Foodstuffs are consumed and distributed at gravesides during *Sarsal*, in commemoration of departed kinsfolk.¹⁰⁰³

Yezidis myths

Yezidis pass down through the generations a body of heartfelt religious myth. Some relate to the creation of the world. God formed the bird Angar, on whose spine sat the pearl, his dwelling place.¹⁰⁰⁴ He also created various Meleks (angels), the foremost being the illustrious Anzazil (aka Melek Ta'us. Anzazil cannot be found in Agrippa. The closest name would be Azazel, a potent aerial demon. Equally interesting is their assigning to Ta'us the additional name of Lasiferos (ie; Lucifer)).¹⁰⁰⁴ This all happened on a Sunday, but on Monday Dardael was formed, on Tuesday Israfel, on Wednesday Mikael, Thursday Azrael (probably Azariel*), Friday Semnael (possibly Samael*) and lastly on Saturday he fashioned Nurael (ie; Nuriel*, also called Uriel). Each of these Melek incarnated into human form at the command of their creator. For instance in earthly form Nurael went by the name Yadin. Each of the Meleks, or more properly archangels, became objects of adoration. Those marked with an asterix were recorded in the writings of Cornelius Agrippa during the Renaissance, leaving one to conclude that the art of the Yezidis were known to Europe's fledglings of the age of enlightenment.

YEZIDIS CREATION
MYTHOS

THE ARCHANGELS

Only after establishing the archangels did the Most High command the formation of heavenly subdivisions, the creation of stars to populate the stary firmament, and luminaries to shine over the world - by day the sun, and by night the moon. To Yadin was given the task of designing mankind and all the creatures of the earth, each of which was encased in a bag (perhaps representing the birth caul enshouding the unborn in the uterus).¹⁰⁰⁴

At this point the divine pearl descended upon the earth, splitting into four parts, thereby releasing waters pent up inside it.¹⁰⁰⁴ The newly created Archangel Gabriel was added to the seven Meleks, and invoked to arrange the pearly fragments into their proper place. He flew down from heaven, alighting on Mt Lalish, from which time he did his maker's bidding. And so earth took the form of a globe, as Gabriel positioned the upper and lower hemisphere, as the earth shook. The constellations of heaven were fully arrayed only at this point, taking the positions we presently see today. Gabriel was instructed to form Adam by converging the primary elements, and placing the spirit in him. Having done so Gabriel ferried Adam to the heavenly paradise, to acquaint him in the High God's laws, which prohibited him, and his ancestors, from consuming wheat products. Adam's fall was attributable to Melek Ta'us who advised him to consume wheat grain, despite god's prohibition, and so produce numerous offspring.¹⁰⁰⁴ From the moment he ate of it, Melek Ta'us evicted Adam from paradise forcing him to return and inhabit the earth. For companionship god gave him a wife called Eve, made by Gabriel from his left shoulder.¹⁰⁰⁴

MT LALISH IS THE
YEZIDIS EQUIVALENT OF
MT OLYMPUS

YEZIDIS SPRANG FROM
ADAM, THE REMAINDER
OF HUMANITY FROM
EVE

Their inherited mythos, as found in the *Mashaf Resh*, proclaims that Yezidis have Adamic lineage, created by god in an earthenware jar, when both conceived of procreating singly and without intercourse.¹⁰⁰⁴ To achieve this Adam and Eve produced seed, placing them in two different pots. Adam's seed produced a male and female, from whom the Yezidis arise, whereas the remainder of humanity sprang up in Eve's pot, from corrupted and polluted worms, generated by Eve's seed, and suckled by Adam. At that point they hoped to discover what would happen if they co-mingled their seed, and upon doing so, sired the remaining earth inhabitants.¹⁰⁰⁴

YEZIDIS ARE NOT TO
INTERBREED WITH
OTHER RACES

Yezidis therefore form an entirely separate class of *homo sapiens sapiens* which it is their duty to preserve from defilement by staying seperate from the earth's other inhabitants, in racially homogenous Yezidis communities.¹⁰⁰⁴

With the passing of time god allowed Melek Ta'us free passage to earth for the purpose of assigning kings and dynasties.¹⁰⁰⁴⁵

YEZIDIS APOSTLES ARE
PERIODICALLY SENT TO
EARTH

Each millenium the Most High god sends a religious leader, to re-calibrate the teachings of those on earth. Mu'awiya, a personal servant of the Prophet Mohammed, was one such messenger, who fathered the great patriarch Yezid (ie; Yazad) by an old crone in her 80th year.¹⁰⁰⁴ Insofar as this myth is concerned Islamic tradition perpetuates a confused distinction between Mu'awiya and Yazad. It holds that Yazad is none other than the Caliph of the Umayyads Yazid ibn Mu'awiya, deeply hated by Shi'ites everywhere for his role in the slaying of Imam Hussein, grandson of the prophet Mohammed, on the "Plain of Sorrow and Misfortune".¹⁰⁰⁴

YEZIDIS PROFESS THAT
KING SOLOMON WAS
PART OF THEIR FAITH

They say that King Solomon (Suleiman the Magnificent) received their teachings, via the ministrations of the archangelic elect.¹⁰⁰⁴

The *Mashaf Resh* castigates the Islamic, Jewish and Christian faiths for insinuating that Melek Ta'us was evicted from heaven.¹⁰⁰⁴

Today's Orthodox Zoroastrians are riled when commentators associate their faith with that of the Yezidis. While there are perceptible Magian elements in Yezidism, their teachings about the supreme being lack dualistic

ORTHODOX
ZOROASTRIANS DISAVOW
ANY CONNECTION WITH
THE YEZIDIS

understanding. By my estimation they should be associated with Chaldeanised, non-Orthodox Zoroastrian Magi who, in addition to that, were exposed to Manichaean ministrations. What emerged from this was a faith outwardly incorporating Jesus Christ, yet in their fundamentals were Chaldeanised Magians through and through. That Sheik Adi's tomb is situated on the grounds of an abandoned Christian monastery near Mosul, at Ash-Shaykh 'Adi, is highly significant. Perhaps Christian monks sought to sanctify Mosul's local heathenism by building a church on the old Yezidis cult site. Alternatively the monastery was established or even re-settled by heretical, overly-Christian Yezidis.

FOR THE PAST THOUSAND
YEARS MUSLIMS HAVE
HUNTED DOWN YEZIDIS
LIKE ANIMALS,
PARTICULARLY IN
KHURDISTAN

Nowadays Yezidis still have the sword of Damocles suspended over their head, especially Khurdish sectarians who have been tirelessly subjected to purges, man hunts, slave trading operations, forced prostitution and so forth.

Uncorroborated reports dating to the early 7th Century demonstrate an extensive Muslim penetration of Khurdistan, accompanied by pillage, the wasting of property and so forth ... deaths unknown.¹⁰⁰⁵ An anti-Islamic uprising by a few thousand Yezidis is believed to have taken place about 906 AD, eliciting the vengeance of Hamadani, the Islamic governor based in Mosul.¹⁰⁰⁵ Yezidis agitators evidently fled their homes only to re-settle in Hakkari. Upon discovering their whereabouts around 980 AD, an Islamic vigilante posse many thousand strong rode up and encircled Hakkari to prevent any route of escape.¹⁰⁰⁵ What ensued was a frightfully bloody massacre, aimed at deterring any future insurrectionists. By the time the Muslims had finished all that remained were a couple of thousand shocked survivors, spared only by agreeing to convert to Islam.¹⁰⁰⁵ The remainder of their compatriots, presumably including prisoners and wounded, and perhaps even the corpses of those slain in the mayhem, were nailed to crosses all along the main highway to Mosul, stretching off into the distance some 25 kilometres away.¹⁰⁰⁵ One can only guess what this grim spectacle resembled over the following week, as the relentless sun beat down on their distended, blackening remains. These macabre adornments of Islamic primacy must surely have attracted birds and buzzards aplenty.¹⁰⁰⁵

THE MASSACRE AT
HAKKARI

When Khurdistan was first brought under Islamic control, Muslim forces once again had difficulty restraining their swords from the local populace.¹⁰⁰⁵ The source *Fars Name* professes half a million families were put to death in 1107 AD.¹⁰⁰⁵ What is equally astonishing is these rapacious genocidal activities were never considered a crime by the society that ordered this kind of behaviour, seeing in it an act of deep devotion to Islamic ideals.

ONLY 50,000 YEZIDIS
REMAIN

Yezedis tribes nowadays number in excess of 50,000 individuals, predominantly situated throughout Iraq at Mosul, and in the regions of Jezireh, Sinjar and Midyat. But considering what they've been through it's amazing there are any left at all.¹⁰⁰⁶

Between the 1200's and 1918 no less than 27 major acts of atrocity were perpetrated against the Yezidis. As for instance the events at Sheykhani 1799, where about 25 villages were razed to the ground by a combined force of Bedouin and soldiers of the Ottoman sultanate ... death toll unknown.¹⁰⁰⁷ Barely a century later the same style of attack on Sheykhani was revisited by the Ottoman governor Omar Wahbi Pasha, this time resulting in the forced conversion of 14,000 believers.¹⁰⁰⁷ And I want to stress, these are only the recorded incidents, perhaps only the tip of the iceberg. For this reason Yezidis have, since time immemorial, travelled and worked with weapons at their side. This may explain why they hate nosey outsiders (Muslims especially) snooping around their villages.

Magus, the Rosetta stone of European paganism

This book is the product of one very major inference; If the Rus' pagan priests, and those in other parts of Europe, were Magi, then they must have employed a fair portion of the religious rites recorded in the *Avesta* and Pahlavi texts. It's a logical enough assumption. In talking of the Magi we are dealing with an ordered religion complete with its own priesthood, theology, texts, rites and teachings. Such an inference is about as watertight as saying mediaeval Christians, Jews and Muslims used the Bible, *Torah* and *Qur'an*. For this reason I will repeatedly employ passages from the Avestan and Pahlavi scriptures as an aid to understanding the paganism, folklore, words and mythology found in Eastern and Western Europe. Time and time again you will find in these texts multiple layers of customs, gods, words, beliefs, religious feasts and ritual equipment also found among the heathen Russes, Finns and Scandinavians.

Ritual is one area that can be gainfully employed in any historical reconstruction, mainly because they have such long lifespans, and are highly resilient to any kind of change. As a rule of thumb, rituals often have

accompanying holy books which have survived, and this is a big windfall for the researcher, because we can access the pagan mind on a level that would normally be quite impossible. Just as the Vedas are a valuable means of delving into the Aryan/Indo-European psyche, the Magian texts also permit us an understanding of Magian ethics, social structure and ritualism. But are comparisons between Magian scripture and 10th Century AD Eastern and Central European pagan Magian customs utterly futile; were they the same in the 10th Century AD as they are today?

Firstly you have to remember that Magianism is supposedly the world's second oldest organised religion. According to the late Professor James Darmesteter, the same *Yasnas* sung by modern-day *Mobeds* (Orthodox Zoroastrian fire-priests) in Bombay (and America and elsewhere), were most likely the same ones used in ancient Persia and India, almost unchanged after the passage of 1,000 years! The 20th Century Parsee *Mobeds* are for all intents and purposes Gujarati-speaking Indian citizens, yet they still recite the *Yasna* ceremonies in the same Persian jargon handed down to them by their long-exiled ancestors.

These inferences are all the more easier to make once you realise that the Magi stringently adhered to their customs, traditions and ritualism to the very letter, just the same as Orthodox or Catholic priests do their best to propagate the rituals and teachings of the early Church. Even today the Indian Parsee *Mobeds*, through rote-learning, memorise half the voluminous *Avesta* before they're 20, just by the strength of their intellect,¹⁰⁰⁸ pretty outstanding wouldn't you say! And what is even stranger, is that they did so without understanding much of its contents because it was originally written in Persian! What greater proof could you need that it was possible for the Magian pagans to have pursued their faith across ages fairly free of corruption and without them ever having needed to put their teachings in writing. Yes, you have it, a religion without a need for written religious texts. But the minimum prerequisite for the suitability of mnemonic lore is a system of priestly education with an intact infrastructure.

According to Moulton, the Parsee priests he met in the 19th Century AD had little or no understanding of the wording for the *Yasna* rituals, but were simply conforming to the rigid rules of exactitude practiced by their peoples from the time of their arrival in India in the 10th Century.¹⁰⁰⁹ For this reason I contend that for the most part the Magian texts are so unchanged over the last 1,000 years that they do provide a relatively reliable window through which to view the Magianism of a millennia ago. Accordingly the European Magi probably performed rites similar to those of the Magi in India.

Despite the Magian tradition of committing their holy texts to memory, many of their hymns and religious law codes were nonetheless written down in tetrads (small prayer books). Furthermore, the word *tetrad* also happens to be the Greek pagan gnostic word for a small book, and the Russian word for an exercise book. The use of the word *tetrad'* in Russia is at least datable to the 11th Century AD¹⁰¹⁰ if not before. Moreover, the Russian word for "a prayer" *molitca* comes from the verb *molit'* meaning "to implore or entreat". This word came from *moliti* (Old Slavonic, Serbo-Croat), and *modliti* (Old Slovenian, Czech) which carried the same meaning. These are linked with the Lithuanian word for "a request" *malda*, which in turn came from the Hittite words *mald* and *malta* meaning "to ask".¹⁰¹¹ Thus elements of Russian paganism have linguistic features stretching back even into Aryan Hittite times.

The Volkhv's role in society

The *Volkhvy* Magi together with the Slavic pagan gnostic philosophers formed the inner sanctum of the pre-Christian intelligentsia. Collectively they were the focal point of their society, prodigies who devoted their lives to studying the movements of the celestial bodies and their affects upon the existence and behavior of all matter on this planet. The ancient "sciences" which they had inherited from their forebears facilitated these daily observations of the heavens. Being Magi, the *Volkhvy* would have believed that all the celestial bodies and zodiac were imbued with definable qualities, energies and personalities which when positioned in various ways created a myriad of effects that manifested themselves upon the earth, influencing both fate and the elements. The Slavic zodiac is indeed the same as that once found throughout Greece, Rome, Egypt and Iran, and still consulted in western society until this day.

The Magi and pagan philosophers further preached that all matter was composed of combinations of four pure elements; earth, air, water and fire, which according to the white Magi it was man's duty to protect from the pollution of other dissimilar elements. Thus white Magians strived to prevent the defilement of these elements at the hand of *Ahriman*, the unholy witches and demons who were hell bent on mutilating the world of creation.

FIRE, AIR, WATER AND
EARTH

Various combinations of these main elemental essences produced various effects readily observable in nature throughout the year. After all, nature was merely the dynamic interaction of elements, through which the life, death and prosperity of all was governed. Without light, water, fire, air and earth, nothing could ever exist.

CREATION IS PROTECTED
BY SPHYNXINE ANGELS

In Magian doctrine mythologised entities and spiritual beings personified these elements. The prosperity of these spirits was of paramount importance; if they were offended or destroyed then the side effects could be catastrophic. Crops could fail, blizzards would become more severe, cattle could die or fall barren, and the earth would turn fallow. To this end the Magi ensured that the proper range of prayers and sacrifices were offered to the various life-dispensing divinities and their antithesis, the rapacious demonic vitae.

Whilst many nature cults preferred to retain the magic of the spoken word by oral tradition, the *Volkhvy* are thought to have possessed their own form of writing which was used to record their spells, religious festivals and rites. *Volkhvy* utilised the *Ruxski pismeni* for such purposes, scripts probably known only amongst their *Volkhvy* colleagues, plus the Moravians, Balkan Slavs and the Bulgars.

In real terms, the *Volkhvy* played the most significant role in the socio-religious hierarchy of the early heathen Russian tribes. They helped administer tribal law, taking into full account the way in which a tribe had to fit into its environment. They provided anesthetics and medicine, and performed surgery (perhaps including scientific autopsies, and invasive brain surgery, skills not unknown to the Medean Magi) and embodied a direct link between mere mortals, the gods and their minions.

Due to the fact that so little was written about the heathen priests of Eastern Europe during the early Mediaeval period it is difficult to ascertain whether or not these priesthoods possessed subordinate offices, just as the Magi once did. For example, was there an internal ranking among the black priests, or the *Magoch Magus*, the *Bieloknyazi* or the *Rasdi*? Since many of these priests were supposed to have been Magi, and due to information that has survived concerning the Rus' *Volkhvy*, it is easily tempting to think so. We shall shortly look at compelling evidence which shows that the *Volkhvy* religious structure closely resembled that of the Magi. But first I must examine data relating to their approximate numbers in Slavia, because it helps us make even more informed guesses about the Magian priesthood in Eastern Europe.

Calculating precisely how many Magus priests and priestesses lived in Russia is a difficult proposition. At the peak of the *Volkhvy's* reign in Rus' their Magi were apparently so numerous that they were present in each and every settlement throughout Rus'; that is a staggering number.¹⁰¹² This need not be an overly dramatised figure, since the Magi taught that each settlement, and indeed each house, should have a holy fire. In private homes though, the flame was maintained by householders rather than priests or priestesses.

FIRE HOUSES

From *ogon'* (Russian: "fire") comes the Russian word *ognishche*.¹⁰¹³ In Russian the suffix *-ishche* means "a shelter". Thus an *ognishche* was a building, or perhaps even a pavilion, specially allocated to shelter a fire, rather than a simple hearth or oven. In pagan times these fire houses, were evidently part of the Russian "fire cult"¹⁰¹⁴ which according to folklore, was once present throughout most of Russia, and according to later opinion, in Lithuania too.¹⁰¹⁴ The Norsemen had fire-houses also, calling them *Elda-hus* ("fire house"), which came from the word *Eldr* ("fire").¹⁰¹⁵ These fire houses were of course additional to whatever fires they kept in their own homes, and might have served as places where rituals were performed, such as the grove cabins kept by the Finns. In myth the living-god Odin is described as "the long-haired friend of the altar fire".¹⁰¹⁶ For this reason, his brand of sorcery, and the religion he supposedly spread among the Germanic and Scandinavian peoples, obviously incorporated aspects of asiatic dualistic fire worship.

ODIN WORSHIPPED AT A
FIRE ALTAR

As recently as last century the inhabitants of Vilnius could still show you where the eternal fire burned, and where the pagan priestly attendant once lived. In the case of Vilnius, folklore recollects that there was only one fire-priest, or at least that is what it had been reduced to after Christianisation.

Fire-houses were traditionally established near tracts of arable land, and, again according to Russian folkloric tradition, were, since the age of Rurik, maintained by the settlements.¹⁰¹⁷ Considering the avalanche of Magian data, especially where Russia is concerned, one can guess these fire-houses were connected with the religion of the white Magi then resident in Russia.

One figure no doubt linked with the fire cult was the *ognishchanin*. Some translate *ognishchanin* as “a bailif”, others as “a hearth -keeper”.¹⁰¹⁸ However *ognishchanin* is more correctly associated with the term *ognishche* (“fire-house”), which differs from the word *ochag*,¹⁰¹⁹ the Russian word for “a hearth”. Accordingly an *ognishchanin* was more properly a “fire-house man”, one who played some special sacerdotal function at a fire-house, or was specially appointed to administer a fire-house. In Old Persia such a person would have been called an *Arthravan* (a wizard charged with maintaining the holy fires), which literally meant “a fire man”.

OGNISHCHANIN - A
FIRE-HOUSE MAN

While every home had their own fire, that still did not make a given resident an *ognishchanin*. That an *ognishchanin* was more greatly valued than ordinary folk is evidenced by Mediaeval Russian laws, which though tailored for Christian society, were still nonetheless survivals of older pagan laws. One could escape punishment for killing a person by paying the family a sum of money. So under their legal charter it became necessary to establish what specific price should be paid to them in silver ingots (*grivna*):

Officer of the prince	80 grivna ¹⁰²⁰
Prince’s steward	80 grivna ¹⁰²⁰
Prince’s farm manager	12 grivna ¹⁰²⁰
Prince’s farm overseer	12 grivna ¹⁰²⁰
Stable master	80 grivna ¹⁰²⁰
Tutor/nurse	12 grivna ¹⁰²⁰
Labourer	5 grivna ¹⁰²⁰
<i>Ognishchanin</i>	80 grivna, but if the <i>Ognishchanin</i> had been killed near a barn or cow-shed

the offender was to be slaughtered without mercy, pursuant to Article 21; no payment in lieu was acceptable. A sub-clause invoked the death penalty for killing the *Ognishchanin*’s lowly assistant steward under the same circumstances.¹⁰²⁰

KILLING AN
OGNISHCHANIN OR HIS
ASSISTANT WAS
PUNISHABLE BY DEATH

The only other mandatory death penalty was Article 40, which provided for the summary execution of thieves caught near a barn.¹⁰²¹

Clearly an *ognishchanin* was roughly equivalent to a prince’s many officials in terms of blood-price, but to kill either him, or his lowly assistant (ie; the sorcerer and his apprentice) near a barn or cattle enclosure drew down a horrific penalty from the prince.

Since *ochag* (“a hearth”), comes from the Turkic,¹⁰²² certain aspects of Russian fire-lore may have had some sort of Turkic ancestry, perhaps Bulgarian, and hence Magian Bulgarian. All things considered it is, without question, traceable to the Asian continent.

Land-owners and ploughmen also performed ancillary duties in relation to the maintenance of fire-houses. These people were known by names which indicated their duties as tenders of various classes of fire. The prior-mentioned fire shrines were especially common throughout the forests of Northern Russia, but were also established on the steppe as well, over a period stretching from Rurik’s time until as recently as last century. That there were so many of these fire-houses in antiquity suggests an intact and extensive infrastructure for the Russian pagan priesthood, the Russian Magi. Magi traditionally celebrated fire ceremonies in towered belfries, structures once built by the heathen Russians too, and for similar reasons.

If, based on this evidence, the number of *Volkhvy* allotted to settlements in pagan Rus’ were true, there might have been thousands of blood-Magi interspersed throughout the Russian clans. So let us examine the question of numbers, to see if there is any basis for this. For a start the 6th Century Sassanian King Chosroes II had some 12,000 fully-trained Orthodox Zoroastrian fire priests at his command.¹⁰²³ After factoring in the number of trainee Magi studying in the Herbadestan seminaries we can probably double that number. to 24,000 That’s without including the more archaic schools of Magi originating out of the older pre-Sassanian colleges and traditions. During Chosroes Byzantine war the heathen Slavs probably encountered quite a number of Orthodox Zoroastrian Magi

CHOSROES HAD 12,000
MAGUS PRIESTS AT HIS
DISPOSAL

In the earlier period of the Magian faith, when the more grandiose fires of Persia burned on lofty places, and at the heights of the temples, a group of eight priests and initiated deacons performed the *Haoma* ceremony. From the 7th Century AD the numbers of Persian priests were drastically reduced due to the intensity of the Islamic Jihads in Central Asia, and the murder of priestly Magi. Subsequently the number of fire-priests required to perform the ceremony was reduced from eight to two; a desperate and unpalatable measure introduced to save the Mazdaean religion from total collapse. The following is a schematic layout of a Magian fire altar, and the placement of each Magus participating in the rite.¹⁰²⁴

MANY MAGI DIED
DURING THE JIHADS

FIRE ALTAR LAYOUT

HAVANAN

HE WHO BRINGS THE HAOMA FILLED MORTAR, AND STONES TO THE ALTAR. HE SQUASHES AND STRAINS THE HAOMA.

SROSHAVAR'Z

THE MAGUS WHO READS PARTS OF THE YASNA, AND OTHERWISE ASSISTS THE ZOTA IN PERFORMING THE HAOMA CEREMONY

THE POSITIONING OF MAGI AROUND THE HOLY FIRE ACCORDING TO THE OLD ORDER OF THE RITE.

FROM THE 7TH CENTURY ONWARDS THE NUMBER OF PRIESTS USED DURING THE CEREMONY WAS REDUCED TO TWO

Ever since the 7th Century AD, every time a Zota Magus (in Central Asia and India) began the roll call of the priests, the assembled attendees were reminded of just how perilous the situation had become for their faith. Before those turbulent years of the Muslim conquests, when the people gathered for the *Haoma* ceremony (on the solstices and equinoxes), the *Zota* called for a priest to fill each position, in turn. He would mention the post of say *Asnatar*, and the Magus who fulfilled that office would say, "I will come". The *Zota* would do so for each of the seven other ceremonial offices at the altar until all eight members had assumed their correct position at the altar.¹⁰²⁵ Then the congregation, the saints and all the faithful departed were invited to attend.

However in the centuries following the time of the Muslim conquests, the *Zota* summoned each Magus priest into position, but there would be a deathly silence ... until only one voice replied, that of the *Raspi*, who answered on behalf of Magi who no longer existed (most of them had been brutally slain, abandoned the priestly vocation or emigrated), and filled the roll of every other office bearer. He busily fed the fire, brought the milk and water, cleansed the equipment and so forth. From Lozko's description of the Russian *Volkhvy* ceremonies, it is fairly certain the Rus' Magians followed a more archaic form of the *Haoma* rite and employed the older number of eight Magus priests in the performance of the *Haoma* ceremony. Because Rus' Magians had no such problems ensuring that these eight positions were manned, it suggests there were probably more Magi living in Russia and the Baltic in the 10th Century AD than there were in Islamic Central Asia and Iran! In olden times the Magi were known to have used the larger "crew" of deacons and priests at the bigger ceremonial fires, and it is possible that the same number of Magi were required at the smaller hamlets and settlements.

In olden times the Magi used the large "crew" of priests at the bigger ceremonial fires, and it is possible that the same number of Magi were required at smaller hamlets and settlements. While it shall remain forever impossible to accurately gauge how many Magians inhabited Rus', these ceremonially-based clues may yield some rough estimates of the Rus' Magian population. We will now examine several demographic models to field some hypothetical population figures.

MODEL 1 - THE NUMBER OF MAGI IN RUS'

The first model presumes that there was a Magian presence in each of the 70 main early Mediaeval Rus' cities and towns, and that eight white Magi, plus a number of Ehrpats (priests and priestesses under training) were present at these locales throughout Rus', whereas (due to a shortage of priestly sacrificers) there might have been only two Magi to tend the Vahram fire-houses of each lesser settlement.

When major *Haoma* ceremonies were performed at the turn of the seasons I believe they would have been celebrated in the major city and town centres only; to admit otherwise is to say that there were eight male Magi for every Rus' settlement. If on the other hand Magi performed the full *Haoma* rite at the smaller settlements then four times as many Magi were required for that locality. The resident Magi of these minor populated settlements would

perhaps have been bolstered by an influx of wandering Magi (the Magian equivalent of Christian hermit monks), who could help them fulfil the eight requisite positions of the formal *Haoma* ceremony. As you will see in Chapter VIII Magi of the migration period frequently travelled about in tent-covered wagons, a great many housing a holy fire.

Thus, according to this model, there were probably 560 male Volkhvy needed to perform the ceremonies in all the 70 main cities and towns of Rus'. The number of villages, hamlets, pogosts and family stockades that would have existed in mediaeval Rus' is unknown, but there could have been between five and ten minor settlements for every town and city in the land. This is very conservative estimate, and there could have been many, many more.

In the more remote settlements, Russia wide, there may have been an additional 700-1400 Magi performing *the daily schedule of prayers and fire observances (for the regular feast days)*. So in total there could have been between 1,260-1,960 male Volkhvy. As stated, this could be a doubtful figure owing to the fact that the Magi had groups of wandering priests who visited small farms and outposts to carry out their sacrifices and perform the *Yasna* ceremonies in their homes. They would have used the home hearth fire for such purposes or brought flame from the fire temple. These wandering Magi were probably newly graduated novices who had freshly completed their long studies, and were perhaps still searching for a warrior-protector, as was the Magian custom.

There would have been an equal number of Volkhva (Magus priestesses), and maybe 5 times the over all number of adult male and female Magian Ehrpats (students) studying in their colleges.

	Cities and towns (70)	Lesser settlements (350-700)	Sub-total
Volkhv	560	700-1,400	1,260-1,960
Volkhva	560	700-1,400	1,260-1,960
Ehrpats	5,600	—————	5,600
Total adult Magi	6,720	1,400-2,800	8,120-9,520

MODEL 2 - THE NUMBER OF MAGI AMONG THE BULGARS

In the next couple of tables I hope to illustrate the spontaneous growth of Magian communities in northern and southern Russia, following the settlement of Bulgars in the region from the Caucasus and Silver Bulgaria. They are purely hypothetical, and based upon the theoretical demographics of Bulgar Magians who had been in Rus' for two generations since their arrival. This Magian populace must have included graduate Magi and their adult children undertaking the training of an Ehrpat, plus their younger offspring born since they arrived in Russia. The breeding rate is based on between 1,260 and 1,960 Magian couples over three generations.

Option A

The following table shows the potential breeding rate of three endogamous generations, giving birth to around six children per family. It assumes that every Magian couple followed their sacred duty to breed offspring. This table differs from the previous one in that it takes into consideration the number of smaller children that had not begun training for their vocation as Magi.

	Generation 1	Generation 2	Generation 3
Total Magian couples	1,260-1,960	3,780-5,880	11,340-17,640
Total Magian children born	7,560-11,760	22,680-35,280	68,040-105,840
Total Magian individuals	8,820-13,720	26,460-41,160	79,380-123,480

Option B

As with the previous table, the next figures are based on an initial number of between 1,260 and 1,960 Magian couples. However under this sub-model only half of the couples bred, each couple having an average of 6 children. In every successive generation only half of these children interbred with each other or with other relatives within different degrees of consanguinity, again having 6 children on average.

It should be remembered that it was deemed grossly sinful for the white Magi to avoid the next-of-kin marriage, and even more damnable not to have children, especially sons. Accordingly the following table is unlikely to reflect the Magi's intense desire to breed.

	Generation 1	Generation 2	Generation 3
Total Magian couples	630-980	945-1,470	1,417-2,205
Total Magian children	3,780-5,880	5,670-8,820	8,502-13,230
Total Magian individuals	4,410-6,860	6,615-10,290	9,919-15,435

These figures do not take into account the number of indigenous Baltic, Southern Slavic, Bulgar, Polish or Magyar Magi still clandestinely residing in their respective countries, or living in exile in Rus' following the conversions of their respective nations during the 9th-10th Centuries AD. *The Primary Chronicle* speaks of 12 magicians being hung, and the odd few executed. Besides them the remainder are unaccounted for. Where did they all get to?

During the 989 AD Rus' pagan diaspora and Volkhyv exodus which is theorised to have occurred following Russia's conversion, many Slavic Magi inevitably left for the still-pagan Baltic states, where Adam of Bremen mentioned that the average home was packed with magicians, necromancers and soothsayers of every conceivable shade. As you will soon see, under the crushing weight of the Holy Roman Empire's anti-pagan crusade, which drove deep into the Baltic during the 13th Century AD, many pagans, a number of which were also believers in Jesus, would die where they stood. Still others were dislodged from their homes and safe-havens, and with nowhere else to go, started moving out into Europe to network with relatives abroad. Some of best potential refuges were with highly ranking nobles, and even Kings. The fugitive pagans, now caught in a no-mans-land of Christianity, went every which way, and upon being apprehended in many parts of Europe, provided ready fuel for the great witch fires that set Europe ablaze some 500 or so years ago. Others chose to dwell in the officially heathen Duchy of Lithuania.

MODEL 3 - THE BULGAR FIGURES MODIFIED BY A KNOWN INCREASE RATE

It is unrealistic to expect to glean a realistic average annual percentage increase in population size; there are just too many factors at work; famine, warfare, migrations and so forth. Nevertheless between the years 1000-1237 AD the population of Novgorod is calculated to have risen from 20,000 to 50,000. This means a 250% increase in the population over 237 years, or 1.05% per annum. Model 3 uses this percentage increase as a benchmark in conjunction with a hypothetical generation duration of 35 years, and applies the rate to the figures shown in Model 2. Thus the increase in the Magian population per generation is deemed to be 36.75% per generation.

	Generation 1	Generation 2	Generation 3
Total Magian individuals (Option A)	8,820-13,720	12,061-18,762	16,493-25,657
Total Magian individuals (Option B)	4,410-6,860	6,030-9,381	8,246-12,827

MODEL 4 - MAGI BORN IN THE ROYAL HAREMS

Let us assume in Model 4 that Magus priests were only allowed to be born from the pagan Slav Royal harems, sired by the Grand Prince himself. I greatly doubt the validity of this model since each Magian couple was quite capable of automatically giving birth to a blood-Magus, but even so it allows for the possibility that slightly different customs were observed in Russia.

In *The Primary Chronicle*, Khagan Vladimir is reported to have had some 800 concubines and 10 wives. It is altogether unrealistic to determine how many women in these harems gave birth to his children annually, but it might have been between 0 and 800 per annum, depending on whether or not his harem existed for the sole purpose of breeding children. In Part II we will examine Magian breeding practices within Western Christendom, because early Mediaeval accounts suggest that Christian priests suspect of heresy, astrology and magic were having large numbers of progeny, and had many concubines.

One other method I've conceived entails comparing the ratio of excarnated and non-excarnated skeletal material in a given area. Based on the findings of Russian archaeologists working sites in Siberia and Central Asia the excarnation ratio is around 5%, or 1 in 20. If this theory holds true roughly 5% of Russia's Magians were of the blood.

OFFICES OF THE SUBORDINATE MAGI

The pagan Rus' religious ceremonies used a number of auxiliary staff and priests who performed vital roles in the performance of these rites. The Russian offices¹⁰²⁶ were similar to those of the Magian *Haoma* priests, and were as follows;

PAGAN OFFICES IN RUS'

- 1 Head priest
- 2 Assistant priest and reader
- 3 Tender of the fire, wood collector and purifier
- 4 Equipment bearer and usher
- 5 Sacrificial-gift bearers
- 6 Cleansers
- 7 Plant gatherer
- 8 Temple guardian

TENDER OF THE FIRE, WOOD COLLECTOR AND PURIFIER

The Slavs had priests who performed the role of fire tender, wood collector and purifier, which would make their functions equivalent to those the Magian *Atarevoksh*. Such a priest might have been known in Slavia as a Sobimir. We know that an *Atarevoksh* was charged with chopping, examining and purifying timber to feed the eternal flame during the five daily ceremonies. The Magi considered it sinful to place flawed kindling into the holy fire, and so wood had to be inspected thoroughly before it was lovingly fed into its consuming flames. Even kindling for the campfire or home hearth had to be checked for imperfections. Wood that was rotting or green, or being eaten by worms and other parasites, was never suitable to place on any fire. The Magian text *Visparad* mentions that the wood had to be well dried, so the Magi would probably have collected their timber a year or so before hand and left it to stand, allowing it to dry out and mature enough to be used as fuel. In his *Geography*, Strabo calls this type of Magus *Pyraethi*.¹⁰²⁷

EQUIPMENT BEARER AND USHER

The Slavic ceremonial role of equipment bearer and usher was similar to that of the Magian *Frabadar*. Frabadars ensured that all the proper equipment was brought to the *Haoma* ceremony, and at the appropriate time of year, ushered one family at a time into the temple to receive the holy drink. He probably also maintained good order during the ceremony.

SACRIFICIAL-GIFT BEARERS

In Slavia this ceremonial position equated with that of *Aberad* Magus. The *Aberad* brought pitchers of milk and holy spring water to the altar during the *Haoma* ceremony. At other times of the day the *Aberad* relieved devotees of the gifts they wished to bestow upon the gods, and brought them into the inner sanctuary, into the presence of their deities.

CLEANSERS

1. The heathen Russian cleansers probably had a role similar to the *Asnatar*. This type of cleanser served in the office of washer and baptiser, tasked with purifying every piece of ritual equipment used by the Magi officiating at a given ceremony. In this connection we find a superficial similarity between the Magian title *Asnatar* and the Old Norse term *Suthnautar* (those who shared meat at the Norse pagan assemblies).¹⁰²⁸

In Old Icelandic we also find *ausa*, which meant "to sprinkle" or "to pour".¹⁰²⁹ This meaning appears in two contexts clearly connected with pagan rites. One was "pour it over the ash tree" and the other usage was intertwined with baptisms or sprinklings with earth or water. For this reason I suggest that *ausa* was distantly related to *asnatar*.

2. Another form of Magian cleanser was known as a *Rathwiskar*. Whenever buns, pancakes, woods, green twigs or plantstuffs were to be burned as sacrificial offerings, they had to be doused with a little spring-water in order purify them, and left to dry for a short while on the altar, close to the fire. This purification of offerings was carried out by the *Rathwiskar* cleanser, who also assisted with the straining and mixing of the *Haoma*. Besides these ceremonial responsibilities, such a Magus was also required to consecrate the sacred spring water and perform the *Baresnum* ceremony for penitents.

Fig 43. Might this Celtic pitcher have been used to carry water or milk in a ceremonial procession? Animal handles were a common feature on Persian ceremonial containers.

ASSISTANT PRIEST AND READER

THE ASSISTANT PRIEST

The Magus who filled the role of *Sroshavar*'z was the Zota's assistant priest. In Iran and Central Asia (following the 7th Century) this role was taken over by the *Raspi*, the new word for an assistant priest, who had to single-handedly carry out the ritual tasks originally assigned to a total of seven subordinate offices during the *Haoma* ceremony. In pagan Rus' however, he would have only been required to undertake the duties of a *Sroshavar*'z. Before the ceremony began, the reader recited, and sung elements of the Gathic hymns, which moved the officiating *Volkhw* and much of the pagan congregation to tears.

PLANT GATHERER

HAOMA STRAINING

Russian plant gatherers were probably Magi fulfilling the traditional role of *Havanan*. The *Havanan* was tasked with gathering the *Haoma* plant and bringing it to the altar during the *Haoma* ceremony, carried inside the mortar used to squash it. He also brought the *varesa* (the straining ring with bull's hairs attached), and the straining cloth used to wring the last juices from the pulpy mass remaining in the mortar. On a normal day, the *Havanan* also gathered local medicinal herbs, and made trips to major trading centres abroad as required, where he could get the sorts of precious woods, herbs and spices needed by the entire community. They were normally accompanied by merchants while doing business overseas. We know the Norsemen had the word *Hver-gaetir* (Old Icelandic: "a cauldron-keeper" or "a cook")¹⁰³⁰ but have no evidence that it was used in a ritual context.

FIRE GUARDIAN

Armed fire guardians normally stood watch at the entrance of temples and sanctuaries, to prevent the desecration of the sacred precincts.

CHOIR

PAGAN CHOIRS

Following the lead of the reader, and at times prompted by the head priest, the polyphonic refrains of the choir swung into action, allowing the crowd to become immersed in the mood of the moment, and mentally prepared to receive the drink of immortality. The choir was probably composed of *Ehrpats*, accompanied by musicians.

The hierarchy of the Magi

In pagan Rus' rulers had their own personal Magus sacrificers. In one Rus' temple we find the glagolitic inscription "*Az esm' Mirobog, zhrets Ol'gov*" which means "I am Mirobog, Oleg's Sacrificer".¹⁰³¹ Zoroastrian and Zurvanite law prescribed that every pagan ruler sponsor and protect his own Magus, who would become the principal sacrificer for his settlement and all who lived in it. Naturally, the more important the settlement, the more prestigious the Magus needed to perform the required ceremonies, on behalf of their sponsor. Because the fullest range of traditional *Volkhw* "clerical" terminologies never survived the transition to Christianity, and because they were essentially a Magian "mystery" priesthood, reliable Persian terms are used here as a point of reference. However, as with the subordinate initiates, the *Volkhw* internal rankings may well have been known by more Slavicised names.

EHRPATPRIESTS WHO WORE
TURBANS

An *Ehrpat* was an elder, deacon, theologian, scribe and/or tender of god's fire. In the eastern world, the *Ehrpat* wore a rounded turban as headdress, which was normally of white cloth. Whether they wore them in pagan Rus' or not is not recorded however. Turbans were fairly common in the Volga area, especially among the Finns, but from a historical perspective it is difficult to evaluate whether this adoption of the turban was a result of Muslim or Zoroastrian influence.

ZOTA

The *Zota* Magus was the head priest of a given ceremonial group, who offered up the supreme sacrifice of the *Haoma* on behalf of the people. He summoned together the priests and congregation to begin the ceremony, and ensured that all ritual observances were performed to the letter, free of defects in their execution.

DASTUR / RATU - HIGH PRIEST

"it is necessary to maintain the religion by rule (dastur), and to practice obedience to the commands of the high-priests; and every duty that people perform they should perform by their authority. For it is declared in the good religion, that, if they accomplish as many good works as the leaves of the trees, or the sand-grains of the desert, or the drops of rain, which they do not perform by command of the high-priests, or to their

satisfaction, no merit whatever attains to their souls, and for the good works they have done they obtain sin as a recompense. While such a one is living it is not proper to call him righteous, and when he dies he does not attain to heaven, and not a single archangel comes near him. He does not make his escape from the hands of the demons and Ahriman, and he does not obtain a release from hell. Because duty and good works attain to the soul on those occasions when they perform them with the authority of the high-priests and those acquainted with the religion, and when they give them one-tenth of those good works".¹⁰³²

A *Dastur* was the Magian high-priest of a given district, roughly equal in status to a Christian bishop, an office bestowed upon them by a *Magupat*. They were also termed *Ratu*. Great temporal and spiritual power lay in their hands. As with all Zoroastrian/Zurvanite priests, *Dastur* wore a pointed mitre or rounded hat. Only a *Dastur* could light the holy flame in a temple, or restart the lower-grade altars which had to be snuffed out and re-lit annually.

I believe the term *Rotu*,¹⁰³³ which referred to a pagan Slav religious brotherhood, might have been derived from the word *Ratu*. If so the *Rotu* was probably a college of *Ratu* Magi residing in the Balkans in the post-conversion era.

MAGUPAT

The office of *Magupat* was roughly similar to that of a Christian archbishop or metropolitan. He ruled over a number of *dasturs*, their *Volkvry* communes and settlements. The highest ranking *Volkvry* were known by the title "Doctor", and, according to Professor Vernadskiy, probably resided in Tmutorokan in the Caucasus. It is probable that the *Volkvry* rank of Doctor was equal to that of *Magupat* (the official title used by the Eastern Magi). Moreover the Zurvanites also had a sect of Magi known as the "Doctors of Islam". So there could be a plausible connection between the *Volkvry* Doctors and the Doctors of Islam who formerly resided in India

MAGUPATAN MAGUPAT

The *Magupatan Magupat* was a supreme Magus, of comparable status to a Christian patriarch or pontiff. Amongst the Magi there were probably only ever five of them at any one time; one for each of the original Magian "patriarchates". Whether they were reduced to two in number as the Muslims destroyed three of their major Patriarchates is hard to say, but nonetheless a logical assumption.

The pagan Russes also had a supreme Magus, who stayed close to the *Velikiy Knyaz'* (Grand Prince) at his main seat of power, as his constant companion and confidant whenever he travelled.¹⁰³⁴ He was regarded in those days as the principal "Sacrificer of the Realm". But who was he? Whether the *Velikiy Knyaz'*s prime Magus was formerly known in Roman times as the *Pater Patrum*, the Mithraic pagan *Pontifex Maximus*, is pure conjecture, but one worthy of very serious consideration. In support of this conjecture, Ptolemy's c. 150 AD world map utilises his own brand of cartographic notations. Conspicuous is the depiction of five large Magian-style fire altars, and two sets of columns; the only holy sites appearing on his world maps. They were situated in Libya (Are Neptuni), Babylon (Are Herrulis or Herculis), Medea (Are Sabee), Russia (Alexander's altar) and one site in the Southern Ukraine - Are Caesaris, ie; Caesar's altar¹⁰³⁵ (which is depicted in a manner identical to a royal Persian fire altar). Why, in 150 AD, were there no temples worth drawing on the Greek /Roman/Indian mainland, but only in Russia and the east? Why was Caesar's Altar located in the Southern Ukraine, and not in Rome? Clearly Ptolemy, one of the most famous scientists of the ancient world, saw these as major world cult centres, perhaps the most important, at least in his eyes.

And there is an even more tantalising option. Since all Magi were blood relatives, the *Magupatan Magupat* of Rus' may even have been the venerable Patriarch of all the Magi (known as the *Peer-e-moghaan*,¹⁰³⁶ or *Masmoghan*, which means "the Great Magian") whose former seat of power lay in the heavily fortified Iranian city of Rai, from whence he ruled the entire Magian world. In ancient times this Magian "godfather" most likely acted as a mediator between all cult variants, trying to iron out any disputation that arose when sects started stepping on the toes of other groups. The *Peer-e-Moghaan* might have relocated to Russia after having been squeezed out of the traditional Magian homelands of Persia, Babylon or Silver Bulgaria by the violence of the Muslim onslaught. Yet it is far more likely that such an eminent personage migrated to China with the greater part of the Magian royals. Liaisons between the Magi and the Chinese were

THE HIGH PRIESTS

RELIGIOUS FIGURES
HIGHER THAN HIGH
PRIESTS

already well developed by the time Magian Iran was destroyed. Even before 1,000 BC, numerous Magi are believed to have been employed at the Chinese imperial court, serving predominantly as expert astrologers and doctors.¹⁰³⁷ The Chinese once wrote of them using an ideogram resembling the sign of the cross, an insignia later energised and popularised by Christianity.¹⁰³⁷

A BULGAR ANTI-POPE
WAS SUPPOSEDLY LEADER
OF THE HERETICS

During the Middle Ages one of Rome and Byzantium's gravest political and religious concerns was the existence of a Bogomil Anti-Pope¹⁰³⁸ in the Balkans, a key figure whose name cropped up time and again in matters relating to heresy. Perhaps the "Supreme Magus" who formerly resided among the Rus' later re-emerged in Mediaeval history as the untensured Anti-Pope mentioned by Stoyanov, he who had shifted into the Balkans following the conversion of Rus' to Christianity. There he welded the heretics and magicians into a single coherent Bogomil movement, by an agreed oath of brotherhood. His success in achieving this can perhaps be attributed to the fact that he as the only truly common link between all the various cults, and an extremely unifying force amongst the pagan elements. But, did so many organised cults join forces under the *Rotu* following a formal council, during which a planned collaboration or amalgamation of Magi and heretics was discussed, and formally figured out between all parties? Or would it be a haphazard amalgamation that would take centuries? Could such a hypothetical council have been in any way linked with the military pact being organised between the Bulgar Prince Vladimir-Rasate and the Frankish Magus-King Arnulf? Many questions still remain.

THE BALTIC PAGAN
DIVINE PRIESTHOOD

As early as 1075 AD, Adam of Bremen spoke of an organised pagan priesthood, complete with monastic-style raiment and their own pagan "Pope", then operating among the Prussians and Balts. This priesthood included god-priests¹⁰³⁹ who were comparable in internal status to a Christian bishop. I believe that Adam's observations are nothing less than a description of a Zoroastrian or Zurvanite *Magupatan Magupat* and his *Dasturs*, very likely saturated with exiled *Volkivry*, plus substantial elements of the indigenous Baltic Magus priesthood.

NECROMANCERS IN
MONASTIC-STYLE ROBES

But what variety of Magian did they represent? Did they favour good over evil, or evil over good? From Adam of Bremen's accounts of the Old Prussians, and his high praise for them,¹⁰⁴⁰ one gathers that they were the epitome of "white" or Zoroastrian piety, with moral standards perhaps even in excess of the surrounding Christians. They drank holy milk or mead according to their station in life, and prized goodness, peace and hard work in the fields above all else. If this was the case, then they may even have had their own Zoroastrian priesthood, which would never have fully integrated with the white and black Magi of the Slav Zurvanites, who would have been responsible for the idol temples in the lands of the Germans and Western Slavs. An unknown number of heathen Baltic priests were in no way allied to the "white" Magi. For there were among them diviners and necromancers garbed in dark, hooded "monastic" robes, perhaps indicating they were black priests, those who interceded before the infernal deities, bringing tithes. Indeed the *Treaty of Christburg* relates that the Balts had predatory priests who greatly lauded the crimes and infamy of their followers.¹⁰⁴¹

THEOCRATIC RULE IN THE
BALTIC REGION

Whether these Baltic sorcerers, were in any way linked with the Mediaeval dualistic Balkan Christian heretics (such as the Bulgar Bogomils and the Massaliens) is likewise unknown.

A strange turn of events occurred throughout the Baltic beginning some time around 1400 AD. Under siege from the Church-inspired task force of Teutonic knights, the Balts accepted a pagan Pontiff to discretely rule over the entire region, instead of a king.¹⁰⁴² This meant a swap to theocratic rule, whereas previously this had never been the custom. Only uncertainty surrounds this man. Where had he come from .. Bulgaria? Rus'? or had he always been there? Or, was he only one of many high ranking pagan priests (magupats), spread out over several nations? In the Baltic there was still talk of these man-gods in the 16th Century! This much is certain. If this pagan High Priest of the Balts turns out to be the same as the religious leader of the Russes, or equal to the Bulgar Anti-Pope, it most likely indicates simultaneous (or even a moving centre of) pagan operations in the Balkans and on the German frontier. It may well be that the very presence of these divine-figures (who were the glue holding the old pagan faith together), was one of the extenuating factors prompting the Teutonic knights to occupy the Baltic in the first instance. The mobility of the black and white Magian presence is telling. We see them in ancient Rus', Finland, Scandinavia, Hungary and among the Bulgars. That they milled in the Baltic region during the 13th Century helps validate an actual movement of "heretics" and witches (some of whom were engaging in devil-worship) into the Holy Roman Empire, something revealed by inquisitorial authorities in France, Germany and Scandinavia. They proved to be the motive for German killing sprees in the Baltic ... a kind of anti-heresy, "Christian Jihad"; Rome's last ditch attempt to force the Magi and Magian-Christians (adherents of a form of Christianity described in great detail throughout Part II) back out of Europe.

CHRISTIAN TEUTONIC
KNIGHTS INVADED THE
AREA

So came the Northern Crusades. Hostilities broke out against the Polish pagans during the Wendish Crusades

of the mid-12th Century and progressed on to the anti-Prussian Crusades as Catholic Germans steamrolled their way eastward. The fighting was very bloody, on both sides of the fence! Beginning in 1226 AD and ending c.1274 AD, the subjugation of the Prussians was finally accomplished, allowing the Germans to pierce far into Baltic heathendom. Victory for the Teutons was complete and utter. Everywhere insurrection was violently quelled, regardless of the cost. After decades of combat, the once densely inhabited area of Samland was reduced to a pocket of little more than 20,000 inhabitants. The Magi, the intercessors of pagan society, were earmarked for annihilation by sword and fire, and with their demise would come the fall of state paganism.

CONFLICT BETWEEN THE PAGANS AND CHRISTIANS CHARACTERISES THE 12TH-13TH CENTURIES IN EASTERN EUROPE

Priestly accoutrements

The Magi required a wide range of apparatus for both ritual and magical purposes.¹⁰⁴³ Almost all the Russian magical apparatus described below (with the exception of the sword, ring, and trident) were used by the average mediaeval European Magus. In the following range of equipment, it is almost impossible for archaeologists to prove that a given artifact was crafted for ritual usage alone. After all, none of them have flashing neon signs, which highlight their original magico-religious usage for the untrained eye. Be that as it may, there are many items that could, without doubt, have been used by Magians in their ceremonies, especially when one considers the Magian presence in Rus', and distinct archeological parallels for such equipment in Iran. Without a foreknowledge of this historical context, interpretations which dub a given artifact as magical are often seen as wildly speculative. Yet it should be remembered that something as seemingly mundane as fire and cattle were worshiped in Slavia. No archaeologist could ever grant spent ashes and bovine skeletons a religious interpretation on the strength of a find, unless they were ritually altered in some observable way. Only interpolating linguistic and historical sources readily allows for such interpretations, a practice many archaeologists are loathe to indulge in, believing that it somehow detracts from the scientific nature of their discipline. On the contrary, cross-disciplinary activity provides very useful interpretative tools. As you are about to see collectively it confirms what folklore has long told us all along, that European witches were once living beings, folk reverencing a plethora of spirits and gods with pointy hats, brooms, cauldrons and other paraphernalia.

WHAT DOES A MAGICAL OBJECT LOOK LIKE?

THE ROBES OF THE MAGI

As you have already read, the white and black Magus priests received robes of magical power from their respective gods; their priestly weapons in the cosmic war between good and evil. Without these garments the Magi were unable to fight the spiritual war, or offer up sacrifices for the people, since divine power was imbued within the fabric itself.

ROBES FILLED WITH MAGICAL POWER

In Aryan tradition, the power of a Brahman came from a sacred thread slung over his shoulder. For the Magians it was such a thread, spun by virgins and woven into their white robes, that gave the white priests their "white" magical abilities. Considering the principles of ritual inversion, the black robes worn during the performance of infernal sorcery were probably spun by temple prostitutes, who, according to the Magi, were affiliated with the devil-worshippers.

THE SACRED THREAD

Volkhvy robes consisted of a full-length white garment with extremely full sleeves and a large hood attached to it, though it is possible that it might be a bonnet with a large veil draped down the back. Though similar to the vestments worn by Zoroastrian priests, these robes were embroidered on the front and did up at the sides by means of studs¹⁰⁴⁴ (a feature of Parthian dress).

VOLKHVY WORE LONG WHITE ROBES

Magi dressed like priests of the Brahmin caste, who traditionally wore a clean linen shirt, carried a staff, and encompassed their lengthy locks of hair with a head ring. Beards of some length, and plaiting were the norm amongst them. While moving about rural provinces they dressed in "the skins of fawns or gazelles (or, I suspect, ibex)".¹⁰⁴⁵ A slightly different tradition existed in Russia, for there the *Volkhvy* Magi donned wolf pelts. Assyrian artwork depicts the more ancient Magi in varying terms, but commonly as men wearing calf-length pointy-tipped boots, pointed headdress, headbands and leopard-skin cloaks.¹⁰⁴⁶ These ancient Magi are also depicted in artwork with lengthy robes, and a stole (a scarf-like length of cloth) draped around the neck (which hung down the front of the robe).¹⁰⁴⁷

GARB SIMILAR TO THAT OF THE BRAHMINS

Magian headdress varied. It could be a turban, or headwear either dome-shaped, pointy or flat-topped. A 1,000 BC weather-mummified Caucasian (presumably Iranian) corpse chanced upon in Eurasia may confirm one element of black Magian attire. A female found wore "a 60 cm high black, brimmed conical hat identical to the witch's headgear of European folklore".¹⁰⁴⁸ In the 500 BC mound-covered Celtic "prince tomb" of Hotchdorf, the interred royal wore a

pointy white hat made of birchbark.¹⁰⁴⁹ He was, by my estimation, one of the white princes, and a Celt for that matter. A wagon was also found within the buried death-house, together with a cauldron (which contained mead remnants) and drinking horns.¹⁰⁴⁹ His body, bedecked in gold (including a torque), lay on an elaborate bronze divan supported by six effigies, each with a wheel between the legs.¹⁰⁴⁹ Though unmentioned in the source, there seems to be a remarkable resemblance between the imagery found on the couch and Scandinavian bronzework of the same period.¹⁰⁵⁰ Perhaps these dress codes enjoyed wide popularity, for some 1,700 years later, in the 13th Century AD, the Russians of Galich were described as wearing “felt caps, pointed and very high”.¹⁰⁵¹

According to Strabo, “most of the (Magian) people wear a double tunic that reaches to the middle of the shin, and a piece of linen cloth round the head; and each man has a bow and a sling.”.¹⁰⁵² He also mentioned the linen shirt worn beneath their over-shirt.

From linguistics especially, we can educe beyond all doubt that Magian ritual dress was worn in Mediaeval pagan Rus’, and well into the Christian period for that matter. The Magian treatise *Shayast La-Shayast* provides details on the precise design and manufacture of the mandatory white Magian holy *kustik* belt and sacred linen shirt mentioned just previously.¹⁰⁵³ One style of shirt had two halves (a shirt and a “skirt” or apron. If pleated, some might even liken it to a kilt), and the other was a single pattern smock. We find potential evidence of both styles in Russia. In Novgorod for instance, a pagan metallic wand was excavated surmounted by a figure that seems to be wearing a pleated kilt of some kind. A one-piece smock was excavated on the Swedish Isle of Birka c. 9th Century. It was of Eastern Slav genesis¹⁰⁵⁴ and of the same style that continued to be worn throughout much of Russia and Slavia, even until this century.

In so far as the shirt is concerned we do not find a word survival of *sapikih*, which was used in Sassanian times when referring to the Magian sacred shirt. What we do find though is a much older Persian word *kurta*. The name of the Russian knee-length linen smock (*kurtka* or *kurta*) comes from the Old Persian word *kurta*, a term once used to describe Persian holy shirts.¹⁰⁵⁵ It was to be found in the Turkic as *kurta* (“a short dress or skirt”) not to mention Parthian and Soghdian (“a shirt”). We also find a similar connection with the Old Norse words *kyrtill* (“a shirt”) or *kyrtle* (“a tunic”).¹⁰⁵⁶ *Kyrtill* and *kyrtle* were either Slavic loan words picked up in Russia and transported into Scandinavia with Russian immigrants, or were used by Magian Norsemen (perhaps such as those who attacked Moorish Spain) when referring to their sacred shirts. Another Old Norse word for a shirt was *serkr*, which apparently comes from the Greek, and therefore a different cultural tradition.

Building further on this argument, Mediaeval Russian males also wore a knee-length overgarment known as a *sovyato*¹⁰⁵⁷ (which is cognate with the Slavic words *sventa* or *sveta* (“holy” or “saintly”). The word *sovyato* evidently originated from the Avestan Persian *spenta* (a word also meaning “saintly” or “holy”, and which referred to the Magus saints), rather than the Latin *sanctus* or the Greek *hagios* (which applied to Christian saints). For this reason I suspect Russian men wore a Magian holy outer garment over the top of their *kurta*. Since they trussed themselves about the waist with the obligatory sash belt, it is plausible that the linen shirt went ungirdled, and the belt was worn around the *sovyato* instead. Nevertheless they might have worn two sash belts, one securing their shirt, the other their *sovyato*. It is my contention that these varied holy shirts were worn by Magian Turkic tribesmen (probably Bulgars), Russians and many other Slavs, plus an undetermined number of Norsemen too.

Zoroastrians (and presumably Zurvanites) considered it sinful to take off the shirt and sacred girdle (*kustik*) because of their efficacy in providing protection against the *drugs* (demons). It was a crime punishable by whipping to walk more than a few paces without the belt on. So when Magians changed their clothing, and re-girdled, they did so in a stationary position. Accordingly the Magian sacred shirts often became very dirty, owing to the fact that they were removed only with great trepidation. Is it a coincidence that another Russian word for “a shirt”, *rubashka*, comes from the root word *rub*, which implies they were grubby in appearance? Well they were heavily soiled in Leo the Deacon’s account of the Russes he encountered. Only Prince Svyatoslav’s white smock was free from the ingrained sweat and dirt that so tarnished the clean appearance of his many Rus’ troops. In the colder months it was evidently worn under clothing, with its hem left hanging out, giving the impression of a dress, apron, or even a kilt, which had been attached.

Magian scripture tells us that the *kustik* belt’s protective power lay in a magical thread sewn into it. Pagan Russes also wore this type of “uniform” (a white smock and belt) and considered it obscene to remove their sash belt,¹⁰⁵⁸ which was of the same dimensions as the Magian *kustik*. What is even more overwhelming is that the Russian word for “a sash” or “a belt” is *kushak*, and therefore similar to *kustik*. *Kushak* is also the Turkic word for “a belt”, so it is possible that the concept of a *kushak* sash belt was imported into Russia with the Turkic Bulgars, but I am more

HOLY GARMENTS

THE SACRED BELT

THE MAGIANS AND RUSSES THOUGHT IT OBSCENE TO REMOVE THEIR BELTS

TO WEAR A BELT WAS TO
BE ENLIGHTENED

inclined to think that it was a term mutually inherited by both Slavs and Turks. Consider also that the Russians have the word *poyasnit'*, which means "to put on a belt". The root word in this case is *yas* or *po-yas*, which suggest that a person became enlightened or illuminated through the act of putting on a belt. Due to the apparently Magian nature of the Russian attire, the source of this light and wisdom was most likely the sun, the divine *Ahura Mazda*. Thus *poyasnit'* was "to become enlightened", or be a true Mazda-yasner (ie; white Magian) by wearing the belt.

HOODED ROBES

The Russian word *beliy* ("white") and the Lithuanian *baltas* ("white"), could be related to the Old Icelandic *belti*, as well as the Swedish, Danish and Norwegian word *balte* (all of which mean "a belt").¹⁰⁵⁹ Here there appears to be a connection between "white" and "belt". I perceive this Nordo-Balto-Slavic phonetic connection as arising from the interrelationship between white Magians and the all-important *kustik* belt.

CEREMONIAL CAFTANS

Russian and Finnish pagan priests probably wore a *kebenyak* also, a hooded overgarment or cape. The term is derived from the Turkic and Kirghiz words *kebanak*.¹⁰⁶⁰ These I link with the verb *kebovat'* (Russian: "to perform sorcery", "to tell the future"), a variant of which is found in the Finnish/Saami languages. In Saami a *kobbat* was "a summer garment", and related to the word *kobenyak* ("a hood", "a hat", "a bag", or "a sack").¹⁰⁶⁰ Thus there appears to be a link between magic and a hooded garment, in the Russian language particularly. Based on the Turkic affiliations with these words, such a magical garment was probably imported into Russia from Eurasia, together with other oriental religious traditions.

Russians wore caftans just as the Magians once did. *Sarafan* (Russian: "a caftan") comes from the Turkic *sarapa*, or the Persian *serapa*, which meant "a garment of honour", or "a ceremonial garment".¹⁰⁶¹ Doubtless to say these were not Christian ceremonial caftans, but Magian (Turkic shamans and Buddhist monks wore safron robes, rather than the more impressive Magian caftans, during their rites). As in Magian times the Russian caftan was traditionally worn with a girdle.

HEADWEAR

Russian women commonly wore a pointy tiara-like headdress known as the *kokoshnik* (so called because it resembles a cock's crest), which secured a veil in place. Strabo tells us that "*Persians wear turbans not unlike those of the priestly Magi*". From other accounts we know that the full attire consisted of a colourful caftan worn over a linen shirt (*kurta*), plus a turban of sorts (worn by *Ehrpats* especially). Turbans not dissimilar to those of the Magi were worn by Finns all along the Upper Volga, presumably as far north as the lands of the Volga Bulgars. As for Russian usage they seem absent from written sources, but are seemingly depicted in manuscript illuminations.¹⁰⁶²

As in Scythia, Mediaeval Russians continued to wear pointed hats, often lined with fur along the rim.¹⁰⁶³ Similar hats were worn by Magians. In Russia the lavishness of a hat was related to the wearer's social status.

The name *shober*¹⁰⁶⁴ (which applied to Russian coats of Persian design) was linguistically derived from the Arabic.

Foot cloths were commonly worn in Russia, providing adequate extra insulation against the biting coldness of their frigid environs. Since Magians were required to wear two shoes at the same time on each foot, foot cloths might also have represented the second shoe. There is also a striking similarity in the boot style preferred by Mediaeval Russians and the Magians.¹⁰⁶³

MASK

The Rus' *Volkhvy* had to wear masks to perform their ceremonies correctly.¹⁰⁶⁵ Because they were Magi, then the type of mask that Lozko refers to would probably be the Magian mouth veil. A mask, handkerchief or veil of cloth was traditionally worn tied around the mouth of any Magus who stood in the presence of the holy fire, ensuring the priest did not desecrate the sacred flame by breathing on it.

In the *Primary Chronicle* we discover that some Rus' pagan priests performed their ceremonies or pantomimes wearing comedy masks. The Magi simply did not wear comedy masks during a traditional *Haoma* ceremony, so this might mean that there were other pagan priests in Rus' who were not Magi, and who performed rituals that were essentially Buddhist or pagan gnostic in nature, perhaps Dionysian, Mithraic or Neo-Pythagorean. Nonetheless the Magi did perform divine comedies, a form of spiritual theatre during which important religious and mythological events were portrayed. By emulating the actions of the gods they believed they could bring about the same series of miraculous events in day to day existence.¹⁰⁶⁶

CUPS AND HORNS

The drink of immortality was always held in an ornate vessel of some kind. It could be a cup, a rhyton (a drinking horn), a gold or silver "chalice", or a ritual bucket (for mead). In connection with this, a great number of conical glass cups have been unearthed in mediaeval pagan settlements throughout Rus' and Scandinavia. This

Fig 50.1

Fig 50.1. Scandinavian glass drinking horn.
Fig 50.2. It's highly unlikely this Pagan artifact is a valkyrie, as many assume, but a depiction of a priest or priestess with a conical libation cup in hand, and wearing a pointed hat, plus a girdled cape or caftan worn over a pleated shirt or skirt. It was evidently made by pagan craftsmen, and therefore reflects a genuine mode of Norse pre-Christian ceremonial attire.

Fig 50.3. Mediaeval Slavic glass drinking horn. The same style of vessel is found throughout the Nordo-Teutonic sphere also. See 50.1 and 50.2.

style of drinking vessel resembles the glass *Haoma* cups of the Magi (called *hawam*). Similar libation cups can often be seen in the hands of people depicted in Pecheneg funeral statues, and on the wall reliefs of the Iranian *dakhmas* (death houses) and Darius' royal monuments, or even on Assyrian reliefs.

Glass goods were a luxury item during the pagan era, in Scandinavia and Eastern Europe, appearing mainly as bowls, small beads, bangles, and of course these conical cups. Linguistics sheds some light on the ethnicity of the glass-blowers who crafted them. The Old Russian word for "glass" *st'klo* is cognate with *st'klo* or *tsklo* (Bulgarian), *steklo* (Slovenian), *st'klo* (Old Czech), *szklo* (Polish), *staklo*, *sklo* or *tsklo* (Serbo-Croatian).¹⁰⁶⁷ Therefore Slavs applied similar terminology when referring to the produce of this specialised trade. The Balts evidently shared the same technology considering their use of the words *stiklas* (Lithuanian: "glass" or "a phial") and *stikls* (Latvian: "glass").¹⁰⁶⁷ These many words originated in the Gothic *stikls* ("a goblet", "a cup", or even "a chalice"), and the Old High German *stechal* ("a wine cup").¹⁰⁶⁸

Goths were the only Europeans to fashion glassware outside of the Roman empire during the 4th Century AD. Archaeologically this "Chernyakov glass" tradition was distributed across a broad expanse of land, spanning between the Ukraine, through the Carpathians (where the main Gothic glass production centre was situated), Latvia, Lithuania, Russia, Czechoslovakia, and Scandinavia (where the heaviest imaginable concentrations of these artifacts are found).¹⁰⁶⁸ In short, we find Gothic glass

goods in geographical regions that share a common linguistic inheritance regarding glass and glassware. These were also areas where ethnic Goths dwelt. In the Gothic and Old High German it more specifically denoted a drinking cup, or more particularly a libation cup or chalice.

Owing to its similarity with the previous words, the Old Icelandic *stikill* ("the pointed end of a horn")¹⁰⁶⁹ enables us to guess that the Goths crafted pointy glass drinking horns (perhaps for ritual usage, but at the very least for drinking bouts); again something already known to archaeologists. This might account for the presence of these same vessels in Slavia, Germany and Scandinavia over a broad time expanse, even into the Mediaeval pagan era. They could also be found in Anglo-Saxon England as well. Since the Goths had their own pagan priesthood, of either a Magian or pagan gnostic persuasion this explains why these Gothic glass conical horns (fig 50.1) so closely resemble Magian *hawam* libation cups.

Aryan-pagans used horns, or wooden and ceramic cups to hold the ritual drink *Soma*, the foremost sacramental libation of the Hindus. For them, *Soma* was the "cup of clarified butter", a cup which was usually placed at the head of a devotee after they died.

The drinking horn mount shown in Fig 47.1 is of triangular shape, and can be identified as Medo-Scythian.¹⁰⁷⁰ That is, it originated in the milieu of the Magi and Scythians. It played a similar function to the triangular mounts on a horn found at the 6th-7th Century AD royal Anglo-Saxon site of Sutton Hoo, in East Anglia. Other artwork, seemingly Medo-Scythian in nature was also discovered at Sutton Hoo.¹⁰⁷⁰

In Achaemenid times there were four distinct types of drinking vessel, three of which were incapable of being placed down without spilling the contents.¹⁰⁷¹ These were rhytons (drinking horns), short metal cups ending in an animal head, and conical beakers.¹⁰⁷¹ Libation buckets were the last type of drink receptacle, and were made from metal or ceramics.¹⁰⁷¹

Sassanian Zoroastrian rhytons were large in comparison to their earlier Parthian and Achaemenid variants, characteristically terminating in an equine sculpture.¹⁰⁷²

For their part the Medes decorated their drinking apparatus with the typical ram's head motif. The depicted rhyton (fig 47.6) comes from the Koban region of the Caucasus, not far from Russia. The Koban exemplar was of Median manufacture, and therefore used by Magians in that region, or brought there as pilfered booty. Owing to the close connections between Persia and this area, it is more likely to have been used for its original purpose, rather than simply transported there by accident.

BARSOM TWIGS

During a *Haoma* ceremony, the officiating Magus priest held a bundle of magical twigs in his left hand, and a single twig in his right as a prayer was recited. *Barsom* twigs opened a connection between the physical and metaphysical world, and were traditionally made from tamarisk twigs, though at some point during the past 1,000 years the Parsees have variously used pomegranate twigs, or metal wands. The magnificence of a given *Yasna* (*Haoma*) ceremony was determined by the number of *barsom* twigs used; the larger the bundle, the more powerful and glorious the rite. For the duration of the ceremony the *barsom* twigs rested upon a *mah-rui*, a metallic wand

stand with crescent-shaped ends. *Barsom* twigs were originally cut from the tree with a knife as the *Ashem Vohu* prayer was uttered, and subsequently blessed with holy water during a ritual known as the *khub*. These twigs were gathered together and bound up a prescribed number of times with a *kustik* belt or date palm leaf (fig 47.7). In all these ritual faggots resembled brooms, making it highly noteworthy that the word for “a broom” throughout various parts of Europe was *besom*. So there is clearly a linguistic association between Magian *barsoms* and European *besoms* (brooms, and indeed European witches’ brooms). Many wands were burned in the sacred flame, but following a typical *Haoma* ceremony leftover *barsom* twigs were issued to the faithful to take back to their homes, for use during the blessing of meals, during the Magian grace. Consecrated green *barsom* twigs were kept on a high shelf in Zoroastrian / Zurvanite homes to impart protection to residents. These had to be sufficiently far from the ground to prevent women from accidentally defiling them by coming too close to the *barsom*, while menstruating. Eastern Finns were known to have kept similar “twigs” in their Lud cabins, and in just the same manner, but we cannot connect them with *barsoms* linguistically. Norsemen used lot-twigs, naming them *hlaut-tein*.¹⁰⁷³

STRAINING CLOTH

The Magi needed to strain the pulverised *Haoma* plant within the mortar to extract its life-saving essence. The *Haoma* straining was often the longest part of the preparation, and was carried out by a Magus performing the role of *Havaman*. To sieve the pulp they used linen, lace or woollen cloth spun, and woven on the looms of virgins and spinsters. Similar kinds of cloth were known in Rus’, either manufactured on their own looms, or imported. The looming of wool and the making of lace were highly specialised tasks, requiring adequate looming facilities and skills. In Western Europe, the best of these workshops existed in Spain, England and Flanders. The importation of woollen cloth to Rus’, from the Flanders area, is known from the archeological context, so there was definite maritime contact between Rus’ and the Lowlands during the pagan and early Mediaeval era. We have no historical evidence that cloth was used in a ritual context in pagan Russia however, but being Magian they no doubt did so.

Although unspecified by Lozko in her details of *Volkhvy* ritual equipment, the *Haoma* strainings performed by the Rus’ Magi may have required the use of a large, often unclosed, ring made of precious metal, to which between three and seven lengthy strands of hair from the tail of a white bull were affixed. Such a ring (which the Magi called *varesa*, or *varas fuliyani*) could only be used as long as the bull lived, and had to be reconsecrated for use before each ceremony. The heavy *Varesa* rings, designed of precious metal, were supposed to be discarded once the bull had died.

Varesa rings were depicted in ritual scenes engraved on Mithraic gems, providing proof that Roman Mithraism and certain Egyptian rites contained common features of Magian ritualism. They also resemble a ring shown in the hand of a horned dancer embossed on the well-known libation horn unearthed in Denmark. Throughout the Celtic and Germanic world large numbers of what seem to be torques have been found in votive deposits. Were these

torques just exquisite pieces of jewellery, or could they have been discarded *Haoma* straining rings? If some of them were straining rings, then the eyelets at each end of these many torques may have been used to attach and anchor the lengths of bovine tail hair.

BLESSED RODS

The Magi also had a type of rod with a piece of iron running down the centre, and a cut gem at one end. It may have closely resembled the “wand” remains unearthed at the Sutton Hoo burial.¹⁰⁷⁴

A Magus’ rod was supposed to have been surmounted by a cut diamond, (which were probably used for astronomical purposes, possibly for the drilling of shafts through rock, crafting talismanic gemstones, or shaping other substances considered too hard for metal tools. Some astronomical devices in the *Almagest* required precision cutting and drilling to achieve the proper results.

The Magi were supposed to have maintained the lapidary skills of ancient Babylon. One account of Simon the Magus’ miraculous abilities (from St Clement of Rome) states that he could bore through solid rock as if it were mere clay (no doubt the action of a diamond tipped drilling rod).¹⁰⁷⁵ Engraved gems were sometimes found in the keeping of witches during the Inquisitions, so these magical rods were quite possibly used to execute these mystical etchings.

Norsemen probably used magical rods, for the term *tein-vondr* “a wand” or “a rod” exists in Old Icelandic,¹⁰⁷⁶ as does *spa-gandr* (“a divination rod”).¹⁰⁷⁷

Special rods were also used by the heathen priests during the tending of the sacred fires, to heap the ash in a special way, and shift sacred woods into position for combustion.

CAULDRON AND TRIPOD

MAGICAL CAULDRONS

The cauldron was a quintessential item of Magian equipment, needed to boil the milk, holy spring water and *Haoma*. Cauldrons were also used by the Aryans to boil the horse sacrificed during the *Asvamedha* ritual. Mediaeval Europe experienced the return of cauldrons (once widely used during pagan times). If one lends credibility to the sort of details that emerged during the witch trials, cauldrons were being employed by the white and black “witches” during their assemblies. The ceremonial use of these cauldrons¹⁰⁷⁸ by both groups of witches is not so much evidence of “Hubble, bubble, toil and trouble”, but much rather the ongoing performance of Magian (or even Aryan pagan) sacrificial rites during the Middle Ages.

As discussed, *chara* was a Slavic word for “a cauldron”, and linguistically it preserves the connection between magic and the cauldron, not to mention the oriental origins of these concepts. We find another Russian term for “a cauldron”, *kotyol* (and variants of it), mutually shared by the diverse Slavic and Germanic-speaking nations. Some have guessed that it came from the Latin word for “a basin”, *catilus*. This is where the English word *kettle* comes from.

SACRAMENTAL UTENSILS

Another Old Russian word *kub* has an archaic etymological origin in the Old Indian *kumbhas* or Avestan Persian *kumba*, both of which mean “a pot”. The latter terms evidently gave rise to the Old Russian *kuba* (“a large vat or cauldron”), which later mutated into the Russian *kubok* (“a goblet” or “a chalice”) and *kub* (“a cauldron”).¹⁰⁷⁹ English obtained the word ‘cup’ through this same Aryan linguistic line, but specifically via the Latin *cuppa* (“a cup”).¹⁰⁷⁹ If the Russian terms drew strength from the Old Indian and Persian, they certainly referred to both ritual and domestic utensils and cookware. If it is technically closer to the Roman, it was derived through Slavic and Roman contact, most likely with soldiers, and hence, without any shadow of doubt, Mithraic brethren.

Other utensils were needed to contain the holy butter (to fuel the fire), spades, cauldrons and diverse ritual cruets, plates, platters, straining bowls and bowls. The Old Russian word *chasha* meant “a cup” or “a bowl”.¹⁰⁸⁰ The same word was found in the Bulgarian and Serbo-Croatian. It also appears as *czasza* (Polish), *chishe* (Czech), and *kosi* (Old Prussian),¹⁰⁸⁰ not to mention a few other independently evolved forms found in the Baltic region. There is a similarity between these words and the Old Indian *casaka* (“a cup” or “a goblet”) and the Armenian *chashak* (“an eating utensil”). To this I will also add *tashta*, Avestan for “a bowl” or “a saucer”, vessels used during the *Haoma* ritual.¹⁰⁸⁰ Thus, bearing in mind the Magian presence in Rus’, it may well be that the word *chasha* (and its variants) entered into the Baltic, Russian, Bulgarian and diverse Slavic lexicons with terms like *dron tashta* (“a dron platter used in Magian services”) and *surakhdar tastija* (a straining plate with nine holes punched in it, again used in the *Haoma* ceremony).

A number of artifacts found in Scandinavia and northern Russia display not only Russian manufacture, but substantial Sassanian Persian stylistic features. For this reason they may have been ritually used, but it is impossible to prove they had anything beyond secular use. One notable exception is the Simurgh pitcher found in Russia.

Fig 53.4

WANDS

Wands were sturdy wooden sticks, or precisely carved bone objects, both of which tapered upwards into a slender point, and were used by the Magi and various pagan gnostic sects to direct magical forces and cosmic energies. This they believed could alter events in this world, or bring about certain outcomes. Wands were made from a variety of woods¹⁰⁸¹ most likely cut from a tree within the sacred grove, not just any tree. According to descriptions of the Rus' wands published by Lozko,¹⁰⁸² their shapes varied. On the basis of their general shape, some could be loosely compared with the 6th Century (Swedish) Lindholm wand,¹⁰⁸³ but Lozko mentions that they were often ornately incised with intertwined zoomorphic creatures, or creatures with hands, nor do they appear to have been etched with runes or similar characters.

Magical badges of office

HEATHENS HAD THEIR OWN RELIQUARIES

Fig 54.1

Fig 54.2

Fig 54.3

Fig 54.4. This crystal sphere was set in a Russian-style mounting.

Fig 54.5

Much of the mage's "miraculous" magical apparatus was contained in his or her own pagan reliquary. For many pagan Europeans these heathen reliquaries were small cupreous receptacles in which they respectfully held swastika and runic amulets, varied animal teeth, amber, and precious gemstones (with talismanic virtues).¹⁰⁸⁴

Other styles of reliquary could be found, in various shapes and sizes, from cloth bags and animal skin pouches, to chests. For instance at least one wolf-shaped pagan reliquary has been found in Europe.¹⁰⁸⁵ The shape of this particular pagan reliquary might be purely coincidental, yet it could also indicate that some of the pagan magicians operating in early Mediaeval Europe were related to the pagan priests of the Slavs, the *Volkhvoy* "wolves", or indeed *Volkhvoy* who had migrated onto the continent following the conversion of Kievan Rus'. *Volkhvoy* of either sex (especially women) probably used the same sort of magical paraphernalia as the Magi.

MORTARS

Sacred metal and stone mortars were operated by the *Havanan* during the course of the *Haoma* ceremony, to crush the sacred *Haoma*. *Toloch'*, the Modern Russian word meaning "to crush" comes from the Old Russian *tlku* and *tolchi*, meaning "to push something around", or "to strike", "to smash", "to sound something", or "to spurt out".¹⁰⁸⁶ Variants of it can be found in the Slovenian, Ukrainian, Belorussian and Serbo-Croat.¹⁰⁸⁶ Now I suggest that the correlation between "to strike", "to smash", and "to sound" is derived from one element of the Magian *Haoma* rite. In it the *Havanan* pushes the *Haoma* around inside the mortar, smashes the sacred plant with the pestle, thus causing the life-giving *Haoma* essence to spurt out. Upon completion of the *Haoma* crushing, the Magus repeatedly struck the mortar with the pestle causing a metallic ringing to sound.

The Old Russian, Bulgarian, Czech and Serbo-Croat word for "a mortar" was *stupa*, or minute variations of the same word. In the Slovenian it was *stopa*, and in the Polish *stępa*. These are supposedly related to the Middle-low-German *stampe* and the Anglo-Saxon *stampe* and the Old High German *stampf*.¹⁰⁸⁷ *Pest* or *pestik*, the Russian words for "a pestle", can also be found in a variety of other Slavic languages.¹⁰⁸⁸ The ancestry of the word is uncertain, but it might be the Old Indian *pinasti* ("to grind something into a powder") or *pistas* ("ground" or "crushed").¹⁰⁸⁸

TONGS AND LADLE

The Russian word for "a ladle" is *chepak*, and the verb *chepat'*. It is remotely possible that *chepak* is connected with the Avestan *chamach*, the ladle used to pour butter onto the sacred flame. The Russian for tongs, *shchiptyy* might be related to *chipyo*, the Avestan word for the set of tongs used to feed the holy fires, and turn the combusting fuel.

CRYSTAL

Since *Volkhvoy* are believed to have known the arts of lapidary, and kept books on the subject of crystal-gazing we can assume they used crystalline prisms or balls to see spectres or portends of the future. The crystal ball shown here (fig 54.4) was found in Gotland, and worn around the neck like jewellery.

In distant Britain, crystal balls were found in the graves of well-to-do Anglo-Saxon women, together with silver spoons that had been pierced in the bowl numerous times.¹⁰⁸⁹ I believe these spoons were either used for ritual straining, or similar to the fire spoons used by magicians, when placing offerings of incensed wood into the holy fires. As in Persia wooden sacrificial chips were probably placed into holes that pierced the bowl of these spoons. Such devices enabled fire-tenders to hold offerings over the holy fire without burning their hands. A similar device was chiselled into a Mithraic statue of Kronos, though the head was not spoon shaped in that particular example. As with the Gothic crystal ball illustrated, Anglo-Saxon crystal balls were mounted inside strips of metal, which wrapped around them, and permitted them to be slung from the belt.

Crystal balls were used by the Celts too. The druids habitually carried crystal spheres known as "Serpent eggs"¹⁰⁹⁰ which were believed to impart various powers. Being caught with one inside the Roman capital was enough to get you executed. A great many centuries later we find a man crystal-gazing in a 1499 AD woodcut, with a dog lashed to his arm.¹⁰⁹¹ Dogs were of course esteemed by the Magi for their ability to keep evil at bay!

MIRROR

Polished metal or glass mirrors had long been used by pagans as a reflective surface in which to look for demons and the souls of the dead during necromantic communal seances, or to summon friends, relatives, and heroes from beyond the grave. We know that heathen Russes had written works on this form of divination.

Mirrors were used for magical purposes in the ancient world, and at least one fancy bronze mirror was found in Ireland. While the mirror was used for reasons of vanity, it is also possible that it served as a necromantic device. It may also be that mirrors were used for signalling purposes over long distances on the steppe. Hunnish horsemen were observed doing just this during the thick of battle. Evidently a pre-agreed series of flashes conveyed information to the observer.

LENSES

It has been hypothesised that lenses were used by the pagan Rus' astronomers during star-gazing sessions,¹⁰⁹² or to scrutinise the face of the moon or sun for important signs. They probably had further application in specialised handcrafts, particularly the fashioning of exquisite jewellery. You've already seen physical, historical and linguistic evidence for the existence of lenses.

TALISMANS

In the ancient world talismans were produced by diverse means, especially low and high magic. In Iran, when a young person came of age, the Magi gave them a small bag of amulets which they wore around their neck, just in front of the throat. This they believed would provide protection against harm. Pagan Russian mystical wards and amulets often bore esoteric images of animals.¹⁰⁹³

One particularly interesting talisman was a disk recovered during the Novgorod excavations. This circular plate of bone was etched with a 9-rayed solar disk being smothered by a dragon (an image also common to the Baltic area), and lacking any written inscription. The real meaning of the motif found on the disk, I believe, can be found in the Magian text *Dadistan-i-Dinik* LXIX. The causer of eclipses was Gokihar, a large 'beast of the apocalypse' with a long head and tail,¹⁰⁹⁴ a creature destined to be flung down upon the earth preceding the Resurrection. Every so often it would devour the sun. This may have been a magical device to cause or prevent eclipses, or designed to free the sun from Gokihar's jaws. Lead scrolls were often used in Greece and Rome to lift fevers, or for the etching of permanent curses, following which they were buried. At least one lead scroll was excavated at Novgorod.

SWORD

From pagan Rus' we have no mention of the *Volkhvy* wielding a sword during their rituals. But the most famous of the Rus' magicians were all warrior princes, and thus did carry them. Originally the Magus sorcerers used their magical iron swords (with boxwood handles) to gain control over spiritual entities which they had summoned.

Clues as to whether the *Volkhvy* Magi once wielded swords of dazzling iron can be found in the words *mech* (Old Slavonic), *mich* (Ukrainian), *meh* (Bulgarian), *mach* (Serbo-Croat), *miecz* (Polish), *mekeis* (Gothic), *mækir* (Old Icelandic), *mece* (Old English), *maki* (Old Saxon), *miekka* (Finnish).¹⁰⁹⁵ These are believed to have come from the Latin word *masto* ("to kill" or "to cut someone's throat"), though they might also be related to the Middle Persian word *magen*, which specifically means "a sword".¹⁰⁹⁵ The Middle Persian *magen*¹⁰⁹⁵ connection seems particularly strong in the case of the Teutonic languages. If the European Magi were sword-bearers we are able to identify them not as Brahman or Zoroastrian Magi, but as the Zurvanite dualist Magus-wizards who had been run out of Central Asia many hundreds of years prior.

STYLI

Lozko mentions that the Russes had sharpened bone or metallic implements decorated by various images.¹⁰⁹⁶ These enigmatic pointed instruments are actually of uncertain usage, but may have been wands, lancets or writing implements.

Since writing was deemed an almost magical pursuit, it may be that these wand-like objects were used as styli to etch birch scrolls and wax or clay tablets. From the Novgorod excavations we know that mediaeval Russians wrote on birch bark scrolls by etching characters onto their surface. Many of the styli¹⁰⁹⁷ found there had a spade-like end, used to smooth the surface of frequently-encountered waxen tablets (known as *tsery*).

Lozko also tells us that these implements possessed images at one end, in various poses. Since Slavs were recorded as having body scarring and tattoos it is equally possible that these objects acted as blood-letters, or were used to tattoo marks onto a devotee's body. Certainly Balkan pagans spilled their blood during acts of witchcraft to satisfy cloud demons, for the release of one's blood seems to have had a quasi-necromantic function, serving as an offering to the demons.

STYLI WERE USED IN RUSSIA

SACRED MEDALS

MEDALS AND MEDALLIONS

The pagan Russes wore medals or medallions of precious metal, hung from the neck or pinned to clothing. These were used during the performance of sorceries, or served to protect the wearer. Some medallions took the form of eastern coinage, even Sassanian dirhems. Others were belt plaques of the sort used to decorate status belts and riding equipment throughout the Russian steppe and Central Asia. Medals were also commonly worn by Gypsies.¹⁰⁹⁸

MAGICAL JEWELLRY

GEM AND JEWELLRY TALISMANS

The pagan Russes apparently possessed magical talismans made in the form of fibulas, brooches, gems, buckles and other items of an aesthetic nature. These were normally etched with solar or lunar symbols, or cosmological montages composed of "totemic" animals.

It is difficult to assess what these Russian objects actually signified, but in classical magic, gem talismans were sometimes engraved with animal images. These were precious stones or crystals allied to each of the seven planets through "astral magnetisms" drawn down from the celestial sphere using closely-guarded rituals. Stones were usually tumbled, rubbed, cut, ground and incised with writing and commanding magical symbols, usually in the form of strange animals like lions, dogs, asses, eagles, bears, bulls and serpents (just to name a few things). These engravings enabled the bearer to control the energies flowing from a planet which the gem was allied to, by virtue of the type of gem used, and the variety of magical signs drawn on it. Such energies could be re-directed to effect the aims of ritual magic. Talismanic jewels were just some of the badges of office handed over to a pagan gnostic, Mithraic initiate or Chaldean sorcerer after their initiation.

THE MAGI ADVOCATED
PENITENTIAL SCOURGING

THE WHIP AND SCOURGE

In *Chips from a German Workshop*, Max Mueller examined Aryan words relating to punishment. He amply demonstrated that they preserved fossilised religious notions about punishment; it was a form of spiritual purification. According to the Magi, suffering bodily chastisement for the sins of the flesh was to take place in this world and the next. Iranian holy books¹⁰⁹ prescribed how many lashes were to be meted out for each offense or sin. These floggings were to be incurred for even minor transgressions like impure thoughts.

LINGUISTIC TRACES OF
THE PRACTICE ARE TO BE
FOUND IN RUSSIA

Two different types of whip are mentioned by the Magi; the *Aspaha-astra* and the *Sraosho-karana* (Zoroastrian terms). The first a thick horse whip, the second a fearful metallic scourge.

The Old Russian *chertu* and *cheresti* (“to cut”) came from the proto-Slavic *ch’rto and *ch’rsti.¹¹⁰ These are traceable to the Lithuanian *kirtis* (“a blow”), the Old Indian *kartanam* (“a cut”), and the Avestan *karantaiti* which relates to cutting. Moreover *chertu* and *cheresti* are related to *cherta*, the Old Russian word for “a line”.¹¹¹ One might guess that this correlation related to the cutting of lines with blows, even more so because the root of the aforementioned Avestan progenitor word *karantaiti* formed part of the word *Sraosho-karana*, the title for the Magian scourge. We also find the word *cherchega* (meaning “a whip” or “to flog or lash”), also known in the Old Russian as *ch’rchega*.¹¹¹ *Cherchega* had evil connotations, perhaps indicating that such whips had fallen from grace in Christian times, though such an instrument would naturally be scary in its own right.

SERPENT-SCOURGE

The Magian scourge was originally invented to slaughter snakes thereby earning the name “*furious serpent-scourge*”, and its appearance varied by “*the length, glitter and weight of the weapon*”.¹¹² The penalty for assault and other offenses against someone’s person was measured in terms of wounding, the severity of which had to befit the crime.¹¹³ Penalties were normally expressed as a 1/4, 1/2, 3/4 or a full wound, which would be inflicted on the criminal. The wealthy could avoid retributive wounding by paying silver dirhems; blood money no less. Small wonder then that scourges saw service in Ancient Rome, where Persian Mithraism previously flourished.

IT WAS A ROYAL
CHASTISEMENT

Good deeds merited boons, or graces that alleviated the pains inflicted on souls in the afterlife, and reduced one’s own period of suffering during the 3 day ordeal of purgatorial molten metal, which was to occur at the end of time. More serious affronts to goodness, that merited death, were not to be carried out without the permission of a *dastur*. Only the Magi conducted scourgings or executions, but in the next passage we discover that other royals probably played a similar role in remedial punishments, for their scriptures mention a nask;

“*about where there is a household, village, communal or provincial petitioning for the royal chastisement of sins affecting the soul*”.¹¹⁴

FLOGGINGS COULD
EXORCISE DEMONS FROM
A WRONG-DOER

Penal scourging was commonplace in Rus’ during pagan and Christian times. Beatings were not only a penance, but a cleansing, and at the same time a form of exorcism, that unseated and chased demons from the host within whom they dwelt. In many places rods or staffs were sometimes used for this purpose.

Until last century the Eastern Finnish tribes of the Votyaks and Mari performed expulsion rituals aimed at purging their settlements of demons, often around New Year.¹¹⁵ Participants rigorously beat dwellings with staffs. The sturdy rods, now infected by the presence of evil, were thrown into a flowing river to be carried away from the settlement.¹¹⁵ Dispensing with evil in a river is also found in the Russian *Primary Chronicle*, where the Christians thrashed the pagan idols with staffs of iron, and threw their effigies into the swift currents of nearby river. The Finnish custom is likely to be fairly old, unless of course they sought to emulate the behaviour shown in the aforementioned Chronicle, which is doubtful

PAGAN PRAYER BEADS

PRAYER BEADS

THE DIFFICULTY OF
IDENTIFYING PRAYER
BEADS IN AN
ARCHAEOLOGICAL
CONTEXT

The Magi, Buddhists and Hindus used prayer beads during acts of personal worship. Very often they were a magical string threaded with seeds. With the beads passing nimbly through their fingers the Magian faithful offered prayers of worship to the angels, archangels and *fravashis* by the *Srosh Yast*, *Farvardin Yast* and penitential prayers. These prayers were extremely repetitive, offering worship to ancestors, saints, *Yazatas*, *Sraosha* and so on, with each intended recipient of the prayer being addressed individually.

In an archeological context it is not an easy task to distinguish between a necklace and a chaplet of pagan prayer beads. Pagan Slavs had strings of coloured glass beads which are interpreted nowadays as necklaces. The beads were of three kinds, plain round beads (the most common), followed by beads encircled by ribbing, and the third trend was beads with diverse impressions and creative coloration. Such beads were found at Novgorod throughout every cultural layer, from the earliest to the latest.

Another type, the *limonky*, were little yellow lemon-shaped beads that abruptly disappeared from the archaeological record during the 11th Century in Novgorod.¹¹⁶ This was either due to their loss of popularity, the

loss of the technique used to manufacture them, or even that they had some pagan significance, which saw them forced from public usage. This last option would still not account for their sudden end (even though they were associated with pagan burial mounds), mainly because the level of paganism was so great that the people would have been inclined to disregard, for the most part, any moves to ban them by the Church, if they were an integral part of the old faith. There would need to be an analysis of these Slavic beads whenever they are found associated with skeletal material, but I am unaware of whether any such specific studies have been done. If they were associated with both male and female remains, and in locations which would lead one to conclude that they were not worn about the neck, then I believe it might indicate that they were in fact chaplets rather than simply necklaces.

If Saxon paganism hypothetically had Magian or Indo-European roots, as it seems, then we should expect to find chaplets there also. Many objects were imported by the Anglo-Saxons of Britain from overseas,¹¹⁰⁷ things such as (rock) crystal balls (which were even used by the druids), and beads of amber, crystal, amethyst and garnet. Many such items originated in the Baltic area, but entered Britain via the Merovingians in France.¹¹⁰⁸ Archaeologists have confirmed that the number of beads to a string varied greatly, and that they were worn as necklaces. Anglo-Saxon bead strings were probably necklaces, unless chaplets were worn.

With the rise of Christianity, Christian missionaries might have combated the pagan chaplets by introducing the Catholic Holy rosary, or Orthodox prayer strings, which directed the newly converted towards acceptable forms of Christian prayer.

A century after the conversion of the Russes to Christianity, the pagan priesthood could still draw an immense following. In a *Primary Chronicle* account pertaining to the late 11th Century we hear of a miracle working pagan magician (who was regarded as a god) making his way into the thriving heart of medieval Novgorod, hoping to win the people over. Only a short while after arriving he immediately drew much of the populace to his side. It was a bold venture, walking into such a great city, but he did so. Clearly the people still placed much hope in him and the other *Volkhov* still at large. The enormous civil disturbances which stemmed from his mustering of the closet pagan Novgoroders was only halted once he was put to death in front of his followers.

CHRISTIAN PRAYER
STRINGS AND BEADS
WERE A MISSIONARY
TOOL

The white Magi

The essence of what the holy wizards professed is embodied in the following passage of Magian scripture;

HOLY WIZARDS

"And the speaking of Ahura Mazda thus: "I am he whose thoughts are good, O evil spirit! he whose words are good, and he whose deeds are good; the sky is my garment, which was first produced from that substance of the worldly existences which is created as the stone above all stones, that is, every jewel is set in it; good thoughts, good words, and good deeds are my food, and I love those of them who are in that place through good thoughts, good words, and good deeds".¹¹⁰⁹

From this prose arose the stereotypical image of wizards clad in glistening white robes decorated with stars, moons and other astronomical imagery. The white Magi were born to serve society as sacrificers, tasked with nourishing the fertility gods and angels of creation during formally organised feast days. Such were the priests and priestesses of life, hope and prosperity, the guardians of Order, Truth and Justice. This, the life-affirming creed of the white Magi, might well be preserved in the Old Russian word *zhivoi* ("live" or "living"), which was derived from the Vedic and Old Persian.¹¹¹⁰

PURE WHITE FINERY

These were the wise, well-meaning, good-thinking, well-armed priests and priestesses of the creator, who served Him and *Spenta Mainyu* (the Holy Spirit) by arousing the people to willingly side with good over evil, for they believed that evil in its many forms had to be directly confronted and defeated in this material world.

Without the white Magi, *Haoma*,¹¹¹¹ the milky libation that sustained the celestial fertility gods, would disappear from the face of the earth and humanity would be left all alone, robbed of immortality and the Magi's magical artifices forever. Although Magus priestesses inherited their extensive magical powers via the proper bloodline and baked the holy unleavened *dron* loaves, they were not under any circumstances allowed to make *Haoma* sacrifices; this was the role of the male priesthood.

LIBATION OF THE
SACRED BEINGS

The basis for pagan feasts (which were offered to the gods) can be found in the writings of the Alexandrian Christian theologian Origen, who mentioned that the pagan divinities needed to be fed their sustenance by man if they were to survive at all. In the role of "white priest" the Magus donned the sacred white robe to perform sacrificial ordinances of "supreme piety", namely the tending of Svarog's holy fires (the *svarogichi*), which burned as eternal

flames in their fire temples and groves. Their duties included presenting the sacred and life sustaining drink *Haoma* to the White God and Svarog. The holy libation was drunk from various types of vessels like goblets or cups, but more especially from rhytons and drinking horns, signifying the pre-existent bull. These objects were sometimes capped at one end, allowing the drinker to sound the horn once the *Haoma* was spent. *Haoma* was extremely holy in nature, a drink deigned to bring life, food, happiness, plenty, virtue, strength and protection against the destructive blows of Black God, the abysmal fiend who daily attempted the destruction of the world through disease, carnage and pests. Other offerings to the White God (the Good Sun) were the fruits of the earth, their toils, their money, their hopes and love. The vessel in which the sacrifice was usually delivered was, so to speak, a cornucopia, a horn of plenty, a holy grail. In Zoroaster's scheme of things the yellow *Haoma* was considered to be a filthy drink, but nonetheless a pre-figuration of Zoroastrian *Haoma* and the white *Haoma* dispensed during the banquet of the final *Sayoshant*.

The black Magi

If the white Magi were devoted to doing good, then their enemies the black Magi, *Ahriman's* devilish apostolate, felt the opposite way;

"The grumbling of the evil spirit (Ahriman) thus: "I am he whose thoughts are evil, O beneficent spirit! he whose words are evil, and he whose deeds are evil; what is dark is my garment which is very thick, with lower corners here, so far as many go, it is still darker; evil thoughts, evil words, and evil deeds are my food, and I love those of them who are in that place through evil thoughts, evil words and evil deeds".¹¹²

Militant black Magi were the descendants of magicians who patronised a god of time and his son, the god of the underworld. Among the Slavs these militant black magicians were called *Garabancias* (and possibly the *Volkhvoy*), so presumably they served Chernobog, the Prince of the Underworld, and by inference *Angra Mainyu* (the Unholy Spirit), and the seven planets. *Ahriman* lovingly bestowed miraculous supernatural powers upon those who loyally rendered unto him the sacrifices. According to Plutarch certain Magi versed in the dark rites offered the "wolf-sacrifice" of *omomi* (*Haoma/Hom*) to the Evil One, the living sin that had come into the world. Evil and wrongdoing was the spiritual drink that sustained the Black Lord, an unwholesome brew of vice, greed, cowardice, idolatry, lust and harlotry, rebellion, lies, and slander. This libation of lawlessness was known as *Az*, and it was drunk from a "black" chalice. The black priests were known by their works ...

"The craving for the fiend, the assistance of the fiend, and the gratification of the fiend by him who is an apostle of the demons" ... "the persuader to evil and the organiser of distress" ... as well as "confusion owing to his speaking deceitfully in the world, and the connection with him of an awful and swift death" and "the wicked follower and assistant of theirs in defeating righteousness, and also in destroying the greater religiousness of the world and making the soul wicked in the end".¹¹³

"The apostasy of apostates being a religion produced by Aharman ... apostasy and priesthood, and the apostates and priests, are fraternal opponents, and whenever the priesthood and multitudes of the priesthood are triumphant multitudes of the apostates of apostasy perish, and when the multitudes of the apostates of apostasy are bold, the priests of the priesthood are weak".¹¹⁴

The white Magian *Sudkar Nask* mentioned the ill-favoured destiny of "A human being when he contentedly reverences a demon in spiritual lordship and priestly authority".¹¹⁵ Here the activities of the devil's priesthood are mentioned, and next we read of their wicked ceremonials, blasphemous recitals, and their greedy, wanton, stench-filled, ill-favoured inner predispositions. These maelific arts stood in complete opposition to the well-disposed fertility ceremonies of the holy Magus wizards; as explained in the *9th nask Baris*, which "contains particulars about ... the ill-advisedness of falsity, stinginess, and ignorance ... the blessing and cursing, the good will and ill-will of the good ritual and evil ritual, the good statements and evil statements ... and of the evil thought, lust, wrath, unrighteousness, and many other demons".¹¹⁶

The book of *Yasna* contains more evidence of the beliefs of the demonolators who raged against the 'white' religion of *Ahura Mazda*...

"...and for the encounter with, and the dislodgement of the Kayadhas, and of the individual Kayadhians, male and female, and of the thieves and robbers, of the Zandas (possibly meaning the Zandiks, the

worshippers of the Drugs (ie; devils), and the sorcerers, of the covenant breakers, and of those who tamper with the covenants. Yea, we sent it forth for the encounter with, and for the overthrow of the murderers of thy saints, and of those who hate and torment us for our Faith, and of those who persecute the ritual, and the tyrant full of death".¹¹¹⁷

Having examined the likely etymology of the English word "warlock" it is interesting to note that Magians associated 'covenant breakers' with sorcerers and devil-worshippers. These devil-priests were warlocks in the true sense of the word, practitioners who bastardised standard white Magian ritualism. Their maltreatment of the rites was made manifest by "yelling, united assault, evil food, and other affliction owing to the wicked in the earlier half of the night".¹¹¹⁸

In Iranian religion crime and infernal ceremonial irregularities formed the nucleus of the devil's arts "owing to theft and terror, obstructing the roads, the dread of the wayfarers, and the disturbance of prisons".¹¹¹⁹ This was due to "the devil and disgrace, foreign magicians and those who act after their proceedings (ie; their ceremonies and assemblies) and become committers of crime ... and we are told of their crime".¹¹¹⁹ In other words individuals left their ceremonies hell bent on criminal behaviour. The inspiration for these misdeeds irradiated their hearts from unspiritual mentors in the underworld below:

"for of those seven evil-doers (the arch-demons), one was Az-i Dahak by whom (evil) witchcraft was first glorified; he exercised the sovereignty of misgovernment, and desires a life of the unintellectual for the world. One was Azi Sruvar, by whom infesting the highway in terrible modes, frightful watchfulness of the road, and devouring of horse and man were perpetrated. One was Vadak the mother of Dahak, by whom adultery was first committed, and by it all lineage is disturbed, control is put an end to, and without the authority of the husband an intermingling of son with son occurs. One was the Viptak (the originator of sodomy) ... carrying on a practice which effaces and conceals the race of the living".¹¹²⁰

Demons such as these were destined to be challenged by all good white Magians throughout their daily lives. The great Iranian hero Keresasp petitioned Ahura Mazda;

"Grant me, O Ahurmazd heaven or the supreme heaven! for I have slain the highwaymen who were so big in body" ... "And if those fallen highwaymen had not been slain by me, Aharman would have become predominant over thy creatures".¹¹²¹

Nikadum nask contained further information on "highway robbery, and of the cursing owing thereto".¹¹²²

The mere concept of a religion (or a sub-component thereof) dedicated to the performance of evil in its purest form, is one which many have difficulty comprehending. Such a creed seemingly defies all rational thought, and for this very reason a number of academics in the field of witchcraft won't accept that a religion of evil could ever have existed. And yet there was a logical basis to this cult, for it expounded black Magian doctrines that inquisitors later termed "the Luciferian doctrine", elements of which were recorded dating back to the Mediaeval Rus' period, in Roman times, and in the scriptures of the Magi.

In addition to paying homage to Ahriman's demon children, the black Magi made further sacrifices to the idols of the ancient Daevas, the old Aryan gods which they added back into the Zoroastrian cosmological view. This became the very reason for their exile from their former Persian homelands, where Orthodox Zoroastrians considered them devil-worshippers, the enemy of goodness. This is of course an exercise in ideological semantics. Hindus see daevas as divine.

By living a "deviant, criminal and corrupt" lifestyle, one fed the Dark Lord, invigorated and strengthened him with the "unholy manna" of Az, just as Haoma sustained the Russian sun god Dazhbog (Ahura Mazda). During Chernobog's "mysteries" the black Magi probably wore black or grey robes and pointy or rounded headdress of similar darkness. From Plutarch's description of the wicked Magi, we can infer that Volkhvoy wishing to enact evil sorcery performed an inverted Haoma ritual. So they dug a pit or hole, where the sun cannot shine, and concealed there the blood of a slaughtered wolf mixed with the pulverised remains of a plant called Omomi (a corruption of Hom or Haoma, the Magi's sacred immortalising plantstuff). They then called upon the powers of the Unholy Spirit, and all the powers of Hell. Otherwise they buried some other sacrifice, or roasted flesh in the sacred fire (an act forbidden to traditional white Zoroastrians).

The black Magi were also responsible for making sacrifices to the daemones of the atmosphere, which gave them the power to raise storms. They often times did so by releasing the smoke of various fumigants "such as seared blood or incense" into the air.¹¹²³

It is possible that throughout history the black Magi deliberately became members of other religions, but their

very presence was masked by a clever deception. The secret implantation of black Magi into other religions allowed them to defile holy things and, even better, to corrupt the orthodox teachings of varied religions through an injection of heresy. The white Magi professed that heresy and apostasy were vile religious dogmas of the black Magi, that is they disseminated a religion of false religion or perverted known rubrics through ritual inversion. Such Magi would have practiced their rituals in secret, or influenced other faiths to such a degree that they acquired an undercurrent of evil, and a need to worship demons. In its most evolved form dualism erupted in host religions as the dark god attached itself like a leech, and fed off it. Based on the discovery of a number of magical gems, it is highly likely that some of these Magi were to be found among the priests and sacrificers who served the religious needs of the Neo-Pythagoreans, Gnostics and Mithraic brotherhoods. As you will see in my next book, some were also quite at home inside the Christian community.

Pagan saints - the fravashis

Saints were an authentic tradition both before and after the coming of Christianity. There are numerous examples from the Middle Ages indicating pagans professed some departed souls, especially those of kings, became saints, and could aid the living after death, through the power of their life's works. Consequently, Christianised monarchs such as the Emperor Charlemagne proved their allegiance to the new order by jettisoning the ways of their ancestors, devising elaborate laws to thwart the continued worship of pre-Christian saints. In Rus', Prussia and Poland especially there is every reason to believe that the concept of saints originated not from Christianity, but the Magian sphere. I say this because the Russian word for something sacred or holy, or a saint (*svyatoi*, *svet*, *sveta*, *sveto*) comes from the Avestan language of the Magi, rather than the Latin [*sanctus*] or Greek (*hagios*). The Old Russian and Old Slavonic was *svyat'*. The same saintly terminology was common to other Slavs also; *svet*, *sveta*, *sveto* (Bulgarian, Serbo-Croat, Slovenian), *svatu* (Czech), *swietu* and *sventa* (Polish), *sventas* (Lithuanian), *sventa* (Old Prussian). They come directly from the Avestan words *spenta* (meaning "holy" or "saintly") or *spanah* (meaning "sanctity"). *Svyat'* is also connected with the Old Indian word *svantas* meaning "thriving" or "prosperous", but clearly the meaning is much closer in the Avestan.¹¹²⁴

Svyatets was another Russian word meaning "a saint" or "a holy man",¹¹²⁵ and possessed the female variant, *svyatsa* ("a holy woman"). It is also found in the Lithuanian as *sventikas*.¹¹²⁵ Such holy ones were no doubt white Magian holy saints.

Another lesser used Russian dialectal word *svyatosh* (which comes from the same root meaning "a saint" or "holiness") paradoxically meant something "unclean" (perhaps meaning "defiled"), or "a demon". Was *svyatosh* a corruption of the Rus' pagan word for a saint? I believe so, and what is more, I am convinced it originally meant an anti-saint, the powerful remnants of a black Magian soul or warlock, that, according to the white Magi, transformed into demons and serpents upon arrival in the Abyss, and which were capable of returning to plague the earth with gross misfortune and vengeance.

Such is the possible origin of a Norse myth recalling serpents that attacked the roots of the holy ash tree in unison with the destructive Nithhogg.¹¹²⁶ These serpents had once been mortals,¹¹²⁶ only after their death, they aided and abetted the destruction of the Norsemen's most holy icon. I venture to guess these myths were started by Norse *Al-Madjus*. Another option is that *svyatosh* was a slang word used in the Christian era to demonise the pagan saints.

By striving with all one's might on behalf of the good an individual became one of the holy immortals, one of the white *fravashis*. Together with the *yazatas* (Iranian winged genii) they formed the vanguard of the sun's shock troops and sentries. The Asii (Alans) undoubtedly payed homage to the ancient Magian *yazatas*, for the Ossetian word denoting "angels" and "spirits of the mystical world" was *Izaed*, and therefore related to Magianism not only linguistically, but spiritually.

After deviously slaying the arch-heretic Mazdak and his supporters during a feast, the Persian King Chosroes was referred to by the additional title *Anoshirvan*,¹¹²⁷ which signified that he had earned a soul that cannot die. Evidently through this act of crushing the heterodox, he was, as it were, "canonised" in the eyes of true Magians, becoming a powerful white *fravashi*.

Dying in battle, or laying down one's life for a good cause was another sure way of becoming a holy *fravashi*. The Norse in particular held similar beliefs to the Magi on this subject; being killed in action was no disgrace. On the contrary it was the highest possible honour one could achieve, for the fallen were often the best men, personally selected for death in battle by Odin.¹¹²⁸ Odin needed as many good warriors as he could lay his hands on, so that they could one day accompany him during the great heathen apocalypse of Ragnarok. In Magian lore, such men would have been seen as holy immortals, the warrior sentinels patiently awaiting the attack of the fiendish legions,

WIZARD SAINTS

THE HOLY FRAVASHIS

DYING HONOURABLY IN BATTLE LED TO SURE SAINTHOOD

beasts, serpents and anti-heroes that were to rage across the star bridge, to assault the walls of heaven. In the Norse Valholl fallen vikings feasted, made merry and honed their combat skills in readiness for the big day. To fetch them, Odin sent warrior maidens, the valkyrie, the “choosers of the slain”. Among the Slavs the mythological, winged, quasi-animalian women known as *Vila* performed a similar function to the Valkyrie.

Like the Magi, the pagan Russians believed that there was no reincarnation; one’s ancestors were quasi-deified and continued to live on in the afterlife, supplying assistance to the living.¹¹²⁹ According to Magian doctrine some souls were far greater than one’s ancestors, these were the kings of old, saintly Magian *fravashis* (holy heroes), and black Magian anti-heroes, the black *fravashis*. As in Magian times, the ancient Russes payed homage to fallen champions and *Volkhvy* Magi, honouring them with an idol. This observance was evidently a continuation of an old Achaemenid and Parthian practice outlawed by the iconoclastic Orthodox Zoroastrian authorities of the Sassanian Empire.

Fravashis figured heavily in the Iranian (and presumably the pagan Rus’ and Norse) mind, for during the final apocalyptic battle, the black *Fravashis* (those who were alive in death) would join the black angels and that living death *Ahriman*, as they pushed forward to assail the heavenly fortress, built around the devil’s escape hole. The sentinels on those battlements were angels and white *fravashi* saints, heroes of goodness (such as kings) who would one day charge out of heaven’s gates, falling in behind their Saviour (*Sraosha*) in his solar chariot, heading a column of mounted angels with spears, ready to slay the Fiend and his contrary legions.¹¹³⁰

*“ Ahura Mazda prepared another rampart, that is stronger, around the sky, which is called “righteous understanding”. And he arranged the guardian spirits of the righteous who are warriors around that rampart, mounted on horses and spear in hand, in such manner as the hair on the head; and they acquired the appearance of prison guards who watch a prison from outside, and would not surrender the outer boundaries to an enemy descended from the inside”.*¹¹³¹

We know that the pagan Slavs erected idols dedicated to the Magi,¹¹³² so the original Rus’ pagan saints might simply have been ancestors, or someone of far greater potency such as a fallen chieftain, battle-hero or Magus.

White fravashis

Odin’s religious system (of the *Aesir* ie; the *Asii*, the *Alans*) required the worship of chiefs and royals as gods. His followers made votive offerings not only to him, but to the twelve other chieftains of the race of the *Aesir*. Even before Odin had died bodily, it seems his servitors and venerators placed all their trust and hopes in him, and the power that dwelt within him. For his word was all power; all life, all death; as he willed it, yet so would it be.

*“His enemies dreaded him; his friends put their trust in him, and relied on his power and on himself. ... People sacrificed to Odin and the twelve chiefs from Asaland, and called them their gods, and believed in them long after”.*¹¹³³

It was only after his death that the cult of Odin more fully developed, for he had, like all good heroes, taken his place high in the heavens, his soul having been taken there by the far-reaching cremation smoke.

*“Odin died in his bed in Swithiod (Scythia?, Russia?, Sweden?); and when he was near his death he made himself be marked with the point of a spear, and said he was going to Godheim (the home of the Gods), and would give a welcome there to all his friends, and all brave warriors should be dedicated to him; and the Swedes believed that he was gone to the ancient Asgaard, and would live there eternally. Then began the belief in Odin, and the calling upon him. Odin was burnt, and at his pile there was great splendor. It was their faith that the higher the smoke arose in the air, the higher he would be raised whose pile it was; and the richer he would be, the more property that was consumed with him”.*¹¹³⁴

Odin’s cremation rite appears Aryan in style, especially the marking of his body with a spear point, following his peaceful death in bed. Aryan *Ksatriyas* (warriors) were not permitted to die a peaceful death, it was damnable and inglorious, for their salvation was to live and die by the sword.¹¹³⁵ But if they died peacefully after surviving all their combats, they could still attain the salvation of warriors if a friend or relative scarred their corpse with a weapon.¹¹³⁵ The Norsemen likewise held that a serene death was a degrading and unfitting end to a man’s life. Being killed by weapons was the only entry ticket.

In the afterlife warriors killed in combat resided with Odin in Valhalla, feasting and sharpening their fighting skills for the *Gotdammerung*, the end of days holy war of Fimbulwinter, yet to be fought against the great wolf.

THE MORTAL REMAINS OF
KINGS HAD SPECIAL
POWERS

Whether in this world or the next, one of Odin's greatest saintly patronages was that of imparting victory on the battlefield. In some respects Odin's men resemble the warrior saints of Aryan tradition. The *Lay of Vafthrudnir* says "All the Einheriar (holy fallen warriors) in Odin's barracks crack each other's crowns every day; they bundle up the dead, ride back from the fight and down sit to drink all healed".^{1135a} The ghostly warriors appear in the *Lay of Helgi the Slayer of Hunding*, where they are described as "High under helmets across the field of heaven, their breastplates all were blotched with blood, and from their spear points sparks flashed forth".^{1135b}

In Magian lore the military *fravashis*, such as the Holy Immortals, were truly a force to be reckoned with, those living *fravashis* of the past, and the present, and those yet to be born. All were joined together in one eternal moment, one great heavenly army. During earthly combats warriors could count on the assistance of ghostly, holy, angelic stormtroopers from above, whose ranks they would one day join on the heavenly battlements.¹¹³⁶ *Farvardin Yast VII-XII* 'We worship the good, strong, beneficent Fravashis of the faithful, who form many battalions, girded with weapons, lifting up spears, and full of sheen; who in fearful battles come rushing along where the gallant heroes go'. They were 'the good, strong, beneficent Fravashis of the faithful, who gallantly and bravely fight, causing havoc, wounding ... most strong ... harmless to those who are true, who turn to that side where are faithful men, most devoted to holiness, and where is the greatest piety'. God's warrior champion Mithras would likely be there too and the soul-weighter 'Rashnu and the awful cursing thought of the wise and the victorious wind'.

Verethragna, the deified Aryan angel of Victory, accompanied men into battle, in the form of a metal-jawed boar. Although he was a spiritual being, Verethragna plausibly took the form of a battle standard, perhaps even a boar effigy mounted on a staff, carried into the depths of the fracas in the tight grip of a brave soul, deeply honoured by the privilege of doing so.

Islamic teaching professes a belief in ghost warriors. "Believers, remember God's goodness to you when you were attacked by your enemy's army. We unleashed against them a violent wind and invisible warriors".¹¹³⁷

Odin's kindred had power over the fertility of nature. During the reign of Njord the lands were fecund, and the people thrived. And it was at that time that all of the man-gods passed away, leaving their followers to worship them with blood-sacrifices.¹¹³⁸

*"In his days were peace and plenty, and such good years, in all respects, that the Swedes believed Njord ruled over the growth of seasons and the prosperity of the people. In his time all the diar or gods died, and blood-sacrifices were made for them".*¹¹³⁹

*"When it became known to the Swedes that Frey was dead, and yet peace and good seasons continued, they believed that it must be so as long as Frey (or perhaps his skeleton) remained in Sweden; and therefore they would not burn his remains, but called him the god of this world, and afterwards offered continually blood-sacrifices to him, principally for peace and good seasons".*¹¹⁴⁰

It may well be that the Swedes retained Frey's skeletal remains for seasonal veneration and homage.

Traditions concerning the living-gods of the heathens continued for some time. In the Middle Ages European sorcerers and diviners had their own pagan relics.¹¹⁴¹ Conceptually they were exactly the same as relics of Christian saints, but due to their 'unholy' nature their usage was positively frowned upon by the new order. While pagan relics can in no way be considered Christian, the line between them was in some cases fairly blurred. The case of St Brigit is a good example. She was a pagan Goddess in Ireland, but by the time the transition to Christianity had occurred, she was still being venerated, though this time as a Christian saint. By my reckoning this glaringly illustrates a Christian faith being a product of the transformation or renovation of the pagan Magian faith (ie; conversion!), rather than an alien creed thrust upon them against their will. In Christian times the glaringly good Brigit had found her niche as a Christian saint carrying a cup, and accompanied by a milking cow, which hints that originally she had been a divine white *fravashi* who was greatly loved by the people; in short, a pagan white saint. The blood or body parts of dead kings, like those of the apostles and the saints exuded powers of good fortune and healing, to help the people in their times of need.¹¹⁴² Similar customs appear to have been present among the Scandinavians.

The utilisation of black necromantic relics (eg; the bones of the ungodly), was wholly different from using white pagan relics; in fact an act of apostasy. White pagans and Christians were on common ground where black relics were concerned. If the Magian texts are anything to go by the white Magi were much preoccupied with denouncing them too, and executing the witches responsible. The wise Magi were just as committed to the eradication of evil as the Church, and perhaps even more heavy handed.

Black fravashis

According to Magian dualistic doctrine, black fravashis appeared in three main forms;

1. Demons, *khrafstras* and snakes sired by *Ahriman* as he brooded in the Abyss.
2. Homosexuals, transvestites, corpse-burners, criminals (brigands, murderers) and bastards, who through the strength of their wickedness, and the grief they had caused to the innocent, became transformed into demons in the after life; the living dead. The most powerful of them however, were believed to be homosexuals or disciples of the devil, who had been executed by the authorities for their crimes, either summarily, or through proper legal channels.
3. Criminal black Magus priests and priestesses, who in this life were already considered to be incarnate demons.

While the white Magi became deified through the goodness of their deeds, black Magian intercessors mutated into demons by doing wrong. In *Shayast La-Shayast* XV:23 ;

“It is declared, that of him whose begetting is owing to the demons, of him who commits sodomy, and of him who performs the religious rites of apostasy of none of the three do they restore the dead (ie; they are not resurrected), for this reason, because he whose begetting is owing to the demons is himself a demon, and the soul of him who commits sodomy will become a demon, and the soul of him who performs the religious rites of apostasy will become a darting snake”.

In *Chapter XXXVI* of the *Book of Arda Viraf*, Arda spoke of the many suffering beings he saw tortured in the underworld, after he had journeyed back from there, bringing a message for the living. They resembled the serpentine *Naga* beings known to the Hindus;

“I also saw the soul of a man who stood up, in hell, in the form of a serpent like a column; and his head was like unto a human head, and the remaining body, unto a serpent. And I asked thus: ‘What sin was committed by this body?’ Srosh the pious, and Adar the angel, said thus: ‘This is the soul of that wicked man who, in the world, committed apostasy; and he fled into hell, in the form of a serpent’.

Similar views seem to have been current in Mediaeval Rus’. In *Yngvar’s Saga* the Rus’ pirates who attacked Yngvar’s flotilla were termed “human devils”.¹¹⁴³

Centuries earlier Procopius saw Domitian and Justinian as “evil demons, and what the poets called scourges of mankind ... who had assumed human forms, and become something between men and demons, and thus convulsed the whole world”.¹¹⁴⁴

In *Yngvar’s Saga*, a noisy demon is said to have materialised before Soti, one of Yngvar’s men. He warned Soti that “Dragons ate the body of the king and his daughters, and it was into dragons that some people believe they were transformed”.¹¹⁴⁵ Perhaps apostasy is insinuated in this passage.

A major teaching of the Magi was that sodomy was not only demonic, but it actually turned the perpetrator into a *Daeva*; it deified them, but in an infernal way, making them deathless gods of the underworld. For this reason white Magians were highly homophobic, and given to killing rather than discriminating against homosexuals.

“O Maker of the material world, thou Holy One! Who is the man that is a Daeva? Who is he that is a worshipper of the Daevas? that is a male paramour of the Daexas? that is a female paramour of the Daexas? that is a she-Daeva (she-devil)? that is in his inmost self a Daeva? that is in his whole being a Daeva? Who is he that is a Daeva before he dies and becomes one of the unseen Daexas after death.

*Ahura Mazda answered: “The man that lies with mankind as man lies with womankind, or as a woman lies with mankind, is the man that is a Daeva: this one is the man that is a worshipper of the Daexas, that is a male paramour of the Daexas, that is a female paramour of the Daexas, that is a she-Daeva, that is in his whole being a Daeva: this is the man who is a Daeva before he dies, and becomes one of the unseen Daexas after death: so is he, whether he has lain with mankind as mankind, or as womankind”.*¹¹⁴⁶

TRANSVESTITES

The Iranian *Sad Dar* text adds “it is necessary to practice abstinence from committing or permitting unnatural intercourse. For this is the chief of all sins in the religion; there is no worse sin than this .. and it is proper to call those who commit it worthy of death in reality” ... “And Aharman, the evil one, becomes more joyful, owing to this practice, than owing to the other sins ... for the soul itself of that person becomes extinct”.¹¹⁴⁷

Under white Magian law, killing homosexuals had redemptory and salvific effects; for every one a believer slew in the act they would have one of their death sins fully expiated.¹¹⁴⁸ The above references also hint that some of the black Magi were transvestites. It is known that cross-dressing was practiced by the heathen Finnish “shamans”, but unfortunately we know not why they robed themselves like women. Cross-dressers may have been present (to an unknown degree) in Scandinavia, at Uppsala during the pagan era, if Adam of Bremen’s reference to the unmanly behaviour and effeminate gestures of their priests is trustworthy.

The Magian anti-saints (living mortal-demons), were worshipped by certain segments of Iranian society, as the following Iranian scripture states; “The ceremonial worship of those worthy of death, which they do not perform by way of renunciation of sin, is the ceremonial which is demon worship”.¹¹⁴⁹

Human skeletal remains were repeatedly used in necromancy by Mediaeval *maleficii* (ie; black magicians) according to Hincmar.¹¹⁵⁰ These were, I believe, the remains of black *fravashis*, that is, the mortal remains of deceased black witches and warlocks, whose undying souls, or much rather phantoms, were at the beck and call of their summoner.

Crime was for them a ritual act. It was a long standing tradition that thieves and brigands could gain magical protection while in the act of robbing homes by procuring the body parts of an executed criminal, preferably one who had been put to death for committing murder.¹¹⁵¹

For our purposes, the trial of Anne Marie de Georget in 14th Century France is particularly illustrative, for “she had not ceased to do evil, practicing all manner of filthiness”.¹¹⁵² Together with her life-threatening cauldron rites, during which cadavers were boiled, she was supposed to have “frequented the gallows-trees by night stealing shreds of clothing from the hanged, or taking the rope by which they were hanging, or laying hold of their hair, their nails or flesh”.¹¹⁵²

Whippings were apportioned in Estonia, to three offenders caught making off with the clothes of a hanged man in 1526.¹¹⁵³ They did so to enhance the amount of sales made by their brewing business.

In Europe shavings from a hanging tree, or a gibbet were believed to heal a number of remedies, such as ague or aching teeth. Any rope which had been used to hang someone, be they a criminal or a suicide was deemed most lucky. Executioners made quick money on the side by selling nooses to patrons wanting good fortune. In England right down to the 19th Century, only moments after an executed criminal had been cut down, the menfolk made a mad scramble up the tree or gallows to get their hands on what remained of the hangman’s rope.¹¹⁵⁴ I contend that this was a form of white pagan relic, which in their eyes, was used to sacrifice the criminal. Although it could be construed as a black relic, but it depended upon the interior disposition and motives of the person who acquired it.

On the other hand, any body part of a criminal could have served as a black relic if it were exhumed and treated in the right manner. These relics may have aided the tempest-conjurors, for it was also once held that on hanging day there would be atmospheric disturbances of some kind.¹¹⁵⁵

Warlocks and white witches alike opened and removed the contents of specific graves to reach even greater heights in the magical arts. Acquiring the body parts of certain people gave them this power.¹¹⁵⁶

Based on the results of excavations in Britain, one archaeologist has speculated that Anglo-Saxon graves were frequently opened and emptied for reasons other than financial enhancement, either to carry away grave goods (as was witnessed during the Rus’ funeral on the Upper Volga), or to steal skeletal remains.¹¹⁵⁷

Corpse exhumation and mutilation continued beyond the pagan era into the Mediaeval period. I personally have no doubts about the factual existence of the necromancers during the Middle Ages, and long before that. The year 1318 AD led to the uncovering of a large society of male necromancers, amongst whom were no less than eight men of the cloth. They had tomes of spells, magical mirrors, and various magical imagery which they employed in the summoning of evil angels (perhaps black Magian warlock *fravashis*). The accused were deemed part of an organised society of necromancers, which Professor Cohn regards as merely a long-standing Church jargon, rather than a factual account.¹¹⁵⁸ I sway to the contrary view, that they were, in reality, part of a widespread cult, a religion much detested by both the Church, the Muslims and the white Magi.

The 1320’s saw a spate of French witch trials in which clergy were implicated. In France in the year 1326 AD, two clergy were tried by a Cardinal for the crime of practicing black magic. Most interestingly they were found to

have been amputating the limbs or severing the head of any criminal that had been hanged by the authorities for crimes. These were, I am willing to bet, regarded as black relics, for it is mentioned that the body parts were seen as storehouses of satanic spiritual power, which enabled the malefactors to unleash maelstroms and death magic. Sometimes incidents of corpse decapitation might have been misconstrued as necromancy, when in fact they were penitential rites carried out by white Magi.

The practice of harnessing black fravashis probably originated in the pre-Zoroastrian arts of the Chaldeans, Akkadians and Sumerians, which continued long after the dissolution of their respective societies. Before the ascension of Orthodox Zoroastrianism the more ancient Magi probably performed these ceremonies, as Lenormant intelligently deduced last century. Such rites were simply elements of the mystical melange then plastered all over Iran and Mesopotamia. The following is an Akkadian conjuration designed to defend the reciter from ill-omened happenings, to protect one from death. It required the assistance of certain types of souls, souls made infamous by misdeeds:

*"He who in the gaol dies of hunger, he who in the gaol dies of thirst, he who being hungry in a pit beseeching (is therefore reduced to eat) dust. He who in the earth or in the river perishes and dies, the female slave who possesses no master, the free woman who has no husband, he who leaves an infamous memory of his name, he who leaves no memory of his name, he who in his hunger cannot recover, he who falls ill and cries at the beginning of an incomplete month, Spirit of the heavens, conjure it! Spirit of the earth conjure it!"*¹¹⁵⁹

*"The consecrated prostitute with the rebellious heart, who abandons the place of prostitution, the prostitute of the god Anna, who does not do his service ... Spirit of the heavens, conjure it! Spirit of the earth, conjure it!"*¹¹⁶⁰

Other demons could be summoned to come to the conjurer's aid:

*"Painful plague, violent plague, plague which never leaves man, unremitting plague, the lingering plague, malignant plague. Spirit of the heavens, conjure it! Spirit of the earth, conjure it!"*¹¹⁶¹

Odin, the magician and witch

Odin was reputed to be a great magician and shape-changer. He could control the forces of nature, and like so many Slav princes could adopt the form of an animal to undertake mystical voyages to places quite distant. Odin evidently knew the dualistic arts of white magic and of witchcraft, the latter normally being the domain of women. This has a parallel in the Chaldean arts, as does the manner in which he embalmed the head of Mime, following which it gave prophecies. But the Aesir were no strangers to magic, even before they learned the occult rites of the Vanir.

Odin had a dark side as well, which points to him practicing white and black magic. If it suited him he could become a necromancer and tomb robber. He tutored his subordinate priests in the magical arts, and on account of this, magic became widely practiced in Europe. Odin, his priests and his kin were seen as nothing less than living gods by their followers, and the people continued to make the appropriate offerings to them ever afterwards.

Subsequently some pagan Norsemen were schooled in *maleficia* (harm magic), but it proved too draining and unseemly for them to engage in it. Instead it was the womenfolk that cleaved towards this particular facet of magic.

"Odin could transform his shape: his body would lie as if dead, or asleep; but then he would be in shape of a fish, or worm, or bird, or beast, and be off in a twinkling to distant lands upon his own or other people's business. With words alone he could quench fire, still the ocean in tempest, and turn the wind to any quarter he pleased. Odin had a ship which was called Skidbladnir, in which he sailed over wide seas, and which he could roll up like a cloth. Odin carried with him Mime's head, which told him all the news of other countries.

Sometimes he even called the dead out of the earth, or set himself beside the burial-mounds; whence he was called the ghost-sovereign, and lord of the mounds. He had two ravens, to whom he had taught the speech of man; and they flew far and wide through the land, and brought him the news. In all such things he was pre-eminently wise. He taught all these arts in Runes, and songs which are called incantations, and therefore the Asaland people are called incantation-smiths. Odin understood also the art in which the greatest power is lodged, and which he himself practiced; namely, what is called magic. By means of this he could know beforehand the predestined fate of men, or their not yet completed lot; and also bring on the death, ill-luck, or bad health of people, and take the

The Royals who ruled Rus'

SEVERAL ROYAL

BLOODLINES RULED

THROUGHOUT SCYTHIA

KHAGAN AND KNYAZ'

According to Professor Vernadsky, several co-existent princely bloodlines pooled forces to form the Rus' Rurikid royal dynasty - that of the Norsemen (Rurik), the Asii (Alans), and Slavs.¹¹⁶⁴ The Bulgar high-born must, of necessity, be added to his list, in no small measure. Seniority among them was undecided at first, but by Vernadsky's reckoning from the reign of Khagan Svyatoslav, only Rurikids had the right to hold supreme power. Some dignitaries went by the Central Asian title *Khagan*, whereas others were known as *Knyaz'* or *Velikiy Knyaz'*. These two classes of royal title serve to differentiate between those princes of Nordo-Gothic stock (*Knyaz'*), and those of more eastern ancestry (*Khagan*).

KINGS AS AN

EMBODIMENT OF THE SUN

This coalition of princes from diverse ethnic backgrounds, was hailed by their subjects as Sun-princes, the sons of Dazhbog (ie; sons of the Slavic sun God).¹¹⁶⁵ Some Norse kings must have belonged to this lineage, considering that the term *Doglingr* “a king, a descendant of king Dag (*Dag* {meaning “the day” in Old Icelandic} comes from the Iranian word for the sun).¹¹⁶⁶ One such son was the mythical king Agni from Uppsala, his name akin to the Hindu fire god *Agni*. Perhaps the Swedish king Agni was a personification of the Aryan fire god, a son of the sun.

THE CZAR WAS LIKE A

FATHER OF THE ENTIRE

LAND

Sun-Kings had probably lived in Europe for countless generations, dating back to the incursions of the Indo-European *Riks* (kings who were like the sun), or the time of Roman domination, when Mithraic legions and Sarmatian auxiliaries transported the Iranian creed all over the continent. But, as with the Hungarian royals, a good many of them may have traced their origins to Khorezm, which, in the language of the *Avesta* means “The Land of the Sun” - *Khvar-zem*.¹¹⁶⁷

The Russian *Golubinaya Kniga* (“The Book of Deep Wisdom”) states “We have a white Czar (king), a king over other kings”.¹¹⁶⁸ “Nobody is as god-like, as his royal majesty (the Tsar)”, who was also called “the white Czar” or “the red-sun”.¹¹⁶⁹ Of them it was also said “The sun shines in the sky, and the Russian Tsar’ (shines) on earth”.¹¹⁷⁰ “Without the Tsar’, the people are waifs, the land a widow”.¹¹⁷⁰ The term Tsar’, in these instances, is of later usage, though the concepts associated with them were pagan, with a distinctly Arthurian feel, and far more ancient.

THE JAPANESE EMPEROR

SHONE LIKE THE SUN

In this respect they were not dissimilar to the Japanese emperor, who until comparatively recent times was seen as a divine being, a Sun-King. The similarity between the Japanese and pagan European royals is not due to Atlantis or universal consciousness, but the widespread primordial influence of vedic traditions, largely transmitted throughout the east and west by way of Buddhist missionaries and shamans.

KHAGAN APPEARS IN

CHINESE AS KEKUAN

The varied use of *Knyaz'* and *Khagan* (both meaning “a prince”) by various members of the house of Rurik is barely commented upon by Rusists (those who study ancient Rus'), yet this point is of extreme importance. The fullest significance of the Khazarian, Turkic and Rus' term *Khagan* can only be seen by analysing the nature of Turkic royalty, and similar Asiatic, and more specifically Turkic and Persian words. From the 6th Century AD, Turkic leaders were called *Kaghans*¹¹⁷¹ (from the Chinese *Ke-Kuan*, meaning “great leader”), and those of the royal blood known as *Beg*.¹¹⁷¹ *Beg* is linguistically affiliated with Azeri and Turkic words like *bag*, *bak*, *baj*,¹¹⁷² which have the same meaning also. At this point a linguistic connection becomes apparent between the Russians, Norse, Persians and Turks. *Beg* is probably related to the Old Norse *bog* (“an important person”), and the Slavic *Bog*, and Avestan *Baga*, both of which meant “a God”.¹¹⁷³

EARTHLY WEALTH WAS A

SIGN OF A LORDLINESS

IMPARTED BY HEAVEN

The concept of wealth was integral to Turkic notions of godliness and lordship, a theme also found in the Norse *Ynglinga Saga* in relation to the religion of Odin, who, we are told, had connections with Turkland. The same could be said for the Slavic. Slav words like *bogatiy* (denoting “wealth”) were related to the Avestan Persian *Baga* (“a Lord” or “a God”).¹¹⁷⁴ It is also connected with the western Slavic word *bog* (meaning “property”, “birthright”,

“fate”, “lot”, and the Old Indian word *bhagas*, which has practically the same meaning. In Latvian the word *bagatigs* meant “princely”. I am unable to confirm a potential relationship between these words and the Old Icelandic *att-bogi* “family lineage”.¹¹⁷⁵

Turkic power resided in their warrior class and the affluence of the Khagans.¹¹⁷⁶ Turkic linguistic correlations seem to indicate that their shamans and Khagans belonged to a certain bloodline. *Kan* (the Turkic word for “bloodline”) was related to *Khan* (“a leader”).¹¹⁷⁷ By implication Khagans had a similar bloodline. Other Asiatic royal titles are riddled with these same connotations. For example *Bogdykhan* (Chinese for “the Emperor”) is a composite word formed by adding the suffix *Khan* onto *bogda* and *bogdo* (Mongolian and Kalmik words meaning “greatness”, “heavenly”, “holy”, “a saint” or “saintly”).¹¹⁷⁸ The Persian word *Faghfur* is found in the Chinese as *Baghbur* “son of Heaven”.¹¹⁷⁸ The cult of these “sons of heaven” centred upon the idols of their kings, which were assiduously worshiped by their subjects. Al-Nadim reports that many Chinese Emperor-worshippers fainted in the presence of his idol, trembling in fear and admiration.¹¹⁷⁹ *Boga* and *Buga* were Mongolian words for “a shaman”, and it is more than likely that these came from the Avestan *Baga* (“a god”).¹¹⁸⁰ At various points in this book you will discover that the apparent interchangeability of these terms was attributable to blood-Magi who were performing a shamanic role in Inner and Outer Eurasia.

The noble Khazarian Jewish bloodline of the Cohens (Hebrew: “a priest {of the temple}”) might be linked with, or derived from the title *Khan* (as used by Turkic Bulgarians), or *Kaghan* (as used by Khazarian and Rus’ rulers). This may have stemmed from the close affiliations the once-Turkic Khazars’ had with the Turkic Bulgars, who were major participants in the foundation of the Khazarian state. Inevitably the title and function of *Khagan* lived on among the Jewish converts.

Vernadsky believes that the term *Knyaz’* (prince) was derived from the Gothic word *Kunnigs*. He further noted that many Gothic kings and princes chose to end their names in the Slavic suffixes *-amir* or *-imir*.¹¹⁸¹ But, if we are to accept his use of the word *Kunnigs*, then *Knyaz’* could just as easily have come from *Konungr*, or *Kununghr* and *Kunungr* (the western and eastern Norse words for “a king” respectively). The only problem with this is that the title *Knyaz’* was by no means confined to Russia and the Germanic speaking countries. The existence of the royal title in Poland, Central Europe and the Balkans, lands far beyond Norse sway, yields other possible interpretations.

Behind correlations in the words *Knez* (Bulgarian: “elder”), *Knez* (Serbo-Croat and Slovenian: “a prince” or “a count”), *Knjez* and *Knez* (Polish: “a Lord” or “a priest”),¹¹⁸² we find clues that a *Knyaz’* was both a prince and a lordly priest. Another possible comparison with *Knyaz’* is to be found in the Old Norse word *Knyja*, which meant “to beat or flog”. *Knyja* is not however recognised as being linguistically related to *Knyaz’*, though the superficial resemblance is interesting. But if we did assume that there was a conceptual relationship between *Knyaz’* and *knyja* it is possible to infer that a *Knyaz’* originally meant a princely priest of royal blood, tasked with scourging recalcitrants. In the Magian book of *Vendidad* flogging criminals was the preserved domain of the white Magi, the Wise Kings. If a *Knyaz’* was a white Magus-Prince, then he would also have been a “flogger”, a dispenser of sacred royal justice, which removed the stain of chaos from society, through the enforcement of law and order.

In like manner, the white pagan Slavic priests of Central Europe were known as *Bieloknyazi* (literally “the white princes”).¹¹⁸³ Thus, on the strength of probabilities, any Russian royal bearing the title *Knyaz’*, was a white wizard. Since Norse pagan, pagan Slavic and Magian religious thought seem closely related, it is possible that a *Knyaz’* was a Magus-prince, in both Russia, Central Europe, the Balkans and Scandinavia.

There are no historical records of elaborate Norse and Germanic ties with the Serbs, Croats and Czechs in the Balkans, besides that of the Goths. Therefore the widespread linguistic ties must belong to a more remote pre-recorded period, or are indicative of the movement of Slavic royal personages and titles into Scandinavia and Germany. While it is believed that the oldest form of *Knyaz’* lies in the Germanic *Kuningiaz*, I am greatly inclined to favour the hypothesis that the term moved westward from the Slavic lands, if for no other reason than the fact that the Magi must have been in Russia before they migrated to Germany and Scandinavia. This is a logical assumption since the migratory route from Iran into Scandinavia and western Europe leads directly through Russia, Central Europe and the Balkans.

Magian Bulgar princes were also a major, perhaps even dominant component of the Rus’ royal family. St Vladimir, son of Svyatoslav, was originally known by Bulgarian versions of the name (Vladimir’ or Vladimer’), instead of the Russian *Volodimer’*, which only appears in one instance throughout every existing manuscript of those early times.¹¹⁸⁴ Not very Nordic for a senior Rurikid prince! In fact, it’s not very Russian! It is also noteworthy that

Vladimir's father Svyatoslav refused to live in Kiev, and instead moved his court to Pereslavyets in Bulgaria, which was in his words, "the centre of his realm".¹¹⁸⁵ On face value it would seem that some of the Khagans, such as Svyatoslav and Vladimir, may have been Bulgars. And if that was the case, then Vernadsky's assertion that only (Nordic) Rurikids had the right to the post of Grand Prince following the death of Svyatoslav is incorrect.

In the 8th Century AD Theophanes the Confessor tells us as much, revealing that "When the Bulgars became the masters of the seven tribes of the Slavini in the vicinity, they resettled the Sebereis to the east, and the remainder of the seven tribes to the south and west up to the land of the Avars".¹¹⁸⁶

A century previous to that the Huns lorded it over the Slavs. In the opening years of the 7th Century certain Slavic tribes, who were serving as slave labourers under a Hunnish khagan, caste off the yoke of bondage by arms.¹¹⁸⁷ How short their freedom was.

One other piece of information worth adding can be found engraved into a border marker on the Byzantine-Bulgarian frontier. The stone was raised in 904 AD (ie; contemporaneous with the Russian Buzh temple inscription) and duly witnessed by one Theodore on behalf of the Bulgars.¹¹⁸⁸ Interestingly Theodore's official title was written in the same manner as that of Mirobog, Oleg's principle Magus sacrificer. Compare *Theodorou Olgou tarkanou* (Theodore, Oleg's Commanding officer or Champion) with *Mirobog zhrets Ol'gov* (Mirobog, Oleg's Sacrificer). The word *tarkhan* was a Turkic, Bulgar or Alanic word meaning a high ranking officer, or even the warrior-champion of their people. Among the Alans and Turks, the heroic *tarkhan* did battle with the champion of the opposing army, to settle disputes with minimal bloodshed. As you will see, they can be equated with incarnate battle-angels, like Persian *yazatas*. In 1022 AD such a one-on-one fight occurred between Mstislav the Rus' Christian prince of Tmutorokan and the still-pagan Alano-Gothic ruler of the Kasogians, Rededy.¹¹⁸⁹ The blind Varangian prince Haakon (who dressed in a robe of spun gold) who allied himself with Vladimir' (c 1024 AD),¹¹⁹⁰ may have had a name derived from the word *tarkhan*.

The pagan Rus' aristocracy consisted of *Boyars* (originally termed *Boyarin*, *Barin*, *Bolyare*, and *Bolyarin*). As with the Rus' royal title *Khagan* or *Khan*, *Boyar* happens to be a Bulgarian Turkic word.¹¹⁹¹ There is a noticeable absence of Norse aristocratic terms like *Yarl* in Kievan Rus'. If Rurik was a Norsemen of some kind, as stated in the *Primary Chronicle*, he was one often surrounded by the Turkic Bulgar nobility.

FLEUR-DE-LIS AND THE
DOUBLE-HEADED EAGLE

From depictions found on Roman ritual fire shovels and Persian wall reliefs, we know that *Sol Invictus* (the Roman Mithraic sun God) wore a golden crown spiked with thorns of sunlight, as did the kings who performed his sacerdotal functions on earth. In Mithraic art *Sol Invictus*, the Good Sun, was sometimes represented as a fresh-faced young man with a luminous halo and golden crown, carrying an orb and scourging rod in his hand.¹¹⁹² The closest parallel to this can be found in Mediaeval depictions of kings, who not only wore golden crowns but carried a rod and orb in their hand, only by this time the orb bore a cross on it.

Two emblems of the Magi were more closely related to the European monarchs than anything else; the double headed eagle and the trefoil - the clover or *fleur-de-lis* (which saw usage in Babylon and Egypt). The double-headed eagle was linked with the Aryan Hittites, and the Seljuks, but later found its way into the royal arms of the Russians, Germans and Prussians.¹¹⁹³ The earliest possible adoption of these Mesopotamian images may be traceable to royal marriages that took place in ancient Scythia. There is at least one instance when Assyrian royals inter-married with Scythian monarchs, as in the case of Esarhaddon's daughter.¹¹⁹⁴ *Even as late as the Middle Ages some European royal fleur-de-lis were trefoils of the most archaic form.* Stripped of artistic embellishment they were the same as what can be found engraved into ancient Assyrian or Egyptian monuments.¹¹⁹⁵ This older type of trefoil appeared similar to a trident; yet another point of similarity with the Rus' royal tamga (heraldic insignia).¹¹⁹⁶

MOST EUROPEAN ROYALS
HAVE USED THE DOUBLE-
HEADED EAGLE AS AN
INSIGNIA OF MONARCHY

The double-headed eagle was used by western European royals too. It was embossed onto things such as mediaeval English royal trade weights, the drinking horn of a Bavarian Emperor (15th Century AD), and a number of coats of arms. It was also the primary emblem of the Romanov dynastic bloodline (for all intents extinguished by the Communists at the murder of Czar Nicholas and his family).

BULGAR LORDS VARIED
IN THEIR RELIGIOUS
ALLEGIANCES

Central Asia was a melting pot of oriental religion and philosophy. It is highly likely Hunnish rulers were of varied religious affiliations, and this is perceptible in names used by Bulgar Khagans. Kana Subigi Bayan was also called Bezmer (660-663 AD), a name probably derived from the Zoroastrian term Burzem-Mihr (the name one of their three great fire temples). Khan Persian who ruled between 836 and 852 AD is a clear candidate for Zoroastrian beliefs also.¹¹⁹⁷ The Bulgar Khan Ditsen (who ruled between 814-816), may have observed Tibetan-style Buddhism, his royal name derived from King Detsen (see p206). The same might be said for Bulgar royal titles like Kun Tengride Ulug Bolmish, Kuch kuchluk Bilge Khagan (reigning 821-824), possibly an earthly incarnation of the

Tengri celestial gods known especially to the Mongols. Khan-Caesar Tervel (705 AD) might have been a Mithraic lord.¹¹⁹⁷ Kana Subigi Sabin (764-766) may have been a Chaldean Sabaeen, Kana Subigi Umar (766) a Muslim convert, and Kana Subigi Pagan (764) a heathen.¹¹⁹⁷ In each case the king is an earthly manifestation of a saint or archangel, part human part divine. In some cases, depending on their religious system, they were a Rex Deus; a god-king.

Despite all efforts, it is impossible to positively establish that *Riorik* and Rurik (the first ruling monarch of the Rus' state) were one and the same person. Though if Vernadsky's assertion that he was Riorik is correct, then it is worth mentioning that he would have had large land holdings in Frisia, at Rustringen. After having been outlawed in Denmark, Riorik's kinfolk obtained this Frisian land as a fiefdom from Charlemagne in return for their allegiance in Charlemagne's wars with the Danes.¹¹⁹⁸ Riorik might thus have been a man of once-Danish stock, raised in close contact with Franks and Frisians. Later, he inherited full control of the fiefdom, only to have it confiscated by Lothair, Charlemagne's successor as ruler of the Franks. With no place to call home, Riorik put to sea with his family of Danish exiles, plundering many of the nearby coastlines until he became a thorn in the side of the Christian authorities.¹¹⁹⁸ His destructive raiding fleet of 350 vessels repeatedly hit locations in France, Frisia, Germany and England. To put an end to his marauding Lothair returned Rustringen to the dispossessed clan of Riorik, but it was too late.¹¹⁹⁸ He already had a taste of the viking (pirate) lifestyle, seeing how swiftly one could accrue wealth by raiding, rather than industrious labour. The sparkle of Byzantium's immense wealth dazzled and overwhelmed the man, he just had to have it. As Vernadsky speculated, this was the real reason for Riorik's enterprising venture against Constantinople, via the lands of the Slavs; bigger prey, bigger dividends.

Chapter 11

"Paganism"

In this chapter, I seek to explain the diverse forms of paganism practiced in Pre-Christian Europe, by resorting to the comparative method of analysis. We will examine the implications of the Indo-European and Indo-Iranian migrations, and what influence their array of formal eastern religions may have had on the formation of Russian and European paganism. This allows us to readily explain a whole range of observances common to European paganism, and not only that, but to categorise the various manifestations of European paganism as *animism*, *aryanism*, *dualism* and *pagan Gnosticism*. Due to the weighty amount of scattered and seemingly unrelated pagan information provided here, the key sub-units provided give us a framework against which we can measure the elder rites and beliefs.

We do not know when paganism first began. Perhaps it was with Neanderthals who made offerings to the spirit of a deer they had just killed, or sprinkled sweet yellow flowers on the body of a dead family member. At the very least it originated in the Neolithic, among the roving families of skin clad hunters that scoured the forests in search of game and other edibles. Unlike modern man, who treats our earth as a saleable commodity, "stone age" man saw it as something majestic, wild and uncontrollable; and even more than that, it was alive. On the walls of his cave dwellings he drew pictures of mighty images, that filled his mind with wonderment. Included among them are what can be construed as ceremonial scenes; menfolk dancing while wearing animal skins and antlers. With such pictures he recorded epic hunts, the struggle between his life, and the life of a beast, or hoped to draw down magic capable of sustaining food stocks in his area. In the oldest form of paganism, Prehistoric Animism (also called shamanism), there were no gods. Instead the spirits of one's ancestors, the land, the water, as well as fire and air remained active, both here and in the afterlife. The spirit essences were awe inspiring, but thankfully none were incapable of being manipulated by the shamans, gifted mystics whose personal repertoire of magical words, charms and songs gained control over such forces. These more primitive sorcerers helped put order into the unexplainable. In its earliest form shamanism was not a formal religion with standardised ritualism (with the exception of ceremonies like the bear hunt) nor did their magic conform to any centralised occult system. Most of the shamans' powers came via a tutelary spirit guide that often appeared in the shape of an animal, or as a result of a sickness which saw them visit the netherworlds and suffer dismemberment at the hands of evil spirits, following which the person was reborn spiritually. With the re-fleshing of their bones they won powers denied to normal men.¹¹⁹⁹

As time progressed the ancient Europeans encountered other races such as the Indo-European Aryans and Indo-Iranians, and as a result, other forms of hybrid shamanistic animism arose. Vedic Aryanism and Dualism (unlike prehistoric shamanism) owed their origins to the religious beliefs of the Aryans (both Vedic and Magian) who arrived in Europe in preceding millennia. Aryanism is characterised by a swollen multitude of gods, as well as spiritual beings (who could loosely be termed saints, heroes and genii), each of which might gain its own cult

following. As a consequence of this, these three forms of pagan religion were all highly susceptible to intertwining out in the wilderness, where diverse races mingled. The absorption of alien gods and religious beliefs, was therefore commonplace, acceptable, and even expected by subjugated peoples.

While the Celts, Germans, Iranians, Indians, Egyptians, Greeks, Romans and Slavs had differences in worship there are also similarities. But most researchers homed in on the differences. Consequently they they were unable to see the religiosity shared by the great civilisations of old. And from this arose a perception that they all had dissociate religious traditions, with separately evolved frameworks, and unrelated pantheons. However the pagan priests of the Greeks, Iranians and Egyptians did not share this view; they recognised the inter-connectedness of their faiths, attributing their origins to the Eastern Kings (of Atlantis), or to expatriate Trojans. For argument's sake, in *the Forbidden History of Europe* you will come to understand how it was that the Persian king Cambyses was seen as the offspring of the sun god, both in his native lands, and in Memphis Egypt.

In Europe, during the thousand or more years following the arrival of the Aryan migrations, the customs and rites of Indo-European Aryanism continued to exist in the host nations, with a relative level of homogeneity, but diversified into what we nowadays refer to as the Celtic, Roman and Greek pantheons. This diversification process led to the formation of pantheons with many divergent practices, yet with an underlying homogeneity. Now in addition to the Indo-European religious customs one finds evidence of dualistic demonology, especially belonging to the Indo-Iranian milieu.

Greek, Celtic and Roman forms of Aryanism subsequently vapourised under Christianisation and the modernisation of their parent civilisations, leaving mediaeval Scandinavia, the Finnish territories, the Eastern, Southern and Western Slavia, Old Prussia, and the Baltic nations as the last remaining places in Europe where hard-core paganism still continued, complete with their swastikas, idols, celestial gods, demons, groves, sacred cows, fire-worship, sun-worship, naga snakes and highly decorated temples. Slavic religious customs were not homogeneous throughout all the tribes, judging by what Procopius stated in the 6th Century AD:

For they (the Slavs) believe that one god, the maker of lightning (perhaps Zeus or Perun), is alone lord of all things, and they sacrifice to him cattle and all other victims; but as for fate, they neither know it nor do they in anywise admit that it has any power among men, but whenever death stands close before them, either stricken with sickness or beginning a war, they make a promise that, if they escape, they will straightaway make a sacrifice to the god in return for their life; and if they escape, they sacrifice just what they have promised, and consider that their safety has been bought with this same sacrifice. They reverence, however, both rivers and nymphs and some other spirits, and they sacrifice to all these also, and they make their divinations in connection with these sacrifices".¹²⁰⁰

Thus early pagan Slav religion largely entailed paying homage to a thunder god by slaughtering cattle, giving offerings to the water nymphs and spirits, and gaining portends of the future thereby. Beyond this Procopius recorded few precise details about their rites, but hints that they knew nothing of the astrological sciences (that he knew anyway). But, being the doorstep of Europe, it is small wonder that newer religious traditions found currency among the local peoples. Owing to this a much more complex religious picture had emerged by the 9th and 10th Centuries AD, if we are to endorse the historicity of the German chronicler Helmold, whose *Chronicle of the Slavs* was penned in the mid 12th Century AD.

"The Slavs have many forms of idol worship, for they are not all agreed upon the same superstitious customs. Some display in the temples fantastically formed images, as, for example, the idol at Plon, the name of which is Pogada; other deities live in the woods and groves, like Proce, the god of Oldenburg; of these no effigies are fashioned. They also carve out many deities with two, three, or more heads. But they do not deny that there is among the multiform godheads to whom they attribute plains and woods, sorrows and joys, one god in the heavens ruling over the others. they hold that he, the all powerful one, looks only after heavenly matters; that the others, discharging the duties assigned to them in obedience to him, proceeded from his blood".¹²⁰¹

At this point in their history, just preceding their conversion to Christianity, a multiplicity of pagan religious traditions thrived throughout Slavia, which manifested themselves in a variety of idols, temples, and groves. As you will see, their idols, temples and rites bore an amazing resemblance to what you would find in India and Iran

Before I launch into the underlying themes forming the backbone of Slavic paganism I will give here a brief synopsis¹²⁰² of the various forms that paganism appears to have taken in Europe and the East during the 6th-10th

THROUGHOUT EUROPE

Centuries AD. The general information cited under the next eight categories is just a prelude to a wider body of data spread throughout this book.

1. Prehistoric Animism

MAIN ADHERENTS: Finno-ugric and Ural-altaic tribesmen.

Prehistoric animism was a carry over from the Paleolithic and Neolithic periods, when mankind worshiped the fickle forces of nature that surrounded him on every side. In Prehistoric animism, the function of religious leader was held by the shaman, a proven and respected “low magician” (ie; folk magician) with exceptional necromantic powers. Shamans had no firm priestly structure to speak of, and inherited their powers through illness, “calling”, or bloodline. Prehistoric animism’s rituals focused on communal gatherings around the shaman, who alone experienced spiritual ecstasy, then entered into spiritual realms above and below to thwart misfortune for the clan, or heal the sick. Magic was the highest form of power available, and through it shamans and heroes became as good as, if not better than, the spirits which lived in the twilight lands beyond. *Soma* ceremonies (the sacred drink of the Aryans discussed in Chapter V) were entirely absent, deformed people were venerated, and the dead were buried.

PREHISTORIC SHAMANS

2. Argan Prehistoric Animism

MAIN ADHERENTS: Finnish tribes in the Scandinavian sphere (Ingrians, Karelians, Votes, and formerly the Chud and Ves prior to their assimilation of Asiatic religious traditions).

This version of Prehistoric Animism employed a mix of mead *Sima* ceremonies (their word for the Aryan *Soma*), Aryan rituals, plus classic shamanism. Other important Aryan rites such as the horse sacrifice continued, but they were performed by a shamanic rather than an Aryan brahminic priesthood. There was widespread use of “low” magic in this forum, and the dead were usually cremated.

SOME SHAMANS
ADOPTED THE RITES OF
THE ARYAN INDO-
EUROPEANS

3. Dualistic Argan Animism

MAIN ADHERENTS: The Turks, Chinese, Indians, Central Asians, Volga Finns and Bulgars, some Baltic Finns, and North-eastern Finns.

Asiatic and Uralic tribespeople who experienced contact with Iranian and Chinese dualistic philosophies, eventually developed their own brand of shamanism, which focussed on the war between the spirits/gods of light and darkness. In effect they were dualists, as stated by Al-Nadim; “the Chinese, they are all dualists and sun-worshippers”.¹²⁰³ Lamaistic shamanism of the type practiced in Tibet and China, is perhaps a perfect example of Dualistic Animism that once existed in Northern and Eastern Russia. In the far-East dualistic animism spread throughout parts of Siberia where the Chinese traded with the Altaic forest races. We know that this in fact occurred because the remains of a Buddhist-style bath house were found at Bolgar, in the Urals.¹²⁰⁴

A FORM OF DUALISTIC
ANIMISM WITH ARYAN
RELIGIOUS
OBSERVANCES

Substantial Buddhist influences seeped into nomadic Eastern Turkic society, through the efforts of Chinese monks.¹²⁰⁵ These conversions had the added effect of taming the ravishing Turkic hordes which, during the 6th Century AD made merry pillaging various Chinese and Central Asian states, extorting great sums of wealth.¹²⁰⁵ Fire, land and water-worship, paying homage to ones ancestors, and demonic exorcisms (performed in a typically Buddhist fashion using bell-ringing, incense and drums) were frequently encountered features of Turkic shamanism.¹²⁰⁶ Demons were also worshiped, as this line from the *Agni Purana* shows:

BUDDHIST INFLUENCES
AMONG THE TURKIC
EURASIANS

“Sacrificial offerings are made to demons, divine mothers, manes and guardian deities of the ground in due order”.¹²⁰⁷

DEVIL-WORSHIP

By some quirk of fate the word *shaman* (which came into the English language from the Russian) is derived from Tokharian¹²⁰⁸ and Old Indian words meaning “an ascetic Buddhist monk”.¹²⁰⁹ The implications of this are obvious. Shamans in Northern Russia were referred to by a name elsewhere reserved for Buddhist monks, monks known as far away as Persia. Considering also the vedic linguistic survival in that region (with a religious slant), plus quasi-Buddhist modes of attire and custom, one might suspect the penetration of Buddhism into that region from nearby Bolgar. That the Russian verb *shamanit’* means “to fall into a state of ecstasy” equally suggests the practice of Buddhist pagan mysticism in Russia.

SHAMAN COMES FROM
A WORD MEANING “AN
ASCETIC BUDDHIST
MONK”

WHITE AND BLACK
MAGIC

Though generally lacking a hierarchical priesthood, these shamans specialised in either white or black “low” magical rites, and administered white and black sacrifices on separate altars, often in separate groves. Their white and black ritualism was related to the propagation of good and evil forces, performed to feed and appease the very gods which brought plenty to the lands, plus fend off the spirit demons of harm. While officiating, these shamans wore celestial planetary sigils pinned onto their crude animal skin shamanic vestments. *Soma* ceremonies were absent, sacred (barsom) twigs were venerated in special *lud* cabins, and the dead were buried whole.

TEMPLES, FLAGS, MASKS,
COSTUMES

In China and Tibet, Lamaistic shamanism (which permit the manipulation of demons and spirits) had a far more developed character, with its own temples, flags, masks, costumes and of course shamans. But these customs were inherited from India, and in many respects early Buddhist trappings and ritualism have a Hindu-like feel. As a consequence of the religious diversity present in the Kusan empire and Central Asia, Buddhism became impregnated with various Magian traditions, not the least of which was exarnation (See Chapter VII).¹²¹⁰ As it happens the connection between Buddhist monks and shamans seems encapsulated in the New Persian *shaman*.¹²¹¹

BODIES EATEN BY BIRDS

Under this form of shamanism, exarnation or cremation were the most common funerary rites (as practiced by Eastern Finns, Tibetans and diverse Siberian tribesmen). The dead were suspended in trees for birds to pick clean, leaving only skeletons remaining. The bones were then gathered up and buried, or cremated.

4. *Aryan-based paganism*

ARYAN WORDS FOR
“GOD” ARE FOUND
THROUGHOUT EUROPE

MAIN ADHERENTS: Aryan-based paganism was practiced in Europe from the time of the arrival of the Indo-Europeans in the 2nd Millennium BC until around the 8th-10th Century AD (especially in Germany, Poland), but during the Middle Ages it only thrived in a relatively pure state in Slavia, the Balkans, Scandinavia and the Baltic, or as a committed underground movement within continental Europe.

Aryan-based paganism includes whatever religious traditions remained amid the cultural backwash left behind by the Aryans who once ruled in Europe and Asia. It focussed on the worship of Daevas, something proven by the fact that the word for “god” in many European languages originated from the Sanskrit word *Daevas*. Consider *Deivas* (Lithuanian), *Zeus* (Greek), or the Roman *Deus* (all meaning “a heavenly god”), all of which are derived from the class of Aryan divinities known as the *Daevas*. These were vedic gods in a number of cases, gods still worshiped in India today. While it is true that Indo-European words for “god”, belonging to this etymology, continued to be used after the conversion to Christianity when referring to the god of the Christians, there is every reason to believe that the heathen priests of eastern Europe and the Urals region, continued to understand the original context of the words.

SOME 2,000 YEARS AFTER
THE ARYAN INTRUSIONS
INTO EUROPE, TRACES OF
THEIR RELIGION WERE
STILL TO BE FOUND

Aryan paganism was not a single religious teaching, but much rather a welding together of various Aryan customs centring around the performance of the old vedic sacrifices. Aryanism itself was a polytheistic religion, in which there was an almighty Creator and many, many subordinate *Daeva* and *Asura* (serpent) gods which were born from it to patronise areas of life, death and creation, as embodied by the holy wheel, or the circular dance of Shiva the Destroyer. Even today the religion of the Hindus (which came from a synthesis of Aryan deities, and the gods of pre-vedic India) supposedly has 600 million or so gods (many of which are only avatars, or reincarnations of preceding gods). *This overwhelming number of gods doesn't mean a multiplicity of different religions, or a diversity of independently formulated unrelated religious traditions.* This point is largely forgotten by many researchers trying to unravel the paganism which existed in Europe before the advent of Judaism, Christianity, Islam. All too often they conveniently construct “pantheons” peculiar to a specific race or civilisation, rather than looking at the underlying themes, sacrificial rites and myths attached to these gods. Just because the gods of say Egypt, Greece, Rome carried different names, from those which appear in the Vedic texts, it doesn't necessarily follow that they belonged to a different, unrelated religious tradition; consider Isis (p.50).

INCENSE, HORSE
SACRIFICES, LIBATIONS
AND SACRED MEALS

*The priests and philosophers of these various religious traditions themselves admitted the inter-relationship of their gods.*¹²¹² In all these religions, the primary acts of religious devotion appear to have had their roots in Aryan religious tradition. These rites included the lighting of incense, the offering of libations and sacrificial meals, the slaughter of horses and oxen, as well as the lighting of perpetual fires (which were venerated as the god Agni was in Aryan times).

HOLY FIRES CALLED AGNI

The Old Russian word for fire was *Ogon'* or *Ogn'*. This is related to the Bulgar *Ogn*, the Serbo-Croat *Ogan*, the

Slovenian *Ogeni*, the Czech *Ohen* or *Ohne*, the Polish *Ogien*, the Lithuanian *Ugnis*, the Latvian *Uguns*. Agni was also found in the Latin *Ignis*, the Hittite *Agnis* and the Vedic *Agnis*.¹²¹³ The same word does not appear to have survived in the Germanic, Greek and Celtic linguistic subfamilies though, perhaps supplanted by more modern words. However in the Norse *Ynglinga Saga* we hear of a Norse King by the name of *Agni*, a son of the sun.

The Aryan pagans believed that two different camps of gods existed, the Asuras and Daevas. In their view the Asuras were demons and the Daevas were the true gods. By drinking the *Soma* man could fly to the heavens and have free commerce with the Daevas. Their structured Aryan priesthood (the Brahmins) and leaders who wielded authority were alone entitled to make the sacrifice of *Soma* (the drink of immortality) to the Daeva gods in such diverse forms as mead, beer, porridge and milk based *Soma*. They also ritually slaughtered herd beasts, and feasted on the victim which had become sanctified through its sacrificial consecration, performed according to the Vedas.

Under Aryan-based paganism aspects of nature were personified as gods of destruction and procreation. These were;

DAEVAS

(The main Gods of the Heavens)

Rig, Indra, Pusan, Soma, Agni,

Varuna, Mitra

ASURAS

(The Gods of the Underworld)

Rudra, Nagas and other Asuric

serpent demons

Under Aryan Vedic cosmology the world had been made by *Brahma*, from the cosmic egg which broke apart, and whose shell formed both heaven and the land. In another of their myths a giant was slain, from whose dismembered body all things were made. From various parts of his body came each of the castes, the main gods, and all livestock, the most esteemed of which were cattle. In their ritual life, people gave the fruits of their labour to the gods as an offering, and through their attention to duty gained lasting immortality and, it was hoped, an escape from rebirth. Similar ancient recollections are to be found in Finnish and Scandinavian mythos especially.

Aryan pagans resorted to low and high magic (ie; simple and highly ritualistic forms of magical ceremonies) to gain leverage over gods with uncertain motives, and their dead were always cremated. Idol temples were not generally built. Instead holy groves were venerated and served as centres of worship. In Chapter VII we discover a change from this older practice, which saw Aryan temples constructed in Europe to house the Daevas, as occurred in India where one finds ample Daeva temples, and forest shrines dedicated to the nagas (the snake-beings discussed in Part I).

The Aryan race's impact on ancient European societies is perceptible by thoroughly examining the remaining Aryan religious texts, which are supposedly the world's oldest holy books. These texts provided unique insights into what is arguably the world's most ancient systematised religion. Once combined with exhaustive anthropological and archaeological studies in Europe and Asia, and the meticulous analysis of European and Asian languages (which occurred late last century and still continues), we witness the spread and dominance of Aryan language and culture over a huge geographical area. This sphere of Aryan cultural-religious influence also enveloped the pagan Slavic lands, and continued to carry some weight there until the time of Russia's conversion to Magianism, and later to Christianity. During the pagan era multi-faced and many-armed idols were prevalent throughout the Slav lands, most likely worshiped by Aryan pagans and Zurvanite Magi. Equally importantly, some Slav deities carried the same name as those worshiped in India.

Aryanism was primarily a way of life that manifested itself through a whole series of tell-tale customs.

1. Ever-present xenophobia, a fear of other unclean, dirty races, which had the ability to defile or desecrate an Aryan's purity, even through casual contact. Aryans sought to distance themselves from alien races, and would engage in warfare to maintain the purity of their lands and people.
2. Aryanism was patriarchal in nature, and women were not to be placed in positions of authority above men. The man was lord of his own house.
3. Aryanism reinforced the fundamental importance of the natural order of things and the role that every person was required to play in society (regardless of sex), by virtue of the life assigned to them by the creator. Thus, a male had to be the bread-winner, the woman the dutiful wife, the child silent and obedient, and so on.

THE NATURAL ORDER

- | | |
|----------------------------------|--|
| THE WORLD TREE | <p>4. "Deviant" sexuality, or behaviour contrary to the natural order of life and the orderliness of the tribes was deemed impious, offensive and very often evil.</p> <p>5. Women were required to wear a head covering of some sort.</p> <p>6. They commonly referred to their holiest site being a World Tree within a grove (in European myth it was the Ash tree), a tree from which immortality sprang. This holy tree¹²¹⁴ and the ceremonial fire that burned beneath it was enshrouded by a protective curtain or tent, a holy of holies, into which only the high priest of the tribe could enter. Here he offered up the libation of milk and honey to the Creator.</p> |
| HORSE SACRIFICES | <p>7. Animals, specifically horses, were sacrificed to the gods, boiled in a cauldron and eaten. These were believed to be resurrected upon their arrival in the other world, where the gods lived. Therefore the brahmin sacrificers ensured they did not break the leg bones, which had the effect of crippling the swiftly-racing sacrifice in the hereafter.</p> |
| OUR DAILY TASKS WERE HOLY DUTIES | <p>8. People had to offer the gods the fruits of their labours, in accordance with their roles; the toils of their lives were in themselves a religious activity. Farmers sowed their grain and tilled the soil. Husbandmen tended their flocks and guarded their families. Warriors sought the bold conquest of opponents, wild beasts and impressionable young ladies. Priests studied, prayed and made offerings to the gods. Women bore children and maintained the house. Merchants sought wealth, fame and fortune through crafty deals and innovative products. It was perhaps only a bi-product of this mind-set that people tended to worship gods more relevant to their profession, or caste; thus, warriors worshiped the war god, farmers and husbandmen the fertility and procreative gods, priests worshiped the ultimate god and his adjutants, and merchants sought the favour of gods who fostered earthly wealth and trade. Rural gods presided in the country, and ruling gods in the cities. Everything had its place.</p> |
| SURVIVAL OF THE FITTEST | <p>9. Aryans saw warfare in almost Darwinian terms; It was a fact of life, and only the strong would survive.</p> <p>10. A belief that creation and life were fundamentally good.</p> <p>11. A belief that alcohol or honest wealth were not evil.</p> <p>12. A belief that everyone had to work hard for a living.</p> <p>13. Worldly authorities were to be obeyed in every way, and the taxes due to them paid in full. Avoidance of these civic duties was deemed to be despicable, and frequently merited capital punishment.</p> <p>14. Warriors often had an ascetical knot tied in their hair as a sign of piety.</p> <p>15. Aryan paganism is littered with gods possessing many and varied forms, responsibilities and natures. Under paganism there was no crime in having a favourite or family god; but they were only one of many. Thus the specific Naga serpents and divinities worshiped locally varied from area to area. Delicately carved temples and groves were maintained in their honour.</p> <p>16. The word Aryan denoted one of the noble, twice-born race. This reference to people being born twice seems at loggerheads with the latter day Hindu teaching of perpetual cycles of birth and rebirth, and for all we know, the original Aryans may have believed that you were born once in this world and once in the afterlife.</p> |

5. Early Zoroastrian paganism

- | | |
|---|--|
| THE DOWNFALL OF THE DAEVAS IN IRAN | <p>MAIN ADHERENTS: A few people in Rus' and the Baltic area (the term Balts comes from the Lithuanian word <i>Baltas</i> meaning "white"),¹²¹⁵ namely the Poles, Old Prussians, Latvians and Lithuanians.</p> |
| THE PROPHET ZOROASTER | <p>Zoroastrianism is that religion codified in the Avestan holy texts due to the efforts of one Zoroaster, a mighty Iranian prophet. The 12,000 year prophetic cycle of the Magi, which recounted the war between the spiritual and physical forces of light and darkness, was already 9,000 years gone at the time of Zoroaster's birth. This left only 3,000 years until the prophesied destruction of the demons and the forces of evil, which was to culminate in the supposed renovation of the universe. During the last 3,000 years would appear the last of the two great saviours Hushedar at the beginning of the 11th Millennium, and the victorious Sraosha, the Resurrector (at the end of the 12th Millennium), around the year 12,000 when heaven and earth would be born anew.</p> |
| A SAVIOUR TO BE SENT FROM THE GOD OF LIFE | <p>The early Zoroastrian godhead is best summed up in the following way, with God peering down over two</p> |

spirits in a state of vicious collision, one of them being Spenta Mainyu, his dear son, the Holy Spirit. Angra Mainyu's point of origin was a topic of debate; Was it an alien force? The other son of Ahura Mazda? Was it spontaneously and inadvertently created by a rogue thought in the Creator's mind? Or was it an alien, malicious, destructive, and intrusive force devoid of any connection to the supreme being whatsoever?

MANY CONTINUED TO
WORSHIP THE AHURAS
AND DAEVAS

AHURA MAZDA (SUPREME GOD)

SPENTA MAINYU (THE HOLY SPIRIT)

ANGRA MAINYU (THE SPIRIT OF WICKEDNESS)

The pre-eminent *Ahura Mazda* (The Wise Lord), also called the Father, the Good and righteous God, gave birth to two spirits which constantly bickered and contended with each other. According to Zoroaster, *Ahura Mazda* appeared as a radiant and glorious light very much like the Sun. Due to the many similarities between the Sun and *Ahura Mazda* (the One God), the Sun was regarded by Zoroastrians as a symbol of his towering majesty, full of warmth, life, happiness and illumination. As accomplished astronomers and astrologers, the Magus priests of old knew full well that the sun, like the planets, was a luminous sphere in the heavens. For them the Sun was their religious icon (just as the Cross was the principle icon of Christ).

From the beginning, Mazda shared heaven with two other pre-existing things; the first created man (Gayomard) and the first Bull (Gosh the heavenly bull), both of which were to be instrumental in the salvation of creation itself, by ending the war between good and evil via the agency of the bull sacrifice, which would take place *at the end of time*.

GOD'S ENEMY WAS THE
UNHOLY SPIRIT

Angra Mainyu ("The Unholy Spirit") owed its continuing existence to a fall from grace in man, for in choosing to do wrong, man brought evil into being, where once it did not exist, and set it in opposition to the Good, which had always existed. In short it was acts, thoughts and motives that were intrinsically evil in nature. Inevitably though, the body and the deeds were united forever through their doing. Thus every wrong act, was one that should never had been, and one that was to be repaid in full.

Zoroaster's original vision for his priesthood, was that they would only act as defenders of creation, life, plenty and goodness. *They were to be servants of goodness alone*, a goodness embodied in the monotheism of a single benign creator with His subordinate Holy Spirit, that was being hounded to death by Angra Mainyu, the free-moving, unfettered Spirit of Wickedness. The true origin of the Spirit of Wickedness can only be guessed, but could had been self-generated accidentally, in the form of a dark thought or doubt by the Supreme God, or may had been brought into existence through man's "fall". It would be allowed to remain only for a fixed amount of time. Later it was to be done away with entirely, as would everything that had to do with death and destruction, leaving only the Good remaining.

As mentioned the Aryans maintained that Asuras were demons and Daevas the true gods, whose company man would join by drinking the *Soma*. Zoroastrianism's drastic ideological reversal of these two forms of gods saw Ahuras lifted up to the state of divine beings, and Daevas abandoned as demonic.¹²¹⁶ This teaching led to war between the two camps of gods and sent shockwaves throughout much of the eastern world.

THE HAOMA LIBATION

In essence priests of this college originated from the direct teachings of Zoroaster, who reviled many of the traditions he saw in Iran, not the least of which was Hinduism, devil-worship and cattle sacrifice. There was probably very little separating this brand of Zoroastrianism from the Orthodox variety, ideologically speaking. Except that is for an absence of cattle sacrifice, and a complete renunciation of arts of sorcery inherited through contact with Chaldeans, Hindus and Babylonians.

6. Orthodox Zoroastrianism

MAIN ADHERENTS: Practiced among the Parsees (in India), and elements of the waves of steppe immigrants, who worked their way into the Balkans, Eastern and Central Europe during the Middle Ages.

Orthodox Zoroastrianism is a term often given to the form which Zoroastrian dualism took following the post-Karterian reformation of the 3rd Century AD, as per the *Avesta / Pahlavi* canon. This is further explained in this and later chapters. A Magian priesthood (drawn mainly from the tribe of the Medes) existed to serve the needs of Orthodox Zoroastrians, but was led by white astrologer-priests only, who were revilers of magic. In the formative

KARTER REFORMS THE
ZOROASTRIAN FAITH

THE GREAT DEMON
AHRIMAN

stages of Zoroastrian Orthodoxy many of Zoroaster's original thoughts were re-written and new concepts incorporated from the West, particularly from Greece. Avestan literature was born from this reorganisation, perhaps the greatest legacy of the long defunct Sassanian Empire. Conversions to other apostate faiths, especially to Christianity (which their clergy held in great contempt) had to be halted by the threat of execution. Evil had by this time become personified as a god, in the form of the great demon *Ahriman*, but he was not deserved of worship. Cremation of white Magian corpses was a capital offense, and the interment of bodies was similarly proscribed. Instead the Orthodox Zoroastrian priests saw to it that the defleshing of corpses was widely practiced, with the bones of the deceased collected up and stored in an ossuary. The main ceremonial offerings were the sacred *Haoma*, holy gruel and *dron* cakes. These rituals are further explained in Chapter VII.

Priests of this school engaged in astrological enquiry, but held dim views about the nature of the planets, largely through a clash of ideals with the Chaldees who were planet worshippers.

7. Eastern Dualist paganism

MAGIANISM

MAIN ADHERENTS: The Islamic nations of the Middle East and Central Asia, Turks, Bulgars, Magyar, Asii, Volga Bulgars, Rus', Crimean and Erulian Goths, other steppe-dwellers and northerners, plus diverse Central and Eastern Europeans such as Bohemians, Vlaxhs and Moravians.

THE FIRE PRIESTS
STRUGGLED TO ENFORCE
A COHERENT, AGREED
RELIGIOUS SYSTEM
DEVOID OF
UNORTHODOXY

The term Eastern Dualist paganism applies to the mish mash of varied oriental traditions practiced on a village, and even family level. Pretensions of Orthodoxy were utterly alien to this class of heathenism, for in practice it lived on as a hazy but intoxicating blend of Persian, Median, Hindu, Chaldean, Assyrian, Egyptian and Babylonian folk customs, myths, sorcery and ritual observances. The only apparent commonality among these eclectic traditions was a strong belief in the dualistic forces tugging away at the universe.

Beginning around 480 BC the pronounced dualistic notions of the Medean Magi crept into Zarathustra's moral reforms and began dictating major changes. During the 5th Century BC *they helped ensure that Aryan daeva-worship was added back onto the Zoroastrian ritual calendar*, a practice considered debased by Zarathustra. By re-instituting daeva-worship, in the Aryan tradition, but with all the trappings of a Zoroastrian priesthood and ritual, they diminished the sovereignty of Ahura Mazda, since in the original Aryan version Ahuras were demonic. But even more than that, they had figured out the perfect way of drawing the allegiances of Aryan devotees. The Medean Magi thus *constructed* a new religion, an admixture of the older Persian and Aryan religious thought that appealed to so many easterners.

INDRA WORSHIP

The Daeva *Indra*, the object of adulation by Aryan warriors for millennia, regained his former prestige, along with Daevas of his kind. By bringing back the traditional idols and warrior god of the Aryan Daevas, the Magi were, in their own perception, worshipping the proper way by undoing the heresy of Zoroaster. Zurvan, the Time-god of the astronomers remained relatively obscure during this phase. As the Magus-wizards gained ever more power, the stage was set for a doctrinal revolution destined to seize the high ground within Zoroastrianism and thence influence over Persia. While it possessed an overall dualistic aura, it amounted to a doctrinal perversion of true dualism in that they relegated the father of demons to a son of the supreme being, cluttering dualism by the addition of a third principle.

In the Grecian West though, Zoroastrianism became synonymous with the priestly Magus-wizard, who doggedly observed the Medean rituals of planetary worship and cattle sacrifice. From that time westerners perceived Zoroastrianism as a militantly dualistic belief in two polarised brother-gods, steeped in magic.

Eastern dualism underpinned many sects, but the cult of Mithra (an occult warrior-brotherhood eventually favoured by Roman legionaries), was its best known face. During the 10th Century AD it was probably only to be found in Rus' and the Balkans, but it was almost certainly present as an underground movement in Britain and Europe, wherever the legions of Rome served or colonised. As you will see in Part II, some of them even had their own Mediaeval churches. Before the advent of Mithraism it was a supremely radical dualist philosophy, also commonly called Zurvanism, a belief that a nebulous creator/time god made two sons, a white son and a black one, both of whom were entitled to worship, and both of whom were fighting for their father's attention.

Zurvan (the god with four faces) was also analogous to the Hindu Brahma, the Aryan creator of the world. Among the Poles he was called *Svyatovit*, and among the Russes *Svarog*. He was said to be without form, and could

not easily be portrayed. Zurvan had four principle natures or faces; namely Luminosity, Might, Wise Thinking and Time. The most obvious precursor to this trinity was that of *Brahma*, and his two children *Vishnu* and *Shiva*. Through it came the Iranian Zurvanite trinitarian paradigm. Further perplexing problems naturally arose as to where his sons, the two co-Gods came from; the origin of the white and the black god, and existence itself. Zurvan, the Time God, the Medean Magi's supreme deity of space, fate and time would surely account for any discrepancy. The Zurvanite godhead was as follows, and I include here other names for the two brother gods;

ZURVAN

AHURA MAZDA

AHRIMAN

In addition to adoration of the two Sons, Zurvanism allowed for the communal worship of Ahuras and Daevas, anthropomorphic Yazatas (good genii) and Dregvants (evil genii), by dualistic white and black sacrifices. Theirs was a powerfully new syncretic version of paganism, a blend of Aryan and semitic belief systems. Under their Zurvan, they had taken the middle ground, by welding together two irreconcilable and opposite ideals, making Ahuras, Daevas, good genii and devils an integral part of their religion. Zurvanism became so popular amongst the masses, that it was the prevailing form of Iranian religion throughout all of Asia Minor, and enjoyed wide public support, particularly in Anatolia. It was from this cogent sphere of dogma that the majority of Rus' Magian dissidents most likely originated, as is evidenced by the nature of the pagan Rus' ritual calendar. This is covered in Chapter VII. We might also think Germans were somehow mixed up in this. Owing to a reference by the Roman Tacitus, it has been theorised in some quarters that pagan Teutonic religion once held to a belief that the god of the heavens had two sons.⁴⁷ But since he described the twin-brother gods in Roman terms it is difficult to know whether they were really the Pollux and Castor contained in the *Aeneid*, or another unknown and unnamed pair of siblings from the same divine womb. Magian Zurvanite parallels are quite strong in this respect. There is a reasonable amount of evidence for Magian worship among the Magyars (eg, the Hungarian word for "Lord" is Ura, which phonetically resembles the Zoroastrian term Ahura.

What Helmold mentioned about Wendish (Western Slav) paganism hints at dualistic doctrines and ceremonies. They had a libation that was offered to the god of goodness, and the demon responsible for all misfortune;

*"The Slavs, too, have a strange delusion. At their feasts and carousals they pass about a bowl over which they utter words, I should say of consecration but of execration, in the name of the gods - of the good one, as well as of the bad one - professing that all propitious fortune is arranged by the good god, adverse, by the bad god. Hence, also, in their language they call the bad god Diabol, or Zerneboch, that is, the black god."*¹²¹⁷

Cult worship of idols, fire and the use of original *Soma*/*Haoma* were a unique feature of this group, though idol-worship represented practices alien to Persians strictly speaking. White families practiced traditional defleshing and burial or cremation of the bones. Black families, those who followed the dark side cremated their corpses. Astrology, divinational auguries, sortilege and high magic were pivotal acts of worship to the planetary gods. Grand dualistic altars, formal religious feast days for devils and the celestial gods, hanging sacrifices and temples to house the holy fires and Aryan Daeva idols were just some features of this brand of paganism, which were in part absent from Aryanism.

8. Pagan Gnosticism

MAIN ADHERENTS: Mesopotamia, Greece and Egypt were the former heartlands of pagan Gnosticism. But during the Middle Ages it could only be found in Southern Iraq, Harran, Rus', Byzantium, Eastern Europe, protected and nurtured by members of the Rotu brotherhood wherever they chose to live.

Pagan Gnosticism was a series of essentially dualistic religious traditions conceived in the temples, libraries and philosophical colleges of Egypt, Greece and Mesopotamia. They believed that the gods of nature, higher learning and goodness reigned in the heavens above, together with heroes and aerie daemones in the lower strata of the celestial sphere. The exact opposite of these gods and demi-gods were depraved and punishing Demons who inhabited the counterworld below. The counterworld (which the Greeks called *Antichthon*) was the exact opposite of the heavens, in every way, an altogether light-starved and unhappy abode.

FEAST DAYS FOR
CELESTIAL GODS AND
DEMONS

PAGAN GNOSTICISM
ADMINISTERED BY
PHILOSOPHERS

The main forms pagan Gnosticism took were *Hermetecism*, *Neo-Pythagoreanism* (plus Neo-Platonism and variants of other ancient Greek philosophies) and *Chaldeanism* (as perpetuated by the "Sabean" Chaldean *Al-Kaldani* sect).

The principle elements of pagan Gnosticism were the performance of rites in adoration of the gods of the ancient world, plus the induction of intellectually gifted individuals into a massive body of well guarded and sacrosanct philosophical, scientific and occult knowledge which had been lovingly passed down from antiquity. The Middle Ages witnessed a lengthy period of renewed interest in pagan Gnostic teachings, which in many instances seriously clashed with the Church Magisterium. The tussle between the Papacy and the pagan Gnostics over the form and even the very existence of the old teachings and sciences prompted the formation of the great Universities of Europe. There those learned in pagan Gnostic concepts, and Church theologians, fought for the survival and supremacy of their respective doctrines.

*I*n summation

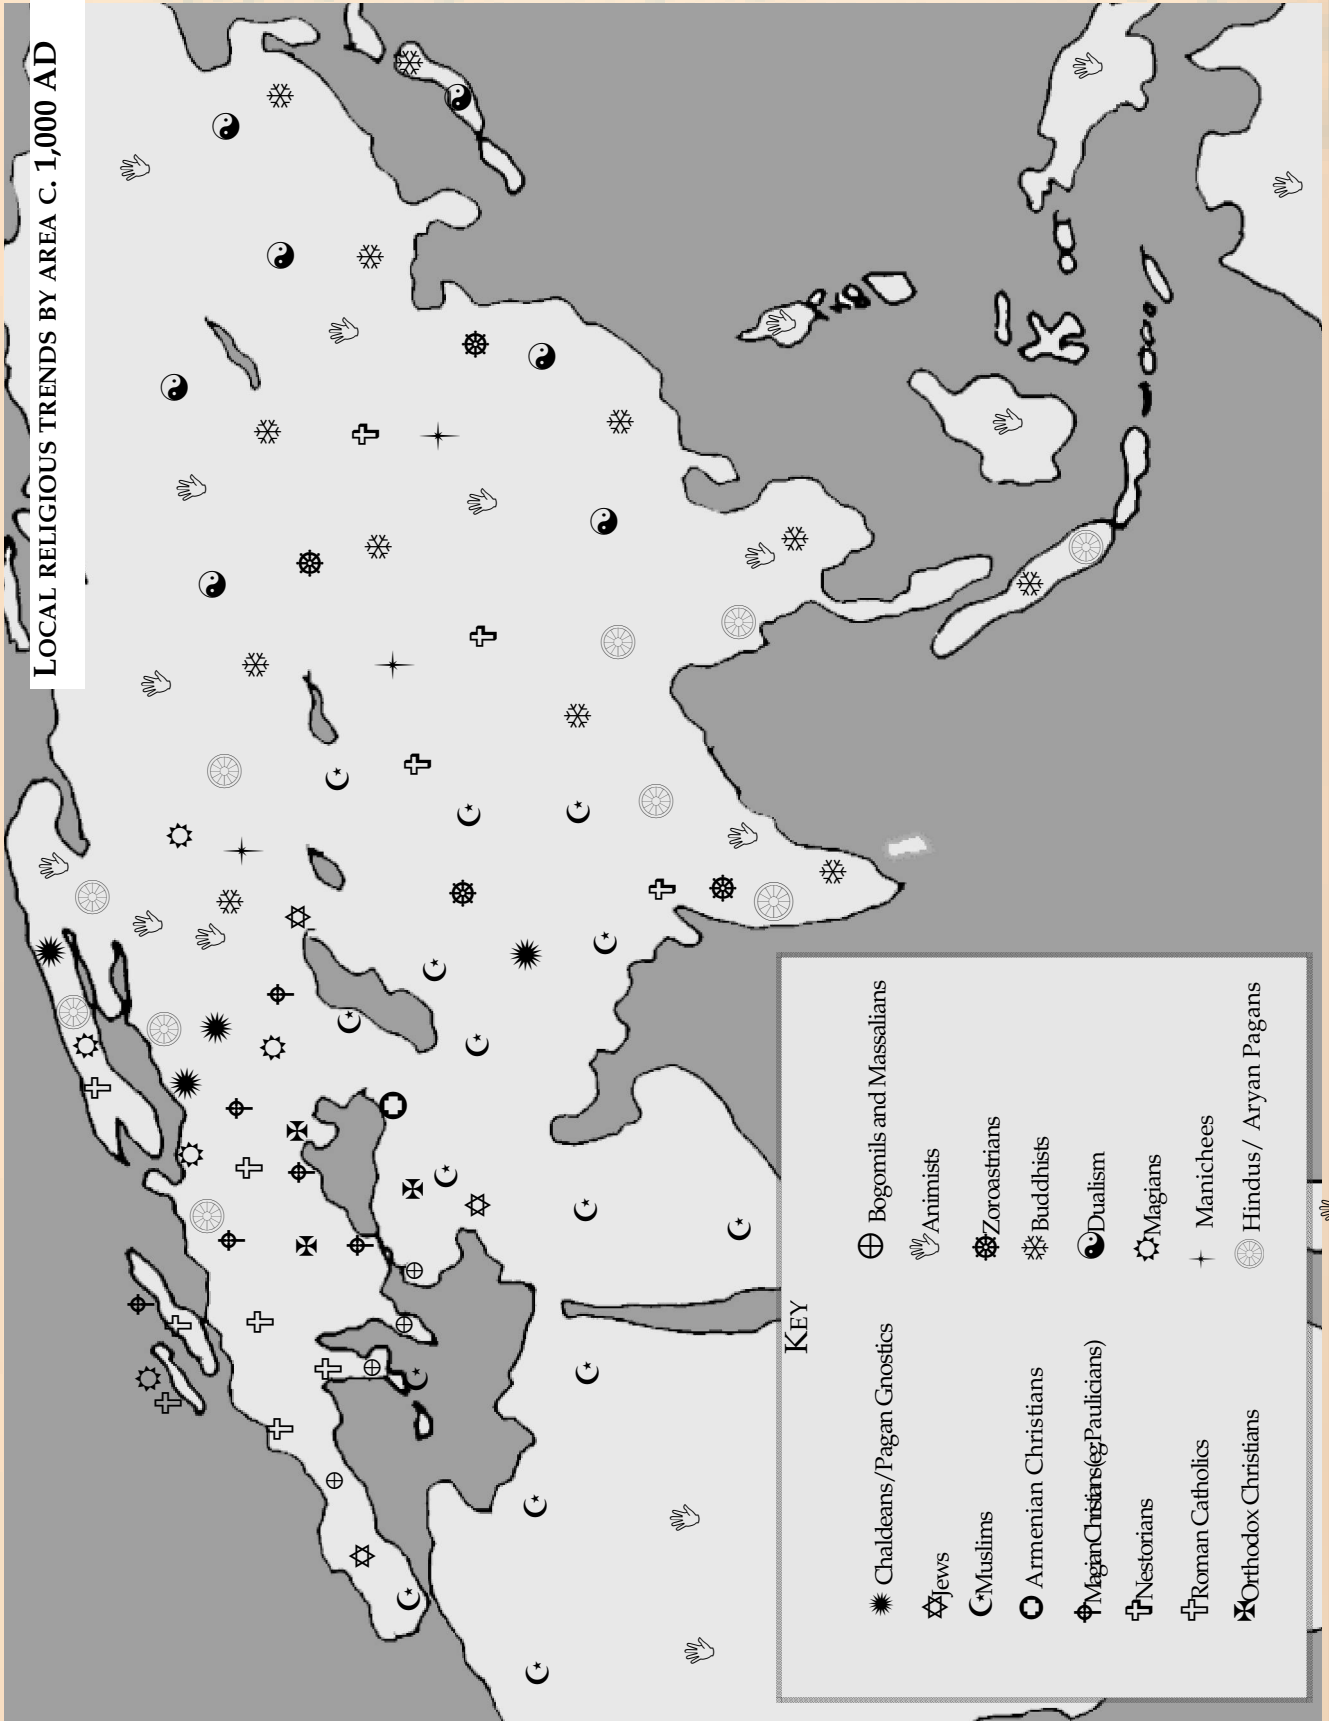

Briefly, types 1 to 3 were governed by shamans, some of whom had been exposed to Buddhist teachings and ritualism. Type 1 was mostly ignorant of Aryan vedic hymns and mythos; the epitome of the stone-age shaman. Of them all, only group 4 still had true Aryan brahmana, elders and chieftains. Only groups 5, 6 and 7 (as listed) practiced the making of *Haoma* and *Soma*, in their original narcotic/hallucinogenic form, rather than the alcoholic variants of mead and beer. Groups 1 through 7 had priests born into their vocation, whereas members of group 8 (and many of the animists) could only become priests through spiritual and philosophical initiation, or because they possessed an astrologically auspicious natal chart.

For the most part, dualism had eclipsed all other influences in Rus', leaving traditional shamanism and Aryanism celebrated only occasionally in the villages. Gods of these elder lineages were often absorbed into the pagan Rus' "pantheon" which I shall shortly describe, without a loss of cult. Before we advance yet further in our examination of paganism, it is profitable for us to examine the spread of ancient cults, which could take seed literally anywhere.

The following two pages reflect the mobility of religious customs across time and space, as well as their ability to influence the teachings and practices of other faiths.

Fig 59. A relief of Isis, the Egyptian goddess of magic and resurrection. Achaemenid Persia

Pagan gods with international credentials

Gods peculiar to foreign “pantheons” sometimes made their presence felt abroad, when the priestly families entrusted with the care and adulation of their idols migrated to new lands.¹²¹⁸ Initially the priests and priestesses of the imported cults found it hard to make a living, but once more converts flocked to the new devotion, the need for cult begging diminished.¹²¹⁸

Foreign divinities were transported back to Rome with increasing regularity, with Romans returning home from postings to regions distant indeed from the centre of the Empire.¹²¹⁹ These citizens and soldiers dwelt in remote neighbourhoods possessing cultures and religions quite different from what they were accustomed to in a number of respects. And it was there that many became captivated by the profound philosophical and ritual nature of the Oriental mysteries. Frontier legions in Syria returned home to Rome having gained a liking for Syrian gods.¹²¹⁹ Egyptian divinities, genii and daemones belonging to the Graeco-Oriental milieu of Alexandria made their almost imperceptible entrance into Rome with North African slaves and Roman officials who had completed periods of administrative service in Egypt.¹²¹⁹ Not to be forgotten are the Anatolian sects, which had taken root among the Gauls and in North Africa,¹²¹⁹ something which tends to support an original connection between the Celtic Druids and Asia Minor. A similar level of religious tolerance is found in Parthia (ie; Greek occupied Persia), where one was just as likely to see a Dionysian wall mural as a Persian sphinx.

Egyptian deities became icons of personal worship in Rome during the rule of Flavius, though, like other foreign deities before them, they were relegated to the city’s outer limits, so as not to offend the sensibilities of Rome’s citizens, and Romulus and Remus, the protector gods of the Empire.¹²²⁰ These private mystery religions had mixed fortunes under different rulers, like Cassius Dio, who was opposed to them, and to Hercules as well. They met with resistance because it was felt that they were diverting the masses from giving homage to the ancestral gods of the Romans. By neglecting the state gods, Rome, as a nation, only stood to lose favour with the divine beings which had raised her to such eminence in the first place.¹²²⁰ The propaganda campaigns against foreign gods had themselves been built upon the thinking of Plato, who was militantly opposed to degrading the pre-eminence of state gods. Sure, alien mysteries were for the most part permissible, and perfectly in keeping with pagan traditions, but they had to be monitored not only for their cultural impact on the host nation, but the potentially clandestine activities of their sagacious cult administrators.¹²²⁰

During the period 70-134 AD especially, Roman women not infrequently payed their respects to alien female deities like Isis, Cybele or Bellona.¹²²¹ While Isis appears to have been tolerated more than the others, generally these female gods were held in some contempt by the authorities.¹²²¹

Even India was as close as ever, where the importation of Eastern religion is concerned. An Indian king sent Caesar Augustus gifts; serpents of immense size, and an idol known as a “hermes”, that is a square post surmounted by a carved head.¹²²³ According to Herodotus we might guess that similar idols could also be found in ancient Greece, at Athens. In Chapter VIII idols which easily fit the description of a “Hermes” are described. The only problem is they were found in Ireland and Slavia.

A holy place dedicated to a Roman goddess of navigation (Nehalania) was once situated at Walichrum (or some say Westcapelle), in Mediaeval Frisia.¹²²⁴ There the missionary Willibrord broke asunder an idol, and was attacked by the sword-wielding pagan site custodian for his efforts.¹²²⁴ As it happens, a heathen altar stone was unearthed there this century, engraved with the name *Hercules Magusanus*.¹²²⁴ The etymology of the name suggests that local pagans had religious devotions which were an admixture of Magian and Ancient Greek religious concepts. It has been suggested that this altar was once connected with the site set upon by St Willibrord, but this has not been proven so far.

A Cappadocian monumental engraving confirms the absorption of Chaldean cultus into Magianism, especially the worship of Bel.¹²²⁵ There was a Magian presence in Egypt too, showing that the faith of Zoroaster was equally capable of implanting itself overseas. Egypt entered the Persian Empire after falling to the Achaemenid Persian kings. Magians no doubt played an important role in governing the newly-acquired satrapy, right up until the time Alexander the Great snatched it from beneath their noses in the 4th century BC. In practical terms Persian Magi probably had regular dealings with the Egyptian pharaonic priests, evidently leading to a two-way transmission of medical, religious and scientific ideas and modes of ritual expression. Magus priests found much to recommend in the Egyptian calendrical format, and so adopted it for Persian usage.

STATE GODS CAN BE
JEALOUS GODS

BELLONA

Fig 60. The Parthian King Antiochus shakes hands with Hercules. This relief epitomises how formal the marriage was between Greek and Iranian religion

MAGIAN-CHALDEANISM

The mummies of the Pharaohs reveal that certain royal ancestors originated not in Africa, but somewhere in Eurasia. These were kings who had come to the fertile Nile Valley as migrants or mighty conquerors, and who raised the North Africans from obscurity, to the status of one of the greatest empires the world had ever known.

THE MAGI IN EGYPT

Like the great Magian monarchs, Egyptian princes were no mere mortals. Pharaohs were divine beings, children of the sun; sun-princes. Symbols and customs profoundly connected with the Pharaohs were the Asian cobra, the vulture, royal incest, the lotus, de-fleshing rites and the winged solar disk, all of which were of Babylonian or Aryan provenance, but which Egypt adopted as its very own. Crooks and scourges are equally common royal motifs, the former signifying their pastoral leadership over their people, the latter their duty to punish violators of the king's laws.

THE DIVINE PHARAOHS

Even in the earliest dynastic periods, pharaoh's maintained vast archives, recorded by scribes who made their notations not in hieroglyphics, but in cuneiform. From this we might infer that the kings of Egypt, and their advisors had a far eastern Sumerian/ Babylonian connection; certainly the first Egyptian pyramid building skills would tend to support this. Moreover many of their religious concepts were similar to those of the white Magi, who, along with the Greeks, had interacted with the pagan Gnostic Egyptian priests in ancient times.

EGYPTIAN ARCHIVES IN CUNEIFORM

The *Papyrus of Ani* (which forms part of the written corpus known as the *Book of the Dead*) is so rife with Magian symbolism and eschatology, that it is beyond doubt that Magianism had come into Egypt, by no means in a pitifully diluted form. The supreme Egyptian god of truth played the role of judge between the sun (Horus) and the great demon (Set, Seth or Sutekh). Excarnation funerary rites were observed by the early Egyptians, they had *Ehrpat* priests, *Persen* cakes and an eschatological view similar to the Magi, in which a catastrophic celestial war takes place between the gods of good and evil, in heaven and about the *Persea tree*.

THE TEACHINGS OF THE MAGI FOUND IN THE PAPYRUS OF ANI

*As concerning the fight which took place near the Persea Tree in Anu, (these words have reference to the slaughter of the children of rebellion, when righteous retribution was meted out to them for (the evil) which they had done. As concerning the "Night of the Battle", (these words refer to) the invasion of the eastern portion of the heaven by the children of rebellion, whereupon a great battle arose in heaven and in all the earth)".*¹²²⁶

PAGAN MORALITY IN EGYPT

Even a cursory examination of Egyptian morality reveals it to be almost identical to that of the Magi. The following recital contained confessions to the gods. These vocalisations of Egyptian morality could just as easily have come from the mouth of a sun-worshipping white Magian. Some 1,600 years have passed since the downfall of paganism in Egypt. In that time general cognisance of this level of high morality has been extinguished, leaving us with only Old Testament accounts portraying the Egyptians as sons of evil, while the Jews have the one and only license on holiness. Now archaeology advocates differently, allowing us to read their scriptures, and see into their minds and hearts;

PROFESSING THAT ONE HAS NOT SINNED

*"and I have not committed sin.. I have not committed robbery with violence... I have not stolen.. I have not slain men and women... I have not stolen grain... I have not purloined offerings, I have not uttered lies.. I have not carried away food... I have not uttered curses... I have not committed adultery, I have not lain with men.. I have made none to weep.. I have not attacked any man.. I am not a man of deceit.. I have not stolen cultivated land.. I have slandered (no man)... I have not been angry without just cause... I have not debauched the wife of (any) man... I have not polluted myself... I have terrorised none... I have not transgressed (the law)... I have not been wroth... I have not blasphemed.. I am not a man of violence... I have not been a stirrer up of strife... I have not pried into matters.... I have not worked witchcraft against the king... I have never stopped (the flow of) water... I have never raised my voice... I have not cursed God... I have not acted with arrogance.... I have not snatched away the bread of the child, nor treated with contempt the god of my city... I have not slain the cattle belonging to the god."*¹²²⁷

*"I have not pillaged the lands which have been ploughed... I have not been a man of anger.... I have not turned a deaf ear to the words of truth".*¹²²⁸

Regarding the punishments of the underworld, which awaited those who could not recite such phrases in complete confidence, the Egyptians wrote;

*"Hail, Lord of Terror, Chief of the Lands of the South and North, thou Lord of the Desert, who dost keep prepared the block of slaughter, and who dost feed on the intestines (of men)".*¹²²⁹

"The sinner who walketh over this place falleth down among the knives (of the watchers)".¹²³⁰

LORD OF TERROR

"May these watchers never gain the mastery over me, and may I never fall under their knives! Who are these Watchers? They are Anubis and Horus, (the latter being) in the form of Horus the sightless. Others, however, say that they are the Tchatcha (or, sovereign princes of Osiris) who bring to nought the operations of their knives; and others say that they are the chiefs of the Sheniu chamber".¹²³¹

This chamber was one of judgement, followed by one of torture.

"May their knives never gain the mastery over me. May I never fall under the knives wherewith they inflict cruel tortures".¹²³¹

SINNERS, BEWARE THE
KNIVES OF THE
WATCHERS

'Heresy' sprouted yet further from debates between the Magi and the great philosophical (Gnostic) thinkers of the Greeks, who between the 1st and 4th Centuries BC were militarily occupying Persia, following its capture by Alexander the Great. By the 1st Century BC the Greek gods and the Ahuras and Daevas of the Zoroastrian and Zurvanite heathens had become so intertwined that *they had become one in the same*. Zeus became "Zeus" or Zeus-Ormazdes; Ormazdes being a hellenisation of Ahura Mazda. As you will soon read in the descriptions of the pagan Russian divinities, this hellenisation was also present in the Rus' "pantheon", so it is possible they were philosophically connected. No doubt Greece, and Thessaly in particular, with their philosophical and occult pastimes, proved a potential meeting place for Greek and Iranian magical cults as they shifted further west in later centuries and entered into the Greek cultural arena. Stragglers from Xerxes invading Persians may have further cultured these ties.

Well just who were *Zeus-Ormazdes* (the name of a god chiselled into a rock face, amid commemorative religious inscriptions) and *Zeus-Sarapis* (a divine name found pressed into Alexandrian coinage), it's a little confusing. Was it *Zeus* or *Ormazdes* (the Magi's Ahura Mazda), *Zeus* or *Sarapis* (an Egyptian god)? The answer to this is intertwined with a factual melding of cult ideologies, resulting from pagan ecumenism, particularly among the heathen philosopher scientists.¹²³² Many modern academics rigidly adhere to a view that Greek and Roman annalists simply labelled foreign gods with names used to address gods of similar virtues and roles within their own pantheons; for the benefit of their readership. One could then understand the approximate functions and status of gods worshiped in other lands. And this they most certainly did.

PHILOSOPHICAL
QUESTIONS

But what many have failed to see is that there was, in many cases, a perception that two or more different gods, worshiped many hundreds of miles apart, were in truth one and the same god, only named and worshiped slightly differently by different peoples. Whether this can be called pagan heresy, or whether it amounts to a revolution in heathen philosophy, granting a common genealogy to the gods of many different pagan nations, is difficult to resolve in each given instance. This is because the classical writers were guilty of something later mediaeval authors can be accused of; mixing their metaphors. Thus we find the high god of the Indians (Brahma) being called *Zeus*.

THROUGH THIS CAME A
FORM OF PAGAN
ECUMENISM

At Bath in England locals payed homage to the healing goddess *Sulis-Minerva*.¹²³³ This divinity evidently represents a fusion of the Roman *Minerva* and the local British god *Sulis*, both of whom were responsible for miraculous cures.¹²³³ Many Roman cult sites in Britain show evidence that local Celtic divinities were worshiped by their conquerors. For Roman devotees, there was no moral conflict worshipping a god held dear to the races they ruled. Perhaps Roman occupation troops were progressively being won over to the region's alien gods through a recognition of their power, but the gods of Briton might also have been in truth part of the Roman religious scheme, loosely speaking.

In the following schematic separate gods are fused into a single divinity, not so much a new god, but a new understanding of the gods, and in particular the supreme god.

The foundations of Russian paganism

There once was a time when most of Asia-Minor, Central-Asia, the Middle-East, the Caucasus and the steppes were under the control of a religion, which very few people have even heard of today, mainly because it is a teaching nearing the point of extinction. Zoroastrianism, the 2,500 year old religion of the prophet Zoroaster (also known as Zarathustra) nowadays boasts only around 130,000 adherents world-wide. Theirs is a faith desperately trying to maintain its purity, propelled into the future by the teachings of their forefathers, as they await the coming of their "Messiah", the Sayoshant (Saviour). Over the past 3,500 years or more the Magian faith has not remained stale and static, but changed slightly, in line with the times. We will now trace the evolutionary path of Magianism through its various stages, including its effect on Russian state paganism.

Heresy, a term which normally conjures medieval Christian imagery, is, in reality, just a label signifying a man-made deviation from an original religious vision, a deviation from the path of "truth". One of the greatest taboos of Zoroastrianism was the existence of "false-hood" or "false-religion", which they deemed to be the embodiment of untruth, the most despicable kind of *druj* (Lie). Without a doubt the most popular heretical doctrine to ever infect the Magian faith was that evil was an intended part of the natural order, and came about when God gave birth to a good son and an evil son, both of equal yet opposite power.

With the introduction of homage to the great demon, Iranian society could no longer take for granted that the Radiant, Wise and Good Ahura Mazda would have mankind's fullest backing. Demonic feast days were instituted for the rightful worship and appeasement of the Princely deceiver, and his cohorts. In response to the ascendancy of devil- and Daeva-worship in Iran, a heated religious struggle ensued. With the full support of successive leaders like Ardashir I, Shapur and Bahram II, Karter (a powerful Zoroastrian religious figure) and the heads of the new Zoroastrian Orthodoxy, accused the Medean Magi of the following crimes against Goodness and The Truth;

1. Defiling the sacred *Haoma*.
2. The burning of flesh.
3. The sacrificial spilling of blood, which was sacred.
4. Building houses, shrines and towered vaults for banned Aryan Daeva idols.
5. The performance of the “repugnant” wolf sacrifice.
6. Wearing two priestly robes. Ahriman’s black or ash coloured robe and the white garment of goodness.
7. Using magic, which they call *Yatukih*, the black mysteries. *Maleficia*, which meant the harming of others through magic (a term widely used during the Middle Ages and the witch trials) is an equivalent concept to *Yatukih*.
8. The enthronement of destiny and astrological sciences at the expense of the white Magi’s “free will” principle.
9. Worshipping Daevas and dregvants or drugs (devils), thereby allowing Ahriman enhanced prestige and power in the world.

In classical Zoroastrian theological tradition dark ceremonies were a spreading amoeba, promoting the worship of demons under the guise of Magianism. The Zoroastrian Magi held that this heresy, above all others, was concocted by the will of demons, being a deliberate fabrication originating among the astronomer priests of the Medes who for political and religious reasons were trying to move in and take over the religion of Zoroaster. For this reason the Zoroastrian hierarchy relentlessly expurgated from its faith whatever it considered to be impious and impure lies. Inevitably the Zurvanite Medean Magi were “excommunicated” from Zoroastrianism, and gave birth to mainstream heretical movements with *extensive followings*. The main stages of Zoroastrian religious evolution were manifold, and always entailed fresh eruptions of heresy, followed by the expulsion of those same heretics from the fold. The formative stages of Zoroastrian religious evolution were;

2700 BC - 1,000 AD?	Aryan pagan Vedic traditions thrive, unwittingly preparing the foundations of Zoroastrianism	ARYAN RELIGIOUS EVOLUTION
c. 618-573 BC?	The birth of Zoroastrianism. Devil-worship, idolatry and the old Magus priesthood (the <i>Karap</i> wizards) were denounced at this time.	
c. 522 BC	Medean Magian religious influences penetrated the Zoroastrian priesthood.	
482 BC	The old Zoroastrian fire-priests succeeded in dethroning the Aryan, Iranian and Babylonian idols and instituted the Zoroastrian calendar of feasts.	
c.475 BC	Zoroastrianism suffered serious setbacks as the Medeans succeeded in reinstating daeva-worship and the building of temples to house the fires and Daeva idols	
c. 400-100 BC	The time of distinct hellenisation under Greek occupation. The Magi and the Greek pagan Gnostics entered into a lengthy period of philosophical, scientific and religious collaboration.	
c. 70AD-?	Mithraism gains ascendancy in Rome, Eastern and Western Europe.	
c. 226 AD	Ardashir standardised Zoroastrian ritualism and texts; thus began Orthodox Zoroastrianism. Prolonged friction ensued between the Orthodox Zoroastrian priests and the Magus wizards (which fostered the Zurvanite and Mazdakite heresies, plus devil worship) except for a period of religious tolerance under Emperor Shapur I.	
c.226-490AD	Sassanian authorities implemented and defended the new Zoroastrian Orthodox reforms against the many religious movements then present throughout the East. Emperor Bahram and his religious mentor Karter unleashed a reign of terror against Buddhism, Hinduism, Judaism, Christianity, and Manichaeism, as well as the Daeva and Drug worshippers, all of which were eliminated or driven out of the Sassanian Empire, leaving Orthodox Zoroastrianism as the exalted state religion.	
c. 273 AD +	The execution of Mani, followed by the repression and victimisation of his devoted Manichees. Manichees fled eastwards from Sassania in droves, into Turkic realms.	

- c.339 AD Renewed persecution of the Christians, including wide-scale executions.
 c. 528 AD Reprisals against the Mazdakite heretics.

In real life, ideas, whether “good” or “evil”, can never be destroyed if the followers are fanatical; ideas only vanish without public belief and support. Humanity’s time-honoured method for eradicating unwanted opinions and ideas was to censor or expel the people responsible, rather than allow people the use of their free will.

The expurgation of heretical movements from within Zoroastrianism began under the attempted enforcement and introduction of Zoroastrian Orthodoxy in several distinct phases, and this produced streams of dissidents. For their many transgressions, the Zurvanites and Mazdakites fled Iran and the Sassanian homelands, to wander, banished out into the steppes and beyond the setting Sun.

Finally, the destruction of Sassania under the great Muslim persecutions of 630 AD saw the beginning of an exodus of Zoroastrians and other dualists from Central Asia and the Caucuses. Whole communities converted to Islam or were shunted into China and India, and Eastern Europe. But these expulsions took them to other places besides the east, including Russia, Eurasia, the Caucuses and the Balkans, either directly across the steppes, or by migrations skirting the Black Sea via the Steppes or the Balkans. Even as late as the 9th and 10th Centuries AD, waves of Central Asian exiles were still coming into Russia and Eastern Europe from the steppes in ever greater numbers, causing all manner of strife.

The most significant and intense phases of religious dissension in Persia were;

- 628-573 BC Zoroaster and his supporters actively preached against Daeva and Drug worship
 271 AD The expulsion of Daeva-worshippers by Karter completed
 531AD The expulsion of the Mazdakites by Qobad
 630-930 AD Muslim attacks on Zoroastrians and the Manichaeans¹²³⁴

As you will have read in Chapter II, based on Vasmer’s etymological study of the Russian language, a certain proportion of Russian words initially came from the Old Persian (46), but most from the Avestan (697), rather than the Pahlavi (28) or New Persian (201). They entered the Slavic lexicon through the ancestral linguistic inheritance of Proto-Indo-European, Indo-European and Indo-Iranian, and also through lateral linguistic ties.

Because Old Persian was heavily impregnated with Medean words, we might think that the 46 survivals of Old Persian are loan words acquired during the 28-year Scythian occupation of Medea, or to the period of co-operation between the Achaemenids and the Scythians. Numerically this is only a small number of survivals, hinting that contact between Iran and Russia had been scant in the period up to 500 BC and the adoption of the Avestan (which might have displaced these earlier words, if indeed it did supplant the Old Persian being spoken in Scythia).¹²³⁵

Dating the true origins of the *Avesta*, as with the Vedas, is an ordeal, largely because it is interwoven with legend. The *Avesta* was written in stages; the oldest texts being *Vendidad*, *Visperad*, *Yasnas* and *the Gathas*, as far back as the time of Zoroaster (618-590 BC, or as early as 1,500 BC according to some). Later came the *Gahs*, *Sirozah*, *Afrinagan* and *Nyayis* during that same period. The Avestan writings once existed in a large corpus of nasks (canonical texts) until destroyed by Alexander the Great in the years just after 331 BC. Under Greek occupation Zoroastrianism entered a period of drastic decline, and it was not until the reign of Emperor Shapur II (309-379 AD) that the surviving portions of the *Avesta* were completely re-gathered, but by that time the Sassanians were using Ancient Greek and more especially Pahlavi instead of Avestan. Thus written Avestan was probably only in general religious use throughout Iran between 618-331 BC and for specialised use from 309 AD onwards. In the intervening period it was inevitably recited orally, or employed by small numbers of Magian scribes when preserving scriptural and secular writing. However since Magian texts were sent abroad to protect them from Alexander, it is a distinct possibility that the Magi dispatched some of their Avestan writings to Eastern Europe during his occupation of their country, and thus Avestan could have been in Baltic, Slavic and Scythian use somewhere between 331 BC and 226 AD, before the advent of Sassanian Pahlavi.¹³²⁵

Linguists propose that a form of Middle Iranian slotted in between the decline of Avestan (especially around 300 BC) and the advent of Sassanian Pahlavi.¹²³⁶ Naturally when and where Avestan deferred its former pre-eminence to Middle-Iranian is impossible to demonstrate. Nor can we define the precise form of Middle Iranian at

HERETICAL SCHOOLS OF
THOUGHT WERE DRIVEN
FROM IRAN

ISLAM GAINED CONTROL
OVER IRAN

a given time, but it was evidently a language embodying a transitional mutation of Avestan into Pahlavi. Sarmatians, Scythians and Alans were speakers of this little defined Middle-Iranian.

While it is true that Avestan and Pahlavi were the common secular languages of their day, the Persian exiles in India continued to record their holy texts in those two languages. Thanks to their scribes we know not only their religion, but have a record of their antiquated linguistic history. Using the Parsees as a control group against which we can measure other expatriate Magians, it is likely that other scattered pockets of Magianism continued using Avestan and Pahlavi for religious purposes. Still this is only a presumption and, as discussed in Chapter II, they might have countenanced the abandonment of Avestan and Pahlavi, only to render their religion into Slavic, Chinese, Turkic and so on. As you saw on p 1087 there is evidence at least one pre-Christian Russian monarch was using Avestan script, but to record Russian words. If it happens that other groups of Magian exiles observed the same practices as the Parsees, and used Avestan and Pahlavi, then important inferences can be made.

The high incidence of ancient Greek linguistic correlations in the Slavic suggest primordial contact with Ancient Greece, and Graeco-Iranian Parthia, which presided over Iran from the downfall of Greek rule through to the foundation of the Sassanian Zoroastrian state. Contact between Scythians and Parthians were inevitably present, for Scythians were an important element in the elimination of Greek power in Iran, by acting in unison with the Indo-Iranian Saka tribes and the Parthians. Liaisons of some kind must have existed for this interaction to have occurred.¹²³⁷ Inevitably these spawned cultural and linguistic modifications to the traditional Scythian lifestyle.

Since Pahlavi was introduced by the Zoroastrian kings and fire-priests from 271 AD onwards (coins dating to 226 AD have been found with Pahlavi), until phased out by the Muslims (which is thought to have been completed by 881 AD), this would demonstrate that there was minimal contact between the Sassanians and Avestan-speakers of Russia during the period 271-881 AD. By interpolating the Slav Magi's minuscule adoption of Pahlavi with historical events, we can perhaps piece together what happened.

For a start there would have been almost no linguistic exchange between the Slav Magi and the Sassanians, *a major point* which would prove that the arrival of the Magi in Eastern Europe preceded, or was contemporaneous with the adoption of Pahlavi (Middle Persian) in Sassania. If there was no contact between the Eastern European Magi and the Sassanian Magi, then there must have been very good reasons. Either the Sassanians didn't know the Western Magi even existed (which is unlikely), or they didn't want to know about them. Pahlavi correlations were present in Rus', but a paltry 21 words as opposed to 687 Avestan, so it is likely that the Sassanians knew about the Western Magians, but wanted nothing whatsoever to do with them. One Russian word might provide such a clue.

Katyr, the dialectal form of the Old Russian word *Kater* (both of which meant "a mule") was also utilised by the Crimean Tatars, Azerbaijani, Turks and Kipchaqs (*Katyr*).¹²³⁸ It is remotely possible that *Kater* or *Katyr* were slang words used by the Zurvanite exiles when lambasting Karter the Orthodox Zoroastrian reformist who was the catalyst for the final stage of their expulsion from the Iranian heartlands. Did the pagan Slavs, and pagans of Northern and Central Asia see Karter as a stubborn ass? If so, then this linguistic survival probably indicates that Karter and the Orthodox Zoroastrian hierarchy were the reason why the Slavic Avestan-speakers lost contact with Iran. I believe this lack of interaction resulted from the mass emigration of Daeva and Drug (e; devil) worshippers from Iran before the 200's AD, though we know that Mithridates had already set up his own Iranian settlements in Russia about the 2nd Century AD. Throughout this book you will see an accumulation of evidence which strongly supports the theory that the Eastern European Magians were Zurvanite dualists that incorporated the worship of both the Daeva idols, and demons, both of which were present in pagan Rus', in addition to Iranian idols.

However, disregarding such compelling evidence, it is still nonetheless possible that there had been ties between the Western Magi and the Sassanians, but that it was largely unidirectional, with Magians leaving Iran to live in Eastern Europe. If this scenario transpired, then upon arrival they abandoned the use of Pahlavi, and resorted to local languages encapsulating the much older Avestan. Only Iranians unhappy with the Sassanian regime would have done this, individuals who did not agree with the Orthodox Zoroastrian reforms such as Manichees, Magian Christians or the last remaining Zurvanites who stayed behind in Iran, carrying out their rites in secret.

Another option is that some Magi throughout the region belonged to Zoroaster's original priesthood that first implemented his new religious vision for Iran, but which fell from grace, were expelled, and otherwise persecuted by the Medeans. These particular Magi only ever used the Avestan tongue.

PAHLAVI, AN
IMPORTANT LANGUAGE
IN SASSANIAN PERSIA

KARTER THE REFORMIST

Finally we have an influx of New Persian into the Russian, some 201 words. These words belong exclusively to the post-Sassanian period, a point which proves that Iranians were arriving in Russia probably between the 8th-9th Centuries AD. These were Iranians that had lived under Arab rule for some time (because they brought very little Pahlavi with them), and as we know, the Zoroastrian Pechenegs were such a people, and to this we might add the tail end of the Bulgar arrivals. Knowing hardly any Pahlavi means that they were probably Muslims, or were Magians that no longer used Pahlavi, instead speaking the vernacular New Persian to practice Magianism. If this was the case then the Magi had abandoned the use of Avestan and Pahlavi at that point, or so few Magi were left in the Islamic East that Magianism had been reduced to crude folk customs.

From the linguistic evidence I postulate that the following migratory phases transpired.

1. The Old Persian dated to the Scythian era arose from Scythian soldiers returning from their stint in Medea, or to Scythian traders, chieftains and administrators connected with the Achaemenid court, or to words left behind by Darius' earlier invasion force.
2. The mass arrival of the Avestan in Eastern Europe and the Baltic between 618 BC-271 AD is attributable to;
 - i. Daeva and Devil worshippers of Zoroaster's time (625-573 BC).
 - ii. Magian refugees from Alexander the Great's conquest of Iran (331 BC), again most likely Zurvanites or pre-Karterian Zoroastrian Magi.
 - iii. Magians who had lived in Parthia (238 BC-226 AD)
 - iv. The final expulsions of the Daeva and Devil worshippers (271 AD).
3. A loss of contact occurred between the Western Magi and the Sassanian state between the late 3rd-9th Centuries AD.
4. Magian refugees that had been living in Arab-occupied Persia began arriving in Rus' from the 8th Century AD onwards. Some may have been refugees from the 930 AD Zoroastrian uprising which the Muslims violently suppressed, leading to the killing of white Magi and the Magian rebels.

Fig 62.1. Persian royal altar dating to the 4th Century BC, the reign of the Achaemenid King Artaxerxes III. Note its similarity to the following rendition of Caesar's Mithraic altar.

Fig 62.2 Caesar's altar in the Ukraine c. 150 AD.

Thus the Indo-Iranian speaking Magians arrived in Europe at first via immigrant-invaders such as the Scythians, Parthians, Sarmatians, Massagetae, Roxolani, and then, for the most part, in company with exiled Zurvanite heretics, escaping the troubles of Asia Minor and Central Asia.

For over a thousand years (beginning c. 500 BC) this diverse conglomeration of "Zurvanite" adherents (who at that stage must have been feeling the extent of Karter's Orthodox Zoroastrian reforms, but were not greatly persecuted) decided to settle down and integrate with the indigenous Finns, who were animists or followed the ancient Aryan traditions. They proved very, very susceptible to conversion into their alluring cocktail of daeva gods and high magic.

The settlers which helped build the cities founded by Mithridates IV, as well as the descendants of captured Roman war prisoners were perhaps largely responsible for the emergence of Iranian dualism in Eastern Europe, in the form of Mithraism especially. At the pinnacle of Mithraism's popularity in Russia (some time before the 2nd Century AD), Caesar's mithraic altar (perhaps the most important of all Roman holy sites) was built in the southern Ukraine, and not Rome as you would suspect. Perhaps the positioning of the altar there was due to Trajan's preoccupation with the Eastern Frontier.

Later it was the entry of Magyars and Bulgars into the Ukraine, Russia and the Balkans, that truly reinforced Magian rule in the numerous Slav nations, and added extra impetus to the growth of heterodox Magian pagan belief systems. Upon arrival this wave of immigrants happened across the widespread worship of Zmeyya-Volos (the Great Serpent) among the Slav peasantry, whose cult was a primitive relic of much earlier Magian migrations. This serpent was probably known to the Iranians as the demon Azi-Dahaka or even Ahriman, but may also have been regarded by local pagan Gnostics as Hermes-Apollo. Rites of devotion performed in adoration of this serpent were executed by Magus-wizards known as Volsvy (the priests of Volos), and later Volkhvy (the Wolves).

By the 10th-11th Centuries AD, the arrival on the steppes of Orthodox Zoroastrians running the gauntlet of

Islam, gave rise to and cultivated the ferocity of the Pecheneg, Polovtsy and Kipchaq wars. For them, this encounter with the very daeva and devil-worshippers described in their scriptures would have left them with the distinct impression that they had walked into Ahriman's brooding nest, the vipers' pit.

All these many factors allowed for the formation of a distinctly Slavic and Baltic pagan religion, one which readily accrued innovations such as prehistoric magic, animism, dualism, philosophy and esoteric Magian wizardry (of both black and white variants).

TIMELINE FOR THE ARRIVAL OF IRANIAN EASTERN DUALIST PAGANISM INTO RUS'

Arrival of the Roxolani, Scythians, Cimmerians	5th-7th Century BC	KNOWN INDO-IRANIAN ARRIVALS IN RUSSIA
Foundation of the Bosphoran city states under Mithridates IV	1st Century BC	
Roman war prisoners and settlers live in the Ukraine and other places in Russia	1st-2nd Centuries AD	
Arrival of the Bulgars, Serbo-Croats, Bohemians and Magyars from the East	9th-10th Centuries AD	
Arrival of the Pecheneg, Kipchaq and Polovtsy hordes	10-12th Centuries AD	

That massive population relocations can occur as a result of religious persecution has historical precedents; the Jewish diasporas are a case in point. Where violence lashes devotees, trails of traumatised refugees are certain to result. Historical sources, and modern international events, tell us that diasporas are the inevitable result where the persecution of a given nationality, political party or religion is lengthy and vicious.

To discover the olden beliefs about the coming of gods, spirits, demons and creatures into the world, we have to look towards historical texts like Iamblichus' *On the Mysteries of the Egyptians, Chaldeans and Assyrians*. According to traditional Slav beliefs,¹²³⁹ and the elaborate explanations of Iamblichus and other pagan Gnostics (which held essentially similar views), we learn that *the ancients did not believe that gods and mythical beings actually entered the world in the flesh, but made their way here by walking or flying about in a spiritual body or visible essence, or by entering into a person, tree or animal*. The concept is very much like the American Indian spirit world, or the Australian Aborigines "Dream-time", a belief in another equally real world. Linked with our own, it lay just beyond the horizon of our psyche, and could be met half way, or even entered by gifted individuals, or during a half-way meeting with those things that came into our world, often against our will or desire. Thus pagan life was not a mundane existence, but a twilight of reality, where two worlds collided, a world where one could just as easily meet a forest demon, as till the soil or shear a ram. The highest divine presence one could ever experience was the entrance of a deity or divine power into a human being, an event conferring upon them the ability to prophecy and perform miracles. Normally this is described by modern anthropologists as the shamanic experience, but for the Magi, it was known as *Magu*, a state of intense spiritual ecstasy.

Russian paganism

It has become apparent that what the English-speaking world has been reading about Rus' paganism for the past 20 years is certainly significant, but exceptionally crude. Recent Russian and Ukrainian publications and reprints are just some of the things that expose a startling and unique style of Slavic polytheistic dualism at work, which possessed a cosmology very much like the Iranian Zurvanite heresy, especially the Mithraic variant, but I suspect with Neo-Pythagorean influences. *In fact there is almost universal consensus among scholars specialising in Magianism that the Slavs were subjected to an immense wealth of Zurvanite religious traditions from Iran,¹²⁴⁰ largely because many of the Slavs were originally of Iranian or Turkic stock.*

In the following catalogue of Russian divinities you will discover the presence of Indian, Iranian, Roman and Greek gods. Such an unmottley aggregation of gods from diverse "pantheons" greatly resembles the religious climate once present in Central Asia from the Macedonian conquests onwards.¹²⁴¹ It further highlights the importance of Vladimir's essentially homogeneous Iranian pantheon. As you will read in Chapter III, his choice of gods for the Kievans was a politico-religious statement about what the Slavs should believe, namely a somewhat purer form of Magianism.

Slavic paganism was undoubtedly dualistic. It was characterised by the worship of earthly gods, demons and the elder vedic Daevas of the celestial realms, by Magus priests who, by inference, wore the black, grey or white

WESTERNERS KNOW
PRECIOUS LITTLE ABOUT
RUSSIAN PAGANISM

PAGANISM IS
CHARACTERISED BY
POLYTHEISM

garments of power when making “white” and “black” sacrifices.

Rus’ paganism entailed the worship of many gods, yet acknowledged a single omnipotent “summus deus” (supreme god) who was called *Svarog*. According to Slav beliefs, time and the cosmos, the living and the dead, the physical and the metaphysical, could only attribute their continued existence to the will of this majestic being, a magnificent, benign and wondrous radiance. All creation was born from its singular thoughts, and thus came to *be*. The miracles of a blade of grass, the endless skies, or putting fleeting life into flesh were all things of lasting wonderment to the human mind, seen as sure evidence of a master designer, architect and creator, rather than the random machinations of haphazard chaos. The universe was seen as the product of this supreme intelligence who left its signature of absolute cosmic *order* (with patron gods, known scientific laws and visible cyclic patterns of a predictable nature) interspersed with apparent chaos. So lofty and sublime was the androgynous *Svarog* that ordinary mortals were not permitted worship it. In this respect Slav paganism was conceptually similar to Chaldeanism. Instead mankind had to be content with lavishing their devotions upon the deity’s two principle underlings, both of them subordinate to *Svarog*; namely *Dazhbog* (the Sun) and *Chernobog* (the Black God).¹²⁴² This pair daily struggled against each other, with all the forces at their disposal. Slav paganism demanded that mankind help sustain the very existence of the gods, through the offering up of propitious sacrifices, and without which each deity would surely die.

THE DEVIL AS AN
EMBODIMENT OF
EXTREME FALSEHOOD

Magian doctrine portrayed the Evil One as the unspiritual embodiment of unholiness and *druj* (“lies” and “falsehood”). It is perhaps then no small coincidence that the pan-Slavic word *zloi* and its variants (meaning “evil”) are related to the New Persian *zur* (“a lie” or “falsehood”), not to mention the Alanic *aeuzaer* and Avestan Persian *zbaraiti* (“bad”). Clearly Persian notions of evil had entered Russia in the dimness of dusty ages past.¹²⁴³

In summation, the three main gods of the Rus’ combined to form a trinity,¹²⁴⁴ a triumvirate of a supremely omnipotent unknowable father god, and beneath him a white god and a black god. Between the white and the black god stood a fourth divinity, *Perun*, the lord of the whole world. This in itself may point to a pagan perception that *Perun* was like *Mithra* and *Indra*, the intercessors who stood between the two polar extremes of light and darkness, and who acted as the champion of the white god, and policemen of the Truth (see the entry for *Perun* on p. 156).

AN UNKNOWN NUMBER
OF RUSSIAN MAGI
BELIEVED IN A SUPREME
GOD, CALLING IT
SVAROG, THE SHINING
GOD

SVAROG (THE SUPREME GOD)

DAZHBOG (BYELUN, BELOBOG) (Rus: the White God) Lord of the Celestial gods	PERUN God of justice and war Lord of the Earthly gods	CHERNOBOG (PAN, KAT, KUTSI, DID’KO) (Rus: the Black God) Lord of the Demon gods
---	---	---

Slavic dualistic paganism differed considerably from Aryan paganism as it was once practiced by the Indo-Europeans of continental Europe, by, in dualistic style, incorporating the formal, intentional worship of demonic forces, in addition to good on a special calendar of religious observances (see dualistic calendar on p511). By doing so they had given birth to a need for “black sacrifices”, which in extreme cases demanded hangings and the shedding of blood. This class of sacrifice was probably uncommon in Europe (besides war time), but not so rare in the East. What is more, from Mediaeval accounts we learn that *the devil-worshipping Slav heretics may well have been Chaldean in origin*.¹²⁴⁵

From the moment of its creation everything was subjected to a never ending cycle of birth and death, even the gods. Annually gods (such as the sun) would be born, grow stronger, then older, then die,¹²⁴⁶ then be reborn *ad infinitum*. The drama of existence was ongoing, just like a plate spinning on the head of a pin, an eternally moving wheel.

And so it was that two rival dualistic sub-pantheons of gods were carved from nothingness. One group, the gods of creation, who were cherished by the “white” families, were tasked with the propagation of life and plenty. Each creator god possessed counterparts in the sphere of destruction, an inveterate foe which made war against it. These gods of desolation, were dyemony (demons) empowered to pollute, thwart and dismantle life and physical existence, and perhaps ultimately annihilate the gods of creation if they got half a chance. Then there was *Svarog*

(the highest Zurvan), who did nothing but keep the wheels of time moving along without delay, waiting for neither man, nor planet, nor god, nor dyemon. And into this equation were fed humble human beings and their Magi, whom they regarded as mortal gods sent down to administer the daily affairs of this world, and who held the fate of physical existence in the palm of their hands. In the scheme of the Magi, man and the gods formed a symbiotic relationship; only creator gods could made us prosperous, but only man could keep them from possible demise at the hands of those darkest forces.

MAGI GUIDED THE
FAITHFUL LIKE
SHEPHERDS

Unclean forces deceived and swayed humanity, making them greedy, selfish and lustful for personal power, wealth and prosperity at the expense of others. It was they who promised humanity the world *if they would rob the creators of their vital tithes*. Likewise, grateful creator gods, (once strong again) often gave genuine thanks and aid to their supporters, for it was only through their continued timely intervention with the sustenance of bonfires, slaughtered beasts, blessed cakes and libations that the gods remained alive and strong, to fight on against evil and chaotic annihilation. Whilst the agents of “creation” and “destruction” were forged of equal potency, it was paradoxically only the intervention of Magi that changed the odds during the great battle, by favouring and feeding one side over the other.

Whilst certain gods, as you will soon see, were confined to the spectrum of fate and others to the sphere of the elements, the terrestrial and aerial daemones that the average Rus’ had to deal with were able, at their whim, to *infect all spheres of existence*, by the agency of demons of fortune and elemental demons, all under the guidance of Chernobog, their supreme lord and Father. For, once made, all things were said to be affected by fate and luck, which in turn determined the kind of life that a person or thing would enjoy or suffer; such was the ebb and flow of the great cosmic war.

Our world belonged to the elemental sphere, and was constructed from four primary components (fire, air, water and earth). Each element appears to have been governed by certain celestial and earth gods. Each god, in turn, had special areas of jurisdiction over the spirits indigenous to their elemental species. Elemental entities (which the Magi called Yazatas), *as distinct from spirits*, were powerful zoomorphic genii who could appear in different forms and guises (as people, sphinxes or griffons), which dwelt upon the earth, and performed wondrous or magical deeds. These entities represented the often ferocious aspects of nature, and fought on the side of the creator. Yazatas were under the immediate direction of the celestial gods who were tasked with controlling the multitudes of spirits that covered the landscape. In almost every area these entities, especially those of water, were deified, attracting much local worship and veneration. And so it was that many European pagans considered themselves to be in the direct presence of god while near fire and water.

We will now scrutinise the “pantheon”¹²⁴⁷ of dualistic gods and demons worshiped by the Russes and Slavs. In many cases the dates of their respective feast days are shown.

Heavenly Deities

THE OMNIPOTENT TIME-GOD

Without Its four faces, how would the elemental gods know the seasons, or when to sow or reap, or to send lightning or rain? When would the gods send new lambs and foals to the earth? And who would tell the planets how fast or how slow to move? All things, destiny, fate, luck, the cosmos, years, humanity and all creation fell under Its guiding hand. To the eastern Slavs this was *Svarog*, to the western Slavs it was *Svyatovit*, the prime mover of all the heavens. These terms appear to be Slavic words used when referring to Ahura Mazda or more specifically Zurvan.

THE GOD ABOVE ALL
OTHERS

GODS OF THE HEAVENS

The celestial gods oversaw the creation and rejuvenation of the world, getting a better view from up there in Paradise, which the Rus’ called Rai. Rai also happens to be the name of a major Persian city, full of luxuriant warehousing and plenty, which was the reputed birthplace of Zarathustra (known throughout the west as Zoroaster).¹²⁴⁸ Clearly, Russian pagan religiosity, or the idea of heaven anyway, was deeply rooted in Zoroastrianism, in either a purist or heretical forms. It is also significant that Rai was the tribal homeland of the Magian bloodline.

GODS REIGNING IN THE
HEAVENS

These heavenly gods accomplished their task of giving life and plenty to the world, while simultaneously doing battle with the forces of evil who hampered their every plan, and slowly polluted and smote created existence.

All the four elements were seen as necessary in order to sustain life; air for breath, earth for flesh, water for blood and fire for warmth. If any one of these was missing then life could not exist, and nature began to die. The pagan Russians, like the Magi, held great reverence for these essential elements that combined to give nature its form; Fire, was the son of the sky, Wind the Lord, Earth the Mother, and Water the blood of the earth.¹²⁴⁹ And far above this world of ours the Sun, the mighty Dazhbog, transited the heavens. As the loving sun, his warmth, life-giving power and light put to death the crisp, chilling snow. With great tenacity he wrestled with the darkness and snow drifts that smothered the earth in the frosty robes of mourning, which throttled most signs of plant life, and caused animals to hibernate or flee South. As the melting snows transformed into pure and invigorating water, life came back to the lands in abundance. Water circulated about us, seen and unseen, feeding and enriching the soil, the womb of the world which was pregnant with manifold seed-children. This all signified the coming of Spring, when visible signs of the sun's victory could be seen everywhere. The tribulations and hunger brought on by the winter were vanquished, replaced with cheerfulness, frivolity, gayly coloured blossoms, sweet scents, birds and bees; and all of a sudden both plant, man and beast felt alive. For what could bring a smile of gladness to a sullen face like the sun? What could fill a granary and bread basket like the sun? So great was their love for him!

Simargl', Dazhbog and several others were already discussed on p152-157.

Dana 19 Jan - 15 Feb Dana was the goddess of inland waters and the consort of the Magian fertility god Simargl' (see p. 152). She appeared as a young woman carrying an amphora of water which she pours out into the rivers and waterways, at the time of the spring thaw. She was a goddess of some antiquity, perhaps worshiped since Scythian times. Dana was the daughter of Lado and Lada and sister of Polelya. She was widely regarded as the equivalent of the Greek goddess, Artemid, but then again she might also be akin to Daena of the Zoroastrians, or the Celtic goddess Danu.

Dev 8 Nov - 19 Dec Dev was god of the heavenly vault, the daytime sky, the wee hours of the night and the great wonders of nature such as rain and storms. Its statue appeared as a young man swathed in long hair and crowned by a coronet of periwinkles. In his right hand he held a drinking horn, a sign of strength and life. Dev could impart miracles upon the fortunate, and his name was derived from the Aryan gods, the *Daevas*, or that of the Latvian supreme god, who also went by the name *Deivas*. Ultimately Dev (pron Div) is cognate with *Div*, a Persian word meaning "the *Daevas*".¹²⁵⁰ This means that an undetermined number of Slavs probably inherited *Daeva* worship by means of an Iranian religious medium, namely Zurvanism. Thus the Slavs observed a Magian faith, but still engaged in the heterodox worship of *Daevas* in addition to the *Ahuras*, a practice considered anathema by the post-Karterian Orthodox Zoroastrian religion. Theirs was the way of *Daeva* worship, from whence the English term Devil worship originates. In the Baltic area however, comparative linguists have established that the people of that region, though speakers of a language closely related to the Aryan tongue, had, in antiquity, begun to deviate away from standard Aryan religious terminologies, which indicated that their pagan faith had cast down the *Daevas*, and held the *Ahuras* in much higher regard.¹²⁵¹

Dolya 6 to 12 Dec Dolya was goddess of the evening sky, and linked with planets fortunate, and fate. Her irreconcilable foe was Nedolya, the goddess of calamity and misfortune. Dolya's idol appeared as a figure with largish breasts, and two big sapphires imbedded in its head, to serve as eyes. The index finger pointed to an object of her contemplation, while her left hand was placed over her heart. She was believed to be the equivalent of the Roman goddess Fortuna, and had some say in the movements of the planets which had a drastic impact on the fate of all things. We might therefore see Dolya as having originated in pagan Gnosticism.

Kupalo 25 Jun Kupalo represented the Summer sun and Summer itself, love, self-sufficiency, harvests, fruits, eroticism, joy, bathing and ablutions, perhaps including penitential washings. Kupalo was the mother of flowers, trees, shrubbery, grasses, fungi and so forth, and was present in the dew and rain showers promoted the fertility of the land. During her festivities the spirits surfaced from their elemental abodes to dance in the moonlight. A festival was held annually in her honour, as it still continues to be in certain regions of Russia and Serbia. During this festival the spirits met up in an almost carnival atmosphere. Similarly people gathered at the springs and temples, partly as a celebration of the occasion, but also to gain protection against the ravages of the innumerable

KUPALO'S FESTIVAL

spirits who took over the forests for the night. This festival was most auspicious for the gathering of herbs of every kind, which was usually undertaken before nightfall. Kupalo appeared as a woman in long flowing verdant robes, bedecked in jewellery of metal, pine cones and needles, acorns, mushrooms, flowers and ribbons of all colours and descriptions. She was also known as Kupala or Kupailo.

Kolyada 25 Dec - 14 Jan (at the time of the Winter solstice). Kolyada was the God of winter, frost and the cold. He appeared as a stout old man with a silver-plated beard and long flowing hair; not unlike Ded' Moroz (the Russian version of Santa Claus!). He had a glistening snowflake in one hand and a sheaf of rye in the other. Kolyada also went by the name of Didukh or Vasil'.

Mokosh' 01 Nov Mokosh' was also called Mokosh or Moksha, and some believe her name comes from the Old Indian word *Makhas* ("rich", "noble", or "a demon").¹²⁵² She was the goddess of women's luck, rain dew and the rainbow. Moksha was predominantly worshiped in Rus' by far-eastern Swedish colonists, and Finns (especially those of the Mordva tribe). For this reason Vasmer includes a variety of Estonian and Finnish etymologies (meaning "a river"), as being connected with the etymology of her name. Therefore Mokosh might once have been strictly a river goddess, perhaps even *Oksho*, another name for *Anahita*, the Magian water goddess.

Descriptions of her idol vary. She appeared as a woman with a bulbous head and long arms, or alternatively as a bronze, large headed woman kneeling, with dishevelled hair, and an open screaming mouth. In the latter form her hands rested upon a small domestic animal. This idol perhaps appeared identical to the Aryan rustic nymph *Urvasi*, at the precise moment when she yelled out in shock, after realising that the first of the two sheep sleeping at her feet had been stolen (as recounted in the Indian *Gandharvas*).

Moksha was moist mother earth, a personification of the highly fertile *chernozem* (literally "black dirt"), and all arable land. As the the earth mother, she portioned out life-giving cereals, berries, livestock and small game to the forests and farmlands of Rus'. Moksha was the mortal enemy of cold and ice, which strove to kill her plants, cereal crops, lambs, suckling piglets and seedlings. She often appeared as a large pregnant middle-aged woman in a bright green dress draped with all manner of beautiful flowers, and wore a coronet of daisies and dandelions about her head.

There is some reason to also equate Moksha with Demeter. Firstly both deities were seen as moist mother earth, portrayed in the form of black soil. Both were clothed in green robes, perhaps an allusion to their black earthy bodies being clothed in a garment of turf. Just as Demeter was a lawgiver, so too was Moksha. When Russian farmers wanted to seal oaths, they did so by placing a slab of turf and dirt on top of their heads. This might also indicate that Russians made their oaths to gods which were peculiar to their class, or caste. Perun was the oath-witness of warriors, Moksha of the farmers, Svarog of the White Magi, Chernobog of the Black Magi, and Volos of the artisans, traders, and musicians, and so on. Therefore Moksha might equally have been a Magian and Greek pagan Gnostic goddess.

Porovit The five-headed Porovit was god of the Summer Solstice, an ardent young man of exceptional beauty and radiance who embodied the Sun exalted in the midheaven. Naturally, life was at its peak during this, the zenith of Dazhbog's greatest power. Porovit symbolised the present triumph of the good Sun in the war against darkness. Since he had five heads, he was probably originally an Aryan Daeva idol.

Rugievit Rugievit was the seven-headed swordsman, with seven sheathed and one wielded blade, the god of swordplay and close-quarters combat. Again, most likely another Daeva idol.

Sima Sima was a god of the pagan Slavs and Finns. Bearing in mind that the Finns sacrificed horses during a typical *Sima* ceremony, sang hymns, and poured mead at those gatherings, there can be little doubt that *Sima* was really *Soma*, one of the most loved of all the gods worshiped by the Aryans. Sima was much more than a loan word, for it had sacral notions affiliated with it. Because *Soma* is much spoken of in the Aryan *Rig Veda* text, it is equally certain that *Sima* had a similar accompanying oral religious tradition in eastern Europe. How similar this might have been to the stanzas of the *Rig Veda* remains unknown. By the Middle Ages, the presumably ubiquitous offerings of the god *Soma* had long since faded away, with the result that the making of ritual *Soma* remained confined to the Hindus of India, who still deeply love him, but it was not unknown in Slavia and Finland too. From the *Rig Veda* we

learn that *Soma* was a plant that became a god; once squeezed and prepared by the Brahmin priests, *Soma* underwent a dramatic transformation and became deified. He then undertook a journey through space and time to the heavens, and acted on man's behalf before the Daevas, especially before the Mighty Indra (See Perun). *Soma* was a bringer of health, happiness, and good fortune, and caused the priests to be as poets. The Finnish *Sima* libation (further discussed in Chapter V) had similar attributes attached to it.

Svarog In terms of his position within the pagan Russian religion, Svarog can be soundly equated with *Zurvan* (Magi), *Brahma* (Aryans), "*Zeus*" (Graeco-Iranian fusion), *Aion* (Greek Gnostics), *Kronos* (Mithraism) and *Grannos/Cernunnos* (the Celts). To the Wends Svarog was *Chetyregod* or *Soyatovit*, and one Russian tradition equates him with *Hephaestus*. Svarog was the radiant all-knowing god, with the single, all-seeing eye, the ultimate creator god, the architect and craftsman of the cosmos, the heavenly smith of the sky, heaven, earth, the planets and forger of all that exists. His connection with smithing suggests a tradition about the old man of the sky, equally shared by the Finns (as described in the *Kalevala* epic), or even the mistaken inclusion of these same Finnish details under the banner of the Slavic Svarog. A variety of etymologies have been suggested for the name Svarog.¹²⁵³

1. The Old Indian word *Svargas*, meaning "the sky has found the greatest support". We find similarities in the Old High German *Gi-swerc* which meant "a thunder cloud", the dutch *Zwerk* "an overcast sky", or the Anglo-Saxon *Sweorc* "a storm cloud".¹²⁵³
2. The Old Indian *Svaraj*, meaning "an independent ruler".¹²⁵³
3. The Old Indian *Svar*, or the Avestan *Hvara*, both of which meant "the Sun".¹²⁵³

Some say Svarog appeared as a wizened and bearded old man of grave disposition, seated atop the clouds, scrutinising his realms. Svarog (the Shining One, or Shining Horn) was all things and nothing, the blueprint for the times of creation, whose appearance was unknown, but was believed to consist of a single head with four faces, under one hat, and had an all-seeing eye. It (the unknowable Svarog was thought androgynous) controlled the unstoppable march of time which affected all things under creation. It cared little for the moment; whether good or bad, all moments would pass; who or what under heaven and earth could refuse Its commands? Thus a mere glance from one of Its four faces would invoke an entire season, summoning the proper god of creation to enter into Its presence to be briefed on the pace of this year's handiwork. As the year progresses It called Simargel, then Kolyada, Kupala and Iarilo, each in turn. Svarog thus formed the main seasonal solar cycles and the circular planetary orbits. Svarog told Mars, Jupiter and Saturn to go much slower than the other planets; and so it is.

If Svarog was simply the Eastern Slav name for *Zurvan* then it is possible to infer that the demonic forces of desolation had a hold over him, for unlike the creator gods, they would not have needed to be summoned into Its presence. This inference is drawn from the story of the Black God's testy dare to Zurvan, as told by the Magi. Thus the "blackened ones" whimsically disrupted the lives of the Slavs at the most uncalled for times; rapacious war, destruction, plagues and pestilence could creep up on them at any time, these were hardly seasonal events, and not subject to the cyclic machinations of the time-god.

We do know that Svarog was the embodiment of the sky illuminated by the sun's rays and the one who sired every single god; Svarog was lord of all the elements and of fate. Svarog touched nothing on earth, but told the gods and entities to do as It wished, for the very gods were Its minions. Rather than being a manifestation of Zurvan, Svarog may have been Ahura Mazda, but since Svarog's name was never invoked, under pain of death, and owing to the absence of temples dedicated to It in Rus', this seems most unlikely.

The Rus' believed that Svarog was far too nebulous to be worshiped by ordinary human beings; only the Volkhyv "Council of Doctors" were permitted to offer Its due tithes. Thus, we may wonder whether or not the Volkhyv "Council of Doctors" was in any way related to the Zurvanite sect known as the "Doctors of Islam". No person could start a day's work unless the communal sacrifice had been offered to It (the Nameless One) via its son, the holy fire. No one was exempt from tendering produce for sacrificial incineration in that most sacred flame.

Svarog was seen as the upholder of justice, oaths and the truth. His aid was brought into being by the unsheathed sword driven into the earth, for where such iron laid naked, so too was Its justice revealed for all to see. This was the most awesome symbolism imaginable to the pagan mind, enough to made you tremble at the knees. Svarog could not accept untruth, and very likely loathed liars, who would not be permitted entry to heaven ...

Perun would see to that!

In the Christian era Svarog was equated with the Lord Sabaoth, or in other words God the Father.

Svarozhich Worshipped daily Svarozhich was also called Svarogich (the Son of Svarog,¹²⁵⁴ or Son of the Sun), Belobog (the White God), Dobrobog (the Good God), or Radigast (Poles). Svarozhich was fire incarnate on earth, Svarog's son, from whom all divine flame originated in the hearths and holy temple fires. He might therefore be favourably equated with fire, the son of Ahura Mazda.

Radigast (the Polish version of Svarozhich) was said to carry a massive two-handed, twin-bladed war axe, and wore a bovine skull for a breastplate, and a helm of a swan. He had rather fierce features including curly red hair.

Another interpretation fielded is that the Son of Svarog was Sva-Rozhich', an Indo-Iranian perception of a horned dog.¹²⁵⁵ As explained thus far Iranians believed one of the Supreme god's sons was the lord of all Devils, a horned winged goat or dog. Therefore Svarozhich might also have represented Chernobog (see p. 308).

The convolutedness of these possible interpretations may also reflect Zurvanite cosmology, and accordingly Svarozhich could also be happily applied to both fire (the Son of the Sun) and the Horned dog (the destroyer).

The name Radigast, who had his own elaborately furnished temple in Poland, could have been derived from Radigasius, the famed Gothic king who held the reigns of power in that region, and who was among those Gothic leaders who led the attack to take Rome. That the temple was bedecked in royal purple cloth, may indicate that it was a centre devoted to the worship of a deified pagan Gothic king and war-leader.

Svyatovit 12 July - 14 October Svyatovit was also known as *Svatovit* or *Chetyregod*, the four-faced god, the four gods in one, or the god of the four times of the year. He was the god of light, daytime, nature, the field, the forest, harvests and home economics. His four faces were white, yellow, brown and black, perhaps corresponding to the Sun's fluctuating energy levels throughout the year, or the four castes (among the Hindus and Aryans, each caste was said to be of a certain colour or *Varna*). They might also signify the four-fold natures of the great Zurvan. Each of Svyatovit's faces pointed to a cardinal point of the compass. He embodied the heat of battle, governed ferocity, physical strength, speed and horsemanship. His particular love was mead and white horses, which were given to him in sacrifice. His prime devotees were pagan Poles, Old Prussians, Lithuanians and Latvians.

Svyatovit's main temple was once situated at Arkona, on the island of Rugen. In the year 1168, Danish troops under Waldemar assailed the cult centre, with the aim of tearing down the temple and idols.¹²⁵⁶ Fortuitously, Svatovit's stone *kapishche* (idol) was dredged from the sea near the old temple, last century (Fig 65.2). It bears a distinct likeness to the Hindu daeva *Brahma* (Fig 26.1), who, in Indian cosmology, was supposed to have created the world. The closeness of the two styles of idol suggests the continuation of Aryan idol-making customs in pagan Europe, as late as the Middle Ages. Just one glance at the recovered idol, affirms Helmold's descriptions of Wendish pagan idols, as contained in the *Chronicle of the Slavs*. Considering that Svatovit was the supreme god of the Rugian Wends, it is plausible that his image represented *Brahma*, the supreme creator God, or, equally plausibly, the four-faced Zurvan, the high god of the daeva-worshipping Zurvanites. Thus the Rugii seem to have been devotees of Hindu/Aryan religion (ie; Daeva-worship). This perhaps resulted from cultural ties with India during the Gothic-Roxolani era. However, they may also have been the descendants of Iranian Zurvanites, who were expelled from Iran for just this same reason, worshipping Daevas. The fact that many of the earliest examples of Hindu temple architecture exhibited Iranian characteristics, has led scholars to conclude that they were built with the aid of Persian stonemasons and architects. These buildings corroborate Magian scripture, which speaks of Indian-Persian cooperation in the field of Daeva worship, which was banned from the time of Karter, but perfectly acceptable before that.

Four-faced idols are known outside of Eastern Europe, in Ireland.¹²⁵⁷ In the year 1835 a 6-foot tall, four-faced wooden idol was uncovered during peat cutting at Derry, on the north coast.¹²⁵⁷ The child who happened across it was overcome by dread, as were the locals who came to inspect it. Some speculate that this figure belongs to a spectrum of little recorded Irish demonological beliefs, perhaps current since Celtic times.¹²⁵⁷ This is because such effigies tend to be more hideous than traditional Celtic idols and reliefs.

Fig 65. 1

Fig 65. 2

Fig 65.3. This gallic Celtic relief depicts a three-headed god, but is it one and the same as Triglav? It is flanked by two other gods, one of which is a man-goat, who stands on its left.

Triglav Triglav (Slavic: The three headed god)

had one head in the netherworld, one on the earth, and one in the elemental heavens. He acted as a spy and official messenger between man, the demons and the gods. Apparently the Wends placed a mask over each of Triglav's mouths and ears, so that he could not hear or speak of things.

The pagan Poles venerated him as a war god, building him the finest of temples, and gathering sumptuous hoards of wealth and war booty inside the sanctuaries, to gain his favour.

If Fig 65.3 is in any way connected with Triglav, then he was most likely worshiped by the Celts too. And not only them, but the people who made a golden libation horn¹²⁵⁸, one of two found in Denmark, for in both cases a triple-headed figure can be seen. Considering this one can suggest that Triglav may had been worshiped across much of Western, Central and Eastern Europe.

Troyan 23 May Troyan, a heathen god who served as protector of the Malorussians, is repeatedly mentioned in early Mediaeval Russian manuscripts. From the mediaeval text *Slovo o Polky Igoreve*:⁷ it is likely that Troyan was actually the long dead Roman Emperor, Marcus Trajan,

who pagan Russes were still worshipping some 700 years later, probably in Mithraic fashion. The Slavic god Troyan invoked bloodshed and war in defence of his people, and to call on his aid the blood of fowls was offered.

We might ask who invited Russian "barbarians" to freely worship a Roman Emperor who had died some 700 years previously, and how such cult activities had eventuated? My guess is Mithraism, the Persian mystery religion favoured by the Romans. According to Vernadsky even Vladimir's pagan name, *Krasnoe Sol'ntse* has a Mithraic genesis meaning the Ardent or Fiery Sun; the reigning Mithra, the ritual and governmental mediator for his people. What is more, the cult of Mithra faithfully worshiped their Emperors, whether living or dead; a further point of correlation.

Troyan appeared as a shining Sun,¹²⁶⁹ which could be a reference to the conviction that (Mithraic) Emperors had entered the heavens in the form of Suns, and could be called upon by those who remembered their names. Certainly Trajan was one of the most loved and accomplished Emperors in Roman history, responsible for settling large numbers of Roman citizens in Dacia (Rumania) and other such locations.

Metropolitan Hilarion states that Troyan appeared as a small man with three snake heads, wings and goat ears.¹²⁶⁰ What this form ultimately signified is anyone's guess.

The results of excavations at Roman-style Chernyakovo culture in the Ukraine, and the recent discovery of a Roman presence in ancient Moscow, plus Ptolemy's *Geographiae* (which shows Caesar's altar as being situated in the Southern Ukraine), collectively suggest that, as with the Baltic area, there was ancient Roman cultural and religious activity in the area, predominantly in the 3rd-4th Centuries AD. These Romans, whoever they were, probably had a major affect on the religious beliefs of later generations in heathen Scythia. These things hint at the stubborn existence of Mithraism, a cult born from the synthesis of Greek pagan Gnostic intellectuals and the Eastern Magian priesthood who presided over the Zurvanite cult of Mithra.

Yarilo 7 Apr - 6 May Yarilo was the god of spring, manly strength and bravery. His virtues were especially embodied in the Spring sun. He was usually associated with a band of lightly dressed *diva* (Russian forest nymphs whose title comes from the Indo-European religious word *Daevas*) who accompanied him carrying a human head in one hand and sheaves of rye in the other. He was therefore reminiscent of the ancient Greek Dionysius, or the Roman Bacchus. Yarilo was also called *Yagelo* and was synonymous with *Yarovit* of the Balts and Western Slavs.

YARILO, THE MALE
FERTILITY GOD

Yarilo, the potent one, rode the lands on horseback, stark naked but for his cloak. His member was of creditable size, whether erect or draped over the saddle, hanging freely. Yarilo oversaw the sprouting of all new shoots from the twisted, winter-struck trees, soil and landscape. Wherever he walked, directing Rod and his Rozhanitsy to fecundate, life sprang up in abundance. Like Rod he was seen as being especially manly, and highly virile; a phallic god if you like.

YARILO MATED WITH
THE LAND

Yarovit Yarovit was especially venerated amongst the Poles, Old Prussians, Lithuanians and Latvians, and seen as the god of Spring and protection in battle. He carried an enormous golden shield,¹²⁶¹ and evidently ran though battle protecting his proteges.

Earthly Deities

The celestial gods had other deities which were subordinate to them, that helped implement their designs in this world. These messenger gods periodically came down to earth from paradise (via the slopes of great Mount Olympus, in the Byzantine province of Thessaly) to greet the people.

SOME GODS WERE SENT
DOWN TO EARTH,
WHETHER SPIRITUALLY
OR IN HUMAN FORM

Another group of earthly gods consisted of kings, princes, Magi and heroes who were divine personages currently living in this world. After death they were perceived to live on in the upper atmosphere, and like the *Yazatas* and *Fravashis* (pagan saints) were ever ready to aid whomsoever invoked their name. Consequently, idols were raised to them after their death (a practice the Russes are known to have followed).¹²⁶²

MANY RUSSIAN PAGAN
GODS WERE LINKED TO
MT OLYMPUS

Following the sighting of a comet in the year 968 AD, a combined and illustrious pagan force under the command of the four Bulgarian Cometopuli brothers, accomplished a great conquest in the Balkans,¹²⁶³ including the overrunning of the Larissa fortress and, presumably, the reclamation of Mt Olympus, which was Holy to the Slavs. Byzantium was unable to recover the land seized there until the pagans were ejected in 1018 AD. Whether or not regaining Olympus was one of the main objectives of these campaigns is unrecorded. Be that as it may, Russian heathen pilgrimages to this (once-Mithraic) "holy site" were now possible during the last decades of the 10th Century AD, since the Byzantine Emperor's forces no longer controlled its slopes.

Artemid In an 11th Century Russian church source we hear of an *Artemid* among the great many other gods worshiped by the peasantry.¹²⁶⁴ Artemid is evidently a version of *Artemis*, the name of Apollo's sister, the Greek goddess who led a wild hunt, surrounded by packs of forest nymphs. Artemis fired arrows at whomsoever displeased her. The Roman counterpart of Artemis was of course Diana, a goddess whose cult is highlighted in the late mediaeval text *Malleus Maleficarum*, as being involved in the arts of witchcraft in Germany. It is crucial that we

ARTEMIS, THE MISTRESS
OF THE WILD HUNT

HER DEVOTEES
PERSECUTED IN
MEDIAEVAL WITCH
TRIALS

realise that Russian Orthodox writers were not in the habit of transcribing the names of local gods using Greek or Latin names. In fact it would be true to say that there are hardly any examples of it. Artemid is therefore an exception, and so this data strongly advocates that Russian priests have provided us with contemporary accounts of Artemis before 1100 AD. Consequently it is rather certain that Artemis had a cult following in 11th Century Russia, some 200 years before the wild witch packs of Diana were noted by their Catholic counterparts. Once their alleged presence in the Holy Roman Empire was discovered witch persecutions erupted, as clergymen attempted to staunch the flow of witchcraft into the area.

A MAGIAN DIVINITY

Bereginya Bereginya¹²⁶⁵ was Svarog's hand on earth, the embodiment of the planet earth itself and the bond between heaven and earth. She tilled the soil with a massive golden plough, and so Svarog sent her to earth to teach humanity how to irrigate, plant and sow. The ploughing goddess had a secret circle of Volkhy who performed her services. In *Yasna I:21, II:27, III:35* we discover a Beregya, which happens to be the name of the Zoroastrian Yazata responsible for causing increases in the abundance of cereal crops. In *Bereginya* we may have further very specialised evidence of the Magi; female Magi at that.

DIVA

Diva 6 Dec - 19 Jan Diva was the goddess of hygiene, body scents and odours, female beauty and the truth. In one hand she held a horn or antler, and in the other a pair of small cups symbolising luck (or the libations which they contained, which brought luck?). Her hair was neatly woven into a single plait, and crowned by a coronet of periwinkles. She was the earthly counterpart of the Luck Goddess Dolya, and thus played an indispensable roll in changing one's day to day lot, as dispensed by Dolya. She was normally given specially baked bread as a form of sacrifice, which was eaten by those seeking good fortune, or tossed into springs for intercessions. Diva is yet another deity whose name is derived from Daeva, the Aryan word which denoted the beneficent gods. A coincidence?

HERCULES

Diy 25 Jun - 25 Jul Diy was the god of manual dexterity, strength, energy and raw talent and commonly perceived as the Russian version of Hercules, radiating vitality, strength and might in its purest form. Diy imparted health and strength upon those whom he favoured.

During the times of ancient Greece, Scythia and the Bosphoran Kingdoms in the Crimea, the Ukraine was the premier wine-growing centre for the region, which fed the Bacchic lust for their fermented juice. Throughout these areas numerous statuettes of Hercules have been found by archaeologists;¹²⁶⁶ they were quite common. In antiquity, Hercules was seen as the male progenitor of the Royal Scythian race, and other minor clans of the Scythian tribes,¹²⁶⁷ so his cult evidently had a lengthy presence in Russia. Hercules was also worshipped by the Germans as Donar, as noted by Tacitus, something which, I believe, identifies some of the German tribes as having originated among the Scythian nations. Of further interest is the fact that Tacitus places the *Pillars of Hercules*¹²⁶⁸ to the North of Germany,¹²⁶⁹ though whether these were the massive pair of columns depicted in the vicinity of Russia and the Baltic c. 150 AD (qv. *Cosmography*) is hard to say; certainly Russia is not to the North of Germany, and those mentioned by Ptolemy were called Alexander's columns.

PEACE AND HARMONY

Karna 14 Oct Zhelya's sister, Karna, cried for men at arms marching into combat, and those who had fallen on the battle field.

Klechal'nitsya 25 May - 25 Jun She was the goddess of verdancy, grasses, medicinal herbs and the protector of people against Rusalka water nymphs, and other harmful forces residing in water and out the forests. Klechal'nitsa¹²⁷⁰ was the earthly offsider of Khors. People sacrificed dried floral arrangements, wildflowers, petals and stems to her.

Lado 22 Mar Lado¹²⁷¹ was the god of peace, harmony, goodness, a happy family, love and excellent inter-personal relations. He appeared as a kind old man with his right hand raised in benediction and his left hand holding a cobra headed naga snake. He was associated with the planet Venus, the morning star. Moreover Lado could be equated with Latona of the Romans, and Leto of the Greeks. Due to the phonetic similarities it is possible to say that Lado was actually a slavification of the Classical Greek divinity Leto.

Lel' 19 Mar Lel'¹²⁷² was the god of the earth, love, the extended family, white sorcery (white poppetry, healing and good bindings), beauty, and the son of Lado and Ladi. He was said to resemble a Christian Archangel, and was associated with the constellation Sirius. Although resembling the celestial angels of the Magian book of *Bundahishm*, Lel' name *does not* equate with Tistar, Sirius' angelic name under Zoroastrianism. Thus Lel' cannot be linguistically linked with the Zoroastrians/ Magians.

THE GOD OF THE
CONSTELLATION SIRIUS

Marena 22 Feb - 20 Mar Marena¹²⁷³ also went by the name Morena. She was the Goddess of Spring and wild flowers, a patroness of the Seas and Oceans, and the earthly counterpart of Kupala. In the past she was also considered to be the goddess of sorcery and death. When she came ashore, it would be as an epidemic or to cause some death, perhaps by drowning. Marena might therefore have been confused with a demon of similar name, a confusion born from the mixed perceptions of Ahura and Daeva-worshippers. Marena was linked with Dana in the Heavens. The name Morena is almost identical to that of the Celtic Goddess Morana. This may not be a coincidence considering the apparent links between Russia and the British Isles described throughout this book.

A GOD KNOWN IN
OTHER PARTS OF
EUROPE

Nemet' 25 Nov - 19 Dec The god Nemet'¹²⁷⁴ appeared as an oak tree (perhaps Perun's oak), its trunk fully clothed in fallen leaves. Nemet' caused trees to shed their foliage each autumn, and he was Moksha's earthly counterpart. Based on *Bundahishm XVIII: 1-7, XIX and XXVII* it is possible that Nemet' was conceptually the same as the Zoroastrian Gokard, a tree that also appeared in a defoliated state.^{1274a}

Radunitsa 14 Mar Radunitsa¹²⁷⁵ was a goddess who acted as a confidant to those who prayed to her, perhaps giving advice via inner spiritual locutions. She was the patroness of good things, grief, nostalgia, fond memories of the deceased, speaking reassuredly to them, to make them happy again. She was the divinity of fun and laughter, and was called upon by "white" families to help them overcome evil doers and sadness.

Obida No calendar entry Obida¹²⁷⁶ was the goddess who smiled readily upon the handicapped, the unlucky, those who had lost all dignity, and those whose reputations had been destroyed or tarnished. She was the sister of Zhelya and Karna, and the enemy of the demons Blud and Bida.

OBIDA, A FRIEND TO
THOSE IN NEED

Oderzhima 25 Jun - 25 Jul Oderzhima¹²⁷⁷ was the goddess of dedication, persuasion, loyalty and conjugal harmony. She was Diy's (Hercules) lover, and patroness of artists, musicians and poets, and regarded by some as the Roman Diana. She aided Khors, Kupala, and Veles', and the heathen *skomorokhy* sang odes to her.

A GODDESS THAT
PATRONISED THE ARTS

Or 6 May Or¹²⁷⁸ was the God of agriculture, vegetable and cereal growth and the plough. His kumirs appeared as a young man with long auburn hair, harnessed to a great golden plough. The name Or is perhaps related to the Old Icelandic *Ardr* ("a simple plough").

THE PLOUGH GOD

Planidi The planidi were lesser entities born of the Rozhanitsy, which appeared much smaller than the Rozhanitsy and considerably younger. They looked after the children of the family and tried to keep them out of trouble and warned them away from the sorts of mischief that youngsters get into.

Pozvid 9 Aug Pozvid¹²⁷⁹ was also called Palikopa, a god who protected home and property. He served Perun, protected the family home, its crops and inhabitants from dyemony, thunder, hail, storms, lightning, earth tremors and quakes. I guess you could say Pozvid was a model hail-spotter. But what was a hail-spotter?

In the Byzantine Balkan province of Peloponnesus, there are stories of specially commissioned Hail Officers¹²⁷⁹, whose sole function was to watch the heavens for impending cold fronts carrying hail clouds.¹²⁷¹ The official then sounded the alert so that everyone had enough time to start bloodletting, which would feed the spiteful cloud dyemons, and make them veer from their course of crop destruction.¹²⁷¹ But god help the lazy hail spotter who didn't allow everyone proper warning!

HAIL SPOTTERS

We know that the pagan Rus' also had hail spotters, but their activities varied from those of the Peloponnesians. The Volkhvy performed the vital role of "Storm-chaser"¹²⁸² (maybe using their astronomers to calculate the dates and times for intense storm and lightning-strike periods). Usually though, they attempted to allay the demonic ferocity of a storm by *melodious musical recitals and bell-ringing*. These may have been Neo-Pythagorean musical dissertations using harmonic theory to calm the cloud-demons. Perhaps the blood-letting of the Southern Balkans was only

THE VOLKHVY STORM-
CHASERS

practiced in Rus' close to harvest time, when there was a risk of significant crop losses due to hail, though this is mere speculation.

Predok On feasts for the dead Predok was the psychopomp, the soul escorter of wrongdoers. It appeared in the form of a man with the head of a spider and an arachnid-like body possessing six segments and eight arms, with grotesque hands. It was said to be the earthly helper of Kolyada.

SOUL ESCORTERS

Pryadko On feasts for the dead Pryadko¹²⁸³ was the patron psychopomp of the "white" ancestors. Normally Pryadko appeared as a softly glimmering light, and Christian peasants thought it reminiscent of the Holy Spirit. This deity regulated births and deaths and acted as a guardian for fleeting souls going to the next world to inherit the lot of the good families. Pryadko acted as Moksha's helper.

A GODDESS WHO HELPED
WOMEN IN THE HOME

Priya 28 Aug - 14 Dec Priya,¹²⁸⁴ the sister of Diva, was the goddess of women's chores, and cleanliness in the home. In Christian times, her pride of place was surrendered to the Virgin Mary. Women beseeched Priya's aid to prepare them for the moment of childbirth, to ready the house to receive the child and forever after help maintain its cleanliness.

TRIBAL PROGENITOR
GODS AND GODDESSES

Rod 1 Mar Rod was the very embodiment of male fertility, and the tribal progenitor god. His idol was normally represented as a venerable man in a seated pose, with his hands clasped to his breast, as though in prayer. Before preparing for marriage and children, people brought a cow or porridge to his idol for sacrifice. To some, Rod appeared as a burlesque well-hung male. His long hair and beard were well groomed and he usually wore only a cloak about his naked frame. He was the begetter of all children and animal offspring.

Rozhanitsy The Rozhanitsy were a progenitor goddesses, deities of child birth, childbearing, the family bloodline and good council between family members. From stone renditions of them, we know that they took the appearance of women with animalian limbs. These were Rod's concubines of the earth, female elemental gods of considerable number. They had been endowed with their fertility by Moksha and without them the tribes and clans could never had eventuated or grown. They were frequently seen as voluptuously enticing women, strangely endowed with outlandish appendages. Clad in nothing but fresh air, it was their form and predilection for saucy escapades that most young women devotees aspired. Each tribe had their own patron Rozhanitsa, the child-giver who gave birth to the tribe at the beginning of the ages.

THE GOD OF VICTORY
AND GLORY

Slava 22 Mar Slava¹²⁸⁵ was the god of victory in war, and aided folk in overcoming their toils, difficult tasks, business ventures and legal matters. He appeared as a fairly strong, fully grown man whose head was crowned by a victory coronet woven from ivy. This deity was invoked prior to combat, trial by combat, during tournaments or the athletic contests which took place during the games held by the Slavs. His intercession was said to be able to allow the most marvellous feats, but only if a floral victory garland was presented before the god's idol, and then worn. Young rams, roosters and goats were sacrificed to him.

TYR POSSIBLY FOUND IN
BOTH RUSSIAN AND
NORSE PAGANISM

Tyr 14 Sep Tyr¹²⁸⁶ was said to be the god of deals, manly strength, agility, the indomitable spirit, and belief in one's self and one's abilities. His great wooden idol was topped by the image of an iron auroch's (bull's) head with two silver horns. The idol was clothed in mail, and in its right hand was a short hand-spear and sword. To him were sacrificed she-bears, horses and goats. Tyr was said to emerge from deep within the stone mountains on the eve of Kupala's festival. He would then blow a horn which caused the spirits of the earth and nature to violently shudder and come alive, allowing them to enter out into the world of mankind for but a short time. This was a very dangerous period. Based on a similarity in names, we can infer that Tyr had a counterpart in Norse mythology, Tyr.

WAS THE RUSSIAN GOD
VILI, REALLY ODIN'S
BROTHER?

Vili 15 Feb Vili¹²⁸⁷ was the patron god of married people and relations outside of the nuclear family, ie; in-laws. People prayed to Vili so that deceased spouses and other family members would be cared for, and each person in the family prayed for each others welfare through him.

The Northmen believed that a god called Vili¹²⁸⁸ was one of Odin's brother, who in company with Ve and "Old Grey Beard", slew the Giant Ymir, whose body made the world. In relation to this dismemberment myth the

Zoroastrian/Zurvanite texts tell us that the world came from the dismemberment of Gayomard's body, and among the Aryans it was said to have come from the slain body of the giant Yima. Thus the Norse conception of the world's birth graphically shows that they were party to Aryan or Iranian cosmological beliefs. Even more so when you consider that Ve, Vili and Odin were the grandchildren of an ancient cow.

Zhelya 14 Oct Zhelya¹²⁸⁹ was the goddess of sorrow, tears, and desperation, and consoler of those to whom she showed pity. Her idol appeared as a seated woman with long flowing hair, and hands covering her bowed face. She cried tears of pity for barren women and widows.

CONSOLER OF
SUFFERING

Zorya Utrenyya and Vechernaya These two cloud maidens appeared as the auroras which lit the morning and evening skies with their wispy glowing veils. In times of war, they appeared as virgin warriors who accompanied men into battle, protecting them from the harm of wounds. The Zorya's also cared for Khors' chariot steeds. It is thought that Zoryas might embody the ancient Aryan cloud-maidens, however a far closer parallel exists in Magianism. The Magi worshiped the Auroras, in the morning and evening during the *Gah Ashunin* prayer watch, and affirmed that the two Auroras were accompanied by, or in the presence of heroes and horses.

The Winds The pagan Slavs worshiped the winds which blew from the North, South, East and West, and from the other cardinal points. These were personified as gods which were bowed to whenever the wind changed direction.

Demon Gods

Russians did not have to wait for the advent of Christianity to know and fear the demonic forces who, in a most unwelcome way, lurked about certain notorious places, embroiling themselves in the day to day affairs of ordinary folk. And what better place was there to find them, than the sides of hills, bogs, swamps, mountains and thickets of the deepest darkest forests. The Rus' landscape was oppressed by ever-present, shadowy demonic forces, many of which are listed here. *Bundahishm XV: 18* and Iamblichus explained the earliest beginnings of devil worship, and the nature of their deeds.

IN RUSSIA DEVIL-
WORSHIP HAD PRE-
CHRISTIAN ORIGINS

According to surviving much-told Russian mythological stories (*which are virtually identical in nature to Magian eschatological myth*), Satan (read Ahriman) was thrown out of heaven, and plunged down into the centre of the world, while his confederate spirits, the demons, landed in swamps, forests, bodies of water and other such places. And for this reason the various species of Slav demons gained names which were related to the environment in which they lived.¹²⁹⁰ For example there were *Polisun*¹²⁹¹ (Malign forest demons), *Ocheretyanik*¹²⁹¹ (Demons of the reeds and grasses), *Bolotyanyk*¹²⁹¹ (Swamp, bog or marsh demons), *Ambarniki*¹²⁹² (unclean spirits, which lived inside pieces of amber. I believe they were fossilised insects), *Nochnitsy* (Night demons) and *Morozhka* (Frost demons). Regarding the Russian *Nochnitsy*, the Magian Zoroastrians believed that blackened corrupted beings, in the form of night demons, rushed out into the world *the very moment the Sun went down*, to lay claim to their kingdom of the night until dawn. And as they raced about they brought various untold afflictions to the earth. From the Magian scriptures we can infer that the Slav demons (who, as in the Aryan tradition, were like goblins) started to cause defilement, destruction and pollution within their immediate environmental sphere after having taken up residence at these places. Then came long years of notoriety; their names endured for centuries. For example Antsybal, Anchibal, Anchut were the various names for a certain bog demon resident in the Kursk area.¹²⁹³

DEMONS OF PLACE

SOME RESEMBLED
GOBLINS

An endless parade of creatures frightened small children ... *Baba-Yaga, Babai, Babka Mara, Baga, Badai, Bomka, Buvan, Buka* (similar to the Gaelic *Boucca*), *Bukan, Bukanko, Bukanai, Bukaritsa, Vova*, to name but a few.¹²⁹⁴ We can't confirm that scaring children was their original harm patronage under paganism. Perhaps it was, though these particular demons might have had their powers reduced in Christian times, becoming little more than squeamish tales to control disobedient children. Just the same, what child hasn't seen shadowy figures, or heard ghostly rustling at bed time?

THOSE WHO PURSUED
YOUNGSTERS

Similar views were most likely held on the British mainland as well. For example, the English words *Bog* (a section of swampy ground), *bogey* ("an impish goblin"), *bogus* (something false or sham), *bogle* ("a dark spectre") are most likely the fossilised remnants of ancient rites once performed in Britain during which black sacrifices were

made to infernal beings in a swamp. As we know from the unearthing of bog bodies in England, these primeval sacrifices did in fact take place. These British links can be directly related to both heathen Slavic and Magian words for "a god". And this is simply no coincidence, for in Ireland and England, one of the pre-Christian deities was a goat by the name of *Puck* (which it has been theorised came from the Slavic word for "a God", *bog* (pronounced bok). An alternative meaning for *Bog* was "a devil",¹²⁹⁵ and this probably reflects the inherent duality present among their multi-formed gods, but it could also have been used as a Christian slur, when speaking of the old gods.

DEMONS LESS POTENT

Vrazhok, Vrazhko, Krivoi Vrazhonok, Vrazhonok¹²⁹⁶ were general labels applied to *Besenok*¹²⁹⁶ and *Chertenok*,¹²⁹⁶ a lesser class of demon, of much smaller stature, in terms of their size and unspirituality.

THEY HAD MANY SUPERNATURAL ABILITIES.

Slav pagan demons had the ability to cause disease, fevers, crop failure, stagnate water, kill stock, extinguish fires, spoil food, destroy property, cause cold and destructive hail, prompt weather changes (as they rode about in the storm clouds), cause prophetic visions, and engaged themselves in milk stealing, and other such malignant enterprises.¹²⁹⁷

DEMONS COULD ALSO BE OF ASSISTANCE TO MANKIND

But they could also be helpful to mankind, if given offerings and worship. Many possessed remarkable skills and knowledge denied to mortals, which could be exploited by anyone wishing to enter into a pact with them. Having formalised a covenant with a demon it could be expected to work in the fields, or serve its master by slaving away as a smith or carpenter. One ancient recollection of such human-demon companionship among the Slavs is to be found in the Russian tale of the *Smith and the Devil*¹²⁹⁸. Demons were therefore no less than gods, in that given homage, they would provide aid that was at least equal to anything provided by the celestial gods. In Finland devils were responsible for causing havoc in the lives of even the greatest heroes. The devil himself misdirected Vainamoinen's own axe blows to slice open his foot, which almost killed him.¹²⁹⁹ Demonic servants are also implied in the Kalevala too, for a Finnish hero commands: "To the Devil with this toil! Let the Demon fell timbers".¹³⁰⁰

DRUGS

The pagan Gnostic priests of Egypt and Greece, and the Chaldeans professed a similar doctrinal stance relative to the daemones. Despite the possibility that Slav demon-worship may have come from these sources, linguistic evidence tends to suggest that the *Norse, German, Slav and Frankish* perception of demons is derived from the Iranian conception of these blackened winged fiends which the Avesta called *Drug*. In Russian the words *podruga*, *drug* (singular) and *druz'ya* (plural) all mean "friend". These Russian words might have had a Frankish phonetic parallel, *dusii*¹³⁰¹, demonic succubi with illusory forms. These *dusii* often took the form of satyrs and Pans,¹³⁰² who ravished and debauched the forest nymphs. *Dusii* can therefore be equated with silvan beings, long regarded as integral to Greek Dionysian ritual and belief. In the Norse a *draugr* was a being from beyond the grave, an apparition, ghost. In Zoroastrian (and Magian Zurvanite?) terminology a *drug*¹³⁰³ was a lying demonic force, even an incarnate falsehood. It is highly significant that *drug* is the Russian word for "a friend", and confirms existing village folklore and *Primary Chronicle* accounts that the demons were regarded by some (but not all) pagan Slavs as helpful or friendly forces.

Another obvious connection can be found in the Old Russian word *drozh'* ("trembling" or "shivering") which is related to the Lithuanian *drugys* (meaning "a fever" or "a butterfly"), and the Old Prussian *drogis* ("a reed"). These words probably originated from the Avestan *druj* or *draoga* ("a lie" or "a deception"), which gave rise to the Old High German *driogan* ("to deceive"), not to mention the Old Iceland *draugr* ("an evil apparition").¹³⁰⁴ The presence of Magian terminology and concepts concerning demons are clearly attested to in the above word survivals, as too their connection with certain misfortunes. Thus, in these linguistic correlations we find evidence of demonic entities which brought harm and burdensome vexation into the world, a point which is greatly expanded upon in Chapter VIII, the Black Rites, and Part II, Chapter VII.

The Old Slavonic word *chr'n'* ("black") is common to all the Slavic peoples of Europe, the Baltic and the Balkans, as is the word *chort* (the word for "a devil" during Christian times), though *bes* ("a devil") was more commonly used during the pagan era. The origins of the word *bes* are still being debated, but it is believed to have come from Indo-European and Sanskrit words denoting "horrors"¹³⁰⁵. Even so, a rendition of Bes's head (a benign dwarvish demon widely worshiped in Egypt) was found in a Scythian tomb,¹³⁰⁶ so plausibly the Egyptian demon Bes was known in Slavia and may have given rise to the Slavic word *bes*. In the Smolensk region we also find the word *mardui* ("a devil")¹³⁰⁷ which comes from the Estonian *mardus* ("an apparition", "a malign spectre" and "a voice from

Fig 66. This dwarvish creature was a benign demon, known affectionately to the Egyptian Pagans as *Bes*. Could this be where the Russian word *bes* (meaning "a demon") comes from?

beyond the grave”).¹³⁰⁷

In Rus', dark forces were formally worshiped in accordance with Volkhvy decrees on certain festivals, but outside of this they were probably normally left well alone (by the “white” families and white Magi who followed the Good Sun), or blatantly worshiped (by the “black” families, piratical warlocks and witches who followed the infernal prince of the underworld). In their estimation, the fools of this world had not caught on to the great secret; as far as they were concerned the demons were gods, because when given sacrifices, they performed whatever you asked of them. People called upon the tricky dyemony for many reasons, often for selfish motives, and sometimes for the common good. Some sought to conjure demons to press them into service in their fields, forges and craft workshops, to enhance both productivity and the quality of their goods.

From Russian sources, and court transcripts and confessions made during the Inquisitions we gain an insight into the religious life of the black families. In pagan times their ceremonial worship of the Black God was at least as elaborate as that supplied to the Sun God, and apparently they met one or more times per week to give their master his necessary offerings. In the Christian era their little cult gatherings were dubbed “Black Sabbaths”. *Bundahishm XXVIII: 1-46* extrapolates upon the names and natures of the Iranian demons and the planetary essences obedient to Ahriman. With the exception of *Viy* and *Niy* they were not included in the Slavic demonic “pantheon” under their original Iranian names, but had undergone Slavicisation over time.

In Christian times, and amid the “white” pagan clans, these “black” pagan reactionaries were seen as a fountainhead of purest wickedness and crime. Far from allaying the demons and their warspite, the black families (intentionally or unintentionally) allowed them to swell to far greater size; cultivated in ferocity.

The Magi spoke of the existence of Vaes, spiritual essences that followed a person around for life. There were two kinds of *Vae*, Upper Vaes (good ones) and Lower Vaes (bad ones). Upper and lower Vae's were similar in nature to the aerie daemones which were invoked by the pagan Gnostics and Chaldeans.¹³⁰⁸

Demons were known in Ireland too, possibly a Christian import, possibly not. An outbreak of pestilence in the year 1084 AD slew up to 25% of the Irish populace.^{1308a} The culprits were supposed to be demons inhabiting the norther quarters of the world, where remote skerries were situated.^{1308a} The paths they trod reached skyward into the upper atmosphere as far as the clouds. Little was preserved about their alleged forms. They were described as having fiery, sword-like tongues, but any mention of wings is lacking.

Having spoken of demon gods as a religious concept, we will now progress onto the more infamous demons of pagan Rus'. In the following entries *some have their own feast days*. That some do not might only be indicative of lost information, or their more general nature, or even their greatest potency, which needed to be appeased all year round.

Bida No calendar entry Bida¹³⁰⁹ was Chernobog's she-goat whore, the female prototype for the pagan demonic form and the “bitch” who gave birth to them. Besides her brood of harm-bringers, which created enough suffering in their own right, she caused deformities and poverty. Considering that another of Chernobog's nicknames was *Lukavii*, Bida's pseudonym might have been *Lukan'ka* a dialectal survival found in the Yaroslavl' region, that applied to a certain demon. Bida may even have been the Slav name for the Great Whore made famous by Zurvanite mythology. From her came the vexation of black magic and abominable deeds without end.

Blud 22 Oct - 22 Dec The demon Blud¹³¹⁰ appeared as a little old man, bent double with a degenerated spine, leaving it malformed by a large hunchback. He traversed the land draped in an owl's skin, and incited wounds by whatever means. Wound infection and blood disorders were his specialties.

I believe that Blud was in reality the Black Fravashi (ie; a black Magian Saint of Evil) of a high ranking Varangian named Blud,¹³¹¹ who acted as a military advisor to Prince Yaropolk. In collusion with Prince Vladimir' he plotted to slay Prince Yaropolk. At the instigation of Vladimir', Blud (who was presumably bound by an oath of loyalty to Yaropolk) was urged to lead his liege into a trap, whereby he could be slain before Vladimir'. In repayment for the timely treachery of Blud, Vladimir' promised him great honours, and *would regard Blud as his father*. This meant that Blud would become Khagan Vladimir's father in an ideological, or even religious sense. Perhaps it was intended that Blud would become his closest personal confidant. Yaropolk's closest advisor, Varyashko, urged him to go and see the (mostly Zoroastrian) Pechenegs to raise an army and fight Vladimir'. Note their level of confidence, in suggesting

FEAST DAYS FOR THE
DEMONS

BIDA, CHERNOBOG'S
WHORE

THE DEMON BLUD
MIGHT ONCE HAVE
BEEN A MAN WHO
BETRAYED HIS OWN
PRINCE

Fig 67.1 Celtic Bronze Age demon

Fig 67.2. This horned winged being has a tail, shaggy hair, and talons. We might think its a horned dog, or perhaps a goat with talons. It is possibly a depiction of Ahriman/Chernobog as found on ceramic plates - Mediaeval Germany c. 14th C. AD.

This creature's resemblance to demons shown in Assyrian artwork (dating to the 9th Century BC) is uncanny.

that the Zoroastrians would place forces at the disposal of white Russian princes. Instead Yaropolk trusted in Blud, who then escorted Yaropolk to see Vladimir'. As soon as Yaropolk was through the doors of the Royal court in Kiev, Blud bolted the doors shut behind him, while two Norsemen ran the prince through with swords. Following this Varyashko sought refuge among the Pechenegs who in turn went to war against Vladimir' for a very long time. Nowhere is there any mention of money being paid to them for their services. It might be on account of his pivotal role in the treasonous betrayal and bloody murder of his own lord, *that Blud became* a widely respected demon, and gained patronage over bloodspilling, petty thieves and perhaps even assassination.

Connected with Blud is the concept of Blud's fire, which is a reference to the ghostly lights that often appear in the vicinity of bogs after nightfall.¹³¹² Far from being ghostly apparitions, these lights were probably chance sightings of witches in the distance, as they made their way into the bogs to perform their nocturnal rites.

Chernobog No calendar entry, but it is known that Chernobog¹³¹³ was worshiped at silvan Sabbaths conducted one or more times per week where ever possible. Chernobog, the Black God, can be directly equated with Ahriman or Aharman (Magians), Satan (Christians and Jews), Ahriman-Shaitan (Muslims), Deus Arimanius (ancient Rome), Abraxas, Seth, Sutech, Set (Egypt). Also called "Lord of Chaos", "Prince of all the underworld", "Son of Darkness", "The Fiend". Chernobog was thus the embodiment of evil in its most pristine form. In Western Europe the devil (ie; Chernobog) was dubbed Puck, Bok, Bouca, Old Nick or Robin Goodfellow, but in pagan Rus' just some of his other folk nicknames were Nechistii (the unclean one), Kutsii, Lukovii, Kat (the Cat), Did'ko, Okh and Mel'nik (and many others which will be examined in Part II, Chapter VII). Among the Slavs he was deemed to be the God of Evil, the Father of maledictions, black magic, darkness and disaster.

Because of Ahriman's convincing powers of illusion, the Persians normally depicted him in several forms, as either a huge, black, horned hound or goat, with wings (evidently of Assyrian origin); or as an immense reptilian serpent. In Magian Zurvanite belief Ahriman was the dispossessed and jealous brother of the creator's most beloved son (the Good Sun). Frighteningly dark, blacker than the most moonless night, Chernobog, harbinger of doom and all evil was a name that incited instant fear. The mere mention of it invoked either plague, or debilitating injury to the speaker or the listener. From descriptions of the Slavic Black God, Chernobog we know that *this Black God of the Poles and Eastern Slavs was identical in appearance to Ahriman, a gigantic black goat or dog, with wings, a tail and enormous horns*,¹³¹⁴ who reached out and blighted the world at will daily. From him came the acts of treachery, lies, corruption, decadence and cowardice beyond knowing, which he offloaded upon the world, whilst slinking around in the shadowy corners of our surrounds. In certain regions of Eastern Russia it is still possible to find dialectal survivals that appear derived from the name "Ahriman". Of added interest is the Russian word *kozyulya*, a variation of *koza* ("a goat"), that paradoxically meant "a serpent".¹³¹⁵ The connection between goats and serpents is obviously not a physical one, but rather metaphysical. In this particular case I believe the correlation arose from pagan Russian perceptions of Ahriman.

In Russia the terms *vorog*, *vrag*, *vrazhnoi* (meaning "the enemy") applied to the devil,¹³¹⁶ Satan, and for this reason it may once have applied to Chernobog in pagan times. Loosely speaking one could also translate it as "the Adversary", a term used to described the Evil One in both Christian and Magian scripture.

It seems that Ahriman/Chernobog did not confine himself to Rus' and Iran. Distinctive black, horned, winged goat-dogs that appeared during the early mediaeval period on things as diverse as German ceramics (Fig 67.2), and the hem of the Bayeux tapestry. Together with griffons, fire-birds, serpents, rampant lions, hounds and mastiffs, they represent fine examples of Persian and Caucasian religious art, that just happened to surface on the Norman Bayeux Tapestry, European and British coats of arms as well as the Welsh national flag. Iranian art must have been very popular indeed in Mediaeval Europe! We might link the proliferation of these kinds of imagery in Britain to the (quasi-Iranian) Roman Mithraic presence, but most likely it stemmed from early waves of German migrants who re-located to Britain after the collapse of Roman rule, especially from the 5th Century AD onwards.

According to Rus's first Metropolitan (or Archbishop), Hilarion (and references to the Antichrist contained in *The Primary Chronicle*), the mystery of Chernobog was a secret no longer; "The Black God" was the Antichrist. The evil one's name in Old Icelandic was *Antikristr*.¹³¹⁷

By matching Slav descriptions of Chernobog with the Zoroastrian/Zurvanite eschatological myth concerning Ahriman the black god, Chernobog could be regarded as the "living falsehood" who claimed to be God's other

son, a dyemon of supremely impious angelic substance, superlative in wickedness, who had for untold aeons gained sustenance from his very special devotees, the doers, thinkers and speakers of evil, the Kolduns and other artificers of maleficia. He would therefore wage war against the Good Sun (Dazhbog/Keres), and under his guiding hand the earth of creation became transformed into a cesspit of decay, as per the Great Whore's plan.

As you will read Orthodox and Catholic clergy and Inquisitors began encountering devil-worshippers in the Balkans, plus eastern and central Europe during the early Mediaeval era (centuries before the great witch trials), with greater frequency. For the Byzantine Church, the field of battle was only just warming up for the final showdown. The "devil's priests", the Volkhvy wolves, had to repent and desist from their unwelcome and unholy offerings or be hounded to death by the Cross.

In the Middle Ages the Vatican also had similar ideas, evidently including the extermination of unrepentant black Magian bloodlines operating within the confines of the clergy and the community, almost derailing the conversion process from one end of Christendom to the other. These were seen as the worst of reprobates, a larder from which Chernobog fed, becoming rapidly bloated with the full weight of mankind's sins. These religious concepts are further examined in Chapter VIII.

Chuma The demoness Chuma¹³¹⁸ was the embodiment of pestilence, and the plague, appearing as a lanky, blackened crone, with sagging breasts. She had serpentine eyes and bovine hind legs. During ancient and mediaeval times disease was deeply feared as nature's most efficient killer, able to slay the greatest warriors without mercy. For this reason Chuma was a demon god that had to be shown due respect and reverence ... otherwise she peddled cankered sores and diverse maladies.

Igrets The demon Igrets played ungodly, discordant music, and was known throughout Southern and Central Russia.¹³¹⁹

Grets' 1 to 9 Aug Grets'¹³²⁰ caused paralysation of the body, usually by means of a stroke. Grets' was also known by the name *Strakh* (fear) and *Perestrakh*. He appeared as an evil man, tall and with the face of a fox. Beneath its cowled blackened robe, its dark eyes penetrated deeply into the mind of those it saw, and its facial fur gave off a slight greenish hue.

Karuchen 25 Dec Karachun was a death demon or evil spirit connected with the winter solstice. His name appears in the Kolyada hymns.¹³²²

Kikimora 1 Mar Kikimora was also called Kuchmara; one of Mara's daughters. Kikimora was small and black, with beady green eyes, and wore a shawl over her tangled, greasy hair. Her ears were like those of a goat, her snout long and pointy, and she had the legs of a chicken. She was a magical weaver, or a dream weaver, who normally entered a person's home at night via the chimney which was fitted to the back of the oven. The Domovoi (the family's ancestral house spirit which lived in the oven) often permitted it to enter at night, for an unspecified price, and if you were careful you could even catch them chatting amongst the crackling oven embers. Outside though, especially during daylight hours, Kikimora manifested herself as a whirlwind or hurricane, often rousing the spirits of nature into a howling elemental riot. Among the Germans there is mention of *Mahr*, and the French *Cauchemar*, both of which designated a terror that afflicted the night.¹³²⁴ Thus, Kuchmara had devotees throughout France, Germany and Slavia.

Korkush 22 Apr Another of Mara's squirming little "mistakes of nature". Korkush the patron demoness of maggots, serpents, dragons, pests, rust, filth and pus, was a loathsome hag whose weeping facial sores added to the impact of her sleepy, deeply wrinkled face.¹³²⁵

Mara 16 Dec - 18 Feb Mara¹³²⁶ was the sullen demoness who prompted nightmares, fear and dark thoughts; who had not been touched by her? In the accounts of those who had seen her, she was depicted as an evil hag, with the trademark long crotchety nose, and who continued her slimy existence in the underworld, scoffing down tadpoles, salamanders, moss and anything else vaguely nutritional found in the cold dark places she preferred to frequent. Swamps and bogs were her favoured haunts. In some tales she was equated with Baba Yaga. More often than not she chose to loiter in the cellars or cool-storage pits of abandoned houses. If she entered the cellar of an

inhabited dwelling undetected, preserved food, wine and other perishable provisions would be spoiled.

Mara was thus the eternal enemy of the Domovik (the benign spirit of one's family's male progenitor, who lived inside the stove), who was always on the look out for her disruptive antics. Mara hated dogs (as did all Iranian demons), and would change into a stick, woven basket or nocturnal bat if set upon by them. She and her daughters could change their shape at will and enjoyed varying their facial features to masquerade as one of the family members. These deceptions were a great amusement to them. By Marnik she bore twelve wretched daughters, who behaved just like their mother. Mara was also the death-herald, to see her was to be dead in but a short time.

Mara is also the name of a Buddhist demoness-hag, no doubt a vestige of an old Aryan belief. The collective memory of her remains among the Irish (Maro or Morrigan), the Basques (Mari), the Slavs, Greeks and Germans (as Morava, Mora, Mara).¹³²⁷ In each case these words, which are ultimately of Indo-European origin, signify a living terror or nightmare. In other parts of Europe she was linked with burial mounds and underground places such as caves. Apparently she also took the form of a moth, the bland colourless butterflies of the night.¹³²⁷ Norse epic made note of her doings too:

"Driva bribed the witch-wife Huld, either that she should bewitch Vanlande to return to Finland, or kill him. When this witch-work was going on Vanlande was at Upsal, and a great desire came over him to go to Finland; but his friends and counsellors advised him against it, and said the witchcraft of the Finn people showed itself in this desire of his to go there. He then became very drowsy, and laid himself down to sleep; but when he had slept but a little while he cried out, saying that the Mara was treading upon him".¹³²⁸

The late Professor Marija Professor Gimbutas associated such a hag with the role of a Goddess of Death. In the case of the Germanic Cimbri a priestess slit the throats of the war prisoners who were suspended upside down by the heels. At the Rus' funeral on the Volga, the concubine was ritually slain by an old Hag, who was regarded as an angel of death. Typically Oriental and European hags had ugly features such as a lengthy misshapen nose, pointed teeth and shaggy lengths of messy hair. As you will read in Part I, Chapter VII, this is a perfect description of the witches who served Ahriman, the Lord of the Underworld, and repeatedly described in the scriptures of the white Zoroastrian Magi ... walking, breathing demons of flesh and blood, female variants of the warlock.

Marnik 6 Dec - 18 Feb Marnik's botched attempts at coition were responsible for Mara's putrid children. He propagated diseases on earth, especially ones that lay dormant in the soil, like anthrax, and putrid blights that caused poor crop yields. Marnik¹³²⁹ could perhaps be related to the Iranian Demon of Death and corruption, which caused the detestable pollution of the soil with diseases and dead matter, and whose very presence was the very reason why the Magi used defleshing rites to reclaim the bodies of the "white" believers from death. Marnik was Mara's consort.

Morok 25 Nov - 25 Dec This demon behaved in much the same way as Moroka,¹³³⁰ only he seemed to had more flair when dealing with males. He was also fond of causing darkness, drizzle and cold.

In Russian the word *Mrachniy* means "gloomy", and is used to describe weather conditions in which the sun is throttled and obscured by grey and foreboding mass of cloud. I believe the Russian adjective *mračniy* was once intended to described those things which had the characteristics of, or which had been touched by the demon Morok, who caused sleet, rain, overcast skies and so forth. Therefore the original adjective *mračniy* might have been *morochniy*, meaning Morok's weather. This was weather that starved the world of the invigorating, enlivening, jubilant light of the sun, and instead replaced it with a terrible gloom. On the other hand Morok might have got his name from the adjective.

Moroka 25 Nov - 25 Dec This demoness was a provocateur of discord between landlords' wives and the wives or grandmothers of tenants. Inspiration for any kind of residential complaints such as barking dogs, pilfered clothing, noisy neighbours etc all came off her acidic tongue. Domestic arguments between man and wife were her forte. Moroka¹³³¹ was the agency for bringing about sad reversals in a family's fortune, of belittling bankrupts and those who were enslaved. She was an oppressor of the poor.

Niy Niy¹³³² was a demon prince of the underworld, cognate with the Iranian demon lord Nai, whose kingdom contained many souls of the "black" families, a haven for the dead. Niy was a tall hunchback, with malformed stature, eight fangs, large prehensile paws and two large black eyes. Its matted and mangy hair, hung like a curtain over its wretched and stinking torso.

NAI, THE IRANIAN
DEMON PRINCE

Norka Norka was yet another Lord of the underworld, and about whom there were very few references indeed. Perhaps he was equated with Nocca, a Gothic deity of streams and underground springs, or the Aryan Naga king, from the underground city of innumerable lights, or even Nergal, the Assyrian lord of the underworld. After death, many Slavs believed that they would experience the beauty of the underworld's wealth, the shining underground cities and many sub-kingdoms of the counter-world. I have had trouble relocating references for this deity, and am unsure of the credibility of references to it.

Ognevitsa A particular disease that appeared in female form, probably an intense fever.¹³³³

Pan No calendar entry In Rus', there was a firm and widespread belief in Pan,¹³³⁴ a classical Greek divinity. This religious tradition was probably a carry-over from Scythian times (when the Greek Dionysian cult centre of Gelonus was located in Scythia), but perhaps may even be related to a Slav legend that refugees from the fall of Troy moved northwards into the wilds, pursued for a short while by their enemies (a similar myth is recounted by the Norse). Under the latter option Pan might have been imported by the Trojan exiles (if indeed they ever existed). Pan might more likely entered Rus' with the many Athenian colonists who came to cultivate the southern reaches of the Ukraine, or with Iranian refugees contaminated by Greek religion in Alexandrian and Parthian times.

PAN, SON OF HERMES

FORMERLY OF ARCADIA

Born from the loins of King Dryop's daughter and sired by Hermes, the ugly child Pan came out looking like a goat, with tell-tale horns, hooves, hair, tail and beard, and his privy part bore the dimensions of the finest stud rams. He was said to perpetually wander the lands, boastfully seducing and molesting the nymphs. Olympus, (located on the coastal approaches of Thessalonika) and the mountains of Arcadia in the Greek Peloponnesus, were his favoured stomping grounds until the coming of Christianity.

Fig 68. Pan - A major silvan god worshipped in ancient Greece.

Following the arrival of Christianity he withdrew into remotest Bulgaria and Rus'. His Russian exploits left behind more than just a few memories for the locals to think about. Pan was invariably perceived as a dark god. Black witches who knew how to coerce him into showing himself personally, often provoked orgies in honour of his attendance. His younger female admirers flocked to the rendezvous, seeking to admire and sample his brutest attribute. If they fell pregnant then they would give birth to a satyr (known in Rus' as Chugaisters). These Chugaisters freely roamed the forests, walking in their father's footsteps. Pan and the Chugaisters were a real god-send to Slav shepherds and farm owners, for he was the god of the wilderness, forests, grazing lands, flocks, and also doubled as a damn good bee-keeper. Hives touched by him would have their normal rate of honey production magnified! Elsewhere in Europe the *dusii* (chugaisters by another name) represented residual elements of the Dionysian rites.

Pekel'nik *Pekel'nik*¹³³⁵ was one of the devil's most able evil henchmen, governor of a class of tormentors called *Pekelniki*, who amid the billowing flames, took vengeance on the damned.

Poludnitsa *Poludnitsa* was a malicious shadowy hag who cruised the fields at midday, floating about on howling winds. She could made people die of exhaustion in the fields if she wished, or cause the death of mothers during childbirth.

Fig 69. Shiva, as depicted in a Hindu religious engraving. Was the Baltic Pagan god Siva or Zhiva one and the same as the Hindu Shiva?

Siva No Calendar Entry Siva was a deity widely worshiped by the Slavs (especially in the Balkans), also under the name Zhiva. The Slavic Siva was undoubtedly the same as the Hindu demon Prince, Shiva the Destroyer (written as Siva), a trident-bearing necromancer, who was a spreader of disease, and a friend of ogres and giants. Among the Hindus, Shiva granted boons to the givers of floral offerings and participants in his dance. He was for all intents and purposes a god of life and death, one who giveth and taketh away.

Some feel that Shiva was really another name for *Rudra*, a fickle and potentially dangerous god found in the *Rig Veda*. He had as his consort Kali, the bloodied haggish death demoness bedecked in the most macabre of wear - human body parts.¹³³⁶

Until comparatively recent times the Balkan Slavs danced the anti-clockwise *Smrtno Kolo*¹³³⁷ (literally "the dance of death"), to the tune of pipes and drums, and with snakes in hand. This strongly suggests that their *Smrtno Kolo* was the same as Shiva's dance, or at least very similar. There was nothing overly sinister about the Dance of Siva, for the mere performance of it extruded the sting out of life's sufferings. It was psychologically empowering to both the individual and their community, fortifying those buckling under their own suffering.

Tryasovitsi 22 Feb The Tryasovitsi¹³³⁸ were demons who caused victims to suffer from body tremors and twitches. If set upon by them, the victim would acquire a chronic illness (that's if they didn't die from the condition), or suffer the misfortune imposed by the Tryasovitsa's area of evil jurisdiction.

Tryaseya	Epilepsy, mental illness	Otpeya	Stubbornness

Glukheya	Deafness	Karkusha	Gloominess
Gnidusha	Lice and parasites		

Volos 6 May Volos was also called Veles. Surviving information on Volos and Veles is to a degree conflicting, and for this reason I am inclined to believe that they referred to two separate gods; one the Iranian Azi-dahaka, and the other the god Apollo/Hermes (long worshiped by the northern Hyperboreans and Greek pagan Gnostics). So, the subject of Volos/Veles can be approached from several different perspectives.

APOLLO-HERMES

1. Volos might have been Apollo-Hermes. Like Apollo, Volos was the god of good marriages, the home, one's livelihood, prosperity, trade, money and the arts. Like Hermes/Apollo¹³³⁹ Volos was the "Good Shepherd" of the underworld (escorter of departed souls), the god of cattle, and lord of all animals, carnivals and festivities.

HERMES, THE STEWARD OF SOULS

*"Hermes is the Steward of souls, and that is the reason he is called Guide, Keeper of the Gate, and Subterranean, since it is he who conducts the souls from their bodies, and from earth, and sea. He conducts the pure souls to the highest region, and he does not allow the impure ones to approach them, nor to come near one another, committing them to be bound in indissoluble fetters by the Furies".*¹³⁴⁰

PATRON OF MUSICIANS AND THE ARTS

Volos was the guardian of poets, skomorokhi musicians and bogatyr's, and one of the most highly regarded of all the gods. He carried a crook in one hand, a horn of plenty in the other, and wore a golden belt. This variant seems very much like Apollo-Hermes.

ZMEYA-VOLOS, THE SERPENT GOD

2. According to a second tradition Volos went by the name Zmeya-volos, the Serpent, or the Dragon. From this we might guess that Zmeya-volos was the Iranian demon Azi-Dahaka (if Vernadsky's Azagarium connection is to be accepted). Nevertheless a definitive association with Azi-Dahaka is impeded by a lack of details about Volos. You see Magian scripture revealed that Azi-Dahaka was a serpent demoness with three heads.

*"Azi Dahaka, the three-mouthed, the three-headed, the six-eyed, who has a thousand senses, that most powerful, fiendish drug."*¹³⁴¹

Fighting Dahaka was no easy matter. The hero Fredun was sternly warned by Ahura Mazda not to slash open the reptilian body of that monster, for if he did “*Dahak would be making this earth full of serpents, toads, scorpions, lizards, tortoises and frogs*”.¹³⁴²

Another tale had Volos residing beneath the roots of the World Tree (the Ash tree).¹³⁴³ This story is paralleled by Magian scripture which represented Ahriman (in the serpent form which he adopted to slip into the centre of the earth) living underground at the base of the *Haoma* tree, where he attacked its roots. The Norse had a similar myth to the Russians. If this analogy were correct then Volos was really Ahriman, ie; Chernobog, but in his serpent form.

Volos (also known as Volosen’ or Volosets) was also perceived as a skinny water serpent or worm, a demonic force that slithered about Russia’s lengthy riverways.¹³⁴³ He could also adopt the guise of an illness which then entered into the bodies of human beings.¹³⁴³ Having possessed them with his very essence, Volos made his victims extremely sick. Volos had the power to suffocate and destroy rye crops using the freezing blizzards which it could whip up in an instant.¹³⁴⁴ To chase this famine provoking damage away from the crops, water was brought to the boil and poured out with ash, as they recited “*In the name of the Father, the son and the Holy spirit*”.¹³⁴⁴ This custom is clearly a hybrid pagan-Christian rite designed to attack the great serpent; perhaps it originally used holy spring water and ash from the sacred fires to bring this to effect.

Volosatik, Volosatik-bog, Volosatiy and Volosenik are other words obviously connected with Volos, only they denote (lesser) demons and unclean spirits.¹³⁴⁵ What connection these words had with Volos is uncertain; perhaps they were the children of Volos, perhaps they were his priests.

He acted as the primary soul escorter, guiding the dead to the shady lands below. Volos was fearsome enough to be called upon in times of war, since he was protector of the underworld flock. Volos frequently came up to visit the world as he wished, and was especially worshiped on the island of Khortitsa by the sacrifice of whole cattle herds, commonly golden-horned, black aurochs. His kumirs were of stone or wood, and the most well known of these was located on the River Pochaina. The cult of Volos was frequently associated with the Slovenes of Northern Rus’, and the grad (“city”) of Rostov in particular.¹³⁴⁶

It is interesting that the serpent Volos was invoked by some Russes (and Perun by others) during the forging of the oaths which bound the 944 AD Russo-Byzantine Treaty, and yet no idol attributable to Volos was mentioned in the *Primary Chronicle* as having been erected by Vladimir’ in Kiev. One illustration contained within the Radzivilian manuscript shows an idol of Perun atop an elaborate stone pedestal, while at the same time a serpent can be seen on the ground nearby.¹³⁴⁷ This might mean that Volos was represented by a ground painting or engraving, or an idol planted inside the ground, and partly exposed to allow devotees to view it. However since the illumination is depicting Oleg, the serpent in the picture might simply be a rendition of the snake which would eventually kill him. On the nature of Perun’s stone pedestal, was it simply a stylised mediaeval portrayal of him, or does the illustration adequately reflect the form of the idol which existed some 200 years prior? The idol shown in the illumination bears little resemblance to the idol as described in the *Primary Chronicle*, though it is possible to suggest that the monks who made the illuminations might have found it difficult to adequately render Perun as he was described.

Nevertheless, we have an 11th Century reference to villagers bowing before an idol of Volos at Rostov, in that part of the city allocated to Chud tribesmen. His idol was also to be found in Novgorod.^{1347a}

3. In Russian folklore Perun was portrayed as the enemy of Volos. From the stories within the Vedas, we can discern that this might be a reference to Indra slaying his enemy the Serpent Vtra (who also happens to have been listed as a demon within the Magian texts), however it should be remembered that in the *Rig Veda* Indra actually slew the serpent, and the waters were made from its body. Thus, to my mind, it would not be proper to equate Volos with the Vedic serpent *Vtra*. So what serpent could Indra have been opposed to. From Vedic lore we might presume that he was the enemy of many asura serpents. Under Magian Zurvanism it is possible that Indra was also an enemy of Azi-Dahaka and Ahriman, though this is not explicitly stated. Conflict with demons was thus a characteristic trait of Indra, so from that perspective it is not implausible that Volos was Azi-Dahaka, Ahriman or another similar Magian serpent demon.

VYED'MA RIDES THE
WINDS

Vyed'ma 25 Jun to 7 Jul Vyed'ma¹³⁴⁸ was a dark witch-goddess who sneakily visited people's cows to steal their holy and life-giving milk. She caused rebellion, coups, violence, warfare and hostility, and was able to turn into a cat, dog or toad at will. This old hag controlled the mother-spring of water which brought life and death, and from which all sacred springs came.

Vyed'ma employed her extensive magical abilities for her own ends, and gained entry to peasant cottages through their stove-pipes in the form of a flaming serpent, or bird. She flew through the air on the winds, on her broom-stick, and caused storms and other unfavourable weather conditions to spring up wherever she roamed.

VIKHOR WAS A WIDELY
KNOWN DEMON

Vikhor 1 Aug Vikhor¹³⁴⁹ was also known as Vikhrik, Vikhor', Vikhrovoi and Kotolup. Such was the enormity of his predations, that he was known throughout much of Russia, and as far North as Permia.¹³⁵⁰ In Russian *Vikhor* is directly translatable as "a whirlwind", and is definitely traceable to at least the 11th Century AD.¹³⁵⁰ His name can be found in other regional languages too: *Vikhr* (Bulgarian), *Vikhar* (Serbo-croatian), *Viher* (Slovenian), and the Polish *Vicher*. This suggests that he was also known in the Balkans and Eastern Europe.

This unkempt looking being was coated in short pig bristles, and possessed wings, a tail, and clawed hands and feet. It caused death on land or on water and dwelt on doleful cliff faces awaiting further victims. The coming of *Vikhor* brought illness, freak accidents, rain or extremely devastating storm fronts that could easily rip up roofing, and bring an untimely death to those caught in his ferocity.¹³⁵¹ In all, one very destructive boy.

HE CAME AS A
WHIRLWIND

Peasants protected themselves by climbing trees to touch a *Vikhorevo Gnezdo* ("Vikhor's nest"), that is a nest-like accumulation of debris that becomes snagged at the top of a tree during a storm.¹³⁵² In legend such "superstitions" staved off adversity and fear. That's right, by touching this demon's nest, one received protection from the harm he brought.

IF YOU TOUCHED HIS
NEST, HE WOULD
PROTECT YOU

For want of a Magian parallel, Vikhor resembled the Vae called *Asto-vidad*, the "Evil-flyer who seizes life; as it says that, when his hand strokes a man it is lethargy, when he casts it on the sick one it is fever, when he looks in his eyes he drives away the life, and they call it death".¹³⁵³

HE MIGHT HAVE BEEN A
MAGIAN VAE KNOWN AS
"THE EVIL FLYER"

Asto-vidad was also called *Vae-isaritar*, which superficially resembles the Eastern Lithuanian *Viesulas* or the Latvian *Veisuols*, which were other names for Vikhor.¹³⁵⁴

THE IRANIAN DEMON
VAI, KNOWN IN RUSSIA AS
VIY

Viy This demon was a gigantic neanderthal-looking humanoid, with a single cyclopean eye planted in its forehead, and a gnarled covering of unsightly body hair. It shuffled along in its degraded posture and gait, scouring the land for places where it should open its eye. With the raising of its eyelid everything in visual distance would suffer a four year drought, or instantly drop dead. He imparted special powers of the evil eye and was often invoked by sorcerers seeking new means of power. In *Viy* we have an exact description of the Zoroastrian/Zurvanite demon-god *Aighash*.

But it is equally plausible that the Slavic demon *Viy*¹³⁵⁵ was derived from the Magian bad *Vai*,¹³⁵⁶ in just the same way as *Niy* (see p. 311) came from the homicidal Magian demon *Nai*.¹³⁵⁶ In both Slavic and Magian demonology these respective figures were arch-demons of some notoriety. Thus we have similarities in both name, nature and function. Clearly we also have a point of origin ... Aryan Iran.

KING OF WATER DEMONS

Vodyanik This demon was the long-bearded water Tsar', who was courted by harems of ravishing water spirits, other species of aquatic rusalki and the *Vodyanoi*.¹³⁵⁷ Depending on what part of Russia you come from he might also appear as a dog, pig or black cat.¹³⁵⁸

Vodyanik did not take kindly to anyone sailing over his kingdom, and would attack vessels by fouling their rudders, to run them aground, or tear planks from the hull. Sea-smart sailors and fishermen usually made dark sacrifices to him, by slaughtering and bleeding overboard a black cock or goat, when heading off under sail. In many respects he was similar to Neptune. Beekeepers were known to go to the water's side to give honey and wax sacrifices to Vodyanik. Consequently bee swarms were supposed to prosper and multiply under the special magical nurturing of Vodyanik.

WAYLAYERS

Vstrechnik A *Vstrechnik* was a malign spectral force, a class of demon renown for loitering about the roads, forests, fields and silvan trails hoping to set upon the unwary traveller, and slay them. Such a role was allotted to demonic highwaymen known to the Magi, possibly incarnate too, appearing as thievish robbers.

Zlidniye To the pagan Rus' the Zlidniye¹³⁵⁹ were exceptionally malicious spiritual evils who delighted in bringing harm and strife into the lives of hard-working folk; incessantly they flagellated humanity. The Zlidniye were further fruits of Mara's "womb of chaos", whom many would have preferred died at birth I'm sure. Most of the zlidniye were female, perhaps even haggish.

EVIL-BRINGERS

The Magi spoke of "demons of ruin, pain, and growing old, producers of vexation and bile, revivers of grief, the progeny of gloom, and bringers of stench, decay, and vileness, who are many, very numerous, and very notorious".¹³⁶⁰ Their functions seem to be replicated in the Tryasovitsy and the following Zlidniye, harm-bringers:

THE MAGI WARNED THE FAITHFUL OF THE HARM EACH DEMON INFLICTED UPON THE WORLD

Gore Grief	Likho Fever	Neshchastiya Misfortune
Bida Poverty	Khvoroba Disease	Nedolya Harm
Nuzhda Need	Zavoina Conquest	Primkha Caprice

Russians maintained that fevers took the form of old hags, and smallpox appeared as toads.¹³⁶¹ The association between toads and illness in Russian folklore might have originated in Magian eschatology, where toads are some of the foremost of the polluting demons created and deployed by Ahriman.

DISEASES PERSONIFIED

Hag-demons similar to those of the Slavs and Norsemen might have been mentioned in the Finnish Kalevala, for within it we hear of the "blind pit-daughter, an old woman ... wickedest of death-daughters, the source of all ills, a thousand downfalls ... made her litter on evil land".¹³⁶² This creature was perhaps equal to Nedolya, a fruit of Mara's fiendish uterus.

HAGS

DEATH'S DAUGHTERS

The next Zoroastrian passage divulges the names and harm-patronages of different Iranian demons. Their titles are translatable, and drawn from the vernacular; in this case Pahlavi. You will note among them most of the harm-specialities espoused by the pagan Rus' demons. As with the Iranian demons, the pagan Rus' demon names were derived from common speech, from Slavic words denoting those same concepts. In at least two instances demons were still known by their original Iranian name.

"Zarman is the demon who makes decrepit, whom they call old age. Kishmak is he who makes disastrous and also cause the whirlwind which passes over for disturbance. The demon Vareno (meaning desire, or lust) is he who causes illicit intercourse, as it says thus: Vareno the defiling. The demon Bushasp is she who causes slothfulness: Seg is the fiend who causes annihilation; and the demon Niyaz is he who causes distress....The demon Nas is he who causes the pollution and contamination, which they call nasai. The demon Fritfar (the deceiver) is he who seduces mankind. The demon Spazg (slander) is he who brings and conveys discourse, and it is nothing in appearance such as he says; and he shows that mankind fights and apologises, individual and individual. The demon Arast (untrue) is he who speaks falsehood. ... The demon But is he whom they worship among the Hindus, and his growth is lodged in idols, as one worships the horse as an idol. Asto-oidad is the evil flyer who seizes the life; as it says that, when his hand strokes a man it is lethargy, when he casts it on the sick one it is fever, when he looks in his eyes he drives away the life, and they call it death. With every one of them are many demons and fiends co-operating, to specify whom a second time would be tedious; demons, too, who are furies, are in great multitude it is said. They are demons of ruin, pain, and growing old, producers of vexation and bile, revivers of grief, the progeny of gloom, and bringers of stench, decay, and vileness, who are many, very numerous, and very notorious; and a portion of all of them is mingled in the bodies of men, and their characteristics are glaring in mankind. The demon Apaosh and the demon Aspengargak are those who remain in contest with the rain. Of the Evil Spirit (Angra Mainyu) are the law of vileness, the religion of sorcery, the weapons of fiendishness, and the perversion of God's works".¹³⁶³

SOME OF THE DEMONS KNOWN TO THE MAGI

EVIL DEMONS AND SPIRITS

Where crying can be heard, the demons are never far away.

Anccestor Worship

PRASHCHURS

ANCESTRAL PROTECTORS

The gods were fickle, and could not always be relied upon for aid. The one exception was a person's *prashchur*, which had been faithfully worshiped from father to son, and mother to daughter for generations. *Each tribe and clan had its own patron pagan god*, which protected and watched over it.¹³⁶⁴

Bearing in mind the profound Iranian influences on Rus' paganism, these deities were probably clan forebears, and gods modelled on the Zoroastrian Holy Immortals, the good angelic *Yazatas* who took charge of their descendants' interests in the spirit world. Our world was a living entity, and each creation but a brush stroke on the Creator's canvas; his world, the great masterpiece. The *Yazatas* personified major features of the landscape; mountains, trees, rivers and lakes, but appeared as anthropomorphic people or winged demi-human beings and genii. They were the souls of the land.

The demonic *prashchurs* of the "black families" can be equated with ancient Mesopotamian demons, and the Zoroastrian/ Zurvanite *dregavants*, patron devils. In the physical world these degenerate essences appeared as polluting influences; bogs which consumed grazing and arable land, faeces, crop and stock diseases, and so on.

Slavic *prashchurs* were also conceptually similar to totemic spirits, the spiritual guardians of the Samoyed, Lapp and Finnish shamanic animists. These totems were often represented in animal form.

FIRES LIT FOR THE ANCESTORS

The soul of the family ancestor who first founded one's house or settlement, was said to live on in the form of the *domovoi*, or *domovik*, an utterly benign force which lived at the back of the stove. The *domovoi* symbolised a family's prosperity. It was very fragile; it had to be fed, cared for, and spoken to properly, lest it suffer an untimely demise, and with it the material good fortune of the entire family.

IF ONE'S HEARTH WENT OUT, GOOD FORTUNE LEFT THE HOUSEHOLD

A *domovoi's* departure was caused by allowing the oven fire to burn out, a tragic occurrence with disastrous consequences. Once it disappeared, every member of the household could look forward to suffering misfortune. Prosperity could not be regained until the present head of the house died, so that his soul could remain behind on the earth, living inside the oven. No Russian son could leave home without having first built a new home for himself. He then asked for fire and hot ash from his parent's oven, a symbolic transference of the family fortune and the fire of Svarog's son to the new house.¹³⁶⁵ Without this, any newly constructed abode was doomed to poverty until the first owner of the house died.

REMEMBRANCE CEREMONIES FOR ANCESTORS

THE RUSSES PERFORMED CEREMONIES IN HONOUR OF THEIR ANCESTORS

Rus' clans consisted of very small tight-knit family groups with the same common genealogy. The family's shared ancestors had long passed on into the after life, but still took an active interest in the lives of their descendants in the physical world, on particular days especially. At certain times of the year the clan elders conducted celebrations of special family significance aimed at procuring the intercession of these ancestors. Such was the respect that pagans had for their blood ancestors that every family member had an intimate knowledge of the exploits of their forebears.

Since the comparative method has been used throughout this book, it is only proper that we explore the all-important ancestor worship of the pagan Slavs in the light of Indo-European Aryanism, and Magianism. This may help us understand the precise nature of the Slavic ancestral rites.

VEDIC ANCESTRAL RITES

Aryan law prescribed the following *Sraddha* rite in adoration of one's ancestors;

"Even water offered with faith (to the manes (ie; souls of one's departed ancestors)) in vessels made of silver or adorned with silver produces endless (bliss).

For twice-born (ie; Aryan) men the rite in honour of the manes is more important than the rite in honour of the gods; for the offering to the gods which precedes (the Sraddhas), has been declared to be a means of fortifying (the latter).

Let him make (the sraddha) begin and end (with a rite) in honour of the gods; it shall not begin and end with a (rite) to the manes; for he who makes it begin and end with a (rite) in honour of the manes, soon perishes together with his progeny.

Let him smear a pure and secluded place with cowdung, and carefully make it sloping towards the south. The manes are always pleased with offerings made in open, naturally pure places, on the banks of rivers, and in secluded spots".¹³⁶⁶

As it happens the Old Russian word for “middle” was *sereda*. But was this term derived from *Sraddha*, the name of the *middle rite* performed by the Aryans to feed their departed ancestors? Unfortunately Vasmer does not include such an analogy in his etymological dictionary. The key to solving this question is the Slavic and Baltic love of swine meat.

You see, the sacrificial oblations of food offered to and eaten by the Brahman on behalf of the souls of one’s ancestors, were considered to be contaminated by the mere presence of a handicapped person, a boar, pig, cock, menstrual woman or dog. Pork was inevitably one of the ancestral banquet meats in Slavia and the Baltic, thus Russian ancestral rites are less likely to have been those of the brahmins.

Contrary to the vedic Indo-European view, the Magi believed that these animals were holy, and not a source of contamination.¹³⁶⁷ *Swine were once extensively bred by the Parsees* (exiled Orthodox Zoroastrians living in India), *and the Mesopotamians before them*. Further evidence for a Magian predilection for pork can be found in *Shayast la Shayast II:58* which contains clear references to swineherding among the Magian people.¹³⁶⁸ Pigs were so highly regarded by Magians that they were deemed suitable even for the major holy feasts held at the change of the seasons.

No doubt the acceptability of pigs to white Magians was owing to their ability to eat scraps and other refuse in the same way that ravens, dogs and vultures ate carrion and rotting animal matter. Pigs were clean animals, the enemies of defilement. *Shayast la-Shayast* further states that pollution and disease were less likely to strike where pigs dwelt. Because the pagan Slavs did not believe that pigs, cocks and dogs were unclean beasts, it is unlikely that Vedic paganism was first and foremost in their minds.

Muslims and Hindus *did not eat the flesh of swine* considering it to be grossly unclean.¹³⁶⁹ During the famous conversion polemic, Khagan Vladimir utterly rejected the ministrations of the Islamic delegation from Bolgar, since the adoption of Islam would have prevented the Slavs from continuing the practices of their forefathers which principally included, amongst other things, the drinking of alcohol and eating pork. Therefore Vladimir could not have been a strict Vedic Aryan if he ate pork. It may well be that the pagan Slavs practiced the previously mentioned *Sraddha* rites, but in a form which was an admixture of Aryan and Magian customs. This would make them Zurvanite in nature. Alternatively they might have followed the purely Magian tradition, which at some time in the past had come to supersede the Vedic ancestral rites. According to the Magian texts;

“...it is necessary to maintain the souls of fathers, mothers and relations properly. And, when any day of theirs occurs, it is necessary to make an endeavour, so that they may accomplish the ceremonial (the Haoma yasna), the sacred feast (of myazd; meat), the consecration of the sacred cakes (drons), and the benedictions.. For it is declared in revelation, that, every time that any day of theirs occurs, they will bring with themselves 9999 guardian spirits of the righteous, like that case when any one goes home himself, and brings people in hospitality. And, when they utter the consecration of the sacred cakes and sacred feast and the benedictions, those people become joyful and utter blessings on that house and master of the house, and on the house-mistress and any persons who are in that house.

*But if they do not celebrate the sacred feast, the consecration of the sacred cakes, the ceremonial and the benedictions, the spirits will remain for them in that place from dawn as long as the period of a day, and are maintaining a hope that “perhaps they will have us in remembrance”, the souls turn upwards from that place, go very quickly on high, and will say, “O creator Hormazd! they do not know that we are such as we are, and that it is necessary for them to come into this world, and in this world they will not give any one acquittal”.*¹³⁷⁰

For them there is need of the good works in consecrating the sacred cakes and celebrating the sacred feast and benedictions; there is no need of them for such as we. Yet, if they would have maintained a place for the duty of those days, we should have turned away from the misfortunes of various kinds; but, as they have not maintained observance of us in the day’s duty, we are not able to come in friendship to this house. Thus much they say, and turn away in anger, and go away from that place.”

The peoples of heathen Russia and the neighbouring Baltic area believed that after death, *the souls of one’s deceased kin became deified*, forming a virtual clan pantheon in the afterlife.¹³⁷¹ Villagers gathered on certain days of the year to give offerings of food to their ancestors, to keep them alive in the afterlife by honouring their memory. But, like the white Magi, they had cause to fear these ancestors also, lest they become angry and offended, and bring misfortune upon the family.¹³⁷¹ From this evidence it is possible that pagan Russians observed the feast days of their ancestors in

a way similar to the white Magians.

I draw your attention to why the performance of the Magian commemorations for the dead brought good fortune to those who observed the various anniversaries. This was due to the 9,999 angels which the ancestor brought to their house in thanks for their kind deed.

The white Magian ancestral rite was able to liberate the souls of one's departed ancestors from expiatory suffering in the afterlife through the spreading of commemorative feasts and the offering of prayers. Such a custom was scrupulously observed by Russian Christians in the Christian era, and is conceptually the same as Roman Catholic prayers and masses for the dead, aimed at releasing their souls from purgatory.

Other pagan beliefs

DISEASES

DISEASE, A WEAPON OF
THE DEVIL

Diseases were instruments of defilement and destruction which the black divinities inflicted upon the world. In Rus' during the night of an epidemic, a local matriarch or Volkhva priestess ploughed the village outskirts, leaving a furrowed circle of protection against the spirits and demons which brought the plague. Other women bearing sickles and scythes guarded the perimeter, killing everything trying to enter the town.

A similar ritual was performed by the Zoroastrian Parsees residing in exile in India, who used a metal ploughshare to dig a Kasha, or circular furrow around any area where dead bodies were situated. This was done to serve as a boundary against the entry of the Death demon across its boundary.

THE BLACK AND WHITE KINGDOMS

AHRIMAN CORRUPTED
MANY OF GOD'S
CREATIONS

In Magian cosmology the entire earth was the scene of intense confrontational warfare between the forces of light and darkness. The very moment Ahriman and his demons entered the world, the pristine nature of Ahura Mazda's many creations was polluted, twisted and defaced. As a result of this all plant and animal life on the planet, including human beings, could be categorised as either white or black life forms, depending on the degree to which they had been touched by the Prince of Evil. In *Shayast La-Shayast* XV:23 it is said that the more of "the damned" that there are in this world, so too does the distress of the world increase proportionately. It naturally followed that by slaying the damned, and eliminating their unwholesome presence from the world, that the created existence would flourish just that bit stronger.

THE MAGI DECLARED IT
NECESSARY TO SLAY THE
DAMNED

The whole concept of killing opposing animals was originally imported into Zoroastrianism by the Medean Magi. Even Magian medicinal remedies required the killing of "black" insects, an act which would bring blessings from heaven, which would in turn make the treatment all the more successful. These were the outlandish superstitious remedies mentioned by Pliny the Elder in his condemnation of the Magi. The mere fact that the principles of white or black slayings were well and truly enshrined in the Zoroastrian holy books illustrates just how much Medean material is still contained within the Karterian modifications to the Zoroastrian faith.

THE DEVIL'S CREATURES
WERE TO BE KILLED BY
THE FAITHFUL

These teachings were probably propagated in Russia by the Volkhvy Magi. Even last century Russian peasants still saw field insects as evil, their swarms "an army of evil".¹³⁷² They weren't just pests, but unholy entities that presumably needed to be exterminated with extreme malice.

THE RUSSES BELIEVED
INSECTS WERE "AN ARMY
OF EVIL"

One Russian colloquialism for "an insect" (*kozyavka*) arose from *koza* ("goat"). Vasmer attributes the inter-relatedness of goats and insects in this case, to the similarity between goat horns and insect antennae. However it is equally likely that this linguistic connection stemmed from (the great goat) Ahriman's obvious relationship with insects, the devil's birds.¹³⁷³ Earlier we heard of the *Ambarniki* demons, which were obviously insects entombed in amber, yet perceived as demons.

INSECTS WERE DEMONIC

THE FINNS SAW SOME
CREATURES AS WICKED

Finns also saw a delineation between good and evil creations. The bee was the mead-bringing friend of man, whereas the wasp was "the demon's bird", full of toxins. Others shared in the latter's abominable functions: "snake venom, a worm's black poison, an ant's itchy juice, a frog's secret hates".¹³⁷⁴ Though a snake is understandably banal, the inclusion of harmless ants, frogs and worms suggests a possible infusion of Magian teachings (on those same creatures) into Finland.

THE MAGI TAUGHT THAT
AHRIMAN HAD HIS OWN
PLANT KINGDOM

In the Magian world infernal flora consisted of "black" plants that came into being once Ahriman came headlong into the world and began corrupting the many good things which Ahura Mazda had made. These

included any plant which harmed humanity, animals or the fields, things such as weeds, and poisonous or thorny plants and bushes.

For instance the Russian word for “thistle” *chertopolokh* was a compound word formed by *chert* and *polokh*. It might therefore be literally translated as “devil’s fear”, “devil’s terror”, “devil’s dread”.¹³⁷⁵

RUSSIAN WORDS FOR
THISTLES

Vasmer believes the connection between *chert*, *polokh* and thistles arose from an old Russian tradition, whereby they burned thistles to fumigate their fields and stock, to protect them from evil spirits and sickness. Devils fled the fields in panic upon smelling burning or smouldering thistle; they were afraid of it.

I believe Vasmer is mostly correct in this respect, however the reason for their flight is more probably attributable to the white Magian destruction of thistles, which embodied the “devil’s fear”, the “devil’s terror”, the “devil’s dread”.

While white families were strengthened by eating holy gruel during their religious ceremonies, the black families may well have had a mirror-image ritual cuisine. Many of the bog victims unearthed in places like Denmark, presumed criminals, had eaten a gruel of weeds prior to their strangulation.¹³⁷⁶ Is this evidence of a black or unholy weed-gruel, or had they been killed during a famine, when such meagre fare was all they could be offered?

Good and evil folk also battled it out. *The Primary Chronicle* account of the Pecheneg ambush on the royal flotilla could conceivably conceal another important message for us. Under dualism, all the creatures and plants of the world (in fact all creation!) was divided into two categories; those on the side of good, and those that belonged to the “Black God”. These were somehow perceived to balance each other out, to mirror one another. For example, the “white” Khazars of Khazaria believed that another race called the “black” Khazars lived on the other side of the world. Accordingly, in the war between good and evil, each human being born was said to have a good or evil opposite somewhere in the world. Under Magianism and Zoroastrianism, it was their sworn duty to kill that person. Considering the magian influences found among the Russes and Pechenegs, might the death of Svyatoslav (who the Pechenegs regarded as a thief) and the reduction of his skull to a grim trophy be attributed to the end of Prince Kuria’s personal quest to kill his dark half, and grant yet another victory to the forces of the “Good Sun”, Ahura Mazda? A Pecheneg Zoroastrian Prince versus a Rus’ Magus-prince, an interesting thought!

BLACK AND WHITE ANIMALS

The animal kingdom was divided into two realms, those creatures which belonged to the underworld, and those which belonged to heaven.¹³⁷⁷ Good families considered it holy to kill evil animals, such as wolves, spiders, pests and bugs, while evil families regarded it a pious act to kill good animals, some of which are described below.

Black animals

Wolves, bears, flies, ants, snakes, toads, ants, scorpions, spiders, worms, locusts, parasites, badgers, rabbits.

White animals

Horses, cattle, goats, deer, hares, dogs, hedgehogs, foxes, ravens, eagles, falcons, hawks, beavers, cocks, magpies.

HOLY DOGS

DOGS WERE VERY HOLY

Of all the “white” animals, no animal was more sacred than a dog (Medean: *spaka*, Russian: *sobaka*); they were man’s best friend, and an actual member of the clan. It is possible that the Slavs held dogs in the same high regard as the Medes, not only because the Slav word for dog has a Medean origin, but because of the attendant Russian peasant lore concerning our canine friends. The dog (and fox) later came to be associated with the wolf (perhaps under the guiding hand of Christian priests trying to eradicate pagan beliefs), though the *sobaka* was originally the wolf’s enemy, protecting the homesteads of the agriculturalists and herders from their predations. Of further interest is a Muslim belief that people who keep dogs are evil. No doubt this view was the result of anti-Magian Muslim preaching. According to the Zoroastrians, the dog-family included water dogs such as beavers, otters, and pointy nosed dogs like weasels, hedgehogs and foxes. To the “white” mind, the shepherd’s dog was especially holy, remaining ever vigilant, ready to chase off wolf packs trying to steal lambs from the flock. Another important dog was the four-eyed dog, a dog with a coloured spot over each eye, so that it has the appearance of four eyes. They called this the four-eyed power. Dogs were most efficacious in the expulsion of unclean or demonic influences, which ran for the hills after taking just one look at them.

Magian dog lore seems to have percolated into Europe. During the high mediaeval period (1400's), no self-respecting necromancer would start work with a dog around; it was a waste of time because nothing would show. This suggests that mediaeval sorcerers held Magian-style beliefs concerning the dog's ability to ward off evil or unclean forces. Mediaeval Europeans believed in dog days, that is days when the dead walked the earth. The term "dog day" perhaps signified dates on which the faithful took their dogs with them everywhere for spiritual protection. In some respects *Western mediaeval "Dog days" coincided with Rus' pagan dates when the dead broke free and visited the earth for the day.* In Russian folk tradition dogs can sense the presence of ghosts.¹³⁷⁸

HOLY BIRDS

HOLY BIRDS KILLED
SERPENTS, PARASITES
AND OTHER ENEMIES OF
CREATION

The holiest of birds were the Griffon bird (strictly speaking it is a bat), the sparrow, the crow, the vulture, the eagle, the crane, the cock and the kite.¹³⁷⁹ This is because each of them was designed to perform some function in the service of their creator in the war against the demons; either to kill serpents, or crop parasites, or carrion-eaters who lifted the defilement that polluted the countryside. Others were allotted the task of slaughtering demons. Many birds, like the sparrow and the dove were faithful and true servants of the Good Sun. And it would be true to say that many pagan Rus' households kept sparrows and pigeons.

CROWS AND MAGPIES

As far as the Magi were concerned, the crow was one of the holiest of all birds, as was the magpie. The Avestan word for a magpie is *Sok*, and the Russian is *Soroka*. The magpie's power lay in its warble, which put demons to flight by the power of the *Avesta* (which according to legend it had eaten in prior ages). Magpies performed a most excellent service to humanity by eating up fallen nail parings which had been prayed over and encircled using the prescribed ordinances. If the parings had not been properly treated in the manner prescribed by *Vendidad*, the demonic forces and witches seized them from the ground and *converted them into arrows*, which they then used to kill magpies or perform other maelific rites.

The various birds consumed crop devouring locusts, noxious worms, beetles and creatures which surfaced from below ground to carry out their devilishly destructive handiwork on the much toiled-over crops which were supposed to feed the local populace. Meanwhile, as these aerial agents of the divine goodness went about their business in the fields, cranes scoured the swamps seeking to consume slimy frogs, toads and salamanders for they all did the bidding of Ahriman, and had to be culled as thoroughly as possible.

THE HOLY COCKS WERE
DEMON AND WITCH
KILLERS

The (white) cocks that crowed to the sun each morning were the mortal enemies of the demons and warlocks. They were a friend to both Sraosha and the holy dogs. According to *Bundahishn* white cocks could kill demons. Presumably black cocks were the exact opposite of the white cocks, and what is worse, very great helpers of the wizards, who we might think used them to cause harm to the both the sun and Sraosha. Kites, vultures and crows were made by Ahura Mazda to kill snakes, and undertake the onerous task of eating up the dead and corrupted flesh of all created things.

MAGIANS HAD TO KILL
THE DEVIL'S CREATURES

While birds did their duty before god, white Magians were similarly entreated to slay the creatures of Ahriman whensoever encountered, to thereby lessen the destruction fiends unleashed on the world. In pre-Christian Russia insect killing was rather formal experience. For instance, every year on the 1st of September, children combed the fields to kill every bug they discovered.

In *Bundahishn* we learn that asses ate reptiles. It goes without saying that this should not be taken literally, but interestingly, in *The Magus* (published in 1801 AD, almost 90 years before the translation of the Magian holy texts for western readers), we discover that asses lung, when burned, was able to put serpents to flight.

England has some customs concerning sparrows that are possibly pagan survivals. From the Middle Ages down to the present day it has been deemed less sacrilegious to steal a chalice from Church, than to rob the nest of a sparrow which resides in a "fire-house". It could cause cow's udders to give blood instead of milk. Such nesting sparrows granted good luck to their host household and prevented it from being hit by lightning. In Kent, sparrows were better loved than the "black swifts", who were seen as minions of the devil.¹³⁸⁰

Intercessions

To gain the favour of the gods, or to learn their counsel, pagans sought the mediation of sacrificial priests, who

interceded before the gods on their behalf. These intercessions fell into two categories, personal and communal. Pagan priests in Slavia are known to have divined the will of the gods by consulting oracular dice, or by interpreting a horse's movements.¹³⁸¹

At dawn each day the attendant Volkhvy of each temple probably rose to greet the glowing morning Sun and cast lots to see what would happen in the day to come. The resulting answers were considered to be nothing less than the will of the gods.¹³⁸² The temple Magus whose lot it was to conduct the daily sacrifices probably cast lots as each offering was presented at the foot of a given idol, to ascertain whether the offering was pleasing enough to the divinity or demon in question. Sacrificed goods were later placed on a ritual pyre. The sacrificial Magus intercessor was most likely required to strangle or bleed the live offerings and perform the ritual incineration of the settlement's tithes, but this would depend on the sex of the person seeking intercession. In accordance with Magian tradition a Volkhv sacrificed for the males of the community, and a Volkhva the females.

Local fertility problems fell under the auspices of the Rozhanitsy or similar fertility deities, whereas more severe regional shortages demanded nothing less than the direct interference of more important celestial deities. It was the duty of all male Volkhvy to offer prayers to the masculine Gods; Female Volkhvy alone would have been permitted to offer song and prayer to Moksha and the other female divinities, on behalf of the women.¹³⁸³

In Zurvanite communities the celestial gods, one's tribal prashchur, one's clan prashchur and the demonic gods, whose "feast days" are listed on the pagan festive calendar, were all given varied sacrifices in the hope of attaining intercession. Due to their proven potency, these entities deserved large scale sacrifices by many people. Most had feast days attributed to them, when communally, every family had to tender their sacrifices. The blood of human sacrifices were apparently not as frequent, only offered up to Perun and the demons of destruction and decay. This topic is given further treatment in Chapter VI.

Other more sedate offerings such as *dron* bread (sacrificial loaves), floral garlands, amber incense, musk, frankincense, porridge, libations, cloth, sin-coins and foods were by far the norm, even where demons were concerned.

Rudimentary wheeled vehicles were used in India for the worship of Pitteri Pennu, a supposed fertility god. Led by a brahmin the car carried cereal seed to each of the local tribal elders.¹³⁸⁴ At settlements along the way stick-wielding men joined the procession, flailing these rods about in the air, and hitting each other. This had the effect of spreading the consignment of seed to the demons, and this would make them go away.¹³⁸⁴

Or in one Russian Finnish expulsion rite "a sacrifice is offered to the devil at noon".¹³⁸⁵ Libations made from alcohol and grain might also be given to solicit liberation from devils and unclean spirits. Finnish men fire-jumped, cleansing their body and clothing with fire, as they passed unscathed over the flames.

These offerings predominantly sustained the gods of creation, helping them stay strong and healthy for battle against the forces of darkness, chaos and destruction. For Zurvanite pagans, sacrificial offerings were considered unholy when made outside the prescribed calendar of sacrifices, to any divinities besides one's prashchur' or spirit guardian. These were considered highly disruptive to the cosmic order and could never occur without a loss of piety. As a point of divergence, militant white or black Magian families would have worshiped their rival species of gods only at great detriment, and to their peril.

MAKING THE OFFERINGS

Whenever pagans prostrated themselves before the idols in prayer, and offered tithes at their feet, special favours were believed to be gained, especially if the deity was one's clan or tribal prashchur.

PERSONAL CRISES OFFERINGS

During times of personal or family hardship, the man of the house took the family's case before the idols to see if some kind of an outcome could be achieved. Again, only the Volkhv or Volkhva threw the die and figured out the scale of sacrifice merited by the situation. The Magus considered factors such as the level of aid being sought, the scale of the catastrophe, the magnitude of the idol being fronted, and whether it was a prashchur or ancestral spirit guardian that was being petitioned for aid. It is also possible that the pagan Rus' (being of the Magian faith) may have used *barsom twigs* (bundles of wands) to add weight to their intercessions. From the *Avesta* and *Pahlavi* texts we learn that holding a barsom twig during a *Haoma* rite enhanced your chances of being heard by the gods.

LOT CASTING

FAMILY GUARDIANS

WHEELED VEHICLES
USED TO TRANSPORT
OFFERINGS FOR DEVILS

COMMUNAL CRISIS OFFERINGS

In a communal crisis, offerings were made to the offended demons by the Volkhy before their demonic effigy, which was probably only a *bolvan* idol (see p.583). The conduct of these black sacrifices is covered in Chapter VIII.

DIVINE INTERCESSION

The celestial deities offered only good things to those who pleaded their aid; help in battle, better crop yields, health, protection against malign spirits and the infernal deities, and more obscure intercessions like happy beehives or sober husbands. Such were the more friendly divinities the “white” families relied on.

MINOR INTERCESSIONS

Ancestors, prashchur’s, the celestial and earthly divinities, the spirits of the home and the workshop, and the spirits of nature were all things that would come to one’s aid if offerings of appeasement were given to them either face to face or before their idol. Apart from the souls of one’s deceased relatives, and the souls of the good which were faithfully venerated from one generation to the next, nothing else that has died before, or which has been eternally dead was ever good, chirpy or helpful. Entities from the underworld (the *nechistiye sili*. Russian: “unclean forces”) and the spirits or demons of the forest were left offerings, which *it was hoped* would made the devils leave them alone, for though strong with sword, man was hopelessly weak against unfathomable supernatural presences. These offerings were best left in a suitable position before entering into a creature’s presumed domain.

*P*agan religious duties

The world of the Aryan Magi was a strange place, intensely regulated by customs and religious duties written into their holy books and oral traditions, often in great detail. These teachings were the yardstick they lived and died by. Do not think for a moment that these faiths dispensed with their many customs as time went by, for these were not fads, superstitions or trends linked to a specific place or time, but a list of religious duties. By examining faiths such as those of the Hindus or Parsees you will soon discover that even today there are faiths which still practice acts and moral choices defined *many thousands of years ago*, and what was more, they do so *to the very letter of the law*.

This being the case, if the pagan Russes possessed the same or similar religious beliefs to the Aryans and Magi, then of necessity they felt a need to follow the letter of their law, the stringent and precise customs of these faiths. Many references to heathen Russian beliefs and customs identical to those of the Aryans and the Magi are found throughout this book, and these need not be “just a coincidence”. However the following one thousand years of living under Christianity slowly whittled away at the religious base which promoted these customs in the first place and subsequently they began to die out, when normally they would had survived the passage of time. So Aryan traditions entered a period of decay, mutating into superstition, that is the performance of acts and rites no longer grounded in their original religious context, perpetuated by custom alone. Unfortunately for us, whatever was not recorded about the customs of the pagan Rus’ during the past thousand years has been lost to us for ever.

MATTERS OF PIETY AND IMPIETY

For most westerners the mere idea that one’s family had a certain level of piety before the gods seems ridiculous. Many of us will think of piety as something intimately personal. But for Aryans and Magians the concept of family piety was integral to much that they believed. One’s ancestors were still alive, but not in this world. Those among the living were still linked with the dearly departed in a very real sense by the necessary rituals and prayers. These rites were a bridge into the next world, and a means of sustaining the ancestors, preventing their souls from weakening or even perishing, via the performance of ritual remembrance ceremonies. It was incumbent upon every individual to act in a proper fashion, and dutifully perform the due rites, or else your ancestors ended up paying for the transgression of both sin and religious negligence. Perjury caused untold anguish to one’s deceased ancestors, catapulting them into hell for a very long stay.

But a good descendant was of great merit to the collective family tree, both past, present and future. Their good works were shared by all their kin, past and present. Still that did not compensate for the fact that a son or daughter’s wrong-doings returned on their parents and forebears just as easily as their good works did. Therefore

FAMILY PIETY

ONE’S ACTIONS

IMPACTED ON THE

FAMILY, BOTH LIVING

AND DEAD

it might have been particularly important that parents chastise or disown wayward children if they were the cause of shameful crimes, not the least of which was oath-breaking. In doing so they could alleviate not only the shame attached to the person's actions, but the spiritual fallout it caused to the family tree.

Magian family piety is well illustrated in the following passage;

"The eighteenth subject is this, that it is necessary for mankind to make an endeavour, so that they may espouse a wife in their youth and beget a child. And for women, in like manner, it is necessary that there should be a longing for espousing a husband. Because it is declared in revelation, that every duty and good work a child performs becomes the father's and mother's just like those which they have performed with their own hands. The meaning of pur (son) is that which signifies pul (a bridge), for by this bridge they arrive at that other world. If there be no child for any one they call him one with a severed bridge, that is, the way for him to that other world is severed, and he is not able to attain to that world. At the head of the Kincot bridge he shall remain; although he has performed much duty and good works he is not able to make a passage over the Kincot bridge, and they do not make up his account and reckoning. And every archangel that comes forward to that place first asks these words, that it "Hast thou brought thy substitute visibly into the world, or not?" When he has not brought it, they will pass over him, and his soul will remain, in that place, full of anguish and grief".

"if there be any one to whom sickness from heaven may occur (eg; sterility), and there be no provision of a child for him, he has commanded him that he should make some one a son of his own, as a friend of his soul, and should receive a child, because every duty can be delegated".¹³⁸⁶

The begetting of children was also an indispensable part of this chain of immortality; without a child, without a son especially to carry on the family name, the entire bloodline of the past came to nought. Who would continue to perform the ancestral rites which maintained the ancestors?

The Magi developed a solution to the problem faced by infertile parents. They instituted a system of foster parentage, whereby barren parents would adopt a son or daughter. And even then, if a childless person died without possessing a surrogate child, a white Magus would appoint someone to act as their bridge into the next world.

The Magi were not only priests and priestesses, but some of the greatest scientists of their time.

Chapter

Astronomy, astrology, education and the sciences

Pagan holy books

It was the 10th Century AD, roughly 500-600 years after the closures of the last great pagan scholastic institutions in Greece, Rome and Egypt. Yet deep inside Russia, far beyond Christendom's borders, undreamed of activities were taking place, that would have a lasting impact on later European history. For there, amid gentle breezes and the bracing smell of conifers, pagan copyists were diligently scribing their secular and religious texts, and teaching their understudies to do likewise. You have already witnessed persuasive evidence of such things.

That these rustics preserved and composed their own literature does not sit well with their "barbarian" image, and for this reason many choose to warmly embrace the notion that Christianity brought them not only a new faith, but writing, teaching and other skills normally associated with civilised beings.

The truth was otherwise. In this chapter we will discover a little-known pagan intellectual culture in Russland, whose holy books were eagerly pursued by the Christians, and burned with utmost relish during Russia's conversion to Christianity. So vigorous was this anti-pagan polemic, that only the names of these texts have survived. We will examine what the contents of such books may have been (based on their titles), their likely origins, and witness linguistic evidence for their pre-Christian education system.

Since heathen Russian priests and priestesses were invariably of a vedic or Magian persuasion, we can deduce that some of these books were ferried into Russia, as the likes of Qutayaba destroyed the Magian infrastructure of Khorezm and similar centres of note. Although there may have been additional sources for this knowledge, a point which we shall now explore.

On the importance of books

The knowledge and great secrets of the ancient world primarily rested in two libraries; one situated in the Greek colony of Alexandria in Egypt, and the other at Pergamum, Asia Minor. There philosophers brushed the midnight oil, brushing up on the sciences progressively expanded upon by their predecessors over prior centuries. If one takes into account the overall number of texts that once graced the shelves in Alexandria, there may have been something approaching three-quarters of a million individual titles on a variety of topics. According to Plutarch, the library there received an injection of a further 200,000 written items from the great library of Pergamum (a seductive present to Cleopatra), many of which Mark Antony later spirited away to Rome from Egypt, and into Plutarch's safe-keeping.¹³⁸⁷ This account illustrates a large-scale trade in academic treatises, and this resulted in the relocation of specialised collections to Rome, Greece, Araby, and many other unrecorded incidents of trafficking besides.

This went on for some time. Centuries later it was Muslims who busied themselves with the matter of archiving

PAGAN RUSSIANS HAD THEIR OWN BOOKS

WHEN PERGAMUM CLOSED, MOST OF THE COLLECTION WAS TAKEN TO ALEXANDRIA

ancient knowledge. Their scholars, such as the medical writer Abu Zayd, were committed to gathering as many specialist books pertaining to their field, as they could, with a view to amassing personal libraries of note. "He travelled through the land to collect ancient books, even going into the Byzantine country".¹³⁸⁸

Antiquarian scientists well versed in these treatises and philosophies greatly influenced the lives of those they met on their wanderings. Then, as now, one well read scholar, or a free-thinker with a little bit of ingenuity, can bring about drastic social change. Edison created the light bulb, the Wright brothers the aeroplane, and Ford the first mass-produced motor car. These are just a few innovations which changed the face of the world, and only several individuals were responsible for the breakthroughs. Antiquity was no less gifted with great minds.

If we could single out and praise one ancient for their creation of lofty scientific works, Ptolemy would be that person. His judicious compilation of extant arcane knowledge, pooled from several great civilisations, set new standards in academic excellence, and between their pages, one could almost say, laid the sum total of humanity's most important discoveries until that time, in the mysteries of nature and science. He was a truly a luminary of the first order. Ptolemy's list of credits included a second century AD map of the globe (drawn in planispheric style and divided into lines of longitude and latitude), which incorporated much of the known world (as far away as Vietnam and China), a definitive tome on astronomy, books on astrology, meteorology and optics. And it is largely these literary, historical and scientific legacies that became items of strategic importance to the nations of the world, for this knowledge granted temporal power and wealth beyond imagining.

The geographical, mathematical, astronomical and scientific wisdom that Ptolemy tapped into was already of considerable age during his time. For example Herodotus talked of the Phoenicians knowing the sea route around Cape Horn, which theoretically gave them the ability to circumnavigate Africa. How many of the original Phoenician sea charts, if any, were to be found at Alexandria? Which mariners and intellectuals read them? Did anyone use these ancient charts to plan voyages, to go to Indonesia and Sri Lanka in search of spices and other relished commodities? What would be the pecuniary value of this and other earth-shattering information, in terms of trade opportunities, particularly if you were one of the privileged few to know the way? As you will soon read, Mediaeval Arabs used Egyptian, Persian, Greek and Roman texts to advance their society, by acquiring and applying the higher learning of the ancients, and tailoring it for their own purposes. Before long the Arabs had free run of the Indian Ocean, spices and new peoples to convert to Islam.

The library in Alexandria suffered several disasters, with the untold damage occurring in 391 AD (not long before the last of the Pharaonic priests left Egypt), and later in the early 7th century at the hands of Christian rioters.¹³⁸⁹ In the theological free-fire zone of Alexandria, the Arians (an heretical form of Christianity which began in Egypt but spread to the Goths and Germans) and the resident pagan Gnostics had sent tempers well past boiling point. The mere existence of their devilish sciences in Alexandria after the conversion caused militant Christians to take the law into their own hands. Inter-sect hostilities became drawn out into open street clashes, which saw the Library (a spiritual home to the pagan gnostics and Magi), soundly trashed, obliterating much of its unique catalogue. Centuries later, during the Arab annexation of the city, any items of significance that still existed there were snatched up and spirited back to Baghdad, or even freely offered by disaffected scholars wanting to get their own back against Rome and Byzantium.

On the other hand, Roman and Byzantine authorities may have maintained their own copies of the ancient books, written treasures inherited from the time of the Caesars. But they were not freely circulated. Ptolemy's *Geographiae* would have been the most dangerous of all to disseminate. If the Church knew how people lived in 'Scythia' and the East, it might have been intent on maintaining the preferred Roman, flat-earth model (Romans made their maps on metal disks), to limit any social discourse with the eastern pagan lands. From a treaty forged between the pagan Russes and Christian Byzantines (where the issuing of certificates and seals by the pagan elite was required when seeking authorisation to commute to Byzantium), it would appear that the pagans wanted very few cross border movements into Christendom either.

For all intents and purposes the world was flat, and at its end lay deadly serpents, and other equally unguessable horrors. And so it stayed until the Middle Ages, when a fresh outbreak of forbidden knowledge, contemporaneous with increased levels of paganism, witchcraft and heresy, first caused people to re-assess their perceptions of the world.

On Science

Who can doubt the role of the Magi in bringing to mankind's attention the magnificence and hidden secrets of science. In their physics and alchemical observations they found sure evidence of divine laws, inalterable laws of physical existence, authored and sponsored by a loving force beyond space and time, whose handcrafts were shaped by physics and chemistry. In the absence of these laws no equation could ever be resolved, since the variables would tirelessly mutate, and rendering the formation of physical matter improbable too, for the very same reason.

Science became an aperture through which life-long students gained a deeper understanding of the Creator's ingenuity, from the infinitely great, to the infinitesimally small. Experimentation was a profound spiritual pursuit, enhancing their love and respect for the Creator as their sharpened intellects happened across ever newer marvels, normally invisible in the world around us. Inch by inch their appreciation of the Creator's legacy expanded.

Most of today's scientists differ from the enquiring Magus or pagan gnostic philosopher of old, in that they are prepared to attribute the untold intricacy of the DNA helix to a self-perpetuating, chance event. In their mind periodic tables and physics formulas furnish evidence for inviolate scientific laws, but not a hypothesised author, since the laws had always existed. Whereas for the Magi, it was the Creator's unseen hand laying out everything under heaven, governing material existence, providing the framework within which all things form. Modern scientific sophistry resembles, in no small measure, that of the Dahris, a sect of atheistic scientists present in Persia, otherwise known as the *Zandiks*. Considering their institutionalised materialism, unbelief and sacrilegion, *Zandiks* were branded 'heretics', harshly condemned on every level by Believers of the Book, Magians, Muslims and Jews alike. Muslims were particularly eager to blood their swords on *Zindiq* (as they called them), since their doctrines were the height of blasphemy against the Most High, an affront to religion generally and societies under their guidance. It is predominantly through Islamic sources that their teachings and confutations are recounted.

"The first school, the Dahris, are one of the oldest sects. They deny the existence of a creator and disposer who is omniscient and omnipotent. They think that the world has always existed of itself and as it now is, without a creator; and that animals have always sprung from seed and seed from animals. So has it always been, and so will it be forever. These are the Zandiks".¹³⁹⁰

According to the Magi, the god-fighting Dahris were one step lower down the stairway into the atheistic abyss than traditional atheists in that *"They give up their religious duties and make no effort to practise virtue: (rather) they engage in endless discussion ... that virtue goes unrewarded, that there is no punishment for sin, that heaven and hell do not exist, and that there is no one who has charge of virtue and sin. ... that all things are material and that the spiritual does not exist".¹³⁹¹* In other words they professed, in addition to their science, doctrines aimed at demolishing the foundations of religion and spirituality.

The Arab legacy

The Middle Ages saw the miraculous re-emergence of many books written by pagan academics and natural scientists over the preceding thousand or so years. These the inner sanctum of Arab thinkers avidly converted ancient sources into Arabic, frequently adding to them based upon their own experimentation.

Such texts included scientific epistles, with names like,¹³⁹²

"The Science of the winds in the bowels of the earth, which produce many earthquakes and terrors";

"The Reason for the forming of clouds and the causes altering this formation during its periods";

"The distances of journeys in the regions of the earth";

"Calculation and making an instrument with which to calculate the distances of the heavenly bodies";

"The heat of a mirror";

"The principles of mechanics" As padded as these titles may be, they provide apt descriptions of their contents.

In the *Fihrist of Al-Nadim*, an extract from the writings of Abu Sahl ibn Nawbakht¹³⁹² described just how the Arabs came to fortuitously acquire so many antiquarian books on the sciences, astronomy, medicine and astrology, information that revolutionised the advancement of Islamic society, making it more progressive than Western society by far.

Apparently Mediaeval Arab scholars had originally been delving into texts that had originated in Babylon, but which had been expanded upon by ancient Egyptian academics and following them by the Indian Brahmins. As far as he was concerned the continuity and propagation of this learning was fostered by various groups of scholars from that time until his, in an unbroken chain, namely the Chaldees, pagan Gnostics and Magi.

One source of this knowledge was the Chaldean sorcerers, whose head men and philosophers kept such treatises. Ibn Nawbakht mentioned that a series of twelve great temples once existed in Babylonian Chaldea, each dedicated to a sign of the zodiac, plus another seven temples, each of which was assigned to one of the main planetary bodies. Each of these seven was run by a man of wisdom, all of which collaborated in the spread and upkeep of Chaldeanism. But following a period of disunity (year unknown), the seven headmen who ran these planet-temples went their own separate ways and *sought out a major city of their own in which to begin spreading the Chaldean faith*.¹³⁹² We will probably never know which cities the Chaldean wise men migrated to, however classical sources tell as that Chaldeans were present in Greece and Rome. Inevitably their books went with them

Another source, perhaps even the foremost source of these books was the Magi. Abu Sahl confirms the incalculable damage that Alexander the Great did to the intellectual infrastructure of Persia and for that matter, the entire inheritance of the ancient world, with his wholesale destruction and robbing of classical writings, and works on the sciences. Abu Ma'shar noted that it was the Great Kings of Persia to whom we are in greatest debt for so concerning themselves with the preservation and survivability of the ancient sciences, particularly during Alexander's reign of terror throughout the East. In this matter they took every care. Apparently the Persian monarchs and Magi had the foresight to send large consignments of books out of Persia into secret locations in India and the Chinese orient where they were guarded from harm.¹³⁹² I personally believe that Tibet's Dun Huang caves was but one destination for these texts, and there generation after generation of guardian Buddhist monks maintained a careful watch over them until this century. The Chinese dualists of the 10th and much earlier centuries were no fools. Some of their inventions were ingenious.¹³⁹³

Meanwhile in Persia, King Tahmurath seized upon the idea of building a buried repository to serve as a fortress of higher learning, a pagan intellectual ark if you like.¹³⁹² As numberless copyists and scholars set about recording the sum total of their knowledge onto highly durable white bark, engineers weighed up the requirements for the construction of an enormous vaulted archive, and surveyed a number of places to determine a suitable site for the project. At various locations they considered such things as the soil's ability to preserve the writing materials which were so susceptible to dampness and rot. The site they chose was in Javy, Isfahan, and once built it was called Sarwayh, a project built with all of the skill and genius of the ancients.¹³⁹² Several such places of safe-keeping were designed and built, and with the passing of ages their exact location came to be forgotten.¹³⁹² Anyhow, in the year 961 AD, several centuries after the fall of Sassanian Persia, the concealed site of an old Persian book repository partially collapsed, giving people their first indication that an underground library existed there.¹³⁹² Muslim scholars and disturbed clerics fell upon the site like flies. As a consequence of their good fortune any books were retrieved from this location, but unfortunately the Arabs proved incapable of deciphering them at that time.¹³⁹²

Meanwhile the Roman Byzantine authorities adopted a very different stance in relation to the ancient science texts. They succeeded in suppressing the teachings of the philosophers until the coming of Emperor Julian the Apostate (who the Christians regarded as walking in the footsteps of the Antichrist), who reinstated the right of the philosophers to continue preaching their doctrines and sciences. Prior to Julian, many of the ancient books were burned, and in one incident just short of twenty wagon loads full of "forbidden books" were put to the torch by the Romans. A Muslim academic named Abu Ishaq ibn Shahram learned that the Byzantine Emperor (Basil II) knew the location of a massive observatory-temple complex originally built by the ancient Greeks, and kept under lock and key since the time of their conversion to Christianity.¹³⁹² With a desire to fathom the unknown running deep in his veins, Ibn Shahram spent a considerable amount of time at the Byzantine court attempting to coerce Basil "the Blinder" into allowing him access to the place. Eventually he made the breakthrough he had long been waiting for, some time shortly before or after 980 AD. He was taken to a location in Anatolia (Turkey) several days travel (by sea?) from Constantinople, to a province known to have been *inhabited by Chaldeans who were still practicing their old religion*. Remarkably the Greeks had not sought to kill them, but allowed them to be as they were, though a subject people. The site in question was sealed by iron doors of such immense size that Ibn Shahram had never seen the likes

of them before.¹³⁹² Inside its spacious halls and corridors of exquisitely decorated marble he viewed in awe unspecified quantities of pagan Greek religious equipment and utensils, plus up to a thousand loads of texts, though Al-Nadim reckons that ibn Shahram may have been exaggerating somewhat.¹³⁹² Nonetheless the state of repair of the texts was said to vary immensely from worm-eaten to mint condition. It has been speculated that he had actually visited the ancient library at Ephesus, but this is by no means conclusive. For all we know it may have been the Var of Magian legend.

The Arab propensity to pursue intellectual studies was contemporaneous with the rise of Islam in the 7th Century AD, and it is towards that era that we must look when attempting to discern the source of their Pythagorean and Aristotelean texts. Some of the earliest Arab acquisitions of ancient knowledge are thought traceable to the Abbasid army which had invaded Egypt c. 643 AD.¹³⁹⁴ There they gathered up what remained of the Alexandrian library's treasures, and from that time Arab society advanced technologically at a phenomenal rate, culminating in the need for a formally established university.

As a consequence, the Baghdad institute of the sciences was built c. 700 AD under the Khalif, Al Ma'mun,¹³⁹⁵ and staffed with a virtual production line of translators and research officers who retrieved their hieroglyphic, hieratic and demotic secrets of the Egyptians, or the Greek teachings of the Hellenic philosophers. This institution came to be known as the *Bayt al-hikma*, or "the House of Wisdom"; Islam's principal scientific and cultural research institute, which employed a number of Arabic, Jewish, Greek Gnostic and Christian (Greek and Syrian) scholars and scribes. There they converted the writings of antiquity (gathered from Greece and other sources also) into Arabic. Under the Khalif, the precious heritage of the Greeks, Romans and Egyptians was protected, nurtured and developed for the benefit of many. This institute became a show-case for what the marriage of money and science could achieve; ethnic and religious tolerance became heightened, along with an awesome respect for enquiry.

It was Yahya ibn Khalid ibn Barmak who first brought Ptolemy's sublime astronomical tome, the *Almagest*, to the attention of the *Bayt Al- Hikhma*.¹³⁹² Once it became apparent just how significant this ancient text was, it was commanded that various translations be made of it and compared with each other for accuracy.¹³⁹² These were in turn to be checked and re-checked against Ptolemy's original. While undertaking many such projects Mediaeval Arab translators and researchers were described as "*taxing themselves with fatigue*".¹³⁹² Such was the level of commitment and scientific sophistication which Arab academics introduced into the arena of Mediaeval scientific discovery. In the end "*they brought to light wonders of learning*",¹³⁹² wonders over a thousand years old in some cases.

In Persia too, the Arabs became eager to convert stacks of documentation into Arabic. This became a priority not only to make these texts intelligible to Arabs, but to seal out the many Persians who were part of the governmental apparatus of Arab-controlled Persia. This move greatly angered the Persians, who in one heated account supplied by Al-Nadim offered an Arabic translator assigned to this task, no less than 100,000 silver dirhems if only he would discretely drop the translation project.¹³⁹²

Multi-disciplined students and sages grew in number. Intoxicated by learning, some began travelling abroad to the very places they had read about in the Alexandrian scrolls. Modern perceptions of what was known a thousand years ago are very poor. If Al-Masudi's *Fields of gold* is anything to go by, the Arabs had happened across an elder regime of knowledge pertaining to the world's seas, peoples and continents. In all it was far more advanced than one might otherwise believe. What is even more unsettling is the sheer antiquity of that information.

Accepting the historicity of these anecdotes might feel like a real sword-swallowing act to some modern readers, especially those hamstrung by what I call the 'village idiot' mentality, a senseless concept which envisages *everyone* living and dying in their own birthplace. This might be fairly normal in any sedentary community, but soldiers, travellers, refugees and merchants have a bad habit of beating their own paths. Contrary to this notion of ultra-stability, Western and Eastern Europe of the past 2,000 years had been repeatedly saturated with migrating nations and invading armies constantly on the move; not very settled at all! For example around 150 AD, the ancient Serb homeland was located along the Volga near the Caspian,¹³⁹⁶ not in the Balkans!

Well, the travel logs of these Arab writers were quite startling; Spain, Rus', Volga Bulgaria, Central Asia, North Africa, India and the Baltic. The discovery of *ouroboros* arm rings in Africa, superior South African-style iron smelters in Poland, and cowrie shells as far North as Finland¹³⁹⁷ might also be attributed to them, or even

wandering pagan scholars and traders.

Some of the greatest Arab "discoveries" stemmed from an infusion of new scientific principles from the Hindu Brahmin astronomers, scientists and mathematicians. Thus the acquisition of mathematical techniques like algorithms and the decimal counting system (from India) really were the icing on the cake for modern mathematics,¹³⁹⁸ and became fully fused with all that was known from the Alexandrian sources about Roman, Greek, Mesopotamian and Egyptian science. Mechanics, optics, you name it, it was all there for the taking.

As shall be mentioned later, the inscriptions on some unearthed Eastern magical artifacts indicate that an eastwards transportation of Egyptian and Gnostic esoteric knowledge had occurred some time prior to 300 AD, or shortly after 400AD, and probably meant the shifting of minor cult activities into the area during this same period. We know that the last of the remaining Egyptian priesthood, who maintained the worship of the Gods of the Pharaohs, were preparing to leave their motherland in the 4th century to live on some reclusive Libyan mountain, in a Graeco-Egyptian city called Diospolis.¹³⁹⁹ They had been run out of town by the Coptic Church, or had left because things were getting a bit too hot for them. For the departing Egyptian priests, the 4th century Crimea and Bosphoran Kingdoms, with their large population of ex-Alexandrians and Arian Christian Goths, may have seemed a natural choice for the occasional cult member. Exiled Mathematici and scientific Gnostics, who often ran afoul of local authorities in pagan and especially Christian times, were another group who would have been keen to find "greener fields". A remote place in the East, where they could engross themselves in their studies, free of troublesome interference, would have been much to their liking. Their wondrous scientific compendia and philosophical works (such as the *Corpus Hermeticum*, the so-called turquoise tablets of "Hermes the very, very, very great"), were known to have been sent to Diospolis in Libya;¹⁴⁰⁰ why not elsewhere? Considering that Alexandrian and Greek observatories were once located at Tanais, and in the Bosphorus and Pontus area, might this have provided some added incentive for expatriate Philosophers and Egyptian pagan Gnostic priests migrating there? As Christian missionaries pressed further and further into the reclusive pagan back-blocks of the known world, the more likely these sects would have been to find solace in even more secluded places.

During the Middle Ages Western Europe was destined to receive Graeco-Egyptian learning, at the hands of Arabs, and perhaps even other interest groups. Hermetic knowledge miraculously sprouted in Sicily, where Arabs ruled after invading from Libya, but it is not thought to have entered Spain, long under Moorish dominion. The Egyptian pagan Gnostic *Corpus Hermeticum* conspicuously slipped into Bogomil hands, at Palermo, Florence and Northern Italy.¹⁴⁰¹ Commonly, Psellus, a philosopher from Tsargrad, was thought responsible, but the information could well have come from Libya as well. Mediaeval Italy also gave birth to the *Tarot*, in legend ascribed to Thoth, the Egyptian god of higher learning, literature and science.

The Ancient Sciences

The ancient world was graced with eminently learned men and women, well versed in maths, alchemy, astronomy, architecture, mechanics and so on. The Greek astronomer Posidonius figured that the moon was 230,000 miles from the earth¹⁴⁰² (it's about 239,000 miles) and the Egyptians had calculated the circumference of the globe (overstating its girth by a mere 15%). But they were not perfect, some of their calculations and theories were out to a lesser or greater degree. Nevertheless, their many excellent achievements were soon forgotten, almost as if they never were. Stories concerning the innovations of the ancient scholars are treated with some contempt by modern readers because, in many ways, they make a laughing stock of our smug belief that every generation before us was technologically inferior! Consider the following points;

Two Alexandrian scientists constructed hydraulic devices for varied purposes, and pumping equipment that operated on pneumatic principles¹⁴⁰³. The lighthouse at Pharos, Alexandria, guided ships and warned them of the treacherous coastline¹⁴⁰⁴. One tale surviving from antiquity maintains that Pharos was equipped with an offensive lense or mirror which could burn the sails of approaching enemy shipping. An Alexandrian architect was in the midst of building a "hovering-god" temple (that was never completed), where the metallic statue was intended to hover above the ground, suspended by the magnetic field of a ceiling constructed entirely from magnetite.¹⁴⁰⁵ The ancients built labyrinths, with the oldest (according to Pliny the Elder) being built three and a half thousand years prior to Pliny's time at Heracleopolis. According to him the subterranean complex was no puny undertaking,

containing a maze, about 20 massive vaulted halls, plus temples and even two 20 metre tall pyramids.¹⁴⁰⁶ Long before Pliny, Herodotus made mention of the great Labyrinth, which in his words surpassed everything that had ever been built by human hands, even greater than the Pyramids, or the temple at Ephesus.¹⁴⁰⁷ The Roman sewer network was so well built that it had served the purposes of Rome relatively intact for seven hundred years prior to Pliny the Elder's time.¹⁴⁰⁸

On what basis can these anecdotes be discredited? To assert that such technology never existed simply because there does not appear to be any continuity in the application of that technology throughout later ages, or they have not been found by archaeologists, is an exceedingly erroneous line of thought.

To illustrate this, the Romans marvelled over the engineering achievements and pyramid-building of the Egyptians, and tried hard to calculate the means employed to hoist the blocks to such lofty heights, but to no avail. Even in those days they were looking for evidence of canals or ancillary earthworks, along which barges might have floated bearing blocks of masonry, but found was nothing. General consensus at that time was that the blocks were taken to the top of the pyramid on mud-brick rampways, bricks which were later used by the workers to build their own homes. The other view was that salt ramps served the same purpose, and these were later washed away by water brought in from the Nile.¹⁴⁰⁹

Ultimately, Roman engineers and builders didn't have a clue how they did it. The fact that the Romans (a later civilisation) were dumfounded by Egyptian construction methods (an older civilisation) means that the arts of pyramid building had been lost by the end of the Old Kingdom. Succeeding generations of architects in the classical world designed many other amazing building projects, yet they were unable to build pyramids (and from the comments of people like Pliny the Elder may have lacked the willingness to do so even if they had have been able to). The fact this technology never again manifested itself in future generations of man proves the discontinuation of former technologies is not only possible, but a historical reality! These arts died when the people who knew their secrets died and failed to pass this knowledge down to their students. Many ingenious contraptions and inventions born in the fertile minds of ancient thinkers are no longer in use today. This does not mean they never existed, or were the fantasies of mediaeval forgers and charlatans, but simply that inventions were surpassed by a more effective application of technology.¹³⁹³

So, having reached this conclusion, can we still say with utmost conviction, that these next few tales are far fetched, or built on wild dreams? According to Pliny the Elder there was a man who wrote an entire copy of the *Illiad* so small that it could fit in a nutshell, or people who carved sculptures so small that they were no bigger than a bee's wing.¹⁴¹⁰ Are these fables, or evidence for the use of magnifying glasses/jeweller's lenses? Iron that would not rust was once made in the ancient world, manufactured according to what were termed sacral rites (alchemy?). Even in the 20th Century, one 1,500 year old rust-free iron column can still be found in India at Mehrauli which leaves modern metallurgists scratching their heads for explanations.¹⁴¹¹ Pliny the Elder talked of an iron chain over the Euphrates that formed part of a suspension bridge (dating to Alexander the Great's invasion of Mesopotamia around 331 BC) possessing links which refused to rust, and concave silver mirrors that were made on account of their ability to magnify images.¹⁴¹²

According to the Nicaean Anastasius and St Clement of Rome, Simon the Magus was a master of illusion, arts known in the Middle Ages as *legerdemain* or *juggling*. He was said to have crafted walking statues (mechanical devices or tricks with wires?), was unharmed by fire (a fire-resistant salve such as that used by modern stuntmen?), could make phantasmal images appear in the air (tricks with lenses, such as the Chinese lantern?). Before a large audience he could make the same person appear in every window of an upper storey tower simultaneously (tricks with multiple mirrors?), he had two faces (convincing facial masks?) and he could mutate into a goat (costumery not unlike that of the witches?).¹⁴¹³

Book burning

In discussing the eradication of treatises and compendiums touching on magic, alchemy and astrology, we must appreciate that the intellectual climate was extremely confusing during the Middle Ages. Neither the Church nor the Muslims had prepared an adequate response plan to the new ideas then awakening after centuries-long hibernation, which wandered into European and Islamic nations. On one hand it was an exciting time; the

invigorating knowledge of the ancients had returned, but conversely some facets of it were no longer compatible with either Christian or Islamic dogma. After all had not their predecessors closed down the colleges of the often militantly anti-Christian pagan philosophers, in places like Athens? Had they not already put an end to all this witchcraft?

Unhappy about the quickening influx of “heretical” ideas and pagan Gnostic works (of a philosophical or scientific nature) into later Mediaeval Christian society, some elements in the Roman Catholic Church favoured destroying unrepentant/relapsed heretics and their forbidden books by fire. This was normally done on bonfires stacked somewhere on the westward side of the local Church.¹⁴¹⁴ Yet other clergy (including some popes and archbishops) were fearful that they were “throwing the baby out with the bath water” as it were, and preferred a calmer approach which permitted a lengthy investigation of the contents of the newly rediscovered. Both approaches were a two-edged sword. To this end the fledgling university schools were established.

Inside the Moorish Caliphate, the situation was much the same, as relations between Muslim clerics and academia became highly inflamed. There were repeated accusations of subversion, Magianism, Manichaeism and Islamic heresy, not to mention Ancient Greek philosophy. This led to reprisals against certain Moorish professors and students, resulting in a spate of banishments and executions between the 8th and 12th Centuries AD,¹⁴¹⁵ carried out first by the Muslims, then after the 1085 liberation of Spain by Christian forces by ecclesiastical bodies. Eastern Islamic scientists also experienced suspicion and intimidation, but not on the same level as those of Spain. Al-Nadim recorded how Abu Ma’shar¹⁴¹⁶ was treated for divining;

As he was antagonistic to al-Kindi, he stirred up the populace against him, accusing him because of his philosophical sciences. But Al-Kindi played a trick on him by means of a man who interested him in the sciences of arithmetic and geometry. Although he entered into this study, he did not perfect himself in it, turning instead to the science of the judgements of the stars. Then he ended his ill will for al-Kindi because of his interest in this science, which was of the same type as the sciences studied by al-Kindi himself. ... (The Caliph) Al-Musta’in had him beaten with lashes because he correctly foretold him of an event before it took place. So he used to say, “I hit the mark and I was severely punished”.

Some of Abu Ma’shar’s works were quite detailed astrologically speaking, such as *Conjunction of the Two Maleficent (Planets of Saturn and Mars) in the sign of Cancer*, and as with so many other Muslim books on astrology, I am uncertain whether or not they remained intact into this era.

Book burning failed miserably as a means of controlling what the newly Christianised Europeans thought. Despite the many pyres of magical treatises made during the Middle Ages, the knowledge encapsulated within them (and even translations of them) are still with us today and available in many libraries and book shops.

But the Church had not always handled itself in this manner. If one takes a look at the earliest years of the Church you will find that their morally-instructive writings faithfully incorporated the writings of the Gnostics and other “condemned sects” and then point by point refuted their claims from the Christian viewpoint. And after comparing the translation of the *Pistis Sophia* dug up in 1946 with the copies preserved by the Church fathers for almost 1,900 years I was astounded to see how faithfully ecclesiastical writers had maintained the original copies¹⁴¹⁷ (in a purely academic sense). This method of handling heresy soon fell by the wayside, and through the discernment of theologians new biblical interpretations gained currency. Within (NT) Acts 19 are two sentences (18-19) which became the justification for the frenzied burning of “unholy books”, and the very reason why the Middle Ages, as well documented as it is, could have been a whole lot easier to research.

“And many that believed came, and confessed, and showed their deeds. Many of them also which used curious arts brought their books together and burned them before all men: and they counted the price of them, and found it fifty thousand pieces of silver.”

In Acts 19:19 the Greek appears as περιεργα πραξάντων συνεγκλωόντες sufficient proof the tomes in question concerned black magic rather than μαγεία (ie; white magic)! In stead of meaning burning books on magic is meritorious, what this passage shows is a crowd of people, who, having chosen to “turn away from the sin”, sought “repentance” by willingly throwing their own tomes of evil sorcery onto a bonfire. That’s sort of like a thief returning what he stole, or a drunk laying off the bottle. *That is very different from saying all books on the curious arts must be burned.*

They had turned from the dark side, to the light.

Throughout history, the desire to monitor and eradicate knowledge has gone hand in hand with repression of all kinds; many different regimes have resorted to it as they saw fit. Censorship of this kind is wrongful, or at the very least misguided, a fundamental deprivation of the human right to exercise free will and judgement, an indulgence in a form of mind control *that in the end really doesn't work*. For this reason the modern Church no longer subscribes to the Mediaeval practice of destroying 'unsavoury' literature that is contrary to Christian teaching. In this respect they are much closer to the Church fathers in the way they have chosen to deal with such things.

Even so, in order to fully understand exactly why the Church took this sledgehammer approach to the "forbidden books" (which the Russian Church called *Chernoknigi*, literally "The Black Books"), we must look back to the mindset of many Mediaeval clergy. By their reasoning, the archaic tomes threatened the new Christian order, which for some time really struggled, and was not helped by the return or stubborn persistence of these books.

Not all clergy were responsible for burning books. On the contrary, many of them copied and saved these works for the future, and debated their legitimacy in the open forum of the universities.

Reasons for the book burning

As you will shortly read, the "Black Books" of the Slav pagans were incinerated, treatises including volumes on astronomy, astrology, poisons, herbal medicine, divination, meteorology, and perhaps even geography. But why burn weather tables and astronomy charts? Surely they would have been of some use to local farmers or sea navigators? The answer is that not everybody wanted to follow the lead of Arab academics (like Al-Farabi, Al-Kindi and Avicenna) in examining the magical arts and demi-sciences with a view to establishing the precise boundaries of "natural science" (such as that propounded by the anti-Magian Roman scientist Pliny the Elder), thereby distancing science from sorcery and the Magian theology permeating antiquarian scientific works. Fear and doubts about the "holiness" of what these books contained is what primarily disturbed Christian leaders and their more orthodox parishioners, and this further prompted a spree of book burning which exterminated most of the knowledge of Rus's resident pagan priests. Stephen I's declaration of war against Hunnish writings promised little quarter for the written word, except it be in Latin. "*Upon the council of Pope Sylvester II we have decided that the ancient (Hungarian) runic characters, and that pagan method of writing which proceeds from right to left, used in Hungary by the people and clergy of the Szekler and Kum provinces, shall henceforth be forbidden and will be suppressed throughout the country, and superseded by Latin writing*".¹⁴¹⁸ Stephen saw to it that any clergymen found to be using heathen writing, or acting as a custodian for pagan texts and inscriptions was thrown out of the priesthood, excommunicated from the Catholic faith entirely, plus fined. Financial incentives had the desired effect of coercing the Hungarians, whether priest or lay, to abandon the pre-existing learned culture of their forefathers. All contraband documentation was thenceforth to be immolated, and chopped apart by the sword. In concluding, the document trumpets "*with their destruction all longing for past traditions and all memory of paganism shall cease*".¹⁴¹⁸ And so a new age surpassed the old. On those incandescent piles of timber, past realities entered the realm fable.

During the 8th to 11th Centuries, the Byzantine East was more unyielding than Rome on such issues. After all it was in damage control mode, as it dawned upon the Patriarchs that many of their provinces were not only under the threat of Muslim and pagan invasions, but progressively more riddled with dualist heretics. With the early Church in Rus' under the command of Byzantine appointed clergy, it is likely strong-arm tactics were brought to the fore the very moment of Vladimir's return to convert Russia.

In the West discussions and logical debate began in Toledo, where Christian thinkers mixed at length with Muslim colleagues, both of which preferred to converse in Arabic rather than their native tongues. Archbishop Raymund's astute decision to gather translators in one college allowed for the many discoveries then being made in Spain to be introduced to Western students in the vernacular.¹⁴¹⁹ It was a period of lengthy enquiry and produced trial and error findings which did not always meet with widespread consensus among their peers,¹⁴²⁰ thus allowing for diverse scientific theories and sub-trends within the Church, theories which still carried that blend of the real and surreal. Toledo had already experienced no less than four Holy Councils as early as the 7th Century AD, and that is long before the golden age of Islamic discovery. During these meetings the topic of magic and astrology reared their head.¹⁴²¹ The time frame for these councils testifies to the sudden nervousness of clergymen in an

atmosphere where heathen philosophy was intruding into the domains of a Church barely ready to tackle the nature of the texts. As in antiquity, the sciences of the 7th-15th Centuries AD were interwoven with the philosophical and occult disciplines; inseparable in fact. Geometry, physics and algebra were awash with numerology, theosophy, the esoteric exploration of numbers, their relationship with the universe, and the ruling planetary intelligences.¹⁴²² To the uneducated Mediaeval mind was it possible to tell the exact difference between numerology and algebra? For pagan Gnostics, the letters of the alphabet were some of the most unfathomable mysteries of the universe; they were seen as essential building blocks for life and existence. "Heretical" and allegedly politically adventurous groups such as the mathematici, geometrists and Magus-scientists made it extremely difficult for the Church and Muslim clerics to trust everything they expounded was it good science, or some "trick of the Devil"? As time progressed, the line between "magical delusion" and scientific breakthrough was still sufficiently hazy to destroy the credibility of such fine theorists as Copernicus (he was forced to recant his heliocentric theories) and Columbus (who many thought would sail off the edge of the world). From the outset, the mere assertion that the sun stood at the centre of the universe could well have had profound pagan undertones in a world where clergy strove to combat heathen heliolatry. For Christian leaders, the acceptance of this new revelation did not come quickly or easily! Once the natural science that underpinned Copernicus' theories had been sufficiently proven, his views gained full endorsement by the Church.

Generally speaking books dedicated to the pure sciences were not purged. By pure I mean those books that did not revel in astronomy, sorcery and astrology. Through a natural curiosity to understand the efficacy of many astrologers' predictions these books often survived. Although unacceptable to the Church hierarchy, they were nonetheless delved into by highly motivated students. Some "heretics" among the clergy and laity were not part of any organised brotherhood, just curious about this line of study. But before long they felt themselves drawn not only deeper into alchemy, and the study of nativities, but into networks consisting of organised "heretics". Yet astrology was in a very real sense perceived as a science; measurable, observable and quantifiable.

Perceived impropriety cannot be held totally to blame for the disappearance of books. Books also vanish because of simple human ignorance. I know of a case here in Australia where an old woman died. She was a collector of books dating back to the first 100 years after the colonisation of Victoria, so much so that whole rooms, and even the corridors were stacked to the ceiling with this priceless inheritance of thousands of books. Immediately following her death the whole house was cleaned out, and her lifetime's collection of books taken to the rubbish dump. A neighbour managed to intervene as the loader was being taken away and managed to save five copies!

Another striking example of a large-scale loss of primary sources can be found in the study of English witch trials undertaken by James Sharpe. He divulges that documentation was only available for a mere handful of boroughs, the remainder of the trial records destroyed or missing. What has occurred there is a tragedy, and it will forever impede any attempts to reconstruct the history of the prosecution of witchcraft in that country. It is here that the importance of people's intentions come into the argument. Were these papers destroyed because they were getting dusty and taking up too much space? Were they an embarrassment? Were they bombed during the war? Was it due to water damage or accidental fires? If they were destroyed for any of the above reasons then we can call it an error of judgement or an accident. But if they were deliberately devastated to cleanse away all traces of the past, to begin a brave new world (an unlikely scenario which I sincerely hope did not occur), then that is censorship of the worst kind. Luckily the Spaniards did keep their trial records, and it is my understanding they are presently being studied.

A certain level of bestial ignorance was present during the Middle Ages, not only in nominally Christian countries, but amid the Muslims as well. *The Filrhist of Al-Nadim* dedicated a large amount of space to naming the hundreds of titles which had survived from the ancient world, and it is my guess that hardly any of these have survived. In some cases they disappeared because the Muslim authorities wanted to dispense with this material as subversive to Islamic teachings. Another major cause which I gleaned from reading Al-Nadim was that older scientific research titles eventually lost their popularity, as newer works replaced them. Then as now, many readers no longer desired to keep the old books, and no doubt many suffered an ignoble fate. Masudi spoke of a book dedicated to the history of the ancients pertaining to the period following the dissolution of Mesopotamian society. This document no longer exists, but no doubt would have been most enlightening. It may even have looked something like this present title. And what about Ptolemy's *Optika*. Lo and behold, much of "Book 5" is missing, a

OF PTOLEMY'S *OPTICA*

text dedicated to experimentation with a device known as the *Fostir* or *Baptistir*, which for all intents and purposes was designed to magnify distant objects;¹⁴²³ some would call it a crude telescope. No prizes for guessing why the crucial last half of "Book 5" is no longer with us!

Books of the Magi

THE PERSIAN MAGI KEPT VERY INTERESTING BOOKS; BUT DID THE EASTERN EUROPEAN MAGI HAVE THEM AS WELL?

According to the Greek philosopher Iamblichus in his *The Life of Pythagorus*, the Magi were learned in maths, magic and every science, *and knew the secrets by which the gods were offered unblemished worship*.¹⁴²⁴

In the *Persian Rivyats*, we are told of the very many different books once possessed by the white Magi; books on natural wisdom, knowledge of the things of the world, the order of Magian society, their efforts to fight crime and lawlessness, angels, purity laws, worldly authority, penal codes, penitential canons, medicine and astrology.

According to the *Pahlavi* texts, Zoroaster first wrote down the *Avesta* and *Zand* on parchments of cow hide (using Avestan characters?) in golden lettering.

THEIR RELIGION WAS MOSTLY PROPAGATED ORALLY, THE PERSIANS HAD A WRITTEN MASTER COPY

The medieval Muslim scholar Al-Masudi described the size and form of the master copy in which the Magi recorded the grand rites and teachings of their faith; "*which the Magi called the book of religion*", it "*was written on 12,000 cowhides, bound together by golden bands. Its language was the Old Persian, which now (10th C. AD) no one understands*".¹⁴²⁵

FURTHER COPIES WERE MADE

Many copies were later made by Zoroastrian scribes, copies which also included falsified or corrupted variants.¹⁴²⁶ Despite the existence of these texts, Zoroaster's religion was primarily an oral faith memorised by his priesthood, one which was responsible for transforming the *daevas* into demons. These texts were doomed to destruction at the hand of Alexander the Great, "*the Devastator*" during the sacking of Persepolis.

ALEXANDER THE GREAT BURNED THE PERSIAN CAPITAL. THE CANONICAL AVESTA WAS BURNED, BUT SCIENTIFIC TREATISES WERE TAKEN BACK TO MACEDONIA

"As to the sections of the parts, such as the Has and Fargards in the Nasks, it is known there were one thousand ... And after the devastation occurred, owing to the evil-destined and raging villain Alexander, there was not so much of them recovered as would be possible for a high-priest to preserve".¹⁴²⁷

"At present, since the Nasks have not remained perfect in the midst of us, it is not possible to solemnize them, because Alexander the Ruman (as the Iranians called Alexander the Great) carried off a rough draft, in Ruman characters, of those of the twenty-one Nasks of the Avesta which were about stars and medicine, and repentedly burnt the books of the Avesta, so that the soul of Alexander burns in hell; and after this calamity, every one of the high-priests, in council together, preserved something of the Avesta in his mind, and the aggregate has disclosed the books of the Yasna, Visperad, Vendidad, Fravash, Khurda, Avesta, Darun, Afringan, Kidah Vagarlardam, and Bundahishn, which they wrote correctly; as to the remainder which they did not write, it was on this account, that they did not preserve it correctly in their minds".¹⁴²⁸

THE ORTHODOX ZOROASTRIAN PATRIARCH KARTER RECONSTRUCTED THE AVESTA FROM SCATTERED TEXTS AND THE MEMORIES OF SURVIVING PRIESTS

During his invasion of Persia (4th Century BC) Alexander the Great ordered burned every copy of *the Avesta* that could be found. As a consequence of this the Magian priests had to reconstruct their entire list of holy books from the rote-memorizations which each priest had been entrusted with, and whatever written fragments remained. What had been forgotten was lost for ever. Those reconstructed texts that retained a haunting aura of dubiousness, were discarded by the Magi, fearful that their endorsement was incompatible with their religion, that aspires to the truth.

Later these texts were modified; initially by the Magi, and later by Karter, during the Sassanian reform period. This was a very important phase in the history of Magianism for at that time Karter accomplished the work of his predecessors by completing the ingathering and reorganisation of the last known mauled shreds of the Avesta. Thus the Orthodox Zoroastrian canon came into being, but it was rewritten in Pahlavi, a more modern variant of Avestan, and from that time Pahlavi became the official language of Sassania. As a consequence of this we cannot be absolutely certain what percentage of the Pahlavi texts dated to before Karter, and which were modifications made afterward. This is because persons unknown (most likely Magi) were continuing to modify even the oldest texts, as late as the 9th Century AD, incorporating into the texts those historical events that amounted to a fulfilment of the long extant canonical prophecies.

THEY ALSO HAD BOOKS ON DIVINATION

Al-Nadim confirmed that the Persians had written books on palmistry, auguries, lot casting and anthropomancy.

These had survived under the custodianship of the Magi until Al-Nadim's day, though by that stage they had fallen into Muslim hands and were rendered into the Arabic.

Part of the present catalogue of Magian scripture, which I used to research this book, is as follows;

MAGIAN TEXT SUBJECT(S)

<i>Gathas</i>	Hymns and rituals written by Zarathustra.
<i>Avesta</i>	The main work, including the Yasnas.
<i>Yasna</i>	Details the order of the <i>Haoma</i> sacrifice.
<i>Bundahishm</i>	Cosmology and eschatology.
<i>Vendidad</i>	Laws and exorcisms against the <i>daevas</i> .
<i>Denkart (Dinkard)</i>	Acts, law, and personal conduct.
<i>Nasks</i>	21 books of sayings, discussions and stories.
<i>Sirozha</i>	A lunar calendar showing the patron gods for each of the 30 days in every month.
<i>Artay viraf's book</i>	A book written about Artay's journey to Heaven and the Underworld.
<i>Sikand-gumanik vigar</i>	An apologetic to protect Zoroastrianism against proselytising faiths such as Christianity, Judaism, and Manichaeism.

THE CURRENT
INVENTORY OF MAGIAN
LORE

SPECIALIST ZURVANITE TEXT

Olema ye Islam *Olema ye Islam* was a Magian Zurvanite treatise written in Persian, by the so-called "Doctors of Islam". It contains ideological texts exchanged between the Magi of Persia and those exiles already living in India.

At present some Western academics believe the Zoroastrians did not possess written religious texts until the Sassanian era. This is of course contrary to what the Magi recorded about their own past, and the administration of their own religion,

*"Even after the decastation which happened owing to Alexander, those who were rulers after him (ie; Vologeses I and Ardashir) brought back much to the collection from a scattered state; and there are some who have ordered the keeping of it (the first reconstructed Avesta, written on cowhide, and scribed in golden lettering) in the treasury of Shapur".*¹⁴²⁹

SHAPUR COMMANDED
THE INGATHERING OF
PERSIAN TEXTS

Thus reconstructed copies of the pre-300 BC Avestan texts were made after the troubles died down, and were considered so valuable that they were safely secured in the Persian royal treasury. On what grounds could you possibly refute the existence of Magian writings extant several centuries before Christ?

In addition to these religious works, King Shapur guided his people through a period of intellectual and technological renaissance, acting as an unrestrained patron for the arts and sciences.¹⁴³⁰ *"The king of kings, Shapur, son of Ardashir, further collected those writings from the Religion, which were dispersed throughout India, the Byzantine Empire and other lands, and which treated medicine, astronomy, movement, time, space, substance, creation, becoming, passing away, qualitative change, logic, and other arts and sciences. These he added to the Avesta and commanded that a fair copy of all of them be deposited in the Royal Treasury; and he examine the possibility of basing every form of academic discipline on the Religion of the worshippers of Mazda".*¹⁴³⁰ It was precisely at this point that ancient science became entangled within Magianism.

SHAPUR DECREED THAT
FOREIGN ACADEMICS
SHOULD GATHER FOR
SCIENTIFIC AND
ARTISTIC SYMPOSIA
INSIDE PERSIA

By his command foreign intellectuals were invited to attend academic fora, in which many issues of nature and science were discussed with a view to standardising human understanding in the sciences.¹⁴³¹

Aryan pagans

T FIRST THE ARYANS DID
NOT HAVE HOLY BOOKS

Aryan pagans originally made no use of holy books. Instead the Brahmana caste memorised the *Vedas* in toto, during tuition lasting between 20 and 40 years, culminating in an urgent need to pass the strict examinations put forth by their priestly mentors before they could serve as priests. The *Vedas* are said to have been held in oral form for some 3,000 years before the Aryan Hindu priests finally recorded them on birch papyri once they acquired the use of brahmi Asoka sanskrit, which was itself influenced by Semitic scripts, ingeniously adapted for Indo-Aryan use. This occurred in India c. 700 BC.¹⁴³² In the 3,000 or so years before the *Rig Veda* was noted on birch bark papyri, it was roving brahmins, priest-poets who kept alive the Aryan faith by performing the prescribed rites and orally recounting the prayers and songs that accompanied them.

WHAT EFFECT DID THE
RECORDING OF THE
VEDAS HAVE ON THE
HINDUS, AND MORE
IMPORTANTLY THE
ARYAN PAGANS OF
EASTERN EUROPE

SARGAS AND SAGAS

As correct as each singer may have been, it is only inevitable that the oral record would differ to a greater or lesser degree once contact was lost between the Indo-European and Indo-Aryan Brahmins, yet *often the rituals remained essentially the same*. These poet-priests performed the ritual *Soma* libation and horse sacrifices wherever they visited, along with recitals and performances. Any study of religious Aryanism must at least account for the fact that the *Rig Veda* and the other three Vedas may not be a 100% faithful reproduction of the original wording of the hymns, though such an admission would be controversial. During the period when the Vedas were handed down by oral tradition there is still a chance that changes to the authentic tradition had occurred. The Indian Vedic recollections had always been subject to the same powers of poetic license, as the utterances made by Aryan poets serving emigres and their descendants in Asia and Europe. For example, the hero-god Indra became as thin as a hair to penetrate the lair of the Serpent Vrtra, whereas, in Finland, the hero-god Vainamoinen turned into a snake to slip into the impenetrable isle of the dead and avoid the great beast Surma. In Russia it was Perun who entered combat with the serpent Volos.

Modern scholars are mostly contemptuous of orally transmitted lore, guessing it to be corrupted and dubious. However it should be stated that the human mind is able to absorb and recall vast amounts of information. For example in 19th Century Finland there were two individuals who recited Finnish poetic epics, one with a repertoire of 4,000 lines, the other 11,000.¹⁴³³ The efficacy of these oral tradition therefore resided in the unforgiving exactitude of priestly mentors, whose job it was to see that the knowledge passed on to each successive generation, in a relatively pure state. Despite the successes of the oral method, the Brahmin eventually chose to establish a parallel means of transmission; the holy texts. Hindus recorded for posterity not only the vedas, but the minor law books (the Aryan legal system) and the Puranas (instructive devotional literature).

Agni Purana further mentions the existence of Aryan *sargas*, that is a corpus of books (or oral compositions) containing creation myths, the genealogies of both gods and kings, and the general happenings of their times.⁴⁰ In

remote ages they had been propagated by those well versed in the ancient oral traditions, but later they were written down. These may have been the precursors of the Norse *Sagas*, which had precisely the same function as the Indian *Sargas*. The potential correlation between *Saga* and *Sarga* is given added credence by the existence of Old Norse words denoting sages, sagacity, knowledge, wisdom, witchcraft and sorcery. These were related to the Old Indian *vita* and therefore connected with the word *veda*. So it would seem that Aryan sagas and vedas were known in Scandinavia, long before their conversion to Christianity in the early Middle Ages. Some of this knowledge may have been Magian, as for instance *Magus Saga*. The Hindu *Sargas* belonged to a greater body of teachings which included information on the astrological sciences, the *Puranas* themselves, plus law codes, and works related to Indian linguistics and vocabulary, not to mention religious doctrines on penances and ritualism.¹⁴³⁴ Accordingly the Hindus and Buddhists, like the Magi, preserved an extensive range of inherited learning, which was maintained by successive waves of wise Brahmins and used to educate their societies generation by generation.

Brahminic books were both storehouses of knowledge, and divine in their own right.

"The book should be established and worshiped in a house or temple. That which is wrapped up in a cloth should be worshiped at the commencement and end of reading".¹⁴³⁵

Scribing or bestowing "a bundle of written leaves" allowed a heathen scholar to become unified with Brahma after death.¹⁴³⁶ So according to the *Puranas* their books took the form of bundles of paypyri. Studying them imparted spiritual purification in the afterlife, and extreme blessedness.

The next most important question is whether vedic knowledge and brahminic wizardry entered Europe during the Indo-European migrations, or whether it came in via later contact with easterners (very often Buddhists) in Central Asia, and shamans in the region of the Urals. When I first began researching this book I was of the former opinion. But now I subscribe to a view that the acquisition of vedic knowledge was two-fold. It seems to have resulted from the progressive penetration of Oriental vedic traditions into Europe between the 2nd and 12th Centuries AD, which fed in over the top of the (perhaps crudely preserved) vedic teachings found throughout pagan Europe, the ambient residue of the Indo-European migrations. For instance, a Buddha has been excavated in

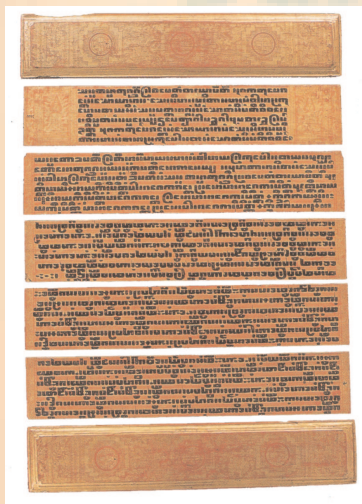

Fig 70. Buddhist text of a sort found in the Dun Huang caves. Written on strips of wood.

THE ARYANS
WORSHIPPED BOOKS

Scandinavia, dating back to the 8th Century AD. Apparently this Buddha was worn around the neck of its owner, since it was found with a leather strap attached.¹⁴³⁷ The wearer either liked it as a charm or might even have been a Viking Buddhist, who ran into battle with the Buddha in mouth. By ignoring the apparent vedic context of Old Norse beliefs and swastikas such an artefact simply becomes a nifty item. Certainly Buddhist trade and magico-herbalistic texts dating to between 500-700 AD have been found in Central Asian Turkestan (according to legend the ancestral realm of Odin), written in Tocharian “A” script, which by that stage probably only saw service in religious writings,¹⁴³⁸ after falling from everyday use. The existence of Tocharian so far East highlights the amazing mobility of an Indo-European language. It had successfully migrated deep inside Asia, some 4,000 kilometres away from its presumed homelands, only to end up in the vicinity of China.¹⁴³⁸ Of all the Indo-European tongues the Old Irish is closest in form to Tocharian “A”.¹⁴³⁸ Therefore contact between East and West did exist, but who knows on what scale? Perhaps an even more detailed comparative study between Indo-European linguistic survivals and those of the Hindus will solve this issue, as would the discovery of pagan bark scrolls in Russia, Scandinavia or elsewhere around Europe.

If there was religious contact between India and the European pagans one suspects it may have provoked culture shock once they began comparing their Indo-European oral religious traditions with written examples of the *Rig Veda*, *Yajura Veda*, *Sama Veda* and *Atharva Veda*, which had been converted into Sanskrit during the 5th Century.

Later intrusions of these texts may have sparked an Aryan cultural revolution in the pagan heartlands of Finland, the Baltic and Eastern Europe, but it might also have been a source of dissension. Perceived deviations may have caused spiritual consternation at a local level. A suitable example of the discord inherent in the latter opinion can be found among the followers of the modern Asatru movement, which is dedicated to the worship of the Old Norse gods. They staunchly maintain their faith was in no way drawn from foreign traditions. And they get very upset when anyone suggests otherwise.

Holy books of the Russian pagans

With the coming of the Byzantine entourage, under Vladimir in 989 AD, *svyashchenniks* (Christian priests), troops and devout Christians attempted a complete round up of any “unholy literature” or equipment discovered in the precincts of the heathen temples, or other places the *Volkhvy* frequented. These were all consigned to the “purifying flames” of the pyres which must have been *well fuelled* and absolutely glowing. In the light of the temple excavations of recent times, and the nature of extant written accounts, it makes you wonder why the *Volkhvy*’s fullest activities were not recorded in more elaborate treatises by Russian Orthodox authorities; they are barely hinted at in the *Primary Chronicle*. What was going on in pagan Rus’ was deliberately played down by Russian Christian writers to the extent that we are left with only sketchy details of the old faith. Clearly *every attempt was made to bury the existence of the Pre-Christian cults for ever by eliminating as much of their knowledge and core teachings as could be achieved*. Prior to this crescendo of intellectual holocaust, pagans used various holy texts. These were the “forbidden books”, or as the Russian Church called them, the *Chernoknizhki* or *Chernoknigi* (literally “the black books”). This very title bears a curious similarity to the “Black Book” of the Yezidis, otherwise known as the *Mashaf Resh* (p227).

The destruction of ‘suspect’ pagan and demi-heathen texts occurred not only in Russia, but across all of Europe. A comment made by Antonio de Araoz in 1559, during the Spanish Inquisitions, typifies the strained intellectual climate of his day, the atmosphere of fear that burdened 16th Century authors;

“The times are such that one should think carefully before writing books”.¹⁴³⁹

Relentlessly pursued by Inquisitors these men of knowledge risked everything they had to ensure their inestimably priceless caches of tomes escaped destruction. If apprehended they stood to have all their property confiscated, and even forfeit their life.¹⁴⁴⁰ Still, for them, it was a risk worth taking.

One of Christian Rus’s best anti-pagan preachers, St Avraamij, actually bothered reading this officially shunned literature so that he would be better able to speak to the people on their own level; *an ‘unhealthy’ curiosity that almost saw him burnt at the stake*. Which titles did the pious idol-chopper St Avraamij of Smolensk read? The hagiographers never sought to mention the titles of the books which had incensed his colleagues so much. Some modern scholars speculate they were Bogomil texts, but ultimately we will never know.

PAGANS WERE ALSO
HEAVILY STACKED
AGAINST HIM

According to Avraamij's hagiography three different groups opposed him.¹⁴⁴¹ Avraamij's style of sermon incorporated dialogue which straddled both Christian and pagan concepts, with the aim of ultimately winning the pagans over to Christianity. As effective as his methods may have been, they earned him many enemies on both sides of the fence. One gets the impression from his life story that the more self-righteous Christians saw him as "demon-inspired". On the other hand, the pagans were no doubt most unhappy about the outstanding efficacy of his missions. If we are to believe his hagiography, St Avraamij succeeded in converting very great numbers of pagans to the Christian faith, so wherever he went there were groups of agitators who followed him about to try and undermine any public sermons that he had organised in new localities.¹⁴⁴¹

The first and most powerful of his detractors were the clergy who were bitterly opposed to his unorthodox preaching style.¹⁴⁴¹ At one stage, his superior banned him from preaching, owing to the large gatherings that were beginning to mill around him, to offer support as he suffered under the weight of mounting opposition.¹⁴⁴¹ A sizeable portion of the clergy wanted him incinerated.¹⁴⁴¹ The second group were the villagers and inhabitants of the cities he visited, who yelled caustic abuse at the cleric.¹⁴⁴¹ Logically these individuals had either pagan or Christian leanings, or both. Their taunts most likely included "Go away, get out of here, we don't want you here" etc. These people were afraid of the forces of change Avraamij had unleashed in other areas where he had preached. The third group appeared to have been his most militant adversaries, the ones who shadowed his missionary expeditions.¹⁴⁴² These persons (and they are not identified) entered into the areas where his discourses and lectures were being conducted and set out to pick arguments with him in front of all the people.¹⁴⁴² These were most likely pagan religious figures, and I say this for the following reasons. They said "*He knows nothing compared with us*".¹⁴⁴² Well firstly who is "*us*". By using the word "*us*" the hecklers were either referring to themselves as being part of a specific group of learned people which was exclusive of the group of people who gathered to hear Avraamij speak, or they were trying to exhort the people collectively to think back to what they had already been taught in the past. But were these Christian teachings or pagan teachings? The listeners were unlikely to have been Christians, since Avraamij's missions were conducted in the countryside in order to gain converts there. As it was, rural localities were only very infrequently visited by priests, and Avraamij's activities were a sort of mission to the pagans. Moreover, the clergy recognised that he had no problems converting masses of pagans to the faith; this was his most major achievement. They only disagreed with the manner in which he did this. Avraamij is not mentioned as having been regarded by the clergy as a heretic, but he may have been dangerously close, at least on face value. Certainly if his teachings were heretical, the Church's thorough investigative process would have helped ensure that he was never canonised.

The very comment mentioned shows that the persons involved perceived that their knowledge was vastly superior to, and far exceeded anything that Avraamij taught. Most likely they were non-Christian teachers of some kind, and definitely not Christian priests (who, as in the rest of the hagiography, would have been identified as such). This band of agitators conspired to rouse the peasantry against Avraamij, but having been refuted by him publicly, they left the gathering of people "*in disgrace*".¹⁴⁴² But it didn't end there. The hagiography goes on to say that these people were unperturbed by the fact that they had lost debates with Avraamij, and came back to raise discord against him wherever he went.¹⁴⁴²

Considering the quantifiably large number of vedic and Magian religious customs in Europe, we can reasonably speculate that there was an accompanying body of religious teaching and teachers, who imprinted their respective pagan societies with these concepts and devotions. It therefore behoves us to briefly examine the holy books of the Brahmin and Magi, as a yardstick with which we can measure the parallel pagan cultures in Europe.

Known Russian pagan treatises

In most cases, the titles of the pagan Russian books are the only things that remain, so their contents can only be hinted at. In other instances the theme of certain books is known, but their name was not preserved. Their titles tell us the texts were designed to convey magic and special learning from generation to generation. These titles bear a startling resemblance to the works of the medieval witches, the pagan Gnostics and Claudius Ptolemaeus, and almost certainly came from a fusion of Greek, Babylonian and Roman sources. Ptolemy's books were compiled from texts held in the great library of Alexandria, the powerhouse of ancient history, technology, and undreamed of knowledge in the sciences. The similarity of these titles to ancient writings means that the pagan Rus' books were either copies, or at the very least contained similar information. Since their titles were Slavic, it can be assumed that they were the product of a lengthy period of isolation from the "civilised world". Not knowing their thickness or precise contents makes the process of matching them with known ancient titles even harder to do.

For the worshippers of Ahura Mazda, Alexander the Great's invasion of Persia was a harrowing ordeal, mainly because he burned as many of their holy books as he could lay his hands on. In the *Rivayat of Nareman Hoshang*:¹¹ we find mention that the Persians originally had the *Kassrob Nask*, which contained 60 sections of information on natural wisdom and acquired knowledge. In the *Rivayat of Dastur Barzu Qiyamu-d-din*:²³ it is stated that Alexander the Great stole copies of 21 Nasks (volumes) of Persian knowledge on the *stars and medicine* which he had made copies of, using Greek. Perhaps the Rus' pagan Holy books were Slavic copies derived from the above-mentioned Greek transcriptions of the Sassanian scientific and occult texts, that must have been taken back to the Balkans as Alexander's Macedonian troops withdrew to their homeland. Besides these texts, Alexander ordered everything else incinerated, leaving the Magi with only a fraction of what they once had.

Another option is that the Russian texts were made in the 3rd Century AD, during the reign of Shapur II. As the process of enforcing and implementing Karter's new plans for Zoroastrian orthodoxy continued, Shapur commanded that diverse books on medicine, astrology, astronomy and the natural sciences be obtained from the Hindu Brahmin, the Greeks, and elsewhere. These were then translated into Iranian and from that time became an integral part of the Magian corpus of holy books, just as they had been in the era preceding the predations of Alexander.¹⁴⁴³

The Volkhvy were described variously as wise men, astronomers, astrologers, seers, magicians, and *possessors of the Chernoknigi (the black books)*, who were elaborately interconnected with the Russian princes.¹⁴⁴⁴ Galina Lozko lists the titles of the "black books" destroyed during the conversion process.¹⁴⁴⁵ Their *known* titles were *Ostrologiya, Zvezdochot, Gromovnik, Kolyadnik, Snosydyets', Volkhovnik, Putnik, Lichyebnik, Tračnik, Zilyeinik, Tsvitnik, Koshchyuni, Golubinnaya Kniga, Rozhdennik* and the *Glubinniye Knigi*.¹⁴⁴⁵ Metropolitan Hilarion's list included these, but also added *Lunnik, Trepetnik* and *Lopatochnik*.¹⁴⁴⁶ There may well have been others, but if so, they went unrecorded in the Mediaeval Russian Church manuscripts which recorded names.

The following catalogue of books thought to be in circulation during the 8th to 10th Century, have been compared with the names of the Volkhvy texts, in an attempt to discover what contemporary titles, *if any*, they may have been related to. They could just as easily be the remnants of the tomes pilfered from Iran by Alexander, or even the writings of the Greek pagan Gnostic Costoudjis, whose individual titles are unknown (so consequently they cannot be listed below).

Some areas of subject matter are so broad that the material could have been written locally, while others are of a *highly specialised nature*, and unlikely to have been the product of independent genius. What we know about Rus' astronomy and astrology tells us that these fields of endeavour *were a foreign import*. With them it is more a matter of finding out what school of astronomy they were affiliated with, and which books they used.

On top of this, apocryphal texts are known to have entered Rus' from Byzantium, after the conversion. One such book, *Litovnik*, was a translation of a four-tome chronicle, written by the 9th Century Byzantine historian George Amartol.¹⁴⁴⁷ It was rendered into Church Slavonic some time during the 13th Century, and contained information on divination and astrology.¹⁴⁴⁷

Putnik

MAKING COMPARISONS WITH OTHER ANCIENT WORKS THOUGHT TO BE IN CIRCULATION DURING THE SAME TIME PERIOD

SUBJECT IMPLIED

Something to help you make a journey, a guide, a traveller's guide. *Putnik* could even have been dedicated to making roadways.

COMPARABLE WORKS:

Based on a similarity in their names it is possible to suggest that *Putnik* was in fact Ptolemy's *Geographia* (which meant 'Geography', but was also known as the 'Traveller's Guide'; often simply referred to as "the Guide"). *Geographica* (Eratosthenes), *Geographike Hyphagesus* (8 Vol) and the writings of Herodotus, Strabo (17 Vol). *The Book of the Countries* (Al-istakhri), *Book of Ways and Provinces* (Ibn Hawkal), *Fields of Gold and Mines of Gems* (Al Masudi).

MAPS HAD DEGENERATED FROM THE TIME OF PTOLEMY

According to Hilarion, the *Putnik* concerned meetings.¹⁴⁴⁸ However, *Putnik* is derived from the word *put'*, which appears in various forms throughout the Bulgarian, Serbo-croat, Slovenian, Czech and Polish with the same meaning ("a road", "a way", "a path", "a route", or "a course").¹⁴⁴⁹ These words originated in the Proto-Slavonic **pot'*, which was cognate with the Old Indian *panthas* (a trail, "a road" or "a path"), or the Avestan *pantha* or the Old Persian *path-*, both of which mean "a road". And it is from this same source that we get the English word *path* (which is not found in the Latin or Old Norse). Accordingly such a text probably had an eastern origin.¹⁴⁴⁹

THE PORTOLANS MAP WAS UNIQUE FOR THE MIDDLE AGES

Maps during the Middle Ages were generally of inferior quality. The *Portolans map* which appeared during the late 13th and early 14th Century AD, was a refreshing improvement on contemporary cartography.¹⁴⁵⁰ It depicted the Black Sea and Eastern waters of the Mediterranean in a precise manner, so logically the chart-maker probably had a good knowledge of that area. A cruder example is the *Mappa Mundi*, which first appeared in the West in the hands of an English monastic scribe.¹⁴⁵⁰ Curiously, in the *Mappa Mundi*, the cardinal compass point East is depicted as pointing to what we think of as North. This may simply be an example of how far the West's map making skills had deteriorated since ancient times, but perhaps this was not a mistake, but evidence of a non-Ptolemaic world view.

MAPPA MUNDI

There is a long standing tradition in academic circles that Novgorod was one of the oldest cities in pagan Russia. This perception was reinforced by comments within *The Primary Chronicle*, and the fact that archaeologists had spent a lot of time doing excavations there. However, the very name Novgorod (Russian: Noviy Gorod - New City), suggests that it was not one of the oldest, but one of the newest and largest cities in Russia. Two other settlements also carried the name Novgorod. Novgorod-Severskiy (literally Northern Novgorod) and Nizhniy Novgorod (literally Lower Novgorod). The main problem is that Lower Novgorod (which you would expect to be situated only a few degrees South of Novgorod) is depicted even further East than Suzdal, and Novgorod-Severskiy (Northern Novgorod) is shown in the West (see the map on p. 341). This may mean that Mediaeval Russians had a different orientation to their maps, with Nizhniy Novgorod (actually located in the East) being shown at the bottom of the map, and Novgorod-Severskiy and Novgorod (both of which were located in the West) being drawn on the northern quarters. If so, then their maps were unlike Ptolemy's *Geographia*, but might have been arranged in a similar manner to the *Mappa Mundi* and a number of Mediaeval Arab maps. This non-Ptolemaic map orientation may have been indigenous to Russia, but it might also have been imported there by Arab travellers or English seafarers.

DIFFERENT VIEWS ABOUT THE WORLD'S ORIENTATION

There is a plausible theory as to how this west-as-north view eventuated. For the white Magi, east was what we commonly regard as true east, the direction from which the Sun rises every morning. The main corridor of each *dakhma* (death house) was aligned in an easterly line, enabling the sun's rays to penetrate down into the tomb daily. The bodies of the dead were laid out for defleshing (as discussed in Chapter VII) with their eyes pointing eastward into the sun; to them the east was holy. But since Magian writings speak of the heinousness of laying the body down for excarnation with their eyes pointing to the north (the place where the fiends lived) there may have been a custom among the black Magi and the black families, that the head of the corpse should face northward toward the Pole Star; to them a holy direction. Both orientations are to be found in proto-Bulgar inhumations. Might this world view in which our east was relocated to our north have been designed by black Magi or Chaldean sorcerers?

UPSIDE DOWN MAPS

One view espoused by a (black) Magus in *The Primary Chronicle*¹⁴⁵¹ was that the world would turn upside down causing land masses to swap places with other lands found in other parts. As with the reversal of the lands, all

water courses were to change the direction of their flow, and move backwards. By inference, this reversal would have meant that north became south, and the south north. Perhaps some maps simply illustrated this belief.

Paradoxically this topsy-turvy view is found depicted on a number of Mediaeval Muslim maps, because generally speaking they were drawn upside down. In Al-Adrisi's 12th Century map the world is shown in an inverted state. In *The Book of the Countries*, Al-Istakhri drew a map of Europe with West pointing North. In this view Spain and the west coast of Europe are at the top of the world. Another of his maps shows a slightly different orientation with south-west appearing as north! But the biggest surprise comes from Al-Qazwini in the 14th Century. Not only is the map upside down (south as north), but it is flipped converting East into West and West into East. From the crude nature of the drawing, and regular, unreversed writing thereon, it is clearly not a projected image, but much rather a deliberate attempt to invert the conventional depiction of the world in every way possible!¹⁴⁵²

One logical reason why Arabs deviated from the Ptolemaic geographical model, preferring what we would call an upside down world, is the compass. These entered the Muslim east with the Mongols. Since many of these inverted maps belong to the same time frame as the introduction of compasses (ie; 12th Century AD or later), Muslim cartographers might have modified their pre-existing notions about the world's orientation by observing the movements of a compass needle. While we perceive that the needle is pulled towards the north (ie; the highest point), they may have taken the opposite view and figured that the compass tip fell to the lowest point, like a dropped stone. While the Arab scholars never had a scientific theory for gravity, it never required genius to figure that objects fall downwards! So is north up or down?

Fig 71.1 Nowadays our maps are shown with Ptolemy's global orientation. The white Magi also held this view.

Fig 71. 2 According to the Slav devil-worshippers, the world was to flip in 1076 AD, causing the rivers to flow backwards. no doubt the magicians' prophesied cataclysm would have left the world looking something like this. In the 12th Century AD Al-Adrisi also drew the map with the same orientation. But was it a compass that led him to think that North was really the bottom of the world?

Fig 71. 3 A West-as-North mapping orientation, as per Istakhri's style.

Fig 71. 4 In the 14th Century, Al-Qazwini drew his maps upside down and flipped. You can only make out the land masses as we know them by turning the map upside down, turning over to the back of the map, and holding it up to the light. Thus his zany perspective is one of looking out into the world, upside down, from within the centre of the earth.

Dstrologiga

ASTROLOGICAL TEXTS

SUBJECT IMPLIED Astrology**COMPARABLE WORKS:**GREEK/ROMAN/EGYPTIAN: *Tetrabiblos* (Ptolemy), *Apotelesmatika*, *Book of the Zodiac*, *Liber Hermetis* (Hermes Trismegistus), *Book of the Bee*, *Hephaestion of Thebes*, *On Signs* (Lydus), *Apocalypse*.SANSKRIT TITLES: *Bhadrabahu-samhita*, *Brhatsamhita*, *Gargasamhita*, *Parasistas*, *Sphujidhvaaja* and *Yaxanajataka*.

Diverse Magian and Arab texts on the subject are another likely source for Slavic astrology, which used the same signs of the zodiac as we do today.

Svezdoehot

BOOKS ON
CONSTELLATIONS**SUBJECT IMPLIED** Astronomy, stars and constellations**COMPARABLE WORKS:** *Almagest*, and *The Book of fixed stars* were the most famous of the mediaeval stellar treatises.

Pagan Slav astronomers may have used fixed astrolabes of the type described by Ptolemy in the *Almagest*, instruments evidently invented by his predecessors, the Greek philosopher-astronomers, who in the centuries before Christ made stellar observations in rural Russia and elsewhere.

The Church saw the pagan Slavs as notorious astrologers, long before astrology made its big European comeback with the revival of the old arts during the early Middle Ages. At that time astrology acquired renewed acceptability, except of course among hard-line elements in the Church who were ever so keen to suppress it. To be an astrologer one also had to be an astronomer (the sister science), or at least know someone who was. Without an exact knowledge of each planetary position in the heavens, astrology and high magic were an exercise in futility. Hence an astrologer's need for books dedicated to astronomy.

Malleus Maleficarum, a legal text used firstly to determine whether a suspect was a witch, and then how to sentence the same, linked astronomy and astrolabes with witchcraft;

“the first sort are called diviners pure and simple, since they work merely by art; and such are referred to in the chapter de sortilegiis, where it says that the presbyter Udabricus went to a secret place with a certain infamous person, that is, a diviner, say the gloss, not with the intention of invoking the devil, which would have been heresy, but that, by inspecting the astrolabe, he might find out some hidden thing. And this, they say, is pure divination or sortilege. But the second sort are called heretical diviners, whose art involves some worship of or subjection to devils, and who essay by divination to predict the future or something of that nature, which manifestly savours of heresy, and such are, like other heretics, liable to the Inquisitorial Court”.¹⁴⁵³

Various Slavic and Baltic words (meaning “to shine”, “a beam of light”, or “the aurora”) are related to the Ukrainian word *zarya* (meaning “a star”, or “the morning or evening star” ie; Venus). These are probably derived from the Persian word *zaychah* (“a horoscope”) indicating that their astronomy was directed towards the formulation of horoscopes, which enabled the pagan priests to prognosticate future happenings. Therefore some Slavs probably practiced Magian horoscopy, as the Mediaeval sources indicated.

Kolyadnik

SUBJECT IMPLIED A book of carols and dances which were performed on the winter solstice, or a book specialising in wheel-making. Maybe it also encompassed mechanical objects like pulleys and cogs or astrolabe “wheels”?**COMPARABLE WORKS:** ?**IF IT CONCERNED RITUALS FOR THE WINTER SOLSTICE:**

Like the pagan Russians, the European witches and even later Christians danced in gyrating circles, around the time of the winter solstice festival, when a goat was often put to death.¹⁴⁵⁴ The gaiety of their circular dancing, simulated the rotations of the fire wheel, the sun (the very embodiment of goodness) as it rolled across the heavens. This was probably not a superstitious rite designed to bring propitious harvests as many believe, but a festival of thanksgiving for his return, and the re-emergence of his potent life-giving warmth that automatically followed him wherever he went. In a Magian sense, the *Kolyada* festival could be seen as the birth of the Sun, who had emerged

from the untold misery of underworld, and gained victory over his brother Ahriman the goat. But in the Christian era the *Kolyada* might have been a Magian-Christian celebration of the birth of Christ, the Sun of Righteousness. Therefore *Kolyadnik* was probably a book of pagan carols dedicated to their Khres, the Jesus of the white Magian converts.

IF IT CONCERNED WHEEL MAKING:

I do not know the titles of any ancient books specifically dedicated to wheel-making. With regard to mechanics, Ptolemy wrote several volumes, and during the 10th century AD, Musa's sons, Ahmand, al-hasan and Muhammad had busied themselves in the application of mathematics, geometry and other allied sciences to produce books of inventive mechanics, which derived much of their inspiration from extant Greek tomes. Because the olden Greeks engendered excellence in mechanical design, it would be interesting to know just how much these Arab mechanical engineering volumes were based on Ptolemy's books on mechanics.

There might have been even older Greek mechanics manuals extant, used to make the analogue celestial reckoner mentioned on p. 365.

If, *Kolyada*, like *kolyaska* (a much later word for "a coach"), was drawn from a *Kolo* ("a wheel") root, as Vernadsky suggests, then *Kolyadnik* might have concerned the making of wheels and wheeled vehicles. *But a definite connection between these words has not been suggested by other linguists.*

If such a book was written by Bulgars who hailed from Central Asia, then *Kolyadnik* might have been the source that Khan Krum's forces consulted in the 9th Century AD when making the (presumably mobile) seige engines needed to attack Constantinople. As previously stated Central Asian wind-cars were built by the Chinese as early as the 6th Century AD. Perhaps the Bulgars saw them in use back east, and even learned how to build them. Perhaps *Kolyadnik* contained the plans for building wind-cars. Might *Kolyadnik* have been based on these, or something even earlier? Assyrian siege frescoes show actual battering rams mounted on multiple sets of wheels, not slung inside a protective armoured gantry, as later became common in Greece and Rome. Perhaps *Kolyadnik* was an Aryan book on chariot wheel fabrication, or a treatise on the wheel of life. At the end of the day we will never know.

Gromovnik

SUBJECT IMPLIED *Gromovnik's* subject matter is difficult to assess. *Gromovnik* implies that it concerns Thunder-making (storm raising?). It might concern the creation of thunder-like booms, or even sound. *Gromovnik* was apparently associated with the singing of hymns. Thus, unless *Gromovnik* aided storm-raising, the creation of loud bangs or acoustic eruptions, then it was either the name of hymn book, or a tome of musical accompaniments such as the Rus' excelled at.

COMPARABLE WORKS:

IF IT CONCERNED A HYMN BOOK:

Linguistic evidence was tabled suggesting the existence of Vedic and Magian psalmody in heathen Russia. Therefore *Gromovnik* might have been a copy of the *Gathas* (Zoroastrian hymns), or the *Vedas* (Aryan hymns) that required the use of musicians in unison with an orchestrated polyphonic choir.

The best candidate for the title of *Gromovnik*, doesn't even come from the Russian area. Entitled *The Thunder*, this title was a ceremonial book of prayer and hymns. As yet of unidentified origin, it was found lumped in with the unearthed Sethian Gnostic and Hermetic pagan Gnostic Nag Hammadi cache in Egypt. Possessing an Upanishad-like feel and metre, it is best likened to an Aryan or Hindu holy book of esoteric meditation and prayer.

IF IT CONCERNED MAKING SOUND AND MUSIC:

Harmonica (Ptolemy), *Manual of Harmonics*, *On Music* (Pythagorean studies into celestial harmonics).

IF IT CONCERNED STORM-RAISING OR DIVINATION BY THUNDER:

One treatise to emerge in Western Europe around 800 AD was the *Book of Thunder*,¹⁴⁵⁵ which concerned divination by means of thunder and lightning strikes. It may be no coincidence that the Slav Volkhvy Magi had the book *Gromovnik* (A book of thunder) and divined the future by thunder claps, lightning and other tribulations in the heavens. Certain forms of thunder claps portended specific events. During the Middle Ages magical and divinatory

practices connected with thunder were directly linked with the machinations of the Antichrist. Magic was viewed by the Church as the shield and sword of Antichrist, and through the penmanship of loyal clergymen we are told that it did much to further the extent of his kingdom and reign in the world.¹⁴⁵⁶

Perhaps *Gromovnik* was a tome on the arts of the *tempestarii* or “storm-raisers”, who were seen as abominable witches. A Karelian scroll containing a spell to call down lightning was excavated at Novgorod, thus testifying that the art of storm-raising was not unknown in early Mediaeval Russia.

Apparently there was another work on “Storm-raising” present in 6th Century AD Europe, which was essentially of Gnostic origin. Maybe it was related to *Gromovnik*, which by inference probably had Gnostic roots.

Snosdyets' or Snosdyets'

SUBJECTS IMPLIED

Hoisting/lowering methods, or necromancy.

COMPARABLE WORKS:

There are no surviving titles from the ancient world concerning methods of lowering or hoisting, but invariably they must have had them. The name *Snosydyets'* perhaps infers that the book was dedicated to raising the dead. If we are to believe Adam of Bremen's accounts on the pagan Balts, then tomes on necromancy might have been present there, among the necromancers who overseas pilgrims came to see.

Volkhovnik

SUBJECT IMPLIED

Volkhvy (ie; Magian) ritual ordinances, a book of wolves.

COMPARABLE WORKS:

The *Yasts*, the *Gathas*, *Vendidad*.

Volkhovnik apparently concerned various means of divination employed by the *Volkhvy*, divination by the rustling of leaves in the forest, or the sounds produced by dogs, birds, and other animals.¹⁴⁵⁶

If however the *Volkhovnik* was a Magian Zurvanite holy text, then it is difficult to ascertain precisely what was contained in it. Late Zoroastrian religious books are overflowing with customs and rites that are Magian in nature, even undeniably Magian. Other Medean practices are difficult to pin-point since the fullest body of Zurvanite holy books no longer exists. Apart from what was mentioned in Plutarch's, *De Iside et Osiride*, there are no texts specialising in the dark half of Medean ritual and sacrificial methods, because Zoroastrian orthodoxy weeded out what they thought was “evil” from their scriptures, and yet other Magian traditions remained unmolested and were even more earnestly sanctioned. There can be little doubt that much of *Vendidad* belonged to the Medes. One area that deserves intensive study by modern scholars is the possible disentanglement of traditional Zoroastrian lore from the rites of the Medean Magi (which were imported into the faith of Zoroaster following his death), but it may prove to be unachievable goal. Perhaps the upcoming excavations at Ecbatana will resolve the matter.

Travnik

SUBJECT IMPLIED

The manufacture of poisons.

COMPARABLE WORKS:

The Book of Antidotes (Galen), *Natural History*

Poisons had applications in potions designed to act as contraceptives, to procure abortions, and to assassinate one's enemies. Witches used poison, and so did Russian warriors, who are rumoured to have fired poison-smeared arrows in battle (just as the Aryans once did). Mediaeval witches were allegedly excellent poisoners, so there might be a connection between *Travnik* and this aspect of infernal witchcraft.

Siehgernik

SUBJECT IMPLIED

A book specialising in medical treatments; perhaps even surgery.

COMPARABLE WORKS:

Numerous.

ARABIC:

Al-Qanun fi at-tibb (Rhazes), Kitab al-Hawi, and others too numerous to list

GRAECO-EGYPTIAN:

Corpus Hippocraticum, *Aphorismi*, *Materia Medica* (Discorides).

INDIAN:

Susruta-samhita, *Caraka-samhita*.

ROMAN:

Galen, *De Medicina*, *De Variolis et morbilis*, *The Natural History*

Chinese sources mention the consummate skill of western physicians employed in their part of the world, which,

believe it if you will, included the ability to pull organs from the human body to undertake repairs and cleansing operations. One of the white Caucasian mummies found at Urumchi showed signs of having undergone surgery, his cuts sewn together with horse hair sutures. It is my belief that these instances are the handiwork of Magian doctors.

The pagan priests of the Slavs and Magyars were skilled physicians and veterinarians, and all things considered probably inherited their surgical skills from the Magi. To illustrate this, we know that the Hungarian *Arbis* (Magyar Magus surgeons) and Russian *Volkhvy* carried out skull trepanations, an operation to remove part of the skull, thereby allowing them to perform invasive brain surgery. From the one trepanated cranium unearthed in Russia, near Kiev,¹⁴⁵⁷ we know that pagan priests performed major surgical operations there, but it is unknown whether the doctor in this particular case was a Magyar or a Slav. Their patients might have been calmed during the operation by opiate-based anaesthesia, which may have been regularly used to kill pain during surgery or child-birth, or to alleviate the suffering of back pain, toothache or painful battle wounds. I say this because opium has grown wild and untended nearby in the Balkans for an undetermined period, and local villagers have long used their seeds as a ready food source. Is it also not possible the narcotic properties of the opium were abundantly clear to the inhabitants of this region, or at least to the educated pagan elite who tended their infirmities? I think once geneticists analyse the DNA signature of Bulgarian opium poppies, they will find the Bulgar crops are closely related to white poppies grown in Afghanistan, and less likely Cambodia. Archaeologists and paleo-botanists might also clarify a date for their arrival in the Balkans.

The Slavic art of trepanation most likely came from things taught to them by Magian physicians, whose Avestan medical terms lived on among the Slavs. For instance, the Russian word for a doctor was *Vrach*, which in the Bulgarian also carried the meaning “sorcerer”.¹⁴⁵⁸

As in Persia, the Slavic and Hunnish Magi may have done autopsies on the bodies of criminals for the purpose of medical enquiry.¹⁴⁵⁹ The Zoroastrian priests recommended “*preserving one worthy of death when it is requisite for medical purposes*”.¹⁴⁶⁰ In other words, they carried out medical experiments and vivisections on criminals, something familiar to them since the earliest days of their studies.

As part of their education novice surgeons performed their first feats of surgery on criminals and others luridly described as ‘devil-worshippers’.¹⁴⁶¹ This was partly to do with their accreditation, but equally concerned with assessing their level of legal culpability in the event of mishaps on other patients. Professors of the art intently scrutinized the results of a trainee’s work before licensing them to operate on Magians. Should three non-Magian patients die from their negligence prior to graduation they were liable for criminal prosecution where they injured one of the believers in the course of a surgical procedure.¹⁴⁶¹ Abortion was an object of revulsion, out and out demonism. Doctors, midwives, and those who consulted them to procure a termination were all guilty of murder since an in-utero child had the same rights as one delivered breathing into the light of day.¹⁴⁶¹

Slavic medical terms seem Eastern in nature; potential evidence for the origins of their anatomical knowhow;

The Russian word for “the brain” is *mozg* (which differs from the German *braegan*, from which we get the English word ‘brain’). The same meaning is found attached to *mozk* (Bulgarian), *mozak* (Serbo-croat), and *mozg* (Slovenian). These come from the Old Prussian *muzgeno* meaning “bone marrow” and the Lithuanian *smagenys* (“brain”), or *smegenys* (“brain” or “bone marrow”), which in turn originated from the Avestan *mazga* meaning “bone marrow”.¹⁴⁶² The Old High German *marg* and *marga* fit snugly into this word set. Together with the Tocharian term *massunt* they collectively mean “marrow”.

The Slavic word for bone *kost’* is traceable to the Old Indian *asthi*, but more especially to the Avestan words *ast-* and *asti-*, to which the Slavs had appended a “k” prefix. Connected with this word is the Latin *os* and *ossis*.¹⁴⁶³ The Russian word for “heart” *serdtse* (plus other Slavic variants of the same word), as well as *sirds* (Latvian) and *sirdis* (Lithuanian), all of which mean “heart”, come from the Avestan *zered* (“heart”).¹⁴⁶⁴ Yet other words like elbow seem peculiar to the Slavs, or from the Baltic and Gothic languages.

Trepanning and brain surgery have been associated with Kurgan builders of Tagar, Southern Siberia.¹⁴⁶⁵ It must have been a relatively common procedure around 100-200 BC (when the practice first arrived there), very often performed post-mortem.¹⁴⁶⁵ Current statistical studies suggest 46 in every 270 individuals had their skull opened up at some point. Operations were variously classified as operative surgery, embalming procedures (ie; brain removal), or the excision of cranial segments for the purposes of amulet production. These sort of finds are likely to be found in the forthcoming Iranian excavations, you can be sure of it.

NAMES FOR PARTS OF
THE BODY WITH AN
INDIAN OR AVESTAN
ORIGIN

Fig 77. A trepanated skull: c. 2,000 BC, England. As late as the 19th century accessing a patient's cranial cavity was often fatal; not so 4,000 years ago, and as far back as the stone age of 6,000 BC. The above patient recovered from the operation and mended well. Is it a coincidence that trepanations were performed by folk physicians in the Balkans even this century.

Trepanations were done for a variety of reasons, not the least of which was to release the pressure of battle wounds and cranial injuries on the brain, or based on observations of Yugoslavian folk trepanning last century, to remove infestations of certain worm-like parasites that could violate the cranial cavity. I personally believe a certain number of trepanations were carried out to allow sunshine to irradiate the brains of the mentally unstable, thereby forcing the demons, which caused the victim's mental illness, to flee from its awesome brilliance.

In the writings of a 12th Century Muslim called Usamah we learn a Frankish cure for demonic possession. It necessitated cutting a cross-shaped flap of scalp away from the crown of the sufferer's head, and treating the exposed skull with salt. It was undoubtedly a pre-Christian tradition, as is evidenced in the following account:

"There (in Oldenburg) sixty (Christian) priests (the rest had been slaughtered like cattle) were kept as objects of derision. After the skin of their (the priest's) heads had been cut in the form of a cross, the brain of each was laid bare with an iron. ... In fine, there were so many martyrs in Slavia that they can hardly be enumerated in a book".¹⁴⁶⁶

It is also worth adding that Mediaeval witches, like the pagan priests and priestesses of earlier Eastern Europe, were deemed to be well schooled in the arts of herbal medicine. During the early Middle Ages, monks filled the role formerly played by the pagan herbalist, tending the ill of the countryside, and this served to draw people towards the Church, whereas in prior times they would have thought nothing about seeing a pagan priest. But at the end of the first millennium AD, there was to be a dramatic change in the kinds of treatments that they were prescribing for their patients. Galen (Claudius Galenus), one of the most influential of the earlier Roman (mostly scientific) physicians was abandoned by many monastic physicians in the 10th Century, in favour of lunar based treatments. Bloodletting became very important, allowing deliverance from demons which had entered the lively blood. Infiltrated monasteries, heretics, pagan converts, and renegade "deceived elements" within the clergy were the most likely reason for these changes, the perfect vehicles for the dissemination of these re-invigorated old ideas.¹⁴⁶⁷ Once the monasteries of the East and West had become home to ascetic Bogomil sorcerer-heretics, the olden form of occultised pharmacology were "resurrected from the dead".

With all these happenings sullyng Rome's image of the Church, definite measures were put in place to counter, what might otherwise have seemed an innocent activity. At the 1215 AD 4th Lateran council it was decreed that clergy were prohibited from engaging in the role of herbalist.¹⁴⁶⁸ Such a ploy probably helped create even further distinctions between the Christian priests and the white Magi who were truly great healers of the sick. All well and good, but the edict of the council merely gave rise to an even greater need for villagers to visit their local Magus seeking pain killers like willow bark (from which the substance to make aspirin is extracted), vervain to soothe their nervousness, and other such remedies.

As it happens the Russian word *lecheniye* comes from the word *leka* which means "a medical treatment". It can be found in the Gothic *lekeis* ("a physician"), the Anglo-Saxon *laece* ("a physician") and the Swedish *lakare* ("to treat an infirmity or ailment").¹⁴⁶⁹ The origin of these terms is by no means certain, but at the very least we might say that the Slavs, Germans and Scandinavians had common words, if not common methods for tending to the needs of the sick.

If these words did not begin in the Greek or Latin, Sanskrit or Avestan, then it is highly likely that Slavo-Germano-Scandinavian treatments were indigenous to the area, or that they used imported medical knowledge which owing to the antiquity of its presence in these areas acquired an indigenous flavour, using local terminologies. These terms were in some cases uniform over a large area between Anglo-Saxon England, Germany, Scandinavia and Russia. This may be where we get the mediaeval term leechcraft, which reflected not only the use of leeches for bleeding the sick, but a linguistic connection with the Slavic *lechiť* ("to treat").

Osvitnik

SUBJECT IMPLIED Flowers, plants, medicinal herbs.

A BOOK ABOUT FLOWERS

In pagan Rus', every god had its own specific flower or grain.¹⁴⁷⁰ These were made into garlands or wreaths and hung around the idol's neck. Kolyada (rye), Kupala (daisies and dandelions), Klechal'nitsa (medicinal herbs and wildflowers), Marena (wildflowers), Or (cereal crops), Slava (ivy), Dev (periwinkles), Khors (wildflowers and [barsom?] twigs). Perun was supposed to have had his own flower, which might have been a lotus, if we take into account the flower-shaped mound excavated at Novgorod, which is normally associated with the worship of the Daevas. The most famous of all the Rus' blossoms was Kupala's bloom, which sprouted for only one day each year! Besides these references to specific flowers, the remainder of the religious floral assignments have passed without note. We will never know which Russian deities had such and such a floral arrangement as an offering.

It is perhaps no coincidence that the Magi taught that each of their celestial angel-gods had its own flower;

"This, too, it says, that every single flower is appropriate to an angel, as the white jasmin is for Vohuman, the myrtle and jasmine are Ahura Mazda's own, the sweet marjoram is Ashavahist's own, the basil-royal is Shatvairo's own, the musk flower is Spendarmad's, the lily is Horvadad's, the kamba is Amerodad's, Din-paxan-Ataro has the orange-scented mint, Ataro has the marigold, the water-lily is Avar's, the white maro is Khurshed's, the ranges is Mah's, the violet is Tir's, the meren is Gosh's, the karda is Din-paxan-Mitro's, all violets are Mitro's, the red chrysanthemum is Srosh's, the dog-rose is Rashnu's, the cockscomb is Fravardin's, the sisebar is Vahram's, the yellow chrysanthemum is Ran's, the orange-scented min is Vad's, the trigonella is Din-paxan-Din's, the hundred-petalled rose is Din's, all kinds of wild flowers are Ard's. Astad has all the white Hom, the bread-makers basil is Asman's, Zamyad has the crocus, Maraspend has the flower of Ardashir, Aniran has this Hom of the angel Hom, of three kinds".¹⁴⁷¹

We know that Magianism was present in Rus', but due to the lack of correlations between the Rus' and Zoroastrian floral offerings, we can assume that the Magian communities in Rus' belonged to a different, perhaps even an earlier era of Magianism, or had improvised with local flowers, where the flowers mentioned in *Bundahishn* proved unavailable in the north.

One first name used by pagan women in Rus' was Kalina,¹⁴⁷² which is a type of rose called the Guelder-rose, snowball tree, or more formally termed *Viburnum Opulus*.¹⁴⁷³ Thus in pagan Rus' roses were grown. Perhaps they had a ritual purpose, perhaps not. Roses graced the gardens of other pagans. Some Bogomil graves in the Balkans (in the 1200's) were emblazoned with roses.¹⁴⁷⁴ And archaeologists have found the remains of roses associated with Norse settlements in Scandinavia,^{1474a} though I have been able to ascertain details of whether these grew wild, and what species of rose the Scandinavians possessed.

Strange stories about flowers predate the arrival of the Rosicrucian movement (of alchemists), which emerged in Europe in the 1600's AD. In the *renaissance* Polish Royal court, where alchemists flocked, a high-born woman was tried and sentenced for witchcraft for growing fresh flowers during winter! Did she learn how to do this from a book like *Tsvitnik* (the book of flower growing), and if so just what kinds of horticultural wonders did *Tsvitnik* contain?

The Chaldeans of Mesopotamia were the earliest recorded propagators of the rose. We know this from inscriptions which speak of them being brought to Mesopotamia from elsewhere as war booty during the reign of the Akkadian dynasty of Sargon (c. 2350 BC). From then on they were used for ornamental purposes and to provide rose oil for use in perfume.¹⁴⁷⁵

The rose was a symbol particularly linked with the Zoroastrian Avestan holy books. Like the Chaldeans, the Iranians cultivated large areas with roses to provide perfume. Apparently 1,000,000 flowers are required to produce just 1,000 gm's of rose oil extract, so the Persians must have cultivated hectares of roses out in well irrigated desert plots to achieve this.¹⁴⁷⁶ Persian roses were tall creeping varieties. This Iranian species was yellow with flecks of red, thus giving them an overall appearance of flames. This almost thornless breed of rose was indigenous to Iran and the Caucasus, but by the 1500's AD its presence was noted in places like China and Austria.¹⁴⁷⁷ It is particularly difficult to deduce precise dates for the arrival of certain breeds of rose in a specific locality, unless they are mentioned or depicted within datable texts or illuminated manuscripts, or there is paleobotanical evidence for them. Examining the simultaneous spread of specific species to various geographical regions is similarly difficult. If we have mention of a breed of rose being in one place, does it mean that it was absent from nearby lands? .. perhaps yes, perhaps no.

The Greeks had the rose around 700 BC, and perhaps even earlier if the references in *The Iliad* are to be relied upon.¹⁴⁷⁸ The later Romans were very committed to rose cultivation. They used glass houses to nurture their holy

ROSES WERE VERY
POPULAR IN THE
ANCIENT WORLD

roses and irrigated them with warm water to promote healthy growth. Roses featured heavily in all kinds of religious ceremonies and victory parades. Generals were permitted to have the rose emblem embossed onto their shields, and they were made into coronets and garlands. All this made the rose particularly distasteful to early Roman Christians.¹⁴⁷⁹ According to Pliny the Elder, the Romans, like the Parthians, anointed their bodies with Royal perfume (which contained rose essence) to take away the odour of sweat and grime. The eagle-standards of the legions were liberally washed with rose essence perfume on certain holy festivals, which Pliny regarded as a bribe which would help the Roman eagle take over the world.¹⁴⁸⁰

Other Russian words for a rose were *roza* or *rozan*, both of which came from the Greek and Latin. The year in which these two words entered the Russian has not been determined, but if it was a product of archaic contacts between the Slavs (or their ancestors) and the Ancient Greeks and Romans then the rose might also have held its original meaning among the Slav pagans.

During the first few centuries of the Christian Church there was a ban on the blessing of flowers by priests, perhaps an attempt to stamp out paganism and its inherent association with floral bouquets and garlands. According to the text, only roses and lilies were permitted to be brought before Christ's altar.¹⁴⁸¹

Zilyeinik

SUBJECT IMPLIED Horticulture and irrigation.

COMPARABLE WORKS: *Geoponica*, *Natural History* (Pliny the Elder), and various ancient Greek and Persian works.

There are no surviving copies of the *zilyeinik*, though it obviously contained sound advice about cultivating a variety of plants useful to mankind. For example the Russians sowed barley when they saw that guelder roses (snow-ball trees) had begun blooming.¹⁴⁸² Such a "folk superstition" might have been found in *zilyeinik*, contained in a rhyme or verse to help its readership remember such important details while out in the fields.

While we are unable to guess *zilyeinik's* contents, we can still make two important inferences regarding the source of such a text.

1. That it was heavily steeped in Persian agricultural practices.
2. That many of these same techniques were shared by Slavs, Balts, Germans, Scandinavians and Saxons, perhaps by virtue of their mutual contact with the Goths, an educated people of Germanic ancestry, who once ruled many of these races, as for instance during the reign of Ermanaric.

The Slavs (the western and Ukrainian tribes especially) were great tillers of the soil. If they weren't at work in their employer's fields then they would just as likely be at home tending their own garden plots growing vegetables. Slav farmers employed simple irrigation in conjunction with slash and burn practices, and controlled blight and pests by means of scarecrows and various pagan observances (such as spells and offerings to various deities).

Agriculture requires the intentional sowing of grain reserves. The Russian *seyat'* ("to sow") and pan-Slavic variants of it are related to the Latvian *set*, the Lithuanian *seti*, the Gothic *saijan*, the Old High German *saen*. Obviously these terms are not traceable to proto-Indo-European, yet were shared by these many Northern races. This perhaps indicates shared agricultural traditions related to sowing, that evolved among them during a period following the Indo-European colonisation of Europe, or may even have originated in Old Europe. Certainly the Russian word for "grain" (*zerno*) is most closely related to the Latvian, Lithuanian, Old Prussian.

Whatever the Slavs harvested they carefully stored it away for the coming Winter. They traditionally used a series of underground pits to preserve their foodstuffs, especially grains. According to Al Masudi, this method was not very effective and subsequently the Slavs suffered greatly from food spoilage, fast becoming emaciated, and dying frequently from malnourishment.

The Slavic word for "hemp" *konophya* is found right throughout the Slavic languages (and slight variants of it). These are related to the Lithuanian (*kanapes*), the Latvian (*kanape*), Rumanian (*canipa*) and the Old Russian (*kanapios*), all of which mean "hemp". Similarly connected are *hampr* (Old Icelandic), *kanab* (New Persian), *khannabis* (Greek), and *kane* (Mari). Clearly the English words "hemp" and "cannabis" are traceable to the same roots (the word

LINGUISTIC EVIDENCE
FOR PERSIAN INFLUENCE
ON A MORE ANCIENT
SYSTEM OF AGRICULTURE

HEMP CROPS

“hemp” being imported into Britain by the Norsemen). In the Far-East we find the Turkic and Kazakh word *kenap* (“hemp”). All of these words were ultimately derived from the Sumerian word *kunibu* (“hemp”).¹⁴⁸³

The Finnish Udmurt word for hemp is *pis*, which is no doubt related to *bis* (an eastern word used when referring to the *Napellus Moysis* plant). Such a correlation is very interesting because there is no logical connection between the two plants, except that is for *Bundahishm XXVII:1* in which the Magi figuratively referred to *bis* as “the height of Hemp” even though the two plants are not similar in appearance. This portion of Magian scripture appears to be the only logical connection between “hemp” and *bis*. Thus the Udmurts most likely labelled hemp *pis* on the strength of a prosaic Magian scriptural reference alone. I examine the Magian use of *bis* in great detail toward the end of Part II.

Bearing in mind that Rus’ was riddled with Magi, there can be little doubt that their hemp was grown not only as a means of making rope, cloth, caulking and sacred shirts but to be smoked. This is related to *Zad Sparam II:7*, which states that hemp (Pahlavi: *bangā*) lessened the annoying blows of the fiends, and the disturbing impact of one’s crimes. In Iranian the word *bangha* meant “hemp”, whereas among the Eastern Finns *bangha* meant the Fly Agaric mushroom.¹⁴⁸⁴

Pipes have been found in Rus’, so unless they used them for smoking moss (like the Finns), then these probably served as hemp pipes. Even in Scythian times smoking hemp (which they called *bhangā*) was a great pastime.¹⁴⁸⁵ In those days people had their own hemp tents which contained a brazier full of red-hot stones and charcoal. Hemp seeds and foliage were thrown onto the coals as everyone sat back and casually enjoyed the intoxication induced by the hemp smoke issuing from the coals. The Scythians also believed that the prolonged usage of hemp gave the inhaler special powers and permitted contact with the spirits that lived in the nether world.

It came to the attention of an academic last century that Russians actually tried to consume less food than what they needed. This is reminiscent of the white Magian belief that a person who went underfed in this life would be fat, healthy, and well catered for in the next life. At the very least, some 100 years ago the Russian peasants only ate as much food as their daily work requirements allowed. As with the Russians, the white Magi also believed that a person was not entitled to receive a larger portion of food than what they earned by the sweat of their brow in the fields. And it is presumably from this creed that the age-old Russian saying “If you don’t work, you don’t eat!” comes from.

Within Rus’ there has always been a great degree of reliance upon herbs, fungi and the bodily organs of certain animals to provide remedies for countless ailments. Unfortunately the pagan Russian treatments are not well documented in an historical context, so we will look towards Western Europe, where folk medicine was better recorded in Mediaeval texts.

To defeat a disease, Mediaeval Western doctors sought to bind phylacteries to the afflicted person. These could contain amber, red cotton, *scarab beetle*, fly, tooth of a black hound, snake’s head, lizard’s eye-ball, grave dust, or an engraved magical letter square. The patient was not permitted to glance at it until after the lapse of the third day.¹⁴⁸⁶

There is not one item that does not bear all the hallmarks of a white Magus-physician. Necromancy, Hermetic science, Magian Zurvanism and Kabbalism are especially implicated through these ingredients. Some Magian remedial prescriptions went from the sublime to the ridiculous, as Pliny testifies, but few people really saw the *religious basis* of some of these cures. They were elements of white magic which required the killing of black creatures to unlock the healing power of the almighty and omnipotent creator. The fierce demons were especially fond of, and appeased by blood-spilling, which caused them to wander off fully sated. But, they also responded to grave offerings, and were repelled or injured by black dogs (a holy animal), or the colour red which was linked to Mars and Perun, thus giving influence over demonic forces attacking the body. By the reckoning of the white Magians, killing a snake, lizard or fly had the effect of empowering the spell uttered over a wound with healing energy, because with each of their deaths, a little bit of the kingdom of Ahriman was defeated. The three day binding rule might have meant that the demon-inspired disease had to spend three days in the underworld, just as would all evil things once the end of the world came.

The mediaeval European leech-physician had all the trademarks of a Magus,¹⁴⁸⁶ and apparently wandered about disseminating how-to-do-it treatises on blood-letting, simulacra, or milk (*Haoma*) sprinklings, plus a whole gamut of other “superstitious” treatments. Yes, allowing leech-wormes to sup on the wickedness of the diabolised blood had high merits back in those days! By the 14th Century AD there was a sort of Renaissance in medicinal street magic in

THE ASSYRIAN ORIGIN
OF THE RUSSIAN WORD

THE MAGI SMOKED
HEMP

Western Europe, which could be traced back to the proliferation of these easy to use tracts.

Courses of herbal treatment were administered in a number of ways. Here are some of the methods that were used in the preparation of remedies (and are still in use today by naturopaths). Each method is capable of being viewed in both a clinical and religious manner. Some plants dispense healing of their own accord. This was further enhanced by mixing them with butter, honey, bee’s wax, water, mead and wine, which were extremely holy additives. These were probably blessed by a white Magus or Brahmin to enhance their curative powers. Many of these ingredients are also mentioned in the *Atharva Veda*, which in places reads like a herbalist’s pharmacopia. It even includes nine stanza’s on hair loss, or comments on honey as a magnificent catalyst for healing!

“This herb, born of honey, dripping honey, sweet as honey, honied, is the remedy for injuries; moreover it crushes insects”.¹⁴⁸⁷

INFUSION	Infusions were a tea made from a plant’s flowers and/or leaves.
DECOCTION	The plant’s roots, bark and stems were soundly boiled.
TINCTURE	As per decoction, but mead or wine was added making a sweet medicinal beverage.
SYRUP	<i>Myod</i> (honey) was added to decoction juices to create a thick syrup.
UNGUENT	Bee’s wax and infused oil were mixed into a firm paste to be rubbed onto the treatment site.
SMOKE	Some obvious medicaments such as hemp or opium could have been smoked in a clay pipe for maximum effect.
OIL INFUSION	The ingredients were boiled in butter or oil for several hours then strained, or just soaked in a jar of the same.

Name lists

TITLE	Unknown.
KNOWN SUBJECT MATTER	Pagan name lists.
COMPARABLE WORKS:	<i>The Chronological Table of the Kings</i> .

*The Chronological Table of the Kings*¹⁴⁸⁸ was a dynastic calendar that normally accompanied copies of Ptolemy’s *Almagest*, and the manuals of other astronomers. Presumably it was a standard ancillary work for most ancient and medieval astronomers. Such genealogical lists were an indispensable astronomy aid, used to date and interpolate celestial data from the various schools of astronomy, pertaining to majestic astronomical events, such as eclipses, and the arrival of comets, which occurred over very long time spans. It encompassed the reigns of Assyrian, Medean, Persian, Macedonian and Roman Kings.

WEATHER TABLES

Another more sedate possibility is that these lists were simply records of a genealogical nature, books of peerage that outlined the bloodlines of the tribal entity, in particular those of royals, chieftains and probably priests also.

Weather charts

TITLE	Unknown.
KNOWN SUBJECT MATTER	Weather tables.
COMPARABLE WORKS:	<i>Meteorologica</i>

Whether public figures traditionally maintained meteorological treatises, like those burned during the conversion, is unclear. Ptolemy is mentioned as having kept them. In his day, any good astronomer had a meticulous record of weather, precipitation and other climatic factors, to predict viewing schedules, thereby minimising the amount of observation time lost due to adverse meteorological phenomena. Normally such meteorological notations were amassed over lengthy periods. If pagan Gnostic astronomers had been operating in Rus’ between 200 BC-9th Century AD (see p.360), one can speculate that their records were outstandingly accurate, as in fact they probably were, if the public spectacle of the Volkhva’s “weather prophesying” is anything to go by. According to Al-Nadim the Chaldean Sabians used a book that was not dissimilar to *Meteorologica*.¹⁴⁸⁹ Since the pagan Slavs had Kolduny sorcerers, these weather charts might have been Chaldean originally.

DIVINING THE FUTURE

It would take centuries for the Christian world to gain anything faintly similar. Around 1337, Morley, an Oxford scholar, devised a series of predictive weather tables to help the tillers of the land foresee what meteorological hazards lay ahead for their crops.¹⁴⁹⁰ My sources do not divulge whether or not Morley’s work was related to either classical or eastern meteorology.

Works on Divination

TITLE *Rozhdennik*
SUBJECT IMPLIED *Rozhdennik*¹⁴⁹¹ was a book detailing the days and hours which were good and bad for specific undertakings. The name *Rozhdennik* infers that it was not only linked with birthdays and divination, but the formulation of natal horoscopes. Thus it permitted the calculation of nativities. It was probably a Roman or Magian almanac of the hours during which certain planets prevailed, and thus would also have had applications in planning which days were auspicious to undertake certain tasks and those less favourable.

NATAL ALMANACS

COMPARABLE WORKS: Whether these might have been similar to the Babylonian Hemerology texts¹⁴⁹² (which had a similar function) is unlikely to ever be known.

Rozhdennik was an essential tool in the hands of the Slav astrologers. And like the pagan Slavs, the pre-Christian Franks believed that an individual's personal fate was largely brought about, and portended by the positioning of stars at birth. Note the similar beliefs of the pagan Slav Magi, who made their natal prognostications from a special book called *Rozhdennik*, a celestial almanac, the book of nativities. Since the Franks were once ruled by Magus-princes and kings we should find that the royals were astrologers of some standing, like the Magi of old. Surviving Mediaeval accounts place certain Frankish monarchs very much in this category. So perhaps the Slavic *Rozhdennik*, and the comparable Merovingian astrological knowledge were derived from a common Magian source.

TITLE *Sonnik*
KNOWN SUBJECT MATTER Dream interpretation and omens.
COMPARABLE WORKS: Possibly ancient Roman or Babylonian exemplars.

BOOKS ON DREAM INTERPRETATION

The Old Icelandic preserves a number of concepts in relation to dreams rather well. There are terms for men, women and creatures that appear in our nightly dream-landscape. Dreams could be prophetic too, and so we find *draum-heill* ("divination by dreams"), *draum-spakr* ("the skill to interpret dreams"), as well as *draum-spekingr* ("one who is skilled at dream interpretation").¹⁴⁹³ Because there are no Old Norse or Old Russian words for "a book of dreams", it does not help us to associate the Russian text with the Norsemen specifically.

TITLE Unknown.
KNOWN SUBJECT MATTER Divination by crystals and mirrors.
COMPARABLE WORKS: This type of book belongs to a remote era and may well have drawn upon Greek and Roman texts concerning "the Etruscan arts".

Symbolically the world below parodied the world above, and thus the things seen in the looking glass were merely infernal images, spectres and ghostly beams (of light) radiating from its surface. The Magi believed that by looking hard enough, one could see other things not found in the worldly panorama around the scrier, but other more sinister things independently moving in the swooning delirium of the underneath lands. A belly-full of *bisina* would probably get things moving along very quickly, charging the mirror up to full power. Prester John's magical mirror allowed him to see events as they transpired throughout his domains, so it may have contained such lore.

Miscellaneous titles

TITLE *Koshchyuni*
SUBJECT IMPLIED This title translates as *The Book of Blasphemies* or *Mockery against God*, which Lozko regards as being tomes of antiquarian legends deemed profane in nature by the Christian authorities. However, it is also possible that *Koshchyuni* was a ritual prayer book of the black Magi, from which their congregations dispensed curses and blasphemies against creation and anything that was holy. In so doing they would have been inverting the correct ritual order, and thus fulfilling their duty to the devil to defile creation not only by deed, but by word of mouth.¹⁴⁹⁴

COMPARABLE WORKS: No known parallels. It is noteworthy that the Mediaeval and Renaissance black witches had a special book, a black missal from which Satan (ie; the chief Black Magus of the congregation) gave sermons consisting not of holy words from the heights of heaven, but, in dualistic style, blasphemies from the very depths of the Abyss.¹⁴⁹⁵

TITLE *Golubinnaya Knigi*
SUBJECT IMPLIED The title translates as *The Book of the Dove*.

COMPARABLE WORKS: A book of pagan Russian wisdom, and stories from the past.

In *The Book of Deep Wisdom* we find,

*“And you are the faithful and true Tsar’ David Eoseevich ... Tell us Lord about the white light! For what reason was the white light made? For what reason did the red sun begin?” ... and “the white dawn?”, the “stars?” ... our “corporeal bodies”?*¹⁴⁹⁶

Next Tsar’ David (no doubt a Bulgarian) proceeded to answer these questions found in *The Book of Deep Wisdom*.

*“The book is by no means small, 40 sazhen’ (fathoms) high”, he says. “I am telling you Brothers what I know from memory, as if it is in writing (methodically memorized texts and lore some ‘40 fathoms’ thick)” ... “We have white light and it comes from the Lord god. The red sun is from the face of god, the white dawn emanates from his eyes” ... “our bones were made of stones, our mortal bodies from moist earth”.*¹⁴⁹⁶ Our mother was moist mother earth, and from her womb we came.

SAYINGS FROM THE BOOK
OF DEEP WISDOM

IT WAS HELD IN MEMORY

In what could easily have been a Magian wise saying we hear that;

“A man searches for the truth for a whole century but he does not find it, and he stands and walks out into the sky, to the sun ... and the truth is in front of him”,¹⁴⁹⁶ so said the Russian folk, invariably drawing upon Persian teachings.

In *The Book of Deep Wisdom*, we are told of the onset of night in the west, the dark verses of the ancient Chernobog, and the petrification of god’s first creations, who spat at the sun. Whereas in the east lay the magical kingdom of the white sun god Belobog, and the verses of the holy day. It was there that the sun god had his palace built from gold and self-shining stones. The throne was covered in purple cloth, and the palace complex surrounded by a garden in which the fire-birds lived and sang. He daily set off across the sky in his chariot drawn by white horses.

TITLE *Glubinniye Knigi*
SUBJECT IMPLIED The title can be translated as *Books of deep wisdom* or even *The Books of the depths*.
COMPARABLE WORKS: The sayings contained in it have a distinctly Iranian dualistic flavour

TITLE *Lopatchnik*
SUBJECT IMPLIED Earthworks and diggings.

This particular title seems derived from *lopata* or *lopatka*, (variants of which are found throughout the Slavic nations, plus Prussian and Bulgarian), meaning “spade”.¹⁴⁹⁷ *Lopatchnik* may have had something to do with mining and tunneling, as well as the construction and engineering of defensive earthworks.¹⁴⁹⁷

COMPARABLE WORKS: Unknown

TITLE *Trepetnik*
SUBJECT IMPLIED *Trepetnik* looks to come from *Trepet’*, leaving one to conclude that it contained information about causing fear, trembling, panic and palpitations.
COMPARABLE WORKS: Unknown

Were these books used by mediaeval witches?

We will probably never be able to clarify what the books discussed above contained, unless some are unearthed in a chance archaeological find somewhere in Russia. Bearing in mind the number of birch bark papyri found there by archaeologists, the potential for such a discovery is not as fanciful as it might seem, especially when one considers that the priests of the old faith were intent on preserving their knowledge for the future. Perhaps many of them went to fairly elaborate lengths to ensure this would occur.

Having spent a lot of time pondering over the nature of these books, I am of the firm belief that the titles mentioned by the Russian Church texts were precursors to those used by the black and white witches of Mediaeval Europe. If so, the library of black Magian witch texts might have looked something like this:

<i>Ostrologiya</i>	The Book of Astrology
<i>Zvezdochot</i>	The Book of Stars and Constellations
<i>Rozhdennik</i>	The Book of Ascensions, an astronomical almanac for use in astrology
<i>Kolyadnik</i>	The Book of Wheel-making (astrolabe spindle wheels and vehicles)
<i>Putnik</i>	The Guide (a copy of <i>Geographiae</i> or other similar work)
<i>Lichyebnik</i>	The Book of Medicinal treatments and surgery
<i>Travnik</i>	The Book of Poisons
<i>Zilyechnik</i>	The Book of Horticulture
<i>Tsvitnik</i>	The Book of Flowers
<i>Gromoznik</i>	The Book of Storm-raising
<i>Snosydyets'</i>	The Book of Raising the Dead
<i>Volkhovnik</i>	The Book of Wolves
<i>Koshchyni</i>	The Book of Blasphemies

Astronomy

According to Pliny the Elder, the arts of astronomy were first fostered by the priests of Babylon and Sumeria.¹⁴⁹⁸ It was a religious activity permitting them to observe the movements of their gods in the heavens, the planetary luminaries whose cosmic energies affected the fortunes of all life on earth. An analysis of excavated cuneiform tablets scribed by Babylonian astronomers shows that Mesopotamians did not understand the fullest workings of our solar system when their priests first began to observe the heavens, but slowly acquired knowledge of the cosmos over centuries.¹⁴⁹⁹

Several of the modern zodiacal star signs were already known to the ancient Babylonians in their '*Ways of Enlil and Anu*' (texts on the zodiac) ... the celestial constellations of Gemini, Leo, Scorpio, Capricorn, and Pisces. These images came to be associated with stellar groupings, whose form was passed down the line to students, in the form of animals and mythical beings.¹⁵⁰⁰

As Sumeria, Ur and Babylon faded away into nothingness, after their destruction by Aryan tribesmen, their learned teachings did not disappear, but were inherited by the Magi, the priests of Medea and Persia, and especially maintained by the Chaldeans, the originators of most star-lore.

Magi were not the only custodians of ancient astronomical lore in that part of the world. If Mediaeval Arab accounts like those of Al-Nadim¹⁵⁰¹ are to be believed. The necessary astronomy books and observation tables appear to have been maintained by a large number of Chaldean sorcerer-astronomers who dwelt in Harran and Southern Iraq as late as the 10th Century AD.

With so many Magians and Chaldeans residing in Russia, the priests of the Slavs almost certainly maintained the skills of their astronomer forefathers. Among the Eastern Slavs they were called *Volkhvy* or *Kolduny*, and the Poles called them *planetniki*. Therefore we will examine the astronomy and astronomy in their historical context.

Astronomy did not exist as a pure science among the Magi, who gleefully intertwined mythological elements with their scientific art, as stated here in a Persian exposition of the world's origins.

BABYLONIAN AND
SUMERIAN PRIESTS
WERE PIONEERS OF
ASTRONOMY

THE MAGI INHERITED
THE ASTRONOMICAL
KNOWLEDGE OF THEIR
PREDECESSORS

In the beginning the heavenly lord, the fountain source of all light and truth was rocked to its foundations by the appearance of a maelific, chaotic force otherwise known as the devil, issuing from its residence in the abyss-like depths of dark space. Upon seeing the light in such an unexpected way the fiend was profoundly disturbed - jealous of the creator, his purity, and his magnificent creations. And so he *"fled back into the gloomy darkness and formed legions of demons, creatures terrible, corrupt and bad"*. From that time war arose between the forces of light and darkness, a war reaching out into the farthest reaches of the cosmos. Beings of light and darkness, of positive and negative energy clashed in eternal combat.

*'And afterwards, he (the Unholy Spirit) came to fire, and he mingled smoke and darkness with it. The planets, with many demons, dashed against the celestial sphere, and they mixed the constellations; and the whole creation was as disfigured as though fire disfigured every place and smoke arose over it. And ninety days and nights the heavenly angels were contending in the world with the confederate demons of the evil spirit, and hurled them confounded to hell; and the rampart of the sky was formed so that the adversary should not be able to mingle with it.'*¹⁵⁰²

THE MAGI RECORDED
THEIR SCIENTIFIC
UNDERSTANDING IN
MYTHOLOGICAL PROSE

Despite this mythical element, the Magi enunciated valuable scientific insights as a result of their lengthy celestial observations and calculations. A heliocentric model for our universe is found in *Sikand Gumanik Vigar IV: 39-45*, which states *"And for the sake of not leaving these five planets to their own wills, they are bound by the creator, Ahura Mazda, each one by two threads to the sun and moon. And their forward motion and backward motion are owing to the same cause. There are some whose length of thread is longer, such as Saturn and Jupiter, and there are some of which it is shorter, such as Mercury and Venus. Every time they go to the end of the threads, they draw them back from behind, and they do not allow them to proceed by their own wills, so that they may not injure the creatures"*.

THEY WERE
HELIOCENTRISTS LONG
BEFORE COPERNICUS

Thus, the sun was orbited by the planets, which rotated out from it at various orbital distances. The Magi clearly understood the sun was orbited by Mercury, Venus, Jupiter and Saturn in roughly that order. They were avowed heliocentrists.

Ancient Greek astronomers and the Alexandrian connection

The ancient Greeks, who were fond of all the arts and sciences under Apollo's inspired guidance, were like a sponge, absorbing everything the could of the astronomy skills employed by Indians, Assyro-Babylonians and Magi. The most important phase in the evolution of Greek astronomy came about when Pythagorus, one of their foremost philosophers, undertook cross-training with the Magi in Medea, just as he had done with the pagan Gnostic priests of Egypt. Astronomy then became a standard field of study for anyone seriously wanting to become a philosopher, especially in the Neo-Pythagorean school of thought. Though still relatively new to this science, the Greeks rapidly excelled themselves and attempted astronomical exploration on a scale that had never been attempted before ... to map out the heavens on both halves of the globe! And this is where we come to the Alexandrian connection ...

10TH CENTURY AD
CHALDEANS ALSO
POSSESSED ANCIENT
ASTRONOMICAL AND
ASTROLOGICAL TEXTS

Historically, Alexandria began as a Greek colony on the Egyptian mainland, which the Macedonian Alexander the Great founded to be the ultimate resting place for his mortal remains upon his death. From this time, Greece, the Balkans and Alexandrian Egypt had even greater ties.

NEXT CAME THE GREEK
PAGAN GNOSTIC
SCIENTISTS, AND THEY
PROVED TO BE THE MOST
COMMITTED OF ALL THE
PAGAN ASTRONOMERS

Alexandria was originally governed by the Greek dynasty of the Ptolemies, and fast became the intellectual and trade hub of the world from the beginning of the first millennium AD. They had considerable ties with their Macedonian kin in the Balkans and the East during the zenith of their ascendancy as a maritime power, and even used Persian currency! Many Greek soldiers and residents of Alexandria became Egyptianised.¹⁵⁰³ For example some Alexandrian Greeks chose to have their bodies placed in sarcophagi which were decorated with a painted portrait of themselves. Those Alexandrians who returned home to Greece and the Balkans no doubt brought some Egyptian culture back with them, just a touch of nostalgia rather than a whole lifestyle. For instance we might ask why it is that in pagan (and even Christian) times, the deceased of Rus' carried a passport scroll into the hereafter, and their bodies were transported on a sled, *pulled by hand*. The closest parallel for these are Mesopotamian and Egyptian customs. Yet from among the many Greeks commuting to and from Egypt, there appeared a group of

THEY WANTED TO VIEW
THE STARS FROM THE
OTHER SIDE OF THE
GLOBE

individuals who were the most mobile and remarkable of all. These were the astronomer-philosophers, a brotherhood of pagan academics who in the 500 year period before the birth of Christ, had been visiting various parts of the northern and southern hemisphere gathering information about the world, and administering their own astronomy network which was being run on a standard equatorial time grid. This allowed their pagan colleagues operating remote observatories in places like *Egypt, Greece, Russia, Pontus, Ceylon, Germany, Britain and France* to simultaneously observe celestial phenomena in real time. In most locations the astronomers were Greeks, but in Gaul, Egypt and Ceylon they probably enjoyed a degree of collaboration with the druids, Brahmins and Egyptian pagan Gnostic priests. However bold and dramatic the impact of their advances may have been on our knowledge of the sciences, it was nothing compared to the impact they had on the simple races they encountered on their travels. For farmers and stock herders meeting one of the scientists was like meeting the gods face to face.

The astronomers' travels

The pagan Gnostic Greek, Roman and Egyptian astronomers knew the earth was spheroid (as stated in *Almagest I: 4*), and decided to take a peek at what the heavenly lights looked like from various vantage points on the top and bottom half of the globe. This appears to have been their main enticement to travel. Ptolemy's world atlas, a geographical masterpiece¹⁵⁰⁴ called "the Guide", was so extensive simply because the astronomers needed it to travel around the world looking for, and accessing new observation sites.

Almagest II: 6 reveals the sites at which shadow measurements were taken on the solstices and equinoxes by means of sundials and quadrant blocks (as described in *Almagest I: 12*). These instruments helped establish the duration of sunlight at those locations, and the lengths of their shadows.

For interest's sake I include here the *Almagest's* data concerning the duration of sunlight¹⁵⁰⁵ at various times of the year, at various latitudes ranging from the equator to the North Pole. By their admission these shadow measurements were taken manually, and I'm inclined to believe that they did exactly that.

LAT	SUMMER	WINTER	LAT	SUMMER	WINTER
Equator	12	12	43°	15.25	8.75
4.25°	12.25	11.75	46°	15.75	8.25
8.25°	12.5	11.5	48°	16	8
12.5°	12.75	11.25	50°	16.25	7.75
16°	13	11	54°	17	7
20°	13.25	10.75	58°	18	6
23°	13.5	10.5	61°	19	5
27°	13.75	10.25	63°	20	4
33°	14.25	9.75	64°	21	3
36°	14.5	9.5	65°	22	2
40°	15	9	66°	23	1

At higher latitudes the sun does not set during Summer, nor does it rise during the Winter. The remainder of the time it stays in a period of twilight, frozen in the act of rising or setting; seemingly frozen in a perpetual state of dawn or dusk.

67°	24	0
69°	2-month day	2-month night
73°	4-month day	4-month night
84°	5-month day	5-month night
North Pole	6-month day	6-month night

In another experiment they sought to test their theory that the earth was round by observing shadows cast by obelisks as the sun was positioned over the equator. Southern hemisphere shadows were shown to point in an opposite direction to the northern ones. This helped to validate their spherical-earth theory.

Pagan Gnostic intellectuals frequented many places; Ptolemy's colleagues and predecessors took measurements

PAGAN GNOSTIC SCIENTISTS VISITED CEYLON, GERMANY, BRITAIN, RUSSIA, TURKEY, EGYPT, THULE AND LIBYA

Fig 78. Classical Mediterranean galley (a symbol of Isis the Egyptian Goddess of Magic), as depicted on the Scandinavian Rorby ritual sword. What was it doing in Sweden? Did it have some ritual use, or was it simply booty? Is it significant that it was found in conjunction with a sarcophagus and collapsible stool?

at Sri Lanka, Thebes (Egypt), Aswan and the lower reaches of Egypt, Libya, Rhodes (Turkey), Marseilles (France), Smyrna (Turkey), the Danube River (Germany? Bulgaria?), Hellespoint (Turkey), Pontus (now in Turkey), the Dnieper River (Russia), the Sea of Azov (Russia), the Rhine River (Germany), the mouth of the Don River (Russia), Middle Britain (England), York (England), Hebrides (Scotland), Little Britain (Brittany), Northern Scythia (Russia), the Isle of Thule¹⁵⁰⁶ (which reportedly had 6 months day, 6 months night. The location of Thule is uncertain though; Some commentators interpret Herodotus' account as meaning that Thule was Greenland, but Bede's information has led others to suggest that it was Iceland. The latitude recorded in the *Almagest* points to Thule being Iceland. The astronomers may even have trekked to the North Pole, for Ptolemy mentioned the amount of sunlight there annually. The existence of data for such far-flung outposts is intriguing ... could they have actually gone there?

Well Polybius and Strabo reported that in the work *On the Ocean*,¹⁵⁰⁶ the Greek geographer-astronomer Pytheas chronicled his voyage to Thule c. 400 BC from his home in Marseilles (Gaul), via Britain. Pytheas also allegedly visited the Athenian colony in Tanais (Russia) too. Another Greek philosopher called Diogenes was apparently a little more adventurous than Pytheas. Not content with having seen Thule he wrote a book *On the Incredible Things Beyond Thule*. Alas the work is another of those "lost", but if it was authentic, and did contain the sort of subject matter its name purports, then who knows, perhaps he had already visited Greenland, or even America, in search of discovery. From these accounts alone we can argue an Ancient Greek presence in Thule, Gaul and Britain. Beyond that, it is absolutely certain that Greek philosophers lived throughout Egypt, Russia, Pontus and Anatolia for hundreds of years before and after Christ.

The many observation locations shown in *The Almagest* also proved to be sites for Greek colonies in the first few centuries before Christ, many of which have been partly excavated by archaeologists this century. The magnitude of Ancient Greek interaction inside pagan Russia must have been awesome. As shown earlier the Russian language is saturated with Ancient Greek words (2112), whereas Middle Greek (103) and Modern Greek (81) barely figure at all. Only a systematic linguistic study of these Ancient Greek correlations in the Russian will establish beyond doubt the precise nature of the Ancient Greek presence in Slavia.

I will return to the matter of Britain and Germany, because proving that ancient Greeks inhabited these countries is a little trickier mainly because archaeological evidence is absent thus far. But so what? A 36 square kilometre Greek cult centre was (according to Herodotus) situated in Russia, yet the site of something so gargantuan has never been chanced upon. As mentioned in Chapter I even historically well-documented sites can prove elusive to the archaeologist's shovel, buried up to 10 metres down.

In *Germania*: 3 Tacitus spoke of Germans worshipping the Greek hero-god Hercules (Hercules also happened to be the Royal Scythian patron god) on the eve of battle, and that he had heard reports that they had an altar which was allegedly founded by Ulysses, and a settlement which owed its origin to him. Are such tales nonsense, or were these "Greek influences" the result of contact with Greeks or Scythians? The answer to this might be found in the Danubian region of the Germanic lands, where (again according to Tacitus) there were said to be a number of mounds, many surmounted by monumental stonework that carried Greek inscriptions. Scythians did not use Greek script, and if true, this account hints that Greeks (perhaps even Egyptianised Alexandrian Greeks) were once in Germany, perhaps the same ones who supplied ascension data for what would later be called the *Almagest*. What then can we say of Diodorus' reference to a Temple dedicated to the ancient Greek God Apollo in the East, perhaps situated somewhere along the Baltic.¹⁵⁰⁷ Since Tacitus mentions Greek ruins in Germany, this most likely tells us that the portion of the astronomy grid situated on the Danube and Rhineland had already ceased being in operation by the advent of the first century AD. But what of the other locations? If he was correct in what he related in *Germania*, then we need to examine whether these Danubian ruins were those of Athenian Greek settlements, or those founded by Greeks who had sailed to Germany all the way from Alexandria, on the northern shores of Egypt. A solution may come from Tacitus, who had heard that some Germans worshiped the Egyptian deity Isis, the great Goddess of magic and Resurrection;

*"Some of the Suebi sacrifice also to Isis. I do not know the origin of this foreign cult ... but the goddess's emblem, being made in the form of a light warship, itself proves that her worship came in (to Germany) from abroad".*¹⁵⁰⁸

Notice he doesn't say all the Germans worship Isis, but only some, only a segment of the Suebian tribe. A physical confirmation of this Northern Isis-cult comes from a Mediterranean-style scimitar bearing an emblem of a classical war galley, unearthed by archaeologists at Rorby in Scandinavia (see p. 362). The sword in question is more likely to have been used in rituals than in warfare. Is it further coincidental that the oaken caskets and stools also found at Rorby had parallels among the Egyptian sarcophagi and seating?

Celtic Druids in Britain and Gaul were formally regarded by Roman geographers and Alexandrian Christian writers as philosophers, best likened to the Pythagorean natural scientists.¹⁵⁰⁹ This may be no freak similarity. As with Germany, it is plausible that Greek-style pagan Gnostic teachings of the Druids were not attributable to independent invention, but personally introduced to them by the various philosophers who visited Britain (and even further West) to view the stars. In Strabo's 1st Century BC geography book we discover that;

*"In an island close to Britain, Demeter and Persephone are venerated with rites similar to the orgies of Samothrace", or "Dionysius says that in islands near Jersey and Guernsey the rites of Bacchus were performed by the women, crowned with leaves; they danced and made an even greater shouting than the Thracians".*¹⁵¹⁰

On the strength of this evidence it certainly appears that Greeks had been exploring a number of locations around Europe, as early as the Bronze Age.

Their love of the stars

So why would these astronomers go to all this trouble, as Pliny says, braving hostile tribes, war, and exposure to the elements just to look at stars? The answer lies in their curiosity as men of "science" and their desire to get a better understanding of the very spheres whose energies were believed to affect every area of life on earth. In short, it was their ongoing need to gauge and harness the powers of the planetary gods for use in magic and the crafting of amulets, as well as to enhance their knowledge of astrology.

All of the seven celestial bodies travelled persistently about the moveable sphere of the zodiac, making their positions in relation to each other permanently unstable. For this reason, high magicians thought it imperative to accurately know the positioning of the spheres at all times. Without a precise knowledge of the planetary locations, a sorcerer could not estimate a sorcery's likely outcome.

Well that's really some achievement for ancient academics. These fellows knew no bounds when it came to their quest for discovering the truth behind all matters philosophical and scientific. Like the later atheistic Roman natural scientist Pliny the Elder, who was burned to death observing the workings of an active volcano, this elite brotherhood of thinkers was ready to risk everything just to 'know', to know things that others never even dreamed of. This magnificent round world of ours was their little secret, their laboratory. Around 100 BC, if not before, philosophers well versed in mechanics like Poseidonius were making astronomical aids, devices possessing rotating spheres; in short, working models of our solar system.¹⁵¹¹ But did these contraptions work? The only way to verify the efficacy and accuracy of such a machine would be to take one south of the equator and compare its settings with what you actually saw in the night sky. With the world being three dimensional, only a southern voyage could ensure the machines adequately reflected what was happening on the other side of the globe. And go south they did!

Stars of the Southern Hemisphere

The Almagest VIII:1 lists the locations of stars in the Southern hemisphere¹⁵¹² and their inherent visual magnitudes. Visual magnitudes ranged from 1 to 6, with 6 being one of the smallest and 1 the biggest. Below 6 there were two other categories, those of the dim bodies and nebulas, which were not accorded a precise intensity.

But where did they view the constellations in the Southern hemisphere from? *The Almagest* lists locations in the northern hemisphere where observations took place, but none for the southern hemisphere. Interestingly these southern constellations were notated in the *Almagest* in as seemingly precise a manner as the northern constellations. There were some inaccuracies however. Canopus, a major body in the stellar group of Argus, was noted at latitude 75° S of the equator! This position is however incorrect, for Canopus is situated at roughly 53° S.

Ptolemy went on to say that shadow measurements were carried out on land only as far South as the Tropic of

Capricorn (ie; around Zimbabwe, Madagascar, Mozambique or South Africa). Beneath this latitude he related that there was rumoured to be people living in sub-tropical Africa, of uncertain race, thus indicating that they were not accessing more southerly locations on foot. Therefore, it is almost certain that most of the southern hemisphere measurements below 45° S were taken from on board vessels transiting the Northern and Southern Indian Ocean. Maritime celestial observations at such southerly latitudes are not such an insane proposition. *Quite likely in fact considering how relatively accurately the Geographia renders sub-equatorial regions.*

On the other hand the astronomers may have done their readings from dry land. Yet we strike problems with Canopus, for a reading of -75° only becomes possible where the observer is at -38° or -68° south, depending on inclination or declination. In laymen's terms we are talking the Antarctic coastline or the the southernmost tip of South America, or a small number of islands like the Falklands, Heard, Mc Donald or Macquarie Islands. The more northerly of the two sites could have been Melbourne,¹⁵¹³ New Zealand's North island or North of Valdivia, Chile.

It seems wild beyond belief that they could have been viewing Canopus from such obscure land masses, some not even depicted in *Geographia*. Yet if you look at reproductions of Ptolemy's world map,¹⁵¹⁴ you can see what seems to be the coastline of the Antarctic continent, but it might also be a distorted view of the East African seaboard. Whether Antarctica (if that's what it was) was copied from older geography maps, or added as heresay, as a guestimate, or by observation, is hard to say, but the drawings that Ptolemy made may not be as haphazard as they first seem. Whereas the Indian ocean is seen as being locked in by land on all sides (which it mostly is) only the seas to the North and West of Africa and Britain are left open, indicating that Ptolemy believed them to be open seas (which they are). At the far east of his map can be seen a extensive body of land reaching down from Asia towards Antarctica. This is, I believe, a rendition of Indonesia and the coast of Western Australia which had become fused together by the mariners who first saw these places. However unlikely, these are other possible ground sites for southern observations. South America is particularly likely. Based on the 1979 French autopsy report¹⁵¹⁵ on Rhameses II mummy it is certain that there was contact between Egypt and the Americas, either directly or via intermediaries as early as 1,300 BC, and if so, some of the *Almagest's* data might have been learned from people who had been in the Americas and brought tobacco to Egypt. You see, during the 1979 examination of the mummy's abdominal cavity, French botanists and archaeologists were amazed to discover, amongst other things, a sizeable quantity of mulched tobacco, which is indigenous to the Americas. Tobacco was first introduced to Europe by Sir Francis Bacon in the late 1500's and caused such a sensation that it is still with us today. Prior to Bacon, this plant is unlikely to have ever been grown in Europe or Egypt. Like all other crops that are of use to humanity, it is unlikely to have become extinct in Africa and Europe if it had been grown there originally. Moreover, there isn't a single depiction of an Egyptian smoking tobacco. Opium yes, but not tobacco. But then again, the mummy was subjected to anatomical inspection soon after its discovery in the late 1800's, so the insertion of tobacco may have been a curators bungled job of preserving Rhameses remains from degeneration. However subsequent examinations by a Russian pathologist seems to confirm that tobacco was used at the time of embalment. These more recent tests have confirmed the initial findings of a French autopsy on Rhameses II's mummified body. *He was preserved with tobacco.* Contact between Egypt and Meso-America is the only realistic explanation for this, contact around 1,300 BC, if not before. Armed with this new knowledge we can now free our minds to the point where we can tackle the remainder of this book in the sound knowledge that the flat earth theory was a perception not necessarily embraced by everyone in the ancient world. At the pinnacle of humanity stood a group of intellectually elite Magi, pagan Gnostic philosophers and natural scientists who made it their business to go out, explore, and measure the world and the heavens.

In all fairness Ptolemy cannot be given full credit for the information found in *Geographia*. After all he was probably only re-hashing and incorporating older Greek information on southern lands and constellations contained in Alexandria. So who made those notations? Someone in even deeper antiquity? Very much so. When compiling his grand astronomical treatise, Ptolemy drew the lion's share of his information and data from the Chaldean astronomers of Mesopotamia,¹⁵¹⁶ who may have possessed unusual geographical knowledge also.

Ptolemy's *Almagest* had some flaws though, which the Arabs went a long way towards identifying and correcting. Nonetheless, so influential was it, that the readers who pursued its contents in almost worshipful contemplation became known as the Mathematicians, and the book's traditional name was altered over the

centuries to suite the tastes of the users. At different times it was known by titles such as *Ho Megas Astronomos*, *Mathimatike Syntaxis*, or the *Al Magiste*. Under the Arabs it acquired the name *Almagest*; the finest star tome in existence.

The Almagest Ptolemy and the Almagest

Most astronomical titles of the Middle Ages have the contents of the *Almagest* as their basis, with the observed data of later Mediaeval astronomers appended to it, creating what were basically new books. While it is tempting to speculate that the Arabs had added the stars of the southern hemisphere to Ptolemy's astronomy book, these newer editions did not expand on the content of Ptolemy's star maps, but instead used them as a platform for more intensive studies of certain celestial quadrants. These later works sought to question the theories and arguments put forth by Ptolemy, and rectify errors whenever discovered, since Ptolemy had inspired his readers to be meticulous in questioning any data put before them.¹⁵¹⁷ Despite the intensive astronomical labours of Arabs, Turks, Indians and Western observers over many centuries, Ptolemy's compendium of stars would still not be bettered for another 1,300 years, and even then *it still took Copernicus with a telescope to dethrone Ptolemy*. This hints at an earlier existence of forgotten technologies. Claudius Ptolomaeus (alias Ptolemy) didn't have the best eye sight in the world for 1,300 years, he had the best optics. Does it sound far fetched? On the subject of optics, Ptolemy began experiments into the relationship between a light-beam's angle of incidence onto prisms or translucent materials of varying density, and the degree of refraction (or bending) experienced by the light. In other words he was experimenting with optical devices of varying shape, density and complexity. His books entitled, *Optika*,¹⁵¹⁸ were very extensive (5 Volumes), detailing his observations of gems, mirrors, glass and spheres, not to mention the *baptistir*, which due to its powers of magnification could be deemed an experimental telescope.

In his optical theory III.11, Ptolemy extrapolates upon his findings, providing modern researchers with a glimpse of his methods; "Accordingly, since angle EBG > angle BEM, while angle EBG + angle ZBT = angle TBL, angle TBL > angle BEM. Hence, when they are extended, lines BL and EK met in the direction of L and K. Let them intersect at point M. Therefore, to the eye at Z the image of point M will appear at point K, which lies between the surface of the mirror and the visible object. Moreover, if point K could lie between the eye and the surface of the mirror, the image would certainly appear in front of the mirror, as is the case in concave mirrors. But since point B invariably blocks point K, it follows inevitably that the surface of the mirror appears in front of the image, for in that case the eye does not distinguish between the internal and external surface; and so the image must lie behind the surface." It all sounds very impressive to me, a 1,850 year old Graeco-Egyptian epistle on applied optics!

Ptolemy mentions custom-made optical focusing instrumentation used (c. 150 AD) for astronomical purposes, and which were employed by the philosophers before his time. One was a prismatic astrolabe¹⁵¹⁹ (in other words a primitive telescope akin to a surveyor's instrument) which had five sight markings on one of the viewing-crystals to aid in the alignment of celestial bodies. Another device was the *Dioptra*,¹⁵²⁰ a viewing beam or rod with a set of sliding ground prisms or rhomboids, one of which possessed a bored hole big enough to allow projected images to be cast though onto the second crystalline plate. The means of producing a dioptra was described in detail by Pappus in a book entitled *Commentary*.¹⁵²¹

Even greater wonders abounded. To the left is an illustration of the reconstructed Antikythera mechanism, which was found by Greek divers in the ruins of a sunken ship-wreck. The original machine was an astronomical computational device assembled and in use by the Ancient Greek philosophers c. 100 BC. It was a precision made mechanical armillary, complete with cogs and other moveable parts. Greeks wrote of things which modern scholars consider fantastical, little more than wild stories. This device is proof indeed that Greeks were able to do things many modern authorities are not prepared to admit.

The Almagest's view of the constellations

The most learned Ptolemy, who some believe was the famed Hermes Trismegistus (an Egyptian pagan Gnostic priest that after death became a god, and continued to impart discourses to his followers), had reasoned that the earth lay at the centre of the universe, based on the works of Hipparchus before him.¹⁵²² Around the celestial core

rotated the planets with their own peculiar epicycles, and elliptical orbits, which at times gave the appearance that they were moving in reverse, against the direction of their normal movement.¹⁵²³ This was known as retrograde movement and in astrological terms it entailed the granting of “unfortunate” status to a planet when in this state. This meant that the celestial properties of the body were reversed, though still susceptible to combining with the energies of other planets.

In Ptolemaic planetary theory, as incorrect as it may be, the order of the planets was the Earth, followed by the bulky planet Moon, then swift little Mercury, then Venus, the Sun, then Mars, then Jupiter, and lastly the blightful Saturn. His model was therefore inferior to that of the Magian heliocentrists. It goes without saying that Ptolemy did not reach these conclusions lightly, or without conducting substantial astronomical observations. The *Almagest*, Ptolemy’s astounding 13 volume stellar exegis, was originally called *Ho Mathimatike Syntaxis*,¹⁵²⁴ and it possessed revolutionary ideas concerning planetary micro and macro orbits, and just over 1,000 stars, some 250 more than the legendary Greek star-gazer of Rhodes, Hipparchus. It is doubtful whether such an impressive matrix of data could ever have been gathered by just one man. Instead Ptolemy presumably began his search for astronomical knowledge in the Great Library at Alexandria, by rationalising information written down by the Greek and Chaldean astronomers from ages past. There he found evidence that had been steadily compiled over many, many hundreds of years by a hardy band of roving Greek astronomer-philosophers.

What made them truly great thinkers was their ability to release themselves from the bondage of accepted theories, to reach out and grasp newer possibilities, which the more staid academics were loathe to contemplate. Even Ptolemy dismissed out of hand the findings of Timaeus, or the collegial Platonist, Heraclides of Pontus. Almost one and a half millennia before Copernicus, both are thought to have postulated a heliocentric scheme for the universe, orbited by Mercury, Venus and a rotating earth, or a variation on the above planetary orders.¹⁵²⁵ Heraclides turned out to be even more correct than the well-versed Ptolemy, but his findings were far too revolutionary for the people of his day. Perhaps one could attribute his inability to gain acceptance in contemporary academic circles on some shortcoming in the way he explained his theories, or by some flaw in the data which he presented to his colleagues. It may even have been due to petty jealousies from his academic colleagues.

THE MAGI BELIEVED
THAT THE PLANETS
REVOLVED AROUND THE
SUN

The Magi definitely professed a heliocentric model;

“And for the sake of not leaving these five planets to their own wills, they are bound by the creator, Ahura Mazda, each one by two threads to the sun and moon. And their forward motion and backward motion are owing to the same cause. There are some whose length of thread is longer, such as Saturn and Jupiter, and there are some of which it is shorter, such as Mercury and Venus. Every time they go to the end of the threads, they draw them back from behind, and they do not allow them to proceed by their own wills, so that they may not injure the creatures”.¹⁵²⁶

THROUGHOUT THE AGES
SOME VERY INFLUENTIAL
FIGURES HAVE TURNED
OUT TO BE ASTRONOMERS

The Mathematici (another name for the Graeco-Roman astronomers) had very powerful friends and exerted immense political clout in Rome. One of their group, Cicero (a former Roman proconsul in *Mesopotamia* at Cappadocia and Cilicia), was not only politically and militarily active, but a key Roman thinker, an *astronomer*, *magician*, *comedian* and *philosopher*. Is it not interesting that a man with such interests should gravitate towards a Mesopotamian governmental posting, and in the end become a major power-broker in Ancient Rome?

Plutarch specifically states that it was through Cicero’s philosophy classes, in which he taught the sons of senators, magnates and aristocrats, that he became one of the most influential men in Rome at that time. His eminence eclipsed that of Mark Antony, whom he drove from the city with waves of intrigue and force of arms. *His power rivalled that of Caesar himself*. Cicero’s poetic skills were astounding for their elegance and eloquence, and he is notable for converting many Greek terms into idioms suitable for Roman students. As time went by, more and more key public figures could be identified as having an astronomy fetish.

Viewing devices

Ever since the dawn of time man has been perplexed by the nature of the heavenly lights which shone in the sky. These bodies awed him so much that in time he sought to study them, and learn their natures. At first he used methods which can only be considered crude by our standards. Rudimentary viewing beams have been discovered in the Ukraine dating back to the late Palaeolithic period,¹⁵²⁷ but they might only be lunar or solar calendars.¹⁵²⁸ In Britain the “primitive” local megalithic culture invested much time and energy into the building of grand astronomical complexes like Stonehenge.

The Greeks believed that the history of astronomy lay squarely in the hands of the Babylonians, which according to them had kept records of their stellar and planetary observations on cuneiform tablets (clay tablets of this kind have been found by archaeologists) for the past 730,000 years (an insanely rash figure by any standards).¹⁵²⁹

The continued recording and tracking of exotic events like eclipses and comets was made possible only by resorting to *The Chronological table of the Kings*,¹⁵³⁰ and their recurring appearance noted as being in the x -th year of a certain monarch’s rule. By comparing successive repetitions of a given celestial phenomenon across multiple dynasties, century after century, astronomers were able to establish the cyclic regularity of the phenomenon, and thus predict their reappearance with spooky accuracy. We can infer that serious astronomy began during the reign of the Assyrian King Nabonassar (who is the very first entry on Ptolemy’s chronological table), or that these were the earliest records which later astronomers were bequeathed by past masters of the science. This list of rulers also gives us an opportunity to see who was exchanging or inheriting astronomical data from previous races. In order of antiquity we see the names of Assyrian, Medean, Persian, Macedonian, Alexandrian and finally Roman Kings.

It is worth taking a few moments to examine the wondrous equipment used by the astronomers of the ancient and classical world, and by their later Mediaeval descendants.

Armillaries

The armillary spheres which Ptolemy resorted to were used for the recording of fixed stars. In the *Almagest* he explained their construction and manner of operation. Yet he had not invented the armillary, but was only exploiting one of the many precision inventions crafted by earlier prodigies like Hipparchus and his Greek astronomer friends. Pioneering researchers in the fields of geometry and trigonometry, like Euclid and Theodosius, gave the Greeks an ability to make terrestrial and celestial representations on three-dimensional spheres. Accordingly, some of their working stellar maps were drawn onto globes.

Mankind’s ability to make similar devices seemed to disappear, for we lose all mention of armillaries for almost 1,000 years until the Arabs learned how to produce them during the 11th and 12th Centuries AD as a result of their examination of ancient astronomical and mechanical texts.

Fixed astrolabes

The astronomers of Ptolemy’s era constructed even larger devices which consisted of three independently-rotating, graduated wooden circles (*resembling spinning wheels*) of differing diameters, mounted one inside the other. Stars were sighted and aligned by rotating the rings in a precise manner. Using an alignment beam the astronomer read off the angles which were recorded by an assistant. For expediency four or five astronomers worked during a viewing session, one assigned to move each ring, one who controlled the beam and one who recorded the data generated by their observations, and performed any necessary mathematical calculations. Ptolemy mentioned the use of cut prisms to aid in this alignment process.

The construction and usage of large fixed astrolabes is discussed by Ptolemy in *Almagest* 5:1. Arabs were also utilising them during the Late Middle Ages.¹⁵³¹

Hand astrolabes

Around 600 AD, smaller hand-portable astrolabes were manufactured.¹⁵³² In the 10th Century this kind of apparatus began to advance in complexity, and due to the efforts of Arab academics and merchants became more readily available, if one had enough money to spare. The hand astrolabe was a very useful instrument because it could be used to tell the time at night, to allow navigation across featureless terrain like oceans, to provide celestial positionings, and to ascertain the precise height of buildings and natural features by using trigonometry.¹⁵³³ The

Arabs churned out precision astronomical devices at a vast rate towards the end of the year 1,000 AD, showing that like their academic exploration, they didn't do anything by halves. The centre for this activity was Harran, which was at that time still a hub of pagan Gnostic and Chaldeanism, in an otherwise Muslim world.

All this was summed up rather well by Al-Nadim, who stated:

*"In ancient times the astrolabes were plain. The first person to make them was Ptolemy. It is said that they were made before his time, but this has not been verified. The first Muslim to make a plane astrolabe was Abiyun al-Batriq. Then the instruments came to be made in the city of Harran (of the Chaldees). Later they were distributed, becoming common and increasing in number, so that the work became plentiful for the makers during the Abbassid period, from the days of al-Ma'mun to this our own time".*¹⁵³⁴

A select clique of Moors began introducing them into Christian Europe via Spain. Just the same, the question had been posed as to why these Arab intellectuals were engrossing themselves in such enterprises. Flint noted the staggering impact these instruments and their instructional "how-to-do-it" guides (found in monasteries) had on the covert pagan populations of Europe. Astrology was once again reborn and flourishing in the hands of ever eager lay astronomers, astrologers, clergy and witches. What these Arabs were doing in Christian countries was a Mediaeval version of "selling guns and whiskey to the Indians", a covert trade in astrolabes and magical tomes. But *why* is the big question! And more importantly who!

From the mid-9th Century the Islamic Jurists, the Ulama, began to crack down on subversive scientists, owing to a growing Magian insurgency, fast becoming dangerous baggage for Spanish Islam. Arab astronomers were burned at the stake, and books on many subjects were destroyed as a result. With a purge of the Muslim universities well underway in Spain, the Western flow of astrolabes into Europe via Spain appears to have come to a grinding halt. Consequently, it was not until the 12th Century before the Umayyad intellectuals finally caught up with the newer developments of their colleagues in Baghdad and the East, since their schools had been shut down by Muslim clerics for the past 300 years. When these Moorish scholastic institutions eventually re-opened, many of their students were championing very un-islamic *Neo-Aristotelian* dogmas!

Hand astrolabes proved to be extremely popular with these various groups; they were accurate and could readily be transported around. These are the very tools which simplified the maritime exploration of the world by the great explorers of the Renaissance period. An astrolabe has several parts;

- ALIDADE** The Alidade was a pivoting ruler enabling one to align the star being observed with the etched line, and the constellation on the Rete. From this one learned the angle of the star. Prisms could be mounted on it to enhance viewing.
- MATER** The Mater was a round brass foundation plate with a central pin, which had the paths of celestial coordinates engraved onto its front surface.
- RETE** A plate, possessing opened sections or windows, which were etched with a star-map depicting all major constellations.
- CLIMATE** These insertion plates carried renditions of coordinate gridlines specific to certain latitudes.

Ascension tables

Greek, Roman and Egyptian astronomers of the 2nd Century AD had workable star maps of the southern and northern hemisphere at their fingertips, and had tables which incorporated planetary ascension data from such diverse lands such as Lower Egypt, Russia and Britain. This seems spectacular to us, because we are hearing about it 1,900 years later, thus making it a little difficult to believe. But spare a thought for Al Ma'mun who inaugurated the House of Wisdom. Around 1,000 AD he would have been feeling just as strange as you do. It is mentioned that he was humiliated that his more than well-trained scholars could barely improve the findings of a bunch of old Greeks and Romans. It was undignified, especially when they were the greatest academic institute in the world! But after he, his researchers, mathematicians and chief translators had sat down and digested their double-helping of humble pie, they were then ready to walk in the footsteps of the masters. But first they had to understand the full importance of what they were reading, and then figure out how the ancient thinkers dreamed up maths and physics concepts so vital, complex and intelligent, that they remain the corner-stones of modern science.

THE MIDDLE AGES SAW A LARGE SCALE TRADE IN ASTROLABES BETWEEN MOORISH SPAIN AND EUROPE

THE GREEKS, ROMANS AND EGYPTIANS HAD THEIR OWN STAR MAPS

ONCE THEY HAD BEGUN TRANSLATING AND RESEARCHING THE ANCIENT TEXTS, MUSLIM SCHOLARS WERE AMAZED BY WHAT THEY FOUND

In *Almagest II:8* we find Ptolemy's ascension tables for locations such as Britain, Egypt, Greece, Pontus and Russia; these almost certainly were derived from observations performed at those locations rather than the product of predictive mathematics. Why would they need to provide values for the geographical locations previously mentioned? ... there would have been other countries more deserved of a position on these tables, simply by virtue of their size, latitude and closer proximity. That we have observed data for such locations betrays the past presence of affiliated groups of sorcerers and astronomers living at these locations. As it stands the Chaldeans, Magi and pagan Athenian/Neo-Pythagorean Gnostic sorcerers would have been the only people with any conceivable need to know this information, primarily to allow them to create magical objects endowed with the potency of their divine planets. These magicians would have been astronomers in their own right, and well able to make the necessary observations in order to deduce the positionings. So, on the basis of the information supplied in the *Almagest* it is highly likely that Greek astronomers were scrutinising the heavens from diverse locations c. 100 AD, and even earlier. Unless these methods and technologies died out, the descendants of the Chaldeans, Magi and pagan Gnostic Philosophers continued to carry on these traditions in heathen France, Germany, Russia and Asia Minor.

At any rate, if the astronomers only decided to mathematically assign values to their tables in the first instance, it is unlikely that they would have been content with not checking these values. *Ptolemy cautioned against dispensing with a need for practical analysis once theora had been established.*¹⁵³⁵ In a way those who came after Ptolemy were duty bound to follow his lead and conduct scientific observations to confirm, deny or refine his theora.

The Magi experimented with varied foreign computistical tables, drawing upon the virtues of the astronomical refinements inherent in each of them:

*“And there may be a position of the stars, settled even by computers of the stars, when they would take that of the sun and moon from the tables of Shatro-ayar, that of Saturn from the Hindu tables, and that of Mars from the tables of Ptolemy, and the position comes out very good”.*¹⁵³⁶

Once the Arabs had established their own observatories, they too proceeded to compile their own handy ascension tables for each of the signs of the zodiac,¹⁵³⁷ and designed ratio tables which allowed them to quickly and effectively find the solutions to trigonometric angles. These reckoners were essential equipment in the hands of the busy professional astronomer. The calculation of angles used by the Arabs used the universally accepted *Babylonian sexagesimal counting system*, a convention which was ideally suited to dealing with the degrees and minutes of a circle. Based on their methodology, Al-Battani composed the astronomical ascension tables known thereafter as the *Zij*. This saw service wherever the Arabs conducted celestial observations, at Baghdad, Cairo, Sammara, Shiraz, Damascus and Khorezm, and helped them maintain an ongoing record of the ascensions for these places.

Ascension tables had been rendered extinct in Europe since Roman times, but began to re-appear in the 10th Century AD, owing to the efforts of Al Battani and others.¹⁵³⁸

Collaboration in the East

During the early Middle Ages, the Arabs were liaising with the Indian Brahman astronomers at Jundishapur,¹⁵³⁹ and conducted formal meetings there concerning astronomy, astrology, medicine and other sciences, not to mention the building of hospitals. From that time onwards the Arabs harnessed decimal calculation with the Babylonian mathematics that they were accustomed to using, as a speedier means of performing bulky calculations, yet all the while maintaining the exactitude of the sexagesimal system.¹⁵⁴⁰ They were merely playing catch up with the now-exiled Magi, who long used an admixture of base-6 and base-10 arithmetic (gleaned from the Egyptians).

Confirmation of this broad-based Indian-Arab-pagan collaboration in the field of astrology lies in the Arabs' use of Asoka sanskrit characters, northern and southern Indian horoscope charts,¹⁵⁴¹ and the inclusion of lunar mansions into the western mediaeval astrologers' bag of tricks. Sanskrit began to appear on magical scrolls, in company with Arabic ciphers and glagolitic letters. This variety of sanskrit writing was the first variant invented by the Brahmins, and the very script style used to write down the Vedas.

Certainly Western and Byzantine astronomers were not invited to these fora, and from the time of the closure of the generously cooperative Islamic university at Toledo,¹⁵⁴² the information flow reduced to a trickle, causing Westerners to become insulated from major developments. To illustrate the point, Byzantium (unlike the Arabs) was

totally oblivious to the existence of decimal-based computations until the mid-15th Century,¹⁵⁴³ or in other words, *this method was hidden from Byzantium for another 500 years!* Even more than that, the knowledge of the stars, geography and the full extent of the globe was concealed from millions of Western “flat-earth” inhabitants and their scholars (who still believed in the old Roman model), all of them painfully unaware of the degree of interaction then taking place between the Indian Brahman scientists, the Arabs, and presumably the pagan astronomers. If they were keen to conceal the new advances in mathematics, *how much more so would they have been guarded about sharing their priceless depictions of the global land masses!*

There was nothing the ancients couldn’t teach the people of the 10th Century, with regard to global map projections. When Ptolemy’s chart of the earth is compared with the “advanced” Mediaeval Arab examples, it seems fairly clear that Mediaeval man had taken a quantum leap backward insofar as mapping was concerned. The Arab maps of the Middle Ages looked like little more than childish scribbles compared with the the ancient terrestrial maps. Unhappily these were the fruits of a frightening closed-mindedness which held us captive in the 500-700 years of human history which followed Ptolemy’s era.¹⁵⁴⁴

Ptolemy’s *Geographiae* was itself modelled on a whole host of other Phoenician, Greek, Roman and Egyptian maps once located in Alexandria’s famed library. In it he listed eight thousand locations and provided a world view that appears to have included such remote places as a large island in the Arctic Circle, and just about every major river and mountain system in Asia and Africa. What seems to be the west coast of Australia, Indonesia, and the shores of Antarctica were drawn in a fairly sketchy manner. There is some attention to the islands of the Indian Ocean, but Sri-lanka looks like it is suffering from a bout of obesity. As it happens, Mediaeval Europeans were left in utter ignorance of the worlds true dimensions. In the 18th Century, Captain James Cook resorted to copies of Ptolemy’s map on his mission to explore the Antarctic and Southern oceans. Based on Renaissance reproductions of *Geographiae*, Columbus felt quite justified in thinking that he would end up in China after just a few weeks sea time to the West, for in Ptolemy’s map China was just across the way from Europe, but on the other side of the map, where the two planispheric map edges theoretically joined up. What they never conceived of was the existence of an intervening landmass, in fact an entire continent ... the Americas.

Where roads and paths through the forests were absent, one wonders if cross-country travel was undertaken by users of *Geographia* (“The Guide”), allowing the Philosophers to trek along lines of latitude, using viewing beams, shadow measurements (accurate to 1°),¹⁵⁴⁵ or astrolabes, to stay on course. The use of such a crude viewing beam is shown in a 1619 chart on geomancy. Now if they did have a preference for travelling along known routes of latitude, there might be an enhanced probability of discovering archaeological sites along the lines of longitude and latitude drawn on Ptolemy’s maps. Such may be the origin of the legendary “lay lines” that allegedly transected much of Europe.

Astro-cartography (Zeranography)

As has been mentioned, 10th Century Europe marked the beginning of a new era in which astronomy, geography, alchemy and other equally amazing things came to light.

There were as many styles of star map as there were astrocartographers.¹⁵⁴⁶ Most frequently they consisted of mythical images, which served as standardised depictions of the various constellations.¹⁵⁴⁶ Despite the common themes of these drawings there was ample room to accommodate the drawer’s artistic style. For argument’s sake, Sagittarius could be drawn on parchment with ink, appearing as goat-legged celestial archer with wings sprouting from his head.¹⁵⁴⁶ At other times he might be depicted as a centaur, drawing his bow, gracefully presented in vibrant illuminations.¹⁵⁴⁶ Generally speaking the stars within a given constellation were superimposed over the image by the astrocartographer, allowing a student to see how the constellation pictures came about.¹⁵⁴⁶ The more lavish charts had draftsmen texture the images using disertations from the likes of Gaius Hyginus, which encapsulated a great many Greek myths in relation to the constellations.¹⁵⁴⁶ For this reason they were also a means of disseminating ancient Greek mythology.

Yet there was another far more enigmatic mapping style, employing the stereo projection of stellar images onto a flat planispheric surface or rete plate. This is suspected to have occurred during the 10th century,¹⁵⁴⁷ though the place from which the practice emerged has not been established. With the expulsion of the Mathematicians and Philosophers from Greece and Rome by the 6th Century AD, and the eradication of the pagan observatories, stellar

charts, tabulated ascension tables, or ephemeræ of any kind had ceased to exist.¹⁵⁴⁸ So where on earth did these strangely-rendered Roman-style maps come from? The presence of these maps perplexed Professor Flint,¹⁵⁴⁹ who had no other choice but to believe that they were only reproductions of ancient Roman works secretly chanced upon after 400-500 years, and generously shared out to the brethren, by some “bent” or misguided priest.¹⁵⁵⁰ What other conclusion could you reach? As she says, if you only knew who was responsible for the fevered level of occult dissemination from the Benedictine monasteries, you would know who rescued astrology and the occult in Western Europe, from the *official annihilation of the Church*. In doing so, they had achieved something certain Moors had been trying to do during the previous few hundred years. So where did they get their texts from, who was in collusion with them, and more importantly why were they doing it?

Had Flint known that there were one or more *active* pagan observatories in Rus’ (and the Balkans?), thought to have been toying with lenses and astronomy, she may have felt inclined to put the finger on them as the “culprits” responsible for re-issuing copies of older Roman star maps. However, it is also equally plausible the monks in question were not re-issuing maps, but much rather creating new ones using ancient Greek and Roman methods. Whatever the case, these maps appeared in Mediaeval Europe as if by some miracle.

As I intend to show in due course, it was most likely the pagan priests of Russia and Scandinavia, and a fraternity of heretics sworn by oath who, in addition to the Arabs and Jews, were responsible for the ground-swell of astronomical, astrological and occult pursuits during the Middle Ages. In Part II we will examine Rome and Byzantium’s crisis of confidence as “heretics” made a show of strength inside the Eastern and Western monasteries, causing St Peter’s fishing boat to flounder, buffeted by the waves of change, and taking in water fast.

Optics in ancient astronomy

When you think about it, the study of optics required no super-human traits, no alien intelligence, and might only have been symptomatic of mankind’s fascination with, and study of crystals. Even in their natural state, gemstones possess a staggering variety of forms, optical properties and colours. They are objects of beauty.

In the ancient world the shape and transparency of a gem appeared to be the most important indicators of its true value.¹⁵⁵¹ Highly preferred shapes for gemstones included the prismatic shaft, followed by lenticular ones, and finally the flat or sheet-surfaced gemstones (suitable for mounting in a *Dioptra*?). One might infer from the types of gem forms mentioned above, that the optical properties of a given gem were the basis for their valuation. For example, due to his poor eyesight, Nero watched the arena through a large piece of emerald, a gemstone esteemed for its refractive qualities.¹⁵⁵² Whether the Emperor’s viewing crystal had been modified in accordance with pioneering optometric principles was never recorded.

Owing to the uniform angles which often characterise prismatic shafts, this sort of gem might have yielded a variety of different prisms if suitably cut and polished, allowing those keen on optics to experiment with various media, or if the given gemstone had superior optical qualities, to produce optical instruments. Ptolemy noted,

“what is polished is seen more clearly than what is rough (they) have a certain regularity, and so brightness is inherent to it”.¹⁵⁵³

A love of gems went hand in glove with the older civilisations of Asia Minor. While rock crystal only grew in the environs of mountains and sandstone strata, one Xenocrates noted with surprise that ploughmen had been digging them from the soil in Cyprus and Pontus.¹⁵⁵⁴ In bygone ages, the inhabitants of these areas had obviously imported a vast quantity of rock crystal. But for what reason? Their magical, aesthetic, or optical properties?

The flipped-image star maps briefly touched upon were found appended to 10th and 11th Century copies of *De Natura Rerum*, and were most likely of a projected variety, unseen in Europe for some considerable time.¹⁵⁵⁵ These fine quality images gave a “God’s-eye view” of the cosmos. In an historical context flipped-image star maps such as these were formerly made in ancient Rome, but evidence of, or any form of reference to, their existence had been lacking in Europe for many centuries. In short, there is evidence for the fusion of stereoscopic images during the 10th Century.¹⁵⁵⁶ It has been theorised that the maps in question were evidently made by radiating a stellar image onto a writing surface (paper or highly polished metal), perhaps through a prismatic device. Astro-cartographers then

MANKIND HAS ALWAYS

CRYSTALS

GEMS WERE VALUED
ACCORDING TO THEIR
PHYSICAL FORM

Fig 80

CRYSTAL WAS POPULAR
IN CYPRUS AND PONTUS

proceeded to draw over the projected image, permanently recording what the lense showed. The resulting star chart therefore gave the impression that it had been drawn from a position high above in the heavens, rather than from a terrestrial vantage point. The only alternative is that they were drawn in space, which I'm sure you'll agree is implausible

EXPERIMENTS WITH APPLIED OPTICS

Moreover, Mediaeval astrolabe manufactures might have used this same projection method to cast stellar images down onto an astrolabe rete plates, thereby allowing the constellations to be etched onto their surface. Consequently a considerable number of retes became elaborate celestial charts in their own right.

Clearly the flipped-image star maps were the work of skilled and highly dedicated astro-cartographers using ways and means not normally associated with those times. Considering this, it appears that visual aids were employed by Mediaeval astronomers, apparatus that must have had an historical precedent.

From the works of Ptolemy, we learn of visual magnification instruments that could have profound impact on the science of astronomy if turned toward these ends, and two of which are thought to have been invented by Ptolemy himself. These were the *fostir* or *baptistir*, and the *dioptra*, which was also termed a *dioptra*.¹⁵⁵⁷ The third class of instrument was the mirror, and they came in a variety of convex and concave shapes.¹⁵⁵⁷

Fostir or baptistir

Ptolemy deduced that water had substantial magnificatory and refractive qualities under certain circumstances. Having discovered this as a result of his cutting-edge experimentation, perhaps even by observing something as simple as a drop of water on a leaf, he devised the *baptistir*, which was essentially a section of metallic tubing filled with water, capable of inflating the perceived size of distant objects.¹⁵⁵⁸ Fig 81 is a reproduction of a manuscript illumination drawn in the 1300's. In this case the star-gazer is using equipment every bit similar to Ptolemy's *baptistir*, an experimental telescope considerably more ancient than the telescope invented by Copernicus and later professional Renaissance astronomers.

Dioptra

The inverted star maps might also have been made using a device modelled on the *Dioptra*, a piece of viewing equipment shown in *Almagest V: 12*, but the *fostir* or *baptistir* could have served a similar purpose. Dioptras consisted of two lenses mounted on a sliding block of wood, and resembled a surveyor's instrument.

Mirrors

A far more likely proposition is that these maps were made with something as simple as a mirror. In the *Optika*, Ptolemy explained that images underwent quantifiable distortions when viewed in convex, concave and flat mirrors. In the following extracts Ptolemy recorded a series of distortions which could conceivably have resulted in images of the type found with *De Natura Rerum*.

"objects seen by means of such reflections ... does not seem to move as a mirror-image, but in the opposite direction ... Indeed, facing objects that are seen in direct vision are disposed so that their right sides lie to our left".¹⁵⁵⁹

"sometimes ... what (image) lies toward the top (of the mirror) will be seen toward the bottom, so that the image is inverted in comparison to what is seen directly. Moreover, right-hand things sometimes appear to the left ... with objects that face us".¹⁵⁶⁰

Unfortunately we will never know with any degree of certainty how the maps were made without excavating a wider range of viewing apparatus, or attempting to reproduce peculiarities inherent in the mapping style through practical experimentation. If it is true that Roman and Greek astronomers were dabbling in applied optics (as

Fig 81

Ptolemy was in his day), then the astronomy techniques which produced the “birds-eye-view” maps are conceptually similar to those of the modern astronomer, who projects imagery onto photographic plates instead of looking up into an eye-piece. If lenses were used, then it is likely that the grinding and polishing of the devices was attributable to brilliant lapidary skills tempered by theories postulated in Ptolemy's *Optika*, which for the rest of the millennium, was the world's most authoritative book on the subject. Few however had the opportunity to read it, due to its rarity, and perhaps the covetous custodianship of those who possessed it.

Although some of Ptolemy's findings were in serious error, they were accepted as fact until finally rectified by Mediaeval Arab researchers.

Russian observatories and astronomy

In Chapter I, I provided diverse and compelling evidence for the existence of observatories in heathen Russia, manned variously by Slavs, Bulgars and Goths. There is other potential indicators for astronomical apparatus in Russia, devices conceptually similar to those used by the ancient philosophers and the Magi. Lozko mentions that the Russes employed spindles, spinning-wheels and distaffs for astronomical and astrological purposes. For instance an item of weaver's equipment was found near Kiev, engraved with an inscription stating that it was enchanted; *Potvoren' Pryasleni*¹⁵⁶¹ “The enchanted spinning-wheel”. Since the artifact had been concealed in a hoard of buried gold and silver dating to the 12th-13th Century AD, it indicates that the former owner attached a great deal of value to it, and perhaps due to an unhappy turn of events, was unable to return to retrieve it. Elsewhere in Russia weaver's equipment has been found decorated with suns, moons and, depending on one's interpretations, perhaps even celestial positions.

Some profess the Russes used shaped gems as optical aids for stellar viewing, as put forward by Lozko and N. A. Chmikhov.¹⁵⁶² Their stance is based on folk sayings of an apparently astronomical nature, such as;

*Iz Vikna u Vikno - Vereteno*¹⁵⁶³

“From the eye through the “eye” is (to?) the spinning-wheel”.

I certainly want to expand upon their theory. The Ukrainian *vikno* means “an eye”, whereas the Russian variant *okno* means “an opening”, “an aperture”, and later “a window”, despite the fact the word also arose from the proto-Slavonic form *oko* (“an eye”).¹⁵⁶⁴ The linguistic transition from “an eye” into “a window” is perfectly understandable with recourse to Aryan logic, for they equated parts of a building with the body parts of a god. A window was therefore, the “eyes” of the building.

The word *vereteno* (Old Russian, Ukrainian, and Old Slavonic), is also found in the Serbo-croat, Czech and Slovenian (*vreteno*), as well as Polish (*wrzeciono*).¹⁵⁶⁵ The general meaning being a rotating spinning-wheel, or even “a potter's wheel” in the case of the Czech.¹⁵⁶⁵ The non Indo-European-speaking Finns also had similar words to *vereteno*, namely *vartana* or *vartina*, which also meant “a spinning-wheel”.¹⁵⁶⁵ These are directly traceable to *varatnam* (Old Indian) meaning “a revolution” or “a rotation”, “spinning” or “rolling”, or “a back and forth movement”.¹⁵⁶⁵ *Vereteno* is also connected to the Old Indian *vartula* (“a spinning wheel” or “a distaff”) and *vartulas* (“circular”), plus the Old High German *wirtel* (“a spinning wheel” or “a distaff”).¹⁵⁶⁵

Vereteno is also related to the words *vertet'*, *vorot* and *versta*. *Versta* meant a unit of distance (3,500 feet.), *vorot* means “a gate” or “a gateway”, and lastly *vertet* “to turn” or “to spin”.¹⁵⁶⁵ As incongruous as it may seem, spinning wheels were etymologically related to Slavic words meaning a gateway, or a unit of measurement suitable for measuring lengthy distances.

From this saying, it would appear that something emerged from an eye and went towards a spinning-wheel through a certain aperture, “eye” or gateway. Considering the cited linguistic information, such an activity greatly resembles the manipulation of a fixed astrolabe. During a typical observation session an astronomer rotated graduated wooden wheels, aligning them with a distant star. The observer then established the celestial object's position in the heavens by comparing its location with a degree marking on the astrolabe wheel.

“From the eye” is an intriguing term of phrase. What could conceivably come from the eye we may ask? Well nothing does, it's a receptor. Yet this was not always believed to be the case. According to Mediaeval optical theory, which conformed to Ptolemy's hypothesis, conical beams of *visual flux* (a faintly-material ethereal light-like substance)

PTOLEMY BELIEVED THAT VISUAL PERCEPTION WAS PERMITTED BY AN EFFUSION OF VISUAL FLUX FROM THE EYE

emanated from the optical source (our eyes) and struck an object, whereupon the image formed. In other words, we could only see because we had invisible beams coming out of our eyes! This was called the extramissionist theory of visual perception, and Ptolemy was its best known champion. Heathen Russians may well have thought similarly.

The contrary position, the intramissionist theory, was expounded by a great many Greek philosophers. In principle it is crudely similar to what we believe today, that the eye passively receives the image. Understanding these points allows us to arrive at an approximate date for the Ukrainian saying. Some have speculated that an Arabic translation of the *Optika* was available during the time of Al-Kindi, somewhere around 873 AD. It is however far more certain that its contents were being discussed by Ibn Sahl and his colleagues in the mid 10th Century AD. Come the 11th Century, Ibn al-Haytham wrote an enormous intramissionist treatise on optics called *Kitab al-Manazir*, which was so widely endorsed that very few academics held *Optika* in high esteem.¹⁵⁶⁶ Therefore there was only a 200-year window during which the extramissionist theory gained acceptance in the Islamic world. Being geographically close to Russia, the Arabs may have been responsible for imparting the extramissionist theory there, though Magian priests and pagan Gnostics are just as likely candidates. Based on surviving manuscripts, we know that three 13th Century English monks (Bacon, Pecham and Witelo) were they only other medieval academics to make written works in part based on the visual flux theory, and none of them were wholly of the extramissionist school.¹⁵⁶⁷ Doubtless to say their demi-extramissionist leanings had little or no impact on Russian folk perceptions about how the human eye visualises things. So there are three possible time-frames for the existence of extramissionist theory in Russia, periods to which the saying might be assigned;

	Time frame	Source of the teaching
1.	The Bronze Age until the 10th Century AD	Athenian philosophers living in Scythia, the Goths, or their respective descendants
2.	The late 9th to the early 11th Century AD	Arabs
3.	The 13th Century	English travellers exposed to Bacon's teachings

Of course it could always be argued that *Iz Vikna u Vikno - Vereteno* simply referred to the movement of spun thread through a feeder-eye to the spinning wheel, rather than gemstones in an astronomical context. This can only be done if you assign Russian meanings to the Ukrainian words, something also required by the special "eye" theory.

Al-Masudi also reported (in his book the *Meadows of Gold*) that a Slavic-Arab commander was placed in charge of the Fatimid forces that captured Egypt during the 10th Century AD. Having accomplished the mission, he was charged with implementing the Caliph's plans to build a new city called Cairo.¹⁵⁶⁸ But it is the way he went about this assigned task that excites the imagination. Apparently he commanded that construction crews were not to start building until his personal astrologers had rung a series of bells, thereby indicating that the planets were auspiciously positioned. A special lever was then raised, thereby signalling a return from refreshment to labour. Masudi recorded the commander's extreme displeasure when gangs began working on Cairo's foundations after the bells were accidentally rung while the power of Mars was unfavourably aspected. In astrological terms Cairo was at risk of being struck by warfare, plague and other forms of conflict if it was built at such tragically inauspicious moments. At no stage does Masudi reveal the ethnicity of his astrologers; perhaps they were Slavs, Arabs, or even Iranian.

THE SLAVIC AND FINNISH WORDS FOR A SPINNING-WHEEL COMES FROM THE OLD INDIAN

The use of spindle-wheels for astronomical purposes might also indicate that the Volkhyv had developed their own home grown devices. It is plausible that they mounted large spinning-wheels (modelled on fixed astrolabes) and quadrant or viewing beams bearing astronomical/astrological insignia. As speculated, these might have been mounted with special "eyes" (prisms), to help the pagan astronomer align the wheel with the intended star, and view the heavens. The making of such devices may have been described in *Zvezdochot*, a defunct pagan Eastern Slav book on astronomy and the stars.

If viewing crystals were used, then this "eye" would have been, at the very least, a naturally occurring crystal prism with superior optical qualities, a ball of glass or amber, or specially cut gem crystals such as were used in

necromancy and scrying, but specially adapted for astronomical usage. If the theories are correct, and the Volkhyv were already using lenses in astronomy, they either looked up into the heavens, through a lense, or may even have projected the celestial images onto other surfaces, just as modern astronomers do, perhaps using a *dioptra*. To achieve this the Volkhyv would most likely have employed the diamond-cut lapidary techniques once practiced by the Magi, or the Gnostic gem-cutters of Ancient Rome.

As pointed out by Lozko, another Ukrainian folk saying could conceivably possess an astronomical meaning;

*“ Lisii Zherebets’ cherez pryasla glyadit’ ”*¹⁵⁶⁹

The fox-like stallion (looks or glances) across part of the spinning wheel.

The fox-like stallion (looks or glances) through a part of the spinning wheel.

The fox-like stallion (looks or glances) through a section of fencing.

Pryasla in this case is related to Serbo-Croat *preslitsa* (“spinning-wheel” or “a distaff”), the Slovenian *preslo* or *preslica* (“a bench”, “a machine”, or “a part of a windmill”), and the Czech *praslo* meaning “a circle” or “that part of the fence that is between two posts”¹⁵⁷⁰

In the following examination of Slavic words for mirror, and linguistically affiliated terms, we find potential evidence for the use of mirrors for personal vanity, and observing the heavens. The Russian *zerkalo* (“a mirror”) is related to similar Czech and Polish words with the same meaning, as well as the Slovenian *zrkalo* (“a pupil {of the eye}” or “a mirror”).¹⁵⁷¹ These are related to the verb *zrkat’* (“to peer this way and that”), and to this I would add the Ukrainian *zirko* (“a star”).¹⁵⁷¹ These are collectively related to *zret’* (variant I: “to see”, “to look at s.t.”, “to glance at s.t.”). *Zret’* is further linked to the Lithuanian *zereti* and *zeriu* (“to shine”, “to beam”, “to be radiant”, “to shine”, “to show through”), and *zeruoti* “to sparkle”, “to flash”. *Zret’* is inter-twined with *zorok* and *zarya*.¹⁵⁷² *Zorok* meant “appearance”, “a glance”, “a look”, “an expression”, and was yet another word related to *zret’* and *zarya*.¹⁵⁷³ The Russian word *zarya* denotes the glowing sky at dawn and sunset, and it was related to *zarevo* (“afterglow”) and *ozarit’* (“to illuminate”, “to light up”). These are in turn connected with the Bulgarian *zarya* (“a ray”, “light”, “the glow of sunrise”), Slovenian *zarja* and Czech *zare* (“glitter”, “light”, “radiance”, “halo”, “brilliance”), the Ukrainian *zorya* (“a star”, “the morning and evening glow”) and *zorkii* (“keen-eyed”, “sharp-eyed”, “far-seeing”).¹⁵⁷⁴ Clearly the concepts of mirrors, stars, radiant light, sparkles, and intense observations are bound up within these words, and are suggestive of stellar observations with the aid of mirrors, a technique described already.

The more primitive Russian observatories would have been found outdoors in the form of rocks, carved trees or posts, ground furrows, and other movable markers. Such circular arrays of posts might have been based upon the Magian and Indian gateways, through which the astronomers observed the planetary positions.

More lavish permanent observatories were however found in the cupolas of most major temples. Each had an upper storey roofed section that could be partially removed at nightfall, when the skies are clear, to facilitate the entrance of celestial light.¹⁵⁷⁵

The Almagest yielded detailed astronomical data pertaining to the northern hemisphere, obtained from a well-planned, and presumably well co-ordinated grid of Greek observatories between the 4th Century BC and the 1st Century AD. As you recall these static observation sites were once located in North Africa, Britain, Germany, France, Turkey, Greece, Sri-Lanka, Pontus (Cappadocia/Eastern Black Sea area), Borysthenes (the Dnieper), Southern Britain, and Tanais (Russia, at the mouth of the Don River, where it empties into the Sea of Azov; a former Greek colony).¹⁵⁷⁶ Some portions of this grid, such as Rhodes, Pontus and Egypt, were operating during the golden age of Greek astronomy, when exceedingly advanced mechanical devices were used.

Even so, it is impossible to say when these observatories were closed, or by whom. Nor are we aware of the fate of the astronomers, their books and their instrumentation. Perhaps the old arts were still present in Rus’ as late as the Middle Ages, and Al-Masudi subsequently wrote of them.

WERE THE DRUIDS CONNECTED WITH THE ASTRONOMERS IN RUS’?

As previously mentioned, Tacitus’ account of Greek ruins in the Danube region probably indicate that the ancient German portion of the grid had shut down prior to the dawn of the first millennium AD. If Greek astronomer-

philosophers were heading to places like Britain, then we have to look for further clues, other evidence of their presence. Diodorus relates that the druids preached Pythagorean philosophies like Metempsychosis, and it is known that ritual objects of pagan Gnostic origin, such as foils, inscribed magical lamellae and simulacra, were used on the British mainland. Not only that, but a principle Celtic deity was *Cernunnos*, a bull-headed man often rendered with fish-tailed serpents for legs. *Cernunnos*, whose image has been excavated in Russia at least once, received much veneration, but was also widely depicted in the British Isles.¹⁵⁷⁷ In one image *Cernunnos* is seen flanked by two robust hounds. Due to its phonetic similarity, I believe *Cernunnos* is actually a corruption of *Kronos*, the Mithraic time god worshiped by the Magian and Neo-Pythagorean astronomer priests of that cult, and therefore equivalent to *Zurvan*. But then again it could also be likened to *Cronus*, who appears in Greek myth as the King of the Titans (Giants), and father of Zeus.

If there was interaction between these many ancient observatories, it is more than likely that the astronomers who manned these posts had a Russian connection as early as the 3rd Century BC.

For instance a celestial deity called *Kruno* is mentioned in the heretical Jewish text *The Book of the Secrets of Enoch*,¹⁵⁷⁸ together with Greek gods like *Ermis* (Hermes), *Aris* (Ares), *Aphrodit* (Aphrodite), and *Zeus* (Zeus-Ormazdes). This deity is linguistically similar to the druidic *Cernunnos* might simply be another name for the Greek *Cronus* or the Mithraic *Kronos* (the Zurvanitic Most High). Considering that the Celtic *Cernunnos* had snake legs, is it coincidental that the Russian word for "leg" just happens to be *noga* (pronounced Naga)? So in the Russian language legs appear to have been prosaically likened to Naga serpents, though we will never know if the concept of snake-legs originated at a time when the Russians knew of a supreme being like the Celtic *Cernunnos*, who had snakish legs.

A further point of similarity is found in the god Ares. As you may remember, the bloodied Scythian sword-pyramids of the ancient Russian steppe were dedicated to Ares, a war-divinity equally worshiped by the Greeks and the authors of *The Book of the Secrets of Enoch*.

These instances might seem like a gross over-indulgence in speculation, but they could also illustrate that these gods were mutually known to the Scythians, Greeks, Celtic druids, and the Jewish sorcerers who wrote the *Book of the Secrets of Enoch*. While it is most likely that Roman sorcerers and priests were responsible for the spread of Graeco-Roman planetary deities into the Celtic Pantheon, another possibility is that the Greeks, Scythians, Romans and Celts were themselves influenced by the same series of myths, and the Magian and pagan Gnostic astronomers. In support of this, Graeco-Roman gods are frequently found engraved on religious murals alongside Celtic deities, right throughout the British Isles.¹⁵⁷⁹

Other possible influences on Russian astronomy

RUSSIAN ASTRONOMY
DEVELOPED
INDEPENDANT OF THE
ARABS

We can infer from Al-Masudi's writings on the Slavs, that the Russian observatories were developed independently of the Arabs, and were significantly different from the observatories being run by his colleagues in Baghdad.¹⁵⁸⁰

Apart from the Zoroastrian Tir, which was equal to Mercury, the Russian names for the planets and star signs do not appear to have been influenced by Sassanian, Arab, Indian or Chinese astronomers, especially since important linguistic terms seem to be absent from surviving astrological and astronomical terminologies.

While the Chinese alone employed an orb-style celestial notation style (which resembled the *Alphabet of the Kings*) on the occasional Mediaeval star map,¹⁵⁸¹ they can be mostly discounted as an influence on Slav astronomy and astrology because they didn't use the 12 standard sun-signs derived from Babylon, Greece, Rome and Egypt. These signs (just as you would find in the back of most coffee-table magazines), were once used by the Russians and other Slavs. Hence the Church's fearful insistence that the Slavs revelled in astrology.

Unfortunately the things Masudi did write concerning the observatory lacked detailed descriptions of the gems and images located inside, information that would have been very revealing to the trained eye. Even so linguistics has enabled us to reconstruct some aspects of their techniques.

RUSSIAN STAR MAPS

One Rus' Volkhvy book, entitled *Zvezdochot*, intimates that the Russes already had their own treatises on constellations and stars prior to 989AD, when they were immolated in the conversion fires of the early Russian Church. Alas we know not whether it possessed celestial maps as well. Some might say that *Zvezdochot* was merely an Arabic astronomy tome imparted to the pagan Slav intelligentsia. For example Al-Battani was a Harranian

Sabian, a man at the forefront of Arab astronomical studies. Yet it was not until 911 AD that he completed his *Knowledge of the Risings of the Zodiacal signs in the Quarters of the Heavens*, and tables for the fixed stars.¹⁵⁸² Though I am personally opposed to the idea, it is nonetheless plausible that the Slavs were recipients of early 10th Century Arabic astronomical knowledge, like that of Al-Battani.

Despite the pace of their astronomical exploration, the illustrious Arab astronomers are not thought to have acquired their first major home-grown celestial chart until 1000 AD (some accounts say around 970-980AD), when Abd ar-Rahman ibn Umar as-Sufi released his *Book of fixed stars*. However, against this notion that the Arabs only grew wise to the heavens in the 10th Century, a hemispherical stellar fresco exists on the domed roof of Jordanian bath house which was first rendered c. 715 AD.

If the Slavs had acquired their astronomical knowledge through an impregnation of Arabic astronomical science sometime in the 10th Century, then it goes without saying that there would have been a proliferation of Arabic astronomy and astrology terms still in use among the Slavs. We find no evidence of this whatsoever

The Slav star signs were merely Slavic translations of the standard zodiac, and so this reveals nothing about who they inherited their astronomy skills from. To solve this riddle we will examine just a few of the more important Slavic words pertaining to celestial bodies and astronomy.

SPECIFICALLY ROMAN INFLUENCE

The Slavic word for Venus, *Venyera*, comes from the Latin *Venerius*. Likewise *Yupiter* comes from the Latin *Jupiter*.

One Russian word for the moon, *Luna*, comes from the Latin. If the Greeks were in closer contact with the Slavs than the Romans then it stands to reason that their word for “the Moon” would be of Greek origin. How is it then attributable to the Latin word for “Moon” (*Luna*), unless it was a word imparted to the Slavs during pagan times, when there was a Roman presence on the steppe?

The Russian word for the Sun (*Solntse*), is related to *Slntse* (Bulgarian), *Suntse* (Serbo-croat), *Solnce* (Slovenian), *Slunce* (Czech), and *Slonce* (Polish). These are related to the Lithuanian, Old Prussian and Latvian words *Saule*, the Gothic *Sauil* (or *Sumna*), which appear closer to the Latin *Sol*, than they do to the Old Indian *Svar* or the Avestan *Hvara*.¹⁵⁸³ This might indicate that the pagan Slavs and Balts derived their name for the Sun from Roman, or perhaps even Mithraic sources which termed it *Sol Invictus* (a deity known as the invincible sun, or the good sun).

ALANIC INFLUENCE

The Russian word for “a star”, *Zvezda* (which is roughly the same throughout all the Slavic nations) is believed to have been taken from the Old Ossetian (ie; Alanic) *Zvestæ*, meaning “silver”.¹⁵⁸⁴ However I have also noted a crude similarity with the Avestan Persian *star*, from which we get the English word *star*, and perhaps even the Old Norse *stara* (“to stare”, or “to gaze”).

ROMAN OR GREEK INFLUENCE

The Russian word for astronomy, *astronomiya*, comes from the Latin and Greek.¹⁵⁸⁵

Planeta, the Russian word for “a planet” is derived from the Latin and Greek.¹⁵⁸⁶

The Russian word for a comet was *kometa*, which has Graeco-Roman origins.

The other commonly-used Slavic word for the moon *mesyats* has parallels with the Greek and Latin, but is finally traceable to the Old Indian *masa*.

SPECIFICALLY GREEK INFLUENCE

The Slav word for the constellation of Pleiades, *Pleyada*, comes from the Greek.

So it is extremely unlikely that Arab astronomers taught Slavic astronomers the art of viewing the stars. This honour appears to go to a hitherto unknown Roman influence, in addition to Greeks. Because the Slavic zodiacal star signs were little more than direct Slavic translations of the standard astronomical and astrological symbols once common to the Babylonians, Egyptians, Magi, Greeks and Romans (ie; ram, bull, twins, crab, lion, virgin, scales, scorpion, archer-centaur, goat, water bearer, and fish), it is reasonable to infer that the classical civilisations are the most likely ones to have begotten the Slav zodiac. Since the Volkhvy also had books on divination by mirrors and crystals, and an astrological tome called *Ostrologiya* (Latin & Greek: *astrologia*) one can speculate that the ancient Slavs learned these arts from Greeks, Romans or even Alexandrians. Therefore the Volkhvy probably used ancient Greek,

Once everything is taken into account, the arts of the Volkhvy astronomers evidently owed their beginnings to;

... EXILED ROMAN
ASTRONOMERS, AND
MITHRAIC CULT
MEMBERS?

1. Exiled Roman (Mithraic), Athenian or Alexandrian (Neo-Pythagorean) Mathematici and alchemists working independently, or in collaboration with the Goths and Magi of the Russes, Bulgars and Hunns.

Tacitus relates that Roman authorities expelled the Mathematici and alchemists from the Empire in the 2nd Century to go and live elsewhere, since they were greatly suspected of sedition, and in the case of the alchemists, wittingly or unwittingly destroyed the Roman economy with their false-coining.

At the end of the 4th Century AD, Egyptian Christian authorities banished the Mathematicians from Alexandria. In their eyes the Mathematicians were little better than Druids or Magi, and of necessity castigated for their “unwholesome rites” as well as their powerful affiliations with the “barbarian” East. Considering this, many no doubt went eastward, with books in hand. Perhaps not a few decided to enjoy the seclusion of the Russian forests and plains, rather than the hustle and bustle of Harran.

... THE TEACHINGS OF
EXILED GREEK
PHILOSOPHERS?

2. Gnostic or Neo-pythagorean scientists working alone, or in unison with the Magi.

In 529 AD the Neo-Platonic school of philosophers in Athens was closed down by the Christian authorities, Most of their fellows are known to have moved to Harran, Baghdad, Jundishapur, and Antioch, scholars known to have used Greek spells, numerology and magical apparatus during their ceremonies. The descendants of these Athenians may have continued to operate observatories in Russia, just as they once did during Ptolemy’s era, and, just maybe, a large number of the exiled philosophers came to live there at the time of the college’s closure. Moreover, the migration of Greek Philosophers to Iran shortly after 529 AD probably meant that they sought refuge with the Magi in the pre-Muslim conquest era. When the Magi were eventually ejected from Central Asia by the Muslims, the ancestors of the ancient philosophers might have chosen to come with them. This is perhaps one small reason for why pagan priests in Rus’ performed comedies wearing “*clown masks*”.¹⁵⁸⁷

... THE MAGI ALONE?

3. Magi who had augmented their Babylonian astronomy methods with Roman or Greek innovations, gleaned from written sources, or by collaboration with the ancestors of the pagan Gnostic philosophers and scientists. For this reason they may have used Greek terms in preference to the Persian, Ancient Greek being a language agreeable to astronomers of varied ethnicity.

... THE TEXTS WHICH
ALEXANDER PILFERED
FROM THE MAGI, AND
SUBSEQUENTLY HAD
TRANSLATED INTO
GREEK?

4. Greeks and Macedonians astronomers employing Greek translations of Magian astronomy texts formerly looted from the Magi around 300 BC by Alexander the Great.

... THE CHALDEANS?

5. Chaldean colonists formerly known as the *Ashab Al-Ra’s*, together with the descendants of those ancient Greek philosophers who repatriated to the Chaldean cult centre of Harran after the closure of their philosophical academy at Athens.

So from all this it has become apparent that the pagan Slavs, Indian Brahman and the Arabs of Baghdad and the Middle-East had fine observatories, with erudite priestly scholars and astronomers working long shifts, scanning the heavens. By the 15th Century, those of Samarkand in Central Asia proved to be the most progressive.¹⁵⁸⁸

In the 1400’s, the Mongol leader Ulugbek, Timur’s grandson, erected some exceptional architecture in the Samarkand area. He had become so possessed by the astronomy craze he built a state-of-the-art observatory at Ulugbek, and served there as chief scientist. Located therein was a massive sextant. Unfortunately no description is given of the device, which was of a type designed during the 10th Century.

In India they persisted in building observatories based on the ancient Greek models, right through to the early 1700’s AD. You see the technology worked, so it survived until it was replaced by something better, namely the telescope.

Fig 82. 1

Fig 82. 2

Fig 82. 1. This Indian observatory not far from Delhi employed the sort of astronomical devices first pioneered by the Ancient Greek Philosophers.

Fig 82. 2. One construction found at the complex is an observatory-calendar. With its circular array of vertical posts, it is somehow reminiscent of Stonehenge, or the so-called "gates" of the Magian astronomers. The Magi observed the sun and other celestial bodies through such openings, each representing a certain number of degrees of the zodiac.

Astrology

Mesopotamia is the undoubted home of astrology. It was there that Babylonian priests developed the notion that seven planets were really gods worthy of worship and sacrifice (Venus, Mercury, Mars, Saturn, Jupiter, Mars and the Moon under varied names). Magi were similarly accomplished astronomers and astrologers. Yet they compiled astrology charts at the birth of every child for an entirely different reason - to discover what harm might befall the newborn. One of their greatest philosophical arguments surrounded the cause of misfortune for extremely pious individuals. They attributed their woes and injustices, in a practical sense, to these planetary 'divinities' who, acting like brigands, redistributed the good fortune of the righteous, and handed it over to the unworthy as they travelled around the zodiac, as they clashed with the celestial sphere. For this reason many of the Magi differentiated between light-emitting (stars and constellations) and light-reflecting celestial bodies (planets). The white wizards made offerings to the stars and holy constellations as entry points for the light of god into the universe, but condemned cattle sacrifices to the planets, whereas the rites of the Chaldeans and Chaldeanised Magi were directed toward adoration of the planets. Magian scripture contains a number of references on this issue;

"A similitude of these planets and the benefit which they always bestow is such as the brigands and highwaymen who interrupt the path of traders in a caravan. They abstract important things from many, and do no grant and give them to the diligent and worthy, but to sinners, idlers, courtzans, parmours and the unworthy." ¹⁵⁸⁹

"And those are the five planets that rush below them in the shape of stars, and they keep them enveloped in light, which are Saturn, Jupiter, Mars, Venus and Mercury. Since the supreme constellation, the great one of the north-opposing. Haptoiring, is opposing Saturn, Haptoiring, created by Mazda, is opposing Jupiter, Vanand, the smiter of noxious creatures, is opposing Mars, the star Sataxes is opposing Venus, and the star Tistar is opposing the planetary Mercury."

"If Ahura Mazda and Ahriman created in conference, then that way it is manifest that Ahura Mazda is an accomplice and confederate with Ahriman, in the harm and evil which ever arise from the celestial sphere. The answer is this, that the celestial sphere is the place of the divinities, who are the distributors of happiness from which they always justly bestow their distribution of every happiness. And the forms of the seven planets are witches who rush below them, despoilers who are antagonistic distributors, to whose scriptural name is Gadug (the Brigands)." ¹⁵⁹⁰

"As the evil spirit was entangled in the sky, that fiend, with evil astuteness and with lying falsehood encompassed and mingled with the light, together with the fiends of crimes of many kinds, who are those of a gloomy race, thinking thus: "I will make these creatures and creation of Ahura Mazda extinct, or I make them for my own" ¹⁵⁹¹

In brief the zodiacal sun signs provided protection against the sometimes vicious fallout of unfortunate planetary positionings, and the inescapable aspects of fate that flowed from them. When it came to the Christian Magi the beneficent zodiacal sphere was remodified, becoming Christ, the Good Sun (*Helios Christus*) or the Sun of Righteousness, surrounded by the constellations of light, each governed by one of the twelve apostles, who revolved in their orbit around the saviour.

PAGAN GNOSTICS HAD
A DIFFERENT
PERCEPTION OF THE
PLANETS THAN THE
MAGI

From birth until death astrology played an important part in the day to day living of the average pagan Russian, for it was at birth that an individual's fate came to be.¹⁵⁹² Thus we find the folk saying *tak na rodu napisano*, which means "so it has been written at birth". We shall now explore pagan conceptions of fate, the zodiac, divination and soothsaying (especially in Russia), as well as the Jewish, Christian and Muslim stance on these subjects.

PREDESTINATION

Whether in Rome, Greece, Persia, Egypt, Syria or Europe, pagans generally thought it possible to predict the future, for all things rested squarely upon a pre-ordained destiny devised by god long before one's birth, a fate fixed and, loosely speaking, unalterable. We can term this notion predetermination. Dogmas concerning predetermination probably originated in Babylonian theora on destiny, or Aryan conceptions of fate. Predetermination was also deeply embedded in Magi thought.

The Babylonian-Chaldean religion was overtly polytheistic, servicing the needs of the seven known planetary gods Venus, the Sun, Mars, Jupiter, Mercury, and the Moon, who cast their influence over the world. Later a fondness for Venus, Mars, Jupiter, Mercury, and Saturn dissipated in Magian communities, for according to Zoroastrian teachings, the signs of the zodiac were blessed stations, under the patronage of the Sun. Whereas the aforementioned planets stood in opposition to those sun-signs (which governed the lives of the good), being universally malign intercessors that ravaged the celestial sphere at the behest of their captain, the infernal Ahriman. They were, so to speak, celestial criminals who purloined the lustrous good fortune destined for the holy, and who freely redistributed these same gifts to the unholy. And so it was that unrighteous people frequently prevailed and prospered over and above the most pious and devoted of Mazda's folk. What greater need could there have been for Zoroastrian astronomers to ascertain the position of the planetary brigands at all times, to gauge the level of damage they were doing to the sun-signs, and the lives of the righteous.

Certain pagan Gnostics such as the Neo-Pythagoreans and Chaldeans, had an in-between view; perceiving in the planets a mixture of good and evil influences, which needed to be observed and quantified. The Greek pagan Gnostic school of thought maintained that Fate existed because the supremely sublime high god had a scheme for all things, all created existence and time, and with time its plans unfolded almost imperceptibly. Unlike the previous examples, the pivotal mechanisms of destiny and luck were not the gods themselves, but terrestrial or aerie demons unfettered by the gods, or the prince of demons. Some of these lower spiritual essences were fortunate, others evil. For the upright and spiritually-pure believer the good daemones were most helpful, and ill-omened daemones were rendered ineffectual, obedient and answerable to the celestial divinities, who forced them to dispense good fortune upon command. Nonetheless other theories were current among the Gnostics, variously incorporating ideas about the role planets played in the machinations of the daemones. In one *Primary Chronicle* account (concerning pagan priests from Beloozero) the priests mentioned the demons of the Abyss, which they worshiped, were obedient to the Christian God. Although this might seem to be a colourful addition by the Chronicler, it might also show that the Slav demons had a function not dissimilar to the demons of the pagan Gnostic or Chaldean pantheons, namely that they had to obey the edicts of the celestial divinities. Perhaps their astronomy and astrology came from such sources?

The eradication of the ancient gods by the Church and the closure of the philosophical colleges were the main reasons why pagan Gnostic philosophers like Iamblichus and Porphyry became so militantly anti-Christian, for in their eyes the demise of Gnosis and the idols of the bounteous celestial gods robbed mankind of his only true allies against misfortune. This led to an abysmal fate at the hands of the demons. Continuing to teach the divine gnosis was their way of combating the wrongs of the world, and restoring good fortune to humanity. The Egyptian man-god Asclepius explained the portended fall of pagan Gnosticism in Egypt in the following terms;

"For all divinity will leave Egypt and will flee upward to heaven. and Egypt will be widowed; it will be abandoned by the gods. For foreigners will come into Egypt, and they will rule it. Egypt! Moreover, Egyptians will be prohibited from worshipping God (note this reference to the One God) ... they will come into the ultimate punishment, especially whoever among them is found worshipping (and) honouring God... No longer will it be full of temples, but full of tombs ... Asclepius, why are you weeping? Divine Egypt will suffer evils greater than these And in that day the world will not be marceled at, and immortality, nor will it

be worshiped since we say that it is not good.. But it (the world) is in danger of becoming a burden to all men. Therefore, it will be despised - the beautiful world of God, the incomparable work.. Darkness will be preferred to light and death will be preferred to life. No one will gaze into heaven. And the pious man will be counted as insane ... nor will they (humanity) know the stars in heaven".¹⁵⁹³

By Asclepius' testimony these happenings and much more would transpire once the Great Demon, the Terrible Evil, had ascended into the atmosphere and taken up his lodgings in the heavens.

The Slavic zodiac Narodnige znaki zodiaka

I covered the Slavic zodiac early in Chapter I. Other folk names for their zodiacal signs seem to link certain star signs with particular gods of the Slav and ancient Greek 'pantheons', such as Perun, Volos, Ares, Tyr, Pan and Moksha. Of particular interest is Capricorn, which is signified by the terms *Kozerog* (the horned goat), *Koza* (the goat), *Pan* (Pan, the Greek silvan divinity), and *Khrest* (perhaps a corruption of the Greek word *Khristos*, which came to mean Jesus, but in fact means "the anointed"). Since *Khors* or *Keresa* (the Good Sun) and *Chemobog*, the horned goat were the opposite of each other, why does *Khrest* appear under Capricorn? Does this signify that some pagan Slavs believed that a horned goat was the anointed one of god? Taking into account information found in Part II, I'll let you be the judge.

The other slav zodiacs

A second folk (solar) zodiac¹⁵⁹⁴ existed which linguistically appears to make more sense in the Indian, Russian or Gypsy languages, but the phonetic linkages are not precise, and difficult to grant a concise meaning. Generally though they tend to equate to certain parts of the body, or pieces of clothing, and signs of the *Rhasis*, the fixed Indian zodiac. These signs were used in connection with the celestial bodies, solar and lunar phases, and the gathering of medicinal herbs, which had to be collected and treated at certain celestially auspicious times. But, it is hard to find comparable Russian meanings for for some of the signs, so it is difficult to figure out the symbolism employed. Apparently this zodiac was faithfully consulted by folk doctors. These other Rus' folk signs corresponded with the 1st - 12th month (including Ophiucus).

1 Bramena, 2 Lyubava, 3 Legena, 4 Mokrava (similar to Makara, the 10th sign of the Indian zodiac, equivalent to Capricorn), 5 Orlena, 6 Dana (similar to Dhanus, the 9th sign of the Indian zodiac, equivalent to Sagittarius), 7 Lada, 8 Ugada, 9 Vishena (similar to Vrshabha, the 2nd sign of the Indian zodiac, equivalent to Taurus), 10 Studena, 11 Yangela, 12 Ribala.

Pre-Islamic Volga Bulgar society exhibited traits belonging to several different religious spheres, namely Manichaeism, Zoroastrianism/Zurvanism and Central Asian (ie; Tibetan) shamanism. A number of the (often shamanistic) Bulgars that migrated to Black Bulgaria in the Balkans employed an animistic astronomical calendar belonging to the Far Eastern milieu.¹⁵⁹⁶ Therefore we can hypothesise that parallel Asian zodiac systems were present in Russia and the Balkans, both of which appear to have been employed by Silver Bulgars.

Christians, Muslims, Jews and Astrology

Christians, Jews and Muslims had very strict prohibitions against seeking divination to solve one's problems instead of turning to the supreme god. In their scriptures, the astrologers, diviners and mediums were numbered among the eternally damned, singled out for special chastisement at the end of this life, and sometimes portrayed

Fig 83.1 A Mithraic zodiac mural; Ancient Rome. Was Roman astronomy and astrology the source of the Slav zodiac, coming by way of their quasi-Iranian Mithraism?

Fig 83.2. Scorpio, as depicted among zodiac symbols found in the sepphoris synagogue in Israel

with their heads wrenched around by Demons, making them look eternally back at the wasted opportunities of their lives. Thus astrology grew well on the back of host monotheistic faiths (believers in one god), like a parasitic vine or mistletoe on an oak tree; their believers turned fully polytheistic in the process. This if nothing else can account for their prohibitions against astrology. Whereas gay marriages and female priests have been or are topics for 20th century theologians, astrology was an all-consuming discussional issue found in most Mediaeval theological faculties. *Malleus Maleficarum* enunciated the following theories on astronomy.¹⁵⁹⁶

"And since Zoroaster was wholly given up to the magic arts, it was the devil alone who inspired him to study and observe the stars. Very early did sorcerers and witches make compacts with the devil and connive with him to bring harm upon human beings".¹⁵⁹⁷

DEBATES ABOUT
ASTRONOMY AND
ASTROLOGY DURING THE
MIDDLE AGES

Theologians eventually postulated that the constellations and stars had some influence over matter, but said that to advocate that a given happening, act or decision could not occur without being in accordance with the stellar positionings was,

"not only false, but so heretical and contrary to the Christian religion, that the true faith cannot be maintained in such an error".

Debate was rife regarding whether or not astrology ought to be classified as witchcraft. Some said no ...

SOME SAID IT WAS
WITCHCRAFT, OTHERS
NOT

"... it (witchcraft) is not caused by the separate Essences which are the Powers that move the stars" ... "For it will be shown in the Second Part (of the Malleus Maleficarum) that they (the black witches) commit murders, fornication, and sacrifices of children and animals". ... "it is no part of a good Intelligence to be the familiar spirit of criminals ... For they are criminals who use witchcraft, and they are known by their works".¹⁵⁹⁸

That Church theologians felt that the stars exhibited some influence over terrestrial life is noteworthy. Though their admissions to this effect were based more upon their observations of the remarkably precise pronouncements made by otherwise 'disreputable' astrologers in their own time, rather than on physiological proofs. Coral polyps spawn on one spring full moon annually right across the world. In this instance something as distant as the moon is the trigger for sexual reproduction in a simple organism world-wide. I noted also, in my period of service with an Australian police department that crime statistics actually rise during a full moon. The US Federal Bureau of Investigation even drafted a paper on this universally known phenomenon. Why it occurs is unknown, but it might be something as simple as the effect the lunar gravitational field has on our body, which is mostly water. If it can modify the physiological behaviour of unicellular polyps, perhaps it can change our frame of mind at certain times? In ancient Rome they called it lunacy ... being "moonstruck".

Muslims

ASTROLOGERS AND MAGI
WERE OFTEN TO BE
FOUND IN ISLAMIC
COUNTRIES

Central to the faith of the Mohammedans was the belief that Allah had already decided upon the fate of all his creations and that any good Muslim was merely enacting *Islam*, which roughly means submission to the will of Allah. In their eyes the great virtue of living was to fatalistically accept your lot in life whether it be poor or rich. Devout Muslims, however capable, would not claim to do something without adding "god-willing", meaning that they recognised Allah's right to disrupt their earthly plans. But being firm adherents of predetermination, and without any scathingly anti-astrological *Surahs* in the *Qur'an*, this made the temptation for Muslims to consult astrologers and fortune-tellers all the more alluring, in fact irresistible.

Astrologers and Magi were relatively common in Islamic countries, and it was they who had been trying to re-introduce astrology into Spain with relative success. In Cordoba, forbidden books were feverishly translated into Latin by Arab scholars and their Western colleagues, passing over into ever eager European hands.

Christians and Jews

THE CONCEPT OF FREE
WILL PRESUMES THAT
FATE IS NOT FIXED, OR
ONLY PARTLY SHAPED

The issue of predetermination, and by implication the foreseeable nature of guaranteed salvation or damnation had long been a hot item of debate amongst Jewish and Christian scholarly theologians. Free will, (which was the prevailing idea amongst these two faiths) is the belief that destiny (whether it exists or not) was not fixed, but perhaps a mere outline, if that. It was still within a person's ability to change their lot in life, free of the constraints of presumed destiny. In any case it was not supposed to mean that believers base their life's decisions on the

predictions of star-gazers, however accurate the predictions were, since in doing so they are becoming devotees of the planetary essences. Officially Christians and Jews were implored to steer clear of astrologers, conjurers and diviners, but throughout every age many believers usually couldn't help themselves, seeking not only predictions, but charms and phylacteries of many and varied types.

To devout Christians and Jews, any diviner was considered more evil than a murderer and a living minion of the Devil himself. From their viewpoint the "Evil One" and his legions of dyemons and unclean spirits were invariably linked with the practice of fortune-telling and sorcery, hoping to mislead the faithful using crowds of mocking demons. Christians, in particular believed that Jesus was placed above all angels, demons and every cosmic power by His resurrection, enabling all who had faith in Him to escape the grip of the planets. Through prayer, Christians believed they had been released from the manacles of fate, and lived freely, fearless of destiny.

This is of course true of traditionally accepted Christian standards ... not so for Jewish and Christian Magi. Christian scripture paradoxically provides evidence of a pre-authored destiny; that salvation and damnation were already pre-ordained by the Supreme Being at the beginning of time. This doctrine, which shall be addressed at the end of Part II is a classic feature of dualistic philosophy, a theoretical dual seed-line, one from god, another the devil.

Shast'e - Luck

Pagan Slavs were said to be born with a "lot" in life, and this was personified by an unshakable entity that followed a person wherever they went for the rest of their life, a gift from the celestial gods, or a curse from the underworld, which intervened in their daily affairs. The personification of good fortune was *Dolya* the spirit of a kind woman, whereas *Nedolya* ("misfortune") appeared as a wretched and impoverished crone.¹⁵⁹⁹ These two figures were profoundly linked with the seven Great Judges, the planets. I believe they can be traced back to the Magian belief in the Maiden and the Hag. One of these figures would greet a person's soul as it left the world. Their physical appearance at that moment was related to the amount of unrepented sin that one's soul had accumulated, and indicated one's lot in the future existence. The less burdened by sin the soul was, the more youthful the woman seemed to be, so to see a young child was the greatest omen of all. Still, the pagan Slav conception of fate probably came from an Aryan source. Various Slavic words for "luck" *shast'e* (Russian), *shchastya* (Ukrainian), *scestie* (Old Czech), *stesti* (Czech), *szczęście* (Polish) can be equated with a composite word in the Old Indian *su+cest'*, meaning "a good portion or lot". Aryan teachings on luck no doubt formed a backdrop for the development of Slavic thinking on the matter.

INVOCATIONS OF LUCK

The following pagan Slav and Gypsy superstitious observances were said to be capable of bestowing luck.

Offerings to one's family *Domovoi*, displaying a horse's head, patting a horse's back, rubbing or patting a cow's back, making offerings to the elemental spirits, leaving offerings for the fairies, and getting a village elder to leave one's offerings for the family *Rozhanitsy*.

The importance of cows and horses in the dispensing of luck can perhaps be related back to *Yasna XI:1-3*, where cows, horses and *Haoma* are listed as principle dispensers of good fortune to Magians. To this we might also add bowing in homage to the rising Sun which was an indispensable part of white Magianism, an act of worship deigned to bring streaks of good fortune, and well attested among the Slavs.

"Reverencing the sun is every time a good work of one Tanaphur (sin); and so the moon and fire in like manner .. And while one does not reverence the sun, the good works which they do that day are not their own; some say that of the good works which they do within the law of the good religion he has no share".¹⁶⁰⁰

Certain acts, we are assured, would invoke almost certain misfortune, somewhere, somehow. These included cursing one of the planets (the Great Judges), cursing one of the gods, speaking ill of the dead, defaming or injuring a Volkhv, speaking the names of dead foes or a demon, not bowing to a wind change, offending, polluting or defiling the spirits, breaking an oath or vow, speaking the words "Svarog" or "Chernobog", letting one's home fire go out, or otherwise harming a fire.

Sale and Death

As mentioned, there was much that the astrologer determined by the planetary positionings at the time of a child's birth. One of the most highly sought after pieces of information was the time and the manner in which Khors had fated that the newborn babe should one day die, as was characterised by the dreaded 8th house of the zodiac. On the day of the person's demise, Khors grabbed the individual's life-star from the heavens and threw it down to earth; when it struck the ground the person died.

Alternatively it was the mighty Perun, firing his arrows of slaying, that mortally wounded the living and ushered them into the next world.

Once the natal chart was made, the time, place and type of death the person would experience were already a matter of record. When a person died at this time, it was known as dying at ones appointed time. Even a horrific death would be looked upon as auspicious if it coincided with that end which was fated. Those people who died at some other time and in a way that was not prophesied were thought to have died before their appointed time. This was the worst type of death, for most Russes and Balts believed such people become ghosts, lost in the nebulous "other side", causing harm and grief for living folk. Such notions were very ancient.

The Song of the Wise Oleg is a Russian ballad depicting Oleg the Sage as a man who attempted to beat his fated death. His court astrologers foretold that Oleg's favourite white stallion would be the death of him. As a precaution he had this prized steed banished to the steppes, foolishly believing his life would be prolonged if he never saw it again. Some years later the news of the beast's death reached him and he decided to pay a visit to its sun bleached skeleton. As he stood there grinding his boot into the skull of that which was supposed to have killed him, a snake darted out from beneath the pile of bones and struck him on the leg. After several days of excruciating pain, he died of the serpent's potent venom.¹⁶⁰¹

Divination

The pagan Slavs were notorious in diverse arts of sortilege and, according to Mediaeval Catholic Church sources, *appear to have presented a particular problem for the Western Church* during the Middle Ages.¹⁶⁰² In this piece of information we find potential evidence that practicing pagans from Slavia were migrating into Europe, or that families of Western Slav ancestry, still living on in the old tribal homelands, were continuing to practice rites connected with the old faith. As mentioned previously, Adam of Bremen stated one Western Slav city could only be entered if the visitor sought the advice of diviners. This was a safety device against the entrance of Christian missionaries into the city.

The Old Testament is especially rich in recorded instances of dream interpretation, or divining the will of God via the Uimim and Thumim and other omens. In this case the prognostications were performed by Jewish seers and prophets. Whereas if a Chaldean or Magus was to do the same thing it would be 'unholy'. When it comes to the Old Testament, Evil divining is something other people do.

The remainder of this chapter describes the most likely range of Slav divinatory practices.

ANTHROPOMANCY

Sometimes the pagan Slavs hoped to divine future events through anthropomancy (divination by examining the body of a sacrificial animal). Druids also resorted to this art, and are recorded as sacrificing not only animals, but people for such purposes. One Roman account tells how they stabbed a victim in the midriff and discerned the will of the the Gods by watching the contortions of the victim's writhing body. Due to the nature of abdominal wounding the victim would have layed there in this state, undergoing a slow but sure death, thus permitting prolonged augry.

The physical shape, colour and condition of the entrails, as well as patterns that were discerned in the fibres, membranes and viscera of the innards, were guessed to be a fair gauge of distant events. As a rule, the entrails were drawn from the abdominal cavity of ritually slaughtered goats, horses, cocks, sacrificial victims and many other beasts. Liver and scapular readings may have predominated.

As you will have read, the word *Koldun* is connected with other regional words meaning animal entrails, and

therefore probably indicative of Chaldean anthropomancy.

BIRDS

The antics, movements and squawks of bird life enabled the soothsayer to discern portents of the future. Augry, the technical term for divining the future by noting the action of birds, particularly ravens, was a divinatory art found throughout Rome, pagan Europe and India (methods for which were contained in *the Puranas*). The Volkhyv were supposed to have been able to tell the future by listening to the sounds made by animals, and specifically birds.

This is a point of similarity with the Magi, who believed that angels visited the earth in the guise of birds and other creatures, to impart prophecies to an alert listener.

*"The sacred beings are also heard through the tongues of the animals scattered in the world, in order that even that witness shall arise as regards his prophesying".*¹⁶⁰³

BIRTH CAULS

After a pagan child was born the membrane that was expelled with the babe was inspected by the diviner during the natal ritual, to ascertain the general future of the child. The prognostication was based upon the condition of the afterbirth. Where a caul displayed remarkable portends of fate, the membrane was often retained, dried and worn on the person's body in a small pouch.¹⁶⁰⁴ If the caul bag was lost, the person would suffer a loss of good fortune for as long as it was missing. If destroyed, the loss of luck was considered permanent, thus symbolising the destruction of a large portion of their fate.

COCK, FOOD AND LETTERS

There are no historical records of divination by cock among the pagan Slavs (an animal linked with the Sun), but the many examples of pagan Gnostic religious beliefs which can be found in Rus', may lead one to conclude that they originally used this highly popular Greek divination method.

By purchasing a black cock and some grain, the sorcerer had all that was needed to carry out this method. The medium traced a circle upon the ground, as well as letters and numbers along its perimeter. Grain was then sprinkled at each place where letters or signs had been engraved into the earth. The letter corresponding to the pile from which the cock pecked grain on each occasion was duly noted, and then rearranged so as to spell out a message or clue as to what would transpire.

CRYSTALS

Mediaeval diviners used receptacles filled with water, magical gems, crystals and mirrors to scry the future and view the shades of the dead. Equipment such as this was used in pagan Rus'. So had the European diviners gained knowledge of these arts from Slav Magi, or were they merely vestiges of devices once used by the Magi and Mathematicians, which had somehow survived the passage of so many centuries locally?

I believe Slavs were responsible for propagating this knowledge also. Pagan Slav priests had books on divining by means of crystals.¹⁶⁰⁵ Obviously their diviners sought to interpret whatever images appeared on the surface of the gem. These cloudy images might have been regarded as messages sent by the celestial intelligences linked to the planet allied to the specific type of stone being used.

DREAM INTERPRETATION

The pagan Slav priests are known to have had books on dream interpretation, which were termed *Sonniki*.¹⁶⁰⁵ These presumably contained lists of symbols and imagery which would help the diviner interpret any messages conveyed to the recipient, by the gods.

Comparative linguistics tells us that the Slavic word for "a dream" *son* is traceable back to the Old Indian *svapnas* ("a dream") and the Avestan *hvacfna*.¹⁶⁰⁶ Perhaps the source of their dream-lore lay in Hindu and Iranian traditions. It should also be noted that the Slavic *son* ("a dream") is very close to the Irish *suán* ("a dream"), and that the Old Norse *svæfn* ("a dream") closely resembles the Avestan or even the Old Indian.

FIRES

Pagan Slavs believed that fire was composed of divine substance, and like the Druids, thought it capable of imparting divine knowledge of the future. Every Russian home had its own domovoi, which was consulted by householders seeking advice from their ancestors. Presumably the intensity, colour, size, sound and movement of a holy flame, in addition to the brilliance of the fire's embers, the manner in which the ash piled up, and the way that the firewood was lying within the fire, all contributed to the content of the diviner's prophecy. The colour, density and shapes displayed by smoke as it was given off by a fire of burning oak wood, laurel leaves and fragrant woods could also be interpreted by the diviner for additional omens. Legends of Slavic and Celtic fire divining might be traceable to Magian and vedic fire-worship, where the believers petitioned the holy fire for assistance in their daily lives.

HOROSCOPES

Since the movements of the planetary bodies were believed responsible for causing the events which took place in our daily lives, the Magi saw fit to draw up charts of the celestial positionings known as horoscopes. For such purposes the Slavic Magus priests and perhaps mathematicians used a book entitled *Rozhdenik*, a tome of nativities. The Mediaeval horoscope charts in Western Europe were presumably modelled on the Arab style - square (not circular like nowadays) and divided into 12 triangle or diamond shaped houses. This variety of chart resembles those of the brahmins of Northern India, and in all likelihood they taught it to the Arabs. Horoscopes provided a clear means of arriving at a specific and quite detailed interpretation.

TEMPLE HORSES

On special occasions the Slav pagan priests divined the will of the Gods by directing a holy temple horse between spears, following which they observed its movements and behaviour.¹⁶⁰⁷

The way in which the horse stomped, bucked and jumps about in response to questions, especially after being paraded about a temple, or between spears, was, in their mind, a fairly sound means of imparting knowledge of future things. What is more, the priests were guided to choose amongst concealed lots by deciphering the omens generated by the steed's behaviour.

MIRRORS

The pagan Slavs had a book on divination by means of mirrors.¹⁶⁰⁸ The surface of the mirror was pondered by the diviner to determine the future.

WAXEN IMAGES

In the Baltic, the *Burty* were pagan priests who acted as seers, prognosticating the future by pouring molten wax into receptacles of water. This means of divination is very ancient, and practiced by pagan priests in most of the classical civilisations.

WEATHER

By looking skyward and interpreting the nature of the meteorological events occurring therein, the Volkhv was capable of determining what would soon transpire. Cloud cover, thickness, shape, colour and speed of movement all served to piece together a whole host of meanings, which enable the Magus to make a prognosis. Thunder and lightning strikes were the greatest portends of all. Almost all these methods spread westward from the East.¹⁶⁰⁹

MAGIC WAS BEGINNING
TO MAKE A RESURGENCE

Chapter 23

Magic

When contemplating the subject of magic, many modern people are prone to regard it as superstitious nonsense. But long ago it was treated with some reverence; as a "science" which offered hope to those seeking remedies against the ills and misfortunes of life. Since magic is the planned, and hopefully controlled, unleashing of a power, intended to alter the course of events in this world, in accordance with a magician's desires, we must recognise two things. Firstly magic requires a supernatural source, agency, power or energy that the magician calls upon and directs.

MAGIC REQUIRES A POWER SOURCE

POWER SOURCE	EXAMPLE
A god	Isis, Zeus, Horus, Dazhbog, Perun, Mithra
An angel or archon	Zadkiel, Uriel, St Michael the archangel
The mystical power of a planet	Jupiter, Saturn, or the embodied spiritual powers connected with the planet
An infernal demon or aeon	Shamael, Ahriman, Azi-dahaka
A daemone or hero	Imhotep, Hermes Trismegistus, Hercules
A holy /magical object	The latent power within the rowan or golden ash, spring water etc, a relic
A holy /magical word	A word laden with magical power

Secondly, magic requires a key to unlock that power. The key in almost every case is a religious ritual; special words, specific ingredients, actions performed in a certain way, in a particular type of place, at a preferred time. Knowing the key to unlocking a breed of magic was to have that power at one's command. For this reason it was imperative that not just anyone should have the power to perform it. As a consequence of this, magical rituals were normally a closely guarded secret; hence the term *occult* ('secret', 'hidden'). Where the power source was a divine being, a hero, demon, an angel, archon or aeon, the key to obtaining their magical intercession was the prescribed prayers and ritual ordinances peculiar to the religion that fostered the worship of such a spiritual being.

MAGIC REQUIRES A RITUAL, A KEY TO UNLOCK THAT POWER

Not surprisingly, pagan Gnostic priests and priestesses, shamans, wizards, kings and Magi were the indispensable key, the trigger for opening these portals of magical power, these gateways to the gods and spirits beyond. They had specialised knowledge of the prescribed rituals. The sacral kings and Magi in particular, had an intimate and privileged familiarity with the gods, and unrivalled spiritual powers by virtue of their divine ancestry. To have one of the latter intercede for you was the best of all.

RITUALS, PRAYERS AND CUSTOMS ASSOCIATED WITH ALIEN RELIGIONS SEEM LIKE SUPERSTITION

It would be true to say that the religious rites of alien religions seem confusing, mysterious or even nonsensical. Consequently magicians and sorcerers experienced alternate periods of fame and infamy depending on how receptive the prevailing host culture was to their religious observances. Where onlookers have difficulty perceiving

the necessary keys to a certain regime of the magical arts, the context for a scheme of rituals is lost. Onlookers fail to see a connection between the ritual act and the outcome of the spell. The act is therefore perceived to be ‘superstitious’, a rude and primitive performance with no perceptible basis in fact, when compared with the rites known to the onlooker.

HOLY MISTLETOE

When Europeans hung rowan or mistletoe in their house they were (knowingly or unknowingly) performing vedic rites inherited from the Indo-Europeans. They adorned their homes with parts of the holiest imaginable plants, and hopefully gained the protection that it supposedly afforded to the believer. But if you don’t know this, it’s just a superstition.

JEWISH CUSTOM

When Jews put a mezzuzah prayer scroll outside their door they hope to gain protection for their home. But if you don’t know this it’s an act of delusion.

BUDDHIST BELLS

When Buddhist monks ring bells to expel a demon while reverently uttering chants of exorcism, they hope to make a devotee’s life just that bit better, by ridding them of the infirmity that has afflicted them. But if you don’t know this, it’s mumbo-jumbo!

RAISED BROOMS

When a flamen raised a barsom twig before the holy fire during the *Haoma* ceremony, and uttered the necessary prayers he was hoping for the supernatural intercession of the Fravashis and angels of Ahura Mazda. But if you don’t know this, it’s foolhardy superstition ... witchcraft!

CHRISTIAN BLESSINGS

When Christians bless themselves with holy water, while making the sign of the cross, they hope to gain the protection and favour of Jesus Christ. But if you don’t know this, it’s crazy.

The point is this; “magic” (for want of a better word) is the ability to draw down preternatural powers to aid the living in their daily affairs. It virtually always belongs to a religious framework, and for this reason there were as many species of magical ritualism as there were religions and religious rituals. Conversely black magic is the ability to bring harm to the object of one’s spell, very often drawing upon powers in the underworld.

So specialised was magic that Mediaeval Muslims and Christian churchmen (and even prior Roman authors) referred to its practitioners by a variety of names such as Jugglers (masters of illusion and trickery), *Haruspex* (soothsayers who foretold the future by animal sacrifices), *Malefici* (witches), *Mathematici* (astronomer magicians), *Hariolus* (diviners), enchanters, weavers, necromancers (those who summoned demons or raised the souls of the dead) and Chaldeans,¹⁶¹⁰ to name but a few.

Then in Eastern Europe you had *Kolduny*, *Volkhvy*, *Ved’ma*, *Garabancias*, *Taltos*, *Magoch Magus*, *Volva*, *Arbis*, *Znakhar’*, *Rasdi*, *Byeloknyazi*, *Baksa*, *Harsany*, *Arbui*, *Burvis*, *Planetniki*, *Maag*, *Mag* and so on, all of which have been explained thus far. Another form of terminology was widely used in Western Europe, perhaps indicating the popularity which their category of magic enjoyed. You see, the words *Magos*, *Magus*, *Mag*, *Maag*, *Mog* and *Magi* are often found in Mediaeval Christian manuscripts.¹⁶¹¹ Besides appearing in Moorish texts when speaking of the Viking pirates who raided Spain (whom they called *Al-Madjus*), the word *Magos* or *Magus* was often chosen by Christian Chroniclers in relation to the “subversive” sorcerers who were the alleged enemies of the Christian faith. But until now it has long been taken for granted that their use of the term *Magus* was simply a recourse to a fashionable word for Magician, when in truth it was an actual reference to the Magian priests of Old Persia, who as early as the 2th Century AD (and perhaps even earlier) were living in Eastern and Western Europe.

THE MAGI ARE MENTIONED BY NAME IN MEDIAEVAL CHRISTIAN SOURCES

THERE HAVE BEEN COUNTLESS STORIES ABOUT MAGIC, MUCH OF IT UNTRUE

The English word “magic” is therefore derived from the Persian word “Magi”. In antiquity the Magus and the arts of high Magic were inseparable. The Roman natural scientist Pliny the Elder stated that; “*Undoubtedly magic began in Persia with Zoroaster, as authorities are agreed*”.¹⁶¹²

Unfortunately though, there has been much fable attached to the arts of magic; classical writers could not even agree among themselves whether Zoroaster used magic or not. What we know of its earliest beginnings are clouded by the condemnatory jibes of such well respected figures as Pliny, not to mention later generations of Christian, Jewish and Muslim clerics. In this chapter we will attempt to examine what magic was, from the surviving Mediaeval examples, but more especially from the holy texts of the Magi themselves. By scrutinising the *Pahlavi* texts and the *Avestan* canon, we gain some insight into what the Persians themselves understood of magic. Equally importantly we stumble across the basis for the white and black magic practiced by the witches of the Mediaeval and Renaissance periods.

Despite the fact that Orthodox Zoroastrian fire-priests were hateful of the magical arts, they still thought to make reference to the rites and practitioners of these arts in their holy texts as a warning to the faithful. Before the Karterian reformation of Mazdaism, a great many Magi did perform rites of high magic (planet magic) and witchcraft. The white Magian book of *Bundahishm* tells us the following about the Magus wizards and the principles which lay behind their sorcery:

ZOROASTER'S WHITE
MAGI SPOKE OF
WITCHCRAFT, NOT AS
SOME SCIENCE OR
TRICK, BUT AS THE
RELIGION OF AHRIMAN

*"And by their devotion to witchcraft he (Ahriman) seduces mankind into affection for himself and disaffection to Ahuramazda, so that they forsake the religion of Ahuramazda and practice that of Ahriman".*¹⁶¹³

MAGICAL POWER CAME
FROM THE PLANETS

*"Various new demons arise from the various new sins the creatures may commit, and are produced for such purposes; who make even those planets rush on which are in the celestial sphere, and they stand very numerous in the conflict. Their ringleaders are those seven planets, the head and tail of Gokihar and Muspar provided with a tail, which are ten. And by them these ten worldly creations, that is, the sky, water, earth, vegetation, animals, metals, wind, light, fire and mankind, are corrupted with all this vileness; and from them calamity, captivity, disease, death, and other evils and corruptions ever come to water, vegetation, and the other creations which exist in the world, owing to the fiendishness of those ten. They whom I have enumerated are furnished with the assistance and crafty nature of Ahriman".*¹⁶¹⁴

AHRIMAN FELT
VICTORIOUS

HE ARRANGED THE
PLANETS AS HE WILLED

*"Amid all this struggling were mingled the instigations of Ahriman, crying thus: "My victory has come completely, for the sky is split and disfigured by me with gloom and darkness, and taken by me as a stronghold; water is disfigured by me, and the earth, injured by darkness, is pierced by me; the vegetation is withered by me, the ox is put to death by me, Gayomard is made ill by me, and opposed to those revolving (the zodiac) are the glooms and planets arranged by me".*¹⁶¹⁵

SORcery WAS A
RELIGION

*"Of the evil spirit are the Law of Vileness, the religion of sorcery, the weapons of fiendishness, and the perversion of God's works; and his wish is this, that is "Do not ask about me, and do not understand me! For if ye ask about and understand me, ye will not come after me!"*¹⁶¹⁶

The Orthodox Magi did not devote their time to magical arts requiring the harnessing of planetary energies, but through the due rites of Zoroastrianism sought *asha*-gifts (truth gifts) from Ahura Mazda, that is divine miracles that would effect a petitioned set of circumstances. Observers unwise in the ways of the Zoroastrian flamen could still only perceive an aura of magic and witchcraft surrounding their ceremonies. Before the advent of Karter's reforms the situation was largely different with Medean Magus-stargazers intently scrutinising the planetary movements, aiming to pinpoint rises and falls in the power flowing from given celestial bodies.

WITCHES CAUSED
HARM

Whether or not European witch-magic (and black magic ie; *maleficia*) was powered by the energies of the planets was a profound and widely discussed topic among Catholic theologians. Certainly churchmen did not see the celestial powers as complicit features within the infernal rites of witchcraft.

*"Witches are so called from the enormity of their magic spells; for they disturb the elements and confound the minds of men, and without any venous draught, but merely by virtue of incantations, destroy souls, etc. But this sort of effects cannot be caused by the influence of the stars through the agency of a man".*¹⁶¹⁷

Although the terms magic and sorcery have been used interchangeably throughout this book, there are distinct differences between the two words. Sorcery is a more general term meaning the manipulation of unseen powers to manipulate physical existence, or to change contemporary events through the agency of those same powers.

According to the Orthodox Zoroastrians, unholy magic consisted of the ritual worship of Ahriman (or an infinite time/creator God) via his lieutenants, seven planetary spirit-essences, through set observances and rituals, and by placing one's life and hopes under their collective power (ie; Chaldeanised wizardry). This abandonment of one's life's journey to the power of the planets was to follow fate or destiny, the will of the planets. With the correct understanding and performance of the prescribed rituals, Magicians invoked these "Gods" and conjured their cosmic energies. On the other hand Orthodox Zoroastrian fire priests crafted amulets to protect believers from the celestial powers, the planetary opponents of the constellations and two luminaries.

Since the Magi believed that all existence fell between the pillars of the two polar extremes of light and darkness, it is not surprising that magic should also conform to this fundamental precept. Based on the Zoroastrian texts (*Avesta* and *Pahlavi*), pagan Gnostic texts (such as those written by Iamblichus and other Neo-Pythagoreans), the

Tomes of Cornelius Agrippa and the writings of the Inquisitors (*Malleus Maleficarum*) we can divide the magical arts into two principle categories:

White magic

White magic involved rituals aimed at procuring beneficent effects. It frequently, though not always, entailed the working of images upon noble substances like gold and precious gems. These rituals were said to have been performed by the white Magi and other astrologers, who used rituals calling down the might of the celestial angelic intelligences to impart miraculous happenings. Gem engravings also featured in the white magical rites of the Chaldean, Biblical Gnostic and pagan Gnostic magicians.

Black magic

Whereas the second type of magic required the *tacit invocation of devils*, and this was known as *Witchcraft* (*maleficia*). References to it readily pervaded not only Zoroastrian scripture, but the records of the Inquisitors and Babylonian clay tablets inscribed several thousand years ago. Black magical rituals were the precise opposite of white magic, often requiring the engraving of incantations into disgusting or contaminated substances, as opposed to pure and inviolate materials.

Although white spells (in reality prayers) were performed by post-Karterian orthodox Zoroastrian Magi, it was only among the Zurvanite (white/black) Magi of Medea that white planet magic and black demon magic (as previously described) was employed. Magical spells were never part of the original Zoroastrian holy canon either. *The Zend-Avesta* and the *Pahlavi* texts explicitly reveal the first Zoroastrian priest-hood's hatred of irregular colleges of Magi, believing them to be among the "99,999 wizards born from the Great Fiend", Ahriman. In traditional Zoroastrian communes the performance of magic warranted death. Just as a market gardener sees the uprooting of weeds and thistles as necessary for the prosperity of his garden plot, so too did Zoroastrian legal bodies relish the task of eradicating warlocks and witches. Confirmed wizards were rounded up, flogged and executed.

And here is what the Inquisitors understood about white and black magic, based on their investigations of the witches;

"Necromantic signs are written under the influence of certain stars in order to counteract the influence and oppositions of other heavenly bodies, and these are inscribed, for signs and characters of this kind are often engraved upon rings gems, or some other precious metal, but magic signs are engraved without any reverence to the influence of the stars, and often upon any substance, nay, even upon vile and sordid substances, which when buried in certain places bring about damage and harm and disease".

"It has been shown above that there are two kinds of images. Those of the Astrologers and Magi are ordained not for corruption, but for the obtaining of some private good. But the images of witches are quite different, since always they are secretly placed somewhere by the command of the devil for the hurt of a creature; and they who walk or sleep over them are harmed, as the witches themselves confess"¹⁶¹⁸

"But the images made by witches have no natural power at all, nor has the material of which they are formed any power; but they fashion such images by command of the devil, that by so doing they may, as it were, mock the work of the creator, and that they may provoke him to anger"¹⁶¹⁹.

Al-Nadim spoke of the Philosophers in Arabia during his day, mentioning their astronomical expertise, and their use of these arts in the fabrication of pagan talismans, some of which included "designs on stones, stringed beads (ie; chaplets), and signet stones".¹⁶²⁰

SIMILAR WAY

Magical ritual

To speak in terms of exact and immutable magical rituals is to ignore the fact that magical lore was of a fairly regional nature and derived from diverse sources, throughout different ages. The precise nature of these rituals can never truly be known, mainly because they were held in oral form, transmitted strictly within clandestine societies, or bound within a corpus of secret writings. Certainly, some breeds of magic were better known.

THE MAJORITY OF
MAGICAL UTTERANCES
ARE LOST FOREVER,
BECAUSE THEY WERE
LARGELY SECRET IN
NATURE

LOW MAGIC

Sympathetic rituals, or 'low magic' were conducted in the more primordial forms of occultism, methods which had been around since the Stone Age. Here a muddled diversity of ingredients proliferated, frequently varying from sorcerer to sorcerer. This is because the required substances were linked to the desired outcome of the sorcery. For example a rat's head brought sickness, the waving of an iron blade, wounds, and so on.

LOW MAGIC WAS MORE
PRIMITIVE; FAR LESS
STRUCTURED

HIGH MAGIC

The term 'high magic' means that the ritual ordinances were very elaborate in nature; a certain planet was required to be in a certain position, at a certain time when a magical operation was carried out. The ingredients had to be correct, and in the right quantity, the words spoken just so. These were rites of exactitude that were to be performed to the letter, in just the same way as the white Magian *Haoma* ceremony was to be without flaw. The ingredients demanded by these forms of 'high magic' were frequently universal in their ability to draw down the power of the planets and bettered by an understanding of Ptolomeic theora about the planetary rotations. Thus plants, stones, metals, animals, incenses and so forth were all supposed to have had a degree of affinity with one of the seven great planets.

ITS EFFICACY CENTRED
ON SYMPATHETIC
PRINCIPLES

HIGH MAGIC IS A TERM
APPLIED TO THE MORE
EVOLVED FORMS OF
MAGIC, WHICH MOSTLY
ORIGINATED IN
MAGIANISM AND
PAGAN GNOSTICISM

In every case, the high magical arts were dualistic in nature and possessed a light and dark side. Generally speaking the pagan Gnostic magical schools summoned Archons and Aeons (bad and good celestial intelligences) to help them perform magic, and the Magian arts drew upon the heavenly spirits attached to each of the planets (in the celestial sphere), or demons (an act prohibited by the white Magi).

In his *Life of Pythagorus*, Iamblichus stated that the arcane rituals of "high magic" had very ancient roots, stretching way back to the time of ancient Babylon, Egypt, and Chaldea, and later to the priestly class of Medea.¹⁶²¹ It is from their name that the word "magic" is derived; the ceremonies of the Magi. Various schools of magic existed.

It was not until those who theorised and philosophised about sorcery gathered together at various centres of knowledge, that more organised magical systems were formulated, standardised and propagated. Kabbalism, Zurvanite magic, Chaldeanism and pagan Gnosticism were the product of organised "systems", and the pinnacle of magical expertise and dualistic understanding. These rites diffused into the surrounding cultures throughout the ages, quickly taking root, especially amongst heathen philosophical scholars of ancient Egypt, Rome and Greece.

SCHOOL OF MAGIC	WHERE IT ORIGINATED
PAGAN GNOSTIC	
Hermetic	Among the Pharaonic priests of Egypt
Neo-Pythagoran	Among the schools of Greek Philosopher scientists
Chaldean	Among the Chaldeans
MESOPOTAMIAN	
Babylonian	Among the priests of Babylon
Assyrian	Among the priests of Assyria
Iranian	Among the Magus priests and priestesses of the Persians and Medeans
ARYAN/SHAMANIC	
Buddhist shamanism	Among the Buddhist monks
Brahminic magic	Among the Vedic and Hindu Brahmins
JEWISH	
Kabbalistic	Among the Essene Jewish sect

Magic through the eye of an historian

What I will endeavour to do now is outline the various schools of magic. This is made possible due to the writings of Greek pagan Gnostics like Iamblichus, and Agrippa's *De Occulta Philosophia*.

Being "more enlightened by science and superior religions" modern thinkers see magic as superstition. Hence it is beneath the dignity of many academics to study it, or even incorporate it into their vision of history. The scale of its Mediaeval following demands our attention however. Throughout much of Western Europe and the Islamic world magic was a religious manifestation of pagan Gnosticism, Chaldeanism and Magianism.

Whether we believe magic did or did not work is totally irrelevant, what is required though is an historical reconstruction that adequately incorporates the significance of magic to the ancient and Mediaeval mind, arts many regard as fantasies dreamed up over the past few centuries.

To attempt a reconstruction of these arts using 20th Century texts is daunting to say the least, mainly owing to the proliferation of "pseudo-magical" practices engineered by various occult societies towards the end of last century, groups such as the Golden Dawn, new societies of Druids, and later, Gerald Gardner's version of Wicca.

Despite these difficulties, if we search long and hard enough it is still possible to find texts penned in the late Mediaeval or Renaissance periods, that are impregnated with magical knowledge once propagated in the ancient world. They most likely do contain fairly pristine elements of the magical lore, the same magic being re-introduced into Europe during the Middle Ages.

To illustrate the concept that magic, like religion, has been handed down to the future relatively intact, it is necessary to table what Ibn Wahshih termed the Alphabet of the Kings.¹⁶²²

Ibn Wahshih, Al-Kahil and Abu Bakir Ahmand were the foremost Arab scholars engaged in the study of ancient scripts in early Mediaeval Baghdad. Just some of the books produced by them were *The Book of Secret Alphabets* (Abu abd Al-Kahil), *Book of Frenzied Devotee to Learn About the Ancient Scriptures* (Abu Bakir Ahmad). With the aid of these linguists and cipher experts, the Arab intelligentsia was able to tap into a wealth of ancient knowledge. Al-Kahil's work was by far the older of the two, maybe dating to 750 AD.¹⁶²³ Collectively they contained a rich bounty of magical ciphers with such diverse origins as *King David of Judah* and *the Pharaohs*. Ibn Wahshih further cited ciphers pertaining to alchemy, and the greatest Greek philosophers and magicians, such as Costoudjis (who wrote more than 360 volumes about magic, divination, the gods, talesma, the affects of the constellations and planets, and necromancy). The variants first published by Ibn Washih (shown above) re-appeared roughly 500 years later in Cornelius Agrippa's grand tome *De Occulta Philosophia*. We find it in Book II: Ch XXIII¹⁶²⁴, Book II: Ch LII¹⁶²⁵, Book III: XXX¹⁶²⁶, Book III: Appendix IV¹⁶²⁷, and these in turn were written up and reprinted in Barrett's book, *The Magus* (1801).

IT IS DIFFICULT TO FIND A LOT OF GOOD INFORMATION ON MAGIC

MODERN OCCULT GROUPS DEVELOPED THEIR OWN MAGICAL SYSTEMS THAT ARE DIVORCED FROM THE RITES OF THE PAST

NEVERTHELESS ACTUAL MAGICAL PRACTICES HAVE FOUND THEIR WAY INTO THE MODERN ERA

Fig 84. Aleph Beth Cheth Daleth Gimel He Iod Kaph Lamekh Mem Nun

In Agrippa's books examples of the "Alphabet of the Kings" are referred to variously as *Celestial Writing*, *The Writing called Malakhim*, and *The Writing called the Passing of the River*. In each case they have been assigned a letter name from the Hebrew alphabet, a point that proves fairly conclusively that Jewish Kabbalists and demi-pagan Jews (as distinct from ordinary Jews) were essential figures in the survival of these teachings, and the dissemination of the script among Mediaeval alchemists, sorcerers, astrologers and astronomers.

Jews were not the only ones to have used it. We are told that Mohammedan forces commandeered a treasure trove of Egyptian hieroglyphic scrolls from Alexandria in the 7th Century AD, and brought them back to Baghdad

for translation. And that is where Ibn Washih (a Nabataean Chaldean academic) and his colleagues first got their hands on the texts. The Alphabet of Kings was just one of the many magical scripts and ciphers extracted from these same scrolls c. 840 AD, which were essentially hermetic works on cryptography. This may or may not indicate that the script was devised by the Hermetic pagan Gnostics of Alexandria. Based on his research of the texts Ibn Wahshih claimed that the weird script, composed of strokes inter-linked with orbs, was once used by the Egyptian pharaohs. This is of course difficult to verify, for, to the best of my knowledge, it does not appear on Egyptian monumental masonry. Be that as it may, there is nothing to say that it wasn't used on specialist papyri not intended for a general readership, but for the kings and Egyptian priests and priestesses alone.

A closer examination of the script reveals that it was not so much based upon Hebrew (as per Agrippa's phonetic assignment), but on Babylonian and early Egyptian alphabetic scripts (see Appendix IV). These are important points, but can Agrippa's book really be viewed as historical? Or was it an over-indulgence in fantasy? Archaeology has yielded the necessary answers.

Examples of the Alphabet of the Kings have been found throughout Asia Minor and the Middle-East, on unearthed Gnostic gems,¹⁶²⁸ spell lamellae¹⁶²⁹ and a magical bowl¹⁶²⁹; finds spanning a number of centuries. It appears that the use of these symbols had migrated out of Egypt and into the Middle East, but our inability to establish an historically acceptable date for the origin of the script in Egypt prohibits us from confirming this eastward movement. So on one hand it was being used by eastern sorcerers, but on the other hand it was also employed in the penning of the Jewish Kabbalistic *Book of Raziel*, which mysteriously materialised in 12th century Spain. No doubt the script had by this stage fallen into the hands of Kabbalistic Rabbis, who had then set about using it to write their magical tomes. Moreover, the principal discrepancy between the Alphabet of Kings and the Egypto-Babylonian alphabetical systems amounts to the addition of these peculiar orbs. Since the characters look uncannily like portions of the Kabbalistic tree of life, elements of the script may also have been used in the formulation of kabbalistic gematria (power words). In short, the ancient Egyptian and Babylonian alphabets were modified in antiquity by Kabbalistic sorcerers. Because elements of this orb writing appear on the so-called Pergamum disk (dated to 300 AD), we can assume that the acquisition of orbs had occurred at some time prior to this date, and its use was present in Anatolia and Asia Minor, presumably amid rogue elements of the post-exilic Jewish communes.

It would seem that the Alphabet of the Kings was designed by or for astronomers. We can infer this because Agrippa included substantial specialist notations on the planets and constellations in his work, and these were made in a similar way to the Alphabet of the Kings with lines interlinking orbs. Judging by the frequency of their use in later generations of magical and alchemical texts, one might guess that the notations were, as a rule, intelligible to those knowledgeable in the science. On the odd occasion, astrocartographers used an element of the alphabet and assigned it an astronomical meaning.¹⁶³⁰

The Constellation of

The goat star²³

While it is possible that the script began its resurgence after having been introduced to eastern and western Europe by the Arabs and Khazarian Jewish war refugees, it is equally likely that it had been there since before the 4th Century AD. That is because letter "r" (resh) of the Alphabet of the Kings is the same as the Royal insignia of the Goths on the Bosphoros, and the later Mediaeval Russian Rurikid dynasty. This being the case, the 4th Century Russo-Gothic use of the script may have resulted from an earlier Hermetic-Gnostic presence in Southern Rus', the Caucasus and the Balkans, rather than an influx of Kabbalists. The Eastern world and the Crimea were not unknown to the Egyptians; after all, the Gothic nation (especially in the Bosphoros) had been in the vanguard of converts to the beliefs of Arius, the Alexandrian Heresiarch, and may well have had sustained ties with North Africa on account of this. The Alphabet of the Kings reveals other far more important things; the continuous propagation of a magical script, in a magical context, allegedly from the time of the pharaohs, to 300 AD, right through to the renaissance, and hence into the 20th Century AD.

Quite apart from containing the Alphabet of the Kings, Ibn Wahshih's work also included Ogham tree script, which they discovered in Alexandrian hieroglyphic texts during the 8th Century AD), and other scripts devised by ancient monarchs, who were often wont to craft their own clandestine alphabets for covert and royal purposes.¹⁶²⁹

THE ALPHABET OF THE
KINGS

Collectively this illustrates a remarkable continuity in this form of magical writing, spanning at least a thousand years. But how could such impeccable survivability have come about, without the existence of sorcerers or "minders" determined enough to bring their magical arts into the future?

Bearing in mind the Papacy's resolve to grind magic into the earth, the Magus wizards, the pagan Gnostic Elect and the Jewish Kabbalists were determined to maintain their solidarity; they became more cooperative, resourceful and ingenious in their endeavours, despite certain philosophical differences separating their varied schools. The magicians swore oaths they would never let this knowledge die, oaths such as the one made at a council of Grandmasters (perhaps in reality Grand Magian Illuminati, ie; philosophers, Chaldeans and pre-Karterian wizards the equivalent of Magupats or dasturs) from Italy, Greece and Spain in the 1300's. At this point it appears that they felt it was better to condense the many smaller books of secret knowledge into thick, mass-compilations, *which were never to fall into the hands of the Christian authorities*.¹⁶³¹ Cornelius Agrippa certainly catered for this wish!

Alchemy

Several races once excelled at alchemy; the Babylonians, Egyptians, Hindu Brahmin and Jews, but ultimately its birthplace was old Babylon. Whether or not the Egyptians developed alchemy independently of the Babylonians is unknown, but in time the discoveries of both races became deeply inter-meshed. This alchemical marriage occurred when the Ancient Egyptian schools of alchemy began interacting with Babylonian metallurgists, who brought with them planetary theora concerning the effects of cosmic energies on the formation of metals and alloys, in the solid or liquid state.¹⁶³² From that time forth, astrology, cosmic energy, planetary invocation and dualism became an indispensable part of Egyptian alchemy, and alchemy in general, as would political power games.

BABYLONIANS,
EGYPTIANS, HINDUS
AND JEWS WERE THE
MOST SKILLED OF
ALCHEMISTS

BABYLONIAN AND
EGYPTIAN ALCHEMY
WERE INTERCONNECTED

Hermetic alchemy

The best part of Egyptian alchemy was embodied in the writings of the pagan gnostic tutelary god Hermes Trismegistus, which, as stated, were re-discovered by the Arabs in Alexandria during their military annexation of the city¹⁶³³ in the 7th Century AD, and taken to universities in Baghdad, Cordoba, and Toledo for translation. Some of the key figures in their drive to dredge up the past were the cryptologists (cipher experts) Bakir Ahmad, Al-Kahil and Ibn Wahshih.¹⁶³⁴ Each of them (in conjunction with linguists in the employ of the Khalifs) wrote studies of magical scripts and ciphers employed in the ancient world. Many of these translations were only made possible due to the efforts of Chaldeans and Nabataeans who allegedly knew the means of translating Egyptian hieroglyphics.¹⁶³⁵ This is quite believable since Chaldean and Nabataean sectarians were present in Asia minor and North Africa during the 10th Century AD, and in the case of the Chaldeans known to be the custodians of books containing very ancient knowledge. Never having seen a specialised work devoted entirely to the writings of Ibn Wahshih prevents me from confirming that Egyptian hieroglyphic manuscripts were amongst those that formed the basis for his texts.

THE ANCIENT ROMAN
ECONOMY WAS
SEVERELY HARMED BY
THE ACTIVITIES OF THE
ALCHEMISTS

AS WITH MANY OTHER
ANTIQUARIAN BOOKS,
THE ARABS WERE
RESPONSIBLE FOR
RESURRECTING THE
TEACHINGS OF THE
ALCHEMISTS

At the hand of Arab academics, the Alexandrian hermetic technologies (including alchemy) came to life once more, and gave rise to some of the Mediaeval world's great medical, mechanical, optical and alchemical advances. Egyptian hermeticists utilised the Alphabet of the Kings, for alchemical notations, together with other symbols known only to their fraternity. For this reason they are repeatedly found in extant Mediaeval and Renaissance alchemical manuscripts.

Eastern alchemy

Mediaeval alchemical advances are not solely attributable to the Arabs, for Jews turned out to be some of the greatest names in Mediaeval alchemy. This wouldn't have been anything the Arabs taught them either. You see the Jews were a Semitic tribe formerly enslaved by the Egyptian Pharaohs, until leaving captivity somewhere around 1300 BC. A slave force they may have been, but they were slaves employed on the some of the most breathtaking building projects ever undertaken in the ancient world. As later Roman engineers marvelled at how the Egyptians achieved these feats, it is likely that an elite and discrete group of Jews continued to assiduously maintain the great secrets that their ancestors once saw, as they toiled over the pyramids and temple constructions in the hot African sun. They perhaps employed these same stone-working skills while building the first Jewish temple under King

JEWISH ALCHEMISTS

Solomon. Thus the Jews (or much rather one section of their population) became the custodians of a corpus of ancient pagan Gnostic knowledge, which presumably included alchemy. And they did have knowledge that was worth knowing. In Porphyry's book, the *Life of Pythagorus*,¹⁶³⁶ we learn that the famed Grecian scientist-Philosopher, Pythagorus, thought enough of the Jews to visit them in search of mentors; just as he did among the Egyptian, Chaldean and Magian priests.¹⁶³⁷

THE JEWS MIGHT HAVE BEEN SLAVES TO THE EGYPTIANS, BUT THEY ACTUALLY WORKED ON ARGUABLY THE GREATEST BUILDING PROJECT EVER UNDERTAKEN IN THE ANCIENT WORLD

Late mediaeval treatises such as *De Occulta Philosophia* are laden with occult data from mediaeval Jewish sources, but how could this have eventuated? Well following the destruction of Khazaria, it is highly likely that Jewish alchemical and Kabbalistic teachings were introduced into Spain by Khazarian academics who had preserved this same knowledge. These Jewish intellectuals were to be found among the refugees issuing forth from the collapsing Khazarian state, to Spain (that other great refuge of Mediaeval Jewry). We know that the Kabbalistic *Book of Raziel* was among them. One 17th Century scroll bears a "Seal of Solomon",¹⁶³⁸ a protective amulet first devised by the Jewish Kabbalists. In essence the scroll in question depicted planetary insignia surrounded by an agglutination of intertwined sigils. What is even more illuminating is that this Seal of Solomon seems to contain not only the Alphabet of the Kings, but a elements of glagolitics and Brahmi Asoka sanskrit. This helps show a link between India, Slavia and the Jewish Kabbalists.

PYTHAGORUS HOPED TO LEARN FROM THE JEWS

JEWISH TEXTS ENTERING EUROPE FROM THE EAST

Alchemy was once popular in Mediaeval Poland, and was still topical in 19th Century Russia¹⁶³⁹ judging by the amount of "pharmacy spiritual" paintings made towards the end of last century, complete with magical squares and full renditions of the alchemist at work. Perhaps these too owed their beginnings to Jewish alchemists traversing their lands en-route to Spain, though it is far more likely that these works of art were the product of neo-occultists. Nevertheless they may have been in part derived from spiritual alchemical beliefs that lay buried in the folk traditions of the Russian people since the Middle Ages, and even before that.

BLAST FURNACES IN RUSSIA

For instance the Arab geographers Ibn Istakhri and Ibn Hawkal spoke of the Arsa, a Rus' tribe who traded in processed tin. Evidently the Arsa had constructed smelters of some kind, to refine and process the tin ore. These need not have been primitive methods either for Russian archaeologists have discovered advanced blast furnaces near Silver Bulgaria,¹⁶⁴⁰ a territory associated with the Arsa, and formerly governed by the Khazarian Jewish Empire.

That these furnaces predated by several hundred years those which emerged in the West during the high Mediaeval period¹⁶⁴¹ confirms that highly evolved metallurgical processes were known in the vicinity of the Ural mountains. At this stage it appears the furnaces were built by the Mongols.

ONE OF THE FINEST MEDIAEVAL ALCHEMICAL TREATISES WAS CALLED THE *PICATRIX*

The Indian connection

The *Picatrix* of Thabit Ibn Qurra was a rallying point for the emergence of alchemy during the Middle Ages, a time when Arab and Western astrologers draughted horoscopes after the manner of Northern and Southern Indian star charts. Since the Arabs were key importers of occult studies into mediaeval Europe, we might have cause to wonder if there was ever a connection between Indian zodiac charts, alchemy and the Arabs ... and it appears that there was.

ITS ARAB AUTHOR, IBN QURRA, HAD INTELLECTUAL COLLEAGUES AMONG THE HINDU BRAHMANS

Thabit Ibn Qurra, the author of the *Picatrix*, was a mathematician and scientific field officer who served in a liaison post with the Hindu Brahmin astronomers. Ibn Qurra was, in his own way, responsible for major advances in mathematics and human understanding by introducing Indian mathematical principles into the Christian and Islamic world. It is quite probable that he incorporated other things he had learned from the Hindu *Brahmin alchemists* while in India, things that he later included in his *Picatrix*. Hence the significance of this book to Mediaeval alchemy. As you will have read Indian-Arab interfacing in the sciences resulted from exchanges of information taking place between the Hindu Brahmin and Arab intellectuals at places like Jundishapur.

The "science" of alchemy

To the uneducated eye, this ghastly smelling science employed processes that bordered on the magical. Studies in alchemy imparted not only the means to produce and refine diverse substances, but an understanding of the philosophical and metaphysical properties possessed by ingredients, and the planets which governed them. The art was notoriously expensive, fairly unproductive, often dangerous, and even fatal.

Alchemists usually worked in husband and wife teams, searching in vain for the elusive “Elixir Vitae” and the “Philosopher’s stone” which was allegedly able to transmute other chemicals into silver and gold. The rationale for heterosexual couples as practitioners exists in the powers unleashed by the mating of opposites. Most of their books were written in symbolic pictures, and were sometimes annotated with magical ciphers that explained the means by which diverse alchemical operations were to be performed. Since alchemists were a secret fraternity, signified by the *ouroborus* (a serpent biting its tail), they were most discreet about their discoveries. The ciphers they employed served to conceal their science from the uninitiated.

Alchemists fastidiously observed the positionings of the planets to establish the most auspicious times to carry out procedures, extractions, refinements, and so forth. Consequently many of them fraternised with astronomers and astrologers, or dabbled in the science of astronomy themselves.

Alchemists made a living by refining ores and substances such as cinnabar (from which comes mercury) or developing new metal alloy recipes, and selling them to sorcerers and specialised tradespeople. Other fortes were the production of dyes and pigments, coloured smoke, remedies and potions, the assaying of ores, metal purification, glowing substances, acids, inflammable substances, and transmutation-like tricks.

Any work not based upon the writings of the masters, or colleagues was deemed experimental and a venture into unchartered waters. As always the work was time consuming, requiring the mounting and replacement of costly and specialised pieces of apparatus, the gathering of base materials, and the lighting and controlling of fires. Projects took weeks at a time to complete as the alchemist meticulously noted changes in the nature of these base substances, and sought to understand the various uses these bi-products could be put to. When pioneering new techniques alchemists carried out much of their work by trial and error; tasting, touching, sniffing, observing. This field was particularly hazardous and time-intensive.

Due to the price of “scientific” glassware and other chemicals, the cost of founding a lab was extraordinarily high, and beyond the means of most, unless they knew a good Arab glass-blower. Consequently it was normal for alchemists to seek the patronage of wealthy nobles. Ultimately the aim of every alchemist was to make monumental discoveries and become independent of their financiers, who only bothered them every other day wanting to know why their financial investment hadn’t led to discovering the secret of turning lead into gold.

But did it do anything?

Alchemy played a leading part in the evolution of human knowledge, for it led a select group of individuals to question the nature of the universe in which they lived, to dissect it, and see how things worked. The alchemists chanced upon many things of merit, such as how to make rust-resistant iron¹⁶⁴² (one example of which is the iron column at Mehrauli, India). In this respect it was of great use to people in some areas.

From a magician’s standpoint, alchemy permitted the production of astounding illusions. *Malleus Maleficarum* stipulated that magic did exist in a very real sense, in just the same way that miracles were supposed to have. However it went on to say that many seemingly magical occurrences were merely natural phenomena, or *illusory trickery*. From the various fables written about Simon the Magus, it is generally believed that he excelled in the arts of Juggling (illusion). Some of these tales intimate that he and his colleagues may have known how to make coloured dyes and smokes. A similar thing could even be said concerning the pagan Rus’ Prince Oleg “the Sage”¹⁶⁴³ who was mentioned as being able to cloak himself in a magical blue mist. Perhaps he, like the Gnostics, might have used such props at opportune moments, or then again, drugs may have been responsible for the illusions, or maybe these were just poetic license; a ripping yarn. Some alchemists claimed an ability to make gold and silver from dissimilar substances, or create an Homonculus, a baby who was conceived and thrived inside a glass tube. In *De Occulta Philosophia*, Agrippa states they achieved the latter by placing secret substances (which to be even remotely plausible had to have included sperm and a human ovum) into a glass crucible. The vessel was scrupulously kept at a moderate temperature for just over a month, encapsulated within a pile of horse dung. Upon completion of the month one would expect to discern a small creature inside. From that time an enriched solution of human blood was poured inside the tube to sustain the being, with these nutrients replenished on a daily basis. The creatures grew steadily, and after some 40 weeks of incubation the alchemists purportedly removed an undersized baby from the glass container, who could in every respect be raised as a normal child.¹⁶⁴⁴

Only in the last decade have we developed in-vitro technology to the stage where we can conceive a child inside

ALCHEMY WAS CONCERNED WITH PHILOSOPHY AND METAPHYSICS AS MUCH AS IT WAS WITH CHEMISTRY

ALCHEMISTS HOPED TO MAKE GOLD USING “THE PHILOSOPHER’S STONE”, BUT THEY HAD TO DISCOVER IT FIRST

WHILE A CERTAIN AMOUNT OF THEIR WORK WAS BASED ON THE FINDINGS OF EARLIER ALCHEMISTS, THERE WAS STILL MUCH THAT THEY HOPED TO DISCOVER BY CONDUCTING EXPERIMENTS

ALCHEMY REQUIRED RICH PATRONS, WHO COULD AFFORD TO FINANCE THE NECESSARY EQUIPMENT

THEY COULD PROBABLY MAKE COLOURED SMOKE

THE ALCHEMISTS CLAIMED THEY COULD RAISE CHILDREN INSIDE A GLASS ALEMBC

THE METHOD THEY USED TO MAKE A HOMONCULUS WAS VERY ELABORATE

WE CAN'T EVEN ACHIEVE
THIS NOWADAYS

a glass tube, and subsequently implant the fertilised ovum into a woman. Even now the technology has only mixed success. The merest notion that one could simulate a full term pregnancy inside an alembic would therefore be unachievable by today's standards. The homonculus was thus a far-sighted, dreamy fantasy on the part of the alchemists. The only other alternative is to admit they could make an artificial womb using nutrient-rich, oxygenated, coagulated blood, that formed a gelatinous womb resembling a human placenta, to which the newly conceived foetus' umbilicus attached itself, and from which it fed, "breathed" and grew? I have grave doubts about whether they could perform something which modern medical experts are not even faintly close to achieving; but that is what they claimed.

DID THEY KNOW HOW TO
EXTRACT HYDROGEN GAS,
TO MAKE HOT AIR
BALLOONS?

The Chinese are credited with the invention of gunpowder and guns (during the 12th Century). However it is equally probable that the Magi, or Hindu Brahman alchemists independently discovered the destructive properties of saltpetre (which in Iran and India can be found in surface deposits) during their experimentation.

TALES OF MEDIEVAL
AIRSHIPS

Whether the alchemists ever observed that hydrogen run-off from acid experimentation created a hot air balloon when siphoned into a wine skin (instead of a glass alembic) may be stretching credibility to its highest limits, but it would be a relatively simple discovery to make when you actually think about it. Certainly ancient Indian texts record their use of flying machines, particularly for military purposes. Aryan soldiers supposedly dropped incendiaries and missiles from these aerial platforms, upon the heads of the enemy far below. If such devices ever existed, they were no doubt kites or balloons of some description.

THE IMPRESSIVE
KNOWLEDGE OF THE
PAGAN INTELLIGENTSIA

Ireland provides one good example of outlandish aeronautical exploits, mostly in the vicinity of a church. The Ulster Annals speak of an air ship inadvertently becoming moored to the altar rails at Clonmacnoise, as its anchor stuck fast, while monks were at prayer. As a result "the big hull rocked to a standstill".¹⁶⁴⁵ The crewmember slid down the anchor rope to free the snagged hook, but appeared to have breathing difficulties (possibly as a result of coming down to a much lower altitude?). The aerial vessel was freed only with the help of the commune's bemused clerics. This event allegedly took place in the year 748 AD.¹⁶⁴⁵

THERE IS A TALE FROM
MEDIAEVAL FRANCE
CONCERNING AN "AIR-
SHIP" WHICH MAGONIANS
FLEW ABOUT IN. WAS
THIS JUST A STORY, OR
POSSIBLE EVIDENCE THAT
PEOPLE FROM MAGONIA
KNEW HOW TO MAKE A
HOT AIR BALLOON?

London experiences such a wierd visitation in the year 1122, as told by a prior from St Peter of Vigeois in France.¹⁶⁴⁵ He reported that churchgoers leaving church during poor weather were greeted by the unusual sight of an anchor buried deep in a caim of rubble. Looking skyward they noted a strained anchor rope reaching up into the clouds, and could even hear crewmen arguing, following which an air sailor made his way down the rope. Here, once again, the airman becomes ill from the air quality and dies not long after alighting.¹⁶⁴⁵ The vessel lingered there for about another hour, but departed after resolving to sever the anchor rope.

Nothing short of two Irish kings purportedly witnessed airships themselves, namely Kings Domhnall and Congallach.¹⁶⁴⁵

If one is to draw a direct parallel between these happenings and those mentioned by Agobard the Lyon bishop, it is plausible these 'mythical' vessels hailed from Magonia "whence ships come in the clouds for the purpose of carrying back the grain which is beaten off by the hail and storms".¹⁶⁴⁵ Later folk tales from County Donegal Ireland likewise associated the 'cloud ships' with Magonia. Villagers also noted that aeronauts were conversant in English, Gaelic and Latin when they wished to converse with locals, but most of the time their language remained unintelligible.

I don't think there's a scholar today who would credit these stories as anything other than imaginings of ancient "science-fiction" writers.

Fig 86. The Renaissance mind was captivated by visions of flying machines, airborne witches and creatures. These two examples are facimilies of flying machines found in Bosch's art.

Even so, what are we to make of a report made by a Mediaeval French Bishop, who claimed he had to stop locals killing a *Magonian* "wheat-stealer". The victim in this case was a *man* who his parishioners swore had been left behind by his airship's crew (a balloon?) after it took off without him.¹⁶⁴⁶ He was allegedly in collusion with the witches. Considering that the Great Svithiod was supposedly ruled by Magon and Russia by Madai, we should regard Magonia as being situated in Scandinavia or the Baltic.

Alchemy was not always used honourably. During the reign of Diocletian Roman alchemists became embroiled in a series of major counterfeiting scams, through the mass production of fake gold, that flooded the market place. The sheer scale of their activities almost brought the state coffers to the brink of ruination and led to an imperial decree commanding the immolation of an immense range of alchemical texts. There are no records of where these Roman alchemists escaped to, or how many treatises escaped the purges. Alchemical treatises were not the only ones subjected to state retribution. Al-Nadim states; “A reliable person has told me that the Romans burned fifteen loads of Archimedes books”, adding that their motive for doing so was very involved, so much so that it would take a long time to relate. By my estimation these books must have been regarded as seditious or threatening to prevailing religious or secular institutions.

The counterfeiting theme re-emerges later in early Mediaeval history. Saxons manufactured false bullion by gilding bronze ingots, perhaps using some alchemical process.¹⁶⁴⁷ During their resettlement to Gaul by Mummolus they swindled a great many townsfolk along the migration route.¹⁶⁴⁷

Books used by the alchemists: The *Picatrix* by Thabit Ibn Qurra (d 901 AD). *On Instruments and Furnaces* by Zosimus of Panopolis, and the writings of Democritus of Alexandria, Geber, Rhasis and Avicenna. All written in Arabic, Latin and Greek; they once had limited, but esteemed readership.

Gnostic magic

HIGH MAGIC

RELIGION Pagan or Biblical Gnostic.

THE SOURCE OF THE POWER

The term pagan Gnosticism has its origins in the Greek word *Gnosis*, which means “knowledge”. Therefore pagan Gnosticism was the pagan Gnosis, ie; the special things that the pagans knew. Pagan Gnostics excelled in all kinds of Gnosis, namely the sciences, medicine, mathematics, philosophy, poetry, religious ritual, gem-craft, music, idol-making, drama, politics, astronomy, astrology, rhetoric, magical apparatus and the worship of the Gods of Greece, Chaldea and Egypt, in addition to daemones (under certain circumstances). Although a large portion of their knowledge was concerned with understanding the physical world in which we live (ie; “science”), the remainder of it related to religious matters, in particular, teachings about a perfect celestial being known as “the Great Spirit”. Beneath him were other spiritual emanations of himself (namely gods, archons, aeons, genii and daemones) who performed services for him in the world, such as the serpentine intelligence called Hermes, the Psychopomp, patron of all the arts.

ARCHONS AND AEONS WERE CONNECTED WITH THE PLANETS AND SIGNS OF THE ZODIAC

PAGAN GNOSTIC INCANTATIONS

Pagan Gnostic (and Biblical Gnostic) power dwelt in the many light or dark androgynous angels who budded from the supreme god’s own spirit, and who bestowed gifts and benefits to those who knew how to summon them. These spirits were inalienably linked to human fate, and coupled with the seven planets and 12 signs of the zodiac. As mentioned by Iamblichus, pagan Gnostics felt a need to conjure the aid of these aerie demons, elder gods and heroes (such as Hercules) in the upper and lower atmosphere, which held the bonds of our fate in their hands.

The key to these invocations were time-honoured magical rituals, lamellae, power gems, foils, or specialised algebraic incantations and prayers, such as OOOOO uuuuuu OOOOOOOOOOOO OOO Zozazoth¹⁶⁴⁸ or eeeeeeeeeeeeeee aaaaaaaaaaaaaa aaaaaaaaaaaaaa OOOOOOOOOOOO OOOOOOOOOOOO.¹⁶⁴⁹ The magical vocalisations in this instance were formerly used by the Sethian serpent Gnostics of Egypt.

The following pagan Egyptian incantation against illness (found written on a papyrus dating to the 3rd Century AD) is particularly illustrative of how such an incantation might be used.¹⁶⁵⁰

“(ia)rbath agrammê fiblô chnêmeô
 (a e)ê êêê iiii ooooo uuuuuu ôôôôôô(ô)
 Lord Gods, heal Helena, daughter of (..)
 from every illness and every shivering and (fever),
 ephemeral, quotidian, tertian, quar(tan),
 iarbath agrammê fiblô chnêmeô

THEY SUMMONED DAEMONES, ARCHONS AND AEONS USING JEALOUSLY GUARDED INCANTATIONS

aeēiouōōuoīēea

 ēiouōōuoīē
 iouōōuoi
 ouōōuo
 uōōu uuuuu
 ôô" 1650

While such utterances seem like gibberish to the uninitiated, they were formed in a prescribed manner. Appearances are deceptive; Gnostic incantations only appeared to be chaotic and jumbled in nature. According to the Sethian prophet Marsanes, their incantations normally contained long strings of vowels, sounds thought to be receptacles of celestial power. The silent quality of the pause, the pitch, rhythm and timbre all affected the invocation of the "angel" or Archon, and were of crucial importance to the efficacy of the magic. Improper utterances would most likely have resulted in failure.

Incantations resembling those of the pagan Gnostics were known in some parts of Europe, even as late as the early Middle Ages. As isolated as these examples may be, they have been found in Scandinavia and Frisia, *incised into wands*. According to Kieckhefer, this variety of wand (fig 87.2) tends to predominate in Denmark, and many places where the Danes settled. The incantation aaaaaaaRRRnnn.bmuttt alu¹⁶⁵¹ was found on one particular wand, a nonsensical string of characters untranslatable in Dansk Tongr, which halted abruptly with the Norse power word "alu". Thus it had an apparent magical meaning, which must have had some significance for the user. Nonetheless modern runologists have been unable to field a possible interpretation for it.

An answer to this problematic question might be found in the writings of the Gnostic prophet Marsanes, who provided a lengthy discourse on the ether-penetrating virtues of vowels, diphthongs and consonants.¹⁶⁵² By comparing the Norse exemplar with known Gnostic inscriptions,¹⁶⁵³ and applying information within the Coptic Nag Hammadi texts (particularly those of Marsanes), we could come up with the following explanation for this inscription, but in truth, its fullest meaning may not have been known even to the sorcerer. It was most likely a solar invocation, denoted by the a's, perhaps in unison with several male archons and minor angels. Maybe an additional entity was summoned by calling upon them collectively by the correct utterance of the name. Whether they were long or short a's was also significant, since short letters were of less account than long ones (which resonated with power). The liquid consonant "R" was most likely what Marsanes referred to as a *semi-vowel*, a consonant which sounded like a vowel when used in a word. A *triple letter* imparted a male archontic power meaning. These groups were then joined together by combinations of *inferior consonants*, known as *intermediaries*, whose full significance was just a matter of faith, something not revealed to the initiate. Consonants were always to be truncated by vowels. Singular letters were often dictated to, and mastered by the name and nature of the preceding, or succeeding power letter, but in some cases they carried some powerful influences.

So, is it a coincidence that there were some eight consecutive a's, three groups of triple consonants, plus three individual consonants? Could "alu" be a corruption of the Egyptian "power-word" for magical energy; "akhu"?¹⁶⁵⁴ Could the "bmuttt" on the wand be a rending of the the Egyptian word "mut"¹⁶⁵⁵ (meaning "a soul of the dead"), and if so was the wand used to summon the dead using the power of the sun? Is it a coincidence that the overall shape of the wands resembles one supposedly used in the raising of Lazarus from the dead (fig 87.1)?

Perceptible similarities between the Norse and Egyptian magical incantations are all the more intriguing once you discover what an Arab Traveller, one Al-Tartushi, had to say about the 10th Century Danes of Heidby. Around 935 AD Al-Tartushi informs us in the *Travel book of Ibrahim Ibn Jakob* that Heidby's Norsemen worshiped the constellation of Sirius as a god (as did the Egyptians and Magi), to which they sacrificed swine, cattle and rams, which were hoisted aloft on stakes. It is a matter of great curiosity that he describes *male and female Danes wearing eye makeup*. The closest parallel to this is of course ancient Mesopotamia (especially Chaldea) and Egypt. Al-Tartushi further reported they sang disturbing growling songs from the throat, like dogs. All in all, the vocalisations of Gnostic vowel incantations must have sounded like insane undulating squealing, or even growling.¹⁶⁵⁶ So, in light of the similarities between the Norse inscriptions and the Alexandrian Gnostic incantations, were the Danes

Fig 87.1 Supposedly a depiction of Christ raising Lazarus from the dead. However I see it as a Gnostic magician wielding a wand similar to the Lindholm example.

Fig 87.2 The Norse Lindholm wand with the aaaaaaaRRRnnn.bmuttt alu inscription.

intentionally making dog sounds? or was it drunken babble? or, perhaps an *aaaaaaaaeeeeoooooiiiiuuooooa* or other Gnostic hymn or vowel incantation like that found on the Lindholm wand? Al-Tartushi added that he found their songs very unnerving.

What is more, the Norse *Volva* prophetesses used what they termed *sethir* magic, which in one surviving account required them to ascend a dais. Someone present in the gathering assembled before the *Volva* began singing songs, as the prophetess entered into a trance. We might ask if there was a connection between Norse Sethir magic, the Danish growling songs, the Sethian-style wand inscriptions of the Norsemen, and the magic of the Sethian serpent Gnostics (who may well have sent their greatest holy books to the Crimea, a location where Norsemen could conceivably come into contact with such teachings)?

The power, prophecies and magic utilised by the Greek pagan Gnostics were rendered all the more powerful through the intermediation of the Great Serpent, or as *Malleus Maleficarum* called it, the Pythonean genius. This was supposed to have been the same spiritual essence which once conversed with the Greek prophetesses at Delphi, who ascended a seated dais to utter their prophecies. This serpent was also protector of the underworld flock, a soul-escorter, magician and lover of all the arts, and went by the name of Hermes or Apollo.

As with the Magi, Gnostics excelled at lapidary work. It was most likely Gnostic jewellers who made Nero's emerald coloured spectacles; just one of many wonders that convinced the Emperor to worship Simon Magus,¹⁶⁵⁷ the Samaritan, as *Sanco Deo*, the Holy God. Biblical Gnostics claimed that their esoteric pursuits were the one true Christian faith, but for the Church their activities were a repugnant, nascent evil in the world.

According to Eusebius, Simon was the main god of the Samaritans, and in Rome his idol, portrait and temple were erected on the Tiber River, where he was worshiped as a living god. In legend, St Peter (who was also once known as Simon) was said to have tracked him down to Rome in order to confront him face to face.¹⁶⁵⁸

Like Simon Magus, many Gnostics were supposedly well versed in juggling, illusions which utilised props, smoke, coloured dyes, ventriloquism, hallucinogenic incenses, sparks, magical boxes with false bottoms, trick wires and locks and magical moving statues. Simon the Magus performed other "god-like" feats like producing birds, animals and even living people "from thin air".¹⁶⁵⁹

PAGAN GNOSTICISM GOES WEST

The archaeological retrieval of seemingly pagan Gnostic magical apparatus in Britain and Scandinavia suggests that heathen Gnosis was present in both places. Magical lamellae (inscribed plaques) and foils (items commonly found in pagan Gnostic ritual magic) were once used in these regions, and with the aid of pagan Gnostic deities such as Asclepius, the people of Mediaeval Britain and Prussia sought to employ these healing amulets to full effect.

The precise purpose of the Scandinavian *goldengubber* golden foils is unknown, though they possessed an apparently magical nature. The similarity between the pagan Gnostic incantations unearthed in Egypt and the 6th Century Lindholm wand is compelling, and when taken in conjunction with the magical foils, and other artefacts seemingly associated with the Egyptian goddess of magic, Isis, one can conclude that an unknown number of pagan Norsemen were devotees of pagan Gnostic magic. We must then explain how pagan Gnostic religion spread to such diverse places as Britain and Scandinavia.

If we accept Tacitus and the *Oxyrhynchus papyrus* (dating to the 2nd Century AD), Isis was already being worshiped in certain parts of Germany and Russia in the first few centuries after Christ at least. There can be no more obvious sources for the later Norse magical traditions. Another solution seems bound up in reports concerning the Druids, which go back as far as 135 BC.¹⁶⁶⁰ Popular perception has it that the Druids were simply a rustic cult confined to the British mainland, whereas there are indications that they were known far and wide, and annually travelled as far away as Galatia in Asia Minor to meet in council.¹⁶⁶⁰ Roman and Alexandrian writers alluded to them being proponents of something very similar to Neo-Pythagoreanism,¹⁶⁶⁰ who avidly pursued philosophy, high magic and the natural sciences. Magical artefacts retrieved by archaeologists prove that this was not just idle prattle on the part of these commentators. This may point to a factual Celtic connection with the Neo-Pythagoreans, and, logically, a movement of Greek pagan Gnostic learning into the west. At the very first these customs probably penetrated Britain (in pre-Celtic times) with the likes of the Greek Philosopher Pytheas on his trip to Thule, or the Greek astronomers who once performed celestial observations in Britain, perhaps several centuries before Christ. Britain's ties with the Greek and Alexandrian astronomers has already been explained. In summary their magic;

SIMON THE MAGUS
WORSHIPED IN ROME

1. was brought to these locations by Greek and Egyptian sea-farers during ancient times, people such as Pytheas.
2. spread to Germany, Britain and Ireland with Celts formerly residing in Asia Minor and Thessaly.
3. spread to other parts of Europe via the travels of the Heruli, Goths, Cimbri, or the splintered tribal remnants of the former Scythian nations.
4. was spread by a brotherhood of Greek and Alexandrian astronomers, especially those dedicated to Isis.
5. All of the above

THE PAGAN GNOSTICS LEAVE EGYPT

Another plausible explanation for the existence of pagan Gnostic magic in Europe and the east can be found in a priceless cache of mixed pagan and Biblical Gnostic documentation discovered in Egypt in 1945, now known as the Coptic Nag Hammadi texts. Portions of these texts outlined a programme of migration, designed to save their faith from extinction by relocating Gnostic holy texts to safer lands.

THE PROPHET GONGESSOS

Among them was the *The Gospel of the Egyptians*,¹⁶⁶¹ which revealed a major transportation of Gnostic tractates from Egypt (during the 4th Century AD) to Diospolis (literally “The City of the Gods”) in Libya. In the same bundle of scriptures, Gongessos (a Sethian Gnostic prophet) explained that Seth’s (the Serpent’s) compilation of extant Sethian manuscripts, which took 130 years to complete, was to be taken to *the mountains of Charaxios*, to be sealed up until the last of all the generations. This shipment was for all intents and purposes the mother-lode of Gnosticism. Gongessos further stipulates that the scriptures were to be placed inside a mountain, in a place where the sun could never rise, or shine.¹⁶⁶² So where was this Charaxios? Based on Claudius Ptolemy’s map of the world (c. 2nd Century AD) Charaxios could be one of two places.

GNOSTIC TEXTS FERRIED TO CHARAXIOS

Firstly the name of the location is extremely illuminating, for *Charax* was a Chaldean word, meaning “a fort”. So presumably the Gnostics were somehow affiliated with the Chaldaean sorcerers, or had chosen to repatriate themselves to a fortification first built by the Chaldeans. That *Charaxios* has the Greek ending *-ios*, probably indicates that Charaxios was situated near Greece or its environs. Considering this, we are compelled to associate Charaxios with the gargantuan Taurian stronghold of *Charax* in the Crimean mountains (on the Crimean promontory of the Ukraine). If this were so, then the greatest ever shipment of Gnostic books could have been dug into the north or south face of the Crimean mountain chain, amid a small, dark cluster of peaks.

IT WAS PROBABLY ONE OF TWO PLACES

IF THE SETHIAN GNOSTIC MANUSCRIPTS WERE SENT TO THE CRIMEA THERE IS NO GUARANTEE THAT THEY HAVEN’T BEEN FOUND OVER THE PAST 1,600 YEARS

The only other location that could be plausibly identified with Charaxios was Charax in Parthia, which was shown on Ptolemy’s map at Longitude 94 15, Latitude 36 40).

Yet even if the cache was sent to the Crimea, there is still no guarantee that it hasn’t already been dug up in the past 1,600 years, and their contents utilised by those who stumbled upon them, or by the descendants of the very people who took them there in the first place, and interred them in a specially built vault.

Considering these various points we find a plausible explanation for the Sethian-style magical inscriptions found on the Lindholm wand.

DIVERSE SPIRITUAL FORCES RULED THROUGHOUT THE COSMOS ACCORDING TO THE MANICHEE SCHEME OF THINGS

MANICHAEAN AND BIBLICAL GNOSTIC MAGIC

Other biblical gnostic cults dabbled in the magic arts, as an expression of their Christian faith. The next magical inscription (Kelsey Museum exhibit 26119) was made on the reverse of a bronze amulet pendant, upon which Jesus is depicted flanked by the four evangelists in their animalian iconographical forms, in addition to snakes and a lion in the foreground.¹⁶⁶³ It reads

*“Holy, Holy, Holy, Lord Sabaôth (4 symbols resembling those found in the Alphabet of the Kings) The seal of the living God, Guard from every evil him who carries this amulet”.*¹⁶⁶³

Here we find what could conceivably be a legitimate holy pendant crafted to protect a Christian wearer. But the inclusion of insignia from the Alphabet of the Kings indicates that it was probably fabricated using magical processes, and therefore banned by the Church.

The Manichaeans were another extremely successful Gnostic sect that evolved in the Far East, a religion that drew upon the mythology and beliefs of Buddhists, Zoroastrians and Christians. These particular heretics are elaborately discussed later on. Though the commandments of Mani forbade the use of "magic" *per se*, the Manichee Elect harnessed Archons and Aeons as well-springs of spiritual power to perform miracles. Unfortunately we know very little about the prayers, incantations and rituals they used to invoke the following spiritual beings, but it was probably a form of dualistic Gnosticism;

MANICHAEAN POWER SOURCES IN THE HEAVENS¹⁶⁶⁴

THE DIVINE AUTOGENES

(the Unknowable father who gave birth to Sophia)

- Pistis Sophia**, the divine wisdom
- Sabaoth**, son of Yaldabaoth
- Jesus** - the Serpent of Salvation who encouraged Adam and Eve to rebel against Yaweh
- The Planetary intelligences**, the heavenly lights, comets and other luminaries
- Adamas** (Adam - the brave rebel)
- Sophia Zoe** (Eve)

THE MANICHEES SAID
ADAM AND EVE WERE
HEROES OF
EXCEPTIONAL VALOUR
FOR DEFYING YAWEH,
AND TRYING TO ESCAPE
HIS CLUTCHES

MANICHAEAN HOLY ANGELS¹⁶⁶⁴

The non-jealous (m), Blessedness (f), The Blessed-one (m), Faith (f), The One-of-truth (m), Gladness (f), He-who-is-without-envy (m), Joy (f), The Most-Loved (m), Love (f), The Trustworthy-one (m), Peace (f), Truth (m) - These mated and gave birth to the 64 Cherubin, the beneficent serpent-angels.

THIS IS BECAUSE IN
THEIR VIEW YAWEH
WAS THE CHIEF GOD OF
THE BOUNDLESS AND
ABYSMAL CHAOS, A
SELFISH, GREEDY,
JEALOUS AND HATEFUL
DIVINITY IN NO WAY
ALLIED TO THE
SUPREME GOD

LORDS OF THE BOUNDLESS AND ABYSMAL CHAOS¹⁶⁶⁴

YALDABAOOTH (Yaweh)

(Demiurge, world-maker, lord of the Hebdomad, the Jealous God)

THE ANDROGYNOUS SONS OF CHAOS - EACH LEADING AN ARMY OF A MYRIAD ANGELS¹⁶⁶⁴

- Yao** - He who is Lordship
- Eloai** - He who is Envy
- Astaphaios** - He who is Wisdom
- Adonais** - He who is Kingship
- Oraios** - He who is Riches
- Death** - He who is the angel of death

THE ARCHONTIC DEMON-CHILDREN OF DEATH¹⁶⁶⁴

Groaning(m), Bitterness (f), Jealousy (m), Curses (f), Lamentation (m), Grief (f), Mourning (m), Lust (f), Sighing (m), Sighing (f), Tearfulness (m), Quarrels (f), Wrath (m), Wrath (f) - These children collectively mated giving rise to 49 meddling demon-spawn.

(m) = Male in nature

(F) = Female in nature

Kabbalistic magic

HIGH MAGIC

RELIGION Jewish (Gnostic).

KABBALISTIC BOOKS:

Sefer Yetsira, Bahir and Raziel, The Book of Enoch, and The Sibylline Oracles.

It was perhaps only natural that the scattered Jewry of Spain, Asia Minor and Khazaria would develop their own peculiar Gnostic magical traditions, things strong enough to help their race through the rigours of exile from Jerusalem. Jews were rather numerous in Asia Minor following their exodus from Jerusalem in the 1st Century AD¹⁶⁶⁵ (Ephesus, Cappadocia, Asia, Pontus and Galatia in particular), and it is known that dualistic Essenes, the authors of the famed Dead Sea scrolls, dwelt there as well.¹⁶⁶⁶ Before Titus' large-scale massacre of the Jews in 70 AD, the Essenes were already a shunned religious faction. These particular Jews apparently did not see eye to eye with the Rabbis of their day, and were compelled to live some distance from the holy city. The greatest of the dualist Essene settlements were founded outside Jerusalem's city limits, as a fortified commune. During an undocumented raid, the encampment was wiped out by Roman troops at roughly the same time as the Jewish temple.

KABBALISM WAS A
FORM OF JEWISH
GNOSTICISM

MANY JEWS LIVED IN
ASIA MINOR

THE ESSENE DUALIST
SECT ONCE HAD A
SETTLEMENT OUTSIDE
OF JERUSALEM

While biblical writings strongly condemned esoteric magic, the mere Jewishness of Kabbalism made it seem at least partially acceptable to the mediaeval Jews, who came to these Gnostic-Rabbis looking for prophecies, miraculous intervention, magical talismans, wards, gems and weapons. Only specially inducted Rabbis were aware of its philosophical basis, its rites and the magic that stemmed from them. Kabbalism centred upon select apocrypha and the five initial books of the *Old Testament* (OT), which they endlessly perused, seeking hidden word constructions that possessed occult power. First and foremost they believed themselves to be the custodians for the correct pronunciation of the divine consonantal Tetragrammaton, YHVH. Ancient Essene beliefs, meditations and unorthodox explanations of the OT, supposedly handed down by Kings David and Solomon in written form, were explored and pondered over by their Rabbis, reduced to profound philosophical symbolism.

Gematria (the study and occult application of the 22-character Hebrew alphabet, words and numbers), was pivotal to their understanding of YHVH's building of the universe and the way that Jewish power-words could be harnessed and applied in magic. They postulated that God maintained the cosmos through perpetual angelic emanations of Himself. Collectively each portion of creation was seen as a part of the first born cosmic man, called Adam Kadmon. He, they believed, gave birth to both good and evil things. Life therefore tottered between two opposing extremes, which were philosophically embodied in the Kabbalistic tree of life (yet another form of dualistic expression). Existence was built upon mystical trees divided into two groups; the heavenly and the infernal sephiroth, the trees of life and death respectively. From each of them hung a group of spheres (which were probably the equivalent of the Magian star stations) Like the shamans of the far North, Essene initiates attempted to mystically climb these spiritual trees, making their way toward heaven via the passage of ordeals encountered as one traversed a given sphere. Each celestial sphere corresponded to one of the planetary bodies. Such were the guarded esoteric mysteries of the Merkaba, which were said to allow rabbinical initiates to repeatedly enter before the divine throne to attain miraculous aid for their people.

The Merkaba itself was the story of Rabbi Akiba's spiritual ascent to Heaven (on the Shekinah) in order to bathe in the Kabod, the radiance of YHVH's fullest conceivable Glory and splendour. In it were taught the secret seals and passwords that allowed passage through "roadblocks" of angels, which prevented the violation of Heaven by uninitiated trespassers. During the age of the Old Testament the likes of Enoch and Elijah were also said to have undertaken this journey to the heavens but in body rather than spirit.

Kabbalists claimed that like God, they could make living things from clay, birds, people and animals, by inscribing magical gematria (algebraic constructions) on any sculptured clay image.

THE ORIGINS OF KABBALISM

According to legend, King Solomon and King David (from whom Christ was descended) were supposed to be magicians of some repute. The greatest magical icon of Kabbalism, the Magen David, is believed to have come from those earliest times, when it also went by the name of the "Seal of Solomon". The design of this insignia may give some clues concerning the birth of Kabbalism.

Unless it was independently invented, the Magen David, more commonly known today as the Star of David, which appears on the modern Israeli flag, is actually a dualistic sign ultimately of Hindu, Essene, or Magian origin, adopted long ago by philosopher-magicians operating in Eastern Jewish communities. In dualistic terms the two overlapping triangles, pointing in opposite directions, signified the mating of the two opposites. The symbolic dualism of the Magen David is not fortuitous for it is totally in keeping with their teachings. Male and female, heaven above and world below, and their fusion created "wholeness" in the world, the meeting place of white and black, good and evil, life and death, the two pillars of the extremes. The star was most likely picked up while the Jews were in Babylonian exile, and stayed with them ever since, or it could even have come from India, where the Hindus saw it as the mating of Brahma and Shiva, Creation and Destruction. A Mesopotamian origin for the cult would amply explain their seemingly Zoroastrian angelology.

Anyhow, dualism was the underlying principle behind the Kabbalistic tree of life, which was normally depicted as a tree of interlinking orbs or celestial pathways, and true to dualism, it possessed a black mirror-image tree, the infernal sephiroth. Orb and line renditions of these spiritual and unspiritual trees (see fig 89.1 and 89.2) are found in mediaeval treatises like *De Occulta Philosophia*, providing compelling evidence that Kabbalists used the Alphabet of Kings. And so while we have established that Kabbalism possibly has Magian or even Hindu origins, the very use

Fig 88. 1. Kabbalistic Tree of Life.

Fig 88. 2. Kabbalistic Tree of Death

Fig 88. 3. Floor design from a Hindu Temple. It resembles the "Magen David".

of the Alphabet of Kings is a dead give away for an Egyptian or Alexandrian connection, since that is where the script supposedly originated.

Based on what survived the Inquisitorial purges Kabbalism appears to be one of the most prevalent forms of magic performed during the Middle Ages, yet it had never belonged to the West. So how did it get there? In the late 12th Century, Toledo experienced the immigration of Jewish Khazarian academics, a migration contemporaneous with the arrival of the Kabbalistic *Book of Raziel*, written in a variant of the *Alphabet of the Kings*, but tailored for Jewish usage. Presumably, some of their number were delving into Kabbalistic enquiry, which we know was practiced by some of the not-so-orthodox Jews of Khazaria. But these refugees were just the tip of the iceberg. The piecemeal destruction of Khazaria by the pagan Rus' *druzhiniki* (under Svyatoslav in the late 900's AD) saw large numbers of Jews feed into Europe from the East, all the more so after the Islamic capture of Khazaria's foremost cities. And from that time until this, they have continued to live there. Many took up residence in the Balkans, Russia and the lands of the Poles and Czechs, while the remainder followed various routes across Europe, via land and sea to reach their recently discovered brothers the Sephardic Jews of Spain. By some coincidence the ancient capitol of Caucasian Albania was known as Kabbala,¹⁶⁶⁷ and, further westward, Balkan Albania became a focal point for disaffected pagan intellectuals and Magi. As a result of Khazaria's demise, there came to be an aristocratic Jewish presence in the Balkans, perhaps an offshoot of the Cohens and Khazar royalty. Bulgaria's ruling elite often bore Jewish, not Christian names; for example Emperor Samuel and the Aaronid dynasty which arose from the Cometopulis.¹⁶⁶⁸ Some of them, like Benjamin, were expert sorcerers, perhaps Jewish Kabbalists. Even if they were, it doesn't follow that they were all Jews; Christian Gnostic Kabbalists of the Mediaeval period certainly weren't. In Bulgaria, Khan (prince) *Benjamin*, alias the dualistic musical enchanter Boyan Magesnik was an *actual historical figure*. The very title Magesnik may mean that he was somehow linked with magical ordinances of the Magi. If this were so, he and his family may well have had Magus-blood, and chose a Jewish Gnostic magic style, perhaps cross-pollinated with Roman or Greek mysticism, music and magic. By the Middle Ages the predicament of the Khazarian Essene Rabbis remains unclear. Had they finally gained the acceptance of Orthodox Rabbis by that time, or were they still shunned as Judaism's own home-grown brand of heretical magicians, just as they had been outcasts in prior ages?

Kabbalism proved most successful at penetrating into the monasteries of Europe and Asia Minor, something which was bound to raise the ire of the Church authorities. As you will see, the emergence of this new strain of magic was a spark that ignited the inflammable anti-Jewish sentiments found throughout much of Europe.

Mithraic magic

HIGH MAGIC RELIGION Dualist pagan.
MITHRAIC BOOKS: *Mihir Yast* and other Zurvanite texts.

Mithraism, the greatest of all the ancient Roman mystery cults (which captivated the Roman army especially), was essentially a Persian religious tradition. The degree to which Roman Mithraic liturgy deviated from the Magian yasna ceremony is not known with any certainty because no ritual manual from the era has survived intact. But as you will already have read, based on Mithraic magical gems that have been unearthed in the past there is every reason to conclude that it was so similar to the Iranian ceremony that it may have been identical, but then again it may have received some oral embellishments which deviated from the original ritual order. What is more certain is that Magians held Mithra in immense regard, as the relentless sentinel of the truth, the enforcer, the punisher. The following is an extract from a Magian prayer, *the Mihir Yast*, which was offered to him in adoration;

*"the Ruffian who lies unto Mithra brings death unto the whole country, injuring as much the faithful world as a hundred evil-doers could do. Break not the contract O Spitama (white one)".*¹⁶⁶⁹

*"We offer up libations unto Mithra, the lord of the wide pastures, who gives a happy dwelling and a good dwelling to the Aryan nations".*¹⁶⁷⁰

*"We sacrifice unto Mithra, the lord of wide pastures, who is truth-speaking, a chief in assemblies, with a thousand ears, well-shapen, with ten thousand eyes, high, with full knowledge, strong, sleepless, and ever awake".*¹⁶⁷¹

"Unto whom nobody must lie, neither the master of a house, nor the lord of the borough, nor the lord of a town, nor the lord of a

Hail to the man who shall offer thee a sacrifice, with the holy wood in his hand, the baresma (wands) in his hand, the holy meat in his hand, the holy mortar in his hand, with his hands well-washed, with the mortar well-washed, with the bundles of baresma tied up, the Haoma uplifted, and the Ahuna Vairya (Hanover) sung through"*¹⁶⁷⁷

TO DRINK A LIBATION TO
MITHRA, THE FAITHFUL
HAD TO CLEANSE
THEMSELVES WITH
ABLUTIONS FOR THREE
DAYS RUNNING AND
SELF-FLAGELLATION

*"Zarathustra asked him: "O Ahura Mazda! how shall the faithful man drink the libations cleanly prepared, which if he does and he offers them unto Mithra, the lord of wide pastures, Mithra will be pleased with him and without anger? Ahura Mazda answered: "Let them wash their bodies three days and three nights; let them undergo thirty strokes for the sacrifice and prayer unto Mithra, the lord of wide pastures. Let them wash their bodies two days and nights; O let them undergo twenty strokes for the sacrifice and prayer unto Mithra, the lord of wide pastures. Let no man drink of these libations who does not know the staota yesna: Vispe ratavo (prayer)"*¹⁶⁷⁸

*"With his arms lifted up towards Immortality, Mithra, the lord of wide pastures, drives forward from the shining Garo-rnmana (Garodoman: the heavenly city patrolled by the warrior saints), in a beautiful chariot that drives on, ever-swift, adorned with all sorts of ornaments, and made of gold. Four stallions draw that chariot, all of the same white colour, living on heavenly food and undying"*¹⁶⁷⁹

*"Oh! may we never fall across the rush of Mithra, the lord of wide pastures, when in anger! May Mithra, the lord of wide pastures, never smite us in his anger; he who stands up upon this earth as the strongest of all gods, the most valiant of all gods, the most energetic of all gods, the swiftest of all gods, the most fiend-smiting of all gods, he, Mithra, the lord of wide pastures"*¹⁶⁸⁰

MITHRAISM BEGAN IN
ARYAN IRAN

Classical Mithraism was a Romanised version of the Iranian cult, a fraternity of warriors and menfolk dedicated to Mithra, the Lord of the Wide Pastures, and a life of fame, wealth and honour. Subsequently the warrior life-style was deeply engrained into the brotherhood, and on account of this excessive militarism females were not permitted to join the brethren.

IT WAS SIMILAR TO
ZURVANISM

Many aspects of Zurvanite Magiansim are to be clearly seen in Roman Mithraism. Their main god was the Time Lord, Kronos, beneath which were three other deities. This triad consisted of Mithra (which may have been another name for Indra), the neutral or mediatrix god who stood in the midst of the constantly feuding *Sol Invictus* (the Invincible Sun) and *Deus Arimanius* (the Black God). The eschatological myth of the Magi gave rise to

Mithraism's most important ceremonial observances. To enter into the Mithraic priestly brotherhood, one was baptised in water by full immersion (perhaps a variation on the Bareshnum ceremony), and then initiated into their minor mysteries. Only later, after attaining the rank of "Lion" would the initiate undergo the central Mithraic initiation, which entailed the slaughtering of a bull, and bathing in its blood. The celebration of this bull sacrifice was said to purify initiates who endlessly drifted between both polar extremes of blessedness and ultra-evil, cleansing the soul and promoting the regeneration of life and plenty throughout the lands. Only after this were they ready to witness some of the principle elements of the Mithraic mysteries, and even then, it would be done in stages, by degrees. The major ceremonies included,

1. The Tauroctonia bull sacrifice, from whose remains came a ritual banquet bestowing immortality.
2. The concoction of a libation from 3 kinds of wine, mixed in 3 goblets of steadily larger size.
3. The preparation of meal of bread and water which, in a sacramental sense, and when performed in conjunction with the wine libation, simulated the slaying of the primeval bull in heaven, believed to convey life eternal.

Despite the fact that paintings and wall reliefs showing bull sacrifices are universally associated with Mithraic mithraea (vaults), there is room to believe that cattle were not always killed by the brotherhood, and that the slaying was purely allegorical,

*"And it is also said that from the blood (of the primeval celestial ox) is the vine, and a great vegetable thing - as wine itself is blood - more befriending the sound quality of the blood".*¹⁶⁸¹

The theme of the above Magian text suggests that the Mithraic mysteries were not always a bloody affair, that they did not require the death of an ox at each assembly. The cult image of Mithra bleeding the ox might only have been symbolic of the outpouring of consecrated wine, or the squashing of the grapes, which were, so to speak, the blood of the primeval ox. Therefore, in a spiritual sense the officiating priest killed the sacred cow by handling the holy wine in the chalices. A particularly good parallel is afforded here with the Christian Eucharistic wine, the blood of the slain Jesus Christ, spiritually remade each mass through divine consecration at the hand of an ordained priest, from water and wine, together with the consumption of a wheaten wafer.

Mithraism professed that Mithra was a pivotal force within the universe, a being both good and evil at the same time, the centre point, all things in one. Even more than this, Mithra and his devotees were seen as champions of truth. As a result of this striving towards truth and honesty, the ultimate sanctity of the oath became central to their way of life. Mithra (like Indra) was the warden of the star bridge which led to heaven, protecting it from defilement. He stood guard there, ever ready to confront and punish all liars, for they would in no wise be allowed entry to heaven. Thus they believed that the avoidance of punishment in the underworld could not be achieved without knowing Mithra, the great mediator, and gaining his favour.

Kronos, the pre-eminent deity worshiped by the Mithraic cult appeared as a menacing-looking, winged, lion-headed spirit (similar in appearance to Sekhmet the "exterminator of humankind", the leonine Egyptian war god), with a large snake repeatedly coiled around it. Although he was commonly called Kronos, or Aion (also known as the God of the astrologers), there is substantial reason to believe that this was all a facade, and that he had another name; Deus Arimanius, the infernal Lord Ahriman. We can say this because Deus Arimanius' very name appears chiselled into these lion statues as far away as mainland Britain.¹⁶⁸² He is probably the very one who the Egyptian *Papyrus of Ani* describes as a great lion, the,

*"god-prince", "the Terrible One with the double divine face", the "lion god with the awesome eye .. Lord of flame opposing his enemies".*¹⁶⁸³

So it would appear that any serious study of Roman Mithraism is confronted with one major paradox. How is it that on one hand that Mithra was the upholder of truth and justice and yet the premier deity happens to be the Iranian equivalent of the Devil? Other archaeological evidence tends to point in this direction; Mithra was worshiped in underground vaults, and considering the vault at Carthage, may have been the recipient of child sacrifices, particularly young babies. For the practicing absolute dualist there is no paradox, this is the way things

Fig 89.1 Imagery on this Mithraic cameo leads one to believe that Mithraic rituals sprang from dualistic Zurvanite Magianism. The figure on the far right holds the Magian varesa ring. In the foreground is the cauldron and mortar.

Fig 89. 2. The Egyptian war deity, Sekhmet.

Fig 89. 3. Kronos, with the additional alias of Deus Arimanius.

are. Having said that no Mithraic vault has ever been unearthed containing juvenile remains, so it is near impossible to assess whether or not Mithrasians performed infernal sacrifices of the sort confirmed at Carthage, especially since human sacrifice was by that stage formally banned under Roman law.

Mithra was also the bestower of earthly wealth, renown and power, and loyally served by his priests and underlings who thrived on the bounty of his magic and gifts. This may help explain Plutarch's insistence that Zoroaster recommended sacrificing to good and evil,¹⁶⁸⁴ which as we know from the *Gathas* is utterly without foundation, for Zoroaster was fearless in his attacks upon any and every form of "wrong-doing". Plutarch said;

*"Zoroaster has also taught that men should make votive offerings and thank-offerings to Oromazes, and averting and mourning offerings to Areimanius".*¹⁶⁸⁵

Clearly, Mithraism had acquired a 'satanic' component that liked to snaffle a sacrificial victim every now and again. So in reality, the cult of Mithra was a dualistic fraternity, perhaps Magian Zurvanite, perhaps pagan Gnostic fraternity, but certainly *not Zoroastrian*.

By the same token, rites were performed on behalf of the Sun also, though not in the subterranean temples. The white half of Mithraism gathered outdoors in groves, conducting ceremonies upon fire altars. Considering the Magian ritual equipment depicted on Mithraic gemstone talismans, their more important rites do doubt resembled the Magian *Haoma* ceremony

The picture of a haloed Silvanus in fig 90.1, though set in a grove, is not a portrayal of him participating in a Mithraic *Haoma* ceremony. Originally a crew of eight Magi was required to perform the *Yasna* rites, and Silvanus appears alone here, perhaps incensing the flame. Moreover there is an absence of other ritual implements normally associated with such an important sacrifice, including the face mask which shielded the fire from the flamen's breath. I am more inclined to believe that Silvanus was merely performing one of the daily Gah sessions on behalf of the Good Sun, where prayers were offered to the good sun, and the fire fed with expensive perfumed woods, often imported from distant lands.

MITHRAISM WAS INTRODUCED TO ROME BY

Fig 90.1. The cult of Mithra also performed outdoor rites, in groves with a fire altar. Here Silvanus (complete with halo) tends the holy fire, as his dog watches on.

CILICIAN PIRATES

THE ORIGINS OF MITHRAISM

Mithraism's spread is largely attributable the re-settlement of the Cilician pirates to Rome.¹⁶⁸⁶ It later found its way to places as geographically widespread, and ethnically diverse as Syria, Gaul, Germania and Roman Briton, just to name a few places, as demobilised legionaries settled around the Roman Empire. Because the brotherhood's meetings were often conducted in the privacy of their cave of mysteries it is impossible to guess the degree to which Roman Mithraism ritually deviated from Mithraism as it was traditionally practiced in the East. Certainly, the Iranian worship of Mithra never included demonic sacrifices (which Plutarch mentions the Roman Mithraic brothers performed underground), and it is this degree of focus on the lion-headed Kronos, which points to the grafting of Medean, Babylonian and Hittite planetary worship onto the essential rituals of Zoroastrianism. What is known of Roman Mithraism indicates that it still incorporated many things from Iranian Mithraism, from whence it originated, plus magical Gnosticism. For example, a depiction of the bread buns used in the Mithraic holy meal show that they could be likened to *drons*, but differed slightly. In Mithraism the bread was marked with a single cross, whereas *drons* had nine crosses on them.¹⁶⁸⁷ In fig 90.2 we find shirt, belts, and a drinking horn, not to mention a hand full of twigs, perhaps a barsom.

Fig 90.2. A Mithraic ceremony. Note the costumed participants.

Similarly Chaldeans and Magi engraved magical gems to invoke various forces. Yet it is also curious that a few *Gnostic gems* possess Mithraic images on the reverse side, and were sometimes mounted on rings. This suggests that a sect of pagan Gnostics were somehow affiliated with the cult of Mithra.

MITHRAISM GOES WEST

In his book *Pompey*,¹⁶⁸⁸ Plutarch spoke of the greedy Cilician pirates during the Mithridates wars who, with impunity, plundered not only the high seas, but coastal and inland cities and major temples, in their thousand-vessel fleet of golden-masted and silver-oared corsairs. A thousand corsairs, just imagine it! Each ship must have needed a crew of at least 50 deckhand-brigands. In effect this meant that during the 1st Century AD there was up to 50,000 Cilician cut-throats (with Zurvanite-style beliefs, including devil-worship) plying the Mediterranean and Aegean, plus the many coastal inlets, in search of booty. If we take into account the women folk and children attached to these pirate bands, the wandering Cilicians might have had an itinerant population in the vicinity of 100-200,000. Who knows, considering the period for their more intense piratical exploits, what is to say that these Cilicians were not actually exiled Zurvanites, with the same beliefs as other Zurvanites who had made the land journey into Scythia from Iran? Later after 100,00 Roman troops and almost 300 warships were despatched to the region, the felonious sea-roguers were cordially disarmed through negotiation, and resettled in Rome. No longer fearful of the unpredictably destructive Cilician presence in the western seas, the legendary Pompey made war against the rebellious Greek, Mithridates, and with some success. With the destruction of Mithridate's forces in the vicinity of the Euphrates, Mithridates took off, sailing across the Black Sea, to safety. It was during this campaign that many Mithraic devotees and their Magi are thought to have migrated North of Pontus, so that Mithraic Magi of the extreme dualist Persian variety, came to call the lower Rus' steppes their home. From there Mithridates re-mustered his army and set off to attack the Italian mainland, all the way from Scythia, going via the Balkans. Obviously his forces encountered no problems from the Scythians, and just maybe they could have constituted a large number of his troops. Thus it would seem that the 'Russians' of their day were on friendly terms with Mithridates. It is mentioned that Pompey ended up fighting the Pontic and Armenian nations in these campaigns, thus indicating regional solidarity between the Scythians, Armenians, Pontic races and the Mithraic Magi.

Adversaries to be feared, most fond of war and pillage, the pirates practiced various Eastern mysteries on Mount Olympus, chiefly amongst which were the rites of Mithra. "Bizarre" sacrifices are said to have been the key offerings, but Plutarch didn't elaborate on this. It should be stressed that when Plutarch uses the word "bizarre", he was actually signifying that the rites were off-beat by Roman pagan standards at the very least. And that must really be saying something. As a personal librarian to Mark Antony, and someone with one of the greater Roman library collections at his finger tips, he must have read numerous accounts of sacrificial practices! He then went on to name them as the progenitors of the Roman arm of the cult. As time went by, more and more of these Cilicians went to live in other parts of Europe.

EVIDENCE OF MITHRAISM IN MEDIAEVAL RUS'

There is some reason to believe that Mithraism was still being practiced in pagan Rus';

1. Like the Mithraic Cilicians, certain Russians saw Mount Olympus as a holy place,¹⁶⁸⁹ from whence their gods set foot upon earth while visiting. This in itself is indicative of Greek and/or Mithraic religious influences on an unknown scale.
2. Before any Mithraic devotee could partake of the sacrifice they had to ritually bathe and mercilessly flagellate themselves 30 or so times, usually with nettles, or alternatively with some sort of punishing acidic decoction. According to the *Primary Chronicle*, this type of bath-house behaviour existed in Rus', with bathers whipping themselves in self-mortification as they bathed, all the while pouring an unidentified liquid upon themselves. We may presume that practices of this kind served to heat the individual during the extreme cold, but could also expel demons, or erase the stain of physical and spiritual impurity. Pursuant to the pagan Russian and Byzantine Pact, which allowed for the presence of heathen Russian traders in Constantinople, the Greeks were treaty-bound to supply specialised bathing facilities suitable for their needs.¹⁶⁹⁰ The need to ratify special bathing facilities for the Russes, in such a major treaty, is most significant, and further illustrates the importance the Rus' attached to ablutions, which we might think had a ritual purpose, rather than for simply hygienic reasons. It is highly probable that their abluion rites were Mithraic.

Fig 91. Mithraic torch-bearers; one illuminating heaven, the other the underworld.

THE PAGAN SLAVS HAD BATHING CUSTOMS SIMILAR THOSE OF THE CULT OF MITHRA

THE RUSSES, LIKE THE
CULT OF MITHRA, DRANK
A LIBATION OF
FERMENTED BREAD AND
WATER

3. Each 10th Century Rus' Druzhinnik carried over his shoulder the equivalent of standard Roman encampment kit,¹⁶⁹¹ and shields that seem based on a 700 year old legionary design, once used during the time of Trajan. Besides being emblazoned on Roman shields, the outward radiating arrow motifs found on the Rus' shields (their shields were normally painted red) can also be seen engraved into Mithraic gem work, together with an owl, a snake, a deer, a scorpion, a dog and a lion, all of which surround a large central eye.¹⁶⁹² I don't know of the true origin of the outward radiating arrow (or lightning bolt) motif used; whether it came from, or was adopted by, the cult of Mithra, nor am I aware of its degree of use outside of the cult and the Roman army. Few other Roman military equipment styles existed in Rus' (c. 1,000 AD), so the shields may have had a ritual meaning. Rus' military ranks included personnel with equivalent Roman ranks, such as *Decurion* and *Sotnik* (literally "a Centurion"). More is said of the Russian military in Appendix III.

4. Mithraic rites were conducted in shrines located underground, preferably in secluded caves and buried vaults (*Mithraea*), since their transmission and performance had to be done underground in greatest secrecy. Much of the cult member's spiritual life was spent in the subterranean *Mithraea*, conducting worship and initiations with other fellow aspirants. Underground temples have been found in Russia, although they do not bear traditional Mithraic wall murals, nor do they adhere to the standard architectural floor plans common to Western European *Mithraea*. The Rus' also drank *Kvas*, a fermented drink made from bread and water; Mithraic devotees had a similar bread and water drink.

DIVINE COMEDIES WERE
PERFORMED IN RUS'

5. The performance of comedies and pantomimes played a pivotal role in the religious life of many pagan Russes. Theatre and divine comedy were an inseparable part not only of Neo-Pythagoreanism, but Mithraism as well.

MANY RUSSIANS WERE
PARTY TO
BROTHERHOODS

6. Rus' was a brotherhood driven society. Everyone had them; merchants, farmers, soldiers and tradesmen. Each local Mithraic sect was headed by a panel of Dekurions; the pagan Rus' military had Dekurions as well, which by implication may have held their original Mithraic status.

CAESAR'S ALTAR WAS
ONCE LOCATED IN
SCYTHIA

7. Caesar's Persian-style Mithraic altar was situated in the Ukraine during the 2nd Century AD.

8. Pagan Russian cosmology conformed to a Zurvanite/Mithraic format.

9. The Russes worshiped a god called Troyan. His cult is believed to have entailed the posthumous worship of a 2nd Century AD Roman Emperor, namely Marcus Trajan.

When these details are collated we can infer that Mithraism in its purely dualist form was most likely alive and well in Rus', the home of Perun, who some may have seen as "Mithra of the wide pastures" (who was in turn similar in nature to the Daeva Indra). There really could have been no more fitting place for the continuance of the cult than the wide expanses of the Russian Steppe. What has survived the ages concerning pagan Rus' shows us that their ritualism and traditions were similar to Neo-Pythagoreanism, and Magianism. This leads us to several possible conclusions;

PERHAPS NEO-
PYTHAGOREANISM,
ZURVANISM AND
MITHRAISM EXISTED SIDE
BY SIDE IN SCYTHIA, BUT
INFORMATION ON THEIR
RESPECTIVE FORMS OF
PAGANISM HAS BECOME
INTERMINGLED OVER
TIME

1. The Rus' pagans were devotees of Mithraism alone, a faith that officially fused the religious cultures of the Neo-Pythagoreans and Magi. This helps explain the melange of Greek and Persian ritualism and mythology at work within pagan Rus'.

2. The Rus' had several main religions simultaneously operating there, but in different regions; the faiths of the Neo-Pythagoreans, the Iranian Zurvanite Magi and the Mithraic cult. The admixture of Greek and Persian religious data might only have become mixed together in the centuries leading up to the year 1,000 AD, in places like Parthia

3. These religions had originally been present in their pure forms, but after coexisting there for so long, had begun to borrow off each other, so much so that new religions were formed which blended the characteristics of these varied progenitor faiths.

THE MITHRAIC INITIATION

Nobody really knows the selection criteria for the brotherhood of Mithra, nor do we know the precise form of their initiation bravery tests. But the initiation was believed to symbolise the soul's journey down into the underworld, the crossing of the river Styx, the punishing ordeals experienced there, the meeting of a guardian who led the person up and out of the blackened cesspit, culminating in a rising from death; the pagan resurrection. The ordeals were said to have taken place over forty days, and encompassed twelve degrees of trauma to be undergone by the aspiring candidate to the brotherhood. The bravery needed to undergo these ordeals was very real indeed, and the risk of accidental death during the trials was ever present, as in fact transpired every so often.

The levels of planetary trial and guardianship went in the following order; *Raven, Groom, Warrior, Lion, Persian and Sun-bearer*, finally culminating in the exalted rank of *Father*, an occult master, beneath whose power were the seven planets. There was even a supreme father, a "worldwide" Mithraic cult leader called the *Pater Patrum*, a pagan religious figure comparable in status to a Christian Pope or Pontifex Maximus. In very many instances, the internal rites of the cult of Mithra outwardly resemble those of the apostolic Church, yet at their core lay something which was the antithesis of Church thinking, namely the harnessing and utilisation of the planetary essences to alter the course of events in this world. Christian membership of the brotherhood amounted to an act of apostasy.

The symbolic imagery attached to each stage of that journey was recorded by Plutarch, and was as follows;¹⁶⁹³

1. A dagger was held at the throat of a kneeling adolescent.
2. The youth lay for an extended period on a bed of freezing snow, perhaps symbolising the terrible winter that would afflict the world.
3. The youth suffered a trial of water, standing upright for an extended period with arms torturously held high, in the shape of a crescent.
4. The youth donned the Cap of Liberty, a pointed Phrygian cap.
5. The youth negated a fearsome flaming pathway to retrieve a rock, perhaps a piece of amber.
6. The youth stood with a bull to his left.
7. The youth stood before a panel of four people who were seated behind a horseshoe shaped table.
8. An old man greeted the youth and ushered him up a stairway.
9. The youth held the hand of this man whilst wearing a long and elegant robe.
10. The man and the youth then traded places.
11. The naked youth was led by the man to a figure seated on a throne. The accomplished aspirant was presented with a laurel victory corona on the tip of a sword which was taken and worn only on the shoulder. Having got thus far, the initiate was then given a calf.
12. At long last the youth finally held the calf upside down by its back legs.

Upon passing the initiation tests the victorious novice stood in a pit locked tight by a grate. Next an ox was slaughtered atop the grille allowing a torrential outpouring of piping-hot blood, which gushed down over the candidate, washing away their imperfections and iniquities. This pit of purification may have originated from the *Bareshnum* trenches once used by the Iranians, which were often lined in stone. Adults stood in such a trench before receiving the initial Bareshnum purification with consecrated water.

Through his "mystery of mysteries", and a successful passage through the traumas of initiation, and the seven ranks within the cult, the priest gained power over the planets, each in turn, and gained the gift of prophecy.

Dionysian and Orphic magic

LOW MAGIC RELIGION pagan Gnostic.

From somewhere to the North of Greece emerged the cult of Dionysius, a set of core mysteries which sank its roots deeply into the religious fabric of Greek civilisation, and became quite popular. In 500 BC Herodotus, a reputable geographer made famous for his attention to detail and accuracy, noted in the *Histories*¹⁶⁹⁴ a Greek Dionysian religious centre in Scythia, in a place called Gelonus, once ruled by the Budini. Its lavish wooden temples became a triennial magnet for Dionysian pilgrims from Greece and perhaps elsewhere.

MITHRAISM HAD A VERY DANGEROUS SERIES OF INITIATIONS FOR ANY PROSPECTIVE CANDIDATE SEEKING MEMBERSHIP OF THE CULT

EACH LEVEL OF INITIATION HAD ITS OWN TITLE

THE INITIATION

ANY CANDIDATE WHO SUCCESSFULLY PASSED THE ORDEALS WAS BATHED IN THE BLOOD OF A BULL; THIS WASHED AWAY ALL THEIR PAST SINS

THE CULT OF DIONYSIUS ORIGINATED TO THE NORTH OF GREECE

THEY HAD A MAJOR RELIGIOUS CENTRE SOMEWHERE INSIDE SCYTHIA, WHICH GREEKS VISITED EVERY THREE YEARS

THE SECT FOUND DEVOTEES IN EGYPT, GREECE AND ROME., BUT WERE OFTEN SEEN AS CONTRARY TO PUBLIC ORDER

DIONYSIANS PERFORMED RITUAL DRAMAS USING VARIOUS PROPS AND MASKS

DIONYSIUS WAS A GOOD-HEARTED FOREST GOD, BUT HE ALSO DROVE MANKIND MAD

DRUNKENNESS AND THE CONSUMPTION OF RAW FLESH WERE SAID TO BE TYPICAL CEREMONIES PERFORMED BY THE CULT

DIONYSIANS BELIEVED THAT SOULS WERE TRAPPED WITHIN THE FLESH, AND HAD TO BE FREED

ORPHIC TEACHINGS ABOUT SOUL-BODY DUALISM RESEMBLED THE DIONYSIANS, BUT THEY DID NOT EAT MEAT

ORPHIC DEVOTEES HOPED TO DEFEAT THE TITANS (GIANTS) WHICH ENSLAVED PEOPLE'S SOULS

THEIR SACRED MYSTERIES EMPLOYED MUSIC, INCENSE, SACRED IMAGES, POETRY AND METAPHYSICAL JOURNEYS

OMOPHAGIA WAS ALLEGEDLY PRACTICED BY THE DIONYSIANS

Further eastward the Dionysian rites came into Iran after 300 BC, imported by Greek colonists enamoured by its ritual shenanigans.¹⁶⁹⁵ So popular were their winebibbing rendezvous they were still being celebrated in Central Asia as late as Islamic times, though they deviated from traditional Dionysianism to an unknown degree, owing to an accrual of Iranian religious tradition.¹⁶⁹⁵

Not everyone was pleased with their mysteries, and so Dionysianism was not greeted with full State endorsement everywhere it sprouted. Before too long, the fearful Dionysian sects that arose in Egypt, Greece and Rome were placed under government surveillance and control in an attempt to tame them down somewhat. All those capable of initiating new members were required by law to be listed on a formal state register. Eventually they were expelled from these empires for harbouring covert political conspiracies, and transgressions against good public order. These included their sacrificial slayings, raucous processions and drunkenness!¹⁶⁹⁶

Judging by a 7th Century AD Byzantine holy council on the matter, the ancient Dionysian and Orphic cults were still loitering in Bulgaria and remoter areas, perhaps even as late as the 10th Century AD. The situation was therefore much the same as in Islamicised Central Asia.

In the Greek tradition it was Dionysius who first taught mankind to grow grapes, crops, and to harness ploughs for work in the fields.¹⁶⁹⁷ Through him life returned to the land each year, and so he was greatly worshiped on account of his role in the land's fecundity. Dionysius was worshiped in pine groves or temples of varied description.¹⁶⁹⁷ His idols normally took form of posts, sometimes surmounted by a mask.¹⁶⁹⁷ However there are cases where he was carved in stone, or made into gilded bronze statues.¹⁶⁹⁷ Dionysius himself appeared either as a bull or goat, as a man clad in the skin of the same creature.¹⁶⁹⁸ For this reason Thracian Bacchanalia attendees wore horned headdress in adoration of their fertility god.¹⁶⁹⁸

Adepts could only enter the cult through initiation into their sacred mysteries. Rites such as divine dramas were re-enacted using props and masks, during which the gods Dionysius or Orpheus suffered death at the hands of titans and enraged women. Both deities rose from the horrors of their dismemberment more divine, prophetic and enlightened than before. And by acting out plays (with roles assigned to members or guests) simulating the cunning murder of Dionysius (or actually doing them) devotees shared in the mystical gains generated by the rite.

These reenactments of his tragic death were by no means a regular event, instead happening once every two years on account of the drama's sanctity.¹⁶⁹⁹ Most times the victim rendered apart was a bull, whose flesh was devoured raw by participants in the ceremony. There are recorded instances of Dionysian human sacrifice at Potniae, Tenedos and Chios, though a later practice saw the victim replaced with a goat.¹⁷⁰⁰ We hear that sometimes the victim was from the royal family, perhaps an attempt to replicate Dionysius' kingship, though in one case the victim was a female blue-blood.

In the oldest Bacchic form, female witches sometimes met during the late evening, in halls, or on the slopes of hills or mountains, to partake of orgiastic rites, sing hymns, perform plays and drink wine until they became mystically possessed by powers of the ancient Greek gods Dionysius or Orpheus.

Dionysius, that wild silvan deity, was said to be a kind and willing healer of men, but he drove them raving mad in his *bacchanalia*, compelling them to indulge in drunken debauchery and *omophagia*, the consumption of raw meat, sometimes in the form of ritual cannibalism. Bacchic witches dressed in long garments, wore fox skins, and coiled ivy or grape vines around their body and head. The male priests of their number carried a ritual sword and shield which were bashed one against the other in a state of hypnotic abandonment, to the sound of rhythmical music and cymbal clashes of the bacchantes. This act kicked off with drinking, carousing and group orgies, which simulated the "good things in life", followed by the inevitable reproduction of the life cycle through the mating process (symbolic of the molestation of Persephone), a role willingly played by a bacchante. The crowning glory of their prime ritual mystery was the actual or pantomimed torture, sacrifice and consumption of a goat or drunken victim, rites which emulated the hardships and eternal sufferings of this life, followed by the horror of death, the destruction and consumption of the earthly body by the grave, the journey down into the underworld, and the encountering of dangerous and fiery tribulations which culminated in the liberation of one's spirit from its bodily tomb.

The Dionysian rites eventually gave rise to a second stream of mysticism, known as Orphism. Great believers in reincarnation, the vegetarian Orphic devotees sought to halt the unstoppable wheel of life by defeating the Titans,

by snapping the bond which chained the soul (Dionysios) to the physical body (and its fallen nature). In Orphism this occurred through the out-pouring and drinking of libations, the examination of one's past lives, sacred dramas, holy images, poetry, music, incenses (of frankincense, poppies and myrrh), the sound of the bull-roarer, and metaphysical astral voyages to the stars, which were seen as other worlds. Suitable candidates submitted themselves to initiation into the *Teletai*; the "sacred mysteries" of both flesh and spirit, life and death. In doing so they conducted a ritual drama in which the candidate broke open a box and viewed sacred pictures (perhaps symbols of the cosmic egg, the Serpent and the male member), learned "hidden secrets" and received "elemental baptisms" which anointed the candidate's tomb (body) with the purity of fire, air and water, thus emancipating it from the damaging grip of the Titanic enemies of Zeus and the other Greek celestial gods.

DIONYSIAN RITUALS IN RUSSIA?

Earlier I described a Russian witch-rite which had all the traits of Dionysian revelry. The Orthodox Patriarch Photius spoke of the Rus' tribe as practitioners of Greek rites. Whether this was a reality of his day, or whether his comments were his own assumption based on the findings of an earlier Church council in Constantinople, which in the 7th Century AD saw fit to mention reports concerning the practice of Dionysian rites in the far North,¹⁷⁰¹ is hard to say. If they were to be found throughout that region, then the Dionysian or Orphic devotees and musicians must have entered Rus' via Thessaly (ie; Bulgaria and Makedonia). Maybe they came to Russia from Central Asia, bearing decayed remnants of Graeco-Iranian culture, that once thrived in Parthia. Or perhaps they had long been in "Scythia" all along, since the time of the Tauri and Geloni, though a belief in a long-standing Dionysian cult presence is logical considering that Herodotus saw a considerable Dionysian presence in ancient Scythia. It should not be forgotten that the mere concept of Dionysius was imported into Greece in the first place, from somewhere in the northern wilds.

Later in their history, the greater part of the Bacchante (Dionysian revellers) became a strictly philosophical cult. And yet in spite of this, M. Krishchuk describes characteristic Rus' witch "sabbaths", that embody classical Dionysian ritual; erotic parades by masked women who had plaits of hair wrapped around their bodies, a Saturday meeting during which an orgy took place, and an animal (not a human being) was rent apart.¹⁷⁰²

CANNIBALISM; FACT OR FANTASY?

Many modern commentators deny that Dionysians ever practiced ritual cannibalism. Certainly when Herodotus went to Scythia he noted the existence of a massive Dionysian cult centre called Gelonus, which was razed by the Persians as they raced across the steppe grasslands in search of the evasive Scythians. At no stage does he mention that cannibalism was practiced at Gelonus, among some of the nearby tribes, yes, but not at Gelonus. If they held banquets of human flesh, I am sure he would have recorded it, though the alleged cannibalistic rites of *omophagia* might only have been held every few years, at a time other than when Herodotus was walking about the Scythian countryside. That is not to say that there were not practicing cannibals, elsewhere.

What Herodotus recounts of Northern cannibalism needs further attention. Speaking of the northerly wastes he wrote;

*"Above this desolate region dwell the Cannibals, who are a people apart, much unlike the Scythians".*¹⁷⁰³

On the Issedonians he said;

*"The Issedonians are said to have the following customs. When a man's father dies, all the near relatives bring sheep to the house which are sacrificed, and their flesh cut in pieces, while at the same time the dead body undergoes the like treatment. The two sorts of flesh are afterwards mixed together, and the whole is served up at a banquet. The head of the dead man is treated differently; it is stripped bare, cleansed, and set in gold. It then becomes an ornament on which they pride themselves, and is brought out year by year at the great festival which sons keep in honour of their father's death".*¹⁷⁰⁴

And then there were the Indo-Iranian Massagetae, who migrated into Europe;

"...Human life does not come to its natural close with this people (the Massagetae); but when a man grows very old, all his kinsfolk collect together and offer him up in sacrifice; offering at the same time some cattle also. After the sacrifice they boil the flesh and feast on it; and those who thus end their days are reckoned the happiest. If a man dies of disease they do not eat him, but bury

HERODOTUS DID NOT MENTION THAT THE DIONYSIANS OF GELONUS WERE CANNIBALS

BUT HE DID MENTION THAT SOME OTHER REGIONAL INHABITANTS WERE PARTIAL TO HUMAN FLESH

THE ISSEDONIANS ATE THEIR PARENTS AND RELATIVES. THE HEAD OF THE CANNIBALISED DECEASED WAS COVERED IN GOLD

FEW DIED NATURALLY AMONG THE MASSAGETAE, THEY BELIEVED THAT ONE SHOULD BE RITUALLY SACRIFICED AND EATEN

*him in the ground, bewailing his ill-fortune that he did not come to be sacrificed....Milk is what they chiefly drink. The only god they worship is the sun, and to him they offer the horse in sacrifice; under the notion of giving to the swiftest of the gods the swiftest of all mortal creatures".*¹⁷⁰⁵

SOME ELEMENTS OF THEIR BELIEFS SEEM VEDIC IN NATURE

Now if what Herodotus was describing here is the Aryan *Soma* and *Asvamedha* sacrifice recorded in the *Rig Veda* (the Sun Veda), then it is evidence the Aryans considered it holy to slay and ritually cannibalise their parents and grandparents, evidently via the *purusamedha* ritual for human sacrifice. If not then it was a hybrid form of Vedic ritual formulated in the forests of what we now call Russia.

BONES HAVE BEEN FOUND WHICH INDICATE THAT THE CORPSE WAS CANNIBALISED

In Russia and Western Europe it should be noted that incomplete skeletons have been found by archaeologists, which were deliberately cleaved apart to remove the marrow, by relatively exact cuts. It has been suggested that these are what remained of a cannibalised victim, but another view is that for some ceremonial reason the bones were snapped or cut open to have their marrow removed. While haphazard breakages in the bones bespeak rough handling or perhaps even animal bites, the presence of deliberate cuts in some places is indicative that the skeletons were treated in this manner by human beings.¹⁷⁰⁶

It is comfortable for Westerners to only associate cannibalism with the Far-East during the middle of the first millennium BC, but even during the Middle Ages we hear tales of man-eating. Prester John's letter to major European royals mentioned the cannibalism that several of his vassal races reckoned so holy, for they were said to eat the flesh of both man and beast.¹⁷⁰⁷

CHARLEMAGNE FORBADE SAXONS AND WITCHES TO EAT HUMAN FLESH

Certainly *Clause 6* of Charlemagne's *Capitulary for Saxony* (dating to the 8th Century AD) mentions that it was a capital offence for witches and others to eat human flesh.¹⁷⁰⁸ Presumably if there was no such thing as cannibalism in the Holy Roman Empire then there would not have been a reason to include a law against it!

SOME CRUSADERS WERE CANNIBALS

And following one Middle-Eastern military engagement some elements of the western Crusader force were discovered gorging themselves with the flesh of Muslims slain in combat.¹⁷⁰⁹ Could cannibalism have survived into the Mediaeval era, and if so was it related to the ancient eastern practices? My own feeling is that it did, and it was.

UNFORTUNATELY MANY NEW BREED SCHOLARS DOUBT THE EXISTENCE OF TRUE CANNIBALISM

There has been a tendency for modern-day scholars to class any historical reference to cannibalism (especially those made by Christian authors) as a standard means of deriding alien cultures; it's a negative reference, and therefore is suspect at the very least, if not totally false. The facts however tell a different story. Obviously there are no surviving cannibals in Europe, but if we look elsewhere in the world, there is plenty of evidence for it.

Not all cannibalism is ritually inspired, in fact it is rarely ever ritual in nature. When severe famine consumes the land, there are certain circumstances in which the instinct to survive at all costs can easily take over. I cite the following examples;

CANNIBALISM IS RARELY RITUALISTIC; SIMPLY A MEANS TO STAY ALIVE

Earlier this century Stalin crippled the Ukraine's agricultural capability by banishing and slaughtering the Kulaki land holders (using troops and tanks!). With nobody left experienced enough to work the land on the required scale, a famine of tragic proportions ensued. In one documentary I saw, a Ukrainian man enacted for the cameras the manner in which he hid around a corner then seized a passer-by, put him to death and cooked him up with what few potatoes he and an accomplice had left. As a result of such happenings anti-cannibalism posters were circulated to stop it.

CANNIBALISM HAPPENED IN THE UKRAINE IN STALINIST TIMES

Even as well-fed party officials ordered Red Army troops to guard the last grain stocks from the starved populace, reports coming out of Stalin's Soviet Union stated;

IT ALSO HAPPENED IN AMERICA

*"The Soviet Government does not allow corpses to be buried until they are decomposed because if fresh corpses were buried the population would open their graves and eat them. Cannibalism is spreading wholesale. Peasants often eat their dead children. The Soviet Government punishes cannibalism by shooting without trial, but that does not help much because death has lost its terror".*¹⁷¹⁰

Cannibalism was not unknown in America either. During an ill-fated wagon expedition from Illinois to reach California in the late 1840's, the sizeable "Donner party"¹⁷¹¹ made an ill-advised departure from the accepted migration route just the other side of Fort Laramie, hoping to take a short cut to the West Coast. But before long their oxen teams failed them, and they found themselves stuck high in the Sierra Nevada Mountains. There the migrants endured a substantial period of isolation in the wilderness. Having run out of oxen, and with no food at their

disposal, the famished party was compelled to cannibalise the remains of their fellow travellers in order to sustain the group. Extreme cold and a hungry death had claimed some 66% of the men and 33% of the women and children, and by eating their remains the survivors obtained just enough sustenance to get by on. As recounted by a survivor by the name of William Perry, both of the Indian guides who tried to lead them out of the wilderness (who incidentally refused to eat the flesh despite their own hunger) were ruthlessly hunted down by a crazed member of the party. No longer content with cadavers, those who had tottered over the abyss into a more primordial, Darwinian state, sought live kills, with the result that the cowering and exhausted guides were shot and cooked. Yet despite the seemingly unwholesome nature of the proceedings, the few men that survived had, through their actions, succeeded in providing the "food" which kept the majority of the women and children alive.

Eventually a series of rescue parties succeeded in reaching them. As they made their way out to the frozen lake upon which the ragged survivors dwelled, they were greeted by the sight of shattered and half-devoured human remains scattered about the snow bound encampment.

Natives in Papua New Guinea ate their enemies up until fairly recent times, and the Maoris are known to have cannibalised those wounded or slain in battle when their yam harvests were poor.

Famished Japanese soldiers in Papua New Guinea during World War II butchered and cooked Australian and American prisoners of war once their convoys could no longer get through to them, and their food stocks had dried up.¹⁷¹²

Tenth Century AD Chinese performed cannibalism during times of famine; in fact they even had culinary names to described dishes that were made with old people, youngsters and so forth.

Similarly Australian aboriginals and American Indians are not usually regarded as consumers of human flesh, but isolated accounts mention that they have done so in the past.

The Mongols ate 10% of their own soldiers to alleviate the hunger experienced by their army as they besieged the Chinese Emperor in his own capital city. By feasting on their remains the Mongol forces stayed strong enough to dig the access tunnels which eventually gave them entry to the besieged city.¹⁷¹³

And let us not forget the airlines disaster in the Andes mountains during the 1970's, which saw the survivors eat the bodies of crash victims until help arrived.

Claims that there was no such thing as cannibalism are just plain nonsense, as are politically correct accusations that most accounts of cannibalism are items of brutal propaganda. Despite the amount of enmity and friction that exists nowadays between Westerners and Muslims, we do not feel ourselves instinctively inclined to call Muslims cannibals, or vice versa. In short, there was (and perhaps always will be) such a thing as cannibalism, and what is more, that under certain circumstances *it is carried out by ordinary people fighting to stay alive.*

But ritual cannibalism is of a different nature. The notion that mankind fed and sustained the gods can be found in a number of cultures, where they performed ritual carnage conceptually similar to what was witnessed by Herodotus or the Spanish conquistadors, keeping the gods fit and healthy with blood and body parts, human or animal. Without these things they believed the cosmos would collapse. According to Herodotus, some Northerners ate their enemies (perhaps the ultimate victory over an enemy) and made cups from their skulls.

This might be traced back to the Magi and Dionysians who taught that every body-part was related to differing natural manifestations within the bio-sphere.

*"For, as the existence of all these creations is derived from the four elements, it is manifest to the sight that those worldly bodies of theirs are to be mingled again with the four elements"*¹⁷¹⁴

Dionysian *Omophagia* was allegedly a ritual killing followed by the consumption of the sacrifice and the distribution of their various remains around the surrounding environment, returning creation to its most basic elements. The spirits of the elements and departed souls could be found across the countryside, within natural features such as hills, trees, ponds, rocks, beehives etc.

The very ancient practice of killing strangers and ritually cannibalising once took place in India. From the *The Primary Chronicle*, we know that cannibalism went unrecorded in Rus', but still reported as extant in India, which might mean that it had died out in Rus' by the 11th-12th Century AD. However, from Adam of Bremen we hear that there were supposedly still practicing cannibals in the vicinity of Rus' in the 10th Century AD,¹⁷¹⁵ who were most

ANY CLAIMS THAT THERE WAS NO SUCH THING AS CANNIBALISM ARE UTTER NONSENSE

UNDER BIZARRE CIRCUMSTANCES PEOPLE DO EAT HUMAN FLESH

RITUAL CANNIBALISM IS OF AN ENTIRELY DIFFERENT NATURE THOUGH

IT MIGHT BE RELATED TO THE NEED TO RETURN ALL ELEMENTS BACK TO THEIR ORIGINAL STATE

OMOPHAGIA

THE PRIMARY CHRONICLE DID NOT MENTION CANNIBALISM IN RUS', ONLY IN INDIA

PLUTARCH SAID THE DRUIDS WERE CANNIBALS

SOME PARTS OF LINDOW MAN'S BODY WERE MISSING.

likely the Finnish Mordva tribe.

Plutarch refers to certain Druids as cannibals and head-hunters. While there is no doubt that Celts and their Druidic leaders took heads during battle, this reference to meals of human flesh (if true) is most likely evidence that some druids practiced ritual *Omophagia*, of a sort known to the Dionysians.

The bog body discovered at Lindow Moss in England¹⁷¹⁶ (believed by some to be that of a sacrificed Druid Prince) was missing some parts of his body, and this was also the case with the second body found at the same bog. This may well be attributed to accidental mutilation caused by peat cutters, but it bears mentioning that Lindow man was excavated lying face down, and at the same time he was missing genitals. The loss of this body part from such a shielded position would tend to indicate that it had been hacked off prior to him being committed to the bog. The second body was also incomplete, missing a head and an arm. Were these missing body parts removed from the corpses and intentionally buried at other locations? Or might they have been ritually consumed?

When speaking of the black Magi we are on much firmer ground concerning *ritual cannibalism*, because for them cannibalism was deeply related to necromancy, a subject you'll traverse in Chapter VIII and Part II, Chapter VII.

Primitive magic

LOW MAGIC RELIGION Any.

Primitive shamanic magicians festooned most cultures of antiquity; Russia was no exception. They were normally identified at birth by certain planetary aspects, which fecundated paltry magical powers within the sorcerer. Primitive magic survived since prehistoric times, when shamans performed dances and songs dressed in skins, which were aimed at increasing the frequency of game animals, or appeasing the spirits of beasts which they had killed during the hunt.

In its later form, primitive magic evolved into the spells of the Vedic elders and wonder-workers, which can still be found in the *Rig*, *Artharva*, *Yajura* and *Sama Vedas*.

Necromancy

LOW OR HIGH MAGIC RELIGION Any.

In the early 1500's Cornelius Agrippa referred to the high rites of necromancy as *Goeta*, the art of demon summoning. It demanded the use of magical words in song, and personal spiritual defilement to effect the raising up of the dead, and demonic essences. These the necromancer then attempted to coax into service. So shunned were its ways that Cornelius described *Goeta* as "*execrated by all known laws*".

What Agrippa did preserve about high necromancy was probably quite reliable, after all magic, horoscopy and divination were his chosen fields of expertise. And yet in Freaque's translation of Agrippa's *De Occulta Philosophia*, out of 836 pages on ritual magic and other occult knowledge, necromancy constituted barely 4 pages, and these were largely condemnatory. Nevertheless Agrippa did write his extensive three volume treatise on magic at a time when the occult was well and truly a taboo subject, and for this reason he might have refrained from telling the reader everything that he knew of them, if only to safeguard the remainder of his work. To read or possess tomes dedicated to necromancy was unlawful in every way, reprehensible to many magicians and most ordinary citizens due to the harm it caused.

In principle, necromancers sought to pollute their bodies with dead matter, rotting food, or pieces of cadaver. This then permitted entities from the underworld to freely violate the medium as they wished. The same theme is adequately described in the Magian texts. In the following Zoroastrian scripture cannibals and dog-eaters are portrayed as falling under Ahriman's dominion forever.

"O Maker of the material world, thou Holy One! Can he be clean again who has eaten of the carcass of a dog or of the carcass of a man? Ahura Mazda answered: "He cannot, his life shall be torn out, his bright eyes shall be put out; the Drug Nasus falls upon him, and takes hold of him even to the end of the nails, and he is unclean, thenceforth for ever and ever".¹⁷⁷

PRIMITIVE MAGIC WAS CONNECTED WITH PREHISTORIC ANIMISTS AND THE EARLY ARYANS

GOETEA; THE HIGH RITES OF NECROMANCY

IT WAS EXECRATED BY ALL KNOWN LAWS

AGRIPPA DID NOT GIVE IT MUCH COVERAGE IN HIS BOOKS

THE BLACK MAGI SAW CANNIBALISM AS A RITUAL WHICH ADMIRABLY SERVED THE PURPOSES OF AHRIMAN

IT CAUSED LIFE-LONG DEFILEMENT FOR WHICH THERE WAS NO PENANCE, IN THIS LIFE OR THE NEXT

HAVING EATEN THE FLESH OF A DOG OR MAN, ONE WAS IN LEAGUE WITH THE EVIL ONE FOR ETERNITY

It is fairly obvious in this passage that the white Magi were trying to get a message across to members of their community, who partook of human or canine flesh, perhaps to become deeply possessed by the Death Demon, whilst still living. They may have done this to procure the powers of necromancy. Since the rites of the black Magi were the antithesis of those dedicated to the sun, the white Magian prohibition of cannibalism was practically a sterling guarantee that they would do it. In terms of necromantic prestige the consumption of a corpse was far superior to defiling the waters and holy fire with a corpse.

"O maker of the material world, thou Holy One! Can he be clean again, O Holy Ahura Mazda! who has brought a corpse with filth into the waters, or unto the fire, and made either unclean?"

Ahura Mazda answered: "He cannot, O holy Zarathustra! Those wicked ones it is, those men turned to Nasus, that most increase gnats and locusts; those wicked ones it is, those men turned to Nasus, that most increase the grass-destroying drought."

*Those wicked ones it is, those men turned to Nasus, that increase most the power of the winter, produced by the fiends, the cattle-killing, thick-snowing, overflowing, the piercing, fierce, mischievous winter. Upon them comes and rushes the Drug Nasus, she takes hold of them even to the end of the nails, and they are unclean, thenceforth, for ever and ever".*¹⁷¹⁸

Thus, in white Magian tradition, cremating flesh in the holy fire or cannibalism were forms of black witchcraft that constituted grand rites of defilement, which could hardly be bettered, and which served to unleash the destructive predations of the fiends who haunted this world. These acts would have been greatly pleasing to Ahriman whenever he saw them.

Touching a corpse may or may not be infernal; everything depended upon one's motives. True white Magians had to make a public declaration if they had touched a dead body:

*"Here I am, one who has touched the corpse of a man, without any wilful sin of mind, tongue, or hand, and who wishes to be made clean".*¹⁷¹⁹

Upon hearing this horrific profession it was a matter of expediency for a cleanser to be hurriedly brought to the defiled one, to wash away the pollution with gomez, the mixture of holy water and bull's urine.

Observations on the infernal arts were sometimes drafted up into formal tomes by the Inquisitors. In *Treatise against the invokers of demons*, demonolatry was described as falling into two categories;¹⁷²⁰

Dulia Necromancers prayed to the Evil One as if he were their one true god, especially calling upon the wickedness of subordinate demons to aid them in a given venture, as though they were Satan's saintly henchmen. Obviously the necromancers regarded demons as Christians and the white Magi did saints, only the demons had patronages of harm. Some caused the loss of sight, tremors, mental instability, plagues, causing murder, or various forms of theft or crime.

Latria Necromancers who performed Latria sang hymns to the demons on bended knees, amid candles and the aroma of incense fumes.

As Norman Cohn rightly points out, many of the surviving Mediaeval spell books do not recommend the worship of demons, but much rather bullying the demons into service by relying on one's moral goodness and the power of the divine name, and even then only the pure in spirit were wise to attempt it; others were warned to stay well away from such doings. Among their number were sorcerers of the Jewish, Arabic, and divergent heretical faiths. But *Cohn tells only part of the story*; there was another group of necromancers and witches, whose aim was to invoke the evil principle directly.

This other class of necromancer was the worst of all, because they worshiped the demons in every way, and believed in an inversion of the world which would see the poles switch places and rivers flow contrary to their normal direction; these were followers of the so-called Luciferian Doctrine.¹⁷²¹ Devotees of this faith were hated by the heavenly beings because they had been made by the god of evil to blight both heaven and earth, and to invoke chaos. Their god was unspiritual, Lord of the Kingdom of flesh, a carnal empire. Those who had died unblessed, or spiritually corrupted would become a meal for the great ravenous serpent of the underworld, who was ever by his

DEFILING FIRE OR WATER WITH A CORPSE WAS SIMILARLY REGARDED AS A REVOLTING ACT OF DEPRAVITY - IT CAUSED INSECT PLAGUES, THE DEATH OF CATTLE, AND DROUGHT OR HEAVY WINTERS

side. Agrippa's independent account bears all the key ingredients of the Magian eschatological myth once preached in Rus' in the year 1071 AD, and which in time came to be known in Europe as the Luciferian doctrine.

According to Isidore (a Spanish Christian writer who wrote a treatise on magic during the 6th Century) witchcraft entailed the special use of cadavers, or the slaughter of living offerings.¹⁷²² Coincidentally these are recorded in Magian scripture as principal acts of Iranian black witchcraft; ie, necromancy. Moreover the demons were supposed to have been sated by the shedding of blood, which was brought to greater effect by letting it flow into water. Isidore also explained that the arts of astrology were right and proper only until the time of Christ's birth, whereupon it became unlawful to god.

During the 12th Century AD, Norwegians were perceived as serious offenders in relation to the sinister ceremonials of black magic (presumably including necromancy), according to Wulfstan, a Saxon clergyman.¹⁷²³ Unless he had a particular dislike for Norwegians, this might be a fairly reliable account, mainly because he could have levelled this charge at Swedes or Danes, but chose to specify the Norwegians. More importantly it provides us with indications that the large number of witches present in Scandinavia would have been due to pre-existing populations of black priests (which might have milled around Norway) or Lapps, rather than to later waves of Wendish or Slav migrants (who were still nonetheless present in some parts of Scandinavia, as is evidenced by the recent unearthing of a Western Slav boatbuilding yard in Denmark, dating to 1090 AD).¹⁷²⁴

Both the white Magi and black Magi utilised the body parts of certain individuals to procure divine or infernal aid, to invoke mystical happenings, just as Christians once did (and do), through the saints. Yet for Christians calling upon a saint, by unleashing the supernatural powers of their bones and uncorrupted flesh, is not seen as necromancy, but an act of piety.

The relics of the European white Magi were conceptually similar to those of the Christian saints, predominantly the earthly remains of the holy kings, who brought life and health to the land, and to their subjects. While these white pagan relics could in no way be considered Christian, the line between them was in some cases fairly blurred,¹⁷²⁵ as discussed in Part II.

Black relics were of an opposite nature to those of the kings, and brought harm to nature, to one's stock, homestead and kin. Such relics were normally the bodily remains of executed criminals, stock thieves, witches and so on. The utilisation of black necromantic relics was viewed wholly different from the use of white pagan relics; an act of apostasy since it entailed the worship of the other god, the author of evil. White pagans and Christians, were on common ground where black relics were concerned. If the Magian texts are anything to go by the white Magi were much preoccupied with denouncing them too, and executing the witches responsible. These Magi were just as committed to the eradication of the infernal arts as the Church was, and perhaps even more heavy handed. In time, Christianity allowed witches to receive a fair trial, and Church sanctuary for those in danger of being lynched by mobs (until such a trial could be heard). The impartiality of these trials did very much rely upon the attitudes of the reigning secular authorities, the time and place in which they were conducted. For this reason some trials were fairer than others.

Since there are far fewer accounts of black witchcraft in Western Europe before the 12th Century AD when compared with the 1400's-1800's, is it possible to say that the black rites were progressively imported westwards from the Slav lands, and southwards from Norway, between the 12th and 15th Centuries AD in particular? Or was it simply a case that crimes of this nature had always been present, but never documented on any scale prior to this period?

Skomorokh's magic

LOW MAGIC RELIGION Pagan Gnostic or dualist.

The general Russo-Slavic word *skomorokh* specifically denoted a wandering musician *who acted as a comedian and a sorcerer*, while wearing Latin-style clothing. In the Old Polish we find the words *skomroszny* ("shameless" or "indecent"), or *skowryсны* and *skowrosny* ("happy" and "lively").¹⁷²⁶ These phonetically similar Polish words carry almost opposite meanings, something which may indicate an adherence to the doctrines of practical absolute dualism; "do evil and do good", but then again it might only be a coincidence, or Christian diatribe. *Skomorokh* is believed to have originated from a Greek word which meant "a prank" or "a practical joke", but could also mean "a

swindle" or "a deliberate act of deception". It is also apparently linked with the Latvian word *Samarags* which meant "someone who never keeps their word". This might be connected to the Middle Slovenian word *skomucati* which meant "to utter inarticulate garbled sounds during a conversation".

Linguistic evidence suggests that *skomorokhi* practiced the arts of the pagan Gnostic Philosophers of Greece and Rome. The word *skomorokhi* appears to have entered the French and English languages as *scaramuccia* (French: "a fool" or "a jester"), and *scaramouch* (English: "a boaster" and "a knave"). These Mediaeval words had not always been part of the English and French languages, thus hinting that *skomorokhi* had entered England and France sometime during the Middle Ages. From what is known historically, the *scaramouch* was a kind of jester or comedian who garbed themselves in unsightly dress and performed acts portraying the anti-virtues of cowardice and boastfulness.

Skomorokhi may have been conceptually similar to the Mediaeval Frankish *troubadors* (who were usually nobles), but *troubadors* played music with a distinctly Middle-Eastern or Iranian flavour, and do not appear to have been comedians.

Since Slavic *Skomorokhi* wore Latin-style clothing and comedy masks during their ceremonial pantomimes, there is a distinct possibility that they were the descendants of actors who performed divine comedies in ancient Rome, thereby causing much scandal, and prompting their subsequent expulsion from the Empire. Their witty stage shows provoked outrage in the eyes of Pliny the Elder, who caustically attacked the manner in which they defamed the celestial gods, with the outrageous lies they invented. Concerning them the Christian theologian St Augustine further wrote:

"This form of propitiation of such gods as these - with all its lascivious impurity, its shameless, filthy corruption, and its actors whom the Romans, with a laudable, instinctive sense of honour, debarred from all political office and expelled from their tribes, marked as beneath contempt and condemned to outlawry"

"On certain appointed festivals, scenes of shame, accompanied with cruelty, acts of dishonour and crime, attributed (whether truly or falsely) to the divine beings, were plainly and openly represented, consecrated and dedicated to those gods .. Those demons (the actors) admit that they are (made) unclean by delighting in such things. They avouch themselves as the promoters of lives of crime and indecency, by their crimes and misdemeanours, real or pretended, and by the public presentation of them..."¹⁷⁷

Here Augustine candidly speaks about their impropriety, even within the pagan milieu, for many forthright pagans were similarly enjoined in such condemnations in the centuries following the birth of Christ. For it would seem that they blatantly mocked some of Rome's dearest gods, and what is more, professed to follow a criminal lifestyle (or so it was alleged).

The *skomorokhi* entertainers of ancient Rus' were highly lyrical orators and deft musicians just as at home amongst peasant fireside vigils as they were in the courts of prestigious princes and chieftains.

In ancient times the *skomorokhi* might have included Orphic or Dionysian singers and Homeric poets, which are known to have formed up in travelling troupes. Legends ascribed to these wandering "bards" concerned the magic they wove by their melodious tunes. But, they were artists both loved and feared. Their spells actuating a powerful transformation of words sung or spoken, into blessings of luck, or curses.

During the ritual carnivals of the heathen festival calendar, *skomorokhi* musicians and actors went from place to place serenading the masses with their skillful orations. Their buffoonery, comedy and merry-making (most likely of classical Greek or Roman origin) no doubt provided an enjoyable dimension to the pagan carnivals, which the Christian priests viewed with exceptional disdain. When a *skomorokhi* plucked the strings of his *gusli*, blew the pipes, or began a ballad or epic poem, an atmosphere of expectation wafted amongst the crowds of listeners and guests. The people jostled for a good spot to stand and awaited with glee, the songs and dramas of their forefathers.

According to the *Primary Chronicle*, pagan impenitence was nowhere more visible, and openly flaunted than when these boys came to town, for the Churches stood almost empty, and wherever the clowns (*skomorokhi*) played, the congregated audiences wore the ground to bare earth!¹⁷⁸ In short, the *skomorokhi* were almost single-handedly responsible for, not only hampering, but undoing the conversions of many early Mediaeval Russians!

In a letter to the Bulgar Khan Boris, Pope Nicholas I similarly condemned their *ioca* ("jokes", or "games"),

SKOMOROKHI WERE PROBABLY VERY SIMILAR TO THE PAGAN GNOSTIC PHILOSOPHERS

Fig 92. 1. These are just some of the many pendants found on an elaborate Russian-made necklace found in Gotland, and dating to the 10th Century AD. Judging by the varied facial expressions on them, and in particular the cheesy smirk on the right, the faces might have been worn by a Pagan actor.

Fig 92. 2. The masks above were worn by Greek actors. They might have resembled the clown masks worn by Russian *skomorokhi*.

incantations, singing and sortilege.¹⁷²⁹ *Ioca* is cognate with the Russian *dzhok* or *zhok*, which referred to a (presumably theatrical dance) practiced in Moldavia (a former Roman Dacian province).¹⁷²⁹ It probably entered Bulgaria and Rus' by way of the Rumanians, but originated from the Latin *jocus* (which meant "a joke" or "a jest"). Perhaps these words were made famous in Eastern Europe by heathen actors, whose naughty brand of entertainment amounted to frivolous though blasphemous mockery of the divine beings, whether pagan or Christian.

When the Byzantine authorities closed down the Athenian college of philosophers back in the 6th Century AD,¹⁷³⁰ little could they have known that this would not be the last they would see of them. Many went to Harran, and it seems a sizeable number went to live in rural Slavia, where they chanced upon other actors, the descendants of those banned much earlier from Rome, but who sought the solace of Rumania.

Let's be realistic, if their predecessors were measuring the globe and (as you have already read) making intricate machinery a good 1,300 years prior to the Middle Ages, chances are that they and their many doctrines would not disappear in any great hurry. At least not in the Mediaeval Christian and Islamic educational institutions, which saw a flurry of their scientific and philosophical teachings burst out into the open.

On music and magic

In antiquity the Magi had awesome reputations in the field of musical theory, both as musicians and teachers. In Iamblichus' the *Life of Pythagorus*,¹⁷³¹ Pythagoras is recorded as having been taken prisoner by the Persians, and led back to Babylon in captivity. While there, his erudite learning caught the eye of the Magi, who then proceeded to teach him their secrets concerning astronomy, mathematics, music and the natural sciences. He considered himself greatly honoured by their attentiveness. From that time onwards the Neo-Pythagoreans adopted Magian musical theora. Nero was another who studied music under the Magi.¹⁷³²

In the ancient world pursuing an understanding of celestial harmonics involved studying the music of the planets and their various vibrations rates, as well as their relationship to the harmonic ratios of strings of differing lengths, of differing scales. Each note on the music scale had its own peculiar metaphysical qualities which were passed onto the listener. Saturnine notes had a basal quality, being slow and heavy, and falling between C and D. Other notes promoted violence if linked with Mars, but were soothing when linked with the Sun, or romantic when linked with Venus, and so on.¹⁷³³

Music was often an integral part of the beguilement of air spirits and aerie daemons. The legendary Volkhvy performed recitals before an incoming hail storm to subdue the daemons stirring chaos in the heavens above, and thereby chase them away. One record dating to the year 1282 AD describes the Volkhvy as able to drive away the clouds, and lunar travel, in the form of wolves.¹⁷³⁴ In a region of Burgundy, during the 9th Century AD, pagan sorcerers blew wind instruments at offending looking clouds to halt the aerial daemons.¹⁷³⁵ A similar rite was also performed by the Slav Volkhvy Magi "Storm-chasers" during the same time frame.¹⁷³⁶

Having diligently examined and learned the writings of the philosophers on music, we find Arab scholars developing treatments for the mentally ill based on these ancient findings on musical theory. From that time music has been used as a means of calming the worried minds of psychiatric patients, a method still employed by psychiatric institutions to this very day. And the reverse of this was also considered to be true. Discordant music was the surest means of invoking demons, and bringing distress into the lives of others.

The pagan Russes had a staggering selection of musical instruments, all of which were of foreign origin, and which featured heavily in their religious musical compositions. These instruments tell us something about the nature and genesis of pagan musical teachings in Slavia. Moreover these same sorts of instruments saw service on sabbaths convened by not a few witch covens. Rus' musical instruments fell into two principal categories, the *svirel'* and *gusli*.¹⁷³⁷

Svirel', *sviralo* (Slovenian), *svirol* (Bulgarian), and *svirala* (Serbo-croat), all came from the Old Russian word *svirati* which meant "to play music on a flute (or wind instrument)". This comes directly from the Old Indian *svarati* ("sound"). The Old Icelandic *svarra* meaning "to rage" or "to storm", "to whistle" or "to pipe (music)" appears connected to the Slavic and Old Indian in this respect, and what is more it seems to preserve the connection between music and rage.¹⁷³⁸

PYTHAGORUS LEARNED MUCH FROM THE MAGI CONCERNING MUSICAL THEORY

MUSICAL NOTES OSCILLATED IN UNISON WITH THE VIBRATORY RATES OF THE PLANETS WHICH AFFECTED DESTINY

MUSIC WAS USED TO CHARM DAEMONES

BURGUNDIAN AND RUS' PAGAN SORCERERS PLAYED MUSIC TOWARDS RAGING STORM FRONTS, TO PREVENT DAMAGING WEATHER CONDITIONS

RUS' MUSICAL INSTRUMENTS

SVIREL (WIND INSTRUMENTS)

Oboe	Egypt
Zhaleika	Egypt / Greece
Pan Pipes	Greece and the Balkans

GUSLI (STRINGED INSTRUMENTS)

Gudok (fiddle)	Greece and the East
Lyre	Greece and Babylon
Lute	Greece
Harp	Greece and Iran
Zither	Ossetia

ARYAN INSTRUMENTS

Aryan-style instruments can be found among the Indians and Turks, plus right across Europe, from Britain to Germany and the Lowlands, and throughout the Alpine regions, Russia and Scandinavia. Musicologists widely accept that Celtic music seems to have been derived from an Indo-European tradition, namely the Raga style which was and is practiced by the Hindus and their Brahmins.¹⁷³⁹ Pursuing this same theme, it has been noted that the music of the Balkans starkly resembles that of pre-Islamic Buddhist Indonesia. A possible though unlikely coincidence, for in both locations you will find puppet shows, women with similar national headdress, similar art styles, swastikas and Indo-European deities.¹⁷⁴⁰

Roga	The Roga is a Balkan variant of the bagpipes (which are related to an Indian form of the same instrument). They were used not only to create music, but in magical conjurations associated with the serpent, whose secret image was until comparatively recently engraved into the finger-pipe. ¹⁷⁴¹
Volynka	Magical pipes. At what point Russian bagpipes became known as <i>volynka</i> rather than <i>roga</i> is unclear, ¹⁷⁴² but <i>volynka</i> has a Rumanian provenance, though on phonetic grounds one might associate it with the name Wollin, in the lands of the Western Slavs.
Duda or Dudka	Magical flutes made from willow or ash wood
Conch shell	Aryans formerly blew conch shell horns
Animal horns	Ram, bull or lengthy auroch's horns served as trumpets for a variety of purposes

MISCELLANEOUS INSTRUMENTS

Vargany (Jew's Harp)	The Middle East (Etymologically derived from the Greek and Latin)
Tambourine	Egypt, Babylon, Greece and the East.
Trumpets	Celts, Babylon, Rome, Greece, Egypt.
Botalo (cow-bells)	Asia? Europe?
Nakra (kettle drum)	Turkic.
Brunchalka (Bull-roarer)	Greece? Siberia? Brunchalka were normally made from animal bones pierced and threaded onto a sting. Since some of the bones were embellished with animal heads it has been guessed that they had ritual applications, perhaps Dionysian in form.
Baraban (drum)	Turkic, from the Persian. ¹⁷⁴³

Middle-Eastern, Asiatic and Egyptian techniques for the crafting of musical instruments found their way into Europe during the first millennium after Christ.¹⁷⁴⁴ For this reason a great many Russian instruments seem to have antecedents in geographically distant regions. Archaeology has provided examples of the gusli and svirel, as well as pipes, bells, cow-bells, pendants with small dangling bells, whistles and flutes.¹⁷⁴⁴ Their *gusli* are particularly interesting, hand-crafted from birch or fir wood and possessing eight or nine strings.¹⁷⁴⁵ They may or may not have been "windowless", that is lacking a *golosnik*, or hole from which the notes emerge as it is being played by the musicians.¹⁷⁴⁵ These were mouths through which the instrument spoke.¹⁷⁴⁵ Some were engraved with images showing Greek or more especially Asiatic influence; grape vines, holy trees, swastikas, and suns.¹⁷⁴⁶ Many gusli took

the shape of wings, or their necks ended in a dragon's head.¹⁷⁴⁶ Russian folklore tells us that *gusli* tunes had an impact on the weather, on account of the similarity between their notes and the sound of thunder.¹⁷⁴⁷

The Russian Church regularly castigated the demi-paganism of their congregations, with oral sermons and other sorts of reminders. The early Mediaeval Russian Hypation manuscript warns the reader that, "*The devil captivates us with pipes, and skomorokhy playing guslis*".¹⁷⁴⁸ Moreover they proscribed the use of musical instruments during mass, perhaps as a means of providing a clear delineation between Church and local Rus' pagan choral practices.

In spite of this the *skomorokhi* remained resilient to change, and with their client base so wide, they enjoyed a permanent place in Russian society until the 1600's when systematic repression of their profession led to the discontinuation of this archaic and once highly popular heathen tradition.¹⁷⁴⁹

Heaven's magic

HIGH MAGIC

RELIGION Zurvanite, pagan Gnostic, Aryan pagan.

It was a long-standing Greek, Ayan and Persian belief that the power of magic resided in the interlacing or knotting of special threads of power, which were spun by the gods; these were probably the woven patterns often found on Slavic, Central-Asian, Scandinavian, Alanic and Celtic magical objects and amulets. Al-Nadim informs us that Chaldeans were skilled in knot magic. In effect a knot was a binding, and by binding magic, one fastened magic to a material object. For instance, Finns sold wind to mariners, breezes held in a knotted string. By untying the knot, gusts supposedly arose which filled their sails, and sent them on their way.

The white Magi and Brahmins professed that magical threads were linked with the the divine beings, or the celestial powers of the planets. The Magi particularly stated that these orbs were tethered to the sun and moon (which were situated at the centre of the universe), by threads of varying lengths.¹⁷⁵⁰ One might think that embroidering garments with the magical thread had the effect of anchoring the celestial energies to the fabric, in just the same way as they were held bound to the sun.

In some respects our lives are like a piece of thread, and we who live are like a spindle girl. She starts with a ball of raw material and start spindling it into one continuous strand, rolling it up into a ball as she went. Eventually she come to the end of the thread, which is death, and all that was left was a roll of thread; a spent life. The paths of every person's life mixed with the threads of those they met, forming an elaborately woven tapestry, with the events of our lives being the motifs thereon.

Ayan brides received a silver thread from their husband, which was sewn into their scarf. And so their marriage was bound, and held in place. In pagan Rus', every bride on her wedding day was given a silver thread, which was tied firmly around her neck, as the hands of husband and brider were bound by ritual chording by a priest. This was so to speak "tying the knot", and it was this thread that represented the strength of a bride's marital fortunes. It was her thread, and her marriage. When the marriage looked tatty, she repaired it, and when dirty she washed it, she renewed it and solidified it.

The art of the weaver was not simple either; different style knots and weaves had to be mastered. The weaver's keen eyesight, concentration and precise hands created an array of delightful patterns, adorning rugs, cloth and other garments. Some young girls well enough endowed with magical blood, and who had reached the age of reason, received a pair of loom sticks, and a magical spindle, which would serve them till death. In pagan Rus' the very first piece of thread they ever made was seen as the thread of greatest magic. Once spun it was burned to cinders with the holy fire and swallowed.¹⁷⁵¹ Then, magical power welled within the woman. From then until the time they first come to know a man, it was a Magian custom they made the pure robes of the Magi, with loving care. Those who decided they would never marry, because they had magical fingers of rare potency remained in the virginal state, spinsters married to the loom. Spinsters, the female clothmakers and weavers, launched into a full career of sorcerous needlework, clothmaking, basket and rug weaving, and by their skill changed the fortunes of others.

Mediaeval Russian Orthodox sources show priests challenging women during the Christian rite of confession as to whether they had been resorting to Moksha (a heathen goddess patronising the weaver's arts) during their weaving and sewing. Obviously Moksha was invoked during the weaving process to procure magical effects.

IN ANCIENT TRADITION WEAVING WAS ABLE TO PRODUCE MAGICAL EFFECTS

THE MAGI BELIEVED THAT EACH PLANET WAS TETHERED TO THE SUN BY A THREAD OF DIFFERING LENGTH

BY USING MAGICAL THREADS, A WEAVER COULD ANCHOR THE CELESTIAL ENERGIES OF A SPECIFIC PLANET TO THE CLOTH

OUR LIVES WERE LIKE A LENGTH OF THREAD

ARYAN BRIDES RECEIVED A SILVER THREAD TO SEAL THEIR MARRIAGE

WEAVING IS A TEDIOUS AND SKILLED PURSUIT

IN RUSSIA THERE WAS A RITE WHEREBY THE FIRST THREAD SPUN BY A YOUNG GIRL WAS BURNED AND THE ASHES SWALLOWED DOWN

THE WHITE MAGI HAD VIRGINS TO WEAVE THEIR ROBES

Peasants were accordingly advised to call on the Christian St Paraskeva-Pyatnitsa instead, as she was supposed to be even more helpful.¹⁷⁵¹

Never could there have been more tedious work than sitting hunched over a loom, day in day out, straining your eyes, and your patience, as the shuttle went back and forth through the vertical strands. Now it was at these times that a weaver's mind started wandering to other things, to family business, to people she liked and to those she hated. Now it was hopes and curses she was wishing, and, before long, well-wishes and hatred were being *sewn into the very cloth* she worked on. Thus weavers could imbue any type of boon or curse into their handcraft, or bind things so that they would not change, or loosen the bonds of fate by undoing knots which represented the lifting of problems being experienced. Their special knots could cause curses, death, fertility, growth, hate, health, infertility, love, luck, unity, power, sickness, strength, poverty, victory, wealth, or wounds.¹⁷⁵²

Knot ritual

To create a knot of power the weaver spindled the thread on her spindle, thus impregnating it with magical strength, or employed thread pre-spun in accordance with the correct planetary affinities. It was then embroidered or woven into the garment, cloth, blanket or rug. This was either worn by the person who it was to effect, or hung from trees in the vicinity of the sacred spring. Once this was done, the magic came into effect. Mothers were always wary of young ladies giving embroidered shirts to their sons, and during the marriage season all sewing and weaving was banned, to allow liaisons to be arranged, *free of magical interference*.¹⁷⁵³

Male weavers, usually bark-weavers and rope-makers could also achieve similar results through their handcrafts, by weaving leather into belts and whips, hemp into rope strands and cloth, and bark into bast shoes. Silver smiths who knew the secrets of magical knots could make magical objects simply by overlapping, weaving, plaiting and inlaying fine gold, or silver wire rolled and hammered by themselves. Stone cutters turned their hand to knotwork too, perhaps binding blessings to buildings and other stately edifices. There is one account from Rus' in which a person gathered together a bunch cereal crops as they grew, and knotted them.¹⁷⁵⁴ They were either trying to bind fertility, infertility, or some other magical attribute onto the crops.

To undo a knot spell the offending knot or weave had to be located and destroyed. Sometimes where the knot was impossible to locate by careful scrutiny of the fabric, the person's garments, and anything else with a textile-like weave might have been burned to destroy whatever evil knot lived in them. Knots which were obviously magical could always be unpicked to destroy the magic. Just as the tying of a knot invoked a certain sorcery, the undoing of that knot by the weaver would undo it. Often, weaving could be a very lucrative magical extortion business.

Russian magic

With priests and priestesses of the Chaldean, Magian and pagan Gnostic persuasion dwelling in many regions of olden Rus' it comes as no surprise that Russian folk spells were found to contain Babylonian and Greek magical incantations.¹⁷⁵⁵ Judging by the strong Turkic linguistic affiliations absorbed by the Slavic tongues, many Russian sorcerers must have been practitioners of Turkic magic. Considering the multiplicity of fused religious traditions in Central Asia, it is doubtful that Turkic sorcery and ritual differed all that much from that of the Buddhists, dualistic shamans, prehistoric animists, and Magi. Be that as it may, Al-Nadim reported that "*The Turks also have an art of magic. A man, most trustworthy and superior, has told me that they perform miracles for the routings of armies, killing of enemies, crossing the water, and cutting short long distances in short time*".¹⁷⁵⁶

One could interpret these feats as physical or metaphysical tricks. Perhaps this meant they knew death magic capable of annihilating whole armies, and shamanic astral voyaging, during which the shaman's soul was sent into the ether to reconoitre a region. On the other hand these feats could easily be interpreted as tactics and weaponry capable of bringing disarray on the battlefield, pontoon-bridges and wind-cars. Such weapons would invariably have been invented by the Chinese, who the Turks formerly lived in close proximity with. Based on 9th and 10th Century AD Chinese military manuals they could hypothetically have included fearful-looking war-kites, flame-throwers (called "Fire Lances"), or poison-gas mortars known as "Fierce Fire Eruptors".¹⁷⁵⁷ Judging by *Ingvær's Saga*, Ingvær and his crews encountered something similar to a mortar or Byzantine siphonophore during a pirate attack on their flotilla. It is taken for granted by many writers that such an account is blatant nonsense. True, it is impossible

TOO

to prove that these contraptions were actually used in Russia. Perhaps the author of that Saga merely drew upon legends describing the factual use of these weapons. Yet, as unpalatable as it may be to admit, perhaps Mediaeval mortars were actually seen in Russia, in the hands of the devastating pirate gangs.

One *Primary Chronicle* incident portrays a sorcerer entering Christianised Novgorod, and winning many followers there by claiming that he would walk across the Volkhv river. A similar thing was said of the Turk magicians. In any case he was killed by Prince Gleb before he had a chance to attempt it.

Pagan Gnostic magic was apparently practiced in certain regions of Russia and the Baltic. How else can we explain reports that Asklepius (the pagan Gnostic god of healing) was worshiped in Egypt, Greece, Britain and among the pagan Old Prussians?

In summation, the following breeds of sorcery are likely to have found their way into Russia;

SOURCE OF INFLUENCE	STYLE OF MAGIC
Ancient Greece	pagan Gnostic magic The Dionysian and Orphic mysteries Skomorokhy magic
Mesopotamia	Chaldean magic Necromancy
India	The rites and spells of the Brahmins
Persia / Iran	The rites and spells of the Magi Necromancy
Central Asia	Buddhist rites and magic Prehistoric animistic spells Magian rites, spells and magic Necromancy
Khazaria	Kabbalistic magic
Rome	Mithraic magic Skomorokhy magic
Alexandria	Hermetic and Greek pagan Gnostic magic

In the *Gesta Danorum*, the Slavs were portrayed as heavily engaged in the arts of witchery.¹⁷⁵⁸ Admissions of this kind are amply reflected in a number of pan-Slavic words dedicated to the arts. However it is often the case that verbs describing the performance of magic and divination have obscure etymologies. While linguists have not established progenitor words for many of them at this stage, this might only indicate the much of their sorcery had originated in Slavia, or had accrued folk terminologies peculiar to themselves. The following are just some of Slavic verbs used in a magical context.:

Sheptat' ("to whisper"),¹⁷⁵⁹

Kudesit' ("to work a miracle"),¹⁷⁵⁹

Ved'movat' ("to perform witchcraft"),¹⁷⁵⁹

Zagovarivat' ("to recite an incantation"),¹⁷⁵⁹

Znakharit' (This verb infers that the practitioner was capable of interpreting signs, symbols and omens).

Gadat' ("to tell someone's fortune"). *Gadat'* is a slavification of a Phalavi term.

Vorozhit' is related to the Old Russian *vorozhiti*, Bulgarian (*vrazha*; "I am casting a spell"), Serbo-Croat (*vrazhati* "to harm someone with magic"), Slovenian (*vrazhiti* "to harm someone with magic"), Polish (*vrozyc*; "to perform magic" or "to foretell the future")¹⁷⁶⁰

Charovat' ("to perform a spell", "to enchant", "to bewitch" {using a libation of some kind}),¹⁷⁵⁹

Koldovat' ("to practice witchcraft" {perhaps, more specifically Chaldean-style sorcery}).¹⁷⁵⁹

Since spell scrolls constitute only a minute portion of the birch papyri discovered at Novgorod (dating to the 12th Century onwards) it is fairly certain that it was not looked upon favourably by the city’s populace after the conversion. Clearly the Church had successfully eliminated written magic from Novgorod’s urban sprawl. This would have been as much due to their highly successful education programmes (which brought the dream of literacy within the grasp of a great many citizens) as it was to a wave of genuine conversions, or iron-fisted crackdowns on dabblers. Still, out in the country-side the situation was markedly different.

*“Thus magic is performed through infernal instigation. Particularly through the agency of women are infernal enchantments brought to pass ... Thus even down to the present day women perform magic by black arts, poison, and other devilish deceits. Unbelievers are likewise led astray by demons”.*¹⁷⁶⁰

Magical objects

In the Baltic area, at the beginning of the first millennium AD, there was, just as in the Crimea, a presence of handcrafts and metalware showing the influence of Roman master-craftsmen. Their industry was the production of stylish accessories, some of which were magical in nature.¹⁷⁶¹ Even the would-be Magus Nero came to the area looking for amber and other such commodities, desperately needed for his magical ordinances.

Once the know-how to calculate planetary positionings had re-entered a converted Europe during the early Middle Ages, magical products could again be confidently made by local craftsmen. In the West, Flanders acquired a reputation as a ‘Mecca’ for the sale and production of occult wares.¹⁷⁶² By the high mediaeval period, fewer people came to Slavia for aid, the sorcerers and magicians had come them ... to live! Those who knew the arts were much sought after to fashion intricate magicked talismans, fibulae, wards and instruments bathed in planetary energies. These were not crude items, but amongst the very best produce of high magical craftsmanship.¹⁷⁶³

In antiquity, gem talismans were crafted by Gnostics, Magi, Kabbalists and Mithraic sorcerers alike, incised with pictures that enhanced their special astral properties, using various lapidary techniques. Rich esoteric imagery like the egg and serpent, Deus Arimanus, El-shaddai, Aion, Sophia, the signs of the zodiac, sacred pillars, orbs of celestial power, gematria, magic words, magical number-squares, deities and woven thread were common motifs.

Other types of celestial talisman were fabricated from disks of ritually consecrated noble metals so as to become a reservoir of celestial power. These were usually disk shaped, and bore magical squares of various dimensions and complexity, emblazoned with sigils and words of power. In Slavia talismanic devices generally came in the form of cloak pins, belt buckles, head rings and fibulas. Often these were inlaid with threads of power and animals bearing planetary affinities.

Creating magical objects

LOW MAGICIANS

“Low magicians” resorted to less complex ingredients than “high magicians”. Often their amulets, phylacteries and enchanted paraphernalia were little more than bags of herbs with the right spells recited over it. Animal parts were frequently used too, things such as horn, teeth, claws, feathers, bones, hide, fur or beaks. Low magical rituals invariably drew upon notions of sympathetic magic, and thus were of a more personal nature, perhaps the result of experimentation. For argument’s sake, Murray described a witch’s Sabbath during which the coven members reported to Satan (ie; the chief black Magus of their area) whatever spells are known to have worked during the preceding week, and the methods they used to procure the desired effect. The master then wrote them down.

THEORIES OF HIGH MAGIC IN THE CREATION OF MAGICAL OBJECTS

To craft a given magical device, ‘high magic’ demanded that magicians adhere to one basic principle; the need to use an appropriate lower body (a gem, plant, animal part, colour, cloth or metal) affiliated by its very nature with a particular planet. Specific ingredients were thought to be greater receptacles for certain planetary cosmic energies than others. By using a prescribed substance, the sorcerer could call down the power of the required planet into the object, which would in turn act as a storehouse of that given energy.¹⁷⁶⁵ Thus practitioners of ‘high magic’ could therefore turn out every possible item (possessing diverse mystical abilities), as long as they possessed the

appropriate ingredients and the additional trade skills necessary to adequately fashion the item. In antiquity pagan craftsmen sometimes produced high quality talismans that were just as likely be hewn from gemstones and crystals possessing the necessary magnetisms and planetary affinities, as they were to be cast from precious metals.

For example an 11th Century magical cup, supposedly of Byzantine craftsmanship, was unearthed from a 13th Century silver hoard in Gotland, Sweden. It was etched with the following high magical inscription *in runes*, not Greek script as was traditionally the case.¹⁷⁶⁶

AFFINITIES OF THE LOWER BODIES

Fumigations, images, letters, numbers, stones, incenses, animals, plants, colours and sounds which were pleasing to the planetary gods, were ideally used during any attempt to summon their divine assistance. Many of the lower bodies were linked with the divine and infernal beings by their very natures, and with the planetary essences in particular.

The medieval Catholic law book *Malleus Maleficarum* ventured to associate the lower bodies with Chaldean daemones: "The devils employ certain lower bodies, such as herbs, stones, animals, and certain sounds and voices, and figures. But since the heavenly bodies are of more potency than the lower bodies, therefore the stars are a far greater influence than these things".¹⁷⁶⁷

By utilizing these objects during the performance of ritual magic, or engraving sacred images, one succeeded in drawing down the powers of the angel or spiritual essence attached to that body.¹⁷⁶⁸ Many of the ingredients listed here were described in Agrippa's *De Occulta Philosophia*.¹⁷⁶⁹

ONE OF THE BEST BOOKS
ON AUTHENTIC MAGIC IS
AGRIPPA'S THE THREE
BOOKS OF OCCULT
PHILOSOPHY

JUPITER¹⁷⁷⁰

- Metal:** Gold, silver or Tin (especially).
- Colour:** Purple.
- Plant:** Ash gum (manna), oak, many nut bearing trees; apple, ash, plum, and pear trees, wheat and barley.
- Animal:** Pelicans, swallows, peacocks, storks, eagles, fish, hart, sheep.

MOON¹⁷⁷¹

- Metal:** Silver.
- Colour:** White.
- Plant:** Palm, hyssop, selentropion, olive.
- Animal:** Dogs, cats, mice, ducks, geese, herons and other birds of the wetlands, plus wasps and dung beetles.

MARS

MARS¹⁷⁷²

- Metal:** Iron and brass (red).
- Colour:** Red or fiery colours like orange.
- Plant:** Radishes, garlic, hellebore, wolfsbane, thorny, toxic or prickly plants, and onions.
- Animal:** Predators and carrion-eaters like eagles, vultures, ravens, wolves, plus goats, reptiles and insects.

MERCURY

MERCURY¹⁷⁷³

- Metal:** Tin, and mercury.
- Colour:** Blue.
- Plant:** Parsley, marjoram, cinquefoil.
- Animal:** Foxes, swifts, weasels, mules, hart, hare, cuckoos, magpies and larks.

SATURN¹⁷⁷⁴

SATURN

- Metal:** Lead, gold and fool's gold.
- Colour:** Black.
- Plant:** White poppy (opium), mandragora, cypress, fig, pine, and many fruitless trees.
- Animal:** Distressful creatures like the wolf, ass, mole, insects, spiders, toads, scorpions, mice, and serpents.

SUN¹⁷⁷⁵

THE SUN

- Metal:** Gold.
- Colour:** Yellow.
- Plant:** Marigolds, vervain, peony, bay, cedar, saffron, amber, balsam, honey, frankincense, and marjoram.
- Animal:** Rams, boars, bulls, eagles, vultures, swans, cocks, hawks, crows and fire-birds.

VENUS¹⁷⁷⁶

VENUS

- Metal:** Silver and Brass (others say copper).
- Colour:** Green.
- Plant:** Thyme, sandalwood, musk, corriander, scented flowers, pomegranates, pears and amberggris.
- Animal:** Sheep, dogs, goats, swans, pelicans, sparrows, eagles, and doves.

The physical appearance of magical items might vary according to the school of magic the sorcerer was party to, and on a secondary level by their own preference and financial means. The primary forms of magical objects are listed here.

MAGICAL OBJECTS
TOOK ON A VARIETY OF
FORMS

THE USUAL FORM OF THE MAGIC

- Lead, wood, bone, metal, foil or ceramic lamellae tiles.
- Spoken, carved or written gematria (power words) using runes, Greek or the Alphabet of the Kings.
- Spells recited in unison with music, incense and burned offerings.
- Spells uttered during the pouring of a libation.

INCISED TILES OF LEAD,
BONE, METAL OR
METALLIC FOIL

Objects were activated by diverse means. Some were worn around the neck, or mounted on rings; others placed in a certain location. For instance once a plaque was manufactured, it was often buried in a place appropriate (ie; astrally linked) to the deity or planet being invoked, to promote the required end of the sorcery.¹⁷⁷⁸

Lithicas: Books of gems and their properties

In the classical world, Greek and Roman philosopher-scientists, Chaldeans and Magi wrote books about gemstones which embodied many aspects of the divine planetary natures, and were therefore suitable to be revered by the pagan priests. Often these gems were engraved with images linked to the gods.

LITHICAS WERE BOOKS
CONCERNING GEMS

The engraving method they used required a chip of diamond set into the tip of a metal rod. For all intents and purposes it was a pencil suitable for drawing images onto rock-hard substances using a material harder than metal. Skillfully manipulated by a master engraver images rapidly took form, like putting a hot knife into butter. Progressively diamond dust was employed as a mild abrasive to gradually smooth back surface imperfections, further enhancing overall appearance of the fashioned gem.

MAGICAL GEMS WERE
ETCHED USING A
DIAMOND CHIP

I once had the good fortune to view an exhibition of Mesopotamian artefacts on loan from the British Museum. Having for so long looked at the impressions they left in clay in published works, I was astounded to see just how tiny these seals are, some little bigger than a bottle lid!

MESOPOTAMIAN
ENGRAVED SEALS WERE
TINY, YET FINELY
DECORATED

Lithicas were gem books detailing the physical, medicinal and magical powers ascribed to gemstones and crystals. These texts saw wide usage in ancient Rome, but no doubt existed in Egypt, Chaldea, Greece and Persia. While there is no record of *Lithicas* being burned during the conversion of Europe, Scandinavia or Russia, one could infer that they were around, even more so once you realise that Prester John (who can be linked with Russia) believed that gems had specific mystical properties.

LITHICAS INFORMED
THE READER OF THE
MYSTICAL AND
THERAPEUTIC
PROPERTIES OF EACH
SPECIES OF GEMSTONE

For instance a certain heathen temple in the Slavic and Baltic region was decorated with coral, carnelian, crystal, sapphires, green chrysolite and gold. I shall now equate these stones with the planetary virtues found in Agrippa's

GEMSTONES AND THEIR
PLANETARY AFFINITIES

writings; CORAL: Venus, Riba (supply source: Arabia); SAPPHIRE: Sun, Jupiter, Venus, Saturn (supply source: Bohemia, Moravia, or Finland); CARNELIAN: Mars (supply source: Arabia, Czechoslovakia, or Romania); GREEN CHRYSOLITE: The Sun (supply source: Czechoslovakia or Norway); CRYSTAL: Venus, Sun, Mercury (supply source: Arabia, Czechoslovakia, Romania, or Rus'); GOLD (The Sun).

Of these six noble substances 50% were allied with the planet Venus, 66% to the Sun and 16% to Mars. The idol associated with this temple was a woman with a gold-plated head who received floral offerings. Perhaps we are dealing with a temple dedicated to Venus, or a goddess very close to her in nature.

Having analysed descriptions of this temple, and the varieties of gemstones embedded into them, and then compare them with the planetary gods they were supposedly associated with, it is not difficult to infer that something fairly comparable to Roman Lithacas were already in the hands of the Baltic and Slav pagan priests.

In search of gems and knowledge

Towards the end of last century, anthropologists and intellectuals fanned out throughout the colonies of the European powers, hoping to record for prosperity the customs and lifestyles of the native peoples they subjugated and ruled over. Their studies were the modern world's last reliable glimpses of past beliefs and superstitions that would soon be absorbed and obliterated by the commercial hype and cultural supremacy of their new overseas masters. From these studies came views of customs spread over large areas of the earth, which in many cases fell into distinct categories, each with many similarities. Jung postulated that these similarities was due to a universal consciousness. It would be easier to believe the totality of his assertion if it were not for the existence of Claudius Ptolemy's map of the ancient world, a map spanning from Iceland to China, South East Asia and (due to the relative exactitude of his cartographic style and his latitude reading for Argus) the coast of Antarctica.¹⁷⁸¹ Jung was only partly right, because a map that detailed just doesn't happen by accident, it was the product of good old fashioned physical contact between the peoples of Europe, Africa and the Orient, and a wide journeying band of travellers whose names we will never know, people who perhaps used a book called "the Guide" and employed its lines of latitude

LAST CENTURY RESEARCH ANTHROPOLOGISTS VISITED THE COLONIES OF THE EUROPEAN POWERS, AIMING TO STUDY FIRST HAND THE BELIEFS AND CUSTOMS OF THEIR INDIGENOUS POPULATIONS

as elder highways through otherwise un-navigable forests, featureless deserts and swamps. A lot of footwear was worn out making that map.

In the *Natural History*, Pliny the Elder despaired of humanity's decline in morality, for in the 1st Century AD they took to the high seas for trade and conquest, no longer interested in the research voyages once launched by the ancient Greek philosophers, to assuage their thirst for knowledge about the world. For example Strabo tells us that a "Magus" had circumvented Africa. On what basis do we discredit such an account?

The astronomer-scientists, magicians and jewellers of the ancient world had an overwhelming need for gems, a romantic lust which in turn gave rise to a thriving specialised trade in precious stones. But the many different gems they required were rarely found in their own back yard; on the contrary, they were connected with quite specific geographical locations, some of them quite distant. This enterprise might have taken gem traders to some very unusual places. The list on the previous page shows known locations for gem deposits. These were inevitably destinations for the heathen magician or gem fossickers who obtained them on their behalf.

Some may have gone to extreme lengths. For instance, there are a number of cave paintings in the Kimberly region of North-Western Australia which are disowned by the aboriginals. They have a long history of continuity and are of considerable antiquity. The style used is not aboriginal, but clearly resembles native African art. Through these paintings and the distribution of the peculiar African Baobab tree (which grows in northern and western Australia), it has been deduced that an African trade route once existed between South Africa and India, via the extremely remote Kimberley mountains in Western Australia and Madagascar.¹⁷⁸² It's worth mentioning that three of these locations have *some of the largest diamond deposits in the world*. Moreover the discovery of Chinese pottery on the East African seaboard, and Madagascar, is believed to indicate the return leg of the route which once reached India and China, perhaps directly, or via Australia, and the formerly Buddhist Malaysian mainland and Indonesian archipelago. These celadon (Chinese ceramic) items have been useful in pegging out a route officially associated with a little known highly specialised trade in gems, shells and wild pearls.¹⁷⁸³ Further evidence of this route can be found in Madagascar. The local divination method there (known as *Sikidy*) owes its presence to the Arabs, whereas *Vintana*, another form of Malagasy sortilege, was brought there in ages past, by Malaysian seafarers and immigrants.¹⁷⁸⁴ Equally interesting is that the Malays used magical squares similar to those used by the magicians of the Middle Ages.¹⁷⁸⁵ This indicates Malays had contact with the arts of the high magicians, perhaps as a result of Arab contacts, but perhaps due to earlier contacts with pagan Gnostic philosophers who were mapping the southern night sky far beneath the equator,¹⁷⁸⁶ or exiled Magians.

And there were other unrelated contacts, such as that made between Meso-America and China, which has been confirmed by dating methods as having occurred as early as 3,000 BC. We can say this with certainty because Meso-American peanuts appear in China at around that time. Peanuts are unable to survive in the gut of migratory birds, nor can their fertility remain viable in sea water. Thus they were brought there through human intervention, but by whom? Due to the absence of rats in Central America (until the time of the Conquistadors) and rice, Chinese ties with the Americas have been ruled out, thus indicating that peanuts came to China via an unknown people, perhaps through intermediaries who sailed abroad from Meso-America.¹⁷⁸⁷

Points of similarity have been found in the magico-religious beliefs and ceremonials of Northern Australia, Indonesia and Melanesia. For instance the Arnhem land aboriginals placed the bodies of their dead in trees for birds to strip them bare. Afterwards the bones were collected up and interred in highly decorated burial posts. The concept is reminiscent of Magian and Buddhist exarnation rites. Rather than flippantly disregard similar traditions as a coincidence, or independently invented, might we also consider that some of these habits were passed onto local natives by adventurers, traders and shipwrecked sailors who came to these parts. These mariners were invariably Buddhists from pre-Islamic Indonesia, or the Chinese seafarers who had long visited Northern Australia searching for troccus shells and trepang (sea slugs).

The mere concept that a landing party of sailors could be seen as an arrival of gods, or the souls of returned ancestors seems laughable. Yet earlier this century an intrepid group of Australian gold prospectors trekked far inside the Papuan interior. By discharging firearms, and mesmerising the natives with mirrors, photographs and gifts of trinkets they convinced them that they were practically gods. At their command a small army of natives set about building a runway for them, while others were directed to pinpoint known gold deposits. The ruse came undone once one of them was spotted defecating, just as a normal human being would.irate with rage the natives pursued the knavish band of speculators, intent of killing them. They barely made it out alive. That such things can happen is beyond all doubt.

Miscellaneous magical beliefs

THE EVIL EYE

The concept of the Evil Eye appears to have originated in Iran and Central Asia, where it was regarded as the many-powered gaze of the Infernal Lord, Ahriman. In Russia the phenomenon was called *zli ochi*.

*“The demon of the malignant eye is he who will spoil anything which men see, when they do not say “in the name of God”.”*¹⁷⁸⁸

The evil eye was the preserved domain of his servants, the black witches, giving them power to blight the world of existence, according to their will.

A similar theme arises in the Norse *Laxdaela Saga*, when a captured male sorcerer (who knew death magic) is further incapacitated by placing a sack over his head. His captors did this to prevent him from gazing at the nearby countryside, for it was known that magicians of his ilk could blight nature just by looking at it. But as misfortune had it, there was a slight tear in the bag, just enough for the captive to peer through. We are told that whatever land his eyes beheld fell fallow for some time, years even.

How similar this seems to the case of the Windeby Iron Age bog body, found near Schleswig, Denmark in 1952. The Windeby girl was a young blond lass, more likely than not to have been a witch. Her hair had been shaved off with a razor, her eyes so tightly blindfolded that the cloth binding cut into her neck (see fig 94). As a penalty for some unforgivable crime, or perhaps as a crisis sacrifice, she was drowned stark naked in the fens, her body held down by a weighty stone, and a scattering of lengthy birch switches.¹⁷⁸⁹

Folk tradition has it that pagan Slavs and Balts had the following remedies, deemed highly efficacious in warding off the malevolent eye of wicked witches.

Wearing a blessed cross or crucifix	Displaying a live snake
Making the hissing noise of a snake	Exposing a bear skull
Exposing the buttocks or genitalia	

Fig 94.

BELIEFS ABOUT HAIR AND NAILS

Pagan Slavs believed hair was a source of magical strength and power.¹⁷⁹⁰ The might of a person, both magical and physical was said to reside in their hair and beard. The onset of pattern baldness was thus causal of a man's loss of strength.

In Rus', the length of one's hair was also a mark of status. Without a minimum of a shoulder-length hair, a beard and moustache, one was seen as little better than a slave, or socially equivalent to one.¹⁷⁹¹ Thus, in olden Rus' it was an offence to cut a man's hair or beard against his will, and offenders were fined.¹⁷⁹² Even today the Parsees (Magian exiles living in India) have a strong dislike for barbers.

On the other hand tonsuring was practiced in India for religious reasons, and this represented a tradition at variance with Magian hair lore. The dictates of family custom and social class, as mentioned in the *Agni Purana*, determined the age at which tonsuring was performed, and what style of tonsure was worn. It was a rite of passage ceremony undertaken by religious students, warriors, tradespeople and normal citizens.

Slavic words for hair such as *vlas'* (Old Slavonic), *volos* (Ukrainian), *vlas* (Bulgarian and Czech), *wlos* (Polish), come from the Avestan word *varesa* and the Middle Persian *vars*. These words seem connected with the word *vlast'* (Old Slavonic and Bulgarian) and *volost'* (Old Russian), which signify a region under rule, a homeland or region.¹⁷⁹³ Since there are so many Russian and Slavic connections with Magianism, we might think that the connection between hair and rule lies in the fact that the long haired Magi were of royal blood, and thus rulers of men.

Russian Volkhvy and princes had special magical knots tied in their hair, which gave or enhanced their supernatural powers, not the least of which was an ability to transform into the shape of a wolf, fish or bird.¹⁷⁹⁴

This was certainly true of the Turkic tribes, whose leaders wore hair up to ten feet long, though held in place by a head band.¹⁷⁹⁵ Like the Turks, the long-haired Indo-European Tokharian kings kept their locks secured by rings, whereas their underlings had their hair lopped off at the shoulders.¹⁷⁹⁶

The Magi did not believe in cutting their hair or beards and grew it long. Like the Magi of old, the Merovingian Magus-Princes of the Franks dyed their hair red, presumably to give them the blood-shedding, iron-wielding

THE EVIL EYE WAS ASSOCIATED WITH THE POWERS OF AHRIMAN

LIKE THE MAGUS WIZARDS, THE SLAVS BELIEVED THAT POWER AND LORDSHIP WAS HELD WITHIN ONE'S HAIR

SLAVIC WORDS FOR HAIR COME FROM THE PERSIAN

THE IRISH HAD MAGIAN-STYLE CUSTOMS ABOUT LOST HAIR

COMBS ARE OFTEN FOUND IN PAGAN GRAVES

powers of mars, that most worrying of planets.¹⁷⁹⁷ After the conversion it was a matter of grave concern if they began growing their hair long once more, for it was a prelude to warfare, and a sign of the old ways. This hair-dying custom might be reflected in the Old Russian *ruda*, which meant not only "blood", but also "dirt" or "ore".¹⁷⁹⁸ I believe it actually signified red ochre, ochre which was used by the Aryans when colouring their hair. Red ochre deposits were present with a number of Aryan skeletal remains, especially around the head area.¹⁷⁹⁹

To lose your hair was to lose your power. So during the 15th Century AD Inquisitors developed a procedure whereby they shaved the head and body of witches, especially to reduce the likelihood of them secreting amulets on their body. I believe they also did this to rob them of their powers.¹⁸⁰⁰ It should be noted that the Muslims shaved the heads of Zoroastrian converts in Central Asia, as a sign that they had converted to Islam.

Christian clergy (Catholic and Orthodox) were required by canon law to be tonsured during the Middle Ages. Irish evangelists who made their way onto the European continent to convert the Franks found that tonsuring was one of the greatest causes of Frankish malcontentment, prompting resistance to their conversion attempts. Apparently the Franks and Saxons were greatly worried by the prospect of a haircut, probably for religious reasons rather than vanity.

The Vendidad, Fargard XVII spoke of how to dispose of hair and nails without giving them over to demons. Nail parings and hair that had fallen to the ground were classed as dead matter, and according to the Iranians would be snatched up by demons and witches who would use them to cause harm in the world. The faithful were therefore implored to be well manicured, and to collect up parings and hair clippings and store them in a pouch. Those which had fallen to the ground inopportunely were to have several circles drawn around them, and prayers recited over them. This was to ensure that a magpie would alight on the hair or nail, and eat them up.

And what of the following superstitions. The Norsemen clipped the nails of their dead for fear that they would be used by Loki to make the ship Naglfar, which would ferry giants to Ragnarok. In England it was customary for country women to sweep up any and all fallen hair and burn it. They were positively frantic about their sweeping, ever fearful that there was a hair lying somewhere unnoticed; hence they swept and swept their homes to examine the sweepings. They did this because they feared that magpies (who they called Pyot) would gather it up and make off with it, which would cause the death of the person whose head it was from within a year.¹⁸⁰¹ This is an exact inversion of white Magian custom, which dictates that magpies must make off with the hair after it is treated in the prescribed manner, by burial and encirclement.

Like the Magi, many Irish followed the custom of retaining whatever hair had fallen by burying it, but never burning it. There was always a danger that hair could fall to the ground, should it work loose, therefore people would have to fastidiously comb their locks, more than frequently to conveniently gather any loose hair they might have, lest it fall to the ground unnoticed. Plaiting would have been useful holding loose hairs in place until combed free.

Archaeologically speaking, combs are found in many graves dating to this period, right throughout Europe. These combs probably ensured that the person was well groomed.

A later Parsi custom permitted the shaving the head, a significant deviation from the old Magian customs, for in ancient times head-shaving was considered evil.¹⁸⁰²

Russian black witches did not believe in cutting their nails, nor would they comb, clean or brush their hair. This seems reminiscent of the black Magi, the two-legged demons with dishevelled hair. The Russian witches were as fastidious in these matters as they were in *not praying to God*.¹⁸⁰³ The Russian word for feet *noga* (pron. naga) and fingernail *nogot'*, come from the Old Indian *nakhm*, and the Persian *nagun* (both of which mean "fingernails"), thus indicating that the superstition most likely had archaic eastern origins.¹⁸⁰⁴

Perhaps the European custom of saying "bless you" after hearing somebody sneeze has a Magian origin.¹⁸⁰⁵

For the Magi stated:

"When a sneeze comes forth from any one, it is requisite to recite (a prayer)".¹⁸⁰⁶

Magie becomes outlawed

The fate of the pagan magicians in Rus' became unclear in the years following the conversion of Rus'. After 996 AD, publicly performed magic was a criminal offense. Such activities were difficult to conceal in the cities, but out in the forests and taiga, prohibitions against practical sorcery were ineffectual, and very difficult to police. It was probably so rampant there that the Church and its newly acquired sponsors (the Slavic royals) were almost powerless to stop it. The best they could do was issue sermons which they hoped would succeed in winning over the people. And it was to these remote districts that front-line preachers of St Avraamij's calibre ventured, introducing the faith to places other monks were loathe to go.

The less controlled and more militant mages, especially the higher-ranking Magi and philosophers probably gained refuge in the Baltic lands, or migrated to Bulgaria, to the Finnish territories, or even the pagan monasteries founded in Albania and Bosnia.¹⁸⁰⁷ Many would live with the Gypsies who had begun arriving from India in wagons. There they could find sanctuary.

In areas that had adopted Christianity (especially the southern half of Rus'), Christians beholden to Byzantium's apostolic view of the faith, might have treated magicians as the most hated type of outlaw, worse than murderers. These Christian Bogatyr's, warriors, simple farming folk and parish priests might have pursued any Magus brave enough to flaunt their magic too publicly, perhaps to be lynched. But, as you will read later, many, if not most Slav converts were stuck in the twilight zone between the old faith and the new, that is despite many Orthodox sermons aiming to hoist them out of this pagan-Christian state. Inevitably the quagmire of demi-paganism in Russia, as in Western Europe, provided a smoke screen behind which the sorcerers could operate, and continue to propagate the Old Faiths.

You see, when a pagan god-priest waltzed into Novgorod almost a century after the conversion of Rus' to provoke a showdown between him, the prince and the Christian authorities, he drew half the city's populace to himself, while the other half of the people stood by their Christian monarch.¹⁸⁰⁸ Therefore, when it came to the crunch, there was roughly 50% support for the pagan priests during the 11th Century. Even those Christian inhabitants who stood by the Church (either out of loyalty to Church doctrines, or fearing that they might displease the prince) did not attempt to attack the Volkhv. Perhaps they didn't want to start a conflict with the fellow Novgoroders who had rallied around the pagan priest, or because many Christians were Dvoeveriye and consequently, in their confusion, too afraid to raise a hand to him. It was not until the prince arrived and killed him that the pagan elements within Novgorod's society disbanded, no doubt continuing to believe in the old ways, and lamenting the loss of their priest.

In the *Izbornik* of 1076, we discover a Russian Orthodox sermon which is an obvious attack on abortion, witchcraft, poisoning and divination;

*"You shall not divine, you shall not bewitch, you shall not poison, for "a sorcerer shall not live." You shall not slay infants in the womb, for all that was formed and animated by God shall, if killed unjustly, be vindicated".*¹⁸⁰⁹

The statement "a sorcerer shall not live" suggests that Christians were being incited to kill the sorcerers based on Old Testament strictures. At the very least this seems to have been the Church's stance in relation to them. Such sermons are only of some significance once you realise that modern "experts" on witchcraft say that the Orthodox Church never had a problem with witchcraft, and claim that this is evidence for their theory that witchcraft was a Catholic 'literary tradition', a stereotype fabricated by fanatical elements in the Roman Catholic Church as they tortured their victims. They made further claims like;

*"Recent research has discarded such notions (of an actual surviving cult) and cast serious doubts on the theory that the stereotype of the witch emerged as early as the 13th c. in heresy trials against Catharism" .. and again "The crucial period in this fusion (of sham Inquisitorial evidence) appears to have been the early 15th c".*¹⁸¹⁰

Nice try! As early as the 13th-15th Centuries? They can't be serious. The evidence (which they usually don't include) simply doesn't support their arguments, and instead traces the existence of witchcraft to a period many centuries earlier, in Europe, and earlier by up to 1,000 years in the case of the Magian texts, which spoke of black

WE DO NOT HAVE A CLEAR PICTURE OF WHAT HAPPENED TO THE PAGAN PRIESTS AFTER RUSSIA CONVERTED, NOR DO WE KNOW WITH CERTAINTY HOW THEY WERE TREATED ONCE THEIR IDENTITIES BECAME KNOWN

SOME HAVE SAID THAT THE STEREOTYPE OF THE WITCH ONLY BEGAN IN THE 15TH CENTURY AD

WITCHCRAFT WAS DENOUNCED BY THE BISHOP OF YORK IN THE MID700'S AD

witches as the religious acolytes of the lord of the underworld, hell-bent on bringing the world into chaos, in accordance with his aims.

But if their version of the events is correct, then how do we account for much earlier Western royal and ecclesiastical decrees on witchcraft? To have a royal law prohibiting such things strongly suggests that the 'crime' was taking place. Would a king proscribe an activity that doesn't really exist? For instance;

IN 924 AD ATHELSTAN DECREED THE DEATH PENALTY FOR WITCHES WHO HAD CAUSED A LOSS OF LIFE

A penitential issued by the Archbishop of York between 734 and 766 AD called for the;

"Prohibition of offerings to devils; of witchcraft; of auguries according to the methods of the heathen".¹⁸¹¹

Later, somewhere between 924-940 AD, the Laws of King Athelstan decreed capital punishment for witches;

"We have ordained respecting witchcrafts, and lyblacs, and morthdaeds: if anyone should be thereby killed, and he could not deny it, that he be liable in his life".¹⁸¹¹

IN 11TH CENTURY BRITAIN, A COUNTRY LONG CONVERTED TO CHRISTIANITY, LAWS WERE STILL BEING PRONOUNCED AGAINST PAGANISM AND WITCHCRAFT

So why would Athelstan execute people for a "crime" that didn't even exist?

Or the 11th Century AD Laws of King Cnut;

"We earnestly forbid every heathenism; heathenism is; that men worship idols; that is they worship heathen gods, and the sun or the moon, fire or rivers, water-wells or stones, or forest trees of any kind; or love witchcraft, or promote month-work in any wise".¹⁸¹¹

KHAGAN VLADIMIR'S 10TH CENTURY AD ANTI-WITCHCRAFT, ANTI-PAGAN STATUTE

Article 9 of the *Statute of St Prince Volodimer* stipulated, from the very outset, that sorcery, the art of magic, the manufacture of special potions and poisons, incest and the exposure of corpses would fall under the jurisdiction of the church courts, pursuant to the *Nomocanon*. Under no circumstances were the princes or the nobility to intervene in these cases. Here the nobility was prohibited from intervening in the judicial process, to favour relatives and other practitioners of the arts. In like manner folk caught in a strange set of circumstances with animals, or frequenting groves and water sources in groups, or praying beneath grain troughs, were brought before the Church court.¹⁸¹² Evidently the Mediaeval Russian Church hoped to curtail royal interference in the apprehension of practicing heathens and witches living in Rus' during the 10th Century AD. Such an article is yet another reason why we must abandon theories which ask us to believe that witchcraft was a late Mediaeval and Renaissance phenomenon.

Chapter VII

The white rites

Now that we have begun to examine the impact of the Indo-Europeans and Indo-Iranians on the European continent, and the various forms of paganism generated under their influence, their dualistic “pantheons” of Gods and Magi, we will attempt to rediscover white pagan ritualism, as it was probably practiced in Europe and Eurasia. The following examples are a series of constructs based upon an interpolation of European pagan evidence, with the scriptures of the Magi, and the Aryan holy texts, the Vedas.

As stated in Chapter I, recourse to such texts and teachings is both logical and valid, considering the Magi headed a learned religion at least as formal as Christianity and Judaism. Certainly nobody would dream of examining Christianity or Islam without including something from the Koran or Bible, as an aid to understanding the religion. Because the Indo-Europeans left no holy texts, we can only make well-informed inferences about the closeness of their religious customs to those of their Indo-Aryan brethren in India. Accordingly, the Magian reconstructions herein are likely to be far more accurate because surviving Magian scripture is so comprehensive

Aryan pagan rites

The *Rig Veda*, *Yajur Veda* and *Sama Veda* texts of the Indo-Aryans are thought to have originated sometime between 1700-1000 BC,¹⁸¹³ but as with any oral tradition, a precise age is impossible to glean. Indian scholars believe the *Puranas*¹⁸¹⁴ were an additional and extensive body of practical religious teachings, that originated contemporaneously with the Vedas. However at least one portion of them was added as recently as the 5th-6th Century AD. The Indo-Aryans and Indo-Europeans are thought to have shared many features of these Vedic teachings. Consequently vedic gods and customs were still to be found in Mediaeval pagan Russia. In fact, as you will see in the following reconstructions, several important aspects of Indo-European Vedic tradition might be better preserved in Russia than in India.

Additional Old Russian words for “a witch” (*ved'ma*) were *vedun* (“a sorcerer”) or *charodei* {a sorcerer who performs spells with libations}”).¹⁸¹⁵ The closest progenitor for *vedun* is the Old Indian *vidatham* (“the wisdom of the [Brahminic] sacrificers”), and *vidya* (“sorcery” or “magic”).¹⁸¹⁵ *Ved'ma* and *vedun* are therefore connected with the Old Russian *vedat'* (“to know”), which is related to the Old Indian *vida* and *veda* (meaning “I know”).¹⁸¹⁶ Put simply, these words described sorcerers whose names were etymologically related to Old Indian words for knowledge, i.e; *knowledge of the Vedas*. The very same connection is found in the Old Prussian *ved'* meaning “sorcery” or “knowledge”, which has an identical point of origin.

What we have here is evidence for the presence of Vedic brahmins in pagan Russia and Old Prussia, only there they were unfavourably perceived as witches. This fall from grace took place either in Christian times, or once the white Magi assumed power throughout eastern Slavia. Certainly it is difficult to think of Indo-Aryans without them,

LINGUISTIC EVIDENCE

for these priests were integral to their interaction between the physical and spiritual world. Brahmins orchestrated and executed some very important rites: the coronation of a king; the horse sacrifice; making the elixir of might – drink of warriors; as well as marriage, passage and initiation rites. They preserved oral and written lore pertaining to their law codes, legends, genealogies and made sacrifices.

The situation was much the same in Scandinavia. The Old Icelandic *vita* (“to know”)¹⁸¹⁷ is practically identical to the Old Indian *vita* or *veda* (“I know”), so by implication it might also have meant “to know the vedas”. The Old Icelandic *vita* formed the basis for the word *vitki* (“a wizard”),¹⁸¹⁷ and so we might guess that the *vitki* were actual people, and what is more, they were the very ones who knew this knowledge, this *veda*. As with the *ved’ma* (witches) of the Balto-Russian sphere, the Norse *vitki* became relegated to the ranks of sorcerers and wizards after the conversion. For this reason we also find the Old Icelandic *vitt* (“sorcery” or “charms”), *vitta* (“to bewitch” or “to charm”), *vittugr* (“skilled in witchcraft”).¹⁸¹⁷ The Old Icelandic *vita-karl* (literally “a wise man”) meant “a beacon watchman”.¹⁸¹⁷ So by inference a *vita-karl* was a brahmin, Magus or philosopher who tended a local holy fire. Wisdom was certainly an attribute of these Scandinavian wizards, as is also suggested by the words *vittr* (“wise”) and *vitra* (“wisdom”, “sagacity” and “knowledge”).¹⁸¹⁷

In the absence of the lofty Brahmin caste, Aryan ceremonies were probably performed by Indo-European kings, village elders and chieftains, wherever Indo-European holy rites were maintained, in the remote communities of pagan Rus’, and the lands of the Finns especially. In the cities and towns of heathen Slavia the Aryan ceremonies might have been enacted by the famed *Skomorokhi* (travelling musicians who performed music, poetic recitals and comedy), or by Volkhvy Magi specially trained in Vedic lore and ritual, and by Princes, Kings and other national leaders.

In Vedic tradition the brahmin was the focal point of society, but in 10th Century Rus’, the dualist cults had probably eclipsed Vedic ritual for some time. With the ascendancy of the Rus’ Magus-princes and their Iranian pantheon, the *Sima* rites become little more than a village oddity in many provinces, if it were not for the fact that *Sima* was still sorely needed to adore Perun (ie; Indra), the thunder god.

ARYAN KINGS CROWNED
BY THE BRAHMINS

The coronation of a king

Throughout the history of European paganism the kings figure heavily, as both secular and religious leaders. Their kingships were, it would seem, born from those of their Indo-European ancestors. And with them came a host of religious duties.

The Hindu coronation rite found in the *Puranas* only applied to instances of royal succession where the preceding king had not yet died.¹⁸¹⁸ It entailed anointing the incoming monarch at an astrologically auspicious time.¹⁸¹⁸ He was ceremonially bathed, following which he appointed his inner cabinet of advisors, which included brahmins, expert astrologers, politically astute chieftains and a queen.¹⁸¹⁸ Chieftains holding power within his realm came to the site of his throne to greet him.¹⁸¹⁸ Ceremonies to propitiate the favour of Indra took place, followed shortly afterward by sacrifices to Manu. A ground fire was lit in the shape of a swastika.¹⁸¹⁸ Next the King-to-be was anointed with different muds, and then washed with water supplied by each of the castes that he was to rule over. Finally a brahmin sealed his kingship with a smear of honey, and by crowning him.¹⁸¹⁸ The manner in which he governed society determined whether he would attain heaven or not. If he did not levy taxes and gainfully employ them; if he did not protect his citizens or rule them justly; if he did not build castles, vigilantly eradicate crime, or suppress treason; if he did not apply tortures and diverse punishments to the wrongdoer, these things would precipitate him into foreboding hells. His eternal destiny therefore lay in supplying a reign memorable for its good rule, and the advancement of the nation as a whole.

FIRES, IN THE SHAPE OF A
SWASTIKA, WERE LIT AT
THE PLACE OF
CORONATION

The singing of the argas

The Vedas contain *aryas* (hymns) sung by the ancient Aryan forefathers during *Soma* making, and in adoration of the Daevas. As it happens some pagan Slavs, Balts and Finns most likely performed the Indo-European religious rites of *Soma* making and the horse sacrifice, even as late as the Mediaeval era. You see in those days the Russes and Finns sang hymns of high praise to their god *Sima* (which in all likelihood was really their term for the *Soma*) who in both pagan European and Aryan tradition was not only a drink but a god (See the descriptions of the Rus’ gods). By analysing the Vedic references to *Soma* we can infer that after the performance of the ritual, the Slavic/Finnish

ARYAN VEDIC
CEREMONIES WERE
ACCOMPANIED BY HYMNS

Sima (an alcoholic honey drink like mead) mutated from a simple drink into the god *Sima*. Like *Soma*, *Sima* probably left the presence of the pagans gathered in their holy grove, and went skyward to strut the Heavens with the other great deities, not the least of which was Indra (ie; Perun). All participants became lively and enraptured by the song-making, in expectation of receiving the sacred beverage.

Khor, the Russian word for a “choir” came from the ancient Greek.¹⁸¹⁹ However an even older Indo-European tradition of religious song is perceptible in the Russo-Slavic word for “poetic verses” *grano*.¹⁸¹⁹ *Grano* comes from the Old Indian *grnati* (“to give praise”, “he is singing”).¹⁸¹⁹ This linguistic survival indicates that a certain number of *Sima*-drinking Slavs sang prose in adoration of the Gods, gods more likely than not to have been Daevas. It would have been impossible for the concept of religious singing (embodied in the word *grano*) to have survived from Indo-European times even into the Christian era, unless there was an accompanying body of Indo-European ritual song to accompany the word. Owing to a common linguistic ancestry *grano* is also related to the Avestan Persian *gar*, which relates to Magian hymns (offered up during the five daily *gah* prayer sessions).

Using ethnographic analogy these folk melodies were evidently sung using orchestrated polyphonies, with tenors, sopranos, bass tenors and so forth, phasing in and out of the hymn at the required moments. Perhaps the songs of European Russia were related to those of the Indo-Aryans, just as their gods were. Certainly there is linguistic evidence suggestive of pagan Slav cognisance of Aryas, the Indo-European and Indo-Aryan hymns.

The following poetic stanzas from the *Rig Veda* concern the crushing of the *Soma*;

“Let them raise their voices, and let us raise our voices. Speak your speech to the stones that speak, when you stones, you mountains full of Soma, rush to bring the rhythmic sound to Indra. They speak in a hundred ways, a thousand ways, howling with their green jaws. Working busily and well to do the good work, the stones have succeeded in eating the oblation even before the priest of the oblation. They speak: they have found the honey. They growl and gnaw on the cooked meat. As they snap at the branch of the red (Soma) tree, the bulls who have grazed well begin to bellow.

*They speak loudly, excited by the exhilarating drink, they shout to Indra: they have found the honey. Artfully they danced with the sisters that embrace them, making the earth echo with their stampings”.*¹⁸²⁰

From *Vacana:194* of the Bakhti Saints¹⁸²¹ (an Indian sect dedicated to the worship of Shiva), who loathed the rituals of the Hindus, we can infer that the *Soma* libation was most likely poured at locations where a serpentine picture appeared etched into a rock. There is no shortage of such rocks in Europe, especially Scandinavia. Presumably the groves that certain European pagans met in were situated near such stones.

At a typical Aryan pagan *Soma* ceremony in Slavia and the Baltic, all the faithful gathered before an oak of the *Soma*-greedy Perun (most likely the Slav name for Indra), or some other species of tree dedicated to a specific Aryan pagan deity. The hymns probably continued throughout the performance of the *Sima* ceremony, to lull and woo the gods, and give strength to all present. These songs (as contained in the *Rigveda*, *Samaveda* and *Yajurveda*) were filled with spirituality and emotion, and the inspiration to sing poetically charged verses. The hymns recounted such things as the coming of *Soma* into the world, brought down from heaven by the great eagle, and *Soma*’s continued growth and prosperity in the world, through whom so much could be achieved. After having been offered up in the ritual, *Soma* was said to have become a god that ascended to heaven from whence he came. So too it may have been with *Sima*.

Many Arya hymns were dedicated to Indra, the greatest and most powerful of the Daevas. Considering the exceptional similarities between Perun and Indra, it is unlikely to be a coincidence that Perun was the god of the heavenly verses. It is plausible that the pagan Slavs sang *aryas* similar to those of the Aryans when giving praise to Perun. In this connection it is important to note that Perun was traditionally viewed as lord of the heavenly verses.¹⁸²² So there was thus a sound link between Perun (Indra), hymns, oak groves, pagan gatherings, and, I would add, the rites of *Sima*.

Soma (Sima) rituals

From Hindu scripture we know that there were a number of varieties of *Soma*. In *Yajur Veda*,¹⁸²³ *Soma* is mentioned as consisting of cereal grains like barley or rice, milk, and curds (which is coagulated milk). It was mixed in a cauldron, and thickened so that it became like gruel.

PERUN, HYMNS,
GROVES AND SIMA

SOMA MADE FROM MILK AND VARIOUS CEREAL GRAINS

The main body of the drink however was made from either milk or water, either of which was brought to the fire in separate jars, then mixed with curds. To this was added grain, and then on top of this honey, that all important honey so lovingly described in the Vedas. From this description one would think it turned out more like gruel than a libation. From *Yajur veda* one might gather that (if diluted and strained) *Soma* formed a beer or mead-based draught, or another variety like sweetened milk. It could not have been alcoholic at this point, since it had only just been mixed before the gathered assembly.

HONEY AS AN ADDITIVE

General academic consensus is that the enrapturing effects of *Soma* were not due to alcoholic intoxication, but perhaps due to a hallucinatory additive, such as the *Amanita Muscaria* mushroom. However *Soma* seems to have been a tree rather than a piece of fungus;

SOME BELIEVE SOMA WAS FLY AGARIC

"As they snap at the branch of the red tree (soma), the bulls who have grazed well begin to bellow".¹⁸²⁴

It may well have been strictly a spiritual experience also. Other variants of the drink are thought to have taken almost two weeks to prepare, so it is possible that these libations underwent fermentations, emerging essentially alcoholic in nature. *Soma* (and presumably *Sima*) gave drinkers the feeling that they were flying high above the clouds.

SOMA MIGHT HAVE BEEN ALCOHOLIC, OR PURELY SPIRITUAL

*"Like impetuous winds the drinks have lifted me up. Have I not drunk Soma?In my vastness, I surpassed the sky and this vast earth, Have I not drunk Soma?...One of my wings is in the sky; I have trailed the other below. Have I not drunk Soma?I am huge, huge! flying to the cloud. Have I not drunk Soma?"*¹⁸²⁵

FLYING TO THE SKY WITH SOMA, HIGHER THAN THE CLOUDS

Ritual flights are a theme that arises during the Inquisitions, with regard to the mystical abilities of the witches. This topic shall be addressed later in the book, because there is every reason to believe that some of the witch ceremonies were in reality pagan rites which pockets of the old-believers continued to perform until the Middle Ages and even later. In fact, even to this day, the Finns still drink *Sima* (especially every 1 May), a beverage made from honey, spring water, sugar and lemons, but obviously no sugar would have been used in pagan times.

The original soma

In this section we discover that one type of *Soma* was the original and the best. The *Rig Veda* describes what this particular *Soma* rite was like:

SOMA GAVE POWER TO INDRA

"All the rest of the band of my friends has come, but my husband's father has not come. He would have eaten barley meal and drunk Soma and gone back home well fed. The sharp-horned bull bellowed as he stood over the height and breadth of the earth. In all combats I (Indra) protect the man who presses Soma and fills my two bellies..

They are pressing out the impetuous, exhilarating Soma juices with the pressing-stone, for you, Indra. Drink them! They are cooking bulls for you; you will eat them, generous Indra, when they summon you with food.

SOMA JUICE WAS FILTERED THROUGH WOOLLEN CLOTH

*(And Indra says) "The gods truly know me as the powerful one, a fierce bull in one action after another, Indra. Exhilarated by Soma, I killed Vretra (the serpent) with my thunderbolt, and I opened up the cow-pen by force for the devout worshipper."*¹⁸²⁶

*"Like a new-born child he bellows in the wood, the tawny racehorse straining to win the sun. He unites with the sky's seed that grows great with milk. With kind thoughts we pray to him for far-reaching shelter"*¹⁸²⁷ Clarifying *Soma*, when you are sated with waters your juice runs through the sieve made of wool. Polished by the poets, Soma who brings supreme ecstasy, be sweet for Indra to drink".

HONEY AND DANCING

"They speak loudly, excited by the exhilarating drink. They shout to Indra; they have found the honey. Artfully they danced with the sisters that embrace them, making the earth echo with their stampings....They plunge deep to their rendezvous with the lower stone; they infuse it with floods of the seed of the sun-bright one....When Indra has drunk the honey they have milked he grows great and acts like a bull....They have raised their voices for the sacrificial juice, like playful children jostling a mother. Set free the inspiration of the one who presses Soma, and let the stones that we hold in awe return to being stones".¹⁸²⁸

*“I have tasted the sweet drink of life, knowing that it inspires good thoughts and joyous expansiveness to the extreme, that all the gods and mortals seek it together, calling it honey.... We have drunk the Soma; we have become immortal; we have gone to the light; we have found the gods. What can hatred and the malice of a mortal do to us now, O immortal one?”*¹⁸²⁹

BOTH GODS AND
HUMANS SOUGHT THE
IMMORTALITY IT
BESTOWED

The rite of *soma*-making outlined in these stanzas was termed *Yajna* in the Indo-Aryan tradition, and it is this term that might provide the key to solving the riddle of the *Soma* tree’s original species. You see in Russia, where *Sima* was once drunk and worshiped, the term *Yajna* appears to have been preserved in a number of words. *Ajna* was conceptually and phonetically related to the word *Yasna*, an important religious term used by the white Magi. In olden times the Zoroastrian yellow *Haoma* recipe was drawn from the book of *Yasna* which shows how the spiritually-empowering ceremony was to be properly performed. In other words, *Haoma* was produced using the *Yasna* rite. For the Magians, *Yasna* applied to the mixing of *Haoma*, their own spiritual libation, which differed from the Indo-European and Indo-Aryan *Soma*, but which originated in the same cultural-religious milieu, in the same region of the world. Hence the similarity of the two words.

YAJNA AND YASNA

In Russia, where the Volkhvy Magi must evidently have performed the *Haoma* rite in antiquity, and where *Sima* was formerly made, we are fortunate to discover that only a few words stem from the root-word *Yas-*, namely; *Yasno* (clear, bright, serene or dazzling, pron. Yasna); *yasen* (“the ash tree”); *yasna* (“gum”); *yasla* (“a babies crib”). *Yasna* might be a reference to the sweet gum that exudes from the bark of the Ash Tree, especially when heated in or near a fire. Magian scripture speaks of “butter” being placed in the sacred fire. This term applied to butter in the true sense as well as plant gum, which served as a sweet food providing sustenance for the holy flame. As you shall now see, these varied yet similar words are likely to be relics of a time in Slavia, when the ash was the “tree of life”, and its gum embodied qualities which the simple commoner perceived in it - clarity, insight, immortality, new life. By cross-referencing the Russian word for an ash tree (*Yasen*), with the phonetically similar Aryan and Magian terms for the *Soma* and *Haoma* rituals (ie; *Yajna* and *Yasna*) it could be said that the Zoroastrians and the Aryan pagans of Russia both regarded the Ash as the tree of life, and thus the basis for both the sacred *Sima* (*Soma*) and *Haoma* libations.

THE ASH TREE, THE
TREE OF LIFE

The religions of the Magians and Indo-Aryans had a common ancestry but, like their languages, splintered in different directions due to the religious schism outlined in Chapter III. Perhaps they differed in the type of ash tree used, for ash trees have two separate genii; genus *Sorbus* and genus *Fraxinus*. Divergent descriptions of the *Soma* and *Haoma* trees in Vedic and Zoroastrian texts respectively, suggest this was the case. What is even better, both sets of descriptions are capable of being matched to one particular genus of ash tree.

A COMMON ANCESTRY
FOR INDIAN AND
IRANIAN RELIGION

The *Rig Veda* informs us that the *Soma* tree turned yellow at certain times, and it became red or tawny to the eye. It only grew in cold (ie; freezing) or highland areas with very wet, waterlogged soils. It appeared red during the autumn season, had perfumed flowers, and lush berries which were a light orange (tawny?) or red in colour. It thrived in the mountains, and grew very quickly. Such a description could only apply to *Sorbus Aucuparia*, the European Mountain Ash, also known as the Rowan tree. Thus we arrive at the European Mountain Ash (*Sorbus Aucuparia*) and its berries as the most likely candidate for the original *Soma* portrayed in the *Rig Veda*. *Sorbus Aucuparia*, fits the precise description of the *Soma* plant, and has limited botanical distribution, only growing high on mountain tops in Europe, or in the precincts of Western Asia. I am unaware if it possessed any narcotic or hallucinogenic properties; or whether it was secondary additives that did this.

THE SOMA PLANT HAD
AN OVERALL RED
APPEARANCE

This older *Soma* formula was perhaps an unfermented drink, mixed from sacred cow’s milk, honey, butter, curds, mountain ash (berries, stalks and tendrils). Lemon or even lime juice may have served as a curdling agent.

PERHAPS IT WAS A RED
ASH, THE EUROPEAN
MOUNTAIN ASH

During vital seasonal solemnities *Soma* was probably consumed only by the upper classes, and ritual mead drunk by farmers, craftsmen and traders. This is mere speculation, but perfectly in accordance with the Indo-Aryan view that different castes were to observe different laws in relation to food and drink.

EUROPEAN PAGANS
SAW THE ROWAN TREE
AS EXTREMELY HOLY

What is equally impressive is that a reasonable body of European folklore exists describing the rowan as one of the holiest of trees. One very interesting aspect of the rowan is that it can be parasitic.¹⁸³⁰ This kind of rowan, termed “flying rowan”,¹⁸³⁰ forms when its seeds have been deposited on another tree by birds. “Flying rowan” need not grow on host plants only, but can take root even on top of houses.¹⁸³⁰ In Scandinavia particularly, “flying rowan” was considered to be the most powerful type of European mountain ash, protecting homes and night-time travellers against witchery.¹⁸³⁰ The rowan tree was held sacred by the Celtic Druids.¹⁸³¹ Long afterwards, far into the Christian era, European folk employed the mountain ash as a (black) witchcraft repellent, or to combat the mischief or harm of

THE ROWAN
ESPECIALLY VENERATED
IN THE GERMANIC AND
SCANDINAVIAN WORLD

THE FINNS THOUGHT IT
HOLY

spirits.¹⁸³¹ In this respect its virtues were similar to those of the Vedic *Soma*. In Britain the rowan tree helped to protect butter-churns and milking utensils, as well as family homes, and their cattle,¹⁸³² protecting households against witchcraft and woe.¹⁸³² In Lancashire England it was the embodiment of love.¹⁸³³

In diverse regions of the European continent villagers erected "May trees", affixing them to places where women or cattle lived, be it the family home or stock enclosures.¹⁸³⁴ And by their influence much milk came to the fore in their udders and breasts.¹⁸³⁴ Very often they used portions of the rowan, or mistletoe to procure similar effects, though within the Nordo-Germanic region, Mistletoe appears to have been more highly regarded in Germany.¹⁸³⁴

Some folklorists believe rowan rites originated in the Celtic world, whereas outside of Britain these customs "were found, powerfully, further north and east, in Denmark, Sweden, Norway, Saxony, Silesia, Moravia, Bohemia and Austria".¹⁸³⁵ To this I would add Russia and Finland. For this to be so there must have been a common link which had seeded across so many countries. I am disinclined to believe it can be wholly attributed to the Norsemen, mainly because some of these regions had little interaction with the vikings. It was therefore not a superstitious Christian custom, but an integral part of a Europe-wide pre-Christian tradition. The ultimate origin of these pan-European "superstitions" resides, I believe, in the ritualism of the Indo-Europeans, and to later waves of eastern religious observance being brought onto the continent.

The Finnish Kalevala, recorded early last century from extant Finnish oral lore, portrayed the hero

Pellervoinen sowing "rowans on holy ground".¹⁸³⁶ The rowan appears repeatedly in the same epic. A maid is warned "Be wary of those rowans in the yard: holy are the rowans in the yard, holy are the rowan's boughs, holy the bough's foliage, the berries still holier".¹⁸³⁷ The rowan was probably found in Finnish folk divination, if the Kalevala trustworthily reflects traditions of popular Finnish folk magic. The Northern Hag's serving wench was advised how to cast lots: "put rowan twigs on the fire".¹⁸³⁸ If blood emerged from the twig, war was imminent, and if water, then peace would prevail. She put lengths of rowan into the flame. Neither blood nor water emerged as the hag had said, but it "oozed out honey, it was trickling mead".¹⁸³⁸ This signified a coming wedding. In this instance the sap of the rowan tree oozed out as its bark split open in the crackling embers. As you will see, Magian scripture provides clues that burning or heating the wood allowed one to extract the resin within the plant.

For those Russlanders and Finns who observed the ancient rites of the Indo-Europeans, the ritually prepared juice of the rowan plant was originally seen as a god called *Sima* (see p. 297). Only later was *Sima* mistakenly concocted as a form of mead, as the proper understanding of the ancient prose broke down under the tens of centuries that followed the arrival of the Indo-Europeans, and then the rigours of the Christianisation process. Accordingly *Soma* was likened to mead, while originally the connection between the two was merely poetic, rather than actual. As time went by, rowans were implicated in some European witch trials, suggesting that the defendants in these cases were pagans apprehended for practicing the ancient rituals. Where they did not renounce these practices, the practitioners were convicted and burned at the stake.

Returning to the making of *Soma*, the *Rigveda* tells us that *Soma* was first "pissed" from the heights of heaven by the Maruts (Daevas), in the form of dew drops. The holy dew was subsequently lapped up by the sacred cows, licked from the morning grass, or perhaps gathered in small cup shaped depressions in rocks of ritual significance,

to be used in the libation. Such stones can be found throughout a number of European countries.

For instance a stone possessing circular indentations was once situated near the Russian village of Fedorov.¹⁸³⁹ These engraved cup-shaped marks were used as collection receptacles for rain water even last century.¹⁸³⁹ A chapel was built next to this site on the strength of a vision, in which Theodore of Alexandria appeared to one of the faithful.¹⁸³⁹ Evidently this Aryan pagan holy stone had drifted into Christian usage.

When the *Soma* plant was gathered, its stalks were placed on an ox-hide¹⁸⁴⁰, then soaked in sacred dew and spring water. They became rapidly engorged by the soaking they received, and fattened for slaughter by the two stones. These slabs yellowed at the pressing. The juice spilled out into several bowls, and was strained through woollen cloth. The libation was then fully mixed, and used to douse the ritual fire of Agni. The remainder was drunk by the elder or poet-priest, who was then said to become filled with divine inspiration and prose - this was known as the priest's share. Next a sizeable quantity of *Soma* was mixed in a large libation horn, the beverage prepared for all pagans present to drink from. The prayerful congregation then entered the grove to imbibe the *Soma*. The *Rig Veda* tells us that the faithful were like chariots at this point, bound with thonging.

SOMA WAS DRUNK
FROM LIBATION HORNS

"(Soma) You have bound me together in my limbs as thongs bind a chariot. Let the drops protect me from the foot that stumbles (physically and spiritually) and keep lameness away from me".¹⁸⁴¹

This segment of the *Rig Veda* can be favourably compared with the religious rites of the pagan Germans;

"No one may enter it (their holy groves) unless he is bound with a cord, by which he acknowledges his own inferiority and the power of the deity. Should he chance to fall, he may not raise himself or get up again, but must roll out over the ground. The grove is the centre of their whole religion. It is regarded as the cradle of the race, and the dwelling-place of the supreme god to whom all things are subject and obedient".¹⁸⁴²

Perhaps the German devotee in this case rolled along because he had become a chariot with the binding of his hands. Having stumbled, all he could do was to roll like a chariot wheel.

THE VEDIC POETS

If drunk with due reverence, the Aryans believed *Soma* brought long life and would disperse and slaughter demons by the thousand. Their Vedic poets spoke of it using highly polished prosaic analogy. Accordingly, it is difficult to arrive at a precise understanding of the things they sung and recited during the rite, without having undergone the training of a poets, and brahmins. Sometimes they used strict analogies, at other times they ambiguously referred to the exact object being addressed, and very often a recital could be an analogy and a reference to the very object being addressed at one and the same time. To illustrate this, *Yajurveda*¹⁸⁴³ XIX: 21 says; parched cereal grains, gruel, barley, roasted rice, wheat, honey and a mixture of milk and curds are what is used to make *Soma*, and then in *Yajurveda*¹⁸⁴³ XIX: 23 (a mere 4 stanzas away!) blows the reader clean out of the water by saying that barley symbolises milk, curds are symbolised by jujube fruit and wheat is the symbol of *Soma*. You really did have to be a poet to understand the meaning of this poetry ... truly!

SOMETIMES THEY USED
OBSCURE ANALOGIES

In light of this, it is hard to know whether butter and honey were used during the *Soma* ritual, because even though they were described by name, butter and honey were words which conceptually meant many other important things. Some experts doubt whether they did in fact use these ingredients, while others argue the point, considering the vedic references graphic enough to stick their neck out. We may never know for sure. For instance, in Plutarch's biographical compilation, *Lives of the Honourable Grecians and Romans*, under the entry on *Coriolanus*, we have references to the Arcadian Oracles as being acorn-eaters, with the powers of mighty prophecy. *Coriolanus* reveals the peoples' deep affection for the oak and the acorns which grew from it. Next he went on to say that the first humans in the world ate acorns for their sustenance, and used acorn kernels of *honey* to concoct mankind's first drink. Obviously the soft nutty seed of the acorn was not honey. Why was it compared with honey, and how was it used to form a drink? Was it squeezed to make an oil or juice? Did some substance in the nut inspire the Oracles?

The oak was invariably connected with Perun (under his various regional names) throughout much of Slavia and the Baltic, and might therefore have been originally associated with Indra. Perhaps the oak was somehow linked with the Indo-European *Soma* observances, whether originally, or as a result of religious devolution as the centuries following the Indo-European arrival lapsed.

Certainly the oak was regarded as a magical tree. For example in the *Kalevala* snapping twigs or foliage from an oak had the effect of breaking off magic and love.¹⁸⁴⁴

Asvamedha - the horse sacrifice

THE HORSE SACRIFICE

In the *Asvamedha* ritual described in the *Rig Veda*,¹⁸⁴⁵ a roan or bay coloured racing steed of repute was paraded about a holy pasture in company with a goat, and with a long procession of devotees in tow.¹⁸⁴⁵ The goat was sacrificed firstly, acting as a heavenly herald, who would announce the windward arrival of the racehorse in the sky lands of the Daevas.¹⁸⁴⁵ The horse was led onto the grounds of the ceremonial banqueting area, where it was sacrificed with a clean blow of an axe, or by a pointed stake thrust up into its chest, or by an arrow fired into its heart via a well-placed neck shot. Next the brahmin priests butchered the horse with a sickle or ritual axe, in an exceedingly precise manner, to avoid damaging the limbs. To do so would cripple the beast once it returned to life in the next world. Every rib was then ritually incised, each dedicated to a planet or constellation in the heavens. The body parts of the slaughtered horse were then stuffed into a large cauldron using ritual hooks, a spade and fork. Spring water boiled away in the red-hot pot, a large iron cauldron, thus releasing the meat's succulent goodness. For this was the food that sustains the gods themselves. The sanctifying blood of the racer, and its cooking juices were spattered all over the assembly who had gathered there, and this would sanctify them. As a result of the performance of the *asvamedha* ritual, the racer, the swiftest of beasts, was spiritually re-animated, and galloped up into the heavens, to where the daeva gods lived.

THE HORSE GALLOPED
INTO HEAVEN

INDO-EUROPEAN HORSE
SACRIFICES IN EURASIA

There is some reason to believe that *asvamedha* continued to be performed by the European descendants of the Indo-Europeans. The artistic motif of a horse crawling, with its abdomen scraping along the ground, seems to have been a common theme in Siberia, China, Central Asia and Scythia,¹⁸⁴⁶ as early as 800 BC in one place. Might such decorations have been religious representations depicting the still-dying horse's ascent into the heavens?

LARGE INDO-EUROPEAN
CULT SITES IN RUSSIA

Substantial deposits of sacrificed horses have been discovered by archaeologists in a massive belt stretching from the Dnieper River in the Ukraine right across Scythia to Central Asia, and dating as far back as 4,500 BC.¹⁸⁴⁷ The dates and locations for these finds coincide with the arrival of an Indo-European presence in Europe and the Russian periphery.¹⁸⁴⁷ In excess of one hundred thousand pieces of horse remains were found at Petropavlovsk, Russia,¹⁸⁴⁷ which might signify that it was nothing less than a major (Indo-European) cult centre. Such an identification is made possible by the presence of Kurgan grave mounds, a recognised cultural indicator of the Aryan Indo-Europeans.

IT WAS IMPERATIVE THAT
THE SACRIFICE'S LEGS
NOT BE HARMED

In some instances horse skeletons have been excavated in Europe by archaeologists, laid out in a rather precise fashion. In effect these animals had been butchered, and perhaps eaten, but the bones were later re-assembled at the site of their interment. It appears the pagans who slew them may well have paid careful attention to preserving the horse's limbs, something of primary importance during the Vedic horse sacrifice. The theme of creatures being nobbled through accidents occurring during the sacrifice, are found in European folklore, as discussed by Dumézil. Of even greater interest is the realisation that the race who ritually slew these horses exposed the bodies of their deceased in the manner of the so-called Kurgan culture. If these people were Aryans, which the archaeological evidence tends to suggest, then we have cause to ask why they treated their dead in a similar manner to the Magi of Persia, rather than cremating the dead as the later Hindus did. This point suggests they were Vedic Aryans who had adopted the funeral rites of the Magi, but might also have been Magians who performed Vedic rites. The latter form of religiosity was probably atypical of the early interaction between Indo-Europeans and primitive Magians inside Iran. Many older-style Magians persisted in these ways until several centuries after Christ, when the Orthodox Magians expunged them from Magian society.

EUROPEAN PAGANS
SACRIFICED HORSES AS
LATE AS THE MIDDLE
AGES

Horse sacrifices were still practiced by the pagan Celts, Balts, Finns, Scandinavians and Russians during the Middle Ages, and throughout the countless centuries prior to their respective conversions. These ceremonies are perhaps identifiable with the Aryan horse sacrifice, based on the numerous elements of Indo-European culture found throughout their respective pagan cultures. Considering archaeological finds of cauldrons, and what seem to be ritual forks and spades, we might infer that after a horse was killed, the animal was carefully butchered, and its meat cooked up in a cauldron with the assistance of large ritual forks and spades, to be eaten by those attending the ceremony.

The Bronze Age Scythians sacrificed horses predominantly, but offered cattle also.¹⁸⁴⁸ The beasts were then boiled in very large cauldrons. According to Herodotus, horses or cattle were ritually strangled by the Scythians.¹⁸⁴⁸

When Slavs, Danes and Finns ate their horse meat at specific times of the year, they were knowingly or unknowingly perpetuating a rite of immense antiquity; formerly a banquet for the gods, with the gods.

A conceptually similar horse sacrifice was recorded in Mediaeval Ireland, performed in connection with a coronation. We do not know how reliable the account is. In Ulster there were “a certain people which is accustomed to appoint its king with a rite altogether outlandish and abominable”. The folk converged at a given site. “A white mare is brought forward into the middle of the assembly.

He who is to be inaugurated, not as a chief, but as a beast, not as king, but as an outlaw, has bestial intercourse with her before all, professing himself to be a beast also”.¹⁸⁴⁹ The steed was ritually felled, whereafter it was butchered and boiled in the cauldron. As it cooled the king-to-be jumped in the pot, drinking and eating of its contents, and washing himself liberally. Such was the manner of his royal consecration.¹⁸⁴⁹

Even today we can look at Russian words beginning with *zher* and find in them clear relics of Aryan ritual horse sacrificing; *zherd'* (“a pole”), *zhereb'yovka* (“casting lots”), *zhertvooprinoshyenie* (“a sacrifice” or “an offering”), *zhyertoennik* (“an altar”), *zherebyonok* (“a foal”), *zherebyets* (“a stallion”), *zherlo* (“an animal's muzzle”), *zhyertoocat* (“to sacrifice something”) and *zhyertoa* (“a sacrifice”). These words preserve elements of the sacrifice: the muzzled horse is tethered to the pole and sacrificed, its body cut up, most likely on an altar.

Last century a large “horse stone” (*kon'-kamen'*) could still be found on an island in Lake Ladoga, where the Konevetskii monastery stood.¹⁸⁵⁰ In honour of St Arsenii, the locals used to sacrifice a horse there annually.¹⁸⁵⁰ Since the stone pre-dated the foundation of the monastery, the *kon'-kamen'* was probably an Aryan pagan sacrificial altar, where holy steeds were once offered up to the Daevas. Again, yet another instance where Christians had resolved to continue with the old ways under the aegis of the new faith.

From the mediaeval annals we know Slavs performed divination by using their temple horses (which only the high priests were permitted to ride). *Zherev'yovka* might be independent confirmation of this detail.

And then there is the Russo-Slavic word *or* (“a horse” or “a stallion”), which is related to the Czech *or* (“a stallion” or “a horse”) and *orz* (Polish for “a horse”). These come from the Old Indian *arva* (“a race horse” or “a stallion”), and the Avestan *aurva* (“fast”), *orr* (Old Icelandic for “fast” or “brave”, and *earu* (Anglo-Saxon: “quick” or “fast”).¹⁸⁵¹ Therefore the English word “horse” seems to have had an eastern origin, perhaps even stemming from the Polish. Some linguists believe that *or* is connected with *aryas*, and the Avestan *airya*, both of which mean “Aryan”. Therefore *or* might preserve a Slavo-Nordic association between fleet-footed horses, Aryans and Aria hymns, ultimately arising from the performance of Aryan horse sacrifice.

Pagan rituals of the white Magi

In the remainder of this chapter we will analyse the ritualism of the white Magi, both ancient and orthodox with a view to understanding the sorts of ceremonies the Russian Magi probably enacted.

The white Magi made sacrifices to all creation, for each living thing was a manifestation of the divine and loving holy being who made the world ... Ahura Mazda the sun.

*And we sacrifice to the fountains of the waters, and to the fordings of the rivers, to the forkings of the highways, and to the meetings of the roads. And we sacrifice to the hills that run with torrents, and the lakes that brim with waters, and to the corn that fills the corn-fields; and we sacrifice to both the protector and the Creator, to both Zarathustra and the Lord. And we sacrifice to both earth and heaven, and to the stormy wind that Mazda made, and to the peak of high Haraiti, and to the land, and all things good”.*¹⁸⁵²

THE RITES OF THE MAGI

BESTOWING OFFERINGS
ON ALL GOD'S
CREATIONS

The rites described over the next few pages were once performed by the white Magi in adoration of God. In some cases they outwardly resembled Aryan ordinances because of their shared religious ancestry, but in the main they are highly distinctive. Some ceremonies are offerings in the true sense, while others are penitential rites allowing Magians to gain atonement for their transgressions against their god's beneficence. Only then could they hope to avoid the clutches of the chain-bearing, soul-escorting demons that came to seize the deceased's soul, at the hour of death

Coming of age

RITE OF PASSAGE

Upon reaching the age of reason (seven years old), a person (who could now tell the difference between good and evil) underwent the *Bareshnum*, recited the *Patet* confession thereby gaining absolution from earthly sins against the heavenly lord, and received a pristine knee-length white linen shirt and sash or chord belt (*kustik*), with a ritual thread in it. These garments had to be worn for the remainder of their life as a symbol of faith, signifying the robe of lesser priesthood, and granting supernatural protection against demons.

The child then ate holy gruel to fortify it for life. This holy gruel-drink is perhaps the same one mentioned by Al-Masudi, who related that (in pre-Islamic times) Persians used to drink a libation called *dushab*, which is related to the Aramaic *dusha* ("honey").¹⁸⁵³ It was a beverage composed of various cereal grains soaked in a sweet substance, presumably honey. Whether or not *dushab* was the name of the holy gruel of the pagan Slavs and Balts is impossible to confirm because their words for gruel may have been supplanted by other terms. Nevertheless some linguistic survivals might point us in this direction. The following Slavic words *dusha* (Ukrainian), *dousha* (Old Slavic), *dusha* (Bulgarian, Serbo-croat), *dushe* (Czech), *dusza* (Polish), all relate to the soul and its strengthening.¹⁸⁵⁴ And *dusha* (Latvian) means "a state of physical and spiritual well-being".¹⁸⁵⁴ These were the virtues which *dushab* imparted to the faithful who ate and drank of it.

Following this rite a person received a gift befitting the walk of life they were bound to enter. Warriors' sons entered into the company of a veteran for skilled training, girls received spindles or got breadboards, a smith's son might get a hammer and tongs, and a Volkhv/a probably began the long preparatory courses of the Ehrpat, just as the Magi once did back in Persia.

Having shaken free the formative years of early childhood, the young person, no longer wet behind the ears, had to participate in the day to day running of the family's chores and assigned tasks. They were now an adult and so capable of becoming a sinner also. From then on, life was a very serious business; full of dangerous choices!

Magian funerary rites

EXCARNATION -
DEFLESHING OF THE
BONES

These days burial is the predominant means of disposing of Christian remains, a custom borrowed from Judaism. In fact, one can detect a fixation with the notion of a 'good Christian burial'. What is not widely known nowadays is that there was a second means of funeral rite, sanctioned by the Church in various regions during the Middle Ages, and at the same time viciously attacked by other elements of the clergy. This method entailed the exposure of the corpse, often to carrion birds, seemingly after the manner of the Magi. But Christians were not alone in this. Russian archaeologists have unearthed clay boxes in Central Asia, once used by Zoroastrians as receptacles for the defleshed bones of their kin once they had been unearthed from the *dakhmas* (death houses). Many of these boxes were decorated by personalised imagery. Of considerable interest is the existence of bone boxes etched with Jewish and (presumably Nestorian) Christian insignia and illustrations.¹⁸⁵⁵ It would appear that Jews and Christians had adopted local Magian funerary customs whilst living in Central Asia, or had continued to use rites once practiced by their forefathers before their conversion to Christianity or Judaism. In Jerusalem, at the time of Jesus, Jews also used bone boxes and ossuaries.¹⁸⁵⁶

CLEANED BONES WERE
FREQUENTLY HELD IN
OSSUARIES OR CHARNEL
BOXES

JEWISH ROYALTY
OBSERVED THE
EXCARNATION TRADITION

Excarnation, the defleshing of bones, as opposed to burial in the earth, is perceptible among the Jews before, during and after the life of Christ. It must have been a continuation of an extremely ancient practice known to the Israelites since the 7th Century BC. At Ketef Hinnom one finds stone sepulchres within which the bodies of Jewish kings and nobles were placed until the flesh had rotted away. Having fully decomposed the skeleton was collected up and stored in a niche or dropped down into a common ossuary for the bones of the elite. There one also found what I would term quasi-magical plaques, inscribed with passages from the *Old Testament*.¹⁸⁵⁷

There was probably a very ancient connection between these same Jewish nobles and the Persian royal houses, which might account for the presence of a similar royal funeral custom in both regions. Despite fundamental differences between Magian and Jewish perceptions about the nature of God, the very building of the temple at Jerusalem took place by order of Persia's three greatest kings, Cyrus, Darius and Artaxerxes, after the deliverance of the Jewish nation from Babylonian captivity. This interaction may have carried far into the future.¹⁸⁵⁸

In my opinion, a bone box now housed in a Canadian museum may prove to be one of the most controversial relics of the primitive Christian age. It sports an Aramaic inscription stating it held the remains of James, brother of Jesus, the son of Joseph. As it stands the empty box is presently believed to have contained the skeleton of St James. What is especially curious is that it was not written in Hebrew, but Aramaic, the language Jesus himself spoke on a daily basis, a lingua franca from the Mesopotamian and Iranian region. It seems that Jesus and his family had an aversion to the use of Hebrew characters, such as those found at Ketef Hinnom. Having said that, the object has met with misfortune. Firstly it was smashed, and the inscription's been branded fake, mostly because it was procured on the black market, and due to concerns about the nature of the ancient patina found within the chiselled indentations.

Nothing is more certain in life than death. That sombre Neanderthals and Cro-Magnons interred the bodies of fallen kinfolk covered in ochre and flower petals, illustrates that living beings have ever wondered where their kin depart to when they die. One minute they were alive, the next minute gasping for air, the next lifeless. They may previously have been exuberant, heroic or industrious, but with death came motionlessness. Never again would the bright light of life flicker in their fast glazing eyes, never a rosy hue in their pallid cheeks. So how do we say our good-byes? How do we respectfully see them off, and mourn their loss? How do we dispose of their inert remains? Methods for sending our dead into the after life are as much a manifestation of religious ideology, as they are a matter of personal or family preference.

The later Aryan Iranians, for example, practiced cremation, which leaves behind few, if any, archeological remains. In antiquity other funerary customs created monuments to the dead varying from clay urns to constructions as magnificent as pyramids. Today mourners look on as the coffin lowers into a yawning grave plot, or rolls into a furnace, on a voyage of no return. In this lifetime they'll never see the deceased stand up again.

You will now be provided with information about the unusual funeral rites of the Magi, as an aid to understanding certain exotic Christian and Jewish rites for the dead.

Excarnation - De-fleshing

Excarnation was a religious custom whereby the remains of a deceased person were left exposed to the elements and carrion eaters, to strip the flesh from their bones. It is a funerary custom particularly associated with the Magi, and (Buddhist) shamans from the Urals to the Far-East. Excarnation was deemed necessary to prevent the seepage of corrupted body juices onto virgin soil, which would contaminate the purity of mother with evil. If sowing grain in her belly brought luscious fields of crops, what could implanting death demons within her ever hope to achieve?

Once cleaned of their flesh and viscera, the de-fleshed bones of the dead were collected and either buried or cremated. Once stripped of rotting flesh they were believed to be pure, thus negating the pestilence of the death demon Nasus. In this part of the chapter, I hope to illustrate that excarnation was yet another heathen funerary rite known in the Baltic, Slavia and Scandinavia, and what is more that it was practiced by Magians everywhere from Siberia right through to Britain, where it may have existed as far back as the megalithic era.

Defleshing, or the feeding of human remains to dogs is recounted in the *Iliad* and the stories of Jason and the Argonauts.¹⁸⁵⁹ At (3rd Century BC) Colchis (now called Armenia) in particular, we are presented with stories of the deceased being suspended upside down from tree branches, encapsulated in the hide of an ox.¹⁸⁵⁹ Tamarisks were described by Apollonius as growing thickly there; a plant originally used by the Magi to make their bundles of wands. Does this mean that there were Magi in Colchis during that era? Quite probably; indeed Magians continued to live in Armenia even into the Middle Ages.

AND SO THE DEATH
DEMON CAME UPON THE
LIVING

And so death came upon the holy, in the form of the blighted death-demon Nasus;

Zarathustra asked Ahura Mazda: 'O Ahura Mazda, most beneficent Spirit, Maker of the material world, thou Holy One!

When a man dies, at what moment does the Drug Nasus (the death demon) rush upon him?

Ahura Mazda answered: 'Directly after death, as soon as the soul has left the body, O Spitama (the white) Zarathustra! the Drug Nasu comes and rushes upon him, from the regions of the north, in the shape of a raging fly, with knees and tail sticking out, all stained with stains and like unto the foulest Khrafstras (Khrafstras were evil creatures made by the devil)

On him she stays until the dog has seen the corpse or eaten it up, or until the flesh-eating birds have taken flight towards it. When the dog has seen it or eaten it up, or when the flesh-eating birds have taken flight towards it, then the Drug Nasus rushes away to the regions of the north in the shape of a raging fly, with knees and tail sticking out, all stained with stains, and like unto the foulest Khrafstras'.

O Maker of the material world, thou Holy One! If a man has been killed by a dog, or by a wolf, or by witchcraft, or by the artifices of hatred, or by falling down a precipice, or by the law, or by a murderer, or by the noose, how long after death does the Drug Nasus come and rush upon the dead?

Ahura Mazda answered: 'At the next watch after death, the Drug Nasus comes and rushes upon the dead, from the regions of the north...'¹⁸⁶⁰

Fig 98. The death houses of Yazd, Iran. Here Magian corpses were readied by corpse-bearers, for their journey to the nearby hill-top astodan.

BEWARE OF THE NEMESIS

With such a frightening nemesis at work, special care was required when handling and disposing of a corpse. The treatment of the mortal remains of 'white' and 'black' Magian families differed. The manner in which the bodies of the unholy were treated was of little consequence to the white Magi. Their demise was regarded as a dearest blessing on the world.

IT COULD DEFILE THE
CREATURES OF GOD

'O Maker of the material world, thou Holy One! If the dead one be a wicked, two-footed ruffian, an ungodly Ashemaogha (heretic), how many of the creatures of the good spirit does he directly defile, how many does he indirectly defile in dying?

THE TWO-LEGGED
RUFFIANS BLIGHTED THE
WORLD

Ahura Mazda answered: 'No more than a frog does whose venom is dried up, and that has been dead more than a year. Whilst alive indeed, O Spitama Zarathustra! that wicked, two-legged ruffian, that ungodly Ashemaogha, directly defiles the creatures of the good spirit, and indirectly defiles them.'

WITH THEIR PASSING,
THE WORLD WAS THAT
BIT SAFER

'Whilst alive he smites the water; whilst alive he blows out the fire; whilst alive he carries off the cow; whilst alive he smites the faithful man with a deadly blow, that parts the soul from the body; not so will he do when dead.

Whilst alive, indeed O Spitama Zarathustra! that wicked, two-legged ruffian, that ungodly Ashemaogha, never ceases depriving the faithful man of his food, of his clothing, of his house, of his bed, of his vessels: not so will he do when dead'.¹⁸⁶⁰

The Magi decreed that it was unholy to dress the corpses of the faithful;

'Whosoever throws any clothing on a dead body, even so much as a maid lets fall in spinning, is not a pious man whilst alive, nor shall he, when dead, have a place in the happy realm. He shall go away into the world of the fiends, into that dark world, made of darkness, the offspring of darkness. To that world, to the dismal realm, you are delivered by your own doings, by your own souls, O sinners!'.¹⁸⁶¹

From the customs of the modern Parsees, exiled Zoroastrians now living in India, we can infer that it was later deemed permissible to dress the dead in their oldest clothing (which had been cleaned), but under no circumstances was good clothing to be used.¹⁸⁶² The rationale for this custom is contained in *Vendidad*; for every thread used to weave a lavish corpse garment became transformed into a black serpent whilst lying buried in the underworld, or fed the appalling worms and parasites infesting the house of evil.¹⁸⁶² Once whomever dressed the corpse in such a manner passed away and descended into the underworld, they were set upon not only by these snakes, but the deceased who they had unlawfully dressed in fine clothing.¹⁸⁶² This soul tugged away at the hem of their sacred skirt (or shirt), castigating the new inmate for causing them to be consumed, as the clothing mutated into a suffocating blanket of ravenous pests.¹⁸⁶²

Only four days later, after the deceased's soul had arisen from the death ground and entered the celestial realms, would the relatives offer up more sumptuous clothing, which the dead would wear in the next world.

Magian doctrine demanded that the 'white' dead be laid down under a roofed place specially set aside, preferably in an *astodan* (a tower of the dead), where the holy dogs or buzzards lived, who scavenged and devoured the flesh of the body. So a day after a person passed away, their demon-defiled body was removed by *two or more* corpse bearers, never one, and taken to a place where the body was to be defleshed. The corpse-bearers were individuals given the unhappy task of handling anything dead, an act which defiled their physical and spiritual purity and required extensive purification rituals. They removed corpses from the place where they met their end, at home, in the field, or even where they fell in battle, and cared for the remains until completion of the funerary rites.

'then men shall properly convey the bones away to the bone-receptacle (astodano) which

one is to elevate so from the ground (on a mound or hill), and over which a roof so stands, that in no way does the rain fall upon the dead matter, nor the water reach up to it therein, nor the damp make up to it therein, nor are the dog and fox able to go to it, and for the sake of light coming to it a hole is made therein'.¹⁸⁶³

The last segment of this scripture speaks of an opening, traditionally left in the eastern parts of the structure. It was through this aperture that light entered, liberally bathing the remains of the individual, especially around sunrise. As soul and body separated, subsequent to corporeal dissolution, the spirit of the deceased walked out through this gateway, towards reunification with the light of the sun.

DOGS, RAVENS AND
BUZZARDS LURKED
AROUND THE DEATH
GROUNDS

Burning cadavers amounted to the execrable defilement of the holy fire, and burying them in dirt lay under similar anathemas. For in doing so, the death demon was planted in the bosom of holy earth. Therefore excarnation remained the most popular option for removing the dead from the world of the living,

'O Maker of the material world, thou Holy One! Whither shall we bring, here shall we lay the bodies of the dead, O Ahura Mazda?

CREMATION WAS
ABSOLUTELY FORBIDDEN

Ahura Mazda answered: 'On the Highest summits, where they know there are always corpse-eating dogs and corpse-eating birds, O Holy Zarathustra!'

There shall the worshippers of Mazda fasten the corpse, by the feet and by the hair, with brass, stones, or lead, lest the corpse-eating dogs and the corpse-eating birds shall go and carry the bones to the water and to the trees....

Ahura Mazda answered: The worshippers of Mazda shall erect a building out of the reach of the dog, of the fox, and of the wolf, and wherein rain-water cannot stay. Such a building shall they erect, if they can afford it, with stones, mortar, and earth; if they cannot afford it, they shall lay down the dead man on the ground, on his carpet and his pillow, clothed with the light of heaven, and beholding the sun'.¹⁸⁶⁴

'then the worshippers of Mazda shall lay down the dead (on the Dakhma) his eyes towards the sun'.¹⁸⁶⁵

EACH SETTLEMENT HAD
ITS OWN DEATH HOUSE,
OR TOWER OF SILENCE

In cities or towns, excarnation was normally carried out in more formal surroundings, such as an *astodan* or *dakhma*, a large 'tower of silence' made of three concentric rooms, radiating out from a high, often round roofless central tower made of sun-dried bricks. In the outer ring rested the bodies of men, in the second women and in the third children.

One school of thought is the corpse was placed in the vicinity of dogs, vultures or diverse feral creatures, not just a single type. Mourners augured omens depending upon what variety of animal first reach the cadaver, with the attention of vultures being highly sought after.¹⁸⁶⁶ Vultures are of course gifted carrion scavengers, with a digestive tract practically impervious to every kind of disease, and musk glands beneath their wings, to take away the foul stench of their rotting meal.

In the more far flung regions of the Persian Empire, alternative funerary proceedings appeared callous, bordering on the desperately macabre; ingesting portions of the deceased in a funeral feast, euthanising the elderly, even throwing ailing relatives to packs of ravenous dogs. It would be true to say that none of these particular methods appear in Orthodox Zoroastrian canonical scripture.

Periodically the bones of the deceased, once picked clean, were gathered up and piled in a pit full of bones within the tower, or removed for cremation, storage or burial elsewhere. Bones flung into the well rotted away into nothingness.

Fig 100. Interior of an Iranian astodan. They look similar to a fort, but they're excarnation grounds.

'Medok-mah says that there should be a shelter (var) one should fasten above that place (the open grave plot), and it would make it dry below; one should place the corpse under that shelter, and they may take the shelter and bring it away'.¹⁸⁶⁷

'For it is declared in the good religion that, when they conceal (ie; cover with dirt) a corpse beneath the ground, Spendarmad, the archangel, shudders; it is just as severe as a serpent or scorpion would be to any one in private sleep, and also just like that to the ground. When thou makest a corpse beneath the ground as it were apparent (so as to be visible), thou makest the ground liberated from that affliction'.¹⁸⁶⁸

IF ONE HAD MEAGRE
FINANCES, ONE COULD
PLACE THE BODY IN AN
OPEN GRAVE, AND COVER
IT WITH A ROOF

Both of these excerpts from Magian scripture show the acceptability of placing a white Magian corpse in an open grave, whereas the full burial of the corpse (ie; filling the plot with soil) was seen as very evil. According to this method, the open grave was covered by a temporary roofed shelter, which could later be removed if need be.

Since Magian scripture states that the type of *dakhma* used by individuals was relative to their financial means, most people were content with make-shift death houses rather than the more ostentatious stone variants. In small Magian settlements, the dead were often kept in a cabin of normal design (Zoroastrian: a *Zad-marg*; 'a death house').

Certainly they would have been cheaper than erecting something as lavish as the royal mausoleum of Koj-Krylgan-Kala in Khorezm which was built in 200-400 BC, a 42 metre diameter crenellated circular keep surrounded by an outer protective wall, complete with sentry towers, and a moat.¹⁸⁶⁹

There were no signs of human habitation within the keep, indicating that it was truly a fortress of the dead, and as is believed, a former cult centre for the worship of kings long dead.¹⁸⁶⁹ Only the protected open area sandwiched between the keep and the outer wall showed evidence that a small number of people lived there, and it has been suggested that this was a living area for the priests (Magi) and corpse-bearers who administered the site.¹⁸⁶⁹

One might think these kings were ready for just about anything once they arose from their graves to fight the demon-spawn during the apocalyptic final battle for heaven, together with archangel *Verethraghna* (the blow of victory). The roof of the tower was probably used as a death ground, upon which corpses were placed to be picked clean by vultures perching in the battlements hemming the area. The presence of ash deposits has been interpreted by Russian archaeologists as signifying that a pyre was lit somewhere atop the keep,¹⁸⁶⁹ where the dead lay, or alternatively were the remains of the fire which eventually destroyed the place. If the fires did have a funerary application, then they were either used to sanctify the area by killing off the demons who loved to congregate in the death grounds, or used to cremate the defleshed skeletal remains resulting from the excarnation process, or even used to cremate the corpses in their entirety, although this is extremely doubtful, considering Magian prohibitions.

Incidentally, artistic renditions of this adobe castle-mausoleum (based on archeological data) have it looking every bit like a medieval European stone castle complete with a circular tower,¹⁸⁶⁹ a variety of fortification that began to appear in Europe only during the Middle Ages. Yet it pre-dates the methods used by the medieval European castle architects and engineers by some one thousand years! Were the castle engineering methods that arose in the Middle Ages the product of independent invention, or were they transported there by eastern immigrants, men knowledgeable in stonecraft and ingenious engineering techniques? The question is difficult to answer. To do so requires an in depth comparative study which compares Central Asian castle construction methods, with those of the Middle Ages, in both Eastern and Western Europe. Unfortunately I do not have access to such information, if it does exist.

Subsequent excavations at Samarkand, Khorezm and similar heavily Magianised places in Central Asia, reveals that Magians frequently interred their dead in family vaults, stone lined cysts and sarcophagi.¹⁸⁷⁰ Mausoleum practices of this kind are not specifically mentioned in the Avestan and Pahlavi texts, though conceptually lawful when one considers the Magian clauses speaking of stone as a barrier to the seepage of death juices into the holy earth.

If it was winter, when heavy rain and snow was falling, and the carrion birds had flown south to escape the bitter cold, then the corpse was to be placed in a hole of a given depth, and the temporary grave roofed over and covered

THE MAGIAN ROYAL
Fig 101.1. This mound-covered grave-home was found in Thuringia Germany, and dated to 1,600 BC.

Fig 101. 2. Pagan Anglo-saxon graves of the conversion era resembled the above roofed Kurgan grave from the Balkans (dating to the 3rd Millenium BC). Note how the body is placed under a temporary roof inside a sunken depression which is later covered by a mound of dirt after a yet to be determined period.

In both cases, this form of funerary practice originated in Asia.

MAUSOLEUM AT
KHOREZM, A FORTRESS
FOR THE DEAD KINGS

MAGIANS DID NOT
ALWAYS DEFLESH THEIR
DEAD

OFTEN THEIR REMAINS
WERE PLACED IN A
MAUSOLEUM,
CATACOMB, STONE CYST
OR SARCOPHAGUS

DURING A HEAVY
WINTER, THE BODY WAS
BURIED UNDER THE
SNOW AND RETRIEVED
LATER

by ash, cow dung, bricks, stones and dry earth. After a month, or the melting of the snows, the body was to be removed and treated in the usual manner.¹⁸⁷¹ During this and other emergencies an alternative death rite could be performed. Where birds and dogs had not put the death-demon to flight, especially due to terrible weather conditions, wood was scattered all around the corpse where it lay, and sprinkled with water.¹⁸⁷² After the lapse of one year in this state, the corpse no longer carried corruption and could be safely handled.¹⁸⁷² Archaeologists periodically come across a number of skeletons and bog bodies treated in precisely this manner, in Ireland especially. Alternatively the Magi prescribed that a corpse be weighed down with wood or heavy objects at the location where the deceased passed away during the winter.

In older times the dead were interred in a plot for a spring and a summer, with sacred ash, dust dirt, bricks and clay piled on top of it for good measure. It was later removed by the corpse bearers and placed on a raised platform so that what was left on the bones could be eaten, or in some other similar manner, but within a *dakhma*.

Additional rites of purification and protection were performed to guard their mortal remains from the ghoulish demons that bickered over the bodies of the fallen. So to stave off the fell beings, a holy fire was sometimes lit close to the central bone collection pit.

When Magian family members wished to pray for their dead relatives they stood before the eastern opening of a *dakhma*. It is a long-held custom still practiced among the Parsees of India.

Sooner or later the smell of an old death ground became unbearable. All that remained was to tidy them up, and cover them with a mound of earth.

'O maker of the material world, thou Holy One! How long after the corpse of a dead man has been laid down on a Dakhma, is the ground, whereon the Dakhma stands, itself again? Ahura Mazda answered: 'Not while the dust of the corpse, O Spitama Zarathustra! has mingled with the dust of the earth.

KINFOLK CAME TO PRAY
AT THE DAKHMA

DEMONS GATHERED AT
THE DAKHMA IN OBSCENE
NUMBERS

Urge every one in the material world, O Spitama Zarathustra! to pull down Dakhmas.' He who should pull down Dakhmas, even so much thereof as the size of his own body, his sins in thought, word, and deed are remitted as they would be by a Patet (the rite of confession), his sins in thought, word, and deed are atoned for.

THERE THEY DEVoured
THE BODIES

Not for his soul shall the two spirits wage war with one another; and when he enters the blissful world, the stars, the moon, and the sun shall rejoice in him; and I, Ahura Mazda, shall rejoice in him, saying: 'Hail, O man! thou who has just passed from the decaying world into the undecaying one!'

EVENTUALLY AN
APPALLING STENCH
AROSE OVER THE AREA

'O maker of the material world, thou Holy One! Where are the fiends? Where are the worshippers of the fiends? What is the place whereon the troops of fiends rush together? What is the place whereon the troops of fiends come rushing along? What is the place whereon they rush together to kill their fifties and their hundreds, their hundreds and their thousands, their thousands and their tens of thousands, their tens of thousands and their myriads of myriads? Ahura Mazda answered: 'Those Dakhmas that are built upon the face of the earth, O Spitama Zarathustra! and whereon are laid the corpses of dead men, that is the place whereon the fiends are, that is the place whereon the troops of fiends rush together, that is the place whereon they rush together to kill fifties and their hundreds, their hundreds and their thousands, their thousands and their tens of thousands, their tens of thousands and their myriads of myriads'

WHEN A DAKHMA WAS
FILLED, THEY COVERED IT
OVER, AND MADE A NEW
ONE ELSEWHERE

DISEASE RADIATED FROM
THE DAKHMAS

On those Dakhmas, O Spitama Zarathustra!! those fiends (demonic flies and maggots) take food and void filth, eating up corpses in the same way as you, men, in the material world, eat cooked meat. It is, as it were, the smell of their feeding that you smell there, O men! Thus the fiends revel on there, until that stench is rooted in the Dakhmas. Thus from the Dakhmas

arise the infection of diseases, itch, hot fever, humors, cold fever, rickets, and hair untimely white. There death has most power on man, from the hour when the sun is down'.¹⁸⁷³

According to Magian lore, bodies were placed in *astodans* until the pit reached the point of being full, whereupon the site was back-filled with soil, and a new one built at another location. The bones either remained *in situ* within the *dakhma* beneath the wooden structure, or were collected up by one's kin and taken to a family burial plot. As bodies fell apart, their vile juices ran down furrows into a central holding pit. Sometimes bones were placed into the central pit with other skeletal remains, and there disintegrated into nothingness. At other times bones (especially those of Magi and kings) were removed from the defleshing area, to be displayed in a shrine for public veneration. Ideally the deconstruction of a *dakhma* entailed removing the wooden shelter, though this might not have been done in most cases, except by the most pious. Whatever the case, *dakhmas*, whether temporary or of sturdier construction, were normally covered with dirt. This procedure left only a mound, sometimes covering post holes and a pit, sometimes covering an intact wooden structure. A deconstructed *astodan* therefore left fairly unobtrusive clues for archaeologists, besides a mound or *kurgan*.

Funerary traditions in ancient Russia

De-fleshing was inevitably practiced in Rus' even though archeological evidence of it is not often or easily recognised, especially since some archaeologists have never even heard of excarnation. Understandably they would be hard pressed to observe the tell-tale signs of uncremated excarnated remains when they are encountered; missing body parts, disturbed skeletal orientations, the alignment of the skull, weathering, a lack of soil discolouration where bones are presumed to have rotted away, evidence of the actions of maggots, and decapitation. And even where excarnated remains are found, one cannot infer that they were the product of a Magian or Buddhist funerary rite unless they were found in the context of an excavated pit or burial mound.

Nevertheless heathen corpses were exposed in pagan Russia, many instances of which drew upon excarnation traditions practiced in Eurasia. But before I go any further into the matter I shall furnish a brief synopsis of funerary traditions associated with geographical Russia.

Finno-Ugric graves Neolithic-1,000 AD

Tripole culture 4,500 BC-3,500 BC

The Tripole agriculturalists of Rumania and the Ukraine lived in extensive settled areas, similar in scale to hamlets and townships, prior to the Aryan incursions.¹⁸⁷⁴ The largest of their cities has been termed *Maydanets'ke*, a well-planned circular matrix, consisting of multiple rows of housing, some 1,700 domiciles in all.¹⁸⁷⁴ Based upon the results of archaeological excavations at their many sites, and clay representations of their homes, which they thoughtfully left behind, we know that they resided in rectangular dwellings normally between 20 and 30 metres long.¹⁸⁷⁴ Many of their homes were two-storey.¹⁸⁷⁴ Tripole settlements enjoyed the use of temples and craft workshops which produced ceramic goods and bone implements.¹⁸⁷⁴ Their dead were interred in communal pits, evidently wrapped in cloth or hides.¹⁸⁷⁴ Gifts of animal teeth and stone implements are normally found with these remains.¹⁸⁷⁴

Afanasiovo culture 3,000 BC

This culture placed their deceased in death houses of a sort found in Central and Inner Asia. These are associated with Aryan Indo-Europeans and Indo-Iranians.

Zarubintsi culture 2nd Century BC- 2nd Century AD.

While there were isolated cases of inhumation, the Zarubintsi people¹⁸⁷⁵ (who have been tentatively identified as Scythian) predominantly cremated their dead, whose remains were placed in clay pots which were usually greyish or highly buffed black ceramics. Burial plots contained clusters of such urns, as well as dress ornaments, including glass beading. Hill fort graves of this period also contain cremations, knives and spear points. Standard features of the Zarubintsi culture were wattle and daub huts with clay ovens. They traded with the various cities and settlements that bordered the Black Sea.

PRE-INDO-EUROPEAN

Fig 102. This receptacle for cremated ashes was found in Sweden, and dated to the Bronze Age. It took the form of a clay house.

Fig 103.1 Pagan Russian funeral urns - Russia

Fig 103.2. Pagan Saxon funeral urns - Britain

Fig 103.3. Lidded clay urn used to contain cremated ashes. A similar style was also used by the heathen Saxons.

Grey-ware pottery also happens to have been a feature of the Medean and Indo-Iranian proto-urban communities,¹⁸⁷⁶ the two pottery styles being plausibly connected.

Another Scythian method was to make a large barrow within which was a roofed structure. Beneath it they laid the mummified bodies of their kings, complete with mounted horsemen and attendants specially killed for the occasion, to accompany their lord beyond the grave. According to Herodotus they had a sort of "Valley of the Kings" where the remains of all the royal Scythians were to be found. It was supposedly situated near the mouth of the Borosthynes, in the land of the Gerrhi. Circa 150 AD this royal cemetery was still to be seen on the western shores of the Caspian sea, near the lands of Caucasian Albania and Azerbaijan

Apparently the Scythians coated some of their corpses in wax and this had the effect of protecting the dissolution of the corpse. Considering Magian funerary traditions, a corpse could be made suitable for burial in the earth if it was in mummified state, whether dried through lengthy exposure or covered by a thick coating of bee's wax. The Scythians most likely adopted this practice in Iran, for there the Medes,

*"smear bodies of the dead with wax before they bury them, though they do not bury the Magi but leave their bodies to be eaten by birds".*¹⁸⁷⁵

Since the Scythian 'ziggurats' were in some ways reminiscent of Mesopotamian examples, we might ask ourselves whether the Scythian custom of slaying a large retinue of mounted horsemen who were then impaled into position on poles surrounding their chieftain's body also has an ancient Mesopotamian precedent. Funerary killings (requiring large scale human sacrifice) were first performed on behalf of the God-kings of Ur. Later it was practiced during the earliest Egyptian dynasties, right throughout Scythian times, and finally by the Mongols and Polovtsy. Such methods were still being practiced in the Ukraine even into the 1200's AD.¹⁸⁷⁷

Chernyakhovo culture 1st-5th Centuries AD

The widespread Chernyakhovo sites are almost universally associated with Roman cultural deposits of glass objects, coins and jewelry. Some of these might have been imports, but then again a certain number of things were produced locally by artisans (probably Goths) possessing Roman craft skills, or even Roman POW's. The agrarian Chernyakhovo sites¹⁸⁷⁸ are peculiar to the Ukraine, and belong to a hitherto unrecorded race, whose ethnicity, history and culture remain enigmatic. Their largely unfortified settlements displayed many facets of civilised urban life, with row after row of log-construction housing arranged along networks of roads up to four kilometres in length. This says something about the social stability of these areas, in particular their freedom from aggression. The Chernyakhovo culture incorporated a vast spectrum of additional material, which has been variously described as Germanic, Slav and Sarmatian (ie; Indo-Iranian). This information ought not come as any great surprise; after all Ptolemy did depict Caesar's altar in the Ukraine around 150 AD, so presumably the area was considered important to the Romans, though it is difficult to say whether or not the Roman-style debris was the result of cross border trading, or manifestations of a Romanised culture in Russia. Whereas the previous Zarubintsi culture made hand burnished earthenware, the Chernyakhovo ceramics were normally crafted on a potter's wheel. Large kilns and furnaces have also been found in conjunction with these sites. The remains of the Chernyakhovo people were interred in urns which are distinguishable from those of pre-existing less culturally evolved Zarubintsi culture. Some archaeologists believe the Chernyakhovo people were Goths, perhaps the very ones who migrated into Slavia from Dacia.

Dyakhovo culture 5th Century BC-5th Century AD.

Dyakhovo culture¹⁸⁷⁹ was characterised by fortifications (located at river confluences) which were built by horse-breeding Finns in the steppe and forested zones between the Upper Volga and Estonia. Conical khati were located therein, encircled by defensive palisading. The inhabitants busied themselves with agriculture, animal husbandry, pottery and the looming of cloth.

Slavic urn field culture

From the physical remains of some *twenty thousand barrows*, Russian archaeologists have managed to piece together a time-line of early pagan culture in Russia. Their findings are drawn from the distribution of two very

distinct groups of urn-fields in particular. From this they have deduced that the Slavs and the Antes were already living in the area around 400 AD, although they were not mentioned by name (Sclavinae) until the 500's AD by Byzantine sources. They were originally termed Venedi, a label Germans applied to the Western Slavs (Poles), who they called Wends.¹⁸⁷⁵ At the beginning of the 6th Century AD, many of these Slavonic peoples penetrated the Balkan zone and came to settle there, complete with their own class-based society.¹⁸⁷⁶

Urn-field culture The so-called Urn-field culture¹⁸⁷⁶ is associated with various Slavic tribes, but did not display a uniform means of interring their cremated remains. This varied from tribe to tribe.

Urn-field culture (Long barrows) 6th-8th Centuries AD “Long Barrow” sites are normally associated with the Krivichi tribe.¹⁸⁷⁹ The ashes of each body were interred next to each other, one after the other, creating long single-barrows up to fifty metres in length.

Urn-field culture (Sopkas) 4th-10th Centuries AD Sopkas¹⁸⁷⁸ were 10-15-metre tall mounds containing multiple cremations. They have been identified with the Slovene tribe. Sopka is simply another term for a *kurgan*, originating in the Slavic *sop* and *spa*, and the Old Russian *s'p'* (denoting “a hill” or “an embankment”).¹⁸⁸¹

Urn-field culture (Borshevo barrows)¹⁸⁸² 4th-10th Centuries AD The oldest of the Vyatichian Borshevo barrows appear in the Moscow region from the 4th Century AD. Later, during the 8th-10th Centuries AD they could also be found along the Don River. This culture utilised subterranean boxes in which ceramic urns containing cremated remains, or the remains of foodstuffs were enclosed. The charred skeletal remains were not poured into the urn in a haphazard manner, but were placed inside with great care, ensuring that the lower bones were in the bottom of the urn, progressing right through to the cranial bones which sat atop the ashen pile.

Besides these funerary trends, Russian archaeologists have been unable to establish the methods particular to the other Slav tribes, nor have they specifically identified those of the Goths with absolute certainty, nor those of the many other tribes which passed through the area on their way into Europe.

Alano-Bulgar funerary methods See the table on p. 454.

A number of imposing interpretative problems remain for the archaeologist if we strive towards the seemingly unattainable, a credible reconstruction of the events leading up to a pagan funeral. Throughout *The Forbidden History of Europe* we have repeatedly witnessed customs born from the importation of oriental religious traditions into Russia. This being the case we must logically turn towards the Magian and Vedic holy texts if we are to make logical inferences about what took place before, during, and after, a funeral, and more importantly, to access the dogmas which provide the rationale for these rites.

Russian researchers investigating circular sanctuaries near the Caspian (dating 2nd-4th Centuries BC) have concluded they resemble Zoroastrian dakhmas, surrounded by torque-wearing stone effigies, probably of heroes, warriors and chiefs of Saka (ie; Scythian) origin.¹⁸⁸³ In bygone years Scythians slew a retinue of servants or warriors to escort chieftains into the afterlife. These idols are visibly armed in a Saka-Medean fashion, using customs shared by Massagetae, Sarmatians, Saka and Medes.¹⁸⁸³ It is eminently plausible these stone baby idols represent individuals that in former times would have been ritually killed and impaled onto a horse, so as to stand watch over their master. Amazingly no skeletons to be found there, leaving open the possibility some mounds were ritual cenotaphs of a type used by Chinese.

A number of cenotaphs exist, which differ somewhat from similar Scythian carved monuments (known in the area c. 600 BC) and so they required a new series of archaeological classification to describe them (designated Baite and Ustyurt).¹⁸⁸⁴ The custom and the techniques associated with it evolved in an area outside of the one in question, and so the style and means of crafting them seems to have been imported into the eastern banks of the Caspian with the craftsmen who made them.

The presence of specific tribal tamgas engraved into the statuary gives reason to associate them with Indo-Iranian Sarmatian tribesmen frequenting the area during the same period.¹⁸⁸⁵ Altars are often found nearby, and this is suggestive of repeated calendrical or commemorative rites in connection with the cenotaphs.

SLAVIC URN FIELDS
